3. EGI's liquidity remained solid despite a significant increase in the Purchase Gas Variance Account (PGVA), which captures the difference between actual and forecast natural gas prices. As of June 30, 2022, the PGVA balance was $780 million. The recovery of the PGVA balance was approved by the Ontario Energy Board (OEB). However, the recovery period extends to 24 months, instead of 12 months. At the end of June 2022, approximately $380 million of EGI's $2.0 billion credit facility was available. In August 2022, the Company's liquidity improved considerably as EGI issued $650 million in long-term debt, which was partially used to paydown the Company's short-term indebtedness. DBRS Morningstar expects that, as in the past, in the event that EGI requires more liquidity to finance its natural gas inventory for the winter distribution, its parent, Enbridge Inc. (rated BBB (high) with a Stable trend by DBRS Morningstar), will step in and provide temporary liquidity.

The Company’s ratings are supported by a stable regulatory framework in Ontario and a very large and economically strong base of approximately 3.8 million customers across the province—the largest in Canada and one of the largest in North America. This large customer base is one of the key factors allowing EGI to achieve operating efficiency under the price-cap IR. Good synergy was realized in the past three years from the amalgamation of Enbridge Gas Distribution Inc. (EGD) with Union Gas Limited

(Union Gas), and DBRS Morningstar expects significant synergy to be achieved through 2023. EGI's reliability and the flexibility of its natural gas supply have improved significantly, compared with stand-alone EGD, as a result of the significant addition of Union Gas's storage facilities. The ratings incorporate EGI's exposure to volume risk and the potential regulatory lag in the recovery of natural gas costs when the price of natural gas increases substantially.

Although EGI will likely generate substantial free cash flow deficits over the next few years because of its major capital projects (which DBRS Morningstar estimates to be between $1.4 billion and $1.5 billion for new projects and system upgrades) and a high dividend payout ratio. Funding of cash flow deficits has been with new debt issued by EGI and equity injections from the parent. DBRS Morningstar expects EGI to continue to fund its future capital expenditures (capex) in such a way that the capital structure will be maintained in line with the regulatory capital structure of 64% debt and 36% equity. As a result, DBRS Morningstar does not expect the financing of EGI's capex to have a material impact on its credit metrics in the medium term.

DBRS Morningstar does not expect any positive rating actions in the near term. However, it could take a negative rating action should the following events occur: (1) an adverse regulatory change that would have a negative impact on EGI's business risk profile, or (2) a significant deterioration of EGI's credit metrics on a sustained basis that would no longer support the current ratings. DBRS Morningstar considers these scenarios unlikely.

Financial Information

Enbridge Gas Inc.	6M June 30	6M June 30	12M June 30	Year ended December 31		
Key Credit Metrics	**2022**	**2021**	**2022**	**2021**	**2020**	**2019**

Issuer Description

Enbridge Gas Inc is a regulated natural gas distributor with connections to approximately 3.8 million meters serving residential, commercial, and industrial customers across Ontario. Other operations include regulated transportation services as well as regulated and unregulated storage services in Ontario. Enbridge Inc. owns 100% of EGI (54% directly and 46% indirectly).

Rating Considerations

Strengths

1. Low-risk regulated operations

Almost all of EGI's assets are regulated and operate under the OEB-approved, five-year price-cap IR plan from 2019 through 2023. The IR plan provides the Company with the following benefits: (A) relatively predictable earnings and cash flow through a formula (see the Regulatory Update section); (B) full recovery of gas supply costs with quarterly adjustments, subject to regulatory review; (C) annual updates for certain costs to be passed through to customers and a reasonable mechanism for capex recovery;

and (D) a mechanism for sharing earnings with customers, which provides incentives for operational efficiency.

2. Strong franchise area with a very large customer base

EGI is currently the largest regulated natural gas distributor in Canada and is one of the largest in North America, serving approximately 3.8 million residential, commercial, and industrial customers across Ontario. The Company's service area is viewed as economically strong compared with other service areas in Canada. EGI's large customer base provides it with the size and scale to operate efficiently during the five-year price-cap IR plan. EGI's large size also allows it to maintain a good degree of flexibility with its capex planning.

3. Sizable storage assets provide additional rate base and cash flow

As at June 30, 2022, EGI owned approximately 281 billion cubic feet (bcf; 276 bcf in 2021) of natural gas underground storage capacity facilities located at the Dawn Hub, the largest natural gas storage hub in Canada, which acts as a gateway for Western Canadian and Appalachian natural gas supply. EGI's storage facilities are strategically connected to major pipelines that transport natural gas to major Canadian and U.S. markets. The majority of EGI's storage assets is in the regulated rate base. In addition, nonregulated storage assets have generated strong cash flows that reflect high demand in Ontario. DBRS Morningstar estimates that cash flow from nonregulated storage activities accounts for approximately 8% to 10% of EGI's consolidated cash flow.

Challenges

1. Volume risk

For EGI's residential and small commercial customers, weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with the weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. For EGI's large industrial customers, volume consumption is sensitive to the economy. However, the volume risk is partially mitigated through the Company's firm contracts with larger commercial and industrial customers where charges are based on demand. Further, the weather forecast is conducted annually to reflect the latest weather patterns.

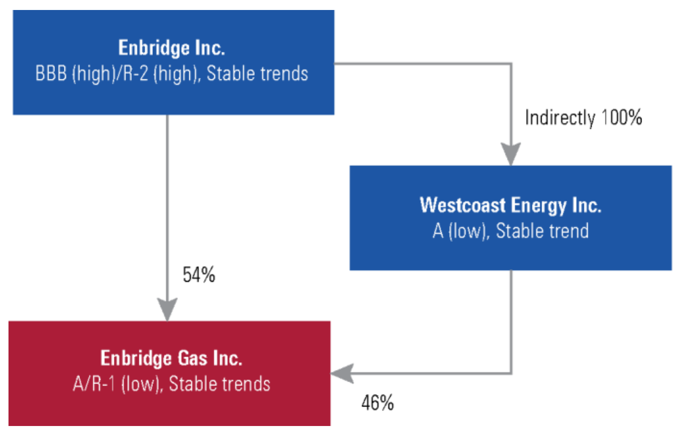
2. Managing operating costs under the price-cap IR plan

EGI is in the fourth year of its five-year price-cap IR plan. Managing operating costs is particularly important for the Company to achieve or exceed the allowed ROE. A significant increase in operating costs can have a negative impact on EGI's earnings and cash flow, and consequently on its credit metrics. Earnings below the allowed ROE will not be recovered from customers unless the actual ROE is 300 basis points (bps) below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag

EGI faces a potential regulatory lag in the recovery of natural gas costs. Although the Company can pass natural gas costs on to customers with quarterly adjustments, the potential for a regulatory lag still exists. If natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, EGI could also face regulatory lag with respect to major projects if capital spending amounts are beyond those that can be funded through base rates and if these capital projects do not qualify for recovery through the Incremental Capital Module (ICM) mechanism (see the Regulatory Update section).

Simplified Organizational Structure



Note: EGI represented approximately 13% of the consolidated EBITDA of Enbridge Inc. in 12 months ended March 31, 2022.

Enbridge Inc.: It is a diversified energy company with the following segments: Liquids Pipelines, Gas Transmission and Midstream, Gas Distribution and Storage, Renewable Power Generation, and Energy Services (see DBRS Morningstar's rating report dated July 27, 2022, for details).

Westcoast Energy Inc.: In addition to owning a 46% interest in EGI, Westcoast Energy Inc. also owns (1) the federally regulated B.C. Pipeline natural gas transmission system and (2) a 78% interest in the federally regulated Maritime & Northeast Pipeline Limited Partnership, a natural gas transmission system in Eastern Canada (see DBRS Morningstar's rating report dated June 29, 2022, for details).

YE2021 Summary

- Operating income in 2021 increased modestly from 2020, largely reflecting (1) the absence of employee severance, transition, and transformation costs in 2021; (2) synergy realized from the amalgamation; and (3) increases in rates and customer base.

H1 2022 Summary

- The increase in operating income in H1 2022 compared with the same period in 2021 reflected (1) colder weather in the first half of 2022, (2) higher distribution charges resulting from increases in rates and customer base, and (3) synergies realized from the amalgamation. However, the increase in the operating income was partially offset by higher operating expenses largely driven by the timing of expenditures.

Outlook

- Assuming normal weather, DBRS Morningstar expects EGI's operating income to continue to increase modestly throughout the deferred rebasing period, reflecting the continued growth in the rate base and customer base as well as the potential synergy to be realized from the amalgamation.
- However, because EGI's annual rate changes are based on a price-cap formula and operating efficiency, any materially unexpected increase in operating costs can have a negative impact on EGI's operating income.

Financial Profile

Enbridge Gas Inc.	6M June 30	6M June 30	12M June 30	Year ended December 31

Total debt in capital structure (%) [1]	64.3	66.2	64.3	65.8	65.1	64.3
Cash flow/total debt (%)	15.0	14.8	12.0	11.4	12.1	12.7
EBIT interest coverage (x)	3.34	3.20	2.49	2.41	2.36	2.55
Dividends/cash flow (%)	86.1	85.5	102.5	103.1	106.1	105.0

1 Excluding goodwill.

Summary

- All credit metrics remained solid in the last twelve months (LTM) ended June 30, 2022, reflecting relatively stable cash flow and reasonable debt leverage.
- The debt-to-capital ratio, excluding goodwill, has remained relatively stable since the amalgamation and has stayed at the low end of DBRS Morningstar's "A" rating range. This capital structure level is consistent with the regulatory capital structure of 36% equity/64% debt.
- The cash flow-to-debt ratio for the LTM ended June 30, 2022, improved modestly from 2021 because of higher cash flow for H1 2022 compared with H1 2021.
- EBIT-interest coverage for the LTM ended June 30, 2022, continued to benefit from solid operating income for the period.
- EGI has generated substantial free cash flow deficits for the last couple of years as a result of a large capex program in 2020 and 2021 (averaging $1.35 billion each year). Most of growth capex was spent on growth capital projects that were approved by the regulator (see below).
- DBRS Morningstar notes the dividend/cash flow ratio has increased since 2018. This increase combined with large growth projects caused EGI to require substantial external funds to finance its cash flow deficits.
- However, EGI's financing plan has been to maintain the debt-to-capital ratio in line with the regulatory capital structure of 64% debt/36% equity.

Outlook

- DBRS Morningstar expects EGI to continue to generate free cash flow deficits over the next couple of years because of its large capex and a high dividend payout. Capex for 2022 and 2023 is estimated to be between $1.4 billion and $1.5 billion each year. A substantial amount of capex each year will be for system upgrades and new capital projects, such as the Lake Shore Kipling Oshawa Loop Replacement Project (Lakeshore KOL Replacement Project), Natural Gas Expansion Project and Panhandle Regional Expansion Project (see the Capital Projects section).
- DBRS Morningstar does not expect EGI to change its financing strategy of maintaining the debt-to-capital ratio (excluding goodwill) at or near the current level throughout the deferred rebasing period.
- Assuming normal weather, DBRS Morningstar expects EGI's cash flow-to-debt and EBIT-interest coverage ratios to improve modestly over the medium term, reflecting expected operating efficiency and incremental cash flow from a growing rate base.

Liquidity and Long-Term Debt Maturities

Credit Facilities As at June 30, 2022

(CAD millions)	Total Facilities	Drawn[1]	Available	Maturity
Enbridge Gas Inc.[1]	2,000	1,620	380	2023

1 Includes facility draws and commercial paper issuances, net of discount, that are backed by the external credit facility.

Summary

- Liquidity remains solid, supported by predictable cash flow from operations and the availability of sizable credit facilities.
- The $2.0 billion Revolving Term Credit Facility is used to backstop a commercial paper program of $2.0 billion. In August 2022, EGI completed a $650 million dual-tranche offering of 10-year and 30-year notes. The debt issuance is not expected to have any material impact on EGI's credit metrics because most net proceeds were used to pay down the Company's short-term indebtedness.
- DBRS Morningstar notes in the event where there is extremely cold weather and gas prices are rising sharply, the Company would have to seek temporary support from its parent, Enbridge Inc. Currently, EGI has access to Enbridge Inc.'s letter of credit facilities totalling $2.0 billion.

Debt Maturities

As at June 30, 2022 (CAD millions)	2022	2023	2024	2025	2026	2027+	Total
EGI medium-term notes and debentures	0	350	300	745	650	7,050	9,095

Summary

- The refinancing risk in the next four years is manageable because the medium-term notes and debentures due in each of these years are modest and within the financing capability of the Company.
- EGI is subject to the issue test covenant in the indenture, which states that its total consolidated funded obligations (namely total indebtedness, including any guarantee that has a maturity term longer than 18 months) will not exceed 75% of total consolidated capitalization. EGI is also subject to an EBIT-to-interest covenant of 2.0 times, based on EBIT for 12 consecutive months and the annual pro forma interest requirements for all debt with a maturity term longer than 18 months:
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant as at June 30, 2022.

Regulatory Update

EGI 2022 Rate Application

- EGI filed its application in two phases. Phase 1 was filed in June 2021 for the setting of rates for 2022. In October 2021, the OEB approved a Phase 1 Settlement proposal and Interim Rate Order effective January 1, 2022. In April 2022, the OEB issued its decision on Phase 2, which was filed in October 2021, addressing ICM funding requirements. The OEB decision approved $127 million of EGI's capital funding, which was incorporated into final rates, effective July 1, 2022.

EGI 2023 Rate Application

- In June 2022, EGI filed for Phase 1 of the application for setting rates for 2023 (the 2023 Application). EGI expects to receive an OEB decision on Phase 1 of the 2023 Application in the second half of 2022. EGI does not anticipate its 2023 capital investment to require incremental funding during the final year of its Price Cap IR term (see below).

Amalgamation

On August 30, 2018, the OEB issued its decision on the application for the amalgamation of EGI and Union Gas. The OEB’s major key determinations in the decision were, among others, as follows:

- The rebasing year is deferred until 2024. The Company asked for a 10-year deferred rebasing period, but the OEB allowed for only five years. DBRS Morningstar believes the five-year rebasing period is credit positive because shorter periods have more certainty regarding cost recovery and forecasts.
- The annual rate change during the deferred rebasing period is based on a price-cap index (PCI), where PCI growth is driven by an inflation factor using the Gross Domestic Product Implicit Price Index's Final Domestic Demand index as the inflation factor, less a productivity factor of zero and a stretch factor of 0.3%. The stretch factor is used in incentive regulation to measure the efficiency of utilities (the actual costs/forecast costs), with superior performance having a lower stretch factor.
- The earnings sharing mechanism during the 2019–23 period will be on a 50:50 basis between EGI and its ratepayers for all earnings in excess of 150 bps over the allowed ROE. This means earnings in excess of up to 150 bps will be retained by EGI.
- All capex in excess of the OEB-defined materiality threshold will be recovered through an ICM mechanism, subject to the ICM eligibility criteria during the deferred rebasing term (see the next section).
- EGI continues to pass through costs associated with Y-factors. The Y-factors are costs related to gas commodity and upstream transportation costs, demand-side management cost changes, lost revenue adjustment mechanism changes for the contract market, and normalized average consumption/average use.
- The Z-factor materiality threshold will be set at $5.5 million on a revenue requirement basis.
- During the deferred rebasing period, EGI will continue to purchase market-based storage services to meet the needs of legacy EGD's in-franchise customers. This will mean that legacy Union Gas customers continue to benefit from the sale of market-based storage until issues of rate harmonization are considered.

ICM Mechanism

- ICM is an OEB funding mechanism for significant capital projects, for which a utility requires rate recovery in advance of its next regularly scheduled cost of service (COS; rebasing) application.
- The test for ICM eligibility is that a capital project is not only part of a capital project that is incremental to the materiality threshold (defined below) but must also be driven by capital spending requirements that are extraordinary and unanticipated.
- Materiality means the amount of capital spending must exceed the OEB-defined threshold (which represents a utility's financial capacities underpinned by existing rates, including growth). Any incremental capital amounts approved for rate recovery must fit within the total eligible incremental capital amount and must clearly have a significant influence on the operation of the utility. In addition, to be eligible for ICM, the amount of capital spending must meet the need and prudence criteria. Need means the total amount of capital spending must be for discrete projects and must be outside of the base upon which the rates are derived. Prudence means the utility's decision to incur the costs must represent the most cost-effective option for ratepayers.

Capital Project - Significant Commercially Secured Projects (Between 2022 and 2027, all approved by OEB)

- Storage Enhancement: This project is part of a larger delta-pressuring project to increase deliverability and storage capacity at EGI's storage facilities. The additional deliverability and storage capacity will be sold as part of the Company's unregulated storage portfolio. The estimated capital cost is $80 million.
- Lake Shore KOL Replacement Project: The replacement project of approximately 4.5 kilometres of natural gas pipeline and ancillary facilities of the Cherry to Bathurst Streets segment of the Kipling Oshawa Loop along Lake Shore Boulevard in the City of Toronto. The project is expected to be placed into service in Q4 2022. The estimated capital cost is $130 million.
- Natural Gas Expansion Program (NGEP): Under Phase 2 of the NGEP, EGI will be provided up to $214 million in funding assistance to deliver 25 community expansion and two economic development projects throughout Ontario. The estimated capital cost is $121 million (net of maximum funding assistance).
- Panhandle Regional Expansion: Expansion of the Panhandle Transmission System, which supplies natural gas from the Dawn Hub to customers in Southern Ontario, west of Dawn, consists of construction of the Panhandle Loop and Leamington interconnects, and is expected to receive a full COS-regulated return upon OEB approval. In-service dates are targeted for November 2023 and November 2024. The estimated capital cost is $314 million.

ESG Factors

There are currently no environmental, social, or governance (ESG) factors affecting the ratings of EGI.

* A Relevant Effect means that the impact of the applicable ESG risk factor has not changed the rating or rating trend on the issuer.
A Significant Effect means that the impact of the applicable ESG risk factor has changed the rating or trend on the issuer.
If any factor is proposed to have a Significant Effect, this should be reflected in the Press Release

ESG Factor		ESG Credit Consideration Applicable to the Credit Analysis: Y/N		Extent of the Effect on the ESG Factor on the Credit Analysis: Relevant (R) or Significant (S)*
Environmental		Overall:	N	N
	Emissions, Effluents, and Waste	Do we consider that the costs or risks for the issuer or its clients result, or could result, in changes to an issuerÆs financial, operational, and/or reputational standing?	N	N
	Carbon and GHG Costs	Does the issuer face increased regulatory pressure relating to the carbon impact of its or its clients' operations resulting in additional costs and/or will such costs increase over time affecting the long term credit profile?	N	N
	Resource and Energy Management	Does the scarcity of sourcing key resources hinder the production or operations of the issuer, resulting in lower productivity and therefore revenues?	N	N
	Land Impact and Biodiversity	Is there a financial risk to the issuer for failing to effectively manage land conversion, rehabilitation, land impact, or biodiversity activities?	N	N
	Climate and Weather Risks	In the near term, will climate change and adverse weather events potentially disrupt issuer or client operations, causing a negative financial impact? In the long term, will the issuer's or client's business activities and infrastructure be materially affected financially by a 2C rise in temperature?	N	N
Social		Overall:	N	N
	Social Impact of Products and Services	Do we consider that the social impact of the issuer's products and services could pose a financial or regulatory risk to the issuer?	N	N
	Human Capital and Human Rights	Is the issuer exposed to staffing risks, such as the scarcity of skilled labour, uncompetitive wages, or frequent labour relations conflicts that could result in a material financial or operational impact?	N	N
		Do violations of rights create a potential liability that can negatively affect the issue's financial wellbeing or reputation?	N	N

All figures are in Canadian dollars unless otherwise noted.

For the definition of Issuer Rating, please refer to Rating Definitions under Rating Policy on www.dbrsmorningstar.com.

Generally, Issuer Ratings apply to all senior unsecured obligations of an applicable issuer, except when an issuer has a significant or unique level of secured debt.

About DBRS Morningstar

DBRS Morningstar is a full-service global credit ratings business with approximately 700 employees around the world. We're a market leader in Canada, and in multiple asset classes across the U.S. and Europe.

We rate more than 3,000 issuers and nearly 60,000 securities worldwide, providing independent credit ratings for financial institutions, corporate and sovereign entities, and structured finance products and instruments. Market innovators choose to work with us because of our agility, transparency, and tech-forward approach.

DBRS Morningstar is empowering investor success as the go-to source for independent credit ratings. And we are bringing transparency, responsiveness, and leading-edge technology to the industry.

That's why DBRS Morningstar is the next generation of credit ratings.

Research Update:

Enbridge Gas Inc. Assigned 'A-' Issuer Credit Rating; Outlook Stable

Rating Action Overview

- On Jan. 2, 2019, S&P Global Ratings assigned its 'A-' long-term and 'A-2' short-term issuer credit ratings to Ontario-based gas distribution utility operator Enbridge Gas Inc. (EGI). The outlook is stable.
- EGI is formed through the amalgamation of Enbridge Gas Distribution Inc. (EGD) and Union Gas Ltd. (Union), both of which were separate stand-alone subsidiaries of Enbridge Inc. (Enbridge) previously.
- The ratings on EGI's senior unsecured debentures that are assumed from EGD and Union are unchanged at 'A-'.
- At the same time, we assigned our 'A-2' global and 'A-1 (Low)' Canada National Scale ratings to EGI's commercial paper program.
- The stable outlook on Enbridge Gas Inc. reflects S&P Global Ratings' expectation that the company will continue to focus on and generate stable and predictable cash flows from its regulated gas distribution operations, and that the company's adjusted funds from operations (AFFO) to debt will range from 12%-13%, for the 2019-2021 forecast period.

Rating Action Rationale

Our ratings assignment follows the formation of Enbridge Gas Inc. (EGI), a new legal entity established after the Ontario Energy Board (OEB) approved the amalgamation of Enbridge Gas Distribution Inc. (EGD) and Union Gas Ltd. (Union) in 2018, with revised terms. Prior to forming EGI, both EGD and Union were separate stand-alone subsidiaries of parent company Enbridge. Key terms of the amalgamation include:

- EGI will primarily operate under inflation-indexed rates through 2023, before starting a new rate application cycle in 2024.
- The annual revenue increases through 2023 will be subject to a productivity stretch factor constraint of 0.3%, that reduces the annual revenue increases by the equivalent.
- All earnings in excess of 150 basis points over the OEB-approved return on equity will be shared equally between EGI and its ratepayers.

Our assessment of EGI's business risk reflects our view of the OEB's regulatory framework, which underpins the utility's predictable and steady cash flow. In our view, the regulatory process is transparent, consistent, and predictable. These factors collectively support EGI's timely recovery of prudently spent capital and operating expenses. In addition, commodity costs are recovered through a quarterly adjustment mechanism from rate-payers, limiting EGI's exposure to commodity risk.

Further supporting our view is EGI's large customer base. EGI serves almost all of Ontario's gas distribution network with about 3.7 million of customers, most of whom are residential and small business customers. As such, we expect EGI's cash flows to remain stable. However, demand for natural gas in the residential customer class can vary due to weather-driven fluctuations that can result in some cash flow volatility. Our favorable view of EGI's business risk is slightly offset by the company's limited geographic footprint and exposure to a single regulatory regime.

From a financial risk perspective, we assess EGI's cash flow using our low volatility leverage benchmarks compared with the typical corporate issuer, which reflects our favorable view of the company's lower-risk regulated gas distribution model and effective management of regulatory risk. Under our base-case scenario, including the revised terms of the amalgamation per the OEB, capital expenditure averaging about C$1 billion per year in 2019-2021, a dividend payment ratio reflecting 100% of EGI's operating cash flow, and synergies, we forecast average adjusted funds from operations (AFFO) to debt of about 12%-13% over the next two to three years.

Outlook

The stable outlook on Enbridge Gas Inc. (EGI) reflects S&P Global Ratings' expectation that the company will continue to focus on and generate stable and predictable cash flows from its regulated gas distribution operation. We also expect EGI will execute its integration plans from the amalgamation and capital programs on time and on budget leading to adjusted funds from operations (AFFO) to debt of about 12%-13% in 2019-2021.

The stable outlook also reflects our view that Enbridge Inc. (Enbridge), the parent, will maintain AFFO to debt in the 15%-18% range through 2020.

Furthermore, the stable outlook on EGI reflects our expectation that both the utility's insulation features and Enbridge's strategy to preserve the utilities' credit strength will not change.

Downside scenario

We could lower the ratings on EGI if the utility's financial measures deteriorate, with forecast AFFO to debt approaching 10% with no prospects of improvement. This could happen if the company experiences material operational issues, delays, and cost overruns in capital and post-amalgamation integration projects, or if adverse material regulatory decisions materially weaken the company's financial performance, or suggest a weaker business risk profile.

Alternatively, we could lower the rating on EGI if we lower our ratings on Enbridge. This could happen if Enbridge's consolidated AFFO to debt stays below 13% or debt to EBITDA remains above 5x in 2019 and beyond.

Upside scenario

A positive rating action on EGI is unlikely without an upgrade to Enbridge because our rating on EGI is constrained by the group credit profile of Enbridge, after accounting for an additional one notch of separation, since EGI is an insulated subsidiary of Enbridge. As such, we could upgrade EGI over the next 12 to 24 months if we upgrade Enbridge, and EGI's stand-alone credit profile (SACP) indicates a higher SACP. For EGI, a higher SACP could be warranted if EGI improves its financial measures with sustained AFFO to debt of about 13%, consistently. An upgrade at the Enbridge group level would require Enbridge to maintain AFFO to debt above 17% and adjusted debt to EBITDA of about 4x, while maintaining its current level of cash flow stability.

Company Description

Enbridge Gas Inc. (EGI) operates as a rate-regulated natural gas distribution utility company in Ontario, Canada. The company was formed through the amalgamation of Enbridge Gas Distribution Inc. and Union Gas Ltd. The company also owns and operates regulated and non-regulated natural gas storage facilities in Ontario. EGI has a rate base of about C$10.5 billion and serves about 3.7 million customers.

Our Base-Case Scenario

- No significant cost overruns or delays in the post-amalgamation integration of EGD and Union.
- Capital expenditure of about C$1.0 billion per year in each of 2019-2021.
- Dividends payout ratio reflects 100% of EGI's cash flow from operations.
- EGI will earn close to its authorized return on equity.
- EGI will maintain its deemed capital structure of 64/36 debt to equity.
- Customer growth of about 1.0%-1.5% per year.
- Enbridge, the parent, or its affiliates will provide timely equity infusions to maintain EGI's deemed capital structure.
- Stable regulatory regime in Ontario, without any material, adverse regulatory decisions for EGI.
- Natural gas cost remains a pass through to rate-payers.

Liquidity

In our assessment, EGI's liquidity is adequate. We expect that liquidity sources will cover uses by more than 1.1x in the next 12 months. We also expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our opinion, EGI has sound relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve its liquidity.

Principal liquidity sources:

- Projected FFO of about C$1.25 billion;
- Committed credit facilities availability of about C$650 million (net of commercial paper backstop) maturing in 2020 and 2021; and
- Ongoing group cash injection of about C$800 million.

Principal liquidity uses:

- Capital spending of about C$1.2 billion over the next 12 months; and
- Dividends of about C$1.25 billion over the next 12 months.

Group Influence

We view EGI as an insulated subsidiary within the Enbridge group, reflecting our view that regulatory restrictions and the parent's strategy with respect to EGI will continue to preserve the utility's credit strength, consistent with our view of one-notch insulation for EGI. Specifically, the regulatory restrictions, inherited from EGD through the amalgamation, continue to limit EGI's business activities and requires the utility to maintain its common equity thickness at the regulatory deemed capital structure. This restriction, in our view, prevents EGI from supporting the Enbridge group in a manner that could impair its stand-alone creditworthiness.

Issue Ratings - Subordination Risk Analysis

Capital structure

As part of the amalgamation, EGI will assume all obligations, including senior unsecured debentures and outstanding credit facilities, of EGD and Union. The senior unsecured debt ranks pari passu with each other. We estimate a total of about C$9 billion of senior unsecured debentures in EGI's capital structure.

Analytical conclusions

We rate the senior unsecured debt at 'A-', the same as the issuer credit rating on EGI because the debt is issued by a qualifying investment-grade regulated utility per our criteria. The 'A-2' commercial paper rating reflects our issuer credit rating on the company, consistent with our criteria.

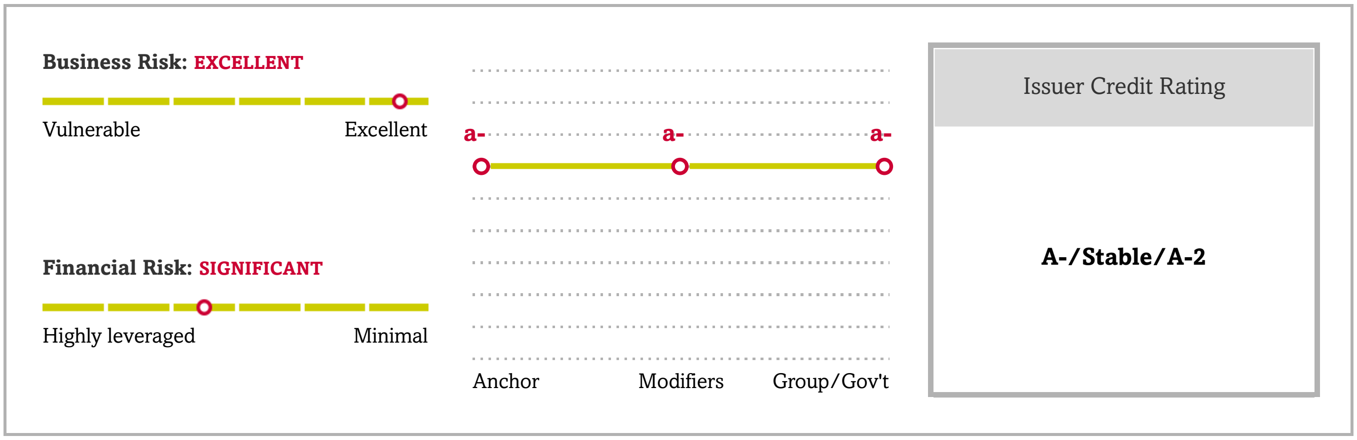
Table Of Contents

Enbridge Gas Inc.



Credit Highlights

Overview

Key strengths	Key risks
Enbridge Gas Inc. (EGI) is a low-risk rate-regulated natural gas distribution and transmission company.	EGI operates only in Ontario, hence limited geographic and regulatory diversification.
About two-thirds of EGI's distribution revenue comes from residential and small business customers, providing stable cash flows.	Negative discretionary cash flow, indicating external funding needs.
Commodity costs are pass through to customers and recovered through quarterly adjustment mechanism, limiting EGI's exposure to commodity risk.	

The OEB established deferral accounts to record costs and losses arising from the COVID-19 pandemic. On March 25, 2020, The Ontario Energy Board (OEB), regulator of Ontario, acknowledges that utility distributors, including Enbridge Gas Inc. (EGI), may incur incremental costs related to the ongoing coronavirus pandemic. As a result, the OEB established deferral accounts for utilities, including EGI, to track any incremental costs and lost revenues related to the COVID-19 pandemic. This allows EGI to recover potential lost revenue, incremental expenses, or costs relating to bad debt expenses subject to OEB approval. The pandemic is likely to result in cash flow volatility and lag for EGI in the short-term but the deferral accounts provides a recovery mechanism for utilities.

EGI has sufficient liquidity sources to cover its uses over the next six-12 months. The utility has a C$2.0 billion credit facility, mostly undrawn, to backstop its commercial paper program. In addition, the company's long-term debt maturity is modest for 2020, with about C$400 million maturing in November 2020. Moreover, EGI recently issued about C$1.2 billion of long-term debt in late March. As a result, we expect EGI to have sufficient liquidity over the next six-12 months. Furthermore, we expect the utility to scale back on capital spending or dividends to the parent group if needed.

EGI lacks geographic and regulatory diversity.

EGI operates only in Ontario. It is the largest gas distributor in Ontario and serves virtually all of Ontario with approximately 3.8 million residential, commercial, and industrial customers. However, compared with other utilities, EGI lacks geographic and regulatory diversity, making it reliant on the OEB to sustain its credit quality.

Outlook: Stable

The stable outlook on Enbridge Gas Inc. (EGI) reflects S&P Global Ratings' expectation that the company will continue to focus on and generate stable and predictable cash flows from its regulated gas distribution operation. We also expect EGI will execute its integration plans from the amalgamation and capital programs on time and on budget leading to funds from operations (FFO) to debt of about 11%-12% through 2021.

The stable outlook also reflects our view that Enbridge Inc. (Enbridge), the parent, will maintain FFO to debt in the 15%-18% range through 2021. Furthermore, the stable outlook on EGI reflects our expectation that both the utility's insulation features and Enbridge's strategy to preserve the utilities' credit strength will not change.

Downside scenario

We could lower the ratings on EGI if the utility's financial measures deteriorate, with FFO to debt approaching 10% with no prospects of improvement.

Alternatively, we could lower the rating on EGI if we lower our ratings on Enbridge. This could happen if Enbridge's consolidated adjusted FFO to debt stays below 13% or debt to EBITDA is sustained above 5x.

Upside scenario

Although unlikely, we can upgrade EGI over the next 18-24 months if we also upgrade Enbridge, and if EGI's stand-alone credit profile (SACP) indicates a higher SACP.

EGI could warrant a higher SACP if it improves its financial measures with FFO to debt consistently above 13%. An upgrade at the parent level would require Enbridge to maintain FFO to debt above 17% and adjusted debt to EBITDA of about 4x while maintaining its current level of cash flow stability.

Our Base-Case Scenario

Assumptions

- No material persistent impact from the COVID-19 pandemic.
- Stable regulatory regime in Ontario with no material adverse regulatory decisions.
- EGI will primarily operate under inflation-indexed rates through 2023, before starting a new rate application cycle in 2024.
- The annual revenue increases through 2023 will be

Key Metrics

	2019a	2020e	2021f

subject to a productivity stretch factor constraint of 0.3%, that reduces the annual revenue increases by the equivalent.

- All earnings in excess of 150 basis points over the OEB-approved return on equity will be shared equally between EGI and its ratepayers.
- EGI will earn close to its authorized return on equity.
- EGI will maintain its deemed capital structure of 64/36 debt to equity.
- Natural gas cost remains a pass through to rate-payers.
- Capital expenditure of about C$1.0 billion to C$1.5 billion per year in each of 2020-2022.
- Dividends payout ratio reflects about 100% of EGI's cash flow from operations.

Company Description

Enbridge Gas Inc. (EGI) operates as a rate-regulated natural gas distribution utility company in Ontario, Canada. The company was formed through the amalgamation of Enbridge Gas Distribution Inc. and Union Gas Ltd. in 2019. The company also owns and operates regulated and nonregulated natural gas storage facilities in Ontario. EGI's distribution rates are set under a five-year incentive regulation framework using a price cap mechanism and it serves about 3.8 million customers.

Business Risk: Excellent

Our assessment of EGI's business risk continues to reflect our view of the OEB's regulatory framework, which underpins the utility's predictable and steady cash flow. In our view, the regulatory process is transparent, consistent, and predictable. These factors collectively support EGI's timely recovery of prudently spent capital and operating expenses. In addition, commodity costs are recovered through a quarterly adjustment mechanism from rate payers, limiting EGI's exposure to commodity risk.

Further supporting our view is EGI's large customer base. EGI serves almost all of Ontario's gas distribution network with about 3.8 million of customers, most of whom are residential and small business customers. As such, we expect EGI's cash flows to remain stable. However, demand for natural gas in the residential customer class can vary due to weather-driven fluctuations that can result in some cash flow volatility. Our favorable view of EGI's business risk is slightly offset by the company's limited geographic footprint and exposure to a single regulatory regime.

Sources: S&P Global Ratings, company data.

Financial Risk: Significant

We assess EGI's financial measures using our low volatility financial benchmark table relative to the typical industrial issuer. This reflects the company's lower-risk regulated gas distribution operation and effective management of regulatory risk. EGI has a large capital program--about 1.65x that of depreciation expense--that will result in negative discretionary cash flow and continually rely on external financing to fund its capital programs.

In respond to the current coronavirus pandemic, the OEB has setup deferral accounts for utilities, including EGI, to track incremental costs and lost revenues related to the pandemic for later disposition, subject to OEB review and approval. As a result, we expect there will be some cash flow volatility associated with EGI's financial measures for 2020.

Under our base case scenario that includes a short-term impact from the pandemic and a stable regulatory environment with no material adverse regulatory decisions, capital spending of about C$1.0 billion to C$1.5 billion in each of 2020 and 2021, and net dividend payments of about C$450 million annually, we expect EGI's FFO to debt to be about 11%-12% in 2020 and 2021.

Liquidity: Adequate

In our assessment, EGI's liquidity is adequate. We expect that liquidity sources will cover uses by more than 1.1x in the next 12 months. We also expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our opinion, EGI has solid relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve its liquidity.

Principal Liquidity Sources	Principal Liquidity Uses
• Cash of about C$77 million as of Dec. 31, 2019; and • Committed credit facilities availability of about C$2 billion; and • Cash FFO of about C$1.2 billion	• Debt maturities of about C$1.3 billion as of Dec. 31, 2019, including current portion of long-term debt and outstanding commercial paper; and • Capital spending of about C$1.1 billion; and • Dividends of about C$450 million, net of ongoing group support.

Debt maturities

- 2020: C$400 million
- 2021: C$375 million
- 2022: C$125 million
- 2023: C$350 million
- 2024: C$300 million

Environmental, Social, And Governance

We view EGI's exposure to environmental, social, and governance-related risks as similar to the broader industry. EGI is a natural gas distributor. For natural gas network operators, environmental risks include gas leaks and explosions and emission of greenhouse gases (GHG), which can affect biodiversity. We believe EGI's environmental risk is consistent with the broader industry because the company continually monitors and replaces aging infrastructure to reduce the potential of gas leaks and explosions. In addition, the company also participates in the federal government's carbon levy program, to offset its GHG footprint in its gas distribution operations.

From a social perspective, EGI has a history of providing safe and reliable natural gas to its customers, which should enable it to maintain social cohesion. Governance factors are neutral. In our view, EGI's board is capably engaged in risk oversight on behalf of all stakeholders.

Group Influence

We view EGI as an insulated subsidiary within the Enbridge group. Specifically reflecting our views that EGI is incorporated as separate legal entities with financial performance and funding that are highly independent from the group, including issuing long- and short-term debt, maintaining its own separate credit facilities, and not commingling its funds, assets, or cash flows with the rest of the group. In addition, there is a strong economic basis for Enbridge to preserve EGI's credit strength, and we do not expect a default of the other group entities within Enbridge to directly lead to a default at EGI.

Issue Ratings - Subordination Risk Analysis

Capital structure

As of Dec. 31, 2019, EGI's capital structure consists of about C$900 million of short-term debt in commercial paper and about C$8.2 billion of senior unsecured long-term debt.

Analytical conclusions

We rate EGI's senior unsecured debt at 'A-', the same as the issuer credit rating (ICR) on EGI because the debt is issued by a qualifying investment-grade regulated utility. The rating on the commercial paper is 'A-2' reflecting our 'A-' ICR on EGI.

Reconciliation

Enbridge Gas Inc.

Credit Highlights

Overview

Key strengths	Key risks
Enbridge Gas Inc. (EGI) is a low-risk rate-regulated natural gas distribution and transmission company.	EGI operates only in Ontario, hence limited geographic and regulatory diversification.
About two-thirds of EGI's distribution revenue comes from residential and small business customers, providing stable cash flows.	Negative discretionary cash flow, indicating external funding needs.
Commodity costs are passed through to customers and recovered through quarterly adjustment mechanism, limiting EGI's exposure to commodity risk.	

COVID-19 has had a modest impact on EGI's operations and cash flow so far. We don't expect the pandemic to have a persistent material effect on Enbridge Gas Inc.'s (EGI's) financial measures. EGI's financial performance has been in line with our expectation with funds from operation (FFO) to debt of about 11% for the 12 months ending Sept. 30, 2020. In addition, in March 2020, EGI's regulator, Ontario Energy Board (OEB), established deferral accounts for utilities to track incremental costs and lost revenues related to COVID-19. This allows EGI to potentially recover lost revenue, incremental expenses, or costs relating to bad debt expenses subject to OEB approval but is likely to result in cash flow volatility and lag for EGI in the short term. In addition, decrease in gas consumption from large commercial and industrial customers as a result of the pandemic is partially offset by increase in consumption from the higher margin residential segment. Furthermore, the company's synergies realization from the amalgamation of Enbridge Gas Distribution Inc. and Union Gas Limited in 2019 also help to support financial measures.

Large capital spending plan over the outlook period. EGI continues to have large capital expenditures through the 2021-2022 outlook period that is about 1.8x its depreciation cost, which could pressure credit metrics and can lead to higher execution risks, including completing its key capital projects on time and within its budget.

EGI lacks geographic and regulatory diversity. EGI operates only in Ontario. It is the largest gas distributor in Ontario and serves virtually all of Ontario with approximately 3.8 million residential, commercial, and industrial customers. However, compared with other utilities, EGI lacks geographic and regulatory diversity, making it reliant on the OEB to sustain its credit quality.

Outlook

The stable outlook on EGI reflects S&P Global Ratings' expectation that the company will continue to focus on and generate stable and predictable cash flows from its regulated gas distribution operation. We also expect EGI will execute its integration plans from the amalgamation and capital programs on time and on budget leading to FFO to debt of about 11%-12% during our two-year outlook period.

The stable outlook also reflects our view that Enbridge Inc. (Enbridge), the parent, will maintain FFO to debt in the 15%-17% range through 2022. Furthermore, the stable outlook on EGI reflects our expectation that both the utility's insulation features and Enbridge's strategy to preserve the utilities' credit strength will not change.

Downside scenario

We could lower the ratings on EGI if the utility's financial measures deteriorate, with FFO to debt approaching 10% with no prospects of improvement.

Alternatively, we could lower the rating on EGI if we lower our ratings on Enbridge. This could happen if Enbridge's consolidated adjusted FFO to debt stays below 13% or debt to EBITDA is sustained above 5x.

Upside scenario

Although unlikely, we can upgrade EGI over the next 18-24 months if we also upgrade Enbridge, and if EGI's stand-alone credit profile (SACP) indicates a higher SACP.

EGI could warrant a higher SACP if it improves its financial measures with FFO to debt consistently above 13%. An upgrade at the parent level would require Enbridge to maintain FFO to debt above 17% and adjusted debt to EBITDA of about 4x while maintaining its current level of asset mix and cash-flow stability.

Our Base-Case Scenario

Assumptions

- No material persistent impact from the COVID-19 pandemic.
- Stable regulatory regime in Ontario with no material adverse regulatory decisions.
- EGI will primarily operate under inflation-indexed rates through 2023, before starting a new rate application cycle in 2024.
- The annual revenue increases through 2023 will be subject to a productivity stretch factor constraint of 0.3%, that reduces the annual revenue increases by the equivalent amount.
- All earnings in excess of 150 basis points over the OEB-approved return on equity will be shared equally between EGI and its ratepayers.
- EGI will earn close to its authorized return on equity.
- EGI will maintain its deemed capital structure of 64%/36% debt to equity.
- Natural gas cost and the federal carbon levy remain a pass through to ratepayers.

- Capital expenditure of about C$1.1 billion-C$1.6 billion in each of 2020 and 2022.
- Dividends of about C$450 million in 2020 and C$200 million in each of 2021 and 2022.

Key Metrics

	2019a	2020e	2021f

a--Actual. e--Estimate. f--Foremost. FFO--Funds from operations.

Company Description

EGI operates as a rate-regulated natural gas distribution utility company in Ontario, Canada. The company was formed through the amalgamation of Enbridge Gas Distribution Inc. and Union Gas Ltd. in 2019. The company also owns and operates regulated and nonregulated natural gas storage facilities in Ontario. EGI's distribution rates are set under a five-year incentive regulation framework using a price cap mechanism and it serves about 3.8 million customers.

DCF/debt (%)	(11.4)	(2.0)	(18.6)	(19.4)

Business Risk

Our assessment of EGI's business risk continues to reflect our view of the OEB's regulatory framework, which underpins the utility's predictable and steady cash flow. In our view, the regulatory process is transparent, consistent, and predictable. These factors collectively support EGI's timely recovery of prudently spent capital and operating expenses. In addition, the federal carbon levy is a flow through cost to customers and gas commodity costs are recovered through a quarterly adjustment mechanism from ratepayers, limiting EGI's exposure to commodity risk.

Further supporting our view is EGI's large customer base. EGI serves almost all of Ontario's gas distribution network with about 3.8 million of customers, most of whom are residential and small business customers. As such, we expect EGI's cash flows to remain stable. However, demand for natural gas in the residential customer class can vary due to weather-driven fluctuations that can result in some cash flow volatility. Our favorable view of EGI's business risk is slightly offset by the company's limited geographic footprint and exposure to a single regulatory regime.

Financial Risk

We assess EGI's financial measures using our low volatility financial benchmark table relative to the typical industrial issuer. This reflects the company's lower-risk regulated gas distribution operation and effective management of regulatory risk. EGI has a large capital program--about 1.8x that of depreciation expense--that will result in negative discretionary cash flow and continually rely on external financing to fund its capital programs.

In response to the coronavirus pandemic, the OEB set up deferral accounts for utilities in early 2020, including EGI, to track incremental costs and lost revenues related to the pandemic for later disposition, subject to OEB review and approval. As a result, we expect there will be some cash flow volatility associated with EGI's financial measures for 2020.

Under our base-case scenario that includes a short-term impact from the pandemic and a stable regulatory environment with no material adverse regulatory decisions, capital spending of about C$1.1 billion-C$1.6 billion in each of 2020 and 2022, and net dividend payments of about C$450 million in 2020 and about C$200 million in each of 2021 and 2022, we expect EGI's FFO to debt to be about 11%-12% in 2020 and 2022.

	Debt	**EBITDA**	**EBIT**	**Interest expense**	**Funds from operations**	**Cash flow from operations**	**Capital expenditure**
	9,435.1	1,639.0	1,025.5	394.5	1,239.5	1,277.5	1,104.0

Liquidity

In our assessment, EGI's liquidity is adequate. We expect liquidity sources will cover uses by more than 1.1x in the next 12 months. We also expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our opinion, EGI has solid relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve its liquidity.

Principal liquidity sources

- Cash of about C$10 million as of Sept. 30, 2020;
- Committed credit facilities availability of about C$2 billion; and
- Cash FFO of about C$1.2 billion.

Principal liquidity uses

- Debt maturities of about C$1.6 billion as of Sept. 30, 2020, including current portion of long-term debt and outstanding commercial paper;
- Maintenance capital spending of about C$370 million over the next 12 months; and
- Dividends of about C$260 million, net of ongoing group support.

Debt maturities

- 2021: C$375 million
- 2022: C$125 million
- 2023: C$350 million
- 2024: C$300 million

Environmental, Social, And Governance

We view EGI's exposure to environmental, social, and governance-related risks as similar to the broader industry. EGI is a natural gas utility distributor. For natural gas network operators, environmental risks include gas leaks and explosions and emission of greenhouse gases (GHG), which can affect biodiversity. We view EGI's environmental risk is consistent with the broader industry because the company continually monitors and replaces aging infrastructure to reduce the potential for gas leaks and explosions. In addition, the company also participates in the federal government's carbon levy program, to offset its GHG footprint in its gas distribution operations. Furthermore, the company recently launched a pilot initiative to blend renewable hydrogen gas into existing EGI natural gas network in an effort to reduce GHG.

From a social perspective, EGI has a history of providing safe and reliable natural gas to its customers, which should enable it to maintain social cohesion. Governance factors are neutral. In our view, EGI's board is capably engaged in risk oversight on behalf of all stakeholders.

Group Influence

We view EGI as an insulated subsidiary within the Enbridge group. Specifically reflecting our views that EGI is incorporated as separate legal entity with financial performance and funding that are highly independent from the group, including issuing long- and short-term debt, maintaining its own separate credit facilities, and not commingling its funds, assets, or cash flows with the rest of the group. In addition, there is a strong economic basis for Enbridge to preserve EGI's credit strength, and we do not expect a default of the other group entities within Enbridge to directly lead to a default at EGI.

Issue Ratings - Subordination Risk Analysis

Capital structure

As of Sept. 30, 2020, EGI's capital structure consists of about C$970 million of short-term debt, including outstanding commercial paper and about C$9.4 billion of senior unsecured long-term debt.

Analytical conclusions

We rate EGI's senior unsecured debt at 'A-', the same as the issuer credit rating (ICR) on EGI because the debt is issued by a qualifying investment-grade regulated utility. The rating on the commercial paper is 'A-2' reflecting our 'A-' ICR on EGI.

Overview

Key strengths	Key risks
Enbridge Gas Inc. (EGI) is a low-risk, rate-regulated natural gas distribution and transmission company.	EGI operates only in Ontario and therefore has limited geographic and regulatory diversification.
About two-thirds of EGI's distribution revenue comes from residential and small business customers, providing stable cash flows.	EGI has negative discretionary cash flow linked with increasing capital expenditure activities, indicating external funding needs.
Commodity costs are passed through to customers and recovered through a quarterly adjustment mechanism, limiting EGI's exposure to commodity risk.	

We expect EGI's financial measures to remain within its financial risk profile category through 2023. This includes a projected funds from operations (FFO) to debt ratio of about 11% through 2023. In addition, we anticipate EGI's capital expenditures to remain elevated during 2022, largely reflecting new customer connections and system replacement projects such as the Lake Shore and St. Laurent natural gas pipeline replacement projects.

Additionally, as in prior years, we expect in 2022 EGI will realize positive synergies from the amalgamation of Enbridge Gas Distribution Inc. (EGD) and Union Gas Ltd. (Union Gas), by continuing to integrate operations and optimizing storage and transmission assets.

Large capital spending primarily results in negative discretionary cash flow over our outlook period. EGI continues to have large capital expenditures through the 2022-2023 outlook period. They are about 2x its depreciation cost, which we expect will lead to negative discretionary cash flow over our forecast period, resulting in external funding needs.

EGI lacks geographic and regulatory diversity. EGI operates only in Ontario. It is the largest gas distributor in Ontario and serves virtually all of Ontario with approximately 3.8 million residential, commercial, and industrial customers. However, compared with other utilities, EGI lacks geographic and regulatory diversity, making it reliant on the Ontario Energy Board (OEB) and its regulation to sustain its credit quality.

Outlook

The stable outlook on EGI reflects S&P Global Ratings' expectation that the company will continue to focus on and generate stable and predictable cash flows from its regulated gas distribution operation. We expect that EGI will continue to benefit from modest growth in new customers, the integration of EGD and Union Gas operations and assets, and the timely and on-budget completion of capital programs. This leads to estimated FFO to debt of 11%-12% during our two-year outlook period.

The stable outlook also reflects our view that Enbridge Inc. (Enbridge), the parent, will maintain FFO to debt of 15%-17% in 2022. Furthermore, the stable outlook on EGI reflects our expectation that both the utility's insulation features and Enbridge's strategy to preserve the utilities' credit strength will not change.

Downside scenario

We could lower the ratings on EGI if the utility's financial measures deteriorate, with FFO to debt approaching 10% with no prospects of improvement.

Alternatively, we could lower the ratings on EGI if we lower our ratings on Enbridge. This could happen if Enbridge's consolidated adjusted FFO to debt falls below 13% or debt to EBITDA is sustained above 5x.

Upside scenario

Although unlikely, we could upgrade EGI over the next 18-24 months if we also upgrade Enbridge, and if EGI's stand-alone credit profile (SACP) indicates a higher SACP.

EGI could warrant a higher SACP if it improves its financial measures with FFO to debt consistently above 13%. An upgrade at the parent level would require Enbridge to maintain FFO to debt above 17% and adjusted debt to EBITDA of about 4x while maintaining its current level of asset mix and cash-flow stability.

Our Base-Case Scenario

Assumptions

- Stable and predictable cash flows from its regulated gas distribution operation, also benefiting from modest new customer growth.
- Stable regulatory regime in Ontario with no material adverse regulatory decisions.
- EGI will primarily operate under inflation-indexed rates throughout 2022 and 2023, before starting a new rate application cycle in 2024.
- The annual revenue increases through 2023 will be subject to a productivity stretch factor constraint of 0.3%, which reduces the annual revenue increases by the equivalent amount.
- All earnings exceeding 150 basis points over the OEB-approved return on equity will be shared equally between EGI and its ratepayers.
- EGI will earn close to its authorized return on equity.
- EGI will operate at or close to its authorized capital structure of 64%/36% debt to equity for the duration of the

outlook period.

- Natural gas cost and the federal carbon levy remain a pass-through to ratepayers.
- Annual capital expenditure estimated to be about C$1.4 billion to C$1.6 billion between 2022 and 2024.
- Dividends of about C$200 million in 2021 and estimated to range from C$525 to C$575 million in each of 2022, 2023, and 2024.

Company Description

EGI operates as a rate-regulated natural gas distribution utility company in Ontario, Canada. The company was formed through the amalgamation of Enbridge Gas Distribution Inc. and Union Gas Ltd. in 2019. The company also owns and operates regulated and nonregulated natural gas storage facilities in Ontario. EGI's distribution rates are set under a five-year incentive regulation framework using a price cap mechanism, and it serves about 3.8 million customers.

N.M.--Not meaningful

Business Risk

Our assessment of EGI's business risk reflects our view of OEB's regulatory framework, which underpins the utility's predictable and steady cash flow. In our view, the regulatory process is transparent, consistent, and predictable. These factors collectively support EGI's timely recovery of prudently spent capital and operating expenses. In addition, the federal carbon levy is a flow-through cost to customers, and gas commodity costs are recovered through a quarterly adjustment mechanism from ratepayers, limiting EGI's exposure to commodity risk.

Further supporting our view is EGI's large customer base. EGI serves almost all of Ontario's gas distribution network with about 3.8 million customers, most of whom are residential and small business customers. As such, we expect EGI's cash flows to remain stable. However, demand for natural gas in the residential customer class can vary due to weather-driven fluctuations that can result in some cash flow volatility. Our favorable view of EGI's business risk is slightly offset by the company's limited geographic footprint and exposure to a single regulatory regime.

Financial Risk

We assess EGI's financial measures using our low volatility financial benchmark table relative to the typical industrial issuer. This reflects the company's lower-risk regulated gas distribution operation and effective management of regulatory risk. EGI has a large capital program--about 2x that of depreciation expense--that will result in negative discretionary cash flow and continually rely on external financing to fund its capital programs.

Under our base-case scenario, which includes a stable regulatory environment with no material adverse regulatory decisions, we expect capital spending of about C$1.3 billion-C$1.6 billion through 2022; net dividend payments of about C$200 million in 2021 and C$500-C$550 million in 2022 and 2023; and FFO to debt of about 11%-12% between 2021 and 2023.

Liquidity

In our assessment, EGI's liquidity is adequate. We expect liquidity sources will cover uses by more than 1.1x in the next 12 months. We also expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our opinion, EGI has strong relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve its liquidity.

Principal liquidity sources

- Cash of about C$8 million as of Sept. 30, 2021;
- Committed credit facilities availability of about C$2 billion;
- Cash FFO of about C$1.2 billion; and
- Working capital inflows of about C$31 million.

Principal liquidity uses

- Debt maturities of about C$1.51 billion as of Sept. 30, 2021;
- Assumed maintenance capital spending of about C$1.0 billion over the next 12 months; and
- Net dividends of about C$444 million.

Debt maturities

- 2022: C$125 million
- 2023: C$350 million
- 2024: C$300 million
- 2025: C$745 million

Environmental, Social, And Governance

ESG Credit Indicators

E-1	**E-2**	E-3	E-4	E-5	S-1	**S-2**	S-3	S-4	S-5	G-1	**G-2**	G-3	G-4	G-5

ESG credit indicators provide additional disclosure and transparency at the entity level and reflect S&P Global Ratings' opinion of the influence that environmental, social, and governance factors have on our credit rating analysis. They are not a sustainability rating or an S&P Global Ratings ESG Evaluation. The extent of the influence of these factors is reflected on an alphanumerical 1-5 scale where 1 = positive, 2 = neutral, 3 = moderately negative, 4 = negative, and 5 = very negative. For more information, see our commentary "ESG Credit Indicators: Definition And Applications," published Oct. 13, 2021.

ESG factors have no material influence on our credit rating analysis of EGI.

Group Influence

We view EGI as an insulated subsidiary within the Enbridge group. This is because EGI is incorporated as separate legal entity with financial performance and funding that are highly independent from the group, including issuing long- and short-term debt, maintaining its own separate credit facilities, and not commingling its funds, assets, or cash flows with the rest of the group. In addition, there is a strong economic basis for Enbridge to preserve EGI's credit strength, and we do not expect a default of the other group entities within Enbridge to directly lead to a default at EGI.

Issue Ratings--Subordination Risk Analysis

Capital structure

As of Sept. 30, 2021, EGI's capital structure consists of about C$1.21 billion of short-term debt in outstanding commercial paper and about C$9.7 billion of senior unsecured long-term debt.

Analytical conclusions

We rate EGI's senior unsecured debt at 'A-', the same as the issuer credit rating (ICR) on EGI because the debt is issued by a qualifying investment-grade regulated utility. The rating on the commercial paper is 'A-2' reflecting our 'A-'

ICR on EGI.

Credit Highlights

Overview

Key strengths	Key risks
Low-risk, rate-regulated natural gas distribution and transmission company.	Operates only in Ontario, thus it has limited geographic and regulatory diversity.
Derives about two-thirds of its distribution revenue from residential and small business customers, which provide stable cash flows.	Negative discretionary cash flow due to increasing capital expenditure activities indicates external funding needs.
Passes commodity costs through to customers and recovers costs through a quarterly adjustment mechanism, which limits its exposure to commodity risk.	

*We expect **Enbridge Gas Inc.** (EGI) to maintain its financial performance throughout our two-year outlook period.* This includes projected funds from operations (FFO) to debt of about 11% and dividends of about C$200 million through 2024. In addition, we anticipate EGI's capital expenditure will remain elevated at about C$1.6 billion during 2022, which largely reflects new customer connections and system replacement projects, such as the Lake Shore and St. Laurent natural gas pipeline replacement projects. The company's large capital spending, totaling more than 2x its depreciation expense, will lead it to generate negative discretionary cash flow over our outlook period, which indicates a need for external funding.

EGI continues to operate in a credit supportive regulatory framework as the Ontario Energy Board (OEB) recently approved its requested capital funding for 2022. In April 2022, the OEB issued its decision on phase 2 of the company's 2022 Rate Application addressing incremental capital module funding requirements, under which it approved C$127 million of EGI's requested capital funding. The approved capital funding was incorporated into the company's final rates and became effective on July 1, 2022. Phase 1 of EGI's 2022 Rate Application was approved in late 2021 and addressed the inflation-indexed price rate mechanism increase of 1.4% for its 2022 consumer rates.

EGI lacks geographic and regulatory diversity. The company operates only in Ontario, is the largest gas distributor in Ontario, and serves virtually all of the province's approximately 3.8 million residential, commercial, and industrial customers. However, compared with other utilities, EGI lacks geographic and regulatory diversity, which makes it reliant on the OEB's regulation to sustain its credit quality.

Outlook

The stable outlook on EGI reflects our expectation that it will continue to focus on, and generate stable and predictable cash flows from, its regulated gas distribution operations. We also expect that the company will continue to benefit from modest growth in its new customers and the timely and on-budget completion of its capital programs. This leads us to forecast FFO to debt of 11%-12% during our two-year outlook period.

The stable outlook also reflects our view that **Enbridge Inc.** (Enbridge), the company's parent, will improve its S&P Global Ratings-adjusted credit metrics throughout the forecast period, with its debt to EBITDA decreasing to 4.7x and its FFO to debt increasing to about 16% by 2024.

Furthermore, the stable outlook reflects our expectation that both the utility's insulation features and Enbridge's strategy to preserve its credit strength will not change.

Downside scenario

We could lower our ratings on EGI if its financial measures deteriorate, including FFO to debt approaching 10% with no prospects for improvement.

Alternatively, we could lower our ratings on EGI if we lower our ratings on Enbridge. This could occur if Enbridge's consolidated S&P Global Ratings-adjusted FFO to debt falls below 13% or it sustains debt to EBITDA of more than 5x.

Upside scenario

Although unlikely, we could upgrade the company over the next 18-24 months if we also upgrade Enbridge and raise our stand-alone credit profile (SACP) on EGI.

We believe the company could warrant a higher SACP if it improves its financial measures, including FFO to debt of consistently above 13%. An upgrade at the parent level would require Enbridge to maintain FFO to debt of more than 17% and S&P Global Ratings-adjusted debt to EBITDA of about 4x while sustaining its asset mix and cash flow stability.

Our Base-Case Scenario

Assumptions

- Stable and predictable cash flows from its regulated gas distribution operations, as well as modest new customer growth;
- A stable regulatory regime in Ontario with no material adverse regulatory decisions;
- EGI will primarily operate under inflation-indexed rates throughout 2022 and 2023 before starting a new rate application cycle in 2024;

- Annual revenue increases through 2023 will be subject to a productivity stretch factor constraint of 0.3%, which reduces the annual revenue rise by the equivalent amount;
- All earnings exceeding 150 basis points over the OEB's approved return on equity will be shared equally between EGI and its ratepayers;
- EGI will earn close to its authorized return on equity;
- EGI will operate at or close to its authorized capital structure of 64%/36% debt to equity for the duration of the outlook period;
- The company continues to pass through its natural gas costs and the federal carbon levy to its ratepayers;
- Annual capital expenditure of about C$1.4 billion-C$1.6 billion between 2022 and 2024; and
- Annual dividends of about C$200 million in 2022, 2023, and 2024.

Business Risk

Our assessment of EGI's business risk reflects our view of the OEB's regulatory framework, which underpins the utility's predictable and steady cash flow. In our view, the OEB's regulatory process is transparent, consistent, and predictable. These factors collectively support the utility's timely recovery of prudently spent capital and operating expenses. In addition, the federal carbon levy flows through to EGI's customers and it recovers its gas commodity costs through a quarterly adjustment mechanism, which limits its exposure to commodity risk.

Further supporting our view is EGI's large customer base. The company serves almost all of Ontario's gas distribution network with about 3.8 million customers, most of which are residential and small business customers. As such, we expect EGI's cash flows to remain stable. However, the demand for natural gas in the residential customer class can vary due to weather-driven fluctuations, which can lead to some cash flow volatility. Our favorable view of the company's business risk is slightly offset by its limited geographic footprint and exposure to a single regulatory regime.

Financial Risk

We assess EGI's financial measures using our low volatility financial benchmark table rather than the benchmark we use for typical industrial issuers. This reflects the company's lower-risk regulated gas distribution operations and effective management of regulatory risk. EGI has a large capital program--about 2x its depreciation expense--that will cause it to generate negative discretionary cash flow and require it to rely on external financing to fund its capital programs.

Under our base-case scenario, which includes a stable regulatory environment with no material adverse regulatory decisions, we expect annual capital spending of about C$1.4 billion-C$1.6 billion, net dividend payments of about C$200 million annually, and FFO to debt of about 11%-12% between 2022 and 2024.

Debt maturities

- 2022: C$125 million;
- 2023: C$350 million;
- 2024: C$300 million;
- 2025: C$745 million; and
- 2026: C$650 million.

Liquidity

We assess EGI's liquidity as adequate. We expect the company's liquidity sources will be more than 1.1x its uses over the next 12 months. We also expect that its net sources would remain positive even if its EBITDA declines by 10%. In our opinion, EGI has strong relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditure and suspend its dividend payments to preserve liquidity.

Principal liquidity sources

- Cash of about C$8 million as of March 31, 2022;
- Committed credit facility availability of about C$2 billion;
- Cash FFO of about C$1.2 billion; and
- Working capital inflows of about C$61 million.

Principal liquidity uses

- Debt maturities of about C$1.72 billion as of March 31, 2022;
- Assumed maintenance capital spending of about C$1.1 billion over the next 12 months; and
- Net dividends of about C$200 million.

Environmental, Social, And Governance

ESG Credit Indicators

E-1	**E-2**	E-3	E-4	E-5	S-1	**S-2**	S-3	S-4	S-5	G-1	**G-2**	G-3	G-4	G-5

ESG credit indicators provide additional disclosure and transparency at the entity level and reflect S&P Global Ratings' opinion of the influence that environmental, social, and governance factors have on our credit rating analysis. They are not a sustainability rating or an S&P Global Ratings ESG Evaluation. The extent of the influence of these factors is reflected on an alphanumerical 1 -5 scale where 1 = positive, 2 = neutral, 3 = moderately negative, 4 = negative, and 5 = very negative. For more information, see our commentary “ESG Credit Indicator Definitions And Applications, ” published Oct. 13, 2021.

ESG factors have no material influence on our credit rating analysis of EGI.

Group Influence

We view EGI as an insulated subsidiary in the Enbridge group. This is because EGI is incorporated as separate legal entity with a financial performance and funding that are highly independent from those of the group, including issuing long- and short-term debt, maintaining its own separate credit facilities, and not commingling its funds, assets, or cash flows with the rest of the group. In addition, there is a strong economic basis for Enbridge to preserve EGI's credit strength and we do not expect that a default at the other Enbridge group entities would directly lead to a default at EGI.

Issue Ratings--Subordination Risk Analysis

Capital structure

- As of March 31, 2022, EGI's capital structure comprised about C$1.60 billion of outstanding commercial paper and about C$9.4 billion of senior unsecured long-term debt.

Analytical conclusions

- We rate EGI's senior unsecured debt 'A-', the same level as our issuer credit rating (ICR) on EGI, because the debt is issued by a qualifying investment-grade regulated utility. Our 'A-2' rating on the commercial paper program reflects our 'A-' ICR on EGI.

Rating Component Scores

Foreign currency issuer credit rating	**A-/Stable/A-2**

ENBRIDGE GAS DISTRIBUTION INC.

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2012

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Distribution Inc.

Financial Reporting
Management of Enbridge Gas Distribution Inc. (the Company) is responsible for the accompanying consolidated financial statements. The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America and necessarily include amounts that reflect management's judgment and best estimates

The Board of Directors and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee (AF&RC) of the Board, which includes directors who are unrelated and independent, has a specific responsibility to oversee management's efforts to fulfil its responsibilities for financial reporting and internal controls related thereto. The AF&RC meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The AF&RC reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with generally accepted accounting principles and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

Independent Auditor's Report

To the Shareholders of Enbridge Gas Distribution Inc.

We have audited the accompanying consolidated financial statements of Enbridge Gas Distribution Inc. and its subsidiaries, which comprise the consolidated statements of financial position as at December 31, 2012 and December 31, 2011 and the consolidated statements of earnings, comprehensive income, changes in shareholders' equity and cash flows for each of the three years in the period ended December 31, 2012, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. GENERAL BUSINESS DESCRIPTION

Enbridge Gas Distribution Inc. (the Company) is a rate-regulated natural gas distribution utility, serving residential, commercial and industrial customers in its franchise areas of central and eastern Ontario. The Company also serves areas in northern New York State through its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence). The Company is a wholly owned subsidiary of Enbridge Inc. (Enbridge).

The Company also owns and operates unregulated natural gas storage facilities in Ontario. Between August 2011 and December 2012, the Company owned and operated two unregulated solar projects located in Amherstburg, Ontario, through a 99.9% limited partnership interest in Project AMBG2 LP (Project Amherstburg).

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

These consolidated financial statements of the Company are prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

The Company commenced reporting using U.S. GAAP as its primary basis of accounting effective January 1, 2012, including restatement of comparative years. The Company is permitted to prepare its consolidated financial statements in accordance with U.S. GAAP for purposes of meeting its Canadian continuous disclosure requirements under a three-year exemption granted by securities regulators in Canada.

BASIS OF PRESENTATION AND USE OF ESTIMATES

The preparation of consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses as well as the disclosure of contingent assets and liabilities in the consolidated financial statements.

Significant estimates and assumptions used in the preparation of the consolidated financial statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities *(Note 4)*; unbilled revenues *(Note 6)*; allowance for doubtful accounts *(Note 6)*; depreciation rates and carrying value of property, plant and equipment *(Note 7)*; amortization rates and carrying value of intangible assets *(Note 9)*; valuation of stock- based compensation *(Note 14)*; fair value of financial instruments *(Note 16)*; provisions for income taxes *(Note 17)*; assumptions used to measure retirement and postretirement benefit obligations *(Note 18),* commitments and contingencies *(Note 21)*; and fair value of asset retirement obligations. Actual results could differ from these estimates.

PRINCIPLES OF CONSOLIDATION

The consolidated financial statements include the accounts of the Company and its subsidiaries. All significant intercompany accounts and transactions are eliminated upon consolidation.

REGULATION

The utility operations of the Company, excluding St. Lawrence, are regulated by the Ontario Energy Board (OEB) and the utility operations of St. Lawrence are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and rate-making and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 4)*.

REVENUE RECOGNITION

The Company recognizes revenues when natural gas has been delivered or services have been performed. Gas commodity and distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's franchise area.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulators.

PUSH-DOWN ACCOUNTING

The Company has elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by the Company. Upon adopting push-down accounting, the historical cost of the Company's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage changes interest rates. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges. The Company did not have any fair value hedges or net investment hedges at December 31, 2012 or 2011.

Cash Flow Hedges

The Company uses cash flow hedges to manage changes in interest rates. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/(loss) (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and long-term assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments are offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

TRANSACTION COSTS

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and classifies these costs with Deferred amounts and other assets. These costs are amortized using the effective interest rate method over the life of the related debt instrument.

INCOME TAXES

The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. Any interest and/or penalty incurred related to tax is reflected in Income taxes.

The regulated utility operations of the Company recover income tax expense based on the taxes payable method as approved by the Regulators for rate-making purposes. As a result, rates do not include the recovery of deferred income taxes related to temporary differences. A corresponding deferred income tax regulatory liability/asset is recorded reflecting the Company's ability to pay/collect the amounts in the future through rates.

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION

Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

The functional currency of the Company's only foreign operation, St. Lawrence, is the United States dollar. The effects of translating the financial statements of St. Lawrence to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/(loss) (AOCI). Asset and liability accounts are translated at the exchange rates on the date of the Consolidated Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS

Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased.

The Company extinguishes liabilities when a creditor has relieved the Company of its obligation, which occurs when the Company's financial institution honours a cheque that the creditor has presented for payment. Accordingly, obligations for which the Company has issued cheque payments that have not been presented to the financial institution are included in Accounts payable and other on the Consolidated Statements of Financial Position.

GAS INVENTORIES

Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

Included in, or deducted from, physical gas inventories is an amount for natural gas to be received from, or returned to, direct purchase customers or agents (non-system supply customers). This amount represents the difference between natural gas received on behalf of non-system supply customers and natural gas delivered to such customers.

At December 31, 2012, $65 million (2011 - $100 million) of natural gas was held on behalf of transportation service customers. These transactions have no impact on the Company's consolidated earnings or financial position.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction at rates authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The Regulators prescribe the pool method of accounting for property, plant and equipment where similar assets with comparable useful lives are grouped and depreciated as a pool. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS

Deferred amounts and other assets primarily include: costs the Regulators have permitted, or are expected to permit, to be recovered through future rates including deferred income taxes; derivative financial instruments; and deferred financing costs. Certain deferred amounts are amortized on a straight-line basis over various periods depending on the nature of the charges. Deferred financing costs are amortized using the effective interest method over the term of the related debt.

INTANGIBLE ASSETS

Intangible assets consist primarily of the Company's Customer Information System (CIS) and software costs. The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are amortized on a straight-line basis over their expected useful lives, commencing when the asset is available for use.

ASSET RETIREMENT OBLIGATIONS

Asset retirement obligations (AROs) associated with the retirement of long-lived assets would be measured at fair value and recognized as other long-term liabilities in the period in which they could be reasonably determined. The fair value would approximate the cost a third party would charge to perform the tasks necessary to retire such assets and would be recognized at the present value of expected future cash flows. AROs would be added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability would be accreted over time through charges to earnings and would be reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

It is not possible to make a reasonable estimate of AROs for the Company due to the indeterminate timing and scope of the asset retirements.

RETIREMENT AND POSTRETIREMENT BENEFITS

The Company maintains non-contributory pension plans which provide defined benefit and defined contribution pension benefits to the majority of its employees.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimate of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. During the year ended December 31, 2012, the Company refined the methodology by which it determines discount rates; in particular, refining the method by which it estimates spreads for bonds with longer term maturities. Pension cost includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Amortization of prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans;
- Interest cost of pension plan obligations;
- Expected return on pension plan assets; and

- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on pension plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contributions occur.

The Company also provides other postretirement benefits (OPEB) other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependants. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans are recognized on the Consolidated Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation.

The regulated utility operations of the Company recovered pension and OPEB expense based on amounts paid, in accordance with the methodology accepted by the Regulators for rate-making purposes. As a result, rates typically only included the recovery of required contributions. Pursuant to an OEB decision in May 2012, the Company's 2012 pension contributions were not separately recovered in rates. A November 2012 rate order from the OEB provided for future pension and OPEB costs, determined on an accrual basis, to be recovered in rates.

The Company recorded pension expenditures on a cash basis. A corresponding pension regulatory asset/liability was recorded, reflecting the Company's ability to incorporate this amount in future rates. In the absence of rate regulation, this balance would not have been recorded and pension expenditures would have been charged to earnings and OCI on the accrual basis of accounting. Pension expenditures will be recorded on the accrual basis of accounting starting in 2013.

The Company has previously recorded and will continue to record OPEB expenditures on the accrual basis of accounting. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period related to OPEB are recognized as a component of OCI, net of income taxes.

STOCK-BASED COMPENSATION

Enbridge grants stock-based compensation to certain employees and senior officers of the Company through four long-term incentive compensation plans. Compensation expense associated with each of the plans, as determined under the methods outlined below is recognized in Operating and administrative expense. Amounts owing to Enbridge in respect of stock-based compensation are payable on a quarterly basis.

Incentive Stock Options (ISOs) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the ISOs granted as calculated by the Black-Scholes-Merton model and is recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility.

Performance based stock options (PBSOs) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the PBSOs granted as calculated by the Bloomberg barrier option valuation model and is recognized over the vesting period. The options become exercisable when both performance targets and time vesting requirements have been met.

Performance Stock Units (PSUs) and Restricted Stock Units (RSUs) are cash settled awards for which the related liability is remeasured each reporting period. PSUs vest at the completion of a three-year term and RSUs vest at the completion of a 35-month term. During the vesting term, an expense is recorded based on the number of units outstanding and the current market price of the Company's shares. The value of the PSUs is also dependent on the Company's performance relative to performance targets set out under the plan.

COMMITMENTS AND CONTINGENCIES
Liabilities for other commitments and contingencies are recognized when, after fully analyzing the available information, the Company determines it is either probable that an asset has been impaired, or that a liability has been incurred, and the amount of impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

COMPARATIVE AMOUNTS
Certain comparative amounts have been reclassified to conform with the current year's consolidated financial statement presentation.

3. CHANGES IN ACCOUNTING POLICIES

FAIR VALUE MEASUREMENT
Effective January 1, 2012, the Company adopted Accounting Standards Update (ASU) 2011-04, which revised the existing guidance on the disclosure of fair value measurements under U.S. GAAP as part of the Financial Accounting Standard Board's joint project with the International Accounting Standards Board. Under the revised standard, the Company is required to provide additional disclosures about fair value measurements, including a description of the valuation methodologies used and information about the unobservable inputs and assumptions used in the Level 3 fair value measurements, as well as the level in the fair value hierarchy of items that are not measured at fair value but whose fair value disclosure is required. As the Company does not hold any Level 3 instruments, the adoption of this update did not have an impact on the Company's consolidated financial statements.

STATEMENT OF COMPREHENSIVE INCOME
Effective January 1, 2012, the Company adopted ASU 2011-05, which updates the existing guidance on comprehensive income, requiring presentation of earnings and OCI either in one continuous statement, referred to as the statement of comprehensive income, or in two separate, but consecutive, statements of earnings and OCI. The adoption of this pronouncement did not affect the Company's presentation of comprehensive income and did not impact the Company's consolidated financial statements.

FUTURE ACCOUNTING POLICY CHANGES

Balance Sheet Offsetting
In December 2011, the FASB issued ASU 2011-11, which provides enhanced disclosures on the effect or potential effect of netting arrangements on an entity's financial position. The adoption of the pronouncement affects financial statement disclosures only and is not anticipated to have a material impact on the Company's consolidated financial statements. This accounting update is effective for annual and interim periods beginning on or after January 1, 2013.

4. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

For the purposes of this note, "Enbridge Gas Distribution" refers specifically to Enbridge Gas Distribution Inc. excluding St. Lawrence, whereas "St. Lawrence" refers specifically to St. Lawrence Gas Company, Inc.

RATE APPROVAL
Enbridge Gas Distribution's annual rates were set using a revenue per customer cap Incentive Regulation (IR) methodology for the 2008 to 2012 period. The IR methodology adjusted revenues, and consequently rates, annually and relied on an annual process to forecast volume and customer additions.

Enbridge Gas Distribution's 2013 rates, and St. Lawrence's rates for each year, are set using a cost of service (COS) methodology that allows revenues to be set to recover costs and to earn a rate of return on common equity. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, municipal and other taxes, interest and income taxes. The rate base is the average level of investment in all recoverable assets used in natural gas distribution, storage and transmission and an allowance for working capital. Under COS, it is the responsibility of Enbridge Gas Distribution and St. Lawrence to demonstrate to the Regulators the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

The cost of natural gas is passed on to customers as a flow-through.

APPROVED RATES

Enbridge Gas Distribution
Enbridge Gas Distribution's after-tax rate of return on common equity embedded in rates was 8.39% for the year ended December 31, 2012 (2011 – 8.39%) based on a 36% (2011 – 36%) deemed common equity component of capital for regulatory purposes.

To align the interests of customers with the Company's common shareholder, an earnings sharing mechanism formed part of the Settlement Agreement (the Settlement) with customer representatives approved by the OEB in February 2008. The Settlement encompassed all major financial aspects of the IR methodology that operated for 2008 to 2012 (inclusive). To the extent the actual utility return on the approved equity level represented by normalized earnings based on Part V – Pre-changeover accounting standards of the Canadian Institute of Chartered Accountants Handbook (Canadian GAAP) (i.e., excluding the effects of weather) (ROE) exceeded the notional allowed utility return on equity (NROE) by certain prescribed thresholds, earnings were shared with customers. The common shareholder retained the first 100 basis points of ROE above the NROE, while earnings represented by the ROE in excess of 100 basis points above the NROE were shared equally with customers.

Enbridge Gas Distribution's rates for 2013, under a COS methodology, will include an after-tax rate of return on common equity of 8.93% based on a 36% deemed common equity component of capital for regulatory purposes.

St. Lawrence
St. Lawrence's approved after-tax rate of return on common equity embedded in rates was 10.5% for the year ended December 31, 2012 (2011 - 10.5%) based on a 50% (2011 - 50%) deemed common equity component of capital for regulatory purposes. Any earnings above a return on equity of 11% (2011 - 11%) were shared equally with customers. The calculation of such earnings was cumulative over the three-year period commencing January 1, 2010 and ending December 31, 2012, and resulted in no sharing impact as at December 31, 2012 (2011 - nil). St. Lawrence will continue operating under the existing COS agreement in 2013.

IMPACTS OF RATE REGULATION

Regulatory Assets and Liabilities
As a result of rate regulation, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other; long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

Regulatory Risk and Uncertainties Affecting Recovery or Settlement
The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or refund of amounts recorded on the Consolidated Statement of Financial Position, or that would have been recorded on the Consolidated Statement of Financial Position in absence of the effects of regulation, could be different from the amounts that are eventually recovered or refunded.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2012**	2011	Consolidated Statement of Financial Position Location**	Estimated Recovery/ Settlement Period *(years)*
(millions of Canadian dollars)				
Regulatory assets/(liabilities)				
Enbridge Gas Distribution				
Deferred income taxes [1]	**198**	164	DA	*
Pension plans, net [2]	**115**	103	DA/OLTL	*
OPEB [3]	**89**	-	AR/DA	20
Purchased gas variance [4]	**11**	-	AR	1
Deferred rate hearing costs [5]	**5**	3	AP/DA	2
Average use true-up variance [6]	**4**	(3)	AR	*
Unaccounted for gas variance [7]	**2**	9	AR	1
Settlement recoverable [8]	**-**	5	AR	*
Future removal and site restoration reserves [9]	**(859)**	(815)	OLTL	*
Transactional services deferral [10]	**(26)**	(7)	AP	1

Other regulatory assets and liabilities	**3**	2	***	***
	(468)	(553)		
St. Lawrence				
Other regulatory assets and liabilities	**8**	6	***	***
	8	6		
	(460)	(547)		

* Refer to the footnote for details

** AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities

*** Dependent on the nature of the item

1 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation, this regulatory balance and the related earnings impact would not be recorded.*

2 *The pension plan balance represents the regulatory offset to the pension liability/asset to the extent the amounts are to be collected/refunded in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

3 *The OPEB balance represents the Company's right to recover OPEB costs pursuant to an OEB rate order received in November 2012. The amount will be collected in rates on a straight-line basis over a 20-year period commencing in 2013. In the absence of rate regulation, this regulatory balance and related earnings impact would not be recorded.*

4 *Purchased gas variance is the difference between the actual cost and the approved cost of natural gas reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process. In the absence of rate regulation, the actual cost of natural gas would be included in gas commodity and distribution costs and revenues or costs would be adjusted by an equal and offsetting amount as the right to collect or refund the revenue or costs has been established.*

5 *Deferred rate hearing costs are incurred by Enbridge Gas Distribution for the regulatory process. Enbridge Gas Distribution has historically been granted OEB approval for recovery of such hearing costs, generally within two years. In the absence of rate regulation, these costs would be expensed as incurred.*

6 *Average use true-up variance represents the net revenue impact to be recovered from or refunded to customers, associated with any variance between forecast average use and actual normalized average use for general service customers. The amount will be recovered from or refunded to customers in future periods in accordance with the OEB's approval. In the absence of rate regulation, the variance would be included in earnings in the year incurred.*

7 *Unaccounted for gas variance represents the difference between the total natural gas distributed by Enbridge Gas Distribution and the amount of natural gas billed or billable to customers for their recorded consumption, to the extent it is different from the approved amount built into rates. Enbridge Gas Distribution has deferred unaccounted for gas variance and has historically been granted OEB approval for recovery or required refund of this amount in the subsequent year. In the absence of rate regulation, this variance would be included in earnings in the year incurred.*

8 *Settlement recoverable deferral represents amounts paid toward the settlement of a class action lawsuit related to late payment penalties. Pursuant to an OEB decision in February 2008, these amounts were recovered from customers over a five-year period, which commenced in 2008. In the absence of rate regulation, these costs would have been expensed as incurred.*

9 *Future removal and site restoration reserves result from amounts collected from customers by Enbridge Gas Distribution, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment. The balance represents the amount that Enbridge Gas Distribution has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

10 *Transactional services deferral represents the customer portion of additional earnings generated from optimization of storage and pipeline capacity. Enbridge Gas Distribution has historically been required to refund the amount to customers in the following year. There would be no change in the treatment of this item in the absence of rate regulation.*

11 *Earnings sharing deferral represents amounts relating to the earnings sharing mechanism, which forms part of the IR Settlement. The earnings sharing is payable to customers and represents 50% of normalized Canadian GAAP earnings represented by the ROE in excess of 100 basis points above the NROE. The December 31, 2012 balance relates to the year ended December 31, 2012. The December 31, 2011 balance relates to the years ended December 31, 2011 and 2010. There would be no change in the treatment of this item in the absence of rate regulation.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Revenue

To recognize the actions or expected actions of the Regulators, the timing and recognition of certain revenues and expenses may differ from that otherwise expected for non rate-regulated entities.

In November 2012, the Company received a rate order from the OEB permitting recovery of OPEB costs in the amount of $89 million. The amount will be collected in rates on a straight-line basis over a 20-year period commencing in 2013, and is presented within Other revenue in the Consolidated Statements of Earnings. In the absence of rate regulation, this earnings impact would not have been recorded.

Operating Cost Capitalization

With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation, a portion of such operating costs may be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2012, costs relating to this services contract of $144 million (2011 - $133 million) were included in gas mains and are being depreciated over the average service life of 25 years. In the absence of rate regulation, some of these costs would be charged to earnings in the year incurred.

Property, Plant and Equipment

In the absence of rate regulation, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred. Further, on the retirement of utility assets, the excess of the book value net of proceeds would be recorded as a loss on the sale of assets in earnings in the period of retirement. Any removal costs incurred would be booked against the future removal and site restoration balance (described above).

Intangible Assets

The Company entered into contracts relating to CIS integration services, software maintenance and support. At December 31, 2012, the net book value of these costs was $86 million (2011 - $99 million). In the absence of rate regulation, a portion of the original cost of these assets would have been expensed in the period incurred.

Gas Inventories

Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2012 is $39 million (2011 - $42 million) of storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation

In the absence of rate regulation, depreciation rates would not have included a charge for future removal and site restoration costs.

5. DISPOSITION AND ACQUISITION

In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to Enbridge Income Fund (the Fund), an affiliated entity under common control, for proceeds of $72 million. Project Amherstburg consisted primarily of property, plant and equipment and intangible assets. The excess of the sale price over the net book value at the time of disposition of $17 million inclusive of deferred income tax recoveries of $10 million were recognized as Additional paid-in capital. No gain or loss was recognized in earnings on the disposition; however $5 million of cash income taxes incurred on the related capital gain remains as a charge to consolidated earnings for the year ended December 31, 2012.

In August 2011, the Company's parent transferred a 99.9% limited partnership interest in Project Amherstburg to the Company. The total consideration transferred for Project Amherstburg was approximately $66 million, which was primarily funded by the issuance of common shares (1,612,367 shares).

6. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2012**	2011
(millions of Canadian dollars)		
Trade receivables	**321**	377
Unbilled revenues	**170**	176
Agent billing and collection receivable	**44**	69
Regulatory assets *(Note 4)*	**32**	24

7. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	2012	2011
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas mains	4.2%	3,132	2,985
Gas services	4.6%	2,530	2,418
Regulating and metering equipment	3.8%	757	719
Gas storage	3.0%	295	275
Land and right-of-way	2.5%	78	79
Computer technology	19.3%	42	35
Under construction	-	102	92
Construction materials inventory	-	38	39
Other	3.6%	284	259
		7,258	6,901
Accumulated depreciation		(1,806)	(1,649)
		5,452	5,252
Unregulated property, plant and equipment			
Gas storage	3.0%	86	88
Accumulated depreciation		(6)	(4)
		80	84
Property, plant and equipment, net		5,532	5,336

Depreciation expense, including amounts collected for future removal and site restoration costs, was $289 million for the year ended December 31, 2012 (2011 - $271 million, 2010 - $260 million).

8. DEFERRED AMOUNTS AND OTHER ASSETS

December 31,	2012	2011
(millions of Canadian dollars)		
Regulatory assets *(Note 4)*	414	277
Deferred financing costs	11	13
Pension asset *(Note 18)*	3	2
Other	4	6
	432	298

At December 31, 2012, deferred amounts of $29 million (2011 - $29 million) were subject to amortization and are presented net of accumulated amortization of $18 million (2011 - $16 million). Amortization expense for the year ended December 31, 2012 was $2 million (2011 - $2 million, 2010 - $2 million).

9. INTANGIBLE ASSETS

December 31, 2012	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	20.6%	128	37	91
CIS	10.0%	127	41	86
		255	78	177

December 31, 2011	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	20.0%	111	40	71
CIS	10.1%	127	28	99
		238	68	170

Intangible assets include $33 million of work-in-progress as at December 31, 2012 (2011 - $21 million). Total amortization expense for intangible assets was $31 million for the year ended December 31, 2012 (2011 - $31 million, 2010 - $32 million). The Company expects aggregate amortization expense for the years ending December 31, 2013 through 2017 of $37 million, $33 million, $28 million, $23 million and $20 million, respectively.

10. ACCOUNTS PAYABLE AND OTHER

December 31,	**2012**	2011
(millions of Canadian dollars)		
Operating accrued liabilities	**281**	246
Security deposits	**67**	79
Budget billing plan payable	**59**	136
Trade payables	**59**	78
Dividends payable	**51**	56

Other	**17**	17
	648	718

11. DEBT

December 31,	Weighted Average Interest Rate	Maturity	**2012**	2011
(millions of Canadian dollars)				
Debenture	9.85%	2024	**85**	85
Medium term notes	5.51%	2014-2050	**2,295**	2,295
Commercial paper and credit facility draws, net			**590**	555
Other			**13**	8
Total debt			**2,983**	2,943
Short-term borrowings	1.10%		**(596)**	(556)
Long-term debt			**2,387**	2,387
Loans from affiliate company			**375**	375

For the years ending December 31, 2013 through 2017, medium-term note maturities are nil, $400 million, nil, nil, and $200 million respectively. The Company's debentures and medium term notes bear interest at fixed rates and interest obligations for the years ending December 31, 2013 through 2017 are $135 million, $129 million, $113 million, $113 million, and $113 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2012**	2011	2010
(millions of Canadian dollars)			
Debentures and medium-term notes	**139**	140	149
Loans from affiliate company *(Note 20)*	**27**	27	27
Commercial paper and credit facility draws	**2**	3	2
Other interest and finance costs	**8**	8	11
Capitalized	**(6)**	(6)	(3)
	170	172	186

In 2012, total interest paid to third parties was $142 million (2011 - $149 million, 2010 - $158 million) and total interest paid to affiliate company was $34 million (2011 - $20 million, 2010 - $27 million).

CREDIT FACILITIES

The Company currently has a $700 million commercial paper program limit that is backstopped by committed lines of credit of $700 million. The term of any commercial paper issued under this program may not exceed one year. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option.

December 31, 2012	Maturity Dates	Total Facilities	Credit Facility Draws[1]	Available
(millions of Canadian dollars)				
Enbridge Gas Distribution Inc.	2014	**700**	**580**	**120**
St. Lawrence Gas Company, Inc.	2014	**12**	**10**	**2**
Total credit facilities		**712**	**590**	**122**

1 Includes facility draws and commercial paper issuances, net of discount, that are backstopped by the credit facility.

Credit facilities carried a weighted average standby fee of 0.22% per annum from January to August 2012 and 0.20% per annum from September to December 2012 on the unused portion and draws bear interest at market rates.

The Company's borrowings, whether debentures or medium-term notes, are unsecured. When issuing any new indebtedness with a maturity over 18 months, covenants contained in the Company's trust indenture require the pro forma long-term debt interest coverage ratio be at least 2.0 times for 12 consecutive months out of the previous 23 months. The pro forma long-term debt interest coverage ratio is calculated as U.S. GAAP earnings adjusted for income taxes, long-term debt interest expense, amortization of financing costs and intercompany interest expense less gains on asset dispositions divided by the annual interest requirement. The Company is permitted to refinance maturing long-term debt with a matching long-term debt issue without the requirement to meet the 2.0 times interest coverage test. As at December 31, 2012, the Company was in compliance with this covenant.

12. OTHER LONG-TERM LIABILITIES

Pension and OPEB liabilities *(Note 18)*	**226**	203
Other	**1**	-
	1,094	1,019

13. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and a limited number of preference shares.

COMMON SHARES

	2012		2011		2010	
December 31,	Number of shares	Amount	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of common shares in millions)						
Balance at beginning of year	**142.3**	**1,137**	140.7	1,071	140.7	1,071
Common shares issued	**-**	**-**	1.6	66	-	-
Balance at end of year	**142.3**	**1,137**	142.3	1,137	140.7	1,071

PREFERENCE SHARES

December 31, 2012, 2011, and 2010	Authorized	Issued and Outstanding	Amount
(millions of Canadian dollars, number of preference shares in millions)			
Group 1	0.2	-	-
Group 2, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 2, Series D, Cumulative Redeemable Convertible	4	-	-
Group 3, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 3, Series D, Fixed / Floating Cumulative Redeemable Convertible	4	4	100
Group 4	10	-	-
Group 5	10	-	-
			100

Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. The Company has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case.

On July 1, 2014, and every five years thereafter, the Group 3, Series D preference shares can be converted, at the holder's option, into Group 2, Series D preference shares on a one-for-one basis, and will pay fixed cumulative cash dividends that are not less than 80% of the Government of Canada yield applicable to the fixed dividend period.

The Group 2, Series D preference shares can be redeemed, at the Company's option, for $25.00 per share. The Group 2, Series D preference shares can also be converted into Group 3, Series D preference shares on a one-for-one basis at the holder's option on July 1, 2014 and every five years thereafter.

14. STOCK OPTION AND STOCK UNIT PLANS

Enbridge's four long-term incentive compensation plans include the ISO Plan, the PBSO Plan, the PSU Plan and the RSU Plan. The Company reimburses Enbridge for stock-based compensation costs associated with its employees on a quarterly basis.

STOCK SPLIT

Effective May 25, 2011, a two-for-one split of the common shares of Enbridge was completed. All references to the outstanding option information have been retroactively restated to reflect the impact of the stock split.

INCENTIVE STOCK OPTIONS

Key employees of the Company are granted ISOs to purchase common shares of Enbridge at the market price on the grant date. ISOs vest in equal annual installments over a four-year period and expire 10 years after the issue date.

December 31, 2012	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**2,568**	**20.84**		
Options granted	**480**	**38.34**		
Options exercised[1]	**(521)**	**17.35**		
Options outstanding at end of year	**2,527**	**24.88**	**6.3**	**37**
Options vested at end of year[2]	**1,305**	**19.38**	**4.6**	**26**

1 The total intrinsic value of ISOs exercised during the year ended December 31, 2012 was $11 million (2011 - $8 million; 2010 - $4 million) and cash received by Enbridge on exercise was $6 million (2011 - $7 million; 2010 - $6 million).

2 The total fair value of options vested under the ISO Plan during the year ended December 31, 2012 was $2 million (2011 - $1 million; 2010 - $1 million).

Weighted average assumptions used to determine the fair value of the ISOs using the Black-Scholes-Merton option pricing model are as follows:

Year ended December 31,	**2012**	2011	2010
Fair value per option *(Canadian dollars)*[1]	**4.81**	4.19	3.44
Valuation assumptions			
Expected option term *(years)*[2]	**5**	6	6
Expected volatility[3]	**19.7%**	18.6%	19.7%
Expected dividend yield[4]	**3.0%**	3.4%	3.6%
Risk-free interest rate[5]	**1.3%**	2.9%	2.7%

1 Options granted to United States employees are based on New York Stock Exchange prices. The option value and assumptions shown are based on a weighted average of the United States and the Canadian options. The fair values per option were $4.65 (2011 - $4.01; 2010 - $3.28) for Canadian employees and US$5.58 (2011 - US$5.11, 2010 - US$4.00) for United States employees.

2 The expected option term is based on historical exercise practice.

3 Expected volatility is determined with reference to historic daily share price volatility and consideration of the implied volatility observable in call option values near the grant date.

4 The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.

5 The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields and the United States Treasury Bond Yields.

Compensation expense recorded for the year ended December 31, 2012 for ISOs was $3 million (2011 - $3 million, 2010 - $2 million). At December 31, 2012, unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO Plan was $3 million. The cost is expected to be fully recognized over a weighted average period of approximately three years.

PERFORMANCE BASED STOCK OPTIONS

PBSOs are granted by Enbridge to executive officers of the Company and become exercisable when both performance targets and time vesting requirements have been met. PBSOs were granted on August 15, 2012 under the 2007 plan. Time vesting requirements for the 2012 grant are fulfilled evenly over a five-year term, ending August 15, 2017. The 2012 grant's performance targets are based on Enbridge's share price and must be met by February 15, 2019 or the options expire. If targets are met by February 15, 2019, the options are exercisable until August 15, 2020.

December 31, 2012	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**-**	**-**		
Options granted	**169**	**39.34**		
Options outstanding at end of year	**169**	**39.34**	**7.6**	**8**

Weighted average assumptions used to determine the fair value of the PBSOs using the Bloomberg barrier option valuation model are as follows:

Year ended December 31,	**2012**
Fair value per option *(Canadian dollars)*	**4.25**
Valuation assumptions	
Expected option term *(years)*[1]	**8**
Expected volatility[2]	**16.1%**
Expected dividend yield[3]	**2.8%**
Risk-free interest rate[4]	**1.6%**

1 *The expected option term is based on historical exercise practice.*
2 *Expected volatility is determined with reference to historic daily share price volatility.*
3 *The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.*
4 *The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields.*

Compensation expense for PBSOs was nil for the years ended December 31, 2012, 2011 and 2010. At December 31, 2012, unrecognized compensation cost related to non-vested stock-based compensation arrangements granted under the PBSO Plan was $1 million. The cost is expected to be fully recognized over a weighted average period of approximately five years.

PERFORMANCE STOCK UNITS

Enbridge has a PSU Plan for senior officers of the Company where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by Enbridge's weighted average common share price for 20 days prior to the maturity of the grant and by a performance multiplier. The performance multiplier ranges from zero, if Enbridge's performance fails to meet threshold performance levels, to a maximum of two, if Enbridge performs within the highest range of its performance targets. The 2010, 2011 and 2012 grants derive the performance multiplier through a calculation of Enbridge's price/earnings ratio relative to a specified peer group of companies and Enbridge's earnings per share, adjusted for non-operating or non-recurring items, relative to targets established at the time of grant. To calculate the 2012 expense, multipliers of two, based upon multiplier estimates at December 31, 2012, were used for each of the 2010, 2011 and 2012 PSU grants.

December 31, 2012	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**37**		
Units granted	**16**		
Units matured[1]	**(19)**		
Dividend reinvestment	**2**		
Units outstanding at end of year	**36**	**1.5**	**3**

1 *The total amount paid by Enbridge during the year ended December 31, 2012 for PSUs was $1 million (2011 - $1 million; 2010 - nil).*

Compensation expense recorded for the year ended December 31, 2012 for PSUs was $7 million (2011 - $6 million; 2010 - $4 million). As of December 31, 2012, unrecognized compensation expense related to non-vested units granted under the PSU Plan was $2 million and is expected to be fully recognized over a weighted average period of approximately two years.

RESTRICTED STOCK UNITS

Enbridge has a RSU Plan where cash awards are paid to certain non-executive employees of the Company following a 35 month maturity period. RSU holders receive cash equal to Enbridge's weighted average share price for 20 days prior to the maturity of the grant multiplied by the units outstanding on the maturity date.

December 31, 2012	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**254**		
Units granted	**103**		
Units cancelled	**(7)**		
Units matured[1]	**(132)**		
Dividend reinvestment	**10**		
Units outstanding at end of year	**228**	**1.4**	**10**

1 The total amount paid by Enbridge during the year ended December 31, 2012 for RSUs was $5 million (2011 - $5 million; 2010 - $3 million).

Compensation expense recorded for the year ended December 31, 2012 for RSUs was $5 million (2011 - $5 million; 2010 - $5 million). As of December 31, 2012, unrecognized compensation expense related to non-vested units granted under the RSU Plan was $5 million and is expected to be fully recognized over a weighted average period of less than two years.

15. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE LOSS

16. DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

MARKET PRICE RISK

The Company's earnings, cash flows and OCI are subject to movements in interest rates, foreign exchange rates and natural gas prices (collectively, market price risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market price risks to which the Company is exposed and the risk management instruments used to mitigate them. The Company uses qualifying derivative instruments to manage some of the risks noted below.

Interest Rate Risk

The Company's earnings and cash flows are exposed to short term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Floating to fixed interest rate swaps and options are used to mitigate the volatility of short-term interest rates on interest expense on variable rate debt.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to mitigate the Company's exposure to long-term interest rate variability on select forecast term debt issuances.

Foreign Exchange Risk

Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. A portion of the Company's purchases of natural gas are denominated in United States dollars and as a result there is exposure to fluctuations of the United States dollar against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer; therefore, the net exposure of the Company to movements in the foreign exchange rate on natural gas purchases is nil (2011 - nil).

Natural Gas Price Risk

Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customer, therefore, the net exposure to the Company is nil (2011 - nil).

TOTAL DERIVATIVE INSTRUMENTS

The following table summarizes the location on the Consolidated Statements of Financial Position and carrying value of the Company's derivative instruments. The Company did not have any outstanding fair value hedges or net investment hedges at December 31, 2012 or 2011.

December 31,	**2012**	2011
(millions of Canadian dollars)		
Deferred amounts and other assets		
Interest rate contracts	**1**	-
Accounts payable and other		
Interest rate contracts	**(1)**	(1)
Other long-term liabilities		
Interest rate contracts	**(1)**	-
Total net derivative liability		
Interest rate contracts	**(1)**	(1)

1 As presented in the Consolidated Statements of Financial Position.

The Company's derivatives instruments mature through 2017 and have a notional principal of $673 million for interest rate contracts for short-term borrowings (2011 - $111 million), and $1,007 million for interest rate contracts on long-term debt (2011 - nil).

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and consolidated comprehensive income, before the effect of income taxes.

Year ended December 31,	**2012**	2011	2010
(millions of Canadian dollars)			
Amount of unrealized loss recognized in OCI			
Cash flow hedges			
Interest rate contracts	**(1)**	(2)	(25)
	(1)	(2)	(25)
Amount of loss reclassified from accumulated other comprehensive loss to earnings *(effective portion)*			
Interest rate contracts[1]	**2**	3	3
	2	3	3

1 Loss reported within Interest expense in the Consolidated Statements of Earnings.

The Company estimates that no AOCI related to cash flow hedges from interest rate contracts will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on the interest rates in effect when derivative contracts that are currently outstanding mature. For all forecasted transactions, the maximum term over which the Company is hedging exposures to the variability of cash flows is 60 months at December 31, 2012.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments and guarantees *(Notes 20 and 21)* as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12 month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations and the issuance of commercial paper and draws under committed credit facilities and long-term debt, which includes debentures and medium-term notes. The Company maintains a current shelf prospectus with securities regulators, which enables, subject to market conditions, ready access to the Canadian public capital markets. As at December 31, 2012, the Company had filed a preliminary shelf prospectus, and the final prospectus was filed in January 2013 *(Note 22)*. In addition, the Company maintains sufficient liquidity through committed credit facilities *(Note 11)* with a diversified group of banks and institutions which, if necessary, enables the Company to fund all anticipated requirements for one year without accessing the capital markets. The Company is in compliance with all the terms and conditions of its committed credit facilities at December 31, 2012. As a result, all credit facilities are available to the Company and the banks are obligated to fund, and have been funding, the Company under the terms of the facilities.

CREDIT RISK

The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is largely mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has tightened credit terms including obtaining additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts.

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate. Under IR, these estimated costs recovered through distribution rates related to the base year of the IR plan (2007) and were escalated by the approved formula during the IR term.

Entering into derivative financial instruments may also result in exposure to credit risk. Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

The Company generally has a policy of entering into individual International Securities Dealers Association (ISDA) agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with those specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in these particular circumstances.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

At December 31, 2012, the Company had a maximum exposure to credit risk of $1 million (2011 - nil) related to its derivative counterparties.

FAIR VALUE MEASUREMENTS

The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

Fair Value of Derivatives

The Company categorizes its derivative assets and liabilities, measured at fair value, into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1

Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3

Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps and Black-Scholes-Merton pricing models for options. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2012, the Company had Level 2 derivative assets with fair value of $1 million (2011 - nil), and Level 2 derivative liabilities with fair value of $2 million (2011 - $1 million).

The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers as at December 31, 2012 or 2011.

Fair Value of Other Financial Instruments
The Company's investment in IPL System Inc., an affiliate company, is a preference share investment carried at a cost of $825 million at December 31, 2012 (2011 - $825 million), which approximates its fair value and redemption value.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenure, and is classified as a Level 2 measurement. At December 31, 2012, the Company's long-term debt had a carrying value of $2,387 million (2011 - $2,387 million) and a fair value of $2,994 million (2011 - $2,943 million).

The fair value of other financial assets and liabilities other than derivative instruments approximate their cost due to the short period to maturity.

17. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2012**	2011	2010
(millions of Canadian dollars)			
Earnings before income taxes and discontinued operations	**291**	234	229
Combined statutory income tax rate	**26.5%**	28.3%	31.0%
Income taxes at statutory rate	**77**	66	71
Increase/(decrease) resulting from:			
Deferred income taxes related to regulated operations	**(13)**	-	7
Non-taxable dividend income from affiliate company	**(17)**	(18)	(19)
Tax rates and legislated tax changes	**8**	-	-
Intercompany sale of investment[1]	**5**	-	-
Other	**1**	(5)	(6)
Income taxes before discontinued operations	**61**	43	53
Effective income tax rate	**20.9%**	18.3%	23.0%

1 *In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to the Fund. As the transaction occurred between entities under common control of Enbridge, the intercompany gain realized as a result of this transfer has been eliminated, although cash income taxes of $5 million remain as a charge to earnings.*

COMPONENTS OF DEFERRED INCOME TAXES

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2012**	2011
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**(317)**	(290)
Investments	**-**	(6)
Reserves	**(23)**	-
Regulatory assets	**(52)**	(41)
Other	**-**	(2)
Total deferred income tax liabilities	**(392)**	(339)
Deferred income tax assets		
Financial derivatives	**4**	4
Retirement and postretirement benefits	**23**	23
Other	**8**	-
Total deferred income tax assets	**35**	27
Net deferred income tax liabilities	**(357)**	(312)
Presented as follows:		
Assets		
Accounts receivable and other *(Note 6)*	**5**	-
Total deferred income tax assets	**5**	-
Liabilities		
Deferred income taxes	**(362)**	(304)
Accounts payable and other *(Note 10)*	**-**	(2)
Liabilities associated with discontinued operations	**-**	(6)
Total deferred income tax liabilities	**(362)**	(312)
Net deferred income tax liabilities	**(357)**	(312)

The Company has assessed all tax positions. As a result, no significant adjustments were required to be made to the income tax provisions for the year ended December 31, 2012.

The Company and its subsidiaries are subject to taxation in Canada. The Company is open to examination by certain tax authorities for the 2008 to 2012 tax years. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario).

18. RETIREMENT AND POSTRETIREMENT BENEFITS

PENSION PLANS

The Company maintains a non-contributory basic pension plan that provides either defined benefit or defined contribution pension benefits to the majority of its employees. The Company has two supplemental non-contributory defined benefit pension plans that provide pension benefits in excess of the basic plan for certain employees.

A measurement date of December 31, 2012 was used to determine the plan assets and accrued benefit obligation for the pension plans.

Defined Benefit Plans

Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially inflation indexed after a member's retirement. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective date of the most recently filed actuarial valuation was December 31, 2009. The effective date of the next required actuarial valuation is December 31, 2012.

Defined Contribution Plans
Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS
OPEB primarily includes supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

BENEFIT OBLIGATIONS AND FUNDED STATUS
The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	Pension		OPEB	
December 31,	**2012**	2011	**2012**	2011
(millions of Canadian dollars)				
Change in accrued benefit obligation				
Benefit obligation at beginning of year	**852**	702	**103**	87
Service cost	**21**	16	**2**	1
Interest cost	**37**	39	**4**	5
Actuarial loss	**33**	127	**5**	13
Benefits paid	**(37)**	(33)	**(3)**	(3)
Other	**(1)**	1	**1**	-
Benefit obligation at end of year	**905**	852	**112**	103
Change in plan assets				
Fair value of plan assets at beginning of year	**744**	759	**6**	4
Transfer to the defined contribution component	**-**	(1)	**-**	-
Actual return on plan assets	**59**	15	**1**	-
Employer's contributions	**17**	4	**4**	6
Benefits paid	**(37)**	(33)	**(3)**	(3)
Other	**(1)**	-	**(1)**	(1)
Fair value of plan assets at end of year	**782**	744	**7**	6
Underfunded status at end of year	**(123)**	(108)	**(105)**	(97)
Presented as follows:				
Deferred amounts and other assets *(Note 8)*	**3**	2	**-**	-
Accounts payable and other *(Note 10)*	**-**	-	**(5)**	(4)
Other long-term liabilities *(Note 12)*	**(126)**	(110)	**(100)**	(93)

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2012**	2011	2010	**2012**	2011	2010
Discount rate	**4.3%**	4.5%	5.7%	**4.3%**	4.5%	5.7%
Average rate of salary increases	**3.5%**	3.5%	3.5%	**3.5%**	5.0%	5.0%

NET BENEFIT COSTS RECOGNIZED

	Pension			OPEB		
Year ended December 31,	**2012**	2011	2010	**2012**	2011	2010
(millions of Canadian dollars)						
Benefits earned during the year	**21**	16	12	**2**	1	1
Interest cost on projected benefit obligations	**37**	39	39	**4**	5	5
Actual return on plan assets	**(59)**	(15)	(78)	**(1)**	-	-
Actuarial loss	**33**	127	79	**5**	13	5
Difference between actual and expected return on plan assets						
Return on plan assets	**10**	(38)	29	**-**	-	-
Amortization of prior service costs	**1**	2	1	**-**	-	-
Amortization of actuarial loss	**(3)**	(110)	(64)	**(4)**	(13)	(5)
Net defined benefit costs on an accrual basis	**40**	21	18	**6**	6	6
Defined contribution benefit costs	**1**	1	2	**-**	-	-
Net benefit cost recognized on an accrual basis	**41**	22	20	**6**	6	6
Net amount recognized in OCI						
Net actuarial loss[1]	**-**	-	-	**4**	13	4
Total amount recognized in OCI	**-**	-	-	**4**	13	4
Total net benefit cost on an accrual basis and amount recognized in OCI	**41**	22	20	**10**	19	10

1 *Unamortized actuarial losses included in AOCI, before tax, were $14 million relating to OPEB at December 31, 2012 (2011 - $10 million loss, 2010 - $3 million gain).*

The Company estimates that approximately $29 million related to pension plans and OPEB at December 31, 2012 will be reclassified into earnings in the next 12 months, as follows:

	Pension Benefits	OPEB	Total
(millions of Canadian dollars)			
Prior service costs	**1**	**-**	**1**
Actuarial Loss	**28**	**-**	**28**
	29	**-**	**29**

Regulatory adjustments were recorded in the Consolidated Statements of Earnings, the Consolidated Statements of Comprehensive Income and the Consolidated Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for rate-making purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers in future rates *(Note 4)*.

Pension costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension costs due to the regulatory mechanism in place. As a result, the net pension expense primarily consisted of contributions to the pension plan. Such costs totaled $18 million for pension benefits for the year ended December 31, 2012 (2011 – $4 million, 2010 – $4 million).

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2012**	2011	2010	**2012**	2011	2010
Discount rate	**4.5%**	5.7%	6.6%	**4.5%**	5.7%	6.6%
Average rate of return on pension plan assets	**7.0%**	7.3%	7.1%	**6.0%**	6.0%	6.0%
Average rate of salary increases	**3.5%**	3.5%	3.5%	**5.0%**	5.0%	5.0%

MEDICAL COST TRENDS
The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in Which Ultimate Medical Cost Trend Rate Assumption is Achieved
Drugs	8.2%	4.5%	2029
Other medical and dental	4.5%	4.5%	-

A 1% increase in the assumed medical and dental care trend rate would result in an increase of $13 million in the accumulated postretirement benefit obligations and an increase of $1 million in benefit and interest costs. A 1% decrease in the assumed medical and dental care trend rate would result in a decrease of $10 million in the accumulated postretirement benefit obligations and a decrease of $1 million in benefit and interest costs.

PLAN ASSETS
The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of the liabilities of the plans; (ii) the investment horizon of the plans; (iii) the going concern and solvency funded status and cash flow requirements of the plans; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

Expected Rate of Return on Plan Assets

	Pension		OPEB	
Year ended December 31,	**2012**	2011	**2012**	2011
Expected rate of return	**7.0%**	7.3%	**-**	-

Target Mix for Plan Assets

Equity securities	44.5%
Fixed income securities	40.0%
Other	15.5%

Major Categories of Plan Assets
Plan assets are invested primarily in readily marketable investments with constraints on the credit quality of fixed income securities. As at December 31, 2012, the pension assets were invested in 60% (2011 – 55%) in equity securities, 37% (2011 – 44%) in fixed income securities and 3% (2011 – 1%) in other.

The following table summarizes the Company's pension financial instruments at fair value. Non-financial instruments with a carrying value of $8 million (2011 - $19 million) have been excluded from the table below.

	2012				2011

Financing Transactions

The Company has invested in Class D, non-voting, redeemable, retractable preference shares of IPL System Inc., an affiliate under common control. At December 31, 2012, the investment of $825 million (2011 - $825 million) in these shares resulted in a weighted average dividend yield of 7.60%.

At December 31, 2012, the borrowing from IPL System Inc. stood at $375 million ($200 million at 6.85% and $175 million at 7.50%). These loans are repayable in 2049 and 2051, respectively. The Company may elect to defer interest payments on the loans for up to five years and settle deferred interest in either cash or non-retractable preference shares of the Company. For the year ended December 31, 2012, interest paid amounted to $34 million (2011 - $20 million).

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 0.55% and is payable on demand.

Treasury and Other Management Services

Enbridge provides treasury and other management services and charges the Company on a cost recovery basis.

Wholesale Service

These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Transportation Services

The Company has contracted for natural gas transportation services from Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), Alliance Pipeline Limited Partnership (Canadian) and Alliance Pipeline Limited Partnership (U.S.), related entities partially owned by an affiliated company under common control. Contractual obligations under these contracts are 2013 – $69 million, 2014 to 2015 – $120 million, and nil thereafter.

Information Services

The Company purchases access to a few of its customer care information systems from Enbridge Commercial Services Inc. (ECS), an affiliate under common control. ECS charges the Company amounts under a service level agreement designed to recover the cost of providing the service.

Trade Receivables and Payables

The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable. Where no market price exists, a cost-based price is charged. The Company may also purchase consulting and other services from affiliates with prices determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

Other Transactions
In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to the Fund, an affiliated entity under common control, for cash proceeds of $72 million *(Note 5)*.

In August 2011, the Company's parent transferred a 99.9% limited partnership interest in Project Amherstburg to the Company for non-cash consideration of $66 million, primarily funded by the issuance of common shares *(Note 5)*.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

21. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
The Company has signed contracts for the purchase of services, pipe and other materials, as well as transportation, totaling $1,183 million which are expected to be paid within the next five years and $149 million in total for years thereafter.

Minimum future payments under operating leases are estimated at $12 million in aggregate. Estimated annual lease payments for the years ended December 31, 2013 through 2017 are $3 million, $3 million, $3 million, $3 million and nil, respectively. Total rental expense for operating leases, classified in Operating and administrative expense, were $3 million, $3 million, and $2 million for the years ended December 31, 2012, 2011 and 2010, respectively.

CONTINGENCIES

Former Manufactured Coal Gas Plant Sites
The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its Station A MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It was and remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

On August 30, 1994, Wyndham Court Canada Inc. (Wyndham) commenced an action in the Ontario Court of Justice (General Division) against the Company and 20 other defendants claiming that coal tar originating from the Company's Station A MGP in Toronto migrated to lands owned by Wyndham. Wyndham claimed general damages in the amount of $70 million and punitive damages in the amount of $5 million. It is believed that this action was also commenced by Wyndham due to its concern about the running of limitation periods.

The Company entered into a Tolling Agreement with Wyndham pursuant to which Wyndham's action was discontinued, without prejudice to Wyndham's right to commence a similar action in the future. In the fall of 2002, the Company received notice that Wyndham sold the lands that were the subject of the action to Cityscape Holdings Inc., which directed that title to a portion of these lands be transferred to Cityscape Residential Inc. (jointly Cityscape). Cityscape served the Company with a Statement of Claim in February 2003, naming the Company and nine other defendants who own or have owned portions of the former Station A MGP site. Cityscape is claiming $50 million in damages and $5 million in punitive damages against the Company as a result of alleged coal tar contamination of the lands now owned by Cityscape. The Company responded with a Statement of Defence denying liability. In January 2004, Cityscape dismissed the action against each of the Company's co-defendants.

In February 2008, the Ontario Superior Court of Justice ordered that examinations for discovery of the plaintiff be completed by mid-June 2008. Examinations for discovery were completed by this date, but required steps in the discovery process have not yet been completed by the plaintiff. At present, it is unknown when the trial of the matter will be heard.

The Company has put all of its known existing and subsisting former third party liability insurers on notice of the Cityscape action. To date, no insurer has confirmed that insurance coverage exists, nor has any insurer acknowledged that it owes the Company a duty to defend the Cityscape lawsuit. The Company first advised the OEB of the Cityscape action during its fiscal 2003 Rate Case and sought approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with the Cityscape action and any future MGP claims that may be advanced. With respect to the Company's 2006 to 2013 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

The Company remains of the view that it has a valid defence to the Cityscape lawsuit; however, it acknowledges that certain risks exist. Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation/isolation/containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

OTHER LITIGATON

The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a material impact on the Company's consolidated financial position or results of operations.

22. SUBSEQUENT EVENT

An $800 million shelf prospectus filed in November 2010 expired during the fourth quarter of 2012. A new $800 million shelf prospectus was filed in January 2013 and will be effective for a 25 month period.

CORPORATE GOVERNANCE

The size of the Board of Directors of the Company is currently set at six (6) members, two (2) of whom are considered to be independent directors.

The Board has an Audit, Finance & Risk Committee comprised of the following directors:

J. L. Braithwaite
D. A. Leslie
J. R. Bird

The Audit, Finance & Risk Committee's key responsibilities include the review of the consolidated financial statements, and systems of internal financial and compliance control.

The governance of the Company is the responsibility of the Board of Directors and the Audit, Finance & Risk Committee of the Board, who are also responsible under law for the supervision of the management of the Company's businesses and affairs and have the statutory authority and obligation to act honestly and in good faith with a view to the best interests of the Company.

The Board makes independent decisions and also receives recommendations from the following committees of the Enbridge Inc. Board of Directors, who act in an advisory capacity to the Board of Directors of the Company:

- Governance Committee
- Human Resources & Compensation Committee
- Corporate Social Responsibility Committee

In addition to the committee structure and mandate of the Board of Directors outlined above, the Board of Directors has adopted and governs itself in accordance with Enbridge Inc.'s corporate governance practices as expressed in the *Corporate Governance Practices* of Enbridge annually disclosed in its *Management Information Circular* (last dated March 2, 2012), which is incorporated herein by reference.

ENBRIDGE GAS DISTRIBUTION INC.
(a subsidiary of Enbridge Inc.)

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2013

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Distribution Inc.

Financial Reporting
Management of Enbridge Gas Distribution Inc. (the Company) is responsible for the accompanying consolidated financial statements. The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors (the Board) and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee (AF&RC) of the Board, composed of directors who are unrelated and independent, has a specific responsibility to oversee management's efforts to fulfill its responsibilities for financial reporting and internal controls related thereto. The AF&RC meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The AF&RC reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

Independent Auditor's Report

To the Shareholders of
Enbridge Gas Distribution Inc.

We have audited the accompanying consolidated financial statements of Enbridge Gas Distribution Inc. and its subsidiaries, which comprise the consolidated statements of financial position as at December 31, 2013 and December 31, 2012 and the consolidated statements of earnings, comprehensive income, shareholders' equity and cash flows for each of the three years in the period ended December 31, 2013, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Enbridge Gas Distribution Inc. and its subsidiaries as at December 31, 2013 and December 31, 2012 and its results of operations and its cash flows for each of the three years in the period ended December 31, 2013 in accordance with accounting principles generally accepted in the United States of America.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. GENERAL BUSINESS DESCRIPTION

Enbridge Gas Distribution Inc. (the Company) is a rate-regulated natural gas distribution utility, serving residential, commercial and industrial customers in its franchise areas of central and eastern Ontario. The Company also serves areas in northern New York State through its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence). The Company is a wholly owned subsidiary of Enbridge Inc. (Enbridge).

The Company also owns and operates regulated and unregulated natural gas storage facilities in Ontario. Between August 2011 and December 2012, the Company owned and operated two unregulated solar projects located in Amherstburg, Ontario, through a 99.9% limited partnership interest in Project AMBG2 LP (Project Amherstburg).

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

These consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

The Company commenced reporting using U.S. GAAP as its primary basis of accounting effective January 1, 2012, including restatement of comparative periods. The Company is permitted to prepare its consolidated financial statements in accordance with U.S. GAAP for purposes of meeting its Canadian continuous disclosure requirements under an exemption granted by securities regulators in Canada.

BASIS OF PRESENTATION AND USE OF ESTIMATES

The preparation of consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the consolidated financial statements. Significant estimates and assumptions used in the preparation of the consolidated financial statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities *(Note 5)*; unbilled revenues *(Note 7)*; allowance for doubtful accounts *(Note 7)*; depreciation rates and carrying value of property, plant and equipment *(Note 8)*; amortization rates and carrying value of intangible assets *(Note 10)*; valuation of stock- based compensation *(Note 15)*; fair value of financial instruments *(Note 17)*; provisions for income taxes *(Note 18)*; assumptions used to measure retirement and other postretirement benefit obligations (OPEB) *(Note 19),* commitments and contingencies *(Note 22)*; and fair value of asset retirement obligations (ARO). Actual results could differ from these estimates.

PRINCIPLES OF CONSOLIDATION

The consolidated financial statements include the accounts of the Company and its subsidiaries. All significant intercompany accounts and transactions are eliminated upon consolidation.

REGULATION

The utility operations of the Company, excluding St. Lawrence, are regulated by the Ontario Energy Board (OEB) and the utility operations of St. Lawrence are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 5)*.

REVENUE RECOGNITION

The Company recognizes revenues when natural gas has been delivered or services have been performed. Gas commodity and distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's franchise area.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulators.

PUSH-DOWN ACCOUNTING

The Company has elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by the Company. Upon adopting push-down accounting, the historical cost of the Company's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage its exposure to changes in interest rates. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges. The Company did not have any fair value hedges or net investment hedges at December 31, 2013 or 2012.

Cash Flow Hedges

The Company uses cash flow hedges to manage its exposure to changes in interest rates. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/loss (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and long-term assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and classifies these costs with Deferred amounts and other assets. These costs are amortized using the effective interest rate method over the life of the related debt instrument.

INCOME TAXES

The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. Any interest and/or penalty incurred related to tax is reflected in Income taxes.

The regulated utility operations of the Company recover income tax expense based on the taxes payable method as approved by the Regulators for rate-making purposes. As a result, rates do not include the recovery of deferred income taxes related to temporary differences. A corresponding deferred income tax regulatory liability/asset is recorded reflecting the Company’s ability to pay/collect the amounts in the future through rates.

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION

Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

The functional currency of the Company’s only foreign operation, St. Lawrence, is the United States dollar. The effects of translating the financial statements of St. Lawrence to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts are translated at the exchange rates in effect on the date of the Consolidated Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS

Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased.

The Company extinguishes liabilities when a creditor has relieved the Company of its obligation, which occurs when the Company’s financial institution honours a cheque that the creditor has presented for payment. Accordingly, obligations for which the Company has issued cheque payments that have not been presented to the financial institution are included in Accounts payable and other on the Consolidated Statements of Financial Position.

GAS INVENTORIES

Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators’ approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

Included in, or deducted from, physical gas inventories is an amount for natural gas to be received from, or returned to, direct purchase customers or agents (non-system supply customers). This amount represents the difference between natural gas received on behalf of non-system supply customers and natural gas delivered to such customers.

At December 31, 2013, $28 million (2012 - $51 million) of natural gas was held on behalf of transportation service customers. These transactions have no impact on the Company's consolidated earnings or financial position.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction at rates authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The Regulators prescribe the pool method of accounting for property, plant and equipment where similar assets with comparable useful lives are grouped and depreciated as a pool. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS

Deferred amounts and other assets primarily include: costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates including deferred income taxes; derivative financial instruments; and deferred financing costs. Deferred financing costs are amortized using the effective interest method over the term of the related debt.

INTANGIBLE ASSETS

Intangible assets consist primarily of the Company's Customer Information System (CIS) and software costs. The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are amortized on a straight-line basis over their expected useful lives, commencing when the asset is available for use.

ASSET RETIREMENT OBLIGATIONS

ARO associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. ARO are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For the majority of the Company's assets, it is not possible to make a reasonable estimate of ARO due to the indeterminate timing and scope of the asset retirements.

RETIREMENT AND POSTRETIREMENT BENEFITS

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality. In 2013, new mortality assumptions were adopted by the Company for the measurement of the December 31, 2013 benefit obligations, moving from the tables previously issued by the Canadian Institute of Actuaries (CIA) to the proposed revised tables. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. During the year ended December 31, 2012, the Company refined the methodology by which it determines discount rates, in particular, refining the method by which it estimates spreads for bonds with longer term maturities. Pension cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Amortization of prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans;
- Interest cost of pension plan obligations;
- Expected return on pension fund assets; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contributions occur.

The Company also provides OPEB other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans is recognized as Deferred amounts and other assets or Other long-term liabilities, respectively, on the Consolidated Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax.

The Company expects to recover pension expense in future rates and therefore records a corresponding regulatory asset to the extent such recovery is deemed to be probable. For years prior to 2012, a regulatory asset related to OPEB obligation was not recorded as a rate order allowing for the recovery of these costs in rates had not yet been obtained. Commencing in 2012, pursuant to a specific rate order allowing for recovery in rates of OPEB costs determined on an accrual basis in rates, a corresponding regulatory asset was recognized. In the absence of rate regulation, regulatory balances would not be recorded and pension and OPEB costs would be charged to earnings and OCI on an accrual basis.

STOCK-BASED COMPENSATION

Enbridge grants stock-based compensation to certain employees and senior officers of the Company through four long-term incentive compensation plans. Compensation expense associated with each of the plans, as determined under the methods outlined below is recognized in Operating and administrative expense. Amounts owing to Enbridge in respect of stock-based compensation are payable on a quarterly basis.

Incentive Stock Options (ISOs) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the ISOs granted as calculated by the Black-Scholes-Merton model and is recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility.

Performance based stock options (PBSOs) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the PBSOs granted as calculated by the Bloomberg barrier option valuation model and is recognized over the vesting. The options become exercisable when both performance targets and time vesting requirements have been met.

Performance Stock Units (PSUs) and Restricted Stock Units (RSUs) are cash settled awards for which the related liability is remeasured each reporting period. PSUs vest at the completion of a three-year term and RSUs vest at the completion of a 35-month term. During the vesting term, compensation expense is recorded based on the number of units outstanding and the current market price of the Company's shares . The value of the PSUs is also dependent on the Company's performance relative to performance targets set out under the plan.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or that a liability has been incurred, and the amount of impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

COMPARATIVE AMOUNTS

Certain comparative amounts have been reclassified to conform with the current year's consolidated financial statement presentation.

3. CHANGES IN ACCOUNTING POLICIES AND ESTIMATES

ADOPTION OF NEW STANDARDS

Balance Sheet Offsetting

Effective January 1, 2013, the Company adopted Accounting Standards Update (ASU) 2011-11 and ASU 2013-01, which require enhanced disclosures on the effect or potential effect of netting arrangements on an entity's financial position. As the adoption of these updates impacted disclosure only, there was no impact to the Company's consolidated financial position for the current or prior periods presented.

Accumulated Other Comprehensive Income

Effective January 1, 2013, the Company adopted ASU 2013-02, which requires enhanced disclosures on amounts reclassified out of AOCI. As the adoption of this update impacted disclosure only, there was no impact to the Company's consolidated financial statements for the current or prior periods presented.

Presentation of Unrecognized Tax Benefits

Effective December 31, 2013, the Company elected to early adopt ASU 2013-11 which requires presentation of unrecognized tax benefits as a reduction to a deferred tax asset for a net operating loss carryforward unless specific conditions exist. There was no material impact to the consolidated financial statements for the current or prior periods presented as a result of adopting this update.

FUTURE ACCOUNTING POLICY CHANGES

Obligations Resulting from Joint and Several Liability Arrangements

ASU 2013-04 was issued in February 2013 and provides both measurement and disclosure guidance for obligations with fixed amounts at a reporting date resulting from joint and several liability arrangements. The adoption of the pronouncement is not anticipated to have a material impact on the Company's consolidated financial statements. This accounting update is effective for annual and interim periods beginning after December 15, 2013 and is to be applied retrospectively.

Parent's Accounting for the Cumulative Translation Adjustment

ASU 2013-05 was issued in March 2013 and provides guidance on the timing of release of the cumulative translation adjustment into net income when a disposition or ownership change occurs related to an investment in a foreign entity or a business within a foreign entity. The adoption of the pronouncement is not anticipated to have a material impact on the Company's consolidated financial statements. This accounting update is effective for annual and interim periods beginning after December 15, 2013 and is to be applied prospectively.

CHANGES IN ACCOUNTING ESTIMATES

Depreciation Rates

In 2013, the Company revised depreciation rates based on the results of a new depreciation study which was approved by the OEB as part of the cost of service settlement applicable to 2013. Had rates remained the same, depreciation and amortization expense would have been higher by $32 million for the year ended December 31, 2013.

4. REVISION OF PRIOR PERIOD FINANCIAL STATEMENTS

In connection with the preparation of the Company's consolidated financial statements for the nine months ended September 30, 2013, an error was identified in the manner in which a component of gas commodity and distribution costs had been recorded. The matter related to the accounting true-up mechanism between actual gas commodity and distribution costs incurred and the regulator-approved price charged to customers.

In accordance with accounting guidance found in Accounting Standards Codification (ASC) 250-10 (Securities and Exchange Commission (SEC) Staff Accounting Bulletin No. 99, *Materiality*), the Company assessed the materiality of the error and concluded that it was not material to any of the Company's previously issued consolidated financial statements. In accordance with guidance found in ASC 250-10 (SEC Staff Accounting Bulletin No. 108, *Considering the Effects of Prior Year Misstatements when Quantifying Misstatements in Current Year Financial Statements*), the Company revised its comparative consolidated financial statements to correct the effect of this matter. As a result of this error, the Company remitted excess income taxes totaling $22 million to the Canada Revenue Agency (CRA) in relation to the 2010, 2011 and 2012 taxation years and over shared earnings with ratepayers under an earnings sharing mechanism in relation to 2010, 2011 and 2012. The Company expects that it will recover the tax overpayment from the CRA.

The following tables present the effect of this correction on individual line items within the Company's Consolidated Statements of Earnings and Consolidated Statements of Financial Position. The effects which flow through to the individual line items of Earnings, Gas commodity and distribution costs excluding depreciation, Income taxes, Gas inventories, Accounts receivable and other, Accounts payable and other, and Changes in operating assets and liabilities of the Consolidated Statements of Cash Flows are not significant and have no net effect on the Company's cash flows from operating activities. Comparative figures as at December 31, 2012 and for the years ended December 31, 2012 and 2011 have been revised throughout these financial statements as necessary to reflect these revisions.

	Year ended December 31, 2012			Year ended December 31, 2011

5. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

For the purposes of this note, “Enbridge Gas Distribution” refers specifically to Enbridge Gas Distribution Inc. excluding St. Lawrence, whereas “St. Lawrence” refers specifically to St. Lawrence Gas Company, Inc.

RATE APPROVAL

For the year ended December 31, 2013, Enbridge Gas Distribution’s rates were set pursuant to an OEB approved settlement agreement and decision related to its 2013 cost of service rate application. For the years ended December 31, 2013, 2012 and 2011, St. Lawrence’s rates were set using a cost of service (COS) methodology. Under COS, revenues are set to recover costs and to earn a rate of return on the deemed common equity component of rate base. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, municipal and other taxes, interest and income taxes. Rate base is the average level of investment in all recoverable assets used in natural gas distribution, storage and transmission and an allowance for working capital. Under COS, it is the responsibility of Enbridge Gas Distribution and St. Lawrence to demonstrate to the Regulators the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

For the years ended December 31, 2012 and 2011, Enbridge Gas Distribution’s annual rates were set using a revenue per customer cap Incentive Regulation (IR) methodology which adjusted revenues, and consequently rates, annually and relied on an annual process to forecast volume and customer additions. Under the IR mechanism, Enbridge Gas Distribution was allowed to earn and fully retain 100 basis points (bps) over the base return. Any return over 100 bps was required to be shared with customers on an equal basis.

In July 2013, Enbridge Gas Distribution filed an application with the OEB for the setting of rates through a customized IR mechanism for the period of 2014 through 2018. A decision is anticipated in the second quarter of 2014.

The cost of natural gas is passed on to customers as a flow-through.

APPROVED RATES

Enbridge Gas Distribution

Enbridge Gas Distribution’s rates for 2013 included an after-tax rate of return on common equity of 8.93% (2012 and 2011 - 8.39%) based on a 36% (2012 and 2011 - 36%) deemed common equity component of rate base. The earnings sharing mechanism, which was previously in effect under the IR methodology, did not apply in 2013.

St. Lawrence

St. Lawrence’s approved after-tax rate of return on common equity embedded in rates was 10.5% for the year ended December 31, 2013 (2012 - 10.5%) based on a 50% (2012 - 50%) deemed common equity component of rate base. Any earnings above a return on equity of 11% (2012 - 11%) were shared equally with customers. The calculation of such earnings was cumulative from January 1, 2010 to December 31, 2013 and resulted in no sharing impact as at December 31, 2013 (2012 - nil).

IMPACTS OF RATE REGULATION

Regulatory Assets and Liabilities

As a result of rate regulation, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

Regulatory Risk and Uncertainties Affecting Recovery or Settlement
The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

FINANCIAL STATEMENT EFFECTS
As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2013**	2012	Consolidated Statement of Financial Position Location**	Estimated Recovery/ Settlement Period *(years)*
(millions of Canadian dollars)

	(626)	(553)		

* Refer to the footnote for details
** AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities
*** Dependent on the nature of the item

1 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation, this regulatory balance and the related earnings impact would not be recorded.*

2 *The OPEB balance represents the Company's right to recover OPEB costs pursuant to an OEB rate order, which allows the amount to be collected in rates over a 20-year period commencing in 2013. In the absence of rate regulation, this regulatory balance and related earnings impact would not be recorded.*

3 *Shared Savings Mechanism (SSM) deferral represents the benefit derived by Enbridge Gas Distribution as a result of its energy efficiency programs. Enbridge Gas Distribution has historically been granted OEB approval to recover the SSM amount through rates after a detailed review by the OEB. The process of review and subsequent recovery may extend over a few years. There would be no change in the treatment of this item in the absence of rate regulation.*

4 *Average use true-up variance represents the net revenue impact to be recovered from or refunded to customers, associated with any variance between forecast average use and actual weather normalized average use for general service customers. The amount will be recovered from or refunded to customers in future periods in accordance with the OEB's approval. In the absence of rate regulation, this regulatory balance and the related earnings impact would not be recorded.*

5 *Unaccounted for gas variance represents the difference between the total natural gas distributed by Enbridge Gas Distribution and the amount of natural gas billed or billable to customers for their recorded consumption, to the extent it is different from the approved amount built into rates. Enbridge Gas Distribution has deferred unaccounted for gas variance and has historically been granted OEB approval for recovery or required refund of this amount in the subsequent year. In the absence of rate regulation, this variance would be included in earnings in the year incurred.*

6 *Customer care CIS rate smoothing deferral represents the difference between the forecast costs and the approved costs for customer care and CIS reflected in rates. The balance will accumulate during 2013 to 2015 when the cost per customer exceeds the cost approved for recovery in rates. The balance will be drawn down during 2016 to 2018 when the cost per customer is lower than the cost approved for recovery in rates. Enbridge Gas Distribution has received OEB approval to collect from or refund to customers any remaining balance after 2018. In the absence of rate regulation, the variance would be included in earnings in the year incurred.*

7 *Deferred rate hearing costs are incurred by Enbridge Gas Distribution for the regulatory process. Enbridge Gas Distribution has historically been granted OEB approval for recovery of such hearing costs, generally within two years. In the absence of rate regulation, these costs would be expensed as incurred.*

8 *Post-retirement true-up variance is the difference between the actual cost and the approved cost of pension and OPEB reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers in the subsequent year, up to a maximum of $5 million per year. Any amounts in excess of $5 million per year will be deferred for refund or collection in the next subsequent year. In the absence of rate regulation, the variance would be included in earnings in the year incurred.*

9 *The pension plan balance represents the regulatory offset to the pension liability/asset to the extent the amounts are to be collected/refunded in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

10 *Future removal and site restoration reserves result from amounts collected from customers by Enbridge Gas Distribution, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment. The balance represents the amount that Enbridge Gas Distribution has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

11 *Transactional services deferral represents the customer portion of additional earnings generated from optimization of storage and pipeline capacity. Enbridge Gas Distribution has historically been required to refund the amount to customers in the following year. There would be no change in the treatment of this item in the absence of rate regulation.*

12 *Earnings sharing deferral represents amounts relating to the earnings sharing mechanism, which forms part of the IR Settlement applicable to 2012. The earnings sharing is payable to customers and represented 50% of normalized 2012 Canadian GAAP earnings represented by the ROE in excess of 100 basis points above the allowed utility return on equity threshold applicable to Enbridge Gas Distribution under IR. The December 31, 2012 balance related to the year ended December 31, 2012. Earnings sharing did not apply to the 2013 COS Settlement. There would be no change in the treatment of this item in the absence of rate regulation.*

13 *Purchased gas variance is the difference between the actual cost and the approved cost of natural gas reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process. In the absence of rate regulation, the actual cost of natural gas would be included in gas commodity and distribution costs and revenues or costs would be adjusted by an equal and offsetting amount as the right to collect or refund the revenue or costs has been established. Purchased gas variance for 2012 has been revised as per Note 4.*

14 *Storage and transportation deferral represents the difference between the actual cost and the approved cost of natural gas storage and transportation reflected in rates. Enbridge Gas Distribution has historically been granted OEB approval to collect this balance from or to refund this balance to customers, generally in the subsequent year. In the absence of rate regulation, the actual cost of natural gas storage and transportation would be included in gas commodity and distribution costs and revenues or costs would be adjusted by an equal and offsetting amount, as the right to collect or refund the revenue or costs has been established.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Revenue

To recognize the actions or expected actions of the Regulators, the timing and recognition of certain revenues and expenses may differ from that otherwise expected for non rate-regulated entities.

In 2012, the Company received a rate order from the OEB permitting recovery of OPEB costs in the amount of $89 million. The rate order allows this amount to be collected in rates over a 20-year period commencing in 2013, and was presented in Other revenue for the year ended December 31, 2012. In the absence of rate regulation, this earnings impact would not have been recorded.

Operating Cost Capitalization

With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2013, cumulative costs relating to this services contract of $154 million (2012 - $144 million) were included in gas mains and are being depreciated over the average service life of 25 years. In the absence of rate regulation, some of these costs would be charged to earnings in the year incurred.

Property, Plant and Equipment

In the absence of rate regulation, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred. Further, on the retirement of utility assets, the excess of the book value net of proceeds would be recorded as a loss on the sale of assets in earnings in the period of retirement. Any removal costs incurred would be booked against the future removal and site restoration balance (described above).

Intangible Assets

The Company entered into contracts relating to CIS integration services, software maintenance and support. At December 31, 2013, the net book value of these costs was $73 million (2012 - $86 million). In the absence of rate regulation, a portion of the original cost of these assets would have been expensed in the period incurred.

Gas Inventories

Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2013 is $40 million (2012 - $39 million) of storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation

In the absence of rate regulation, depreciation rates would not have included a charge for future removal and site restoration costs.

6. DISCONTINUED OPERATIONS

In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to Enbridge Income Fund (the Fund), an affiliated entity under common control, for proceeds of $72 million. Project Amherstburg consisted primarily of property, plant and equipment and intangible assets. The excess of the sale price over the net book value at the time of disposition of $17 million inclusive of deferred income tax recoveries of $10 million were recognized as Additional paid-in capital. No gain or loss was recognized in earnings on the disposition; however $5 million of cash income taxes incurred on the related capital gain remains as a charge to consolidated earnings for the year ended December 31, 2012.

In 2011, the Company's parent transferred a 99.9% limited partnership interest in Project Amherstburg to the Company. The total consideration transferred for Project Amherstburg was approximately $66 million, which was primarily funded by the issuance of common shares (1,612,367 shares).

7. ACCOUNTS RECEIVABLE AND OTHER

	171	170	172

In 2013, total interest paid to third parties was $142 million (2012 - $142 million, 2011 - $149 million) and total interest paid to affiliate company was $27 million (2012 - $34 million, 2011 - $20 million).

CREDIT FACILITIES

The Company currently has a $700 million commercial paper program limit that is backstopped by committed lines of credit of $700 million. The term of any commercial paper issued under this program may not exceed one year. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option. In August 2013, the Company extended the term out date of its $700 million committed line of credit for an additional year to August 2014, with a maturity date in August 2015.

December 31, 2013	Maturity Dates	Total Facilities	Credit Facility Draws[1]	Available
(millions of Canadian dollars)				
Enbridge Gas Distribution Inc.	2015	**700**	**370**	**330**
St. Lawrence Gas Company, Inc.	2019	**13**	**12**	**1**
Total credit facilities		**713**	**382**	**331**

1 *Includes facility draws and commercial paper issuances, net of discount, that are backstopped by the credit facility.*

Credit facilities carried a weighted average standby fee of 0.2% on the unused portion and draws bear interest at market rates.

The Company's borrowings, whether debentures or medium-term notes, are unsecured. When issuing any new indebtedness with a maturity over 18 months, covenants contained in the Company's trust indenture require the pro forma long-term debt interest coverage ratio be at least 2.0 times for 12 consecutive months out of the previous 23 months. The pro forma long-term debt interest coverage ratio is calculated as U.S. GAAP earnings adjusted for income taxes, long-term debt interest expense, amortization of financing costs and intercompany interest expense less gains on asset dispositions divided by the annual interest requirement. The Company is permitted to refinance maturing long-term debt with a matching long-term debt issue without the requirement to meet the 2.0 times interest coverage test. As at December 31, 2013, the Company was in compliance with this covenant.

13. OTHER LONG-TERM LIABILITIES

Group 2, Series D, Cumulative Redeemable Convertible	4	-	-
Group 3, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 3, Series D, Fixed / Floating Cumulative Redeemable Convertible	4	4	100
Group 4	10	-	-
Group 5	10	-	-
			100

Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. The Company has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case. As at December 31, 2013, no preference shares have been redeemed.

On July 1, 2014, and every five years thereafter, the Group 3, Series D preference shares can be converted, at the holder's option, into Group 2, Series D preference shares on a one-for-one basis, and will pay fixed cumulative cash dividends that are not less than 80% of the Government of Canada yield applicable to the fixed dividend period.

The Group 2, Series D preference shares can be redeemed, at the Company's option, for $25.00 per share. The Group 2, Series D preference shares can also be converted into Group 3, Series D preference shares on a one-for-one basis at the holder's option on July 1, 2014 and every five years thereafter.

15. STOCK OPTION AND STOCK UNIT PLANS

Enbridge's four long-term incentive compensation plans include the ISO Plan, the PBSO Plan, the PSU Plan and the RSU Plan. The Company reimburses Enbridge for stock-based compensation costs associated with its employees on a quarterly basis.

INCENTIVE STOCK OPTIONS

Key employees of the Company are granted ISOs to purchase common shares of Enbridge at the market price on the grant date. ISOs vest in equal annual installments over a four-year period and expire 10 years after the issue date.

December 31, 2013	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**2,527**	**24.88**		
Options granted	**456**	**44.81**		
Options exercised[1]	**(264)**	**16.93**		
Options cancelled	**(229)**	**30.97**		
Options outstanding at end of year	**2,490**	**28.81**	**6.2**	**40**
Options vested at end of year[2]	**1,430**	**22.12**	**4.7**	**33**

1 *The total intrinsic value of ISOs exercised during the year ended December 31, 2013 was $7 million (2012 - $11 million; 2011 - $8 million) and cash received by Enbridge on exercise was $2 million (2012 - $6 million; 2011 - $7 million).*

2 *The total fair value of options vested under the ISO Plan during the year ended December 31, 2013 was $2 million (2012 - $2 million; 2011 - $1 million).*

Weighted average assumptions used to determine the fair value of the ISOs using the Black-Scholes-Merton option pricing model are as follows:

Year ended December 31,	**2013**	2012	2011
Fair value per option *(Canadian dollars)*[1]	**5.27**	4.81	4.19
Valuation assumptions			
Expected option term *(years)*[2]	**5**	5	6
Expected volatility[3]	**17.4%**	19.7%	18.6 %
Expected dividend yield[4]	**2.8%**	3.0%	3.4%
Risk-free interest rate[5]	**1.2%**	1.3%	2.9%

1 *Options granted to United States employees are based on New York Stock Exchange prices. The option value and assumptions shown are based on a weighted average of the United States and the Canadian options. The fair values per option were $5.15 (2012 - $4.65; 2011 - $4.01) for Canadian employees and US$5.63 (2012 - US$5.58, 2011 - US$5.11) for United States employees.*

2 *The expected option term is based on historical exercise practice.*

3 *Expected volatility is determined with reference to historic daily share price volatility and consideration of the implied volatility observable in call option values near the grant date.*

4 *The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.*

5 *The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields and the United States Treasury Bond Yields.*

Compensation expense recorded for the year ended December 31, 2013 for ISOs was $3 million (2012 - $3 million, 2011 - $3 million). At December 31, 2013, unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO Plan was $3 million. The cost is expected to be fully recognized over a weighted average period of approximately two years.

PERFORMANCE BASED STOCK OPTIONS

PBSOs are granted by Enbridge to executive officers of the Company and become exercisable when both performance targets and time vesting requirements have been met. PBSOs were granted on August 15, 2012 under the 2007 plan. Time vesting requirements for the 2012 grant will be fulfilled evenly over a five-year term, ending August 15, 2017. The 2012 grant's performance targets are based on Enbridge's share price and must be met by February 15, 2019 or the options expire. If targets are met by February 15, 2019, the options are exercisable until August 15, 2020.

December 31, 2013	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**169**	**39.34**		
Options cancelled	**(169)**	**39.34**		
Options outstanding at end of year	**-**	**-**	**-**	**-**

Weighted average assumptions used to determine the fair value of the PBSOs using the Bloomberg barrier option valuation model are as follows:

Year ended December 31,	**2013**
Fair value per option *(Canadian dollars)*	**4.25**
Valuation assumptions	
Expected option term *(years)*[1]	**8**
Expected volatility[2]	**16.1%**
Expected dividend yield[3]	**2.8%**
Risk-free interest rate[4]	**1.6%**

1 *The expected option term is based on historical exercise practice.*
2 *Expected volatility is determined with reference to historic daily share price volatility.*
3 *The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.*
4 *The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields.*

Compensation expense for PBSOs was nil for the years ended December 31, 2013, 2012, and 2011. At December 31, 2013, unrecognized compensation cost related to non-vested stock-based compensation arrangements granted under the PBSO Plan was $1 million. The cost is expected to be fully recognized over a weighted average period of approximately four years.

PERFORMANCE STOCK UNITS

Enbridge has a PSU Plan for senior officers of the Company where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by Enbridge's weighted average share price for 20 days prior to the maturity of the grant and by a performance multiplier. The performance multiplier ranges from zero, if Enbridge's performance fails to meet threshold performance levels, to a maximum of two if Enbridge performs within the highest range of its performance targets. The 2011, 2012 and 2013 grants derive the performance multiplier through a calculation of Enbridge's price/earnings ratio relative to a specified peer group of companies and Enbridge's earnings per share, adjusted for unusual non-operating or non-recurring items, relative to targets established at the time of grant. To calculate the 2013 expense, multipliers of two, based upon multiplier estimates at December 31, 2013, were used for each of the 2011, 2012 and 2013 PSU grants.

December 31, 2013	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**36**		
Units granted	**10**		
Units cancelled	**(7)**		
Units matured[1]	**(21)**		
Dividend reinvestment	**1**		
Units outstanding at end of year	**19**	**1.5**	**2**

1 The total amount paid by Enbridge during the year ended December 31, 2013 for PSUs was $2 million (2012 - $1 million; 2011 - $1 million).

Compensation expense recorded for the year ended December 31, 2013 for PSUs was $4 million (2012 - $7 million; 2011 - $6 million). As of December 31, 2013, unrecognized compensation expense related to non-vested units granted under the PSU Plan was $1 million and is expected to be fully recognized over a weighted average period of approximately two years.

RESTRICTED STOCK UNITS

Enbridge has a RSU Plan where cash awards are paid to certain non-executive employees of the Company following a 35 month maturity period. RSU holders receive cash equal to Enbridge's weighted average share price for 20 days prior to the maturity of the grant multiplied by the units outstanding on the maturity date.

December 31, 2013	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**228**		
Units granted	**94**		
Units cancelled	**(1)**		
Units matured[1]	**(127)**		
Dividend reinvestment	**9**		
Units outstanding at end of year	**203**	**1.4**	**9**

1 The total amount paid by Enbridge during the year ended December 31, 2013 for RSUs was $5 million (2012 - $5 million; 2011 - $5 million).

Compensation expense recorded for the year ended December 31, 2013 for RSUs was $5 million (2012 - $5 million; 2011 - $5 million). As of December 31, 2013, unrecognized compensation expense related to non-vested units granted under the RSU Plan was $5 million and is expected to be fully recognized over a weighted average period of approximately two years.

16. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE INCOME

Changes in AOCI for the years ended December 31, 2013, 2012 and 2011, are as follows:

	Cash Flow Hedges	Cumulative Translation Adjustment	Unamortized OPEB Actuarial Loss	Total
(*millions of Canadian dollars*)				
Balance at January 1, 2013	**(10)**	**(6)**	**(10)**	**(26)**

17. DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

MARKET PRICE RISK

The Company's earnings, cash flows and OCI are subject to movements in foreign exchange rates, interest rates and natural gas prices (collectively, market price risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market price risks to which the Company is exposed and the risk management instruments used to mitigate them.

Foreign Exchange Risk

Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. A portion of the Company's purchases of natural gas are denominated in United States dollars and as a result there is exposure to fluctuations in the exchange rate of the United States dollar against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer; therefore, the net exposure of the Company to movements in the foreign exchange rate on natural gas purchases is nil (2012 - nil).

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps and options are used to mitigate the volatility of short-term interest rates on interest expense related to variable rate debt.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to mitigate the Company's exposure to long-term interest rate variability on select forecast term debt issuances. The Company uses qualifying derivative instruments to manage interest rate risk.

Natural Gas Price Risk
Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customer, therefore, the net exposure to the Company is nil (2012 - nil).

TOTAL DERIVATIVE INSTRUMENTS
The following table summarizes the Consolidated Statements of Financial Position location and carrying value of the Company's derivative instruments. The Company did not have any outstanding fair value hedges at December 31, 2013 or 2012.

The Company generally has a policy of entering into individual International Swaps and Derivatives Association, Inc. (ISDA) agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in those particular circumstances. The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2013	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts receivable and other					
Interest rate contracts	**36**	**-**	**36**	**-**	**36**
Deferred amounts and other assets					
Interest rate contracts	**46**	**-**	**46**	**-**	**46**
Total net derivative asset					
Interest rate contracts	**82**	**-**	**82**	**-**	**82**

December 31, 2012	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Deferred amounts and other assets					
Interest rate contracts	1	-	1	-	1
Accounts payable and other					
Interest rate contracts	(1)	-	(1)	-	(1)
Other long-term liabilities					
Interest rate contracts	(1)	-	(1)	-	(1)
Total net derivative liability					
Interest rate contracts	(1)	-	(1)	-	(1)

The Company's derivatives instruments mature through 2017 and have a notional principal of $535 million for interest rate contracts for short-term borrowings (2012 - $673 million), and $747 million for interest rate contracts on long-term debt (2012 - $1,007 million).

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and consolidated comprehensive income, before the effect of income taxes.

Year ended December 31,	**2013**	2012	2011
(millions of Canadian dollars)			
Amount of unrealized gains/(loss) recognized in OCI			
Cash flow hedges			
Interest rate contracts	**109**	(1)	(2)
	109	(1)	(2)
Amount of loss reclassified from AOCI to earnings *(effective portion)*			
Interest rate contracts[1]	**(2)**	(2)	(3)
	(2)	(2)	(3)
Amount of gains reclassified from AOCI to earnings *(ineffective portion)*			
Interest rate contracts[1]	**2**	-	-
	2	-	-

1 Reported within Interest expense in the Consolidated Statements of Earnings.

The Company estimates that $2 million in AOCI related to cash flow hedges from interest rate contracts will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on the interest rates in effect when derivative contracts that are currently outstanding mature. For all forecasted transactions, the maximum term over which the Company is hedging exposures to the variability of cash flows is 37 months at December 31, 2013.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments *(Notes 21 and 22)* as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12 month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper and draws under committed credit facilities and long-term debt, which includes debentures and medium-term notes. The Company maintains a current shelf prospectus with securities regulators, which enables, subject to market conditions, ready access to the Canadian public capital markets. In addition, the Company maintains sufficient liquidity through committed credit facilities *(Note 12)* with a diversified group of banks and institutions which, if necessary, enables the Company to fund all anticipated requirements for one year without accessing the capital markets. The Company is in compliance with all the terms and conditions of its committed credit facilities at December 31, 2013. As a result, all credit facilities are available to the Company and the banks are obligated to fund, and have been funding, the Company under the terms of the facilities.

CREDIT RISK
The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has tightened credit terms including obtaining additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts.

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

The Company had group credit concentration and maximum credit exposure, with respect to derivative instruments, in the following counterparty segments:

	December 31, 2013	December 31, 2012
(millions of Canadian dollars)		
Canadian financial institutions	**69**	1
European financial institutions	**13**	-
	82	1

FAIR VALUE MEASUREMENTS
The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

Fair Value of Derivatives
The Company categorizes its derivative assets and liabilities, measured at fair value, into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1
Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is

considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3

Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2013, the Company had Level 2 derivative assets with fair value of $82 million (2012 - $1 million), and Level 2 derivative liabilities with fair value of nil (2012 - $2 million).

The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers as at December 31, 2013 or 2012.

Fair Value of Other Financial Instruments

The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded in OCI, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at cost. The Company's investment in IPL System Inc., an affiliate company, is carried at cost of $825 million at December 31, 2013 (2012 - $825 million), which approximates its fair value and redemption value.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2013, the Company's long-term debt had a carrying value of $2,799 million (2012 - $2,387 million) and a fair value of $3,161 million (2012 - $2,994 million).

The fair value of other financial assets and liabilities other than derivative instruments approximate their cost due to the short period to maturity.

18. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2013**	2012	2011
(millions of Canadian dollars)			
Earnings before income taxes and discontinued operations	**260**	261	206
Federal statutory income tax rate	**15.0%**	15.0%	16.5%
Federal income taxes at statutory rate	**39**	39	34
Increase/(decrease) resulting from:			
Provincial and state income taxes	**19**	18	16
Effects of rate regulated accounting	**(5)**	(7)	-
Non-taxable intercompany distributions	**(9)**	(9)	(10)
Legislative changes and other rate differentials	**-**	8	-
Intercompany sale of investment[1]	**-**	3	-
Other[2]	**(1)**	1	(5)
Income taxes before discontinued operations	**43**	53	35
Effective income tax rate	**16.5%**	20.3%	17.0%

1 In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to the Fund. As the transaction occurred between entities under common control of Enbridge, the intercompany gain realized as a result of this transfer was eliminated, although cash income taxes of $5 million remained as a charge to earnings.

2 Included in "Other" are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals & entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.

Comparative figures within the income tax reconciliation for 2012 and 2011 have been revised to conform to the presentation followed for the current year. In 2013, a preferable presentation format was adopted which calculates expected taxes using a federal statutory rate as opposed to a combined federal and provincial rate. This format is preferable as it is more commonly used by companies following U.S. GAAP.

COMPONENTS OF DEFERRED INCOME TAXES
Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2013**	2012
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**(320)**	(317)
Financial derivatives	**(25)**	-
Deferrals	**(13)**	(23)
Regulatory assets	**(56)**	(52)
Other	**(2)**	-
Total deferred income tax liabilities	**(416)**	(392)
Deferred income tax assets		
Financial derivatives	**-**	4
Retirement and postretirement benefits	**23**	23
Other	**1**	8
Total deferred income tax assets	**24**	35
Net deferred income tax liabilities	**(392)**	(357)
Presented as follows:

Total deferred income tax assets	**3**	5
Liabilities		
Deferred income taxes	**(395)**	(362)
Total deferred income tax liabilities	**(395)**	(362)
Net deferred income tax liabilities	**(392)**	(357)

The Company has assessed all tax positions. As a result, no significant adjustments were required to be made to the income tax provisions for the year ended December 31, 2013.

The Company and its subsidiaries are subject to taxation in Canada. The Company is open to examination by certain tax authorities for the 2009 to 2013 tax years. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario).

19. RETIREMENT AND POSTRETIREMENT BENEFITS

PENSION PLANS
The Company maintains a non-contributory basic pension plan that provides either defined benefit or defined contribution pension benefits to the majority of its employees. The Company has two supplemental non-contributory defined benefit pension plans that provide pension benefits in excess of the basic plan for certain employees.

A measurement date of December 31, 2013 was used to determine the plan assets and accrued benefit obligation for the pension plans.

Defined Benefit Plans
Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially inflation indexed after a member's retirement. In 2013, mortality assumptions were revised resulting in an increase to pension liabilities of $28 million. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective date of the most recent actuarial valuation was September 1, 2013. The effective date of the next required actuarial valuation is September 1, 2016.

Defined Contribution Plans

Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS

The Company also provides OPEB, which primarily includes supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

BENEFIT OBLIGATIONS AND FUNDED STATUS

The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	Pension		OPEB	
December 31,	**2013**	2012	**2013**	2012
(millions of Canadian dollars)				
Change in accrued benefit obligation				
Benefit obligation at beginning of year	**905**	852	**112**	103
Service cost	**25**	21	**1**	2
Interest cost	**38**	37	**4**	4
Actuarial loss	**(52)**	33	**(16)**	5
Benefits paid	**(40)**	(37)	**(2)**	(3)
Other	**(1)**	(1)	**1**	1
Benefit obligation at end of year	**875**	905	**100**	112
Change in plan assets				
Fair value of plan assets at beginning of year	**782**	744	**7**	6
Actual return on plan assets	**84**	59	**1**	1
Employer's contributions	**38**	17	**3**	4
Benefits paid	**(40)**	(37)	**(2)**	(3)
Other	**2**	(1)	**-**	(1)
Fair value of plan assets at end of year	**866**	782	**9**	7
Underfunded status at end of year	**(9)**	(123)	**(91)**	(105)
Presented as follows:				
Deferred amounts and other assets *(Note 9)*	**7**	3	**1**	-
Accounts payable and other *(Note 11)*	**-**	-	**(4)**	(5)
Other long-term liabilities *(Note 13)*	**(16)**	(126)	**(88)**	(100)

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2013**	2012	2011	**2013**	2012	2011
Discount rate	**5.0%**	4.3%	4.5%	**5.0%**	4.3%	4.5%
Average rate of salary increases	**3.5%**	3.5%	3.5%	**3.5%**	3.5%	5.0%

NET BENEFIT COSTS RECOGNIZED

	Pension			OPEB		
Year ended December 31,	**2013**	2012	2011	**2013**	2012	2011
(millions of Canadian dollars)						
Benefits earned during the year	**25**	21	16	**1**	2	1
Interest cost on projected benefit obligations	**38**	37	39	**4**	4	5
Actual return on plan assets	**(84)**	(59)	(15)	**(1)**	(1)	-
Actuarial loss	**(52)**	33	127	**(16)**	5	13
Difference between actual and expected return on plan assets						
Return on plan assets	**32**	10	(38)	**-**	-	-
Amortization of prior service costs	**1**	1	2	**-**	-	-
Amortization of actuarial loss	**80**	(3)	(110)	**18**	(4)	(13)
Net defined benefit costs on an accrual basis	**40**	40	21	**6**	6	6
Defined contribution benefit costs	**1**	1	1	**-**	-	-
Net benefit cost recognized on an accrual basis	**41**	41	22	**6**	6	6
Net amount recognized in OCI						
Net actuarial (gain)/loss[1]	**-**	-	-	**(14)**	4	13
Total amount recognized in OCI	**-**	-	-	**(14)**	4	13
Total net benefit cost on an accrual basis and amount recognized in OCI	**41**	41	22	**(8)**	10	19

1 *Unamortized actuarial losses included in AOCI, before tax, were nil relating to OPEB at December 31, 2013 (2012 - $14 million, 2011 - $10 million).*

The Company estimates that approximately $17 million related to pension plans and OPEB at December 31, 2013 will be reclassified into earnings in the next 12 months, as follows:

	Pension Benefits	OPEB	Total
(millions of Canadian dollars)			
Prior service costs	**-**	**-**	**-**
Actuarial Loss	**17**	**-**	**17**
	17	**-**	**17**

Regulatory adjustments were recorded in the Consolidated Statements of Earnings, the Consolidated Statements of Comprehensive Income and the Consolidated Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers in future rates *(Note 5)*. For the year ended December 31, 2013, an offsetting regulatory asset of $3 million (2012 - $22 million) has been recorded to the extent pension and OPEB costs are expected to be collected from customers in future rates.

Pension and OPEB costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension and OPEB costs due to the regulatory mechanism in place. As a result, the net pension and OPEB expense primarily consisted of OEB approved pension and OPEB costs.

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2013**	2012	2011	**2013**	2012	2011
Discount rate	**4.3%**	4.5%	5.7%	**4.3%**	4.5%	5.7%
Average rate of return on pension plan assets	**6.8%**	7.0%	7.3%	**6.0%**	6.0%	6.0%
Average rate of salary increases	**3.5%**	3.5%	3.5%	**3.5%**	5.0%	5.0%

MEDICAL COST TRENDS
The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in Which Ultimate Medical Cost Trend Rate Assumption is Achieved
Drugs	8.2%	4.3%	2029
Other medical and dental	4.5%	4.5%	-

A 1% increase in the assumed medical and dental care trend rate would result in an increase of $12 million in the benefit obligation and an increase of $1 million in benefit and interest costs. A 1% decrease in the assumed medical and dental care trend rate would result in a decrease of $10 million in the benefit obligation and a decrease of $1 million in benefit and interest costs.

PLAN ASSETS
The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

Expected Rate of Return on Plan Assets

	Pension		OPEB	
Year ended December 31,	**2013**	2012	**2013**	2012
Expected rate of return	**6.8%**	7.0%	**-**	-

Target Mix for Plan Assets

Equity securities	44.5%
Fixed income securities	40.0%
Other	15.5%

Major Categories of Plan Assets
Plan assets are invested primarily in readily marketable investments with constraints on the credit quality of fixed income securities. As at December 31, 2013, the pension assets were invested in 55% (2012 - 60%) in equity securities, 36% (2012 - 37%) in fixed income securities and 9% (2012 - 3%) in other.

The following table summarizes the Company's pension financial instruments at fair value. Non-financial instruments with a carrying value of $18 million (2012 - $10 million) have been excluded from the table below.

	2013				2012

Financing Transactions
The Company has invested in Class D, non-voting, redeemable, retractable preferred shares of IPL System Inc., an affiliate under common control. At December 31, 2013, the investment of $825 million (2012 - $825 million) in these shares resulted in a weighted average dividend yield of 7.6%.

At December 31, 2013, the borrowing from IPL System Inc. stood at $375 million ($200 million at 6.85% and $175 million at 7.5%). These loans are repayable in 2049 and 2051, respectively. The Company may elect to defer interest payments on the loans for up to five years and settle deferred interest in either cash or non-retractable preference shares of the Company. For the year ended December 31, 2013, interest paid amounted to $27 million (2012 - $34 million).

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 0.55% and is payable on demand.

Treasury and Other Management Services
Enbridge provides treasury and other management services and charges the Company on a cost recovery basis.

Natural Gas Purchases
The Company has contracted for the purchase of natural gas from Tidal Energy Marketing Inc. and Tidal Energy Marketing (U.S.) LLC, related entities under common control, at prevailing market prices and under normal trade terms. Contractual obligations under these contracts are 2014 - $52 million and nil thereafter.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Transportation Services
The Company has contracted for natural gas transportation services from Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), Alliance Pipeline Limited Partnership (Canadian) and Alliance Pipeline Limited Partnership (U.S.), related entities partially owned by an affiliated company under common control. Contractual obligations under these contracts are 2014 - $74 million, 2015 to 2016 - $82 million, 2017 to 2018 - $16 million and thereafter - nil.

Trade Receivables and Payables
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable. Where no market price exists, a cost-based price is charged. The Company may also purchase consulting and other services from affiliates with prices determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

Other Transactions
In 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to the Fund, an affiliated entity under common control, for cash proceeds of $72 million *(Note 6)*.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

22. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
The Company has signed contracts for the purchase of services, pipe and other materials, as well as transportation, totaling $3,010 million which are expected to be paid within the next five years and $649 million in total for years thereafter.

Minimum future payments under operating leases are estimated at $12 million in aggregate. Estimated annual lease payments for the years ended December 31, 2014 through 2018 are $4 million, $4 million, $3 million, $1 million and nil, respectively. Total rental expense for operating leases, classified in Operating and administrative expense, was $3 million for each of the years ended December 31, 2013, 2012 and 2011.

CONTINGENCIES

Former Manufactured Coal Gas Plant Sites
The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its Station A MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It was and remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

On August 30, 1994, Wyndham Court Canada Inc. (Wyndham) commenced an action in the Ontario Court of Justice (General Division) against the Company and 20 other defendants claiming that coal tar originating from the Company's Station A MGP in Toronto migrated to lands owned by Wyndham. Wyndham claimed general damages in the amount of $70 million and punitive damages in the amount of $5 million. It is believed that this action was also commenced by Wyndham due to its concern about the running of limitation periods.

The Company entered into a Tolling Agreement with Wyndham pursuant to which Wyndham's action was discontinued, without prejudice to Wyndham's right to commence a similar action in the future. In the fall of 2002, the Company received notice that Wyndham sold the lands that were the subject of the action to Cityscape Holdings Inc., which directed that title to a portion of these lands be transferred to Cityscape Residential Inc. (jointly Cityscape). Cityscape served the Company with a Statement of Claim in February 2003, naming the Company and nine other defendants who own or have owned portions of the former Station A MGP site. Cityscape is claiming $50 million in damages and $5 million in punitive damages against the Company as a result of alleged coal tar contamination of the lands now owned by Cityscape. The Company responded with a Statement of Defence denying liability. In January 2004, Cityscape dismissed the action against each of the Company's co-defendants.

In February 2008, the Ontario Superior Court of Justice ordered that examinations for discovery of the plaintiff be completed by mid-June 2008. Examinations for discovery were completed by this date, but required steps in the discovery process have not yet been completed by the plaintiff. At present, it is unknown when the trial of the matter will be heard.

The Company has put all of its known existing and subsisting former third party liability insurers on notice of the Cityscape action. To date, no insurer has confirmed that insurance coverage exists, nor has any insurer acknowledged that it owes the Company a duty to defend the Cityscape lawsuit. The Company first advised the OEB of the Cityscape action during its fiscal 2003 Rate Case and sought approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with the Cityscape action and any future MGP claims that may be advanced. With respect to the Company's 2006 to 2013 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

The Company remains of the view that it has a valid defence to the Cityscape lawsuit; however, it acknowledges that certain risks exist. Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation/isolation/containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

OTHER LITIGATON

The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a material impact on the Company's consolidated financial position or results of operations.

CORPORATE GOVERNANCE

The size of the Board of Directors of the Company is currently set at six (6) members, two (2) of whom are considered to be independent directors.

The Board has an Audit, Finance & Risk Committee comprised of the following directors:

J. L. Braithwaite
D. A. Leslie
J. R. Bird

The Audit, Finance & Risk Committee's key responsibilities include the review of the consolidated financial statements, and systems of internal financial and compliance control.

The governance of the Company is the responsibility of the Board of Directors and the Audit, Finance & Risk Committee of the Board, who are also responsible under law for the supervision of the management of the Company's businesses and affairs and have the statutory authority and obligation to act honestly and in good faith with a view to the best interests of the Company.

The Board makes independent decisions and also receives recommendations from the following committees of the Enbridge Inc. Board of Directors, who act in an advisory capacity to the Board of Directors of the Company:

- Governance Committee
- Human Resources & Compensation Committee
- Corporate Social Responsibility Committee

In addition to the committee structure and mandate of the Board of Directors outlined above, the Board of Directors has adopted and governs itself in accordance with Enbridge Inc.'s corporate governance practices as expressed in the *Corporate Governance Practices* of Enbridge annually disclosed in its *Management Information Circular* (last dated March 5, 2013), which is incorporated herein by reference.

ENBRIDGE GAS DISTRIBUTION INC.

(a subsidiary of Enbridge Inc.)

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2014

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Distribution Inc.

Financial Reporting
Management of Enbridge Gas Distribution Inc. (the Company) is responsible for the accompanying consolidated financial statements and all related financial information, including Management's Discussion and Analysis (MD&A). The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors (the Board) and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee (AF&RC) of the Board, includes directors who are unrelated and independent, and has a specific responsibility to oversee management's efforts to fulfill its responsibilities for financial reporting and internal controls related thereto. The AF&RC meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The AF&RC reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

Independent Auditor's Report

To the Shareholders of
Enbridge Gas Distribution Inc.

We have audited the accompanying consolidated financial statements of Enbridge Gas Distribution Inc. and its subsidiaries, which comprise the consolidated statements of financial position as at December 31, 2014 and December 31, 2013 and the consolidated statements of earnings, comprehensive income, shareholders' equity and cash flows for each of the three years in the period ended December 31, 2014, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

PricewaterhouseCoopers LLP
PwC Tower, 18 York Street, Suite 2600, Toronto, Ontario, Canada M5J 0B2

Opinion
In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Enbridge Gas Distribution Inc. and its subsidiaries as at December 31, 2014 and December 31, 2013 and its results of operations and its cash flows for each of the three years in the period ended December 31, 2014 in accordance with accounting principles generally accepted in the United States of America.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. GENERAL BUSINESS DESCRIPTION

Enbridge Gas Distribution Inc. (the Company) is a rate-regulated natural gas distribution utility, serving residential, commercial and industrial customers in its franchise areas of central and eastern Ontario. The Company also serves areas in northern New York State through its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence). The Company is a wholly owned subsidiary of Enbridge Inc. (Enbridge).

The Company also owns and operates regulated and unregulated natural gas storage facilities in Ontario. Between August 2011 and December 2012, the Company owned and operated two unregulated solar projects located in Amherstburg, Ontario, through a 99.9% limited partnership interest in Project AMBG2 LP (Project Amherstburg).

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

These consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

The Company commenced reporting using U.S. GAAP as its primary basis of accounting effective January 1, 2012, including restatement of comparative periods. The Company is permitted to prepare its consolidated financial statements in accordance with U.S. GAAP for purposes of meeting its Canadian continuous disclosure requirements under an exemption granted by securities regulators in Canada until 2018.

BASIS OF PRESENTATION AND USE OF ESTIMATES
The preparation of consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the consolidated financial statements. Significant estimates and assumptions used in the preparation of the consolidated financial statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities *(Note 4)*; unbilled revenues *(Note 6)*; allowance for doubtful accounts *(Note 6)*; depreciation rates and carrying value of property, plant and equipment *(Notes 2 and 7)*; amortization rates and carrying value of intangible assets *(Note 9)*; valuation of stock-based compensation *(Note 14)*; fair value of financial instruments *(Note 16)*; provisions for income taxes *(Note 17)*; assumptions used to measure retirement and other postretirement benefit obligations (OPEB) *(Note 18);* commitments and contingencies *(Note 21)*; and fair value of asset retirement obligations (ARO). Actual results could differ from these estimates.

PRINCIPLES OF CONSOLIDATION
The consolidated financial statements include the accounts of the Company and its subsidiaries. All significant intercompany accounts and transactions are eliminated upon consolidation.

REGULATION
The utility operations of the Company, excluding St. Lawrence, are regulated by the Ontario Energy Board (OEB) and the utility operations of St. Lawrence are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 4)*.

REVENUE RECOGNITION

The Company recognizes revenues when natural gas has been delivered or services have been performed. Gas commodity and distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's franchise area.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulators.

PUSH-DOWN ACCOUNTING

The Company elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by the Company. Upon adopting push-down accounting, the historical cost of the Company's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage its exposure to changes in interest rates. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges. The Company did not have any fair value hedges or net investment hedges at December 31, 2014 or 2013.

Cash Flow Hedges

The Company uses cash flow hedges to manage its exposure to changes in interest rates. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/loss (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and long-term assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and classifies these costs with Deferred amounts and other assets. These costs are amortized using the effective interest rate method over the life of the related debt instrument.

INCOME TAXES

The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. Any interest and/or penalty incurred related to tax is reflected in Income taxes.

The regulated utility operations of the Company recover income tax expense based on the taxes payable method as approved by the Regulators for rate-making purposes. As a result, rates do not include the recovery of deferred income taxes related to temporary differences. A corresponding deferred income tax regulatory liability/asset is recorded reflecting the Company's ability to pay/collect the amounts in the future through rates (*Note 4*).

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION

Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

The functional currency of the Company's only foreign operation, St. Lawrence, is the United States dollar. The effects of translating the financial statements of St. Lawrence to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts are translated at the exchange rates in effect on the date of the Consolidated Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS

Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased.

The Company extinguishes liabilities when a creditor has relieved the Company of its obligation, which occurs when the Company's financial institution honours a cheque that the creditor has presented for payment. Accordingly, obligations for which the Company has issued cheque payments that have not been presented to the financial institution totaling \$23 million as of December 31, 2014 (2013 - \$9 million) are included in Accounts payable and other on the Consolidated Statements of Financial Position.

GAS INVENTORIES

Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

Included in, or deducted from, physical gas inventories is an amount for natural gas to be received from, or returned to, direct purchase customers or agents (non-system supply customers). This amount represents the difference between natural gas received on behalf of non-system supply customers and natural gas delivered to such customers.

At December 31, 2014, $33 million (2013 - $28 million) of natural gas was held on behalf of transportation service customers. These transactions have no impact on the Company's consolidated earnings or financial position.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction at rates authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The Regulators prescribe the pool method of accounting for property, plant and equipment where similar assets with comparable useful lives are grouped and depreciated as a pool. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS

Deferred amounts and other assets primarily include: costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates including deferred income taxes; derivative financial instruments; and deferred financing costs.

INTANGIBLE ASSETS

Intangible assets consist primarily of the Company's Customer Information System (CIS) and software costs. The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are amortized on a straight-line basis over their expected useful lives, commencing when the asset is available for use.

ASSET RETIREMENT OBLIGATIONS

ARO associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. ARO are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For the majority of the Company's assets, it is not possible to make a reasonable estimate of ARO due to the indeterminate timing and scope of the asset retirements.

RETIREMENT AND POSTRETIREMENT BENEFITS

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality. In 2014, new mortality assumptions were adopted by the Company for the measurement of the December 31, 2014 benefit obligations. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. During the year ended December 31, 2012, the Company refined the methodology by which it determines discount rates, in particular, refining the method by which it estimates spreads for bonds with longer term maturities. Pension cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Amortization of prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans;
- Interest cost of pension plan obligations;
- Expected return on pension fund assets; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contributions occur.

The Company also provides OPEB other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans is recognized as Deferred amounts and other assets or Other long-term liabilities, respectively, on the Consolidated Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax.

The Company expects to recover pension expense in future rates and therefore records a corresponding regulatory asset to the extent such recovery is deemed to be probable. For years prior to 2012, a regulatory asset related to OPEB obligation was not recorded as a rate order allowing for the recovery of these costs in rates had not yet been obtained. Commencing in 2012, pursuant to a specific rate order allowing for recovery in rates of OPEB costs determined on an accrual basis, a corresponding regulatory asset was recognized. In the absence of rate regulation, regulatory balances would not be recorded and pension and OPEB costs would be charged to earnings and OCI on an accrual basis.

STOCK-BASED COMPENSATION

Enbridge grants stock-based compensation to certain employees and senior officers of the Company through four long-term incentive compensation plans. Compensation expense associated with each of the plans, as determined under the methods outlined below is recognized in Operating and administrative expense. Amounts owing to Enbridge in respect of stock-based compensation are payable on a quarterly basis.

Incentive Stock Options (ISOs) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the ISOs granted as calculated by the Black-Scholes-Merton model and is recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility.

Performance Stock Units (PSUs) and Restricted Stock Units (RSUs) are cash settled awards for which the related liability is remeasured each reporting period. PSUs vest at the completion of a three-year term and RSUs vest at the completion of a 35-month term. During the vesting term, compensation expense is recorded based on the number of units outstanding and the current market price of the Company's shares. The value of the PSUs is also dependent on the Company's performance relative to performance targets set out under the plan.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or that a liability has been incurred, and the amount of impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES AND ESTIMATES

ADOPTION OF NEW STANDARDS

Obligations Resulting from Joint and Several Liability Arrangements

Effective January 1, 2014, the Company retrospectively adopted Accounting Standards Update (ASU) 2013-04 which provides measurement and disclosure guidance for obligations with fixed amounts at a reporting date resulting from joint and several liability arrangements. There was no material impact to the consolidated financial statements for the current or prior periods presented as a result of adopting this update.

FUTURE ACCOUNTING POLICY CHANGES

Extraordinary and Unusual Items

ASU 2015-01 was issued in January 2015 and eliminates the concept of extraordinary items from GAAP. Entities will no longer be required to separately classify and present extraordinary events in the income statement, net of tax, after income from continuing operations. This accounting update is effective for annual and interim reporting periods beginning after December 15, 2015 and may be applied prospectively or retrospectively. The adoption of the pronouncement is not anticipated to have an impact on the consolidated financial statements.

Revenue from Contracts with Customers

ASU 2014-09 was issued in May 2014 with the intent of significantly enhancing comparability of revenue recognition practices across entities and industries. The new standard provides a single principles-based, five-step model to be applied to all contracts with customers and introduces new, increased disclosure requirements. The new standard is effective for annual and interim periods beginning on or after December 15, 2016 and may be applied on either a full or modified retrospective basis. The Company is currently assessing the impact of the new standard on its consolidated financial statements.

Reporting Discontinued Operations and Disclosures of Disposals of Components of an Entity

ASU 2014-8 was issued in April 2014 and changes the criteria and disclosures for reporting discontinued operations. It is anticipated that in general, the revised criteria will result in fewer transactions being categorized as discontinued operations. This accounting update is effective for annual and interim periods beginning after December 15, 2014 and is to be applied prospectively. The adoption of the pronouncement is not anticipated to have an impact on the Company’s consolidated financial statements.

CHANGES IN ACCOUNTING ESTIMATES

Depreciation Rates

In 2014, the Company revised depreciation rates based on the results of a new net negative salvage study which was approved by the Ontario Energy Board (OEB) as part of the 2014 to 2018 customized incentive regulation (IR) plan. The revised rates decreased depreciation and amortization expense by $44 million for the year ended December 31, 2014.

4. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

For the purposes of this note, “Enbridge Gas Distribution” refers specifically to Enbridge Gas Distribution Inc. excluding St. Lawrence, whereas “St. Lawrence” refers specifically to St. Lawrence Gas Company, Inc.

RATE APPROVAL

The OEB issued a decision in July 2014, with a subsequent decision and rate order in August 2014 on the Company's customized IR application for the setting of rates for the period of 2014 through 2018. The customized IR plan requires allowed revenue, and consequently rates, to be updated for select items. The OEB also approved the adoption of a new approach for determining net negative salvage percentages to be included within the Company's depreciation rates. Under the customized IR plan, the Company shares equally with customers, earnings above the approved base return.

Under the customized IR plan, the Company will continue to apply the accounting guidance found in Accounting Standards Codification (ASC) 980 – Regulated Operations.

For the year ended December 31, 2013, Enbridge Gas Distribution's rates were set pursuant to an OEB approved settlement agreement and decision related to its 2013 cost of service (COS) rate application. For the years ended December 31, 2014, 2013 and 2012, St. Lawrence's rates were set using a COS methodology. Under COS, revenues are set to recover costs and to earn a rate of return on the deemed common equity component of rate base. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, interest and income taxes. Rate base is the average level of investment in all recoverable assets used in natural gas distribution, storage and transmission and an allowance for working capital. Under 2014 and 2013 COS, St. Lawrence's revenues were set to earn a rate of return on the deemed common equity component of rate base. Gas costs are not recovered through revenue rates, but are set separately in gas cost rates. Under COS, it is the responsibility of Enbridge Gas Distribution and St. Lawrence to demonstrate to the Regulators the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

For the year ended December 31, 2012, Enbridge Gas Distribution's rates were set using its OEB approved revenue per customer cap IR methodology, which was in place from 2008 through 2012. The IR methodology adjusted revenues, and consequently rates, annually and relied on an annual process to forecast volume and customer additions. Under the IR mechanism, Enbridge Gas Distribution was allowed to earn and fully retain 100 basis points (bps) over the base return. Any return over 100 bps was required to be shared with customers on an equal basis.

During the years ended December 31, 2014, 2013 and 2012, the cost of natural gas is passed on to customers as a flow-through.

APPROVED RATES

Enbridge Gas Distribution

Enbridge Gas Distribution's rates for 2014 included an after-tax rate of return on common equity of 9.36% (2013 - 8.93% and 2012 - 8.39%) based on a 36% (2013 and 2012 - 36%) deemed common equity component of rate base.

St. Lawrence

St. Lawrence's approved after-tax rate of return on common equity embedded in rates was 10.5% for the year ended December 31, 2014 (2013 and 2012 - 10.5%) based on a 50% (2013 and 2012 - 50%) deemed common equity component of rate base. Any earnings above a return on equity of 11% (2013 and 2012 - 11%) were shared equally with customers. The calculation of such earnings was cumulative from January 1, 2010 to December 31, 2014 and resulted in no sharing impact as at December 31, 2014 (2013 and 2012 - nil).

IMPACTS OF RATE REGULATION

Regulatory Assets and Liabilities

As a result of rate regulation, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

Regulatory Risk and Uncertainties Affecting Recovery or Settlement

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2014**	2013	Consolidated Statement of Financial Position Location**	Estimated Recovery/ Settlement Period *(years)*
(millions of Canadian dollars)				
Regulatory assets/(liabilities)				
Enbridge Gas Distribution

* Refer to the footnote for details

** AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities

*** Dependent on the nature of the item

1 *Purchased gas variance (PGVA) is the difference between the actual cost and the approved cost of natural gas reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process. In May 2014, the OEB issued a decision allowing a portion of the PGVA balance as at June 30, 2014 to be recovered over a 24-month period from July 1, 2014 to June 30, 2016. In the*

absence of rate regulation, the actual cost of natural gas would be included in gas commodity and distribution costs, excluding depreciation and revenues or costs would be adjusted by an equal and offsetting amount as the right to collect or refund the revenue or costs has been established.

2 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation, this regulatory balance and the related earnings impact would not be recorded.*

3 *The pension plan balance represents the regulatory offset to the pension liability/asset to the extent the amounts are to be collected/refunded in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

4 *The OPEB balance represents the Company's right to recover OPEB costs pursuant to an OEB rate order, which allows the amount to be collected in rates over a 20-year period commencing in 2013. In the absence of rate regulation, this regulatory balance and related earnings impact would not be recorded.*

5 *The Constant dollar net salvage adjustment represents the cumulative variance between the amount proposed for clearance and the actual amount cleared, relating specifically to the site restoration clearance adjustment. At the end of 2018 any residual balance will be cleared in a post 2018 true up, ensuring that the actual amount cleared is equivalent to the required $380 million.*

6 *The Unabsorbed demand cost deferral account (UDCDA) represents the actual cost consequences of unutilized transportation capacity contracted by Enbridge Gas Distribution to meet increased requirements resulting from the Peak Gas Design Day Criteria (PGDDC). Enbridge Gas Distribution updated its PGDDC in 2013 and 2014. The impact of this update was phased in equally over the two years. The balance for 2014 captures the cost consequences of unutilized transportation capacity above the amount associated with the 2014 Design day criteria transportation deferral account (DDCTDA). In the absence of rate regulation, these costs would be expensed as incurred.*

7 *DDCTDA balance represents the actual cost consequences of unutilized transportation capacity contracted by Enbridge Gas Distribution to meet increased requirements resulting from the PGDDC. Enbridge Gas Distribution updated its PGDDC in 2013 and 2014. The impact of this update was phased in equally over the two years. The heating degree days used within its design day criteria for 2013 and 2014's design day criteria were updated. The balance for 2014 captures the cost consequences of unutilized transportation capacity associated with the 2014 DDCTDA. In the absence of rate regulation, these costs would be expensed as incurred.*

8 *Demand side management incentive deferral account (DSMIDA), previously referred to as shared savings mechanism deferral account, represents the benefit derived by Enbridge Gas Distribution as a result of its energy efficiency programs. Enbridge Gas Distribution has historically been granted OEB approval to recover the DSMIDA amount through rates after a detailed review by the OEB. The process of review and subsequent recovery may extend over a few years. There would be no change in the treatment of this item in the absence of rate regulation.*

9 *Unaccounted for gas variance represents the difference between the total natural gas distributed by Enbridge Gas Distribution and the amount of natural gas billed or billable to customers for their recorded consumption, to the extent it is different from the approved amount built into rates. Enbridge Gas Distribution has deferred unaccounted for gas variance and has historically been granted OEB approval for recovery or required refund of this amount in the subsequent year. In the absence of rate regulation, this variance would be included in earnings in the year incurred.*

10 *Customer care CIS rate smoothing deferral represents the difference between the forecast costs and the approved costs for customer care and CIS reflected in rates. The balance will accumulate during 2013 to 2015 when the cost per customer exceeds the cost approved for recovery in rates. The balance will be drawn down during 2016 to 2018 when the cost per customer is lower than the cost approved for recovery in rates. Enbridge Gas Distribution has received OEB approval to collect from or refund to customers any remaining balance after 2018. In the absence of rate regulation, the variance would be included in earnings in the year incurred.*

11 *Deferred rate hearing costs variance account (OHCVA) is rate hearing costs incurred by Enbridge Gas Distribution for the regulatory process. Historically, Enbridge Gas Distribution had been granted OEB approval for recovery of such hearing costs, generally within two years. Beginning in 2014, the OHCVA has been discontinued. In the absence of rate regulation, these costs would be expensed as incurred.*

12 *Average use true-up variance represents the net revenue impact to be recovered from or refunded to customers, associated with any variance between forecast average use and actual weather normalized average use for general service customers. The amount will be recovered from or refunded to customers in future periods in accordance with the OEB's approval. In the absence of rate regulation, this regulatory balance and the related earnings impact would not be recorded.*

13 *Future removal and site restoration reserves result from amounts collected from customers by Enbridge Gas Distribution, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment. The balance represents the amount that Enbridge Gas Distribution has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

14 *The Site restoration clearance adjustment represents the amount, that was determined by the OEB, of previously collected costs for future removal and site restoration that is now considered to be in excess of future requirements and will be refunded to customers over the customized IR term. This was a result of the OEB's approval of the adoption of a new approach for determining net negative salvage percentages. The new approach resulted in lower depreciation rates and lower future removal and site restoration reserves. There would be no change in the treatment of this item in the absence of rate regulation.*

15 *The revenue adjustment represents the revenue variance between interim rates, which were in place from January 2014 to September 2014, and the final OEB approved 2014 rates, which were implemented in October 2014, but effective in January 2014. The revenue adjustment balance is the 2014 OEB approved revenue adjustment amount to be refunded to customers in January 2015. There would be no change in the treatment of this item in the absence of rate regulation.*

16 *Transactional services deferral represents the customer portion of additional earnings generated from optimization of storage and pipeline capacity. Enbridge Gas Distribution has historically been required to refund the amount to customers in the following year. There would be no change in the treatment of this item in the absence of rate regulation.*

17 *Earnings sharing deferral represents amounts relating to the earnings sharing mechanism, which forms part of the customized IR plan applicable to 2014. The earnings sharing is payable to customers and represented 50% of normalized 2014 U.S. GAAP earnings represented by the ROE in excess of the allowed utility return on equity threshold applicable to Enbridge Gas Distribution under the customized IR. The December 31, 2014 balance related to the year ended December 31, 2014. Earnings sharing did not apply to the 2013 COS Settlement. There would be no change in the treatment of this item in the absence of rate regulation.*

18 *Storage and transportation deferral represents the difference between the actual cost and the approved cost of natural gas storage and transportation reflected in rates. Enbridge Gas Distribution has historically been granted OEB approval to collect this balance from or to refund this balance to customers, generally in the subsequent year. In the absence of rate regulation, the actual cost of natural gas storage and transportation would be included in gas commodity and distribution costs and revenues or costs would be adjusted by an equal and offsetting amount, as the right to collect or refund the revenue or costs has been established.*

19 *Post-retirement true-up variance is the difference between the actual cost and the approved cost of pension and OPEB reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers in the subsequent year, up to a maximum of $5 million per year. Any amounts in excess of $5 million per year will be deferred for refund or collection in the next subsequent year. In the absence of rate regulation, the variance would be included in earnings in the year incurred.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Revenue
To recognize the actions or expected actions of the Regulators, the timing and recognition of certain revenues and expenses may differ from that otherwise expected for non rate-regulated entities.

In 2012, the Company received a rate order from the OEB permitting recovery of OPEB costs in the amount of $89 million. The rate order allows this amount to be collected in rates over a 20-year period commencing in 2013, and was presented in Other revenue for the year ended December 31, 2012. In the absence of rate regulation, this earnings impact would not have been recorded.

Operating Cost Capitalization
With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2014, cumulative costs relating to this services contract of $166 million (2013 - $154 million) were included in gas mains and are being depreciated over the average service life of 25 years. In the absence of rate regulation, some of these costs would be charged to earnings in the year incurred.

Property, Plant and Equipment
In the absence of rate regulation, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred. Further, on the retirement of utility assets, the excess of the book value net of proceeds would be recorded as a loss on the sale of assets in earnings in the period of retirement. Any removal costs incurred would be booked against the future removal and site restoration balance (described above).

Intangible Assets
The Company entered into contracts relating to CIS integration services, software maintenance and support. At December 31, 2014, the net book value of these costs was $60 million (2013 - $73 million). In the absence of rate regulation, a portion of the original cost of these assets would have been expensed in the period incurred.

Gas Inventories
Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2014 is $42 million (2013 - $40 million) of storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation
In the absence of rate regulation, depreciation rates would not have included a charge for future removal and site restoration costs.

5. DISCONTINUED OPERATIONS

In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to Enbridge Income Fund (the Fund), an affiliated entity under common control, for proceeds of $72 million. Project Amherstburg consisted primarily of property, plant and equipment and intangible assets. The excess of the sale price over the net book value at the time of disposition of $17 million inclusive of deferred income tax recoveries of $10 million were recognized as Additional paid-in capital. No gain or loss was recognized in earnings on the disposition; however $5 million of cash income taxes incurred on the related capital gain remains as a charge to consolidated earnings for the year ended December 31, 2012.

6. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2014**	2013
(millions of Canadian dollars)		
Regulatory assets *(Note 4)*	**567**	54
Trade receivables	**372**	357
Unbilled revenues	**161**	211

Agent billing and collection receivable	**-**	15
Other	**52**	33
Allowance for doubtful accounts *(Note 16)*	**(33)**	(31)
	1,189	706

During the first quarter of 2014, increases in natural gas prices and colder than normal weather resulted in the Company accumulating a significant balance in its PGVA. Included in Accounts receivable and other at December 31, 2014 is $491 million (December 31, 2013 - $6 million in Accounts payable and other) which represents the PGVA balance that is expected to be recovered from customers within the next 12 months.

7. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	**2014**	2013
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas mains	**2.2%**	**3,593**	3,342
Gas services	**2.3%**	**2,798**	2,667

		115	111
Accumulated depreciation		**(22)**	(17)
		93	94
Property, plant and equipment, net		**6,268**	5,869

Depreciation expense, including amounts collected for future removal and site restoration costs, was $237 million for the year ended December 31, 2014 (2013 - $267 million, 2012 - $289 million). Additional information about the impact of the revised depreciation rates is included in Note 3.

8. DEFERRED AMOUNTS AND OTHER ASSETS

December 31,	**2014**	2013
(millions of Canadian dollars)		
Regulatory assets *(Note 4)*	**711**	312
Deferred financing costs	**12**	11
Deferred income taxes *(Note 17)*	**8**	1
Pension and OPEB asset *(Note 18)*	**4**	8
Long-term portion of derivative assets *(Note 16)*	**-**	46
Other	**3**	1
	738	379

At December 31, 2014, deferred amounts of $34 million (2013 - $31 million) were subject to amortization and are presented net of accumulated amortization of $22 million (2013 - $20 million). Amortization expense for the year ended December 31, 2014 was $2 million (2013 and 2012 - $2 million).

In May 2014, the OEB issued a decision allowing a portion of the PGVA balance as at June 30, 2014 to be recovered over a 24-month period from July 1, 2014 to June 30, 2016. Included in Deferred amounts and other assets at December 31, 2014 is $182 million (2013 - nil) which represents the portion of the PGVA balance that is expected to be recovered beyond the next 12 months.

9. INTANGIBLE ASSETS

December 31, 2014	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	**24.1%**	**198**	**(97)**	**101**
CIS	**10.0%**	**127**	**(67)**	**60**
		325	**(164)**	**161**

December 31, 2013	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	22.8%	162	(61)	101
CIS	10.0%	127	(54)	73
		289	(115)	174

Intangible assets include $23 million of work-in-progress as at December 31, 2014 (2013 - $19 million). Total amortization expense for intangible assets was $49 million for the year ended December 31, 2014 (2013 - $37 million, 2012 - $31 million). The Company expects aggregate amortization expense for the years ending December 31, 2015 through 2019 of $43 million, $49 million, $47 million, $45 million and $41 million, respectively.

10. ACCOUNTS PAYABLE AND OTHER

December 31,	**2014**	2013
(millions of Canadian dollars)		
Operating accrued liabilities	**365**	329
Regulatory liabilities *(Note 4)*	**233**	76
Budget billing plan payable	**137**	82
Security deposits	**61**	62
Dividends payable	**52**	51
Due to affiliates *(Note 20)*	**44**	55
Trade payables	**27**	40
Interest payable	**27**	28
Taxes payable	**11**	22
Short-term portion of derivative liabilities *(Note 16)*	**6**	-
Current portion of OPEB liability *(Note 18)*	**4**	4
Agent billing and collection payable	**2**	-
Other	**5**	20
	974	769

Included in Accounts payable and other at December 31, 2014 is $52 million (2013 - nil) relating to the 2014 OEB approved revenue adjustment that will be refunded to customers as a result of the variance between interim rates and final OEB approved 2014 rates. Also included in Accounts payable and other at December 31, 2014 is $90 million (2013 - nil) relating to the portion of site restoration clearance adjustment that is expected to be refunded to customers within the next 12 months.

11. DEBT

December 31,	Weighted Average Interest Rate	Maturity	**2014**	2013
(millions of Canadian dollars)				
Debenture	9.85%	2024	**85**	85
Medium-term notes	4.73%	2017-2050	**3,025**	2,695
Commercial paper and credit facility draws, net[1]			**1,122**	382
Other[2]			**37**	26
Total debt			**4,269**	3,188
Current maturities			**(2)**	(400)
Short-term borrowings	1.32%		**(938)**	(374)
Short-term borrowings from affiliates *(Note 20)*	2.18%		**(204)**	(15)
Long-term debt			**3,125**	2,399
Loans from affiliate company *(Note 20)*			**375**	375

1 *Includes amounts drawn on uncommitted demand credit facilities.*
2 *Consists of note payable to affiliate company and debt premium.*

In April 2014, the Company issued $300 million of three-year medium-term notes at an interest rate of 1.85%. In June 2014, a new $1,000 million shelf prospectus was filed as a continuation of the Company's medium-term note program, which was last renewed in January 2013. The prospectus is effective for a 25-month period.

In August 2014, the Company issued $215 million of ten-year medium-term notes at an interest rate of 3.15% and $215 million of thirty-year medium-term notes at an interest rate of 4.00%.

For the years ending December 31, 2015 through 2019, medium-term note maturities are $2 million, $2 million, $502 million, $1 million and $1 million, respectively. The Company's debentures and medium-term notes bear interest at fixed rates, and interest obligations for the years ending December 31, 2015 through 2019 are $151 million, $151 million, $149 million, $135 million and $136 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2014**	2013	2012
(millions of Canadian dollars)			
Debentures and medium-term notes	**149**	138	139

Commercial paper and credit facility draws	**9**	4	2
Other interest and finance costs	**(4)**	9	8
Capitalized	**(6)**	(7)	(6)
	177	171	170

In 2014, total interest paid to third parties was $163 million (2013 and 2012 - $142 million) and total interest paid to affiliate company was $29 million (2013 - $27 million, 2012 - $34 million).

CREDIT FACILITIES

The Company currently has a $1,000 million commercial paper program limit that is backstopped by committed lines of credit of $1,000 million. The term of any commercial paper issued under this program may not exceed one year. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option.

In June 2014, the Company obtained a new $300 million revolving credit facility from Enbridge Inc. which has a term out date in June 2015 and a maturity date in June 2016. As at December 31, 2014, $175 million was drawn on this credit facility. The Company also increased its external credit facility by $300 million to a total of $1,000 million and extended the term out date for an additional year to July 2015, with a maturity date in July 2016.

		December 31, 2014			December 31, 2013
	Maturity Dates	Total Facilities[1]	Draws[2]	Available	Total Facilities
(millions of Canadian dollars)					
Enbridge Gas Distribution Inc.	2016	**1,300**	**1,110**	**190**	700
St. Lawrence Gas Company, Inc.	2019	**8**	**8**	**-**	13
Total credit facilities		**1,308**	**1,118**	**190**	713

1 Includes facility draws and commercial paper issuances, net of discount, that are backstopped by the credit facility.
2 Includes facility draws and commercial paper issuances, net of discount, that are backstopped by the external credit facility.

In addition to the committed credit facilities noted above, St. Lawrence Gas Company, Inc. also has $6 million (2013 - $5 million) of uncommitted demand credit facilities, of which $2 million (2013 - $1 million) was unutilized as at December 31, 2014.

Credit facilities carried a weighted average standby fee of 0.2% on the unused portion and draws bear interest at market rates.

The Company's borrowings, whether debentures or medium-term notes, are unsecured. When issuing any new indebtedness with a maturity over 18 months, covenants contained in the Company's trust indenture require the pro forma long-term debt interest coverage ratio to be at least 2.0 times for 12 consecutive months out of the previous 23 months. The pro forma long-term debt interest coverage ratio is calculated as U.S. GAAP earnings adjusted for income taxes, long-term debt interest expense, amortization of financing costs and intercompany interest expense less gains on asset dispositions divided by the annual interest requirement. The Company is permitted to refinance maturing long-term debt with a matching long-term debt issue without the requirement to meet the 2.0 times interest coverage test. As at December 31, 2014, the Company was in compliance with this covenant.

12. OTHER LONG-TERM LIABILITIES

	943	1,026

13. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and a limited number of preference shares.

COMMON SHARES

	2014		2013		2012	
December 31,	Number of shares	Amount	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of common shares in millions)						
Balance at beginning of year	**150.6**	**1,287**	142.3	1,137	142.3	1,137
Common shares issued	**8.3**	**150**	8.3	150	-	-
Balance at end of year	**158.9**	**1,437**	150.6	1,287	142.3	1,137

PREFERENCE SHARES

December 31, 2014, 2013, and 2012	Authorized	Issued and Outstanding	Amount
(millions of Canadian dollars, number of preference shares in millions)			
Group 1	0.2	-	-
Group 2, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 2, Series D, Cumulative Redeemable Convertible	4	-	-
Group 3, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 3, Series D, Fixed / Floating Cumulative Redeemable Convertible	4	4	100
Group 4	10	-	-
Group 5	10	-	-
			100

Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. The Company has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case. As at December 31, 2014, no preference shares have been redeemed.

On July 1, 2019, and every five years thereafter, the Group 3, Series D preference shares can be converted, at the holder's option, into Group 2, Series D preference shares on a one-for-one basis, and will pay fixed cumulative cash dividends that are not less than 80% of the Government of Canada yield applicable to the fixed dividend period. The Group 3, Series D preference shareholders opted not to convert their shares into Group 2, Series D preference shares effective July 1, 2014.

The Group 2, Series D preference shares can be redeemed, at the Company's option, for $25.00 per share. The Group 2, Series D preference shares can also be converted into Group 3, Series D preference shares on a one-for-one basis at the holder's option on July 1, 2019 and every five years thereafter.

14. STOCK OPTION AND STOCK UNIT PLANS

Enbridge's four long-term incentive compensation plans include the ISO Plan, the PBSO Plan, the PSU Plan and the RSU Plan. The Company reimburses Enbridge for stock-based compensation costs associated with its employees on a quarterly basis. As of December 31, 2014, the Company did not have any employees that had options in the PBSO Plan.

INCENTIVE STOCK OPTIONS

Key employees of the Company are granted ISOs to purchase common shares of Enbridge at the market price on the grant date. ISOs vest in equal annual installments over a four-year period and expire 10 years after the issue date.

December 31, 2014	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**2,490**	**28.81**		
Options granted	**468**	**48.81**		
Options exercised[1]	**(363)**	**20.19**		
Options cancelled	**(7)**	**31.87**		
Employee movements from other Enbridge companies	**77**	**30.07**		
Options outstanding at end of year	**2,665**	**33.53**	**6.3**	**48**
Options vested at end of year[2]	**1,529**	**26.02**	**4.8**	**39**

1 The total intrinsic value of ISOs exercised during the year ended December 31, 2014 was $11 million (2013 - $7 million; 2012 - $11 million) and cash received by Enbridge on exercise was $5 million (2013 - $2 million; 2012 - $6 million).

2 The total fair value of options vested under the ISO Plan during the year ended December 31, 2014 was $2 million (2013 and 2012 - $2 million).

Weighted average assumptions used to determine the fair value of the ISOs using the Black-Scholes-Merton option pricing model are as follows:

Year ended December 31,	**2014**	2013	2012
Fair value per option *(Canadian dollars)*[1]	**5.53**	5.27	4.81
Valuation assumptions			
Expected option term *(years)*[2]	**5**	5	5
Expected volatility[3]	**16.9%**	17.4%	19.7%
Expected dividend yield[4]	**2.9%**	2.8%	3.0%
Risk-free interest rate[5]	**1.6%**	1.2%	1.3%

1 Options granted to United States employees are based on New York Stock Exchange prices. The option value and assumptions shown are based on a weighted average of the United States and the Canadian options. The fair values per option were $5.45 (2013 - $5.15; 2012 - $4.65) for Canadian employees and US$5.35 (2013 - US$5.63, 2012 - US$5.58) for United States employees.

2 The expected option term is based on historical exercise practice.

3 Expected volatility is determined with reference to historic daily share price volatility and consideration of the implied volatility observable in call option values near the grant date.

4 The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.

5 The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields and the United States Treasury Bond Yields.

Compensation expense recorded for the year ended December 31, 2014 for ISOs was $4 million (2013 and 2012 - $3 million). At December 31, 2014, unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO Plan was $4 million. The cost is expected to be fully recognized over a weighted average period of approximately three years.

PERFORMANCE STOCK UNITS

Enbridge has a PSU Plan for senior officers of the Company where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by Enbridge's weighted average share price for 20 days prior to the maturity of the grant and by a performance multiplier. The performance multiplier ranges from zero, if Enbridge's performance fails to meet threshold performance levels, to a maximum of two if Enbridge performs within the highest range of its performance targets. The 2012, 2013 and 2014 grants derive the performance multiplier through a calculation of Enbridge's price/earnings ratio relative to a specified peer group of companies and Enbridge's earnings per share, adjusted for unusual non-operating or non-recurring items, relative to targets established at the time of grant. To calculate the 2014 expense, multipliers of two, based upon multiplier estimates at December 31, 2014, were used for each of the 2012, 2013 and 2014 PSU grants.

December 31, 2014	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**19**		
Units granted	**15**		
Units matured[1]	**(9)**		
Dividend reinvestment	**1**		
Units outstanding at end of year	**26**	**1.6**	**3**

1 *The total amount paid by Enbridge during the year ended December 31, 2014 for PSUs was $1 million (2013 - $2 million; 2012 - $1 million).*

Compensation expense recorded for the year ended December 31, 2014 for PSUs was $5 million (2013 - $4 million; 2012 - $7 million). As of December 31, 2014, unrecognized compensation expense related to non-vested units granted under the PSU Plan was $2 million and is expected to be fully recognized over a weighted average period of approximately two years.

RESTRICTED STOCK UNITS

Enbridge has a RSU Plan where cash awards are paid to certain non-executive employees of the Company following a 35-month maturity period. RSU holders receive cash equal to Enbridge's weighted average share price for 20 days prior to the maturity of the grant multiplied by the units outstanding on the maturity date.

December 31, 2014	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**203**		
Units granted	**96**		
Units cancelled	**(9)**		
Units matured[1]	**(105)**		
Dividend reinvestment	**8**		
Employee movements from other Enbridge companies	**3**		
Units outstanding at end of year	**196**	**1.4**	**10**

1 *The total amount paid by Enbridge during the year ended December 31, 2014 for RSUs was $5 million (2013 - $5 million; 2012 - $5 million).*

Compensation expense recorded for the year ended December 31, 2014 for RSUs was $5 million (2013 - $5 million; 2012 - $5 million). As of December 31, 2014, unrecognized compensation expense related to non-vested units granted under the RSU Plan was $6 million and is expected to be fully recognized over a weighted average period of approximately two years.

15. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE INCOME

Changes in AOCI for the years ended December 31, 2014, 2013 and 2012, are as follows:

(millions of Canadian dollars)	Cash Flow Hedges	Cumulative Translation Adjustment	Unamortized OPEB Actuarial Loss	Total
Balance at January 1, 2014	**70**	**(5)**	**-**	**65**

16. DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

MARKET RISK

The Company's earnings, cash flows and OCI are subject to movements in foreign exchange rates, interest rates and natural gas prices (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which the Company is exposed and the risk management instruments used to mitigate them.

Foreign Exchange Risk
Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. A portion of the Company's purchases of natural gas are denominated in United States dollars and as a result there is exposure to fluctuations in the exchange rate of the United States dollar against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer; therefore, the net exposure of the Company to movements in the foreign exchange rate on natural gas purchases is nil (2013 - nil).

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps and options are used to mitigate the volatility of short-term interest rates on interest expense related to variable rate debt.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to mitigate the Company's exposure to long-term interest rate variability on select forecast term debt issuances. The Company uses qualifying derivative instruments to manage interest rate risk.

Natural Gas Price Risk
Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customer, therefore, the net exposure to the Company is nil (2013 - nil).

TOTAL DERIVATIVE INSTRUMENTS
The following table summarizes the Consolidated Statements of Financial Position location and carrying value of the Company's derivative instruments. The Company did not have any outstanding fair value hedges at December 31, 2014 or 2013.

The Company generally has a policy of entering into individual International Swaps and Derivatives Association, Inc. (ISDA) agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in those particular circumstances. The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2014	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts payable and other					
Interest rate contracts	**(6)**	**-**	**(6)**	**-**	**(6)**
Other long-term liabilities					
Interest rate contracts	**(5)**	**-**	**(5)**	**-**	**(5)**
Total net derivative liability					
Interest rate contracts	**(11)**	**-**	**(11)**	**-**	**(11)**

December 31, 2013	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts receivable and other					
Interest rate contracts	36	-	36	-	36
Deferred amounts and other assets					
Interest rate contracts	46	-	46	-	46
Total net derivative asset					
Interest rate contracts	82	-	82	-	82

The Company's derivatives instruments mature through 2017 and have a notional principal of $346 million for interest rate contracts for short-term borrowings (2013 - $535 million), and $422 million for interest rate contracts on long-term debt (2013 - $747 million).

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and consolidated comprehensive income, before the effect of income taxes.

Year ended December 31,	**2014**	2013	2012
(millions of Canadian dollars)			
Amount of unrealized gains/(loss) recognized in OCI			
Cash flow hedges			
Interest rate contracts	**(84)**	109	(1)
	(84)	109	(1)
Amount of loss reclassified from AOCI to earnings *(effective portion)*			
Interest rate contracts[1]	**-**	(2)	(2)
	-	(2)	(2)
Amount of gains reclassified from AOCI to earnings *(ineffective portion)*			
Interest rate contracts[1]	**-**	2	-
	-	2	-

1 Reported within Interest expense, net in the Consolidated Statements of Earnings.

The Company estimates that $1 million in AOCI related to cash flow hedges from interest rate contracts will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on the interest rates in effect when derivative contracts that are currently outstanding mature. For all forecasted transactions, the maximum term over which the Company is hedging exposures to the variability of cash flows is 25 months at December 31, 2014.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments *(Notes 20 and 21)* as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under committed credit facilities and long-term debt, which includes debentures and medium-term notes, and, if necessary, additional liquidity is available through intercompany transactions with Enbridge Inc. and other related entities. These sources are expected to be sufficient to enable the Company to fund all anticipated requirements. The Company maintains a current shelf prospectus with securities regulators, which enables, subject to market conditions, ready access to the Canadian public capital markets. In addition to the Company's access to the Canadian public capital markets, the Company maintains committed credit facilities *(Note 11)* with a diversified group of banks and institutions. The Company is in compliance with all the terms and conditions of its committed credit facilities at December 31, 2014. As a result, all credit facilities are available to the Company and the banks are obligated to fund, and have been funding, the Company under the terms of the facilities.

CREDIT RISK
The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has tightened credit terms including obtaining additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts *(Note 6),* which totaled $33 million at December 31, 2014 (December 31, 2013 - $31 million).

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

The Company had group credit concentration and maximum credit exposure, with respect to derivative instruments, in the following counterparty segments:

	December 31, 2014	December 31, 2013
(millions of Canadian dollars)		
Canadian financial institutions	**-**	69
European financial institutions	**-**	13
	-	82

FAIR VALUE MEASUREMENTS
The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

Fair Value of Derivatives
The Company categorizes its derivative assets and liabilities, measured at fair value, into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1
Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2
Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3
Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2014, the Company had Level 2 derivative assets with fair value of nil (2013 - $82 million), and Level 2 derivative liabilities with fair value of $11 million (2013 - nil).

The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers as at December 31, 2014 or 2013.

Fair Value of Other Financial Instruments
The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded in OCI, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at cost. The Company's investment in IPL System Inc., an affiliate company, is recorded at fair value. At December 31, 2014, the fair value of the investment was $825 million (2013 - $825 million). The fair value of the Company's investment is classified as a Level 2 measurement and as of December 31, 2014 and 2013 the fair value approximated its cost and redemption value and therefore no amount was recognized in OCI.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2014, the Company's long-term debt had a carrying value of $3,127 million (2013 - $2,799 million) and a fair value of $3,709 million (2013 - $3,161 million).

The fair value of other financial assets and liabilities other than derivative instruments approximates their cost due to the short period to maturity.

17. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2014**	2013	2012
(millions of Canadian dollars)			
Earnings from continuing operations before income taxes	**252**	260	261
Federal statutory income tax rate	**15.0%**	15.0%	15.0%
Federal income taxes at statutory rate	**38**	39	39
Increase/(decrease) resulting from:			
Provincial and state income taxes	**3**	19	18
Effects of rate regulated accounting[1]	**(25)**	(5)	(7)
Non-taxable intercompany distributions	**(9)**	(9)	(9)
Legislative changes and other rate differentials	**-**	-	8
Intercompany sale of investment[2]	**-**	-	3
Other[3]	**(1)**	(1)	1
Income taxes from continuing operations	**6**	43	53
Effective income tax rate	**2.4%**	16.5%	20.3%

1 *During 2014, previously collected costs for future removal and site restoration were refunded to customers that resulted a decrease in income taxes from continuing operations of $26 million (2013 - nil).*

2 *In December 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to the Fund. As the transaction occurred between entities under common control of Enbridge, the intercompany gain realized as a result of this transfer was eliminated, although cash income taxes of $5 million remained as a charge to earnings.*

3 *Included in "Other" are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals & entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.*

	3	(9)	24
Income taxes from continuing operations	**6**	43	53

COMPONENTS OF DEFERRED INCOME TAXES

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2014**	2013
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**(577)**	(560)
Financial derivatives	**(3)**	(25)
Deferrals	**-**	(13)
Regulatory assets	**(72)**	(56)
Other	**(1)**	(2)
Total deferred income tax liabilities	**(653)**	(656)
Deferred income tax assets		
Future removal and site restoration reserves	**143**	240
Deferrals	**53**	-
Retirement and postretirement benefits	**21**	23
Other	**4**	1
Total deferred income tax assets	**221**	264
Net deferred income tax liabilities	**(432)**	(392)
Presented as follows:		
Assets		
Accounts receivable and other *(Note 6)*	**23**	2
Deferred amounts and other assets *(Note 8)*	**8**	1
Total deferred income tax assets	**31**	3
Liabilities		
Deferred income taxes	**(463)**	(395)
Total deferred income tax liabilities	**(463)**	(395)
Net deferred income tax liabilities	**(432)**	(392)

The Company has assessed all tax positions. As a result, no significant adjustments were required to be made to the income tax provisions for the year ended December 31, 2014.

The Company has not provided for deferred income taxes on the difference between the carrying value of its foreign subsidiaries and their corresponding tax bases as the earnings of those subsidiaries are intended to be permanently reinvested in their operations. As such these investments are not anticipated to give rise to income taxes in the foreseeable future. The difference between the carrying value of the investment and its tax basis is largely a result of unremitted earnings and currency translation adjustments. The unremitted earnings and currency translation adjustment for which no deferred taxes have been recognized in respect of foreign subsidiaries is $21 million (2013 - $16 million). If such earning were remitted, in the form of dividends or otherwise, the Company may be subject to income taxes and foreign withholding taxes. The determination of the amount of unrecognized deferred income tax liabilities on such amounts is not practicable.

The Company and its subsidiaries are subject to taxation in Canada and the Unites States. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario). The Company's 2010 to 2013 taxation years are still open for audit in Canada.

18. RETIREMENT AND POSTRETIREMENT BENEFITS

PENSION PLANS

The Company maintains a non-contributory basic pension plan that provides either defined benefit or defined contribution pension benefits to the majority of its employees. The Company has two supplemental non-contributory defined benefit pension plans that provide pension benefits in excess of the basic plan for certain employees.

A measurement date of December 31, 2014 was used to determine the plan assets and accrued benefit obligation for the pension plans.

Defined Benefit Plans
Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially inflation-indexed after a member's retirement. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective date of the most recent actuarial valuation was December 31, 2013. The effective date of the next required actuarial valuation is December 31, 2016.

Defined Contribution Plans
Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS
The Company also provides OPEB, which primarily includes supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

BENEFIT OBLIGATIONS AND FUNDED STATUS
The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	Pension		OPEB	
December 31,	**2014**	2013	**2014**	2013
(millions of Canadian dollars)				
Change in accrued benefit obligation				
Benefit obligation at beginning of year	**875**	905	**100**	112
Service cost	**25**	25	**2**	1
Interest cost	**43**	38	**6**	4
Actuarial loss/(gain)	**142**	(52)	**12**	(16)
Benefits paid	**(41)**	(40)	**(3)**	(2)
Other	**2**	(1)	**-**	1
Benefit obligation at end of year	**1,046**	875	**117**	100
Change in plan assets				
Fair value of plan assets at beginning of year	**866**	782	**9**	7
Actual return on plan assets	**96**	84	**2**	1
Employer's contributions	**41**	38	**5**	3
Benefits paid	**(41)**	(40)	**(3)**	(2)
Other	**(2)**	2	**-**	-
Fair value of plan assets at end of year	**960**	866	**13**	9
Underfunded status at end of year	**(86)**	(9)	**(104)**	(91)
Presented as follows:				
Deferred amounts and other assets *(Note 8)*	**4**	7	**-**	1
Accounts payable and other *(Note 10)*	**-**	-	**(4)**	(4)
Other long-term liabilities *(Note 12)*	**(90)**	(16)	**(100)**	(88)

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2014**	2013	2012	**2014**	2013	2012
Discount rate	**4.0%**	5.0%	4.3%	**4.0%**	5.0%	4.3%
Average rate of salary increases	**3.7%**	3.5%	3.5%	**3.7%**	3.5%	3.5%

NET BENEFIT COSTS RECOGNIZED

	Pension			OPEB		
Year ended December 31,	**2014**	2013	2012	**2014**	2013	2012
(millions of Canadian dollars)						
Benefits earned during the year	**25**	25	21	**1**	1	2
Interest cost on projected benefit obligations	**43**	38	37	**6**	4	4
Expected return on plan assets	**(59)**	(52)	(49)	**(1)**	(1)	(1)
Amortization of prior service costs	**-**	1	1	**-**	-	-
Amortization of actuarial loss	**16**	28	30	**-**	2	1
Net defined benefit costs on an accrual basis	**25**	40	40	**6**	6	6
Defined contribution benefit costs	**1**	1	1	**-**	-	-
Net benefit cost recognized on an accrual basis	**26**	41	41	**6**	6	6
Net amount recognized in OCI						
Net actuarial (gain)/loss[1]	**-**	-	-	**9**	(14)	4
Total amount recognized in OCI	**-**	-	-	**9**	(14)	4
Total net benefit cost on an accrual basis and amount recognized in OCI	**26**	41	41	**15**	(8)	10

1 *Unamortized actuarial losses included in AOCI, before tax, were $9 million relating to OPEB at December 31, 2014 (2013 - nil, 2012 - $14 million).*

The Company estimates that approximately $19 million related to pension plans and OPEB at December 31, 2014 will be reclassified into earnings in the next 12 months, as follows:

	Pension Benefits	OPEB	Total
(millions of Canadian dollars)			
Actuarial loss	**19**	**-**	**19**
	19	**-**	**19**

Regulatory adjustments were recorded in the Consolidated Statements of Earnings, the Consolidated Statements of Comprehensive Income and the Consolidated Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers, respectively, in future rates *(Note 4)*. For the year ended December 31, 2014, an offsetting regulatory liability of $6 million (2013 - regulatory asset of $3 million) has been recorded to the extent pension and OPEB costs are expected to be refunded to customers in future rates.

Pension and OPEB costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension and OPEB costs due to the regulatory mechanism in place. As a result, the net pension and OPEB expense primarily consists of OEB approved pension and OPEB costs.

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2014**	2013	2012	**2014**	2013	2012
Discount rate	**5.0%**	4.3%	4.5%	**5.0%**	4.3%	4.5%
Average rate of return on pension plan assets	**6.8%**	6.8%	7.0%	**6.0%**	6.0%	6.0%
Average rate of salary increases	**3.5%**	3.5%	3.5%	**3.5%**	3.5%	5.0%

MEDICAL COST TRENDS

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in Which Ultimate Medical Cost Trend Rate Assumption is Achieved
Drugs	7.7%	4.3%	2029
Other medical and dental	4.5%	4.5%	-

A 1% increase in the assumed medical and dental care trend rate would result in an increase of $14 million in the benefit obligation and an increase of $1 million in benefit and interest costs. A 1% decrease in the assumed medical and dental care trend rate would result in a decrease of $12 million in the benefit obligation and a decrease of $1 million in benefit and interest costs.

PLAN ASSETS

The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

Expected Rate of Return on Plan Assets

	Pension		OPEB	
Year ended December 31,	**2014**	2013	**2014**	2013
Expected rate of return	**6.8%**	6.8%	**-**	-

Target Mix for Plan Assets

Equity securities	44.5%
Fixed income securities	40.0%
Other	15.5%

Major Categories of Plan Assets

Plan assets are invested primarily in readily marketable investments with constraints on the credit quality of fixed income securities. As at December 31, 2014, the pension assets were invested in 55% (2013 - 55%) in equity securities, 36% (2013 - 36%) in fixed income securities and 9% (2013 - 9%) in other.

The following table summarizes the Company's pension financial instruments at fair value. Non-financial instruments with a carrying value of $18 million (2013 - $18 million) have been excluded from the table below.

	2014				2013

Financing Transactions
The Company has invested in Class D, non-voting, redeemable, retractable preference shares of IPL System Inc., an affiliate under common control. At December 31, 2014, the investment of $825 million (2013 - $825 million) in these shares resulted in a weighted average dividend yield of 7.60%.

At December 31, 2014, the borrowing from IPL System Inc. stood at $375 million ($200 million at 6.85% and $175 million at 7.50%). These loans are repayable in 2049 and 2051, respectively. The Company may elect to defer interest payments on the loans for up to five years and settle deferred interest in either cash or non-retractable preference shares of the Company. For the year ended December 31, 2014, interest paid amounted to $27 million (2013 - $27 million).

In June 2014, the Company obtained a new $300 million revolving credit facility from Enbridge Inc. which has a term out date in June 2015 and a maturity date in June 2016. At December 31, 2014, the total drawings on the revolving credit facility were $175 million. For the year ended December 31, 2014, interest paid amounted to $2 million (2013 - nil).

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 0.55% and is payable on demand.

Treasury and Other Management Services
Enbridge provides treasury and other management services and charges the Company on a cost recovery basis.

Natural Gas Purchases
The Company has contracted for the purchase of natural gas from Aux Sable Canada LP, Tidal Energy Marketing Inc. and Tidal Energy Marketing (U.S.) LLC, related entities under common control, at prevailing market prices and under normal trade terms. Contractual obligations under these contracts are nil.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Transportation Services
The Company has contracted for natural gas transportation services from Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), Alliance Pipeline Limited Partnership (Canadian) and Alliance Pipeline Limited Partnership (U.S.), related entities partially owned by an affiliated company under common control. Contractual obligations under these contracts are 2015 to 2016 - $1,971 million, 2017 to 2018 - $570 million and thereafter - $286 million.

Trade Receivables and Payables
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides consulting and other services to affiliates. Market prices are charged for these services where they are reasonably determinable. Where no market price exists, a cost-based price is charged. The Company may also purchase consulting and other services from affiliates with prices determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

Other Transactions
In 2012, the Company sold its 99.9% limited partnership interest in Project Amherstburg to the Fund, an affiliated entity under common control, for cash proceeds of $72 million *(Note 5)*.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a quarterly basis.

21. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
The Company has signed contracts for the purchase of services, pipe and other materials, as well as transportation, totaling $5,328 million. The amounts which are expected to be paid in the next five years are $1,781 million, $904 million, $589 million, $436 million, and $411 million, respectively, and $1,207 million thereafter.

Minimum future payments under operating leases are estimated at $9 million in aggregate. Estimated annual lease payments for the years ended December 31, 2015 through 2019 are $4 million, $4 million, $1 million, nil and nil, respectively. Total rental expense for operating leases, classified in Operating and administrative expense, was $3 million for each of the years ended December 31, 2014, 2013 and 2012.

CONTINGENCIES

Former Manufactured Coal Gas Plant Sites
The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its Station A MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It was and remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

On August 30, 1994, Wyndham Court Canada Inc. (Wyndham) commenced an action in the Ontario Court of Justice (General Division) against the Company and 20 other defendants claiming that coal tar originating from the Company's Station A MGP in Toronto migrated to lands owned by Wyndham. Wyndham claimed general damages in the amount of $70 million and punitive damages in the amount of $5 million. It is believed that this action was also commenced by Wyndham due to its concern about the running of limitation periods.

The Company entered into a Tolling Agreement with Wyndham pursuant to which Wyndham's action was discontinued, without prejudice to Wyndham's right to commence a similar action in the future. In the fall of 2002, the Company received notice that Wyndham sold the lands that were the subject of the action to Cityscape Holdings Inc., which directed that title to a portion of these lands be transferred to Cityscape Residential Inc. (jointly Cityscape). Cityscape served the Company with a Statement of Claim in February 2003, naming the Company and nine other defendants who own or have owned portions of the former Station A MGP site. Cityscape is claiming $50 million in damages and $5 million in punitive damages against the Company as a result of alleged coal tar contamination of the lands now owned by Cityscape. The Company responded with a Statement of Defence denying liability. In January 2004, Cityscape dismissed the action against each of the Company's co-defendants.

In February 2008, the Ontario Superior Court of Justice ordered that examinations for discovery of the plaintiff be completed by mid-June 2008. Examinations for discovery were completed by this date, but the required steps in the discovery process were not completed by the plaintiff. The Company has brought a motion to dismiss the plaintiff's action for delay. At present, it is unknown when or if the trial of the matter will be heard.

The Company has put all of its known existing and subsisting former third party liability insurers on notice of the Cityscape action. To date, no insurer has confirmed that insurance coverage exists, nor has any insurer acknowledged that it owes the Company a duty to defend the Cityscape lawsuit. The Company first advised the OEB of the Cityscape action during its fiscal 2003 Rate Case and sought approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with the Cityscape action and any future MGP claims that may be advanced. With respect to the Company's 2006 to 2014 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

The Company remains of the view that it has a valid defence to the Cityscape lawsuit; however, it acknowledges that certain risks exist. Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation/isolation/containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

OTHER LITIGATON

The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a material impact on the Company's consolidated financial position or results of operations.

ENBRIDGE GAS DISTRIBUTION INC.

(a subsidiary of Enbridge Inc.)

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2015

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Distribution Inc.

Financial Reporting
Management of Enbridge Gas Distribution Inc. (the Company) is responsible for the accompanying consolidated financial statements and all related financial information, including Management's Discussion and Analysis. The consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors (the Board) and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee (AF&RC) of the Board, includes directors who are unrelated and independent, and has a specific responsibility to oversee management's efforts to fulfill its responsibilities for financial reporting and internal controls related thereto. The AF&RC meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The AF&RC reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

(Signed)

Glenn W. Beaumont

Independent Auditor's Report

To the Shareholders of
Enbridge Gas Distribution Inc.

We have audited the accompanying consolidated financial statements of Enbridge Gas Distribution Inc. and its subsidiaries, which comprise the consolidated statements of financial position as at December 31, 2015 and December 31, 2014 and the consolidated statements of earnings, comprehensive income, shareholders' equity and cash flows for each of the three years in the period ended December 31, 2015, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Enbridge Gas Distribution Inc. and their subsidiaries as at December 31, 2015 and December 31, 2014 and its results of operations and their cash flows for each of the three years in the period ended December 31, 2015 in accordance with accounting principles generally accepted in the United States of America.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. GENERAL BUSINESS DESCRIPTION

Enbridge Gas Distribution Inc. (the Company) is a rate-regulated natural gas distribution utility, serving residential, commercial and industrial customers in its franchise areas of central and eastern Ontario. The Company also serves areas in northern New York State through its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence). The Company is a wholly owned subsidiary of Enbridge Inc. (Enbridge).

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

These consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

The Company commenced reporting using U.S. GAAP as its primary basis of accounting effective January 1, 2012, including restatement of comparative periods. The Company is permitted to prepare its consolidated financial statements in accordance with U.S. GAAP for purposes of meeting its Canadian continuous disclosure requirements under an exemption granted by securities regulators in Canada until 2018.

BASIS OF PRESENTATION AND USE OF ESTIMATES

The preparation of consolidated financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the consolidated financial statements. Significant estimates and assumptions used in the preparation of the consolidated financial statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities *(Note 4)*; unbilled revenues *(Note 5)*; allowance for doubtful accounts *(Note 5)*; carrying value of gas inventory; depreciation rates and carrying value of property, plant and equipment *(Note 6)*; amortization rates and carrying value of intangible assets *(Note 8)*; valuation of stock-based compensation *(Note 14)*; fair value of financial instruments *(Note 16)*; provisions for income taxes *(Note 17)*; assumptions used to measure retirement and OPEB *(Note 18);* commitments and contingencies *(Note 22)*; and fair value of asset retirement obligations (ARO) *(Note 12)*. Actual results could differ from these estimates.

PRINCIPLES OF CONSOLIDATION

The consolidated financial statements include the accounts of the Company and its subsidiary. All significant intercompany accounts and transactions are eliminated upon consolidation.

REGULATION

The utility operations of the Company, excluding St. Lawrence, are regulated by the Ontario Energy Board (OEB) and the utility operations of St. Lawrence are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 4)*.

REVENUE RECOGNITION

The Company recognizes revenues when natural gas has been delivered or services have been performed. Gas commodity and distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's franchise areas.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulators.

PUSH-DOWN ACCOUNTING
The Company elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge, when it first adopted U.S. GAAP. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by the Company. Upon adopting push-down accounting, the historical cost of the Company's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships
The Company uses derivative financial instruments to manage its exposure to changes in interest rates. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges. The Company did not have any fair value hedges or net investment hedges at December 31, 2015 or 2014.

Cash Flow Hedges
The Company uses cash flow hedges to manage its exposure to changes in interest rates. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/loss (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives
The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and long-term assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset
Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs
Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and classifies these costs with Deferred amounts and other assets. These costs are amortized using the effective interest rate method over the life of the related debt instrument.

INCOME TAXES
The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. Any interest and/or penalty incurred related to tax is reflected in income taxes.

The regulated utility operations of the Company recover income tax expense based on the taxes payable method as approved by the Regulators for rate-making purposes. As a result, rates do not include the recovery of deferred income taxes related to temporary differences. A corresponding deferred income tax regulatory liability/asset is recorded reflecting the Company's ability to pay/collect the amounts in the future through rates (*Note 4*).

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION
Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

The functional currency of the Company's only foreign operation, St. Lawrence, is the United States dollar. The effects of translating the financial statements of St. Lawrence to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts are translated at the exchange rates in effect on the date of the Consolidated Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS
Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased. Refer to Note 3 for changes in accounting policy.

GAS INVENTORIES
Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

PROPERTY, PLANT AND EQUIPMENT
Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction at rates authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The pool method of accounting for property, plant and equipment is followed whereby similar assets with comparable useful lives are grouped and depreciated as a pool, as approved by the Regulators. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation until the last asset in the pool is disposed of. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS
Deferred amounts and other assets primarily include: costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates; deferred income taxes; derivative financial instruments; and deferred financing costs.

INTANGIBLE ASSETS
Intangible assets consist primarily of the Company's Customer Information System (CIS) and software costs. The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are amortized on a straight-line basis over their expected useful lives, commencing when the asset is available for use.

ASSET RETIREMENT OBLIGATIONS
ARO associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. ARO are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For the majority of the Company's assets, it is not possible to make a reasonable estimate of ARO due to the indeterminate timing and scope of the asset retirements.

RETIREMENT AND POSTRETIREMENT BENEFITS
The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality. In 2014, new mortality assumptions were issued and further revised in 2015. These assumptions were adopted by the Company for the measurement of the December 31, 2015 benefit obligations. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. Pension cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Amortization of prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans;
- Interest cost of pension plan obligations;
- Expected return on pension fund assets; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contributions occur.

The Company also provides OPEB other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans is recognized as Deferred amounts and other assets or Other long-term liabilities, respectively, on the Consolidated Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax.

The Company records regulatory adjustments to reflect the difference between pension expense and OPEB costs for accounting purposes and the pension expense and OPEB costs for rate-making purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension expense or OPEB costs are expected to be collected from or refunded to customers, respectively, in future rates. In the absence of rate regulation accounting, regulatory balances would not be recorded and pension and OPEB costs would be charged to earnings and OCI on an accrual basis.

STOCK-BASED COMPENSATION

Enbridge grants stock-based compensation to certain employees and senior officers of the Company through four long-term incentive compensation plans. Compensation expense associated with each of the plans, as determined under the methods outlined below is recognized in Operating and administrative expense. Amounts owing to Enbridge in respect of stock-based compensation are payable on a quarterly basis.

Incentive Stock Options (ISO) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the ISOs granted as calculated by the Black-Scholes-Merton model and is recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility.

Performance Stock Units (PSU) and Restricted Stock Units (RSU) are cash settled awards for which the related liability is remeasured each reporting period. PSUs vest at the completion of a three-year term and RSUs vest at the completion of a 35-month term. During the vesting term, compensation expense is recorded based on the number of units outstanding and the current market price of the Company's shares. The value of the PSUs is also dependent on the Company's performance relative to performance targets set out under the plan.

Performance Stock Options (PSO) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the PSOs granted as calculated by the Bloomberg barrier option valuation model and is recognized over the vesting period. The options become exercisable when both performance targets and the time vesting requirements have been met.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or that a liability has been incurred, and the amount of impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES AND ESTIMATES

FUTURE ACCOUNTING POLICY CHANGES

Measurement Date of Defined Benefit Obligation and Plan Assets

Accounting Standards Update (ASU) 2015-04 was issued in April 2015 with the intent to simplify the fair value measurement of defined benefit plan assets and obligations. Where there are significant events in an interim period that would trigger a re-measurement of the plan assets and obligations, an entity is permitted to re-measure such assets and obligations using the month end that is closest to the date of the significant event. The accounting update is effective for financial statements issued for fiscal years beginning after December 15, 2015 and is to be applied on a prospective basis. The adoption of the pronouncement is not anticipated to have a material impact on the Company's consolidated financial statements.

Simplifying the Presentation of Debt Issuance Costs
ASU 2015-03 was issued in April 2015 with the intent to simplify the presentation of debt issuance costs. The new standard requires a debt issuance cost related to a recognized debt liability to be presented in the balance sheet as a direct deduction from the carrying amount of that debt liability, as consistent with the presentation of debt discounts or premiums. Further, ASU 2015-15 was issued in August 2015 to clarify the presentation and subsequent measurement of debt issuance costs associated with line-of-credit arrangements, whereby the Company may defer debt issuance costs as an asset and subsequently amortize them over the term of the line-of-credit. The accounting updates are effective for financial statements issued for fiscal years beginning after December 15, 2015 on a retrospective basis. The adoption of the pronouncement is not anticipated to have a material impact on the Company's consolidated financial statements.

Revenue from Contracts with Customers
ASU 2014-09 was issued in May 2014 with the intent of significantly enhancing comparability of revenue recognition practices across entities and industries. The new standard provides a single principles-based, five-step model to be applied to all contracts with customers and introduces new, increased disclosure requirements. In July 2015, the effective date of the new standard was delayed by one year and the new standard is now effective for annual and interim periods beginning on or after December 15, 2017 and may be applied on either a full or modified retrospective basis. The Company is currently assessing the impact of the new standard on its consolidated financial statements.

Classification of Deferred Taxes on the Statement of Financial Position
ASU 2015-17 was issued in November 2015 with the intent to simplify the presentation of deferred income taxes. The amendments eliminate the current requirement to present deferred tax assets and liabilities as current and noncurrent. The amendments require that all deferred tax assets and liabilities be classified as noncurrent in a classified statement of financial position. The accounting update is effective for fiscal years beginning after December 15, 2016, including interim periods within those fiscal years and is to be applied on a prospective basis. Early application is permitted for all entities as of the beginning of an interim or annual reporting period. Effective January 1, 2016, the Company will elect to early adopt ASU 2015-17. The adoption of the pronouncement is not anticipated to have a material impact on the Company's consolidated financial statements.

Recognition and Measurement of Financial Assets and Liabilities
ASU 2016-01 was issued in January 2016 with the intent to address certain aspects of recognition, measurement, presentation, and disclosure of financial assets and liabilities. The amendments revise accounting related to the classification and measurement of investments in equity securities, the presentation of certain fair value changes for financial liabilities measured at fair value, and the disclosure requirements associated with the fair value of financial instruments. The accounting update is effective for fiscal years beginning after December 15, 2017, and is to be applied by means of a cumulative-effect adjustment to the consolidated Statement of Financial Position as of the beginning of the fiscal year of adoption, with amendments related to equity securities without readily determinable fair values to be applied prospectively. The Company is currently assessing the impact of the new standard on its consolidated financial statements.

Simplifying the Measurement of Inventory
ASU 2015-11 was issued in July 2015 with the intent to simplify the measurement of inventory. The new standard requires inventory to be measured at the lower of cost and net realizable value and is applicable to all inventory, with the exception of inventory measured using last-in, first-out or the retail inventory method. Net realizable value is the estimated selling price in the ordinary course of business, less reasonably predictable costs of completion, disposal and transportation. The Company is currently assessing the impact of the new standard on its consolidated financial statements. The new standard is effective for annual and interim reporting periods beginning after December 15, 2016 and is to be applied on a prospective basis.

CHANGES IN ACCOUNTING POLICY

Book Overdrafts
Prior to January 2015, the Company recorded all obligations for which cheques were issued but not presented to the financial institution in Accounts payable and other. Effective January 2015, the Company changed the accounting policy and began presenting only book overdrafts in Accounts payable and other. Comparative figures presented in the audited consolidated financial statements for the year ended December 31, 2015 have been retrospectively revised. The change in accounting policy did not have a material impact on the audited Consolidated Statements of Financial Position and audited Consolidated Statements of Cash Flows for previously issued financial statements. There was no impact to the audited Consolidated Statement of Earnings. The change in accounting policy allows for the Company to account for its book overdrafts in a preferable method.

4. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

For the purposes of this note, “Enbridge Gas Distribution” refers specifically to Enbridge Gas Distribution Inc. excluding St. Lawrence, whereas “St. Lawrence” refers specifically to St. Lawrence Gas Company, Inc.

RECENT RATE APPROVALS

Enbridge Gas Distribution
For the year ended December 31, 2015, Enbridge Gas Distribution’s rates were set according to the OEB approved settlement agreement (April 2015) and final rate order (May 2015). The rates approved as part of the 2015 rate application represented the second year of the Company’s customized incentive regulation (IR) plan, which set rates for the period of 2014 to 2018 and was approved by the OEB in July and August 2014.

For the year ended December 31, 2014, Enbridge Gas Distribution’s rates were set by the OEB’s July 2014 decision, and subsequent August 2014 decision and rate order in the Company’s customized IR application. The decisions and rate order established final 2014 allowed revenues and billing rates, as well as placeholder allowed revenues for 2015 through 2018. The customized IR plan requires Enbridge Gas Distribution to update select items in each of 2015 through 2018, in order to establish final allowed revenues and rates. The customized IR decision also approved the adoption of a new approach for determining net negative salvage percentages as a component of the Enbridge Gas Distribution’s depreciation rates in addition to Enbridge Gas Distribution shares earnings above the approved base return, equally with customers.

Under the customized IR plan, the Company has continued to apply the accounting guidance found in Accounting Standards Codification (ASC) 980 – Regulated Operations.

For the year ended December 31, 2013, Enbridge Gas Distribution’s rates were set on a cost of service (COS) basis pursuant to an OEB approved settlement agreement.

St. Lawrence Gas
For the years ended December 31, 2015, 2014 and 2013, St. Lawrence’s rates were set using a COS methodology. Under COS, revenues are set to recover costs and to earn a rate of return on the deemed common equity component of rate base. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, interest and income taxes. Rate base is the average level of investment in all recoverable assets used in natural gas distribution, storage and transmission and an allowance for working capital. Gas costs are not recovered through revenue rates, but are set separately in gas cost rates.

Under COS, it is the responsibility of Enbridge Gas Distribution and St. Lawrence to demonstrate to the Regulators the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

During the years ended December 31, 2015, 2014 and 2013, the cost of natural gas was passed on to customers as a flow-through.

APPROVED RETURNS ON EQUITY

Enbridge Gas Distribution

Enbridge Gas Distribution's rates for 2015 included an after-tax rate of return on common equity of 9.30% (2014 - 9.36% and 2013 - 8.93%) based on a 36% (2014 and 2013 - 36%) deemed common equity component of rate base.

St. Lawrence

St. Lawrence's approved after-tax rate of return on common equity embedded in rates was 10.5% for the year ended December 31, 2015 (2014 and 2013 - 10.5%) based on a 50% (2014 and 2013 - 50%) deemed common equity component of rate base. Any earnings above a return on equity of 11% (2014 and 2013 - 11%) were shared equally with customers. The calculation of such earnings was cumulative from January 1, 2010 to December 31, 2015 and resulted in no sharing impact as at December 31, 2015 (2014 and 2013 - nil).

IMPACTS OF RATE REGULATION

Regulatory Assets and Liabilities

As a result of rate regulation accounting, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation accounting, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

Regulatory Risk and Uncertainties Affecting Recovery or Settlement

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2015**	2014	Consolidated Statement of Financial Position Location**	Estimated Recovery/ Settlement Period *(years)*
(millions of Canadian dollars)				
Regulatory assets/(liabilities)				
Enbridge Gas Distribution				
Deferred income taxes[1]	**324**	270	AP/DA	*
Purchased gas variance[2]	**129**	673	AR	1
OPEB[3]	**75**	84	AR/DA	17

Other regulatory assets and liabilities, net	**6**	5	***	***
	(64)	305		

* Refer to the footnote for details

** AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities

*** Dependent on the nature of the item

1 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

2 *Purchased gas variance (PGVA) is the difference between the actual cost and the approved cost of natural gas reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process. In May 2014, the OEB issued a decision allowing a portion of the PGVA balance as at June 30, 2014 to be recovered over a 24-month period from July 1, 2014 to June 30, 2016. In the absence of rate regulation accounting, the actual cost of natural gas would be included in Gas commodity and distribution costs, and revenues or costs would be adjusted by an equal and offsetting amount as the right to collect or refund the revenue or costs has been established.*

3 *The OPEB balance represents the Company's right to recover OPEB costs pursuant to an OEB rate order, which allows the amount as at December 31, 2013 to be collected in rates over a 20-year period commencing in 2013. In the absence of rate regulation accounting, this regulatory balance and related earnings impact would not be recorded.*

4 *The Unabsorbed demand cost deferral account (UDCDA) represents the actual cost consequences of unutilized transportation capacity contracted by Enbridge Gas Distribution to meet requirements resulting from its Peak Gas Design Day Criteria (PGDDC). Enbridge Gas Distribution updated its PGDDC in 2013 and 2014. The impact of this update was phased in equally over the two years.*

The balance for 2014 captures the cost consequences of unutilized transportation capacity above the amount associated with the 2014 Design day criteria transportation deferral account (DDCTDA). In the absence of rate regulation accounting, these costs would be expensed as incurred.

5 *The Constant dollar net salvage adjustment represents the cumulative variance between the amount proposed for clearance and the actual amount cleared, relating specifically to the site restoration clearance adjustment. At the end of 2018 any residual balance will be cleared in a post 2018 true up, ensuring that the actual amount cleared is equivalent to the required $380 million.*

6 *The pension plan balance represents the regulatory offset to the pension liability/asset to the extent the amounts are to be collected/refunded in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation accounting, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

7 *Customer care CIS rate smoothing deferral represents the difference between the forecast costs and the approved costs for customer care and CIS reflected in rates. The balance accumulated during 2013 to 2015 when the cost per customer exceeds the cost approved for recovery in rates. The balance will be drawn down during 2016 to 2018 when the cost per customer will be lowered than the cost approved for recovery in rates. Enbridge Gas Distribution has received OEB approval to collect from or refund to customers any remaining balance after 2018. In the absence of rate regulation accounting, the variance would be included in earnings in the year incurred.*

8 *Demand side management incentive deferral account (DSMIDA) represents the benefit derived by Enbridge Gas Distribution as a result of its energy efficiency programs. Enbridge Gas Distribution has historically been granted OEB approval to recover the DSMIDA amount through rates after a detailed review by the OEB. The process of review and subsequent recovery may extend over a few years. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

9 *Storage and transportation deferral represents the difference between the actual cost and the approved cost of natural gas storage and transportation reflected in rates. Enbridge Gas Distribution has historically been granted OEB approval to collect this balance from or to refund this balance to customers, generally in the subsequent year. In the absence of rate regulation accounting, the actual cost of natural gas storage and transportation would be included in Gas commodity and distribution costs and revenues or costs would be adjusted by an equal and offsetting amount, as the right to collect or refund the revenue or costs has been established.*

10 *Unaccounted for gas variance represents the difference between the total natural gas distributed by Enbridge Gas Distribution and the amount of natural gas billed or billable to customers for their recorded consumption, to the extent it is different from the approved amount built into rates. Enbridge Gas Distribution has deferred unaccounted for gas variance and has historically been granted OEB approval for recovery or required refund of this amount in the subsequent year. In the absence of rate regulation accounting, this variance would be included in earnings in the year incurred.*

11 *DDCTDA balance represents the actual cost consequences of unutilized transportation capacity contracted by Enbridge Gas Distribution to meet increased requirements resulting from the PGDDC. Enbridge Gas Distribution updated its PGDDC in 2013 and 2014. The impact of this update was phased in equally over the two years. The heating degree days used within its design day criteria for 2013 and 2014's design day criteria were updated. The balance for 2014 captures the cost consequences of unutilized transportation capacity associated with the 2014 DDCTDA. In the absence of rate regulation accounting, these costs would be expensed as incurred.*

12 *The revenue adjustment represents the revenue variance between interim rates, which were in place from January 2014 to September 2014, and the final OEB approved 2014 rates, which were implemented in October 2014, but effective in January 2014. The revenue adjustment balance is the 2014 OEB approved revenue adjustment amount that was refunded to customers in January 2015. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

13 *Future removal and site restoration reserves result from amounts collected from customers by Enbridge Gas Distribution, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment that is recorded in rates. The balance represents the amount that Enbridge Gas Distribution has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation accounting, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

14 *The Site restoration clearance adjustment represents the amount, that was determined by the OEB, of previously collected costs for future removal and site restoration that is now considered to be in excess of future requirements and will be refunded to customers over the customized IR term. This was a result of the OEB's approval of the adoption of a new approach for determining net negative salvage percentages. The new approach resulted in lower depreciation rates and lower future removal and site restoration reserves. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

15 *Transactional services deferral represents the customer portion of additional earnings generated from optimization of storage and pipeline capacity. Enbridge Gas Distribution has historically been required to refund the amount to customers in the following year. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

16 *Earnings sharing deferral represents amounts relating to the earnings sharing mechanism, which forms part of the customized IR plan. The Earnings sharing is payable to customers and represents 50% of normalized U.S. GAAP utility earnings represented by an ROE in*

excess of the allowed utility ROE applicable to Enbridge Gas Distribution, as determined for each year of the customized IR plan. There would be no change in the treatment of this item in the absence of rate regulation accounting.

17 *Average use true-up variance represents the net revenue impact to be recovered from or refunded to customers, associated with any variance between forecast average use and actual weather normalized average use for general service customers. The amount will be recovered from or refunded to customers in future periods in accordance with the OEB's approval. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

18 *Post-retirement true-up variance is the difference between the actual cost and the approved cost of pension and OPEB reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers in the subsequent year, up to a maximum of $5 million per year. Any amounts in excess of $5 million per year will be deferred for refund or collection in the next subsequent year. In the absence of rate regulation accounting, the variance would be included in earnings in the year incurred.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Revenue
To recognize the actions or expected actions of the Regulators, the timing and recognition of certain revenues and expenses may differ from that otherwise expected for non rate-regulated entities.

Operating Cost Capitalization
With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation accounting, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2015, cumulative costs relating to this services contract of $174 million (2014 - $166 million) were included in gas mains and are being depreciated over the average service life of 25 years. In the absence of rate regulation accounting, some of these costs would be charged to earnings in the year incurred.

Property, Plant and Equipment
In the absence of rate regulation accounting, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred. Further, on the retirement of utility assets, the excess of the book value net of proceeds would be recorded as a loss on the sale/disposal of assets in earnings in the period of retirement. Any removal costs incurred would be booked against the future removal and site restoration balance (described above).

Intangible Assets
The Company entered into contracts relating to CIS integration services, software maintenance and support. At December 31, 2015, the net book value of these costs was $48 million (2014 - $60 million). In the absence of rate regulation accounting, a portion of the original cost of these assets would have been expensed in the period incurred.

Gas Inventories
Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2015 is $40 million (2014 - $42 million) of storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation accounting, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation
In the absence of rate regulation accounting, depreciation rates would not have included a charge for future removal and site restoration costs.

5. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2015**	2014
(millions of Canadian dollars)		
Trade receivables	**309**	372
Regulatory assets *(Note 4)*	**216**	567
Unbilled revenues	**151**	161
Agent billing and collection receivable	**39**	-
Sundry receivables	**28**	22
Taxes receivable	**19**	28
Current deferred income taxes *(Note 17)*	**18**	23
Prepaid expenses	**11**	8
Other	**33**	30
Allowance for doubtful accounts *(Note 16)*	**(34)**	(33)
	790	1,178

During the first half of 2014, increases in natural gas prices and colder than normal weather resulted in the Company accumulating a significant balance in its PGVA. Included in Regulatory assets as at December 31, 2015 is $129 million (December 31, 2014 - $491 million) which represents the PGVA balance that is expected to be recovered from customers within the next 12 months.

6. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	**2015**	2014
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas mains	**2.2%**	**3,740**	3,593
Gas services	**2.3%**	**2,929**	2,798
Regulating and metering equipment	**5.7%**	**848**	825
Gas storage	**2.1%**	**327**	323
Right-of-way	**1.0%**	**52**	52

Under construction	**-**	**893**	307
Construction materials inventory	**-**	**40**	39
Land	**-**	**24**	24
Other	**6.9%**	**303**	289
		9,187	8,290
Accumulated depreciation		**(2,197)**	(2,115)
		6,990	6,175
Unregulated property, plant and equipment			
Gas storage	**2.1%**	**88**	88
Other	**8.6%**	**27**	27
		115	115
Accumulated depreciation		**(24)**	(22)
		91	93
Property, plant and equipment, net		**7,081**	6,268

Depreciation expense, including amounts collected for future removal and site restoration costs, was $239 million for the year ended December 31, 2015 (2014 - $237 million, 2013 - $267 million).

7. DEFERRED AMOUNTS AND OTHER ASSETS

December 31,	**2015**	2014
(millions of Canadian dollars)		
Regulatory assets *(Note 4)*	**526**	711
Deferred financing costs	**13**	12
Pension and OPEB asset *(Note 18)*	**8**	4
Deferred income taxes *(Note 17)*	**8**	8
Other	**1**	3
	556	738

At December 31, 2015, deferred financing costs of $29 million (2014 - $34 million) were subject to amortization and are presented net of accumulated amortization of $16 million (2014 - $22 million). Amortization expense for the year ended December 31, 2015 was $2 million (2014 and 2013 - $2 million).

In May 2014, the OEB issued a decision allowing a portion of the PGVA balance as at June 30, 2014 to be recovered over a 24-month period from July 1, 2014 to June 30, 2016. Included in Regulatory assets at December 31, 2015 is nil (2014 - $182 million) which represents the portion of the PGVA balance that is expected to be recovered beyond the next 12 months.

8. INTANGIBLE ASSETS

December 31, 2015	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	**23.2%**	**238**	**(129)**	**109**
CIS	**10.0%**	**127**	**(79)**	**48**
		365	**(208)**	**157**

December 31, 2014	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	24.1%	198	(97)	101
CIS	10.0%	127	(67)	60
		325	(164)	161

Intangible assets include $61 million of work-in-progress as at December 31, 2015 (2014 - $23 million). Total amortization expense for intangible assets was $51 million for the year ended December 31, 2015 (2014 - $49 million, 2013 - $37 million). The Company expects aggregate amortization expense for the years ending December 31, 2016 through 2020 of $58 million, $47 million, $45 million, $41 million and $32 million, respectively.

9. ACCOUNTS PAYABLE AND OTHER

December 31,	**2015**	2014
(millions of Canadian dollars)		
Accrued liabilities	**396**	351
Regulatory liabilities *(Note 4)*	**136**	233
Budget billing plan payable	**105**	137
Trade payables	**62**	17
Security deposits	**61**	61
Contractual holdbacks	**38**	7
Interest payable	**33**	27
Short-term portion of derivative liabilities *(Note 16)*	**14**	6
Taxes payable	**9**	11
Current portion of OPEB liability *(Note 18)*	**4**	4
Agent billing and collection payable	**-**	2
Dividends payable	**1**	1
Other	**11**	4
	870	861

Included in Regulatory liabilities at December 31, 2015 is $84 million (2014 - $90 million) relating to the portion of site restoration clearance adjustment that is expected to be refunded to customers within the next 12 months. Also included in Regulatory liabilities at December 31, 2015 is nil (2014 - $52 million) relating to the refund of revenues to customers.

10. DEBT

December 31,	Weighted Average Interest Rate	Maturity	**2015**	2014
(millions of Canadian dollars)				
Debenture	9.85%	2024	**85**	85
Medium-term notes	4.56%	2017-2050	**3,595**	3,025
Commercial paper and credit facility draws, net[1]			**607**	1,122
Other[2]			**35**	37
Total debt			**4,322**	4,269
Current maturities			**(2)**	(2)
Short-term borrowings	0.81%		**(599)**	(938)
Short-term borrowings from affiliates *(Note 21)*	0.80%		**(40)**	(204)
Long-term debt			**3,681**	3,125
Loans from affiliate company *(Note 21)*			**375**	375

1 *Includes amounts drawn on uncommitted demand credit facilities.*
2 *Consists of note payable to affiliate company and debt premium.*

In September 2015, the Company issued $400 million of 10-year medium-term notes at an interest rate of 3.31% and an additional $170 million of medium-term notes under the same terms as the August 2044 30-year medium-term note pricing supplement issued in August 2014 at an interest rate of 4.00%.

In December 2015, a new $1.5 billion shelf prospectus was filed as a continuation of the Company's medium-term note program, which was previously renewed in June 2014. The prospectus is effective for a 25-month period.

For the years ending December 31, 2016 through 2020, medium-term note maturities are $2 million, $502 million, $2 million, $2 million and $400 million, respectively. The Company's debentures and medium-term notes bear interest at fixed rates, and interest obligations for the years ending December 31, 2016 through 2020 are $171 million, $169 million, $156 million, $156 million and $155 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2015**	2014	2013
(millions of Canadian dollars)			
Debentures and medium-term notes	**158**	149	138
Loans from affiliate company *(Note 21)*	**27**	29	27
Commercial paper and credit facility draws	**8**	9	4
Other interest and finance costs	**9**	(4)	9
Capitalized	**(21)**	(6)	(7)
	181	177	171

In 2015, total interest paid to third parties was $166 million (2014 - $163 million, 2013 - $142 million) and total interest paid to affiliate company and related party was $27 million (2014 - $29 million, 2013 - $27 million).

The Company's borrowings, whether debentures or medium-term notes, are unsecured. As at December 31, 2015, the Company was in compliance with all covenants.

CREDIT FACILITIES

The Company currently has a $1 billion commercial paper program limit that is backstopped by committed lines of credit of $1 billion. The term of any commercial paper issued under this program may not exceed one year. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option. In July 2015, the Company extended the term out date of this external credit facility to July 2016, with a maturity date in July 2017.

The Company also has a $300 million revolving credit facility from Enbridge. In June 2015, the Company extended the term out date to May 2016 on this revolving credit facility, with a maturity date in May 2017. As at December 31, 2015, no amounts were drawn on this credit facility.

The Company actively manages its bank funding sources to ensure adequate liquidity and to optimize pricing and other terms. The following table provides details on the Company's committed credit facilities as at December 31.

		December 31, 2015			December 31, 2014
	Maturity Dates	Total Facilities[1]	Draws[2]	Available	Total Facilities[1]
(millions of Canadian dollars)					
Enbridge Gas Distribution Inc.	2017	**1,300**	**595**	**705**	1,300
St. Lawrence Gas Company, Inc.	2019	**10**	**8**	**2**	8
Total credit facilities		**1,310**	**603**	**707**	1,308

1 *Includes a $300 million revolving credit facility from the Company's ultimate parent, Enbridge and matures in May 2017.*
2 *Includes facility draws and commercial paper issuances, net of discount, that are backstopped by the external credit facility.*

In addition to the committed credit facilities noted above, St. Lawrence also has $7 million (2014 - $6 million) of uncommitted demand credit facilities, of which $3 million (2014 - $2 million) was unutilized as at December 31, 2015.

Credit facilities carried a weighted average standby fee of 0.2% on the unused portion and draws bear interest at market rates.

11. OTHER LONG-TERM LIABILITIES

December 31,	**2015**	2014
(millions of Canadian dollars)		
Regulatory liabilities *(Note 4)*	**670**	740
Pension and OPEB liabilities *(Note 18)*	**163**	190
Long-term portion of derivative liabilities *(Note 16)*	**-**	5
Other *(Note 12)*	**14**	8
	847	943

Included in Regulatory liabilities at December 31, 2015 is $109 million (2014 - $193 million) relating to the portion of site restoration clearance adjustment that is expected to be refunded to customers beyond the next 12 months.

12. ASSET RETIREMENT OBLIGATIONS

The liability for the expected cash flows as recognized in the consolidated financial statements reflected discount rates ranging from 1.65% to 3.77% (2014 - 1.65% to 3.77%). A reconciliation of movements in the Company's ARO is as follows:

December 31,	**2015**	2014
(millions of Canadian dollars)		
Obligations at beginning of year	**9**	6
Liabilities settled	**(2)**	-
Change in estimate	**2**	3
Accretion expense	**-**	-
Obligations at end of year	**9**	9
Presented as follows:		
Other long-term liabilities *(Note 11)*	**9**	9
	9	9

13. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and a limited number of preference shares.

COMMON SHARES

	2015		2014		2013	
December 31,	Number of shares	Amount	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of common shares in millions)						
Balance at beginning of year	**158.9**	**1,437**	150.6	1,287	142.3	1,137
Common shares issued	**11.1**	**200**	8.3	150	8.3	150
Balance at end of year	**170.0**	**1,637**	158.9	1,437	150.6	1,287

PREFERENCE SHARES

December 31, 2015, 2014, and 2013	Authorized	Issued and Outstanding	Amount
(millions of Canadian dollars, number of preference shares in millions)			
Group 1	0.2	-	-
Group 2, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 2, Series D, Cumulative Redeemable Convertible	4	-	-
Group 3, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 3, Series D, Fixed / Floating Cumulative Redeemable Convertible	4	4	100
Group 4	10	-	-
Group 5	10	-	-
			100

Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. The Company has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case. As at December 31, 2015, no preference shares have been redeemed.

On July 1, 2019, and every five years thereafter, the Group 3, Series D preference shares can be converted, at the holder's option, into Group 2, Series D preference shares on a one-for-one basis, and will pay fixed cumulative cash dividends that are not less than 80% of the Government of Canada yield applicable to the fixed dividend period. The Group 3, Series D preference shareholders opted not to convert their shares into Group 2, Series D preference shares effective July 1, 2014.

The Group 2, Series D preference shares can be redeemed, at the Company's option, for $25.00 per share. The Group 2, Series D preference shares can also be converted into Group 3, Series D preference shares on a one-for-one basis at the holder's option on July 1, 2019 and every five years thereafter.

14. STOCK OPTION AND STOCK UNIT PLANS

Enbridge's four long-term incentive compensation plans include the ISO Plan, the PSO Plan, the PSU Plan and the RSU Plan. The Company reimburses Enbridge for stock-based compensation costs associated with its employees on a quarterly basis. As of December 31, 2015, the Company did not have any employees that had options in the PSO Plan.

INCENTIVE STOCK OPTIONS

Key employees of the Company are granted ISOs to purchase common shares of Enbridge at the market price on the grant date. ISOs vest in equal annual installments over a four-year period and expire 10 years after the issue date.

December 31, 2015	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**2,665**	**33.53**		
Options granted	**458**	**59.08**		
Options exercised[1]	**(422)**	**23.20**		
Options cancelled	**(16)**	**44.94**		
Employee movements from other Enbridge companies	**3**	**18.24**		
Options outstanding at end of year	**2,688**	**39.43**	**6.3**	**45**
Options vested at end of year[2]	**1,560**	**30.85**	**4.9**	**40**

1 The total intrinsic value of ISOs exercised during the year ended December 31, 2015 was $14 million (2014 - $11 million; 2013 - $7 million) and cash received by Enbridge on exercise was $10 million (2014 - $5 million; 2013 - $2 million).
2 The total fair value of options vested under the ISO Plan during the year ended December 31, 2015 was $2 million (2014 and 2013 - $2 million).

Weighted average assumptions used to determine the fair value of the ISOs using the Black-Scholes-Merton option pricing model are as follows:

Year ended December 31,	**2015**	2014	2013
Fair value per option *(Canadian dollars)*[1]	**6.48**	5.53	5.27
Valuation assumptions			
Expected option term *(years)*[2]	**5**	5	5
Expected volatility[3]	**19.9%**	16.9%	17.4%
Expected dividend yield[4]	**3.2%**	2.9%	2.8%
Risk-free interest rate[5]	**0.9%**	1.6%	1.2%

1 Options granted to United States employees are based on New York Stock Exchange prices. The option value and assumptions shown are based on a weighted average of the United States and the Canadian options. The fair values per option were $6.22 (2014 - $5.45; 2013 - $5.15) for Canadian employees and US$6.22 (2014 - US$5.35, 2013 - US$5.63) for United States employees.
2 The expected option term is based on historical exercise practice.
3 Expected volatility is determined with reference to historic daily share price volatility and consideration of the implied volatility observable in call option values near the grant date.
4 The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.
5 The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields and the United States Treasury Bond Yields.

Compensation expense recorded for the year ended December 31, 2015 for ISOs was $4 million (2014 - $4 million; 2013 - $3 million). At December 31, 2015, unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO Plan was $4 million. The cost is expected to be fully recognized over a weighted average period of approximately three years.

PERFORMANCE STOCK UNITS

Enbridge has a PSU Plan for senior officers of the Company where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by Enbridge's weighted average share price for 20 days prior to the maturity of the grant and by a performance multiplier. The performance multiplier ranges from zero, if Enbridge's performance fails to meet threshold performance levels, to a maximum of two if Enbridge performs within the highest range of its performance targets. The 2013, 2014 and 2015 grants derive the performance multiplier through a calculation of Enbridge's price/earnings ratio relative to a specified peer group of companies and Enbridge's earnings per share, adjusted for unusual non-operating or non-recurring items, relative to targets established at the time of grant. To calculate the 2015 expense, multipliers of two, based upon multiplier estimates at December 31, 2015, were used for each of the 2013, 2014 and 2015 PSU grants.

December 31, 2015	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**26**		
Units granted	**14**		
Units matured[1]	**(11)**		
Dividend reinvestment	**1**		
Units outstanding at end of year	**30**	**1.5**	**3**

1 *The total amount paid by Enbridge during the year ended December 31, 2015 for PSUs was $2 million (2014 - $1 million; 2013 - $2 million).*

Compensation expense recorded for the year ended December 31, 2015 for PSUs was $2 million (2014 - $5 million; 2013 - $4 million). As of December 31, 2015, unrecognized compensation expense related to non-vested units granted under the PSU Plan was $2 million and is expected to be fully recognized over a weighted average period of approximately two years.

RESTRICTED STOCK UNITS

Enbridge has a RSU Plan where cash awards are paid to certain non-executive employees of the Company following a 35-month maturity period. RSU holders receive cash equal to Enbridge's weighted average share price for 20 days prior to the maturity of the grant multiplied by the units outstanding on the maturity date.

December 31, 2015	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**196**		
Units granted	**81**		
Units cancelled	**(9)**		
Units matured[1]	**(96)**		
Dividend reinvestment	**10**		
Employee movements from other Enbridge companies	**2**		
Units outstanding at end of year	**184**	**1.4**	**11**

1 *The total amount paid by Enbridge during the year ended December 31, 2015 for RSUs was $5 million (2014 and 2013 - $5 million).*

Compensation expense recorded for the year ended December 31, 2015 for RSUs was $6 million (2014 and 2013 - $5 million). As of December 31, 2015, unrecognized compensation expense related to non-vested units granted under the RSU Plan was $6 million and is expected to be fully recognized over a weighted average period of approximately two years.

15. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE INCOME

Changes in AOCI for the years ended December 31, 2015, 2014 and 2013, are as follows:

	Cash Flow Hedges	Cumulative Translation Adjustment	Unamortized OPEB Actuarial Loss	Total
(millions of Canadian dollars)				
Balance at January 1, 2015	**8**	**(2)**	**(7)**	**(1)**
Other comprehensive income retained in AOCI	**(24)**	**8**	**-**	**(16)**
Other comprehensive loss reclassified to earnings	**6**	**-**	**-**	**6**

	80	1	10	91
Balance at December 31, 2013	70	(5)	-	65

16. DERIVATIVE FINANCIAL INSTRUMENTS AND HEDGING ACTIVITIES

MARKET RISK

The Company's earnings, cash flows and OCI are subject to movements in foreign exchange rates, interest rates and natural gas prices (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which the Company is exposed and the risk management instruments used to mitigate them.

Foreign Exchange Risk

Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates.

The Company generates certain revenues, and holds a subsidiary that is denominated in a currency other than Canadian dollars. As a result, the Company's earnings, cash flows, and OCI are exposed to fluctuations resulting from foreign exchange rate variability.

A portion of the Company's purchases of natural gas are denominated in United States dollars and as a result there is exposure to fluctuations in the exchange rate of the United States dollar against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer;

therefore, the Company has no net exposure to movements in the foreign exchange rate on natural gas purchases.

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps and options are used to mitigate the volatility of short-term interest rates on interest expense related to variable rate debt.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to mitigate the Company's exposure to long-term interest rate variability on select forecast term debt issuances. The Company uses qualifying derivative instruments to manage interest rate risk.

The Company's portfolio mix of fixed and variable rate debt instruments is monitored by its ultimate parent company, Enbridge. The Company does not typically manage the fair value of its debt instruments.

Natural Gas Price Risk
Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customer, therefore, the net exposure to the Company is nil (2014 - nil).

TOTAL DERIVATIVE INSTRUMENTS
The following table summarizes the Consolidated Statements of Financial Position location and carrying value of the Company's derivative instruments. The Company did not have any outstanding fair value or net investment hedges at December 31, 2015 or 2014.

The Company generally has a common practice of entering into individual International Swaps and Derivatives Association, Inc. (ISDA) agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in those particular circumstances. The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2015	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts payable and other					
Interest rate contracts	**(14)**	**-**	**(14)**	**-**	**(14)**
Other long-term liabilities					
Interest rate contracts	**-**	**-**	**-**	**-**	**-**
Total net derivative liability					
Interest rate contracts	**(14)**	**-**	**(14)**	**-**	**(14)**

December 31, 2014	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts payable and other					
Interest rate contracts	(6)	-	(6)	-	(6)
Other long-term liabilities					
Interest rate contracts	(5)	-	(5)	-	(5)
Total net derivative liability					
Interest rate contracts	(11)	-	(11)	-	(11)

The Company's derivatives instruments mature through 2017 and have a notional principal of $154 million for interest rate contracts for short-term borrowings (2014 - $346 million), and $162 million for interest rate contracts on long-term debt (2014 - $422 million).

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and consolidated comprehensive income, before the effect of income taxes.

Year ended December 31,	**2015**	2014	2013
(millions of Canadian dollars)			
Amount of unrealized (loss)/gain recognized in OCI			
Cash flow hedges			
Interest rate contracts	**(24)**	(84)	109
	(24)	(84)	109
Amount of loss reclassified from AOCI to earnings *(effective portion)*			
Interest rate contracts[1]	**(2)**	-	(2)
	(2)	-	(2)
Amount of (loss)/gain reclassified from AOCI to earnings *(ineffective portion)*			
Interest rate contracts[1]	**(4)**	-	2
	(4)	-	2

1 Reported within Interest expense, net in the Consolidated Statements of Earnings.

The Company estimates that $3 million in AOCI related to cash flow hedges from interest rate contracts will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on the interest rates in effect when derivative contracts that are currently outstanding mature. For all forecasted transactions, the maximum term over which the Company is hedging exposures to the variability of cash flows is 13 months at December 31, 2015.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments *(Notes 21 and 22)* as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under committed credit facilities and long-term debt, which includes debentures and medium-term notes, and, if necessary, additional liquidity is available through intercompany transactions with its ultimate parent, Enbridge, and other related entities. These sources are expected to be sufficient to enable the Company to fund all anticipated requirements. The Company maintains a current MTN shelf prospectus with securities regulators, which enables ready access to the Canadian public capital markets, subject to market conditions. In addition to the Company's access to the Canadian public capital markets, the Company maintains committed credit facilities *(Note 10)* with a diversified group of banks and institutions. The Company is in compliance with all the terms and conditions of its committed credit facilities at December 31, 2015. As a result, all credit facilities are available to the Company and the banks are obligated to fund, and have been funding, the Company under the terms of the facilities.

CREDIT RISK

The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has tightened credit terms including obtaining additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts *(Note 5),* which totaled $34 million at December 31, 2015 (December 31, 2014 - $33 million).

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

The Company did not have group credit concentration and maximum credit exposure, with respect to derivative instruments, in the Canadian financial institutions or European financial institutions counterparty segments at December 31, 2015 and 2014.

FAIR VALUE MEASUREMENTS

The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

Fair Value of Derivatives

The Company categorizes its derivative assets and liabilities, measured at fair value, into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1

Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3
Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2015, the Company had Level 2 derivative assets with fair value of nil (2014 - nil), and Level 2 derivative liabilities with fair value of $14 million (2014 - $11 million).

The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers as at December 31, 2015 or 2014.

Fair Value of Other Financial Instruments
The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded in OCI, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at cost. The Company's investment in IPL System Inc., an affiliate company, is recorded at fair value. At December 31, 2015, the fair value of the investment was $825 million (2014 - $825 million). The fair value of the Company's investment is classified as a Level 2 measurement and as of December 31, 2015 and 2014 the fair value approximated its cost and redemption value and therefore no amount was recognized in OCI.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2015, the Company's long-term debt had a carrying value of $3,683 million (2014 - $3,127 million) and a fair value of $4,159 million (2014 - $3,709 million).

The fair value of other financial assets and liabilities other than derivative instruments approximates their cost due to the short period to maturity.

17. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2015**	2014	2013
(millions of Canadian dollars)			
Earnings before income taxes	**245**	252	260
Federal statutory income tax rate	**15.0%**	15.0%	15.0%
Federal income taxes at statutory rate	**37**	38	39
Increase/(decrease) resulting from:			
Provincial and state income taxes	**5**	3	19
Effects of rate regulated accounting[1]	**(22)**	(25)	(5)
Non-taxable intercompany distributions	**(9)**	(9)	(9)
Other[2]	**-**	(1)	(1)
Income taxes	**11**	6	43
Effective income tax rate	**4.5%**	2.4%	16.5%

1 During 2015 and 2014, previously collected costs for future removal and site restoration were refunded to customers that resulted in a decrease in income taxes of $24 million at December 31, 2015 (2014 - $26 million).

2 Included in "Other" are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals & entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.

COMPONENTS OF PRETAX EARNINGS AND INCOME TAXES

Year ended December 31,	**2015**	2014	2013
(millions of Canadian dollars)			
Earnings before income taxes			
Canada	**243**	249	258
United States	**2**	3	2
	245	252	260

Minimum tax credits	**9**	-
Financial derivatives	**2**	-
Other	**2**	4
Total deferred income tax assets	**189**	221
Net deferred income tax liabilities	**(498)**	(432)
Presented as follows:		
Assets		
Accounts receivable and other *(Note 5)*	**18**	23
Deferred amounts and other assets *(Note 7)*	**8**	8
Total deferred income tax assets	**26**	31
Liabilities		
Deferred income taxes	**(524)**	(463)
Total deferred income tax liabilities	**(524)**	(463)
Net deferred income tax liabilities	**(498)**	(432)

The Company has assessed all tax positions. As a result, no significant adjustments were required to be made to the income tax provisions for the year ended December 31, 2015.

The Company has not provided for deferred income taxes on the difference between the carrying value of its foreign subsidiaries and their corresponding tax bases as the earnings of those subsidiaries are intended to be permanently reinvested in their operations. As such these investments are not anticipated to give rise to income taxes in the foreseeable future. The difference between the carrying value of the investment and its tax basis is largely a result of unremitted earnings and currency translation adjustments. The unremitted earnings and currency translation adjustment for which no deferred taxes have been recognized in respect of foreign subsidiaries is $30 million (2014 - $21 million). If such earnings were remitted, in the form of dividends or otherwise, the Company may be subject to income taxes and foreign withholding taxes. The determination of the amount of unrecognized deferred income tax liabilities on such amounts is not practicable.

The Company and its subsidiaries are subject to taxation in Canada and the Unites States. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario). The Company's 2011 to 2014 taxation years are still open for audit in Canada.

18. RETIREMENT AND POSTRETIREMENT BENEFITS

PENSION PLANS

The Company maintains a non-contributory basic pension plan that provides either defined benefit or defined contribution pension benefits to the majority of its employees. The Company has two supplemental non-contributory defined benefit pension plans that provide pension benefits in excess of the basic plan for certain employees.

A measurement date of December 31, 2015 was used to determine the plan assets and accrued benefit obligation for the pension plans.

Defined Benefit Plans
Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially inflation-indexed after a member's retirement. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective date of the most recent actuarial valuation was December 31, 2013. The effective date of the next required actuarial valuation is December 31, 2016.

Defined Contribution Plans
Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS
The Company also provides OPEB, which primarily includes supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

BENEFIT OBLIGATIONS AND FUNDED STATUS
The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	Pension		OPEB	
December 31,	**2015**	2014	**2015**	2014
(millions of Canadian dollars)				
Change in accrued benefit obligation				
Benefit obligation at beginning of year	**1,046**	875	**117**	100
Service cost	**35**	25	**1**	2
Interest cost	**41**	43	**5**	6
Actuarial loss/(gain)	**(54)**	142	**(1)**	12
Benefits paid	**(43)**	(41)	**(4)**	(3)
Other	**-**	2	**2**	-
Benefit obligation at end of year	**1,025**	1,046	**120**	117
Change in plan assets				
Fair value of plan assets at beginning of year	**960**	866	**13**	9
Actual return on plan assets	**49**	96	**-**	2
Employer's contributions	**3**	41	**5**	5
Benefits paid	**(43)**	(41)	**(4)**	(3)
Other	**-**	(2)	**3**	-
Fair value of plan assets at end of year	**969**	960	**17**	13
Underfunded status at end of year	**(56)**	(86)	**(103)**	(104)
Presented as follows:				
Deferred amounts and other assets *(Note 7)*	**6**	4	**2**	-
Accounts payable and other *(Note 9)*	**-**	-	**(4)**	(4)
Other long-term liabilities *(Note 11)*	**(62)**	(90)	**(101)**	(100)

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2015**	2014	2013	**2015**	2014	2013
Discount rate	**4.2%**	4.0%	5.0%	**4.2%**	4.0%	5.0%
Average rate of salary increases	**3.4%**	3.7%	3.5%	**3.4%**	3.7%	3.5%

NET BENEFIT COSTS RECOGNIZED

	Pension			OPEB		
Year ended December 31,	**2015**	2014	2013	**2015**	2014	2013
(millions of Canadian dollars)						
Benefits earned during the year	**35**	25	25	**1**	1	1
Interest cost on projected benefit obligations	**41**	43	38	**5**	6	4
Expected return on plan assets	**(62)**	(59)	(52)	**(1)**	(1)	(1)
Amortization of prior service costs	**-**	-	1	**-**	-	-
Amortization of actuarial loss	**19**	16	28	**1**	-	2
Net defined benefit costs on an accrual basis	**33**	25	40	**6**	6	6
Defined contribution benefit costs	**1**	1	1	**-**	-	-
Net benefit cost recognized on an accrual basis	**34**	26	41	**6**	6	6
Net amount recognized in OCI						
Net actuarial (gain)/loss[1]	**-**	-	-	**-**	9	(14)
Total amount recognized in OCI	**-**	-	-	**-**	9	(14)
Total net benefit cost on an accrual basis and amount recognized in OCI	**34**	26	41	**6**	15	(8)

1 *Unamortized actuarial losses included in AOCI, before tax, were $9 million relating to OPEB at December 31, 2015 (2014 - $9 million, 2013 - nil).*

The Company estimates that approximately $13 million related to pension plans and OPEB at December 31, 2015 will be reclassified into earnings in the next 12 months, as follows:

	Pension Benefits	OPEB	Total
(millions of Canadian dollars)			
Actuarial loss	**13**	**-**	**13**
	13	**-**	**13**

Pension and OPEB costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension and OPEB costs due to the regulatory mechanism in place. As a result, the net pension and OPEB expense primarily consists of OEB approved pension and OPEB costs.

Regulatory adjustments were recorded in the Consolidated Statements of Earnings, the Consolidated Statements of Comprehensive Income and the Consolidated Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers, respectively, in future rates *(Note 4)*. For the year ended December 31, 2015, an offsetting regulatory asset of nil (2014 - regulatory liability of $6 million) has been recorded to the extent pension and OPEB costs are expected to be collected from customers in future rates.

The weighted average assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2015**	2014	2013	**2015**	2014	2013
Discount rate	**4.0%**	5.0%	4.3%	**4.0%**	5.0%	4.3%
Average rate of return on pension plan assets	**6.8%**	6.8%	6.8%	**6.0%**	6.0%	6.0%
Average rate of salary increases	**3.7%**	3.5%	3.5%	**3.7%**	3.5%	3.5%

MEDICAL COST TRENDS

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in Which Ultimate Medical Cost Trend Rate Assumption is Achieved
Drugs	7.7%	4.3%	2029
Other medical and dental	4.5%	4.5%	-

A 1% increase in the assumed medical and dental care trend rate would result in an increase of $12 million in the benefit obligation and an increase of $1 million in benefit and interest costs. A 1% decrease in the assumed medical and dental care trend rate would result in a decrease of $10 million in the benefit obligation and a decrease of $1 million in benefit and interest costs.

PLAN ASSETS

The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

Expected Rate of Return on Plan Assets

	Pension		OPEB	
Year ended December 31,	**2015**	2014	**2015**	2014
Expected rate of return	**6.8%**	6.8%	**-**	-

Target Mix for Plan Assets

Equity securities	44.5%
Fixed income securities	40.0%
Other	15.5%

Major Categories of Plan Assets

Plan assets are invested primarily in readily marketable investments with constraints on the credit quality of fixed income securities. As at December 31, 2015, the pension assets were invested in 47% (2014 - 55%) in equity securities, 36% (2014 - 36%) in fixed income securities and 17% (2014 - 9%) in other.

The following table summarizes the Company's pension financial instruments at fair value. Non-financial instruments with a carrying value of $29 million (2014 - $18 million) have been excluded from the table below.

	2015				2014			
December 31,	Level 1[1]	Level 2[2]	Level 3[3]	Total	Level 1[1]	Level 2[2]	Level 3[3]	Total

1 Level 1 assets include assets with quoted prices in active markets for identical assets.
2 Level 2 assets include assets with significant observable inputs.
3 Level 3 assets include assets with significant unobservable inputs.
4 The fair value of the investment in United States Limited Partnership - Global Infrastructure Fund and IFM Global Infrastructure (Canada) L.P. are established through the use of valuation models.
5 The fair value of the investment in Bentall Kennedy Prime Canadian Property Fund Ltd and MetLife Core Property Fund L.P. are established through the use of valuation models.

Changes in the net fair value of plan assets classified as Level 3 in the fair value hierarchy were as follows:

Year ended December 31,	**2015**	2014
(millions of Canadian dollars)		
Balance at beginning of year	**69**	67
Unrealized and realized gains	**26**	15
Purchases and settlements, net	**52**	(13)
Balance at end of year	**147**	69

PLAN CONTRIBUTIONS BY THE COMPANY

	Pension		OPEB	
Year ended December 31,	**2015**	2014	**2015**	2014
(millions of Canadian dollars)				
Total contributions	**4**	41	**5**	5

The contributions expected to be paid in 2016 for pension is $4 million and for OPEB is $4 million.

BENEFITS EXPECTED TO BE PAID BY THE COMPANY

Year ended December 31,	2016	2017	2018	2019	2020	2021-2025
(millions of Canadian dollars)						
Expected future benefit payments	48	50	52	54	56	310

19. SEVERANCE COSTS

Included in Operating and administrative expense is $12 million in severance costs related to one-time termination benefits to employees. This resulted from an Enbridge-wide reduction of workforce that occurred in November 2015 that affected approximately 5% of Enbridge's workforce.

In 2015, $4 million was paid with the remaining $8 million to be paid in 2016 and is included in Accounts payable and other as at December 31, 2015.

20. CHANGES IN OPERATING ASSETS AND LIABILITIES

Year ended December 31,	**2015**	2014	2013
(millions of Canadian dollars)			
Regulatory assets	**532**	(732)	(31)
Regulatory liabilities[1]	**(178)**	(102)	2
Accounts receivable and other[2,3]	**34**	24	(13)

Financing Transactions

The Company has invested in Class D, non-voting, redeemable, retractable preference shares of IPL System Inc., an affiliate under common control. At December 31, 2015, the investment of $825 million (2014 - $825 million) in these shares resulted in a weighted average dividend yield of 7.60%.

At December 31, 2015, the borrowing from IPL System Inc. stood at $375 million ($200 million at 6.85% and $175 million at 7.50%). These loans are repayable in 2049 and 2051, respectively. The Company may elect to defer interest payments on the loans for up to five years and settle deferred interest in either cash or non-retractable preference shares of the Company. For the year ended December 31, 2015, interest paid amounted to $27 million (2014 - $27 million).

The Company has a $300 million revolving credit facility with Enbridge with a maturity date in May 2017. At December 31, 2015, the total drawings on the revolving credit facility were nil (2014 - $175 million). For the year ended December 31, 2015, interest paid amounted to nil (2014 - $2 million).

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 0.55% and is payable on demand.

Treasury and Other Management Services

Enbridge provides treasury and other management services and charges the Company on a cost recovery basis.

Natural Gas Purchases
The Company has contracted for the purchase of natural gas from Aux Sable Canada LP, Tidal Energy Marketing Inc. and Tidal Energy Marketing (U.S.) LLC, related entities under common control, at prevailing market prices and under normal trade terms. Contractual obligations under these contracts are nil.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Transportation Services
The Company has contracted for natural gas transportation services from Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), Alliance Pipeline Limited Partnership (Canadian) and Alliance Pipeline Limited Partnership (U.S.), related entities partially owned by an affiliated company under common control, and Niagara Gas Transmission Limited. Contractual obligations under these contracts are 2016 to 2017 - $71 million, 2018 to 2019 - $20 million and thereafter - nil.

Trade Receivables and Payables
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides consulting and other shared corporate services to affiliates on a fully-allocated cost basis. Market prices, if they are reasonably determinable, are charged for affiliate services that are not shared corporate services. The Company may also purchase consulting and other services from affiliates with prices determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

Other Transactions
The Company and affiliates invoice on a monthly basis and amounts are due and paid on a monthly basis.

22. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
The Company has signed contracts for the purchase of services, pipe and other materials, as well as transportation, totaling $5,722 million. The amounts which are expected to be paid in the next five years are $1,354 million, $942 million, $595 million, $566 million, and $487 million, respectively, and $1,778 million thereafter.

Minimum future payments under operating leases are estimated at $4 million in aggregate. Estimated annual lease payments for the years ended December 31, 2016 through 2020 are $4 million, nil, nil, nil and nil, respectively. Total rental expense for operating leases, classified in Operating and administrative expense, was $3 million for each of the years ended December 31, 2015, 2014 and 2013.

The Company, Enbridge, and Enbridge Pipeline Inc., in aggregate, have access to $95 million of letters of credit that they can issue, of which $37 million was unutilized as of December 31, 2015. The total outstanding letters of credit that related to the Company as of December 31, 2015 was $5 million. The Company had access to $75 million of letters of credit that it could issue, of which $51 million was unutilized as of December 31, 2014. The total outstanding letters of credit that related to the Company as of December 31, 2014 was $24 million.

CONTINGENCIES

Former Manufactured Coal Gas Plant Sites
The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were

commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its Station A MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It was and remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

On August 30, 1994, a former owner of part of the Historic Distillery District (Wyndham Court Canada Inc.) commenced an action in the Ontario Court of Justice (General Division) against the Company alleging that coal tar originating from the Company's Station A MGP in Toronto had migrated to its lands. The Company entered into a Tolling Agreement with Wyndham Court Canada Inc. pursuant to which this action was discontinued, without prejudice to the right to commence a similar action in the future. In the fall of 2002, the Company received notice that Wyndham Court Canada Inc. sold the lands that were the subject of the action to Cityscape Holdings Inc., which directed that title to a portion of these lands be transferred to Cityscape Residential Inc. (jointly Cityscape).

Cityscape served the Company with a Statement of Claim in February 2003, naming the Company and nine other defendants who own or have owned portions of the former Station A MGP site. Cityscape is claiming $50 million in damages and $5 million in punitive damages against the Company as a result of alleged coal tar contamination of the lands now owned by Cityscape. The Company responded with a Statement of Defence denying liability. In January 2004, Cityscape dismissed the action against each of the Company's co-defendants.

In February 2008, the Ontario Superior Court of Justice ordered that examinations for discovery of the plaintiff be completed by mid-June 2008. Examinations for discovery were completed by this date, but the required steps in the discovery process were not completed by the plaintiff. The Company has brought a motion to dismiss the plaintiff's action for delay. At present, it is unknown when or if the trial of the matter will be heard.

The Company has put all of its known existing and subsisting former third party liability insurers on notice of the Cityscape action. To date, no insurer has confirmed that insurance coverage exists, nor has any insurer acknowledged that it owes the Company a duty to defend the Cityscape lawsuit. The Company first advised the OEB of the Cityscape action during its fiscal 2003 Rate Case and sought approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with the Cityscape action and any future MGP claims that may be advanced. With respect to the Company's 2006 to 2015 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

The Company remains of the view that it has a valid defence to the Cityscape lawsuit; however, it acknowledges that certain risks exist. Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation/isolation/containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

OTHER LITIGATON

The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a significant impact on the Company's consolidated financial position or results of operations.

ENBRIDGE GAS DISTRIBUTION INC.

(a subsidiary of Enbridge Inc.)

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2016

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Distribution Inc.

Financial Reporting
Management of Enbridge Gas Distribution Inc. (the Company) is responsible for the accompanying consolidated financial statements and all related financial information, including Management’s Discussion and Analysis. The consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors (the Board) and its committees are responsible for all aspects related to governance of the Company. The Audit, Finance & Risk Committee (AF&RC) of the Board, includes directors who are unrelated and independent, and has a specific responsibility to oversee management’s efforts to fulfill its responsibilities for financial reporting and internal controls related thereto. The AF&RC meets with management, internal auditors and independent auditors to review the consolidated financial statements and the internal controls as they relate to financial reporting. The AF&RC reports its findings to the Board for its consideration in approving the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company’s internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

Independent Auditor's Report

To the Shareholders of
Enbridge Gas Distribution Inc.

We have audited the accompanying consolidated financial statements of Enbridge Gas Distribution Inc. and its subsidiaries, which comprise the consolidated statements of financial position as at December 31, 2016 and December 31, 2015 and the consolidated statements of earnings, comprehensive income, shareholders' equity and cash flows for each of the three years in the period ended December 31, 2016, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements
Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility
Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion
In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Enbridge Gas Distribution Inc. and their subsidiaries as at December 31, 2016 and December 31, 2015 and its results of operations and their cash flows for each of the three years in the period ended December 31, 2016 in accordance with accounting principles generally accepted in the United States of America.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. GENERAL BUSINESS DESCRIPTION

Enbridge Gas Distribution Inc. (the Company) is a rate-regulated natural gas distribution utility, serving residential, commercial and industrial customers in its franchise areas of central and eastern Ontario. The Company also serves areas in northern New York State through its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence). The Company is a wholly owned subsidiary of Enbridge Inc. (Enbridge).

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

These Consolidated Financial Statements are prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

The Company is permitted to prepare its Consolidated Financial Statements in accordance with U.S. GAAP for purposes of meeting its Canadian continuous disclosure requirements under an exemption granted by securities regulators in Canada until 2018.

BASIS OF PRESENTATION AND USE OF ESTIMATES
The preparation of Consolidated Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the Consolidated Financial Statements. Significant estimates and assumptions used in the preparation of the Consolidated Financial Statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities *(Note 4)*; unbilled revenues *(Note 6)* and unbilled amounts pertaining to the Budget Billing Program *(Note 10)*; allowance for doubtful accounts *(Note 6)*; carrying value of gas inventory; depreciation rates and carrying value of property, plant and equipment *(Note 7)*; amortization rates and carrying value of intangible assets *(Note 9)*; valuation of stock-based compensation *(Note 15)*; fair value of financial instruments *(Note 17)*; provisions for income taxes *(Note 18)*; assumptions used to measure retirement and OPEB *(Note 19);* commitments and contingencies *(Note 23)*; and fair value of asset retirement obligations (ARO) *(Note 13)*. Actual results could differ from these estimates.

PRINCIPLES OF CONSOLIDATION
The Consolidated Financial Statements include the accounts of the Company and its subsidiary. All significant intercompany accounts and transactions are eliminated upon consolidation.

REGULATION
The utility operations of the Company, excluding St. Lawrence, are regulated by the Ontario Energy Board (OEB) and the utility operations of St. Lawrence are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 4)*.

REVENUE RECOGNITION
The Company recognizes revenues when natural gas has been delivered or services have been performed. Gas commodity and distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company’s franchise areas.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulators.

PUSH-DOWN ACCOUNTING

The Company elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge, when it first adopted U.S. GAAP. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by the Company. Upon adopting push-down accounting, the historical cost of the Company's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage its exposure to changes in interest rates and foreign exchange. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges. The Company did not have any fair value hedges or net investment hedges at December 31, 2016 or 2015.

Cash Flow Hedges

The Company uses cash flow hedges to manage its exposure to changes in currency exchange rates related to unregulated storage revenue and changes in interest rates. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/loss (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and long-term assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and classifies these costs as a direct deduction from the carrying amount of the related debt liability. These costs are amortized using the effective interest rate method over the life of the related debt instrument and are recorded in Interest expense.

INCOME TAXES
The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. Any interest and/or penalty incurred related to tax is reflected in income taxes. Deferred tax liabilities and assets are classified as noncurrent in the Consolidated Statements of Financial Position.

The regulated utility operations of the Company recover income tax expense based on the taxes payable method as approved by the Regulators for rate-making purposes. As a result, rates do not include the recovery of deferred income taxes related to temporary differences. A corresponding deferred income tax regulatory liability/asset is recorded reflecting the Company's ability to pay/collect the amounts in the future through rates (*Note 4*).

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION
Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

The functional currency of the Company's only foreign operation, St. Lawrence, is the United States dollar (USD). The effects of translating the financial statements of St. Lawrence to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts are translated at the exchange rates in effect on the date of the Consolidated Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS
Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased.

RESTRICTED CASH
Cash and cash equivalents that are restricted as to withdrawal or usage, in accordance with specific agreements, are presented as Restricted cash on the Consolidated Statements of Financial Position *(Note 5)*.

GAS INVENTORIES
Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

PROPERTY, PLANT AND EQUIPMENT
Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction as authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The pool method of accounting for property, plant and equipment is followed whereby similar assets with comparable useful lives are grouped and depreciated as a pool, as approved by the Regulators. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation until the last asset in the pool is disposed of. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS
Deferred amounts and other assets primarily include: costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates; deferred income taxes; and derivative financial instruments.

INTANGIBLE ASSETS
Intangible assets consist primarily of the Company's Customer Information System (CIS) and software costs, including the Work and Asset Management Solution (WAMS). The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are amortized on a straight-line basis over their expected useful lives, commencing when the asset is available for use.

ASSET RETIREMENT OBLIGATIONS
ARO associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. ARO are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For the majority of the Company's assets, it is not possible to make a reasonable estimate of ARO due to the indeterminate timing and scope of the asset retirements.

RETIREMENT AND POSTRETIREMENT BENEFITS
The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality.

Effective January 1, 2016, the Company refined the method to estimate current service cost and interest cost for pension and other postretirement benefits. Previously, these were estimated utilizing a single weighted-average discount rate derived from the yield curve used to measure the defined benefit obligation at the beginning of the year. Under the refined method, different discount rates are derived from the same yield curve, reflecting the different timing of benefit payments for past service (the defined benefit obligation) and future service (the current service cost). Differentiating in this way represents a refinement in the basis of estimation applied in prior periods. This change does not affect the measurement of the total defined benefit obligation recorded on the Consolidated Statements of Financial Position as at December 31, 2016 or any other period. The refinement compared to the previous method resulted in a decrease in the current service cost and interest components with an equal offset to actuarial gains (losses) with no net impact on the total benefit obligation. The refinement did not have a material impact on the Consolidated Statements of Earnings for the year ended December 31, 2016. This change was accounted for prospectively as a change in accounting estimate.

In 2014, new mortality assumptions were issued and further revised in 2015. These assumptions were adopted by the Company for the measurement of the December 31, 2015 benefit obligations. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. Pension cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Amortization of prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans;
- Interest cost of pension plan obligations;
- Expected return on pension fund assets; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contributions occur.

The Company also provides OPEB other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans is recognized as Deferred amounts and other assets or Other long-term liabilities, respectively, on the Consolidated Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax.

The Company records regulatory adjustments to reflect the difference between pension expense and OPEB costs for accounting purposes and the pension expense and OPEB costs for rate-making purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension expense or OPEB costs are expected to be collected from or refunded to customers, respectively, in future rates. In the absence of rate regulation accounting, regulatory balances would not be recorded and pension and OPEB costs would be charged to earnings and OCI on an accrual basis.

STOCK-BASED COMPENSATION

Enbridge grants stock-based compensation to certain employees and senior officers of the Company through four long-term incentive compensation plans. Compensation expense associated with each of the plans, as determined under the methods outlined below is recognized in Operating and administrative expense. Amounts owing to Enbridge in respect of stock-based compensation are payable on a quarterly basis.

Incentive Stock Options (ISO) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the ISOs granted as calculated by the Black-Scholes-Merton model and is recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility.

Performance Stock Units (PSU) and Restricted Stock Units (RSU) are cash settled awards for which the related liability is remeasured each reporting period. PSUs vest at the completion of a three-year term and RSUs vest at the completion of a 35-month term. During the vesting term, compensation expense is recorded based on the number of units outstanding and the current market price of the Company's shares. The value of the PSUs is also dependent on the Company's performance relative to performance targets set out under the plan.

Performance Stock Options (PSO) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the PSOs granted as calculated by the Bloomberg barrier option valuation model and is recognized over the vesting period. The options become exercisable when both performance targets and the time vesting requirements have been met.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or a liability has been incurred, and the amount of the impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES

ADOPTION OF NEW STANDARDS

Classification of Deferred Taxes on the Statement of Financial Position

Effective January 1, 2016, the Company elected to early adopt Accounting Standards Update (ASU) 2015-17 and applied the standard on a prospective basis. The amendments require that deferred tax liabilities and assets be classified as noncurrent in the Consolidated Statements of Financial Position. The adoption of the standard resulted in a decrease to Deferred income taxes of $18 million and a decrease to Accounts receivable and other of $18 million.

Measurement Date of Defined Benefit Obligation and Plan Assets

Effective January 1, 2016, the Company adopted ASU 2015-04 on a prospective basis. The revised criteria simplifies the fair value measurement of defined benefit plan assets and obligations. The adoption of the pronouncement did not have a material impact on the Company's Consolidated Financial Statements.

Simplifying the Presentation of Debt Issuance Costs

Effective January 1, 2016, the Company adopted ASU 2015-03 on a retrospective basis which, as at December 31, 2015, resulted in a decrease in Deferred amounts and other assets of $13 million and a corresponding decrease in Long-term debt of $13 million. The new standard requires debt issuance costs related to a recognized debt liability to be presented in the Consolidated Statements of Financial Position as a direct deduction from the carrying amount of that debt liability, consistent with the presentation of debt discounts or premiums. Further, effective January 1, 2016, the Company adopted ASU 2015-15 which clarifies that debt issuance costs associated with line-of-credit arrangements may be deferred as an asset and subsequently amortized over the term of the arrangement. The adoption of ASU 2015-15 did not have a material impact on the Company's Consolidated Financial Statements.

FUTURE ACCOUNTING POLICY CHANGES

Clarifying the Presentation of Restricted Cash in the Statement of Cash Flows

ASU 2016-18 was issued in November 2016 with the intent to add or clarify the guidance on the classification and presentation of changes in restricted cash and restricted cash equivalents within the cash flow statement. The amendments require that changes in restricted cash and restricted cash equivalents should be included within cash and cash equivalents when reconciling the opening and closing period amounts shown on the Statements of Cash Flows. The Company is currently assessing the impact of the new standard on its Consolidated Financial Statements. The accounting update is effective for fiscal years beginning after December 15, 2017 and is to be applied on a retrospective basis.

Simplifying Cash Flow Classification
ASU 2016-15 was issued in August 2016 with the intent of reducing diversity in practice of how certain cash receipts and cash payments are classified in the Consolidated Statements of Cash Flows. The new guidance addresses eight specific presentation issues. The Company is currently assessing the impact of the new standard on its Consolidated Financial Statements. The accounting update is effective for annual and interim periods beginning on or after December 15, 2017 and is to be applied on a retrospective basis.

Accounting for Credit Losses
ASU 2016-13 was issued in June 2016 with the intent of providing financial statement users with more useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. Current treatment uses the incurred loss methodology for recognizing credit losses, which delays the recognition until it is probable a loss has been incurred. The amendment adds a new impairment model, known as the current expected credit loss model that is based on expected losses rather than incurred losses. Under the new guidance, an entity recognizes as an allowance its estimate of expected credit losses, which the Financial Accounting Standards Board believes will result in more timely recognition of such losses. The Company is currently assessing the impact of the new standard on its Consolidated Financial Statements. The accounting update is effective for annual and interim periods beginning on or after December 15, 2019.

Improvements to Employee Share-Based Payment Accounting
ASU 2016-09 was issued in March 2016 with the intent of simplifying and improving several aspects of accounting for share-based payment transactions including the income tax consequences, classification of awards as either equity or liabilities, and classification on the Consolidated Statements of Cash Flows. The accounting update is effective for annual and interim periods beginning on or after December 15, 2016 and is to be applied on a prospective or retrospective basis. The adoption of the pronouncement is not anticipated to have a material impact on the Company's Consolidated Financial Statements.

Recognition of Leases
ASU 2016-02 was issued in February 2016 with the intent to increase transparency and comparability among organizations by recognizing lease assets and lease liabilities on the Statement of Financial Position and disclosing additional key information about leasing arrangements. The Company is currently assessing the impact of the new standard on its Consolidated Financial Statements. The accounting update is effective for interim and annual periods beginning on or after December 15, 2018, and is to be applied using a modified retrospective approach.

Recognition and Measurement of Financial Assets and Liabilities
ASU 2016-01 was issued in January 2016 with the intent to address certain aspects of recognition, measurement, presentation, and disclosure of financial assets and liabilities. The amendments revise accounting related to the classification and measurement of investments in equity securities, the presentation of certain fair value changes for financial liabilities measured at fair value, and the disclosure requirements associated with the fair value of financial instruments. The Company is currently assessing the impact of the new standard on its Consolidated Financial Statements. The accounting update is effective for fiscal years beginning after December 15, 2017, and is to be applied by means of a cumulative-effect adjustment to the Statements of Financial Position as of the beginning of the fiscal year of adoption, with amendments related to equity securities without readily determinable fair values to be applied prospectively.

Revenue from Contracts with Customers
ASU 2014-09 was issued in 2014 with the intent of significantly enhancing consistency and comparability of revenue recognition practices across entities and industries. The new standard establishes a single, principles-based five-step model to be applied to all contracts with customers and introduces new and enhanced disclosure requirements. The standard is effective January 1, 2018. The new revenue standard permits either a full retrospective method of adoption with restatement of all prior periods presented, or a

modified retrospective method with the cumulative effect of applying the new standard recognized as an adjustment to opening retained earnings in the period of adoption. The Company is currently assessing which transition method to use.

The Company has reviewed a sample of its revenue contracts in order to evaluate the effect of the new standard on its revenue recognition practices. Based on our initial assessment, the application of the standard may result in a change in presentation related to payments to customers under the earnings sharing mechanism which are currently shown as an expense in the Consolidated Statements of Earnings. Under the new standard, these payments would be reflected as a reduction of revenue. While we have not yet completed our assessment, our preliminary view is that we do not expect these changes to have a material impact on our revenue or earnings. The Company is also developing processes to generate the disclosures required under the new standard.

4. FINANCIAL STATEMENT EFFECTS OF RATE REGULATION

For the purposes of this note, “Enbridge Gas Distribution” refers specifically to Enbridge Gas Distribution Inc. excluding St. Lawrence, whereas “St. Lawrence” refers specifically to St. Lawrence Gas Company, Inc.

RECENT RATE APPROVALS

Enbridge Gas Distribution
For the year ended December 31, 2016, Enbridge Gas Distribution’s rates were set according to the OEB approved settlement agreement (December 2015) in the Company’s 2016 rate application, updated to reflect the OEB’s decision and final rate order (May 2016) in the Company’s multi-year demand side management (DSM) application. The rates approved as part of the 2016 rate application represented the third year of the Company’s customized incentive regulation (IR) plan, which set rates for the period of 2014 to 2018, and was approved by the OEB in July and August 2014. As specified within the customized IR plan, DSM costs are one of the select items to be updated annually.

For the year ended December 31, 2015, Enbridge Gas Distribution’s rates were set according to the OEB approved settlement agreement (April 2015) and final rate order (May 2015), in the Company’s 2015 rate application.

For the year ended December 31, 2014, Enbridge Gas Distribution’s rates were set by the OEB’s July 2014 decision, and subsequent August 2014 decision and rate order in the Company’s customized IR application. The decisions and rate order established final 2014 allowed revenues and billing rates, as well as placeholder allowed revenues for 2015 through 2018. The customized IR plan requires Enbridge Gas Distribution to update select items in each of 2015 through 2018, in order to establish final allowed revenues and rates. The customized IR decision also approved the adoption of a new approach for determining net negative salvage percentages as a component of Enbridge Gas Distribution’s depreciation rates, as well as an earnings sharing mechanism in which Enbridge Gas Distribution shares earnings above the approved base return equally with customers.

Under the customized IR plan, the Company has continued to apply the accounting guidance found in Accounting Standards Codification (ASC) 980 – Regulated Operations.

St. Lawrence
St. Lawrence is currently in a rate year ending May 31, 2017, according to the recent NYSPSC order establishing a three year rate plan covering the period of June 1, 2016 through May 31, 2019. For the years ended December 31, 2016, 2015 and 2014, St. Lawrence’s rates were set using a Cost of Service (COS) methodology. Under COS, revenues are set to recover costs and to earn a rate of return on the deemed common equity component of rate base. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, interest and income taxes. Rate base is the average level of investment in all recoverable assets used in natural gas distribution,

storage and transmission and an allowance for working capital. Gas costs are not recovered through revenue rates, but are set separately in gas cost rates.

For the rate year ending May 31, 2017, any earnings above the approved return on equity and between 9.5% to 10.0% will be shared 50/50 between customers and the Company; from 10.0% to 10.5%, 80/20; and over 10.5%, 90/10; respectively. The calculation of earnings is on an annual basis for each rate year period commencing June 1, 2016. There was no earnings sharing for the period of January 1, 2016 to May 31, 2016. In fiscal 2015 and fiscal 2014, any earnings above a return on equity of 11% were shared equally with the customers. The calculation from January 1, 2015 to December 31, 2015 resulted in no sharing impact as at December 31, 2015 (2014 – nil).

Under COS, it is the responsibility of St. Lawrence to demonstrate to the NYSPSC the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

During the years ended December 31, 2016, 2015 and 2014, the cost of natural gas was passed on to customers as a flow-through.

APPROVED RETURNS ON EQUITY

Enbridge Gas Distribution

Enbridge Gas Distribution’s rates for 2016 included an after-tax rate of return on common equity of 9.19% (2015 - 9.30% and 2014 - 9.36%) based on a 36% (2015 and 2014 - 36%) deemed common equity component of rate base.

St. Lawrence

St. Lawrence’s approved after-tax rate of return on common equity embedded in rates was 9.0% for the rate year ended May 31, 2017 (fiscal 2015 and fiscal 2014 - 10.5%) based on a 48% (fiscal 2015 and fiscal 2014 - 50%) deemed common equity component of rate base.

IMPACTS OF RATE REGULATION

Regulatory Assets and Liabilities

As a result of rate regulation accounting, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation accounting, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

Regulatory Risk and Uncertainties Affecting Recovery or Settlement

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators’ future actions may differ from current expectations or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators’ future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2016**	2015	Consolidated Statement of Financial Position Location**	Estimated Recovery/ Settlement Period *(years)*
(millions of Canadian dollars)				
Regulatory assets/(liabilities)				
Enbridge Gas Distribution				
Deferred income taxes[1]	**381**	324	DA	*

	(86)	(64)		

* Refer to the footnote for details

** AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities

*** Dependent on the nature of the item

1 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

2 *The OPEB balance represents Enbridge Gas Distribution's right to recover OPEB costs resulting from the adoption of the accrual basis of accounting for OPEB costs upon transition to US GAAP in 2012. Pursuant to the OEB rate order, the amount as at December 31, 2012 is to be collected in rates over a 20-year period that commenced in 2013. In the absence of rate regulation accounting, this regulatory balance and related earnings impact would not be recorded.*

3 *The pension plan balance represents the regulatory offset to the pension liability/asset to the extent the amounts are to be collected/refunded in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation accounting, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

4 *The Constant dollar net salvage adjustment represents the cumulative variance between the amount proposed for clearance and the actual amount cleared, relating specifically to the site restoration clearance adjustment. At the end of 2018 any residual balance will be cleared in a post 2018 true up, ensuring that the actual amount cleared is equivalent to the required $380 million.*

5 *Unaccounted for gas variance represents the difference between the total natural gas distributed by Enbridge Gas Distribution and the amount of natural gas billed or billable to customers for their recorded consumption, to the extent it is different from the approved amount built into rates. Enbridge Gas Distribution has historically been granted OEB approval for recovery or required refund of this amount in the subsequent year. In the absence of rate regulation accounting, this variance would be included in earnings in the year incurred.*

6 *Average use true-up variance represents the net revenue impact to be recovered from or refunded to customers, associated with any variance between forecast average use and actual weather normalized average use for general service customers. The amount will be recovered from or refunded to customers in future periods in accordance with the OEB's approval. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

7 *Storage and transportation deferral represents the difference between the actual cost and the approved cost of natural gas storage and transportation reflected in rates. Enbridge Gas Distribution has historically been granted OEB approval to collect this balance from or to refund this balance to customers, generally in the subsequent year. In the absence of rate regulation accounting, the actual cost of natural gas storage and transportation would be included in Gas commodity and distribution costs and revenues or costs would be adjusted by an equal and offsetting amount, as the right to collect or refund the revenue or costs has been established.*

8 *Customer care CIS rate smoothing deferral represents the difference between the forecast costs and the approved costs for customer care and CIS reflected in rates. The balance accumulated during 2013 to 2015 when the cost per customer exceeded the cost approved for recovery in rates will be drawn down during 2016 to 2018 when the cost per customer will be lower than the cost approved for recovery in rates. Enbridge Gas Distribution has received OEB approval to collect from or refund to customers any remaining balance after 2018. In the absence of rate regulation accounting, the variance would be included in earnings in the year incurred.*

9 *The Deferred rebate account reflects amounts payable to, or receivable from, customers as a result of the clearing of deferral and variance accounts authorized by the OEB which remain outstanding due to the Company's inability to locate such customers. Enbridge Gas Distribution has historically been granted OEB approval to collect this balance from or to refund this balance to customers, generally in the subsequent year. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

10 *Demand side management incentive deferral account (DSMIDA) represents the benefit earned by Enbridge Gas Distribution as a result of its energy efficiency programs. Enbridge Gas Distribution has historically been granted OEB approval to recover the DSMIDA amount through rates after a detailed review by the OEB. The process of review and subsequent recovery may extend over a few years. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

11 *Purchased gas variance (PGVA) is the difference between the actual cost and the approved cost of natural gas reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process. In May 2014, the OEB issued a decision allowing a portion of the PGVA balance as at June 30, 2014 to be recovered over a 24-month period from July 1, 2014 to June 30, 2016. In the absence of rate regulation accounting, the actual cost of natural gas would be included in Gas commodity and distribution costs, and revenues or costs would be adjusted by an equal and offsetting amount as the right to collect or refund the revenue or costs has been established.*

12 *The GTA incremental transmission capital revenue requirement deferral account reflects the revenue requirement related to incremental capital costs which resulted from the upsizing of Segment A of the GTA project to a Nominal Pipe Size (NPS) 42 pipeline, from an NPS 36 pipeline. The account was required in the event that at the time Segment A was put into service, there are no transportation customers, or there is no ability for transportation customers to utilize Segment A. The revenue requirement reflects revenue to be collected from transportation customers once they are able to take service under Rate 332. In the absence of rate regulation accounting, the amount would be recognized when included in rates billed to transportation customers.*

13 *The Unabsorbed demand cost deferral account represents the actual cost consequences of unutilized transportation capacity contracted by Enbridge Gas Distribution to meet requirements resulting from its Peak Gas Design Day Criteria. In the absence of rate regulation accounting, these costs would be expensed as incurred.*

14 *Future removal and site restoration reserves result from amounts collected from customers by Enbridge Gas Distribution, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment that is recorded in rates. The balance represents the amount that Enbridge Gas Distribution has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation accounting, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

15 *The Site restoration clearance adjustment represents the amount, that was determined by the OEB, of previously collected costs for future removal and site restoration that is now considered to be in excess of future requirements and will be refunded to customers over the customized IR term. This was a result of the OEB's approval of the adoption of a new approach for determining net negative salvage percentages. The new approach resulted in lower depreciation rates and lower future removal and site restoration reserves. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

16 *Post-retirement true-up variance is the difference between the actual cost and the approved cost of pension and OPEB reflected in rates. Enbridge Gas Distribution has been granted OEB approval to refund this balance to, or to collect this balance from, customers in the subsequent year, up to a maximum of $5 million per year. Any amounts in excess of $5 million per year will be deferred for refund or collection in the next subsequent year. In the absence of rate regulation accounting, the variance would be included in earnings in the year incurred.*

17 *Transactional services deferral represents the customer portion of additional earnings generated from optimization of storage and pipeline capacity. Enbridge Gas Distribution has historically been required to refund the amount to customers in the following year. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

18 *Earnings sharing deferral represents amounts relating to the earnings sharing mechanism, which forms part of the customized IR plan. The Earnings sharing is payable to customers and represents 50% of normalized U.S. GAAP utility earnings represented by a return on equity in excess of the allowed utility return on equity applicable to Enbridge Gas Distribution, as determined for each year of the customized IR plan. There would be no change in the treatment of this item in the absence of rate regulation accounting.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Revenue

To recognize the actions or expected actions of the Regulators, the timing and recognition of certain revenues and expenses may differ from that otherwise expected for non rate-regulated entities.

Operating Cost Capitalization

In the absence of rate regulation accounting, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred.

With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation accounting, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs, primarily consulting fees, are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2016, cumulative costs relating to this services contract of $181 million (2015 - $174 million) were included in gas mains and are being depreciated over the average service life of 25 years. In the absence of rate regulation accounting, some of these costs would be charged to earnings in the year incurred.

The Company entered into contracts relating to CIS integration services, software maintenance and support. At December 31, 2016, the net book value of these costs included in intangible assets was $35 million (2015 - $48 million). In the absence of rate regulation accounting, a portion of the original cost of these assets would have been expensed in the period incurred.

WAMS is the Company's new integrated work and asset management solution. At December 31, 2016, the net book value of the asset included in intangible assets was $84 million (2015 - $52 million was included in work-in-progress). In the absence of rate regulation accounting, a portion of the original cost of the asset would have been expensed in the period incurred.

Gas Inventories

Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2016 is $49 million (2015 - $40 million) of storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation accounting, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation
In the absence of rate regulation accounting, depreciation rates would not have included a charge for future removal and site restoration costs.

5. GREEN INVESTMENT FUND

In July 2016, the Company received $58 million from the Government of Ontario for the purpose of carrying out the Green Investment Fund (GIF) program. The purpose of the GIF program is to reduce greenhouse gas emissions in the residential sector. The Company's use of the funds is limited to eligible expenditures for the purpose of executing the program. The Company will manage the GIF program separately from its core regulated activities. There is no earnings impact relating to the GIF program. Any unspent funds must be returned to the Government of Ontario at the expiry of the agreement on May 31, 2019, or should the Government of Ontario elect to terminate the agreement at any time prior to its expiration date.

As at December 31, 2016, the Company had Restricted cash of $58 million and Accounts payable and other *(Note 10)* of $57 million on the Consolidated Statements of Financial Position related to the funds received for the GIF program. The cash flow impacts of these items are included in Changes in operating assets and liabilities on the Consolidated Statements of Cash Flows (*Note 21*).

6. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2016**	2015
(millions of Canadian dollars)		
Trade receivables	**327**	309
Unbilled revenues	**135**	151

Current deferred income taxes *(Notes 3 and 18)*	**-**	18
Other	**16**	21
Allowance for doubtful accounts *(Note 17)*	**(33)**	(34)
	655	790

During the first half of 2014, increases in natural gas prices and colder than normal weather resulted in the Company accumulating a significant balance in its PGVA. In May 2014, the OEB issued a decision allowing a portion of the PGVA balance as at June 30, 2014 to be recovered over a 24-month period from July 1, 2014 to June 30, 2016. Included in Regulatory assets as at December 31, 2016 is $5 million (December 31, 2015 - $129 million) which represents the PGVA balance that is expected to be recovered from customers within the next 12 months.

7. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	**2016**	2015
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas mains	**2.2%**	**4,637**	3,740
Gas services	**2.3%**	**3,065**	2,929

Other	**2**	1
	576	543

9. INTANGIBLE ASSETS

December 31, 2016	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	**22.2%**	**279**	**(156)**	**123**
CIS	**10.0%**	**127**	**(92)**	**35**
		406	**(248)**	**158**

December 31, 2015	Weighted Average Amortization Rate	Cost	Accumulated Amortization	Net
(millions of Canadian dollars)				
Software	23.2%	238	(129)	109
CIS	10.0%	127	(79)	48
		365	(208)	157

Intangible assets include $12 million of work-in-progress as at December 31, 2016 (2015 - $61 million). Total amortization expense for intangible assets was $56 million for the year ended December 31, 2016 (2015 - $51 million, 2014 - $49 million). The Company expects aggregate amortization expense for the years ending December 31, 2017 through 2021 of $65 million, $70 million, $71 million, $64 million and $66 million, respectively.

10. ACCOUNTS PAYABLE AND OTHER

December 31,	2016	2015
(millions of Canadian dollars)		
Accrued liabilities *(Note 20)*	**371**	396
Regulatory liabilities *(Note 4)*	**96**	136
Trade payables	**82**	62
Budget billing plan payable	**75**	105
GIF liability *(Note 5)*	**57**	-

Dividends payable	**1**	1
Short-term portion of derivative liabilities *(Note 17)*	**1**	14
Other	**10**	11
	807	870

Included in Regulatory liabilities at December 31, 2016 is $78 million (2015 - $84 million) relating to the portion of site restoration clearance adjustment that is expected to be refunded to customers within the next 12 months.

11. DEBT

December 31,	Weighted Average Interest Rate	Maturity	**2016**	2015
(millions of Canadian dollars)				
Debenture	9.85%	2024	**85**	85
Medium-term notes	4.38%	2017-2050	**3,895**	3,595
Commercial paper and credit facility draws, net[1]			**360**	607
Other *(Note 3)*[2]			**15**	22
Total debt			**4,355**	4,309
Current maturities			**(500)**	(2)
Short-term borrowings	0.85%		**(351)**	(599)
Short-term borrowings from affiliates *(Note 22)*	1.66%		**(34)**	(40)
Long-term debt *(Note 3)*			**3,470**	3,668
Loans from affiliate company *(Note 22)*			**375**	375

1 Includes amounts drawn on uncommitted demand credit facilities.
2 Consists of note payable to affiliate company, debt premium and debt issuance costs.

In August 2016, the Company issued $300 million of ten-year medium-term notes (MTNs) at an interest rate of 2.50%.

For the years ending December 31, 2017 through 2021, medium-term note maturities are $500 million, nil, $9 million, $400 million and $175 million, respectively. The Company's debentures and medium-term notes bear interest at fixed rates, and interest obligations for the years ending December 31, 2017 through 2021 are $176 million, $163 million, $163 million, $163 million and $147 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2016**	2015	2014
(millions of Canadian dollars)			
Debentures and medium-term notes	**176**	158	149
Loans from affiliate company *(Note 22)*	**27**	27	29
Commercial paper and credit facility draws	**7**	8	9
Other interest and finance costs	**10**	9	(4)
Capitalized	**(14)**	(21)	(6)
	206	181	177

In 2016, total interest paid to third parties was $181 million (2015 - $166 million, 2014 - $163 million) and total interest paid to affiliates was $27 million (2015 - $27 million, 2014 - $29 million).

The Company's borrowings, whether debentures or medium-term notes, are unsecured. As at December 31, 2016, the Company was in compliance with all covenants.

CREDIT FACILITIES

The Company currently has a $1 billion commercial paper program limit that is backstopped by committed lines of credit of $1 billion. The term of any commercial paper issued under this program may not exceed one year. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option. In July 2016, the Company extended the term out date of this external credit facility to July 2017, with a maturity date in July 2018.

During the first quarter of 2016, St. Lawrence terminated its credit facility and entered into new banking agreements with a new financial institution in which $9 million (US$7 million) of promissory notes were issued under the loan agreement at an interest rate of 2.98%, maturing in July 2019.

During the second quarter of 2016, St. Lawrence terminated its uncommitted demand credit facilities, and entered into new banking agreements with a new financial institution in which $8 million (US$6 million) of committed credit facilities were issued under the agreement. The credit facilities bear interest at market rates and mature in June 2019.

In May 2016, the Company did not renew its $300 million revolving credit facility that it had with Enbridge.

The Company actively manages its bank funding sources to ensure adequate liquidity and to optimize pricing and other terms. The following table provides details of the Company's credit facilities at December 31, 2016.

		December 31, 2016			December 31, 2015
	Maturity Dates	Total Facilities	Draws[1]	Available	Total Facilities[2]
(millions of Canadian dollars)					
Enbridge Gas Distribution Inc.	2018	**1,000**	**345**	**655**	1,300
St. Lawrence Gas Company, Inc.	2019	**17**	**15**	**2**	10
Total credit facilities		**1,017**	**360**	**657**	1,310

1 Includes facility draws and commercial paper issuances, net of discount, that are back-stopped by the external credit facility.
2 Includes a $300 million revolving credit facility from the Company's ultimate parent, Enbridge.

As at December 31, 2016, the Company did not have any uncommitted demand credit facilities. As at December 31, 2015, the Company had $7 million of uncommitted demand credit facilities, of which $3 million was unutilized.

Credit facilities carried a weighted average standby fee of 0.2% on the unused portion and the draws bear interest at market rates.

12. OTHER LONG-TERM LIABILITIES

December 31,	**2016**	2015
(millions of Canadian dollars)		
Regulatory liabilities *(Note 4)*	**624**	670
Pension and OPEB liabilities *(Note 19)*	**208**	163
Long-term portion of derivative liabilities *(Note 17)*	**1**	-
Other *(Note 13)*	**13**	14
	846	847

Included in Regulatory liabilities at December 31, 2016 is $31 million (2015 - $109 million) relating to the portion of site restoration clearance adjustment that is expected to be refunded to customers beyond the next 12 months.

13. ASSET RETIREMENT OBLIGATIONS

The liability for the expected cash flows as recognized in the Consolidated Financial Statements reflected discount rates ranging from 1.65% to 3.77% (2015 - 1.65% to 3.77%). A reconciliation of movements in the Company's ARO is as follows:

December 31,	**2016**	2015
(millions of Canadian dollars)		
Obligations at beginning of year	**9**	9
Liabilities settled	**(1)**	(2)
Change in estimate	**(1)**	2
Accretion expense	**-**	-
Obligations at end of year	**7**	9
Presented as follows:		
Other long-term liabilities *(Note 12)*	**7**	9
	7	9

14. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and a limited number of preference shares.

COMMON SHARES

	2016		2015		2014	
December 31,	Number of shares	Amount	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of common shares in millions)						
Balance at beginning of year	**170.0**	**1,637**	158.9	1,437	150.6	1,287
Common shares issued	**15.6**	**280**	11.1	200	8.3	150
Balance at end of year *(Note 22)*	**185.6**	**1,917**	170.0	1,637	158.9	1,437

PREFERENCE SHARES

December 31, 2016, 2015, and 2014	Authorized	Issued and Outstanding	Amount
(millions of Canadian dollars, number of preference shares in millions)			
Group 2, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 2, Series D, Cumulative Redeemable Convertible	4	-	-
Group 3, Series A - C, Cumulative Redeemable Retractable	6	-	-
Group 3, Series D, Fixed / Floating Cumulative Redeemable Convertible	4	4	100
Group 4	10	-	-
Group 5	10	-	-
			100

Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. The Company has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case. As at December 31, 2016, no preference shares have been redeemed.

On July 1, 2019, and every five years thereafter, the Group 3, Series D preference shares can be converted, at the holder's option, into Group 2, Series D preference shares on a one-for-one basis, and will pay fixed cumulative cash dividends that are not less than 80% of the Government of Canada yield applicable to the fixed dividend period. The Group 3, Series D preference shareholders opted not to convert their shares into Group 2, Series D preference shares effective July 1, 2014.

The Group 2, Series D preference shares can be redeemed, at the Company's option, for $25.00 per share. The Group 2, Series D preference shares can also be converted into Group 3, Series D preference shares on a one-for-one basis at the holder's option on July 1, 2019 and every five years thereafter.

15. STOCK OPTION AND STOCK UNIT PLANS

Enbridge's four long-term incentive compensation plans include the ISO Plan, the PSO Plan, the PSU Plan and the RSU Plan. The Company reimburses Enbridge for stock-based compensation costs associated with its employees on a quarterly basis. As at December 31, 2016, the Company did not have any employees that had options in the PSO Plan.

INCENTIVE STOCK OPTIONS

Key employees of the Company are granted ISOs to purchase common shares of Enbridge at the market price on the grant date. ISOs vest in equal annual installments over a four-year period and expire 10 years after the issue date.

December 31, 2016	Number	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(options in thousands; exercise price and intrinsic value in Canadian dollars)				
Options outstanding at beginning of year	**2,688**	**39.43**		
Options granted	**703**	**44.06**		
Options exercised[1]	**(419)**	**28.78**		
Options cancelled	**(7)**	**44.83**		
Employee movements from other Enbridge companies	**511**	**38.56**		
Options outstanding at end of year	**3,476**	**41.54**	**6.3**	**39**
Options vested at end of year[2]	**1,957**	**35.74**	**4.8**	**33**

1 The total intrinsic value of ISOs exercised during the year ended December 31, 2016 was $10 million (2015 - $14 million; 2014 - $11 million) and cash received by Enbridge on exercise was $12 million (2015 - $10 million; 2014 - $5 million).

2 The total fair value of options vested under the ISO Plan during the year ended December 31, 2016 was $3 million (2015 and 2014 - $2 million).

Weighted average assumptions used to determine the fair value of the ISOs using the Black-Scholes-Merton option pricing model are as follows:

Year ended December 31,	**2016**	2015	2014
Fair value per option *(Canadian dollars)*[1]	**7.37**	6.48	5.53
Valuation assumptions			
Expected option term *(years)*[2]	**5**	5	5
Expected volatility[3]	**25.1%**	19.9%	16.9%
Expected dividend yield[4]	**4.4%**	3.2%	2.9%
Risk-free interest rate[5]	**0.8%**	0.9%	1.6%

1 Options granted to United States employees are based on New York Stock Exchange prices. The option value and assumptions shown are based on a weighted average of the United States and the Canadian options. The fair values per option were $7.01 (2015 - $6.22; 2014 - $5.45) for Canadian employees and US$6.60 (2015 - US$6.16, 2014 - US$5.35) for United States employees.

2 The expected option term is based on historical exercise practice and three years for retirement eligible employees.

3 Expected volatility is determined with reference to historic daily share price volatility and consideration of the implied volatility observable in call option values near the grant date.

4 The expected dividend yield is the current annual dividend at the grant date divided by the current stock price.

5 The risk-free interest rate is based on the Government of Canada's Canadian Bond Yields and the United States Treasury Bond Yields.

Compensation expense recorded for the year ended December 31, 2016 for ISOs was $6 million (2015 and 2014 - $4 million). At December 31, 2016 , unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO Plan was $4 million. The cost is expected to be fully recognized over a weighted average period of approximately three years.

PERFORMANCE STOCK UNITS

Enbridge has a PSU Plan for senior officers of the Company where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by Enbridge's weighted average share price for 20 days prior to the maturity of the grant and by a performance multiplier. The performance multiplier ranges from zero, if Enbridge's performance fails to meet threshold performance levels, to a maximum of two if Enbridge performs within the highest range of its performance targets. The performance multiplier is derived through a calculation of Enbridge's price/earnings ratio relative to a specified peer group of companies and Enbridge's earnings per share, adjusted for unusual non-operating or non-recurring items, relative to targets established at the time of grant. To calculate the 2016 expense, multipliers of two, based upon multiplier estimates at December 31, 2016, were used for each of the 2014, 2015 and 2016 grants.

December 31, 2016	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**30**		
Units granted	**23**		
Units cancelled	**(8)**		
Units matured[1]	**(22)**		
Dividend reinvestment	**3**		
Employee movements from other Enbridge companies	**9**		
Units outstanding at end of year	**35**	**1.5**	**5**

1 The total amount paid by Enbridge during the year ended December 31, 2016 for PSUs was $1 million (2015 - $2 million; 2014 - $1 million).

Compensation expense recorded for the year ended December 31, 2016 for PSUs was $4 million (2015 - $2 million; 2014 - $5 million). As at December 31, 2016, unrecognized compensation expense related to non-vested units granted under the PSU Plan was $2 million and is expected to be fully recognized over a weighted average period of approximately two years.

RESTRICTED STOCK UNITS

Enbridge has a RSU Plan where cash awards are paid to certain non-executive employees of the Company following a 35-month maturity period. RSU holders receive cash equal to Enbridge's weighted average share price for 20 days prior to the maturity of the grant multiplied by the units outstanding on the maturity date.

December 31, 2016	Number	Weighted Average Remaining Contractual Life *(years)*	Aggregate Intrinsic Value *(millions)*
(units in thousands; intrinsic value in Canadian dollars)			
Units outstanding at beginning of year	**184**		
Units granted	**97**		
Units cancelled	**(9)**		
Units matured[1]	**(96)**		
Dividend reinvestment	**12**		
Employee movements from other Enbridge companies	**(1)**		
Units outstanding at end of year	**187**	**1.5**	**17**

1 The total amount paid by Enbridge during the year ended December 31, 2016 for RSUs was $5 million (2015 and 2014 - $5 million).

Compensation expense recorded for the year ended December 31, 2016 for RSUs was $6 million (2015 - $6 million; 2014 - $5 million). As at December 31, 2016 , unrecognized compensation expense related to non-vested units granted under the RSU Plan was $6 million and is expected to be fully recognized over a weighted average period of approximately two years.

16. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE INCOME/(LOSS)

Changes in AOCI for the years ended December 31, 2016, 2015, and 2014, are as follows:

	Cash Flow Hedges	Cumulative Translation Adjustment	Unamortized OPEB Actuarial Loss	Total
(millions of Canadian dollars)				
Balance at January 1, 2016	**(5)**	**6**	**(7)**	**(6)**
Other comprehensive loss retained in AOCI	**(14)**	**(2)**	**(2)**	**(18)**

	(62)	3	(7)	(66)
Balance at December 31, 2014	8	(2)	(7)	(1)

17. RISK MANAGEMENT AND FINANCIAL INSTRUMENTS

MARKET RISK

The Company's earnings, cash flows and OCI are subject to movements in natural gas prices, foreign exchange rates and interest rates (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which the Company is exposed and the risk management instruments used to mitigate them.

Natural Gas Price Risk

Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customer; therefore, the net exposure to the Company is nil.

Foreign Exchange Risk

Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. The

Company generates certain revenues, and holds a subsidiary that is denominated in USD. As a result, the Company's earnings, cash flows, and OCI are exposed to fluctuations resulting from USD exchange rate variability.

The Company implemented a policy in 2016 to hedge a portion of USD denominated unregulated storage revenue exposures. Qualifying derivative instruments are used to hedge anticipated USD denominated revenues and to manage variability in cash flows.

A portion of the Company's purchases of natural gas are denominated in USD and as a result there is exposure to fluctuations in the exchange rate of the USD against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer; therefore, the Company has no net exposure to movements in the foreign exchange rate on natural gas purchases.

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps are used to mitigate the volatility of short-term interest rates on interest expense related to variable rate debt.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to mitigate the Company's exposure to long-term interest rate variability on select forecast term debt issuances. The Company uses qualifying derivative instruments to manage interest rate risk.

The Company's portfolio mix of fixed and variable rate debt instruments is monitored by its ultimate parent company, Enbridge. The Company does not typically manage the fair value of its debt instruments.

TOTAL DERIVATIVE INSTRUMENTS
The following table summarizes the financial statement line item in the Consolidated Statements of Financial Position and carrying value of the Company's derivative instruments. The Company did not have any outstanding fair value hedges or net investment hedges at December 31, 2016 or 2015.

The Company generally has a common practice of entering into individual International Swaps and Derivatives Association, Inc. (ISDA) agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in those particular circumstances. The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2016	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts payable and other					
Interest rate contracts	**-**	**-**	**-**	**-**	**-**
Other long-term liabilities					
Foreign exchange contracts	**(1)**	**-**	**(1)**	**-**	**(1)**
Total net derivative liabilities					
Interest rate contracts	**-**	**-**	**-**	**-**	**-**
Foreign exchange contracts	**(1)**	**-**	**(1)**	**-**	**(1)**

December 31, 2015	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)					
Accounts payable and other					
Interest rate contracts	(14)	-	(14)	-	(14)
Total net derivative liabilities					
Interest rate contracts	(14)	-	(14)	-	(14)

The Company's derivative instruments relating to interest rate contracts mature through 2017 and have a notional principal of $8 million for interest rate contracts for short-term borrowings (2015 - $154 million) and nil for interest rate contracts on the anticipated issuance of long-term debt (2015 - $162 million).

The Company's derivative instruments relating to foreign exchange forward contracts mature through 2022 and have a notional principal of $13 million for the sale of foreign exchange (2015 – nil).

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and consolidated comprehensive income, before the effect of income taxes.

Year ended December 31,	**2016**	2015	2014
(millions of Canadian dollars)			
Amount of unrealized loss recognized in OCI Cash flow hedges			
Interest rate contracts	**(13)**	(24)	(84)
Foreign exchange contracts	**(1)**	-	-
	(14)	(24)	(84)
Amount of loss reclassified from AOCI to earnings *(effective portion)*			
Interest rate contracts[1]	**(3)**	(2)	
	(3)	(2)	-
Amount of loss reclassified from AOCI to earnings *(ineffective portion)*			
Interest rate contracts[1]	**(3)**	(4)	
	(3)	(4)	-

1 Reported within Interest expense in the Consolidated Statements of Earnings.

The Company estimates that nil in AOCI related to cash flow hedges will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on interest and foreign exchange rates in effect when derivative contracts that are currently outstanding mature. For all forecasted transactions, the maximum term over which the Company is hedging exposures to the variability of cash flows is one month at December 31, 2016.

LIQUIDITY RISK
Liquidity risk is the risk the Company will not be able to meet its financial obligations, including commitments *(Notes 22 and 23)* as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under committed credit facilities and long-term debt, which includes debentures and MTNs and, if necessary, additional liquidity is available through intercompany transactions with its ultimate parent, Enbridge, and other related entities. These sources are expected to be sufficient to enable the Company to fund all anticipated requirements. The Company maintains a current MTN shelf prospectus with securities regulators, which enables ready access to the Canadian public capital markets, subject to market conditions. The Company also maintains committed credit facilities *(Note 11)* with a diversified group of banks and institutions. The Company is in compliance with all the terms and conditions of its committed credit facilities as at December 31, 2016. As a result, all credit facilities are available to the Company and the banks are obligated to fund the Company under the terms of the facilities.

CREDIT RISK
Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has obtained additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts *(Note 6),* which totaled $33 million at December 31, 2016 (December 31, 2015 - $34 million).

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

The Company did not have group credit concentrations and maximum credit exposure, with respect to derivative instruments, in the Canadian financial institutions or European financial institutions counterparty segments at December 31, 2016 or 2015.

FAIR VALUE MEASUREMENTS
The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and are supported by observable

market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

FAIR VALUE OF FINANCIAL INSTRUMENTS

The Company categorizes its derivative instruments measured at fair value into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1

Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3

Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support a Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest, foreign exchange, and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2016, the Company had Level 2 derivative assets with fair value of nil (2015 - nil) and Level 2 derivative liabilities with fair value of $1 million (2015 - $14 million).

The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers between levels as at December 31, 2016 or 2015.

FAIR VALUE OF OTHER FINANCIAL INSTRUMENTS

The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded in OCI, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at cost. The Company's investment in IPL System Inc., an affiliate company, is recorded at fair value. At December 31, 2016, the fair value of the investment was $825 million (2015 - $825 million). The fair value of the Company's investment is classified as a Level 2 measurement and as at December 31, 2016 and 2015 the fair value approximated its cost and redemption value and therefore no amount was recognized in OCI.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2016, the Company's long-term debt, including the current portion had a carrying value of $3,983 million (2015 - $3,683 million) and a fair value of $4,585 million (2015 - $4,159 million).

The fair value of other financial assets and liabilities other than derivative instruments and long-term debt approximate their cost due to the short period to maturity.

18. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2016**	2015	2014
(millions of Canadian dollars)			
Earnings before income taxes	**239**	245	252
Federal statutory income tax rate	**15.0%**	15.0%	15.0%
Federal income taxes at statutory rate	**36**	37	38
Increase/(decrease) resulting from:			
Provincial and state income taxes	**(27)**	5	3
Effects of rate regulated accounting[1,2]	**(25)**	(22)	(25)
Non-taxable intercompany distributions[2]	**(9)**	(9)	(9)
Part VI.1 tax, net of federal Part I tax deduction[2]	**35**	-	-
Other[3]	**(1)**	-	(1)
Income taxes	**9**	11	6
Effective income tax rate	**3.8%**	4.5%	2.4%

1 During 2016, 2015 and 2014, previously collected costs for future removal and site restoration were refunded to customers that resulted in a decrease in income taxes of $22 million at December 31, 2016 (2015 - $24 million, 2014 - $26 million).
2 The provincial tax component of these items is included in "Provincial and state income taxes" above.
3 Included in "Other" are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals & entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.

COMPONENTS OF PRETAX EARNINGS AND INCOME TAXES

Year ended December 31,	**2016**	2015	2014
(millions of Canadian dollars)			
Earnings before income taxes			
Canada	**236**	243	249
United States	**3**	2	3

	31	(5)	3
Deferred income taxes			
Canada	**(24)**	14	3
United States	**2**	2	-
	(22)	16	3
Income taxes	**9**	11	6

COMPONENTS OF DEFERRED INCOME TAXES
Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2016**	2015
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**(637)**	(600)
Regulatory assets	**(101)**	(86)
Deferrals	**(8)**	-
Other	**-**	(1)
Total deferred income tax liabilities	**(746)**	(687)
Deferred income tax assets		
Future removal and site restoration reserves	**153**	146
Retirement and postretirement benefits	**37**	30
Minimum tax credits	**13**	9
Loss carryforwards	**4**	-
Financial derivatives	**4**	2
Other	**3**	2
Total deferred income tax assets	**214**	189
Net deferred income tax liabilities	**(532)**	(498)
Presented as follows:		
Assets

Deferred amounts and other assets *(Note 8)*	**-**	8
Total deferred income tax assets	**-**	26
Liabilities		
Deferred income taxes	**(532)**	(524)
Total deferred income tax liabilities	**(532)**	(524)
Net deferred income tax liabilities	**(532)**	(498)

The Company has assessed all tax positions. As a result, no significant adjustments were required to be made to the income tax provisions for the year ended December 31, 2016.

The Company has not provided for deferred income taxes on the difference between the carrying value of its foreign subsidiaries and their corresponding tax bases as the earnings of those subsidiaries are intended to be permanently reinvested in their operations. As such these investments are not anticipated to give rise to income taxes in the foreseeable future. The difference between the carrying value of the investment and its tax basis is largely a result of unremitted earnings and currency translation adjustments. The unremitted earnings and currency translation adjustment for which no deferred taxes have been recognized in respect of foreign subsidiaries is $30 million (2015 - $30 million). If such earnings were remitted, in the form of dividends or otherwise, the Company may be subject to income taxes and foreign withholding taxes. The determination of the amount of unrecognized deferred income tax liabilities on such amounts is not practicable.

The Company and its subsidiaries are subject to taxation in Canada and the Unites States. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario). The Company's 2012 to 2015 taxation years are still open for audit in Canada.

19. RETIREMENT AND POSTRETIREMENT BENEFITS

PENSION PLANS
The Company provides a non-contributory basic pension plan that provides defined benefit or defined contribution pension benefits to the majority of its employees. The Company has two supplemental non-contributory defined benefit pension plans that provide pension benefits in excess of the basic plan for certain employees.

A measurement date of December 31, 2016 was used to determine the plan assets and accrued benefit obligation for the pension plans.

Defined Benefit Plans
Benefits payable from the defined benefit plans are based on members' years of service and final average remuneration. These benefits are partially inflation-indexed after a member's retirement. Contributions by the Company are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities. The effective date of the most recent actuarial valuation was December 31, 2013. The effective date of the next required actuarial valuation is December 31, 2016.

Defined Contribution Plans
Contributions are generally based on the employee's age, years of service and remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS
The Company also provides OPEB, which primarily includes supplemental health, dental, health spending account and life insurance coverage for qualifying retired employees.

BENEFIT OBLIGATIONS AND FUNDED STATUS
The following tables detail the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans using the accrual method.

	Pension		OPEB	
December 31,	**2016**	2015	**2016**	2015
(millions of Canadian dollars)				
Change in accrued benefit obligation				
Benefit obligation at beginning of year	**1,025**	1,046	**120**	117
Service cost	**32**	35	**1**	1
Interest cost	**35**	41	**5**	5
Actuarial loss/(gain)	**51**	(54)	**2**	(1)
Benefits paid	**(46)**	(43)	**(4)**	(4)
Other	**1**	-	**(1)**	2
Benefit obligation at end of year	**1,098**	1,025	**123**	120
Change in plan assets				
Fair value of plan assets at beginning of year	**969**	960	**17**	13
Actual return on plan assets	**73**	49	**1**	-
Employer's contributions	**1**	3	**5**	5
Benefits paid	**(46)**	(43)	**(4)**	(4)
Other	**1**	-	**(2)**	3
Fair value of plan assets at end of year	**998**	969	**17**	17
Underfunded status at end of year	**(100)**	(56)	**(106)**	(103)
Presented as follows:				
Deferred amounts and other assets *(Note 8)*	**3**	6	**3**	2
Accounts payable and other *(Note 10)*	**-**	-	**(4)**	(4)
Other long-term liabilities *(Note 12)*	**(103)**	(62)	**(105)**	(101)

The weighted average assumptions made in the measurement of the projected benefit obligations of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2016**	2015	2014	**2016**	2015	2014
Discount rate	**3.9%**	4.2%	4.0%	**3.9%**	4.2%	4.0%
Average rate of salary increases	**3.5%**	3.4%	3.7%	**3.5%**	3.4%	3.7%

NET BENEFIT COSTS RECOGNIZED

	Pension			OPEB		
Year ended December 31,	**2016**	2015	2014	**2016**	2015	2014
(millions of Canadian dollars)						
Benefits earned during the year	**32**	35	25	**1**	1	1
Interest cost on projected benefit obligations	**35**	41	43	**5**	5	6
Expected return on plan assets	**(60)**	(62)	(59)	**(1)**	(1)	(1)
Amortization of actuarial loss	**14**	19	16	**-**	1	-
Net defined benefit costs on an accrual basis	**21**	33	25	**5**	6	6
Defined contribution benefit costs	**1**	1	1	**-**	-	-
Net benefit cost recognized on an accrual basis	**22**	34	26	**5**	6	6
Net amount recognized in OCI						
Net actuarial (gain)/loss[1]	**-**	-	-	**2**	-	9
Total amount recognized in OCI	**-**	-	-	**2**	-	9
Total net benefit cost on an accrual basis and amount recognized in OCI	**22**	34	26	**7**	6	15

1 Unamortized actuarial losses included in AOCI, before tax, were $11 million relating to OPEB at December 31, 2016 (2015 - $9 million, 2014 - $9 million).

The Company estimates that approximately $16 million related to pension plans and OPEB at December 31, 2016 will be reclassified into earnings in the next 12 months, as follows:

	Pension Benefits	OPEB	Total
(millions of Canadian dollars)			
Actuarial loss	**16**	**-**	**16**
	16	**-**	**16**

Pension and OPEB costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension and OPEB costs due to the regulatory mechanism in place. As a result, the net pension and OPEB expense primarily consists of OEB approved pension and OPEB costs.

Regulatory adjustments were recorded in the Consolidated Statements of Earnings, the Consolidated Statements of Comprehensive Income and the Consolidated Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers, respectively, in future rates *(Note 4)*. For the year ended December 31, 2016, an offsetting regulatory liability increased by $10 million (2015 - nil) and has been recorded to the extent pension and OPEB costs are expected to be refunded to customers in future rates.

The assumptions made in the measurement of the cost of the pension plans and OPEB are as follows:

	Pension			OPEB		
Year ended December 31,	**2016**	2015	2014	**2016**	2015	2014
Discount rate - service cost	**4.3%**	4.0%	5.0%	**4.3%**	4.0%	5.0%
Discount rate - interest cost	**3.5%**	4.0%	5.0%	**3.5%**	4.0%	5.0%
Average rate of return on pension plan assets	**6.5%**	6.8%	6.8%	**6.0%**	6.0%	6.0%
Average rate of salary increases	**3.4%**	3.7%	3.5%	**3.4%**	3.7%	3.5%

MEDICAL COST TRENDS
The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	Medical Cost Trend Rate Assumption for Next Fiscal Year	Ultimate Medical Cost Trend Rate Assumption	Year in Which Ultimate Medical Cost Trend Rate Assumption is Achieved
Drugs	6.6%	4.3%	2034
Other medical and dental	4.5%	4.5%	-

A 1% increase in the assumed medical and dental care trend rate would result in an increase of $13 million in the benefit obligation and an increase of nil in benefit and interest costs. A 1% decrease in the assumed medical and dental care trend rate would result in a decrease of $11 million in the benefit obligation and a decrease of nil in benefit and interest costs.

PLAN ASSETS
The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the operating environment and financial situation of the Company and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets. The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

Expected Rate of Return on Plan Assets

	Pension		OPEB	
Year ended December 31,	**2016**	2015	**2016**	2015
Expected rate of return	**6.5%**	6.8%	**-**	-

Target Mix for Plan Assets

Equity securities	44.5%
Fixed income securities	40.0%
Other	15.5%

Major Categories of Plan Assets
Plan assets are invested primarily in readily marketable investments with constraints on the credit quality of fixed income securities. As at December 31, 2016, the pension assets were invested in 47% (2015 - 47%) in equity securities, 36% (2015 - 36%) in fixed income securities and 17% (2015 - 17%) in other.

The following table summarizes the Company's pension financial instruments at fair value. Non-financial instruments with a carrying value of $24 million (2015 - $29 million) have been excluded from the table below.

	2016				2015

20. SEVERANCE COSTS

Included in Operating and administrative expense for the year ended December 31, 2016 is $20 million (2015 - $12 million) in severance costs related to termination benefits to employees. This resulted from Enbridge-wide reductions of workforce that occurred in October 2016 and November 2015 that affected approximately 5% of Enbridge's workforce in each respective year.

In 2016, $9 million was paid with the remaining $11 million to be paid in 2017, and is included in Accounts payable and other as at December 31, 2016.

In 2015, $4 million was paid with the remaining $8 million paid in 2016, and was included in Accounts payable and other as at December 31, 2015.

21. CHANGES IN OPERATING ASSETS AND LIABILITIES

Year ended December 31,	**2016**	2015	2014

Financing Transactions
The Company has invested in Class D, non-voting, redeemable, retractable preference shares of IPL System Inc., an affiliate under common control. At December 31, 2016, the investment of $825 million (2015 - $825 million) in these shares resulted in a weighted average dividend yield of 7.60%.

At December 31, 2016, the borrowing from IPL System Inc. stood at $375 million ($200 million at 6.85% and $175 million at 7.50%). These loans are repayable in 2049 and 2051, respectively. The Company may elect to defer interest payments on the loans for up to five years and settle deferred interest in either cash or non-retractable preference shares of the Company. For the year ended December 31, 2016, interest paid amounted to $27 million (2015 - $27 million).

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 1.1% and is payable on demand.

Treasury and Other Management Services
Enbridge provides treasury and other management services and charges the Company on a cost recovery basis.

Part IV.1 Tax Reimbursement
The Company entered into an agreement with Enbridge for the transfer of Part VI.1 tax and the related Part 1 tax deduction. The Company received a non-taxable reimbursement relating to the transfer.

Natural Gas Purchases
The Company contracted for the purchase of natural gas from Aux Sable Canada LP, Tidal Energy

Marketing Inc. and Tidal Energy Marketing (U.S.) LLC, related entities under common control, at prevailing market prices and under normal trade terms. Contractual obligations under the Tidal Energy Marketing (U.S.) LLC contract are 2017 to 2018 - $3 million, 2019 to 2020 – nil and thereafter - nil.

Optimization Services
The Company provides pipeline and storage optimization services to Tidal Energy Marketing Inc., an affiliated entity under common control.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Transportation Services
The Company contracted for natural gas transportation services from Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), Alliance Pipeline Limited Partnership (Canadian) and Alliance Pipeline Limited Partnership (U.S.), related entities partially owned by an affiliated company under common control, and Niagara Gas Transmission Limited and 2193914 Canada Limited. Contractual obligations under the Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian) and Niagara Gas Transmission Limited contracts are 2017 to 2018 - $46 million, 2019 to 2020 - $43 million and thereafter – $101 million.

Trade Receivables and Payables
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides consulting and other shared corporate services to affiliates on a fully-allocated cost basis. Market prices, if they are reasonably determinable, are charged for affiliate services that are not shared corporate services. The Company may also purchase consulting and other services from affiliates with prices determined on the same basis as services provided by the Company. The trade receivable and payable balances include amounts received or paid on behalf of the Company or affiliates.

Other Transactions
The Company and affiliates invoice on a monthly basis and amounts are due and paid on a monthly basis.

23. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
The Company has signed contracts for the purchase of services, pipe and other materials, as well as natural gas and transportation, totaling $4,729 million. The amounts which are expected to be paid in the next five years are $1,216 million, $630 million, $599 million, $513 million, and $465 million, respectively, and $1,306 million thereafter. Included in these amounts are right-of-way payments, estimated to be approximately $2 million per year, related to cancellable gas storage lease payments that are reasonably likely to occur for the remaining life of all storage reservoirs, which has been assumed to be 65 years.

Minimum future payments under operating leases are estimated at $2 million in aggregate. Estimated annual lease payments for the years ended December 31, 2016 through 2021 are $2 million, nil, nil, nil and nil, respectively. Total rental expense for operating leases, classified in Operating and administrative expense, was $2 million for the year ended December 31, 2016, and $3 million for each of the years ended December 31, 2015 and 2014.

The Company, Enbridge, and Enbridge Pipeline Inc., in aggregate, have access to $95 million of letters of credit that they can issue, of which $33 million was unutilized as at December 31, 2016. The total outstanding letters of credit that related to the Company as at December 31, 2016 was $8 million. The Company had access to $95 million of letters of credit that it could issue, of which $37 million was unutilized as at December 31, 2015. The total outstanding letters of credit that related to the Company as at December 31, 2015 was $5 million.

CONTINGENCIES

Former Manufactured Coal Gas Plant Sites

The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its Station A MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It was and remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

On August 30, 1994, a former owner of part of the Historic Distillery District (Wyndham Court Canada Inc.) commenced an action in the Ontario Court of Justice (General Division) against the Company alleging that coal tar originating from the Company's Station A MGP in Toronto had migrated to its lands. The Company entered into a Tolling Agreement with Wyndham Court Canada Inc. pursuant to which this action was discontinued, without prejudice to the right to commence a similar action in the future. In the fall of 2002, the Company received notice that Wyndham Court Canada Inc. sold the lands that were the subject of the action to Cityscape Holdings Inc., which directed that title to a portion of these lands be transferred to Cityscape Residential Inc. (jointly Cityscape).

Cityscape served the Company with a Statement of Claim in February 2003, naming the Company and nine other defendants who own or have owned portions of the former Station A MGP site. Cityscape is claiming $50 million in damages and $5 million in punitive damages against the Company as a result of alleged coal tar contamination of the lands now owned by Cityscape. The Company responded with a Statement of Defence denying liability. In January 2004, Cityscape dismissed the action against each of the Company's co-defendants.

In February 2008, the Ontario Superior Court of Justice ordered that examinations for discovery of the plaintiff be completed by mid-June 2008. Examinations for discovery were completed by this date, but the required steps in the discovery process were not completed by the plaintiff. The Company has brought a motion to dismiss the plaintiff's action for delay. At present, it is unknown when or if the trial of the matter will be heard.

The Company has put all of its known existing and subsisting former third party liability insurers on notice of the Cityscape action. To date, no insurer has confirmed that insurance coverage exists, nor has any insurer acknowledged that it owes the Company a duty to defend the Cityscape lawsuit. The Company first advised the OEB of the Cityscape action during its fiscal 2003 Rate Case and sought approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with the Cityscape action and any future MGP claims that may be advanced. With respect to the Company's 2006 to 2016 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

The Company remains of the view that it has a valid defence to the Cityscape lawsuit; however, it acknowledges that certain risks exist. Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation/isolation/containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

OTHER LITIGATION
The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a significant impact on the Company's consolidated financial position or results of operations.

ENBRIDGE GAS DISTRIBUTION INC.

(a subsidiary of Enbridge Inc.)

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2017

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Distribution Inc.

Financial Reporting
Management of Enbridge Gas Distribution Inc. (the Company) is responsible for the accompanying consolidated financial statements and all related financial information, including Management's Discussion and Analysis. The consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors (the Board) is responsible for all aspects related to governance of the Company. The Board has a specific responsibility to oversee management's efforts to fulfill its responsibilities for financial reporting and internal controls related thereto. The Board reviews the consolidated financial statements and the internal controls as they relate to financial reporting. The Board approves the consolidated financial statements for issuance to the shareholders.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, conducts an examination of the consolidated financial statements in accordance with Canadian generally accepted auditing standards.

Independent Auditor's Report

To the Shareholders of
Enbridge Gas Distribution Inc.

We have audited the accompanying consolidated financial statements of Enbridge Gas Distribution Inc. and its subsidiaries, which comprise the consolidated statements of financial position as at December 31, 2017 and December 31, 2016 and the consolidated statements of earnings, comprehensive income, shareholders' equity and cash flows for the years then ended, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the consolidated financial statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audits to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

T: +1 416 863 1133, F: +1 416 365 8215

Opinion
In our opinion, the financial statements present fairly, in all material respects, the financial position of Enbridge Gas Distribution Inc. and their subsidiaries as at December 31, 2017 and December 31, 2016 and its financial performance and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. BUSINESS OVERVIEW

Enbridge Gas Distribution Inc. (the Company) is a rate-regulated natural gas distribution utility, serving residential, commercial and industrial customers in its franchise areas of central and eastern Ontario. The Company also serves areas in northern New York State through its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence Gas), an asset held for sale *(Note 4)*. The Company is a wholly owned subsidiary of Enbridge Inc. (Enbridge).

2. SIGNIFICANT ACCOUNTING POLICIES

These Consolidated Financial Statements are prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

In 2014, Canadian securities regulators approved the extension of the Company's exemptive relief to continue reporting under U.S. GAAP instead of International Financial Reporting Standards (IFRS) until the earlier of January 1, 2019, and the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation. The Company is in the process of obtaining further extension of this exemptive relief beyond January 1, 2019.

BASIS OF PRESENTATION AND USE OF ESTIMATES
The preparation of Consolidated Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the Consolidated Financial Statements. Significant estimates and assumptions used in the preparation of the Consolidated Financial Statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities; unbilled revenues; allowance for doubtful accounts; carrying value of gas inventory; depreciation rates and carrying value of property, plant and equipment; amortization rates and carrying value of intangible assets; valuation of stock-based compensation; fair value of financial instruments; provisions for income taxes; assumptions used to measure retirement and OPEB; commitments and contingencies; and fair value of asset retirement obligations (ARO). Actual results could differ from these estimates.

Effective September 30, 2017, the Company combined Cash and cash equivalents and amounts previously presented as Bank indebtedness where the corresponding bank accounts are subject to cash pooling arrangements. As at December 31, 2017, $4 million (2016 - $72 million) of Bank indebtedness has been combined with Cash and cash equivalents on the Company's Consolidated Statements of Financial Position. Net cash provided by financing activities in the Company's Consolidated Statements of Cash Flows have been reduced by $45 million for the year ended December 31, 2016 to reflect this change.

PRINCIPLES OF CONSOLIDATION
The Consolidated Financial Statements include the accounts of the Company and its subsidiary. All significant intercompany accounts and transactions are eliminated upon consolidation *(Note 4)*.

REGULATION
The utility operations of the Company within Ontario are regulated by the Ontario Energy Board (OEB), while the utility operations of St. Lawrence Gas are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 5)*.

As a result of rate regulation accounting, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation accounting, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations, or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

REVENUE RECOGNITION

The Company recognizes revenues when natural gas has been delivered or services have been performed. Gas commodity and distribution revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's franchise areas.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulators.

PUSH-DOWN ACCOUNTING

The Company elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge, when it first adopted U.S. GAAP. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by the Company. Upon adopting push-down accounting, the historical cost of the Company's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage its exposure to changes in interest rates and foreign exchange. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges. The Company did not have any fair value hedges or net investment hedges at December 31, 2017 or 2016.

Cash Flow Hedges
The Company uses cash flow hedges to manage its exposure to changes in currency exchange rates related to unregulated storage revenue and changes in interest rates. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/loss (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives
The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and non-current assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset
Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs
Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and classifies these costs as a direct deduction from the carrying amount of the related debt liability. These costs are amortized using the effective interest rate method over the life of the related debt instrument and are recorded in Interest expense.

INCOME TAXES
The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. Any interest and/or penalty incurred related to tax is reflected in income taxes. Deferred tax liabilities and assets are classified as noncurrent in the Consolidated Statements of Financial Position.

The regulated utility operations of the Company recover income tax expense based on the taxes payable method as approved by the Regulators for rate-making purposes. As a result, rates do not include the recovery of deferred income taxes related to temporary differences. A corresponding deferred income tax regulatory liability/asset is recorded reflecting the Company's ability to pay/collect the amounts in the future through rates *(Note 5)*.

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION
Foreign currency transactions are those transactions denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of

exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

The functional currency of the Company's only foreign operation, St. Lawrence Gas, is the United States dollar (USD). The effects of translating the financial statements of St. Lawrence Gas to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts are translated at the exchange rates in effect on the date of the Consolidated Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS
Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased, net of bank indebtedness that is subject to cash pooling arrangements.

RESTRICTED CASH
Cash and cash equivalents that are restricted as to withdrawal or usage, in accordance with specific agreements, are presented as Restricted cash on the Consolidated Statements of Financial Position. Restricted cash represents funds received from the Green Investment Fund program. The cash flow impact of this item is included in changes of operating assets and liabilities on the Consolidated Statements of Cash Flows.

GAS INVENTORY
Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

PROPERTY, PLANT AND EQUIPMENT
Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction as authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The pool method of accounting for property, plant and equipment is followed whereby similar assets with comparable useful lives are grouped and depreciated as a pool, as approved by the Regulators. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation until the last asset in the pool is disposed of. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS
Deferred amounts and other assets primarily include: costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates; deferred income taxes; and derivative financial instruments.

INTANGIBLE ASSETS
Prior to January 1, 2017, Intangible assets consisted primarily of the Company's Customer Information System (CIS) and software costs, including the Work and Asset Management Solution (WAMS). The Company capitalizes costs incurred during the application development stage of internal use software projects. Those intangible assets are amortized on a straight-line basis over their expected useful lives, commencing when the asset is available for use. Beginning January 1, 2017, intangible assets also include emission allowances purchased in order to meet greenhouse gas compliance obligations *(Note 8)*.

ASSET RETIREMENT OBLIGATIONS
Asset Retirement Obligations (ARO) associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. ARO are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

RETIREMENT AND POSTRETIREMENT BENEFITS
The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality.

The Company uses mortality tables issued by the Canadian Institute of Actuaries tables (revised in 2014) to measure its benefit obligations of its pension plan. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipate making under each of the respective plans. Pension cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Interest cost of pension plan obligations;
- Expected return on pension plan assets;
- Amortization of the prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contribution occurs.

The Company also provides OPEB other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans is recognized as Deferred amounts and other assets or Other long-term liabilities on the Consolidated Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax.

The Company records regulatory adjustments to reflect the difference between pension expense and OPEB costs for accounting purposes and the pension expense and OPEB costs for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension expense or OPEB costs are expected to be collected from or refunded to customers, respectively, in future rates. In the absence of rate regulation, regulatory balances would not be recorded and pension and OPEB costs would be charged to earnings and OCI on an accrual basis.

STOCK-BASED COMPENSATION

Incentive Stock Options (ISO) granted are recorded using the fair value method. Under this method, compensation expense is measured at the grant date based on the fair value of the ISOs granted as calculated by the Black-Scholes-Merton model and is recognized on a straight-line basis over the shorter of the vesting period or the period to early retirement eligibility.

Restricted Stock Units (RSU) are cash settled awards for which the related liability is remeasured each reporting period. PSUs vest at the completion of a three-year term and RSUs vest at the completion of a 35-month term. During the vesting term, compensation expense is recorded based on the number of units outstanding and the current market price of Enbridge's shares.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or a liability has been incurred, and the amount of the impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES

ADOPTION OF NEW STANDARDS

Clarifying the Definition of a Business in an Acquisition

Effective January 1, 2017, the Company early adopted ASU 2017-01 on a prospective basis. The new standard was issued with the objective of adding guidance to assist entities with evaluating whether transactions should be accounted for as acquisitions (disposals) of assets or businesses.

Accounting for Intra-Entity Asset Transfers
Effective January 1, 2017, the Company early adopted ASU 2016-16 on a modified retrospective basis. The new standard was issued with the intent of improving the accounting for the income tax consequences of intra-entity asset transfers other than inventory. Under the new guidance, an entity should recognize the income tax consequences of an intra-entity transfer of an asset, other than inventory, when the transfer occurs. The adoption of the pronouncement did not have a material impact on the Company's consolidated financial statements.

Improvements to Employee Share-Based Payment Accounting
Effective January 1, 2017, the Company adopted ASU 2016-09 and applied certain amendments on a modified retrospective basis with the remaining amendments applied on a prospective basis. The new standard was issued with the intent of simplifying and improving several aspects of accounting for share-based payment transactions including the income tax consequences, classification of awards as either equity or liabilities, and classification on the statement of cash flows. The adoption of the pronouncement did not have a material impact on the Company's consolidated financial statements.

FUTURE ACCOUNTING POLICY CHANGES
Improvements to Accounting for Hedging Activities
ASU 2017-12 was issued in August 2017 with the objective of better aligning a company's risk management activities and the resulting hedge accounting reflected in the financial statements. The accounting update allows cash flow hedging of contractually specified components in financial and non-financial items. Under the new guidance, hedge ineffectiveness is no longer required to be measured and hedging instruments' fair value changes will be recorded in the same income statement line as the hedged item. The ASU also allows the initial quantitative hedge effectiveness assessment to be performed at any time before the end of the quarter in which the hedge is designated. After initial quantitative testing is performed, an ongoing qualitative effectiveness assessment is permitted. The accounting update is effective January 1, 2019, with early adoption permitted, and is to be applied on a modified retrospective basis. The Company is currently assessing the impact of the new standard on its Consolidated Financial Statements.

Clarifying Guidance on the Application of Modification Accounting on Stock Compensation
ASU 2017-09 was issued in May 2017 with the intent to clarify the scope of modification accounting and when it should be applied to a change to the terms or conditions of a share based payment award. Under the new guidance, modification accounting is required for all changes to share based payment awards, unless all of the following are met: 1) there is no change to the fair value of the award, 2) the vesting conditions have not changed, and 3) the classification of the award as an equity instrument or a debt instrument has not changed. The accounting update is effective January 1, 2018 and will be applied on a prospective basis. The Company does not expect the adoption of this accounting update to have a material impact on the consolidated financial statements.

Improving the Presentation of Net Periodic Benefit Cost related to Defined Benefit Plans
ASU 2017-07 was issued in March 2017 primarily to improve the income statement presentation of the components of net periodic pension cost and net periodic postretirement benefit cost for an entity's sponsored defined benefit pension and other postretirement plans. In addition, only the service cost component of net benefit cost is eligible for capitalization. The accounting update is effective January 1, 2018 and will be applied on a retrospective basis for the statement of earnings presentation component and a prospective basis for the capitalization component. The Company does not expect the adoption of this accounting update to have a material impact on the consolidated financial statements.

Clarifying Guidance on Derecognition and Partial Sales of Nonfinancial Assets
ASU 2017-05 was issued in February 2017 with the intent of clarifying the scope of asset derecognition guidance and accounting for partial sales of nonfinancial assets. The ASU clarifies the scope provisions of nonfinancial assets and how to allocate consideration to each distinct asset, and amends the guidance for derecognition of a distinct nonfinancial asset in partial sale transactions. The accounting update is

effective January 1, 2018 and will be applied on a modified retrospective basis. The Company does not expect the adoption of this accounting update to have a material impact on the consolidated financial statements.

Clarifying the Presentation of Restricted Cash in the Statement of Cash Flows
ASU 2016-18 was issued in November 2016 with the intent to clarify guidance on the classification and presentation of changes in restricted cash and restricted cash equivalents within the statement of cash flows. The accounting update requires that changes in restricted cash and restricted cash equivalents be included within cash and cash equivalents when reconciling the opening and closing period amounts shown on the statement of cash flows. The Company currently presents the changes in restricted cash and restricted cash equivalents under operating activities in the Consolidated Statement of Cash Flows. The accounting update is effective January 1, 2018 and will be applied on a retrospective basis. The Company will amend the presentation in the Consolidated Statement of Cash Flows to include restricted cash and restricted cash equivalents with cash and cash equivalents and retrospectively reclassify all periods presented.

Simplifying Cash Flow Classification
ASU 2016-15 was issued in August 2016 with the intent of reducing diversity in practice of how certain cash receipts and cash payments are classified in the Consolidated Statement of Cash Flows. The new guidance addresses eight specific presentation issues. The accounting update is effective January 1, 2018 and will be applied on a retrospective basis. The Company has assessed each of the eight specific presentation issues and the adoption of this ASU does not have a material impact on the consolidated financial statements.

Accounting for Credit Losses
ASU 2016-13 was issued in June 2016 with the intent of providing financial statement users with more useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. Current treatment uses the incurred loss methodology for recognizing credit losses that delays the recognition until it is probable a loss has been incurred. The accounting update adds a new impairment model, known as the current expected credit loss model, which is based on expected losses rather than incurred losses. Under the new guidance, an entity recognizes as an allowance its estimate of expected credit losses, which the Financial Accounting Standards Board believes will result in more timely recognition of such losses. The Company is currently assessing the impact of the new standard on our consolidated financial statements. The accounting update is effective January 1, 2020.

Recognition of Leases
ASU 2016-02 was issued in February 2016 with the intent to increase transparency and comparability among organizations. It requires lessees of operating lease arrangements to recognize lease assets and lease liabilities on the statement of financial position and disclose additional key information about lease agreements. The accounting update also replaces the current definition of a lease and requires that an arrangement be recognized as a lease when a customer has the right to obtain substantially all of the economic benefits from the use of an asset, as well as the right to direct the use of the asset. The Company is currently gathering a complete inventory of its lease contracts in order to assess the impact of the new standard on its consolidated financial statements. The accounting update is effective for fiscal years beginning after December 15, 2018 and is to be applied using a modified retrospective approach.

Recognition and Measurement of Financial Assets and Liabilities
ASU 2016-01 was issued in January 2016 with the intent to address certain aspects of recognition, measurement, presentation and disclosure of financial assets and liabilities. Investments in equity securities, excluding equity method and consolidated investments, are no longer classified as trading or available-for-sale securities. All investments in equity securities with readily determinable fair values are classified as investments at fair value through net income. Investments in equity securities without readily determinable fair values are measured using the fair value measurement alternative and are recorded at

cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for an identical or similar investment of the same issuer. Investments in equity securities measured using the fair value measurement alternative are reviewed for indicators of impairment each reporting period. Fair value of financial instruments for disclosure purposes is measured using exit price. The accounting update is effective January 1, 2018 and will be applied on a prospective basis. The Company does not expect the adoption of this accounting update to have a material impact on the consolidated financial statements.

Revenue from Contracts with Customers
ASU 2014-09 was issued in 2014 with the intent of significantly enhancing consistency and comparability of revenue recognition practices across entities and industries. The new standard establishes a single, principles-based five-step model to be applied to all contracts with customers and introduces new and enhanced disclosure requirements. It also requires the use of more estimates and judgments than the present standards in addition to additional disclosures. The new standard is effective January 1, 2018. The new standard permits either a full retrospective method of adoption with restatement of all prior periods presented, or a modified retrospective method with the cumulative effect of applying the new standard recognized as an adjustment to opening retained earnings in the period of adoption. The Company has decided to adopt the new standard using the modified retrospective method.

The Company has reviewed its revenue contracts in order to evaluate the effect of the new standard on its revenue recognition practices. Based on the Company's assessment, the application of the standard will result in a change in presentation for payments to customers under an earnings sharing mechanism which are currently shown as an expense in the Consolidated Statements of Earnings. Under the new standard, these payments will be reflected as a reduction of revenue. The Company does not expect that these changes will have a material impact on revenue or earnings. The Company has also developed and tested processes to generate the disclosures which will be required under the new standard commencing in Q1 2018.

4. ASSETS HELD FOR SALE

In August 2017, the Company entered into an agreement to sell the issued and outstanding shares of St. Lawrence Gas for cash proceeds of approximately $88 million (US $70 million). Subject to regulatory approval and certain pre-closing conditions, the transaction is expected to close in 2018. As at December 31, 2017, St. Lawrence Gas was classified as held for sale and the related assets and liabilities were measured at the lower of their carrying value and fair value less costs to sell. Included within Assets held for sale, long-term is $94 million related to Property, plant and equipment, net. No impairment loss was recognized on the classification of St. Lawrence Gas as held for sale. Any gain or loss on the sale will be measured and recorded at the date that the transaction closes.

5. REGULATORY MATTERS

RATE APPROVALS
Enbridge Gas Distribution
For the year ended December 31, 2017, the Company's rates were set according to the OEB Decision and Rate Order (December 2016) in the Company's 2017 rate application. The rates approved as part of the 2017 rate application represented the fourth year of the Company's customized incentive regulation (IR) plan, which set rates for the period of 2014 to 2018, and was approved by the OEB in July and August 2014. The customized IR plan requires the Company to update select items in each of 2015 through 2018, in order to establish final allowed revenues and rates.

Effective January 1, 2017, in accordance with the OEB's Interim Rate Order (November 2016) in the Company's 2017 Cap and Trade Compliance Plan application, the Company also commenced charging customers interim cap and trade unit rates. The interim cap and trade unit rates were confirmed as final cap and trade unit rates, as per the OEB's Decision and Rate Order (November 2017) in the aforementioned application.

For the year ended December 31, 2016, the Company's rates were set according to the OEB approved settlement agreement (December 2015) in the Company's 2016 rate application, updated to reflect the OEB's decision and final rate order (May 2016) in the Company's multi-year demand side management (DSM) application.

Under the customized IR plan, the Company has continued to apply the accounting guidance found in Accounting Standards Codification (ASC) 980 - Regulated Operations.

St. Lawrence Gas

St. Lawrence Gas is currently in a rate year ending May 31, 2018, according to the recent NYSPSC order establishing a three year rate plan covering the period of June 1, 2016 through May 31, 2019. For the years ended December 31, 2017 and 2016, St. Lawrence Gas' rates were set using a Cost of Service (COS) methodology. Under COS, revenues are set to recover costs and to earn a rate of return on the deemed common equity component of rate base. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, interest and income taxes. Rate base is the average level of investment in all recoverable assets used in natural gas distribution, storage and transmission and an allowance for working capital. Gas costs are not recovered through revenue rates, but are set separately in gas cost rates.

The calculation of earnings sharing is on an annual basis for each rate year period commencing June 1, 2016. For the fiscal rate years ending May 31, 2018 and 2017, any earnings above the approved return on equity and between 9.5% to 10.0% will be shared 50/50 between customers and the Company; from 10.0% to 10.5%, 80/20; and over 10.5%, 90/10.

Under COS, it is the responsibility of St. Lawrence Gas to demonstrate to the NYSPSC the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

During the years ended December 31, 2017 and 2016, the cost of natural gas was passed on to customers as a flow-through.

APPROVED RETURNS ON EQUITY

Enbridge Gas Distribution

Enbridge Gas Distribution's rates for 2017 included an after-tax rate of return on common equity of 8.78% (2016 - 9.19%) based on a 36% (2016 - 36%) deemed common equity component of rate base.

St. Lawrence Gas

St. Lawrence Gas' approved after-tax rate of return on common equity embedded in rates was 9.0% for the rate year ended May 31, 2018 (fiscal 2016 - 9.0%) based on a 48% (fiscal 2016 - 48%) deemed common equity component of rate base.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2017**	2016	Consolidated Statement of Financial Position Location
(millions of dollars)			
Current regulatory assets			
Purchase gas variance[1]	**55**	5	AR
Other current regulatory assets	**78**	61	AR
Total current regulatory assets	**133**	66	
Long-term regulatory assets			
Deferred income taxes[2]	**468**	381	DA
Pension plan receivable[3]	**42**	60	DA
OPEB[4]	**67**	71	DA
Other long-term regulatory assets	**18**	56	DA
Total long-term regulatory assets	**595**	568	
Total regulatory assets	**728**	634	
Current regulatory liabilities			
Site restoration clearance adjustment[5]	**31**	77	AP
Other regulatory liabilities	**45**	19	AP
Total current regulatory liabilities	**76**	96	
Long-term regulatory liabilities			
Future removal and site restoration reserves[6]	**603**	577	OLTL
Site restoration clearance adjustment[5]	**—**	32	OLTL
Other regulatory liabilities	**8**	15	OLTL
Total long-term regulatory liabilities	**611**	624	
Total regulatory liabilities	**687**	720	

AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other
OLTL – Other long-term liabilities

1 *Purchase gas variance is the difference between the actual cost and the approved cost of natural gas reflected in rates.*

2 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

3 *The pension plan balance represents the regulatory offset to the pension liability to the extent the amounts are to be collected in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation accounting, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

4 *The OPEB balance represents the Company's right to recover OPEB costs resulting from the adoption of the accrual basis of accounting for OPEB costs upon transition to US GAAP in 2012. Pursuant to the OEB rate order, the amount as at December 31, 2012 is to be collected in rates over a 20-year period that commenced in 2013. In the absence of rate regulation accounting, this regulatory balance and related earnings impact would not be recorded.*

5 *The site restoration clearance adjustment represents the amount that was determined by the OEB of previously collected costs for future removal and site restoration that is now considered to be in excess of future requirements and will be refunded to customers over the customized IR term.*

6 *Future removal and site restoration reserves result from amounts collected from customers by Enbridge Gas Distribution, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment that is recorded in rates. The balance represents the amount that Enbridge Gas Distribution has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation accounting, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Operating Cost Capitalization

In the absence of rate regulation accounting, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred.

With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation accounting, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs, primarily consulting fees, are being capitalized to gas mains in accordance with regulatory approval. At December 31, 2017, the net book value of these costs included in gas mains in Property, plant and equipment, net was $118 million (2016 - $125 million). In the absence of rate regulation accounting, some of these costs would be charged to earnings in the year incurred.

The Company entered into contracts relating to CIS integration services, software maintenance and support. At December 31, 2017, the net book value of these costs included in intangible assets was $22 million (2016 - $35 million). In the absence of rate regulation accounting, a portion of the original cost of these assets would have been expensed in the period incurred.

WAMS is the Company’s new integrated work and asset management solution. At December 31, 2017, the net book value of the asset included in intangible assets was $77 million (2016 - $84 million). In the absence of rate regulation accounting, a portion of the original cost of the asset would have been expensed in the period incurred.

Gas Inventories

Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers’ system supply rates. Included in gas inventories at December 31, 2017 is $55 million (2016 - $49 million) of storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation accounting, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation

In the absence of rate regulation accounting, depreciation rates would not have included a charge for future removal and site restoration costs.

6. ACCOUNTS RECEIVABLE AND OTHER

		107	113
Accumulated depreciation		**(19)**	(23)
		88	90
Property, plant and equipment, net		**7,532**	7,418

Depreciation expense, including amounts collected for future removal and site restoration costs, was $268 million for the year ended December 31, 2017 (2016 - $266 million).

The Company incurred approximately $15 million for the year ended December 31, 2017 (2016 - $15 million) in incremental depreciation resulting from push-down accounting *(Note 2)*.

8. INTANGIBLE ASSETS

December 31,	2017	2016
(millions of dollars)		
Intangible assets	**779**	**406**
Less: Accumulated amortization	**(293)**	**(248)**
Intangible assets, net	**486**	**158**

Intangible assets consists of software, CIS, and emission allowances. Beginning January 1, 2017, emission allowances were purchased by the Company for itself and most of its customers in order to meet greenhouse gas compliance obligations in the Province of Ontario. Purchased emission allowances are recorded at their original cost and are not amortized, as they will be used to satisfy compliance obligations as they come due. For the year ended December 31, 2017, the weighted average amortization rate for software and CIS were 18.8% and 10.0% respectively (2016 - 22.2% and 10.0% respectively).

Intangible assets include $15 million of work-in-progress as at December 31, 2017 (2016 - $12 million). Total amortization expense for intangible assets was $62 million for the year ended December 31, 2017 (2016 - $56 million). The Company expects aggregate amortization expense for the years ending

December 31, 2018 through 2022 of $68 million, $59 million, $62 million, $64 million and $65 million, respectively.

9. ACCOUNTS PAYABLE AND OTHER

Long-term debt			**3,760**	3,470
Loans from affiliate company *(Note 18)*			**375**	375

1 The balance in 2017 pertaining to St. Lawrence Gas amounting to approximately $9 million is presented as Liabilities held for sale, long-term (Note 4) on the Consolidated Statements of Financial Position.
2 Consists of note payable to affiliate company, debt premium and/or debt issuance costs.
3 The balance in 2017 pertaining to St. Lawrence Gas amounting to approximately $30 million is presented as Liabilities held for sale, current (Note 4) on the Consolidated Statements of Financial Position.

In November 2017, the Company issued $300 million of thirty-year medium-term notes (MTNs) at an interest rate of 3.51% payable semi-annually in arrears. This MTN matures in November 2047.

In August 2016, the Company issued $300 million of ten-year MTNs at an interest rate of 2.50% payable semi-annually in arrears. This MTN matures in August 2026.

For the years ending December 31, 2018 through 2022, medium-term note maturities are nil, nil, $400 million, $175 million and nil, respectively. The Company's debentures and medium-term notes bear interest at fixed rates, and interest obligations for the years ending December 31, 2018 through 2022 are $174 million, $174 million, $174 million, $157 million and $149 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2017**	2016
(millions of dollars)		
Debentures and medium-term notes	**176**	176

Commercial paper and credit facility draws	**8**	7
Other interest and finance costs	**7**	10
Capitalized	**(5)**	(14)
	214	206

In 2017, total interest paid to third parties was $185 million (2016 - $181 million) and total interest paid to affiliates was $28 million (2016 - $27 million).

The Company's borrowings, whether debentures or MTNs, are unsecured. As at December 31, 2017, the Company was in compliance with all covenants.

CREDIT FACILITIES

The Company currently has a $1 billion commercial paper program limit that is backstopped by committed lines of credit of $1 billion. The term of any commercial paper issued under this program may not exceed one year. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option. In July 2017, the Company extended the term out date of this external credit facility to July 2018, with a maturity date in July 2019.

The Company actively manages its bank funding sources to ensure adequate liquidity and to optimize pricing and other terms. The following table provides details of the Company's credit facilities at December 31, 2017.

			December 31, 2017		December 31, 2016
	Maturity Dates	Total Facilities	Draws[1]	Available	Total Facilities
(millions of dollars)					
Enbridge Gas Distribution Inc.	2019	**1,000**	**960**	**40**	1,000
St. Lawrence Gas Company, Inc.	2019	**16**	**12**	**4**	17
Total credit facilities		**1,016**	**972**	**44**	1,017

1 Includes facility draws and commercial paper issuances, net of discount, that are back-stopped by the external credit facility. St. Lawrence Gas draws are shown as Liabilities held for sale, current and long-term on the Consolidated Statements of Financial Position.

Credit facilities carried a weighted average standby fee of 0.2% on the unused portion and the draws bear interest at market rates.

11. SHARE CAPITAL

The authorized share capital of the Company consists of an unlimited number of common shares with no par value and a limited number of preference shares.

COMMON SHARES

	2017		2016	
December 31,	Number of shares	Amount	Number of shares	Amount
(millions of dollars; number of common shares in millions)				
Balance at beginning of year	**185.6**	**1,917**	170.0	1,637

Balance at end of year *(Note 18)*	**213.3**	**2,417**	185.6	1,917

PREFERENCE SHARES

December 31, 2017 and 2016	Authorized	Issued and Outstanding	Amount
(millions of dollars, number of preference shares in millions)			
Group 2, Series A - C, Cumulative Redeemable Retractable	6	—	—
Group 2, Series D, Cumulative Redeemable Convertible	4	—	—
Group 3, Series A - C, Cumulative Redeemable Retractable	6	—	—
Group 3, Series D, Fixed / Floating Cumulative Redeemable	4	4	100
Group 4	10	—	—
Group 5	10	—	—
			100

Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. The Company has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case. As at December 31, 2017, no preference shares have been redeemed.

On July 1, 2019, and every five years thereafter, the Group 3, Series D preference shares can be converted, at the holder's option, into Group 2, Series D preference shares on a one-for-one basis, and will pay fixed cumulative cash dividends that are not less than 80% of the Government of Canada yield applicable to the fixed dividend period.

The Group 2, Series D preference shares can be redeemed, at the Company's option, for $25.00 per share. The Group 2, Series D preference shares can also be converted into Group 3, Series D preference shares on a one-for-one basis at the holder's option on July 1, 2019 and every five years thereafter.

12. STOCK OPTION AND STOCK UNIT PLANS

Enbridge's four long-term incentive compensation plans include the ISO Plan, the PSO Plan, the PSU Plan and the RSU Plan. The Company reimburses Enbridge for stock-based compensation costs associated with its employees on a quarterly basis. As at December 31, 2017, the Company did not have any employees that had options in the PSO Plan.

INCENTIVE STOCK OPTIONS
(options in thousands)
Key employees of the Company are granted ISOs to purchase common shares of Enbridge at the market price on the grant date. ISOs vest in equal annual installments over a four-year period and expire 10 years after the issue date.

Compensation expense recorded for the year ended December 31, 2017 for ISOs was $5 million (2016 - $6 million). At December 31, 2017, unrecognized compensation cost related to non-vested share-based compensation arrangements granted under the ISO Plan was $2 million. The cost is expected to be fully recognized over a weighted average period of approximately three years. As at December 31, 2017, there were 2,838 ISOs outstanding (2016 - 3,476 ISOs outstanding).

PERFORMANCE STOCK UNITS
(units in thousands)
Enbridge has a PSU Plan for senior officers of the Company where cash awards are paid following a three-year performance cycle. Awards are calculated by multiplying the number of units outstanding at the end of the performance period by Enbridge's weighted average share price for 20 days prior to the maturity of the grant and by a performance multiplier. The performance multiplier ranges from zero, if Enbridge's performance fails to meet threshold performance levels, to a maximum of two if Enbridge performs within the highest range of its performance targets. The performance multiplier is derived through a calculation of Enbridge's price/earnings ratio relative to a specified peer group of companies and Enbridge's earnings per share, adjusted for unusual non-operating or non-recurring items, relative to targets established at the time of grant.

Compensation expense recorded for the year ended December 31, 2017 for PSUs was nil (2016 - $4 million). As at December 31, 2017, unrecognized compensation expense related to non-vested units granted under the PSU Plan was $1 million and is expected to be fully recognized over a weighted average period of approximately two years. As at December 31, 2017, there were 19 PSUs outstanding (2016 - 35 PSUs outstanding).

RESTRICTED STOCK UNITS
(units in thousands)
Enbridge has a RSU Plan where cash awards are paid to certain non-executive employees of the Company following a 35-month maturity period. RSU holders receive cash equal to Enbridge's weighted average share price for 20 days prior to the maturity of the grant multiplied by the units outstanding on the maturity date.

Compensation expense recorded for the year ended December 31, 2017 for RSUs was $5 million (2016 - $6 million). As at December 31, 2017, unrecognized compensation expense related to non-vested units granted under the RSU Plan was $5 million and is expected to be fully recognized over a weighted average period of approximately two years. As at December 31, 2017, there were 165 RSUs outstanding (2016 - 187 RSUs outstanding).

13. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE INCOME/(LOSS)

Changes in AOCI for the years ended December 31, 2017 and 2016 are as follows:

	2017			
	Cash Flow Hedges	Cumulative Translation Adjustment	Unamortized OPEB Actuarial Loss	Total
(millions of dollars)				
Balance at January 1, 2017	**(11)**	**4**	**(8)**	**(15)**
Other comprehensive loss retained in AOCI	**—**	**(2)**	**(2)**	**(4)**

	2	—	1	3
Balance at December 31, 2016	(11)	4	(8)	(15)

14. RISK MANAGEMENT AND FINANCIAL INSTRUMENTS

MARKET RISK

The Company's earnings, cash flows and other comprehensive income (OCI) are subject to movements in natural gas prices, emission allowance prices, foreign exchange rates and interest rates (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which the Company is exposed and the risk management instruments used to mitigate them.

Natural Gas Price Risk
Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customers; therefore, the net exposure to the Company is zero.

Emission Allowance Price Risk
Emission allowance price risk is the risk of gain or loss due to changes in the market price of emission allowances that the Company is required to purchase for itself and most of its customers to meet greenhouse gas compliance obligations under the Ontario Cap and Trade framework. Similar to the gas supply procurement framework, the OEB's framework for emission allowance procurement allows recovery of fluctuations in emission allowance prices in customer rates, subject to OEB approval.

Foreign Exchange Risk
Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. The Company generates certain revenues, and holds a subsidiary that is denominated in United States dollars (USD). As a result, the Company's earnings, cash flows, and OCI are exposed to fluctuations resulting from USD exchange rate variability.

The Company implemented a policy in 2016 to hedge a portion of USD denominated unregulated storage revenue exposures. Qualifying derivative instruments were used to hedge anticipated USD denominated revenues and to manage variability in cash flows through September 2017. During September 2017, the Company assigned its USD denominated unregulated storage contracts to Union Gas Limited (Union Gas), an affiliated company under common control as a result of the merger transaction *(Note 18)*. The Company has also novated all of its qualifying derivative instruments relating to forward exchange contracts to Union Gas.

A portion of the Company's purchases of natural gas are denominated in USD and as a result there is exposure to fluctuations in the exchange rate of the USD against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer; therefore, the Company has no net exposure to movements in the foreign exchange rate on natural gas purchases.

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps were used through January 2017 to mitigate the volatility of short-term interest rates on interest expense related to variable rate debt.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps were used during 2016 to mitigate the Company's exposure to long-term interest rate variability on select forecast term debt issuances.

The Company's portfolio mix of fixed and variable rate debt instruments is monitored by its ultimate parent company, Enbridge. The Company does not typically manage the fair value of its debt instruments.

TOTAL DERIVATIVE INSTRUMENTS
The following table summarizes the financial statement line item in the Consolidated Statements of Financial Position and carrying value of the Company's derivative instruments. The Company did not have any outstanding fair value hedges or net investment hedges at December 31, 2017 or December 31, 2016.

The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2017	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of dollars)					
Other long-term liabilities					
Foreign exchange contracts	—	—	—	—	—
Total net derivative liabilities					
Foreign exchange contracts	—	—	—	—	—

December 31, 2016	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of dollars)					
Other long-term liabilities					
Foreign exchange contracts	(1)	—	(1)	—	(1)
Total net derivative liabilities					
Foreign exchange contracts	(1)	—	(1)	—	(1)

The Company did not have any outstanding derivative instruments relating to interest rate contracts as at December 31, 2017. Derivative instruments relating to interest rate contracts as at December 31, 2016 had a notional principal of $8 million for interest rate contracts for short-term borrowings and zero for interest rate contracts on the anticipated issuance of long-term debt.

The Company did not have any outstanding derivative instruments relating to forward exchange contracts as at December 31, 2017. At December 31, 2016 the Company's derivative instruments relating to foreign exchange forward contracts matured through 2023 and had a notional principal of $13 million (US $10 million).

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and consolidated comprehensive income, before the effect of income taxes.

Year ended December 31,	**2017**	2016
(millions of dollars)		
Amount of unrealized loss recognized in OCI cash flow hedges		
Interest rate contracts	—	(13)
Foreign exchange contracts	—	(1)
	—	(14)
Amount of loss reclassified from AOCI to earnings *(effective portion)*		
Interest rate contracts[1]	**(4)**	(3)
	(4)	(3)
Amount of loss reclassified from AOCI to earnings *(ineffective portion)*		
Interest rate contracts[1]	—	(3)
	—	(3)

1 Reported within Interest expense in the Consolidated Statements of Earnings.

The Company estimates that no amount in AOCI related to cash flow hedges will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on interest and foreign exchange rates in effect when derivative contracts that are currently outstanding mature.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under committed credit facilities and long-term debt, which includes debentures and medium term notes (MTNs) and, if necessary, additional liquidity is available through intercompany transactions with its ultimate parent, Enbridge, and other related entities. These sources are expected to be sufficient to enable the Company to fund all anticipated requirements. The Company also maintains committed credit facilities with a diversified group of banks and institutions. The Company is in compliance with all the terms and conditions of its committed credit facilities as at December 31, 2017. As a result, all credit facilities are available to the Company and the banks are obligated to fund the Company under the terms of the facilities.

CREDIT RISK

Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has obtained additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts, which totaled $29 million at December 31, 2017 (December 31, 2016 - $33 million).

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

The Company did not have group credit concentrations, with respect to derivative instruments, in the Canadian, United States, European, Asian or other financial institutions counterparty segments at December 31, 2017 or December 31, 2016.

FAIR VALUE MEASUREMENTS

The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and are supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

FAIR VALUE OF FINANCIAL INSTRUMENTS

The Company categorizes its derivative instruments measured at fair value into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1

Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3

Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support a Level 2 classification. The

Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest, foreign exchange, and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2017, the Company had Level 2 derivative assets with fair value of nil (2016 - nil) and Level 2 derivative liabilities with fair value of nil (2016 - $1 million). The Company’s policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers between levels as at December 31, 2017 or December 31, 2016.

FAIR VALUE OF OTHER FINANCIAL INSTRUMENTS

The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded in OCI, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at cost. The Company’s investment in IPL System Inc., an affiliate company, is recorded at fair value. At December 31, 2017, the fair value of the investment was $825 million (2016 - $825 million). The fair value of the Company’s investment is classified as a Level 2 measurement and as at December 31, 2017 and 2016 the fair value approximated its cost and redemption value and therefore no amount was recognized in OCI.

The fair value of the Company’s long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2017, the Company’s long-term debt, including the current portion had a carrying value of $3,780 million (2016 - $3,983 million) before debt issue costs and a fair value of $4,363 million (2016 - $4,585 million).

The fair value of other financial assets and liabilities other than derivative instruments and long-term debt approximate their cost due to the short period to maturity.

15. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2017**	2016
(millions of dollars)		
Earnings before income taxes	**236**	239
Federal statutory income tax rate	**15.0 %**	15.0%
Federal income taxes at statutory rate	**35**	36
Increase/(decrease) resulting from:		
Provincial and state income taxes	**(11)**	(27)
Effects of rate regulated accounting[1,2]	**(36)**	(25)
Non-taxable intercompany distributions[2]	**(9)**	(9)
Part VI.1 tax, net of federal Part I tax deduction[2]	**—**	35
Investment in foreign subsidiaries held for sale *(Note 4)*	**4**	—
Other[3]	**3**	(1)
Income tax expense/(recovery)	**(14)**	9
Effective income tax rate	**(5.9)%**	3.8%

1 During 2017, 2016, 2015 and 2014, previously collected costs for future removal and site restoration were refunded to customers that resulted in a decrease in income taxes of $21 million at December 31, 2017 (2016 - $22 million).
2 The provincial tax component of these items is included in “Provincial and state income taxes” above.
3 Included in “Other” are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals & entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.

COMPONENTS OF PRETAX EARNINGS AND INCOME TAXES

Year ended December 31,	**2017**	2016
(millions of dollars)		
Earnings before income taxes		
Canada	**232**	236
United States	**4**	3
	236	239
Current income taxes		
Canada	**5**	32
United States	**—**	(1)
	5	31
Deferred income taxes		
Canada	**(20)**	(24)
United States	**1**	2
	(19)	(22)
Income tax expense/(recovery)	**(14)**	9

COMPONENTS OF DEFERRED INCOME TAXES

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2017**	2016
(millions of dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**(662)**	(637)
Regulatory assets	**(124)**	(101)
Deferrals	**(24)**	(8)
Other	**(4)**	—
Total deferred income tax liabilities	**(814)**	(746)
Deferred income tax assets		
Future removal and site restoration reserves	**160**	153
Retirement and postretirement benefits	**31**	37
Minimum tax credits	**12**	13
Loss carryforwards	**13**	4
Financial derivatives	**3**	4
Other	**4**	3
Total deferred income tax assets	**223**	214
Net deferred income tax liabilities	**(591)**	(532)

In 2017, the investment in St. Lawrence Gas was classified as held for sale. The Company is no longer asserting permanent reinvestment for this foreign subsidiary's earnings. As such, it recorded a deferred tax liability of $4 million on the difference between the carrying value of this foreign subsidiary and its corresponding tax basis. This difference is largely a result of unremitted earnings and currency translation adjustments.

In 2016, the Company did not provide for deferred taxes on this difference as the earnings in this subsidiary were intended to be permanently reinvested in its operations. As such, this investment was not anticipated to give rise to income taxes in the foreseeable future. The unremitted earnings and currency translation adjustment for which no deferred taxes were provided in 2016 was $30 million.

The Company and its subsidiaries are subject to taxation in Canada and the Unites States. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario). The Company is open to examination by Canadian tax authorities for the 2012 to 2017 tax years. The Company is currently under examination for income tax matters in Canada for the 2015 to 2016 tax years.

UNRECOGNIZED TAX BENEFITS

The Company has no unrecognized tax benefits related to uncertain tax positions as at December 31, 2017 and 2016 and no accrued interest or penalties thereon.

16. PENSION AND OTHER POSTRETIREMENT BENEFITS

PENSION PLANS

Substantially all of the Company's employees participate in non-contributory pension plans which provide defined benefit and/or defined contribution pension benefits. The Company also maintains supplemental pension plans that provide pension benefits in excess of the basic plan for certain employees.

Defined Benefit Plans

Benefits payable from the defined benefit plans are based on each plan participant's years of service and final average remuneration. These benefits are partially inflation-indexed after a plan participant's retirement. The Company's contributions are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities.

Defined Contribution Plans
Contributions are generally based on each plan participant's age, years of service and current eligible remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS
OPEB primarily includes supplemental health and dental, health spending accounts and life insurance coverage for qualifying retired employees on a non-contributory basis.

BENEFIT OBLIGATIONS AND FUNDED STATUS
The following table details the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans.

	Pension		OPEB	
December 31,	**2017**	2016	**2017**	2016
(millions of Canadian dollars)				
Change in accrued benefit obligation				
Benefit obligation at beginning of year	**1,098**	1,025	**123**	120
Service cost	**33**	32	**2**	1
Interest cost	**36**	35	**4**	5
Actuarial loss	**43**	51	**1**	2
Benefits paid	**(58)**	(46)	**(4)**	(4)
Other	**(16)**	1	**(14)**	(1)
Benefit obligation at end of year[1]	**1,136**	**1,098**	**112**	**123**
Change in plan assets				
Fair value of plan assets at beginning of year	**998**	969	**17**	17
Actual return on plan assets	**107**	73	**2**	1
Employer's contributions	**47**	1	**4**	5
Benefits paid	**(58)**	(46)	**(4)**	(4)
Other	**(7)**	1	**(19)**	(2)
Fair value of plan assets at end of year	**1,087**	**998**	**—**	**17**
Underfunded status at end of year	**(49)**	**(100)**	**(112)**	**(106)**
Presented as follows:				
Deferred amounts and other assets	**2**	3	**—**	3
Accounts payable and other *(Note 9)*	**—**	—	**(4)**	(4)
Other long-term liabilities	**(51)**	(103)	**(108)**	(105)

1 For pension plans, the benefit obligation is the projected obligation. For OPEB plans, the benefit obligations is the accumulated postretirement benefit obligation. The accumulated benefit obligation for the Company's pension plans was $1,051 million as at December 31, 2017 (2016 - $991 million).

At December 31, 2017, pension plans with accumulated benefit obligations in excess of plan assets had projected benefit obligations of $54 million (2016 - $106 million), accumulated benefit obligations of $1,109 million (2016 - $1,072 million) and plan assets with a fair value of $1,055 million (2016 - $966 million).

AMOUNTS RECOGNIZED IN OTHER COMPREHENSIVE INCOME
The net actuarial loss included in AOCI, before tax, was $12 million relating to the Company's OPEB plans as at December 31, 2017 (2016 - $11 million).

NET BENEFIT COST RECOGNIZED

The components of net benefit cost and other amounts recognized in pre-tax OCI related to the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
Year ended December 31,	**2017**	2016	**2017**	2016
(millions of Canadian dollars)				
Service cost	**33**	32	**2**	1
Interest cost	**36**	35	**4**	5
Expected return on plan assets	**(63)**	(60)	**(1)**	(1)
Amortization of actuarial loss	**17**	14	**—**	—
Net defined benefit and OPEB costs	**23**	21	**5**	5
Defined contribution benefit costs	**1**	1	**—**	—
Net benefit cost recognized in Earnings	**24**	**22**	**5**	**5**
Amount recognized in OCI				
Net actuarial loss arising during the year	**—**	—	**2**	2
Total amount recognized in OCI	**—**	—	**2**	2
Total amount recognized in Comprehensive income	**24**	22	**7**	7

The Company estimates that approximately $14 million related to pension plans and OPEB plans as at December 31, 2017 will be reclassified from AOCI into earnings in the next 12 months.

Pension and OPEB costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension and OPEB costs due to the regulatory mechanism in place. As a result, the net pension and OPEB expense primarily consists of OEB approved pension and OPEB costs.

Regulatory adjustments were recorded in the Consolidated Statements of Earnings, the Consolidated Statements of Comprehensive Income and the Consolidated Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers, respectively, in future rates *(Note 5)*. For the year ended December 31, 2017 there were nominal differences between pension expense for accounting purposes and pension expense for ratemaking purposes. For the year ended December 31, 2016, an offsetting regulatory liability increased by $10 million and has been recorded to the extent pension and OPEB costs are expected to be refunded to customers in future rates.

ACTUARIAL ASSUMPTIONS

The weighted average assumptions made in the measurement of the benefit obligations and net benefit cost of the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
Year ended December 31,	**2017**	2016	**2017**	2016
Benefit obligations				
Discount rate	**3.6%**	3.9%	**3.6%**	3.9%
Rate of salary increase	**3.2%**	3.5%	**3.2%**	3.5%
Net benefit cost				
Discount rate - service cost	**4.1%**	4.3%	**4.1%**	4.3%
Discount rate - interest cost	**3.9%**	3.5%	**4.0%**	3.5%
Rate of return on plan assets	**6.4%**	6.5%	**0.0%**	6.0%
Rate of salary increase	**3.5%**	3.4%	**3.5%**	3.4%

The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

ASSUMED HEALTH CARE COST TRENDS

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	2017	2016
Health care cost trend rate assumed for next year	**5.5%**	5.6%
Rate to which the cost trend is assumed to decline (the ultimate trend rate)	**4.3%**	4.3%
Year that the rate reaches the ultimate trend rate	**2034**	2034

A 1% point change in the assumed health care cost trend rate would have the following effects for the year ended and as at December 31, 2017:

	1% Point Increase	1% Point Decrease
(in millions of dollars)		
Effect on total service and interest costs	—	—
Effect on accumulated postretirement benefit obligation	14	(11)

PLAN ASSETS

The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the Company’s operating environment and financial situation and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets.

The asset allocation targets and major categories of plan assets are as follows:

Asset Category	Target Allocation	December 31, 2017	2016
Equity securities	46-70%	**48.5%**	47.0%
Fixed income securities	30-36%	**34.0%**	36.0%
Other	0-18%	**17.5%**	17.0%

The following table summarizes the fair value of the plan assets for the Company's pension and OPEB plans recorded at each fair value hierarchy level.

	2017				2016			
December 31,	Level 1[1]	Level 2[2]	Level 3[3]	Total	Level 1[1]	Level 2[2]	Level 3[3]	Total

Total OPEB plan assets at fair value	**—**	**—**	**—**	**—**	**17**	—	—	17

1 Level 1 assets include assets with quoted prices in active markets for identical assets.
2 Level 2 assets include assets with significant observable inputs.
3 Level 3 assets include assets with significant unobservable inputs.
4 The fair values of the infrastructure and real estate investments are established through the use of valuation models.

Changes in the net fair value of plan assets classified as Level 3 in the fair value hierarchy were as follows:

Year ended December 31,	**2017**	2016
(millions of dollars)		
Balance at beginning of year	**153**	147
Unrealized and realized gains	**17**	13

17. CHANGES IN OPERATING ASSETS AND LIABILITIES

Year ended December 31,	**2017**	2016
(millions of dollars)		
Restricted cash	**15**	(58)
Accounts receivable and other[1,2]	**(169)**	(39)
Gas inventory	**20**	35
Regulatory assets *(Note 5)*	**(7)**	158
Deferred amounts and other assets[1]	**(34)**	—
Accounts payable and other[1,2]	**(61)**	109
Regulatory liabilities *(Note 5)*	**(102)**	(127)
Cap and trade compliance liability[3]	**365**	—
	27	78

1 *The cash flow impacts of regulatory assets and liabilities have been separately disclosed and are not included.*
2 *Includes amounts related to affiliated companies.*
3 *Under cap and trade regulation in the Province of Ontario, the Company is required to meet greenhouse gas compliance obligations for most of its customers' use of natural gas as well as emissions from its own operations. The Company will be required to relieve its compliance liability, through the submission of emission allowances, following the completion of the initial compliance period of January 1, 2017 through December 31, 2020. The balance in 2017 is presented as Other long-term liabilities on the Consolidated Statements of Financial Position.*

18. RELATED PARTY TRANSACTIONS

All related party transactions are provided in the normal course of business and, unless otherwise noted, are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties.

Year ended December 31,	**2017**	2016
(millions of dollars)		
Enbridge Energy Distribution Inc.		
Common share dividends declared	**600**	237
Union Gas[1]		
Purchase of gas storage and transportation services	**112**	—

Interest payable	**9**	2
Note payable to affiliate company		
Enbridge (U.S.) Inc.	30	34
Other accounts receivable/(payable)		
Other related entities, net	**(40)**	(23)

Financing Transactions
The Company has invested in Class D, non-voting, redeemable, retractable preference shares of IPL System Inc., an affiliate under common control. At December 31, 2017, the investment of $825 million (2016 - $825 million) in these shares resulted in a weighted average dividend yield of 7.6%.

At December 31, 2017, the borrowing from IPL System Inc. stood at $375 million ($200 million at 6.9% and $175 million at 7.5%). These loans are repayable in 2049 and 2051, respectively. The Company may elect to defer interest payments on the loans for up to five years and settle deferred interest in either cash or non-retractable preference shares of the Company. For the year ended December 31, 2017, interest paid amounted to $27 million (2016 - $27 million).

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 1.1% and is payable on demand.

Treasury and Other Management Services
Enbridge provides treasury and other management services and charges the Company on a cost recovery basis.

Part VI.1 Tax Reimbursement
The Company entered into an agreement with Enbridge for the transfer of Part VI.1 tax and the related Part I tax deduction. The Company received a non-taxable reimbursement relating to the transfer.

Natural Gas Purchases
The Company contracted for the purchase of natural gas from Aux Sable Canada LP, Tidal Energy Marketing Inc. and Tidal Energy Marketing (U.S.) LLC, related entities under common control, at prevailing market prices under normal trade terms. Contractual obligations under the Tidal Energy Marketing (U.S.) LLC and Tidal Energy Marketing Inc. contracts are 2018 to 2019 - $32 million, 2020 to 2021 - nil, and thereafter - nil.

Optimization Services
The Company provides pipeline and storage optimization services to Tidal Energy Marketing Inc., an affiliated entity under common control.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Storage and Transportation Services
The Company contracted for natural gas transportation services from Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), Alliance Pipeline Limited Partnership (Canadian) and Alliance Pipeline Limited Partnership (U.S.), related entities partially owned by an affiliated company under common control, Niagara Gas Transmission Limited, 2193914 Canada Limited and Union Gas. The Company also contracted for natural gas storage services from Union Gas. Contractual obligations under the Union Gas, Vector Pipeline Limited Partnership (U.S.) and Vector Pipeline Limited Partnership (Canadian) are 2018 to 2019 - $316 million, 2020 to 2021 - $280 million and thereafter - $358 million.

Unregulated Storage Services
On July 31, 2017, the Company entered into a Gas Storage Service Agreement (GSSA) with Union Gas, whereby Union Gas contracted all of the Company's unregulated storage space and deliverability effective September 2017.

Trade Receivables and Payables
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides consulting and other shared corporate services to affiliates on a fully-allocated cost basis. Market prices, if they are reasonably determinable, are charged for affiliate services that are not shared corporate services. The Company may also purchase consulting and other services from affiliates with prices determined on the same basis as services provided by the Company.

Other Transactions
The Company and affiliates invoice on a monthly basis and amounts are due and paid on a monthly basis.

19. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
At December 31, 2017, the Company had commitments as detailed below:

	Total	Less than 1 year	2 years	3 years	4 years	5 years	Thereafter
(millions of dollars)							
Purchase of services, pipe and other materials, including transportation[1,2]	4,954	1,073	841	614	489	435	1,502

1 *Includes capital and operating commitments.*

2 *Included in these amounts are right-of-way payments, estimated to be approximately $2 million per year, related to cancellable gas storage lease payments that are reasonably likely to occur over the remaining life of all storage reservoirs, which have been assumed to be 65 years.*

The Company and certain affiliates, in aggregate, have access to $500 million of letters of credit that they can issue. The total outstanding letters of credit that related to the Company as at December 31, 2017 was $6 million.

ENVIRONMENTAL
The Company subject to various federal, state and local laws relating to the protection of the environment. These laws and regulations can change from time to time, imposing new obligations on the Company.

Environmental risk is inherent to liquid hydrocarbon and natural gas pipeline operations, and the Company and its affiliates are, at times, subject to environmental remediation at various contaminated sites. The Company manages this environmental risk through appropriate environmental policies and practices to minimize any impact our operations may have on the environment. To the extent that the Company is unable to recover payment for environmental liabilities from insurance or other potentially responsible parties, the Company will be responsible for payment of liabilities arising from environmental incidents associated with the operating activities of the Company.

Former Manufactured Coal Gas Plant Sites
The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its Station A MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It was and remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

In its fiscal 2003 Rate Case, the Company sought OEB approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with a then current MGP claim and any future MGP claims that may be advanced. With respect to the Company's 2006 to 2017 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation/isolation/containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

OTHER LITIGATION

The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a significant impact on the Company's consolidated financial position or results of operations.

The Consolidated Financial Statements and all information in this report have been prepared by and are the responsibility of management. The Consolidated Financial Statements have been prepared in conformity with generally accepted accounting principles in the United States and include certain estimated amounts, which are based on informed judgements to ensure fair representation in all material respects. When alternative accounting methods exist, management has chosen those it considers most appropriate.

Management depends upon Union Gas' system of internal controls and formal policies and procedures to ensure the consistency, integrity and reliability of accounting and financial reporting, and to provide reasonable assurance that assets are safeguarded and that transactions are properly executed in accordance with management's authorization. Management is also supported and assisted by a program of internal audit services.

The Board of Directors is responsible for ensuring that management fulfils its responsibility for financial reporting and for final approval of the Consolidated Financial Statements.

The Board of Directors meets regularly with management, the internal auditors and the shareholders' auditors to review the Consolidated Financial Statements, the Independent Auditor's Report and other auditing and accounting matters to ensure that each group is properly discharging its responsibilities.

The shareholders' auditors have full and free access to the Board of Directors, as does the Director of Internal Audit Services.

Deloitte LLP performed an independent audit of the 2012 and 2011 Consolidated Financial Statements in this report. Their independent professional opinion on the fairness of these Consolidated Financial Statements is included in the Independent Auditor's Report.

Independent Auditor's Report

To the Shareholders of
Union Gas Limited

We have audited the accompanying consolidated financial statements of Union Gas Limited, which comprise the consolidated balance sheets as at December 31, 2012 and December 31, 2011, and the consolidated statements of operations and comprehensive income, equity, and cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Union Gas Limited as at December 31, 2012 and December 31, 2011 and the results of its operations and its financial performance and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

UNION GAS LIMITED
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
DECEMBER 31, 2012 AND 2011

1. Summary of Operations and Significant Accounting Policies

The terms ("Union Gas" or "the Company") as used in these Consolidated Financial Statements refer collectively to Union Gas Limited and its subsidiary unless the context suggest otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Union Gas. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (Westcoast). Westcoast is an indirect wholly-owned subsidiary of Spectra Energy Corp (Spectra Energy).

Nature of Operations

Union Gas owns and operates natural gas distribution, storage and transmission facilities in Ontario. The Company distributes natural gas to customers in northern, southwestern and eastern Ontario and provides natural gas storage and transportation services for other utilities and energy market participants. The property, plant and equipment of the Company consist primarily of pipeline, storage and compression facilities used in the distribution, storage and transportation of natural gas. In total, the Company has approximately 4,800 kilometres of high-pressure transmission pipeline and approximately 63,200 kilometres of distribution main and service pipelines. The Company's underground natural gas storage facilities have a working capacity of approximately 155 billion cubic feet (Bcf).

Basis of Presentation

The Consolidated Financial Statements of the Company include the accounts of Union Gas and its subsidiary, Huron Tipperary Limited Partnership I, of which the Company owns 75%.

The Consolidated Financial Statements of Union Gas have been prepared in accordance with generally accepted accounting principles in the United States (U.S. GAAP). All amounts are presented in millions of Canadian dollars except where noted.

In 2011, Canadian securities regulators approved the Company's election to report its financial statements in accordance with U.S. GAAP instead of International Financial Reporting Standards, effective January 1, 2012 through December 31, 2014, at which point the Company's intention is to reapply for exemptive relief to continue reporting under U.S. GAAP. For all periods up to and including the year ended December 31, 2011, the Company prepared its Consolidated Annual and Interim Financial Statements in accordance with Part V – Pre-changeover Canadian generally accepted accounting principles (CGAAP). For periods on or after January 1, 2012, the Company has prepared its financial statements to comply with U.S. GAAP. The adoption of U.S. GAAP has been made on a retrospective basis. The Financial Statements for prior periods have been restated in accordance with U.S. GAAP in effect at that time. The Company's date of transition to U.S. GAAP is January 1, 2011. See Note 2 for further details.

Use of Estimates

The preparation of Consolidated Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Actual amounts could differ from these estimates. Management's significant estimates include unbilled revenue, income tax expense, employee future benefit expense, estimated useful life of property, plant and equipment and asset retirement obligations.

Regulation

The Company is regulated by the Ontario Energy Board (OEB) pursuant to the provisions of the *Ontario Energy Board Act, (1998)*, which is part of a package of legislation known as the *Energy Competition Act*, *(1998)*. This legislation provides an opportunity for different forms of regulation and increased competition in the energy (electricity and natural gas) industry in Ontario. The Company is subject to regulation with respect to the rates that it may charge its customers, with the exception of the items noted below, system expansion or facility abandonment, adequacy of service, public safety aspects of pipeline system construction and certain accounting principles. The OEB has determined that it will forbear from regulating the prices for long-term storage services. The Storage Forbearance Decision created an unregulated storage operation within Union Gas and provides the framework required to support new storage investments.

The OEB is mandated to approve rates that are just and reasonable. Utility earnings are regulated by the OEB under cost of service regulation, on the basis of a return on rate base for a future period. Under cost of service regulation, a rate application process leads to the implementation of new rates intended to provide a utility with the opportunity to earn an allowed rate of return. The actual rate of return achieved by the Company may vary from the rate allowed by the OEB as a result of unexpected changes in weather, average use per customer, inflation, the price of competing fuels, interest rates, general economic conditions and its ability to achieve forecast revenues and manage costs.

Rates effective January 1, 2007 were approved by the OEB on the basis of the traditional cost of service framework. Effective January 1, 2008, the Company began a five year incentive regulation term. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts. The Company has set rates for 2013 on a cost of service basis.

The Company follows U.S. GAAP, which may differ for regulated operations from those otherwise expected in non rate-regulated businesses. As a result, the Company records assets and liabilities that result from the regulated ratemaking process that may not be recorded under U.S. GAAP for non rate-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because they are probable of future recovery in customer rates. Regulatory liabilities generally represent obligations to make refunds to customers for previous collections for costs that are not likely to be incurred, or for certain net revenues beyond a pre-established threshold. Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as applicable regulatory changes and recent rate orders to other regulated entities. Management believes the existing regulatory assets are probable of recovery. This determination reflects the current political and regulatory climate at the provincial and national levels, and is subject to change in the future. If future recovery of costs ceases to be probable, the asset write-offs could be recognized in current period earnings.

Revenue Recognition

Revenues from the transportation, storage, distribution and sales of natural gas are recognized when either the service is provided or the product is delivered. Revenues related to these services provided or products delivered but not yet billed are estimated each month.

Gas Sales and Cost of Gas

Gas sales revenue is recorded on the basis of regular meter readings and estimates of customer volume usage since the last meter reading date to the end of the reporting period applied using OEB approved rates. Cost of gas is recorded using amounts approved by the OEB in the determination of customer sales rates. Differences between the OEB approved reference amounts and those costs actually incurred are deferred on the Consolidated Balance Sheets for future disposition subject to approval by the OEB.

In determining the quantities of gas delivered and received, differences arise from the measurement process. The Company includes in the Cost of gas an estimated amount of these differences based upon the methodology used by the OEB in the determination of rates for storage, transmission and distribution of gas. Annual fluctuations from the estimated level are recognized in earnings during the year.

As part of the Company's OEB-approved incentive regulation framework, an earnings sharing mechanism exists whereby earnings above an allowable return on equity are shared with ratepayers as a reduction in earnings during the year, if applicable.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term investments, with an original maturity of three months or less.

Income Taxes

Deferred income taxes are recognized for differences between the financial reporting and tax bases of assets and liabilities at enacted statutory tax rates in effect for the years in which the differences are expected to reverse. The effect on deferred taxes of a change in tax rates is recognized in income in the period that includes the enactment date. Actual income taxes could vary from these estimates due to the future changes in income tax law or results from the final review of tax returns by federal and provincial tax authorities.

Financial statement effects on tax positions are recognized in the period in which it is more likely than not that the position will be sustained upon examination, the position is effectively settled or when the statute of limitations to challenge the position has expired. Interest related to the unrecognized tax benefits is recorded as Interest expense.

Inventories

Gas in storage for resale to customers is carried at weighted average cost approved by the OEB in the determination of customer sales rates. The difference between the approved cost and the actual cost of the gas purchased is deferred on the Consolidated Balance Sheets for future disposition subject to approval by the OEB. Inventories of materials and supplies are valued at the lower of average cost or net realizable value.

Property, Plant and Equipment and Depreciation

Property, plant and equipment is stated at historical cost less accumulated depreciation and amortization. The Company capitalizes all construction-related direct labour and material costs, as well as indirect construction costs. Indirect costs include general engineering and the cost of funds used during construction. The costs of renewals and betterments that extend the useful life or increase the expected output of property, plant and equipment are also capitalized. The cost of repairs, replacements and major maintenance projects that do not extend the useful life or increase the expected output of property, plant and equipment are expensed as incurred.

Regulated depreciation is computed based on the asset's average service life using the straight-line method. Unregulated depreciation is computed based on management's assumption of useful life using the straight-line method.

When regulated property, plant and equipment is retired, the original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation and amortization. When entire regulated operating units are sold or non-regulated property, plant and equipment is retired, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced. Any gain or loss is recorded in earnings, unless otherwise required by the applicable regulatory body.

Asset Retirement Obligations

The Company recognizes asset retirement obligations (AROs) for legal commitments associated with the retirement of long-lived assets that result from the acquisition, construction, development and/or normal use of the asset and conditional AROs in which the timing or method of settlement are conditional on a future event that may or may not be within the Company's control. The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made and is added to the carrying amount of the associated asset. This additional carrying amount is depreciated over the estimated useful life of the asset.

Stock-Based Compensation

Union Gas employees participate in a stock-based compensation plan sponsored by Spectra Energy. For employee awards, equity classified and liability classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability classified stock-based compensation cost is re-measured at each reporting period until settlement. The compensation cost is recognized as an expense over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests or the date the employee becomes retirement eligible. Awards, including stock options, granted to employees that are already retirement eligible are deemed to have vested immediately upon issuance, and therefore, compensation cost for those awards is recognized on the date such awards are granted.

In addition, certain Union Gas employees that previously participated in the Company's 1989 Long Term Incentive Share Plan have the ability to receive a portion of their converted stock option awards as a stock appreciation right (SAR) paid in cash. Union Gas accounts for these by measuring the amount by which the quoted market price of the underlying stock exceeds the SAR base stock price at the balance sheet date.

New Accounting Pronouncements

There were no significant accounting pronouncements adopted during 2012 or 2011 that had a material impact on the Company's Consolidated Financial Statements.

2. First Time Adoption of U.S. GAAP

In 2011, Canadian securities regulators approved the Company's election to report its Consolidated Financial Statements in accordance with U.S. GAAP instead of International Financial Reporting Standards effective January 1, 2012. In March 2012, the OEB approved the use of U.S. GAAP for regulatory purposes.

For all periods up to and including the year ended December 31, 2011, the Consolidated Annual and Interim Financial Statements were prepared in accordance with Part V – Pre-changeover accounting standards of the CICA Handbook.

The Consolidated Financial Statements have been prepared to comply with U.S. GAAP applicable for periods on or after January 1, 2012. The adoption of U.S. GAAP has been made on a retrospective basis. The Consolidated Financial Statements for prior periods have been restated in accordance with U.S. GAAP in effect at that time. The date of transition to U.S. GAAP is January 1, 2011. This note explains the principal adjustments made in restating the Consolidated Balance Sheets as of January 1, 2011 and as of December 31, 2011, the Consolidated Statement of Operations and Comprehensive Income for twelve months ended December 31, 2011 and the Consolidated Statement of Cash Flows for twelve months ended December 31, 2011.

The following reconciliations provide details of the impact of the transition to U.S. GAAP on:

- Consolidated Balance Sheet at January 1, 2011;
- Consolidated Balance Sheet at December 31, 2011;
- Consolidated Statement of Operations and Comprehensive Income for twelve months ended December 31, 2011 and
- Consolidated Statement of Cash Flows for twelve months ended December 31, 2011.

Notes to Transitional Adjustments from CGAAP to U.S. GAAP

Deferred Financing Costs

Under CGAAP, deferred financing costs are classified within the balance of Long-term debt. On transition to U.S. GAAP, deferred financing costs of $9 million as of January 1, 2011 and $10 million as of December 31, 2011 have been reclassified from Long-term debt to Regulatory and other assets.

Employee Future Benefits

Under CGAAP, the pension asset or liability is recorded at the net balance of cumulative benefit costs and the cumulative contributions to the plan. Unamortized actuarial gains and losses and prior service costs are not recorded in the pension asset or liability. Under U.S. GAAP, the pension asset or liability is recorded at the present value of the defined benefit obligation less the fair value of plan assets. The pension asset or liability includes unrecognized actuarial gains or losses and prior service costs or credits with an offset to Accumulated other comprehensive loss (AOCL).

On transition, the adjustments made to comply with U.S. GAAP as of January 1, 2011 resulted in a decrease of $137 million to Regulatory and other assets, an increase of $115 million to Regulatory and other liabilities and a loss of $252 million to AOCL. As of December 31, 2011, the adjustments resulted in an increase of $3 million to Accounts receivable, a decrease of $199 million to Regulatory and other assets, an increase of $167 million to Regulatory and other liabilities and a loss of $363 million to AOCL.

Preferred Stock

Under CGAAP, the Company's Class A, Series A and C preferred stock were reported as Long-term debt and the Company's Class A, Series B and Class B, Series 10 preferred stock were reported as Share capital. Under U.S. GAAP, since all of Company's preferred stock are not solely within the Company's control they are reported as temporary equity. On transition to U.S. GAAP, $5 million of preferred stock were reclassified from Mandatorily redeemable preferred stock to Preferred stock and $105 million were reclassified from Share capital to Preferred stock.

Income Taxes

The change in deferred income taxes represents the tax effect of the U.S. GAAP transition adjustments discussed above. U.S. GAAP also requires certain tax reserves to be classified as current and only allows the use of enacted tax rates as opposed to substantively enacted. As of January 1, 2011, this resulted in a decrease of $8 million to Income taxes payable, an increase of $17 million to Income taxes receivable, a decrease of $63 million to Deferred income taxes (liability), an increase of $1 million to Accounts payable and accrued charges, an income of $63 million to AOCL, and an increase of $24 million to Regulatory and other liabilities. As of December 31, 2011, U.S. GAAP adjustments resulted in an increase of $1 million to Deferred income taxes (asset), a decrease of $27 million to Income taxes payable, a decrease of $90 million to Deferred income taxes (liability), an income of $91 million to AOCL, and an increase of $27 million to Regulatory and other liabilities.

Cash Pooling

Under CGAAP, negative book balances may be included as a component of Cash and cash equivalents. Under U.S. GAAP, these balances are reported as liabilities. As of December 31, 2011 negative book balances of $5 million were reclassified from Cash and cash equivalents to Accounts payable and accrued charges.

3. Regulatory Matters

The Company recorded the following assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities. See note 1 for further discussion.

($millions)	Financial Statement Location	**December 31, 2012**	December 31, 2011 (note 2)	Recovery/Settlement Period
Regulatory assets				
Customer deferrals	Accounts receivable, net	**44**	36	Less than 1 year
Gas in storage inventory	Inventories	**15**	54	Less than 1 year
Other deferrals – long-term	Regulatory and other assets	**1**	9	1 – 3 years
Deferred income taxes – long-term	Regulatory and other assets	**298**	235	2 years to exceeds remaining life of asset
Total regulatory assets		**358**	334	
Regulatory liabilities				
Other deferrals – current	Accounts payable and accrued charges	**9**	9	Less than 1 year
Customer deferrals	Accounts payable and accrued charges	**58**	33	Less than 1 year
Gas cost deferrals	Accounts payable and accrued charges	**49**	54	Less than 1 year
Asset removal costs	Regulatory and other liabilities	**444**	427	Exceeds remaining life of asset
Total regulatory liabilities		**560**	523	

Rate Related Information

As 2012 was the final year of the Company's current multi-year incentive regulation framework, the Company filed an application with the OEB in November 2011 to set its distribution rates effective January 1, 2013. As part of the 2013 rates hearing process, the Company conducted settlement negotiations with intervening parties. A settlement agreement was reached on most capital and rate base issues, and on all operating costs. That settlement agreement was accepted by the OEB on July 10, 2012. The unsettled issues, including operating revenue, cost of capital, and rate design, were the subjects of a hearing. On October 25, 2012, the OEB issued its decision on the unsettled issues. The average annual impact on a customer's total bill will range from 0% - 6% depending on their location and customer class. The draft rate order was filed with the OEB in December 2012, and approved in January 2013. The Company implemented the approved OEB rate order in February 2013. During 2013, the Company intends to apply to the OEB for another incentive regulation framework effective for 2014 and beyond.

Non-Commodity Deferral Account Disposition

In April 2011, the Company applied to the OEB for the annual disposition of the 2010 non-commodity deferral account balances. A decision on that application was issued by the OEB in January 2012, and a final rate order was approved in March 2012. In May 2012, pursuant to certain intervenor correspondence, the OEB commenced a proceeding to reconsider the sharing of short-term storage margins between ratepayers and Union Gas. Written submissions were made on May 11, 2012, and a second decision on this matter was issued by the OEB on July 18, 2012. In that revised decision, the OEB directed Union Gas to dispose of an incremental credit balance of $3 million to ratepayers as part of the October 2012 Quarterly Rate Adjustment Mechanism. On August 24, 2012, the Company filed a motion to review and vary the revised decision which was dismissed by the OEB without a hearing.

In April 2012, the Company applied to the OEB for the annual disposition of the 2011 non-commodity deferral account balances. The combined impact on customers, including the impact of incentive regulation earnings sharing for 2011 is a refund payable to customers of approximately $3 million. The OEB decision on the sharing of short-term storage margins, discussed above, increased this refund payable to customers to $6 million.

In August 2012, the OEB determined that it would review the treatment of 2011 revenues derived from the optimization of the Company's upstream transportation contracts as part of the application to dispose of the 2011 non-commodity deferral account balances. The Company has historically recorded the optimization of upstream transportation contracts as revenues based on rates approved by the OEB. However, the OEB decision on the Company's 2013 rates application issued October 25, 2012 found that, among other things, the revenues associated with the optimization of upstream transportation contracts effective in 2013 are to be considered a reduction of natural gas supply costs, 90% of which are to be credited to customers.

On November 19, 2012, the OEB issued its decision on the treatment of 2011 revenues derived from the optimization of the Company's upstream transportation contracts. Similar to its finding in the 2013 rates application, the OEB determined retroactively that certain optimization revenue for 2011 will be treated as a reduction to natural gas supply costs. The result of this decision is to further increase the refund payable to customers for the 2011 non-commodity deferral account balances by $5 million to an approximate total of $11 million. The Company has appealed this decision to the Ontario Divisional Court (the Court) on the basis of impermissible retroactive ratemaking. A hearing and decision by the Court is expected by the end of 2013.

With respect to 2012, the above-mentioned finding on the treatment of certain revenues derived from the optimization of the Company's upstream transportation contracts resulted in a payable to customers of approximately $34 million. This amount has been recorded in the 2012 Consolidated Financial Statements.

Management believes that the effects of the above matters will not have a material adverse effect on the Company's future Consolidated Financial Statements.

4. Gas Imbalances

The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Consolidated Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

At December 31, 2012 Accounts receivable, net and Accounts payable and accrued charges include $250 million (2011 – $195 million) related to gas imbalances and gas balancing services.

5. Inventories

Gas in storage includes gas for delivery to customers and for use in the Company's operations. Inventories of materials and supplies are for use in Company's operations.

Total accumulated amortization		**56**	58
Total Property, plant and equipment, net		**4,567**	4,495

The Company had no capital leases at December 31, 2012 or 2011.

Almost 95% of the Company's property, plant and equipment is regulated with estimated useful lives based on rates approved by the OEB. Composite weighted-average depreciation rates were 3.25% for 2012 and 3.25% for 2011.

Amortization expense of intangible assets totalled $15 million in 2012 and $16 million in 2011. Estimated amortization expense for the next five years follows:

		2,290	2,290
Less: unamortized debt discount		**3**	3
		2,287	2,287

The Company's long-term debt is unsecured. The weighted average cost of long-term debt as at December 31, 2012 was 6.6% (2011 – 6.6%). Principal repayment requirements on long-term debt are as follows:

($millions)	**Total**	**2013**	**2014**	**2015**	**2016**	**2017**	**Thereafter**
Long-term debt	2,290	–	150	150	200	125	1,665

Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants including a limitation on the payment of dividends. As of December 31, 2012 and 2011, the Company is in compliance with all such covenants.

Total interest paid on long-term debt in 2012 was $150 million (2011 – $151 million).

Available Credit Facility and Restrictive Debt Covenants

			Commercial Paper Outstanding at	
($millions)	**Expiration Date**	**Credit Facility Capacity**	**December 31, 2012**	December 31, 2011
Multi-year syndicated [a]	2016	400	374	279

[a] The credit facility contains a covenant requiring the debt-to-total capitalization ratio to not exceed 75% and a provision which requires Union Gas to repay all borrowings under the facility for a period of two days during the second quarter of each year. The ratio was 68% at December 31, 2012 (2011 – 68%, as adjusted per note 2).

The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under the credit facility. As of December 31, 2012 and 2011 there were no letters of credit issued under the credit facility or revolving borrowings outstanding.

The Company's credit agreement contains various financial and other covenants, including the maintenance of certain financial ratios. Failure to meet those covenants beyond applicable grace periods could result in accelerated due dates and/or termination of the agreement. As of December 31, 2012 and 2011, the Company was in compliance with those covenants. In addition, the credit agreement allows for the acceleration of payments or termination of the agreement due to non-payment, or in some cases, due to the acceleration of other significant indebtedness of the borrower or some of its subsidiaries.

A majority of the Company's short-term cash requirements are funded through the issuance of commercial paper. The weighted average rate on outstanding commercial paper as of December 31, 2012 was 1.12% (2011 – 1.05%).

Total interest paid on short-term debt in 2012 was $4 million (2011 – $3 million).

8. Preferred Stock

		Outstanding			
	Authorized	**December 31, 2012**	December 31, 2011 (note 2)	**December 31, 2012**	December 31, 2011 (note 2)
	(shares)	*(shares)*		*($millions)*	
Class A	202,072				
Series A, 5.5%		**47,672**	47,672	**3**	3
Series B, 6%		**90,000**	90,000	**5**	5
Series C, 5%		**49,500**	49,500	**2**	2
Class B, Series 10, 4.88%	Unlimited	**4,000,000**	4,000,000	**100**	100
				110	110

The Class A, Series A and C Preferred stock are cumulative and redeemable at $50.50 per share. The Company is obligated to offer to purchase $170,000 of Series A and $140,000 of Series C shares annually at the lowest price obtainable, but not exceeding $50 per share.

The Class A, Series B Preferred stock are cumulative and redeemable at $55 per share at the option of the Company.

The Class B, Series 10 Preferred stock are cumulative and redeemable at $25 per share at the option of the Company and, at the option of the holders, convertible back into Series 11 shares every five years commencing January 1, 2014. Union Gas may redeem at any time all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2013.

The Company has an unlimited number of authorized 4.79% Class B, Series 11 Preferred stock. These shares are cumulative and redeemable at $25 per share at the option of the Company, and at the option of the holders, convertible back into Series 10 shares every five years. At December 31, 2012 and December 31, 2011 none of these shares were issued or outstanding.

The shares are not subject to any sinking fund or mandatory redemption and are not convertible into any other type of securities other than preferred stock. As these shares are not solely in the control of the Company, they have been classified as temporary equity on the Consolidated Balance Sheets.

9. Asset Retirement Obligations

The Company's asset retirement obligations relate to the legal obligation to disconnect, purge and cap abandoned pipelines, capping abandoned storage wells, and in some buildings, special handling and disposition of asbestos if it is disturbed.

The Company has non-asbestos AROs which include easements and some railway license agreements relating to pipeline assets located on land which the Company does not own. The Company has not recognized a liability in regard to the non-asbestos ARO because the fair value of the ARO cannot be reasonably estimated.

The Company's pipeline system is considered a critical component of its business and is expected to be maintained and remain in place indefinitely. Natural gas supplies are also considered sufficient for the Company to operate in the long-term. The Company has determined that sufficient information to estimate the fair value of an ARO is not available because the assets are considered permanent with indeterminate useful lives and that sufficient information is not available to estimate a range of potential settlement dates in order to employ a present value technique to estimate fair value.

Asset retirement obligations are adjusted each period for liabilities incurred or settled during the period, accretion expense and any revisions made to the estimated cash flows.

Reconciliation of Changes in Asset Retirement Obligation Liabilities

($millions)	**December 31, 2012**	December 31, 2011
Balance, beginning of year	**134**	123
Accretion expense	**7**	6
Liabilities incurred	**3**	5
Liabilities settled	**(1)**	–
Balance, end of year	**143**	134

10. Stock-Based Compensation

Under the Long Term Incentive Share Option Plan 1989 (1989 Plan), the Company's parent company, Westcoast has granted certain stock options to its employees, including employees of Union Gas. Stock options are granted at an exercise price that equals the market price as defined in the 1989 Plan of Westcoast's shares on the date of grant. The 1989 Plan also provides for share appreciation rights under which the holder of a stock option may, in lieu of exercising the option, exercise the share appreciation right.

The Spectra Energy 2007 Long-Term Incentive Plan (the 2007 LTIP), as amended and restated, provides for the granting of stock options, restricted stock awards and units, unrestricted stock awards and units, and other equity-based awards, to employees and other key individuals who perform services for Spectra Energy. A maximum of 40 million shares of common stock may be awarded under the 2007 LTIP. Union Gas employees participate in the 2007 LTIP.

Options granted under the 2007 LTIP are issued with exercise prices equal to the fair market value of Spectra Energy common stock on the grant date, have ten year terms and generally vest over a three year term. Compensation expense related to stock options is recognized over the requisite service period. The requisite service period for stock options is the same as the vesting period, with the exception of retirement eligible employees, who have shorter requisite service periods ending when the employees become retirement eligible. Spectra Energy issues new shares upon exercising or vesting of share-based awards. The Black-Scholes option-pricing model is used to estimate the fair value of options at grant date.

Restricted, performance and phantom stock awards granted under the 2007 LTIP typically become 100% vested on the three-year anniversary of the grant date. The equity-classified and liability-classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability-classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period which is the same as the vesting period.

At the time of the Spectra Energy spin-off from Duke Energy Corporation (Duke Energy), Duke Energy converted stock options, restricted stock awards, performance awards and phantom stock awards (collectively, Stock-Based Awards) of Duke Energy common stock held by Spectra Energy employees and Duke Energy employees. One replacement Duke Energy Stock-Based Award and one-half Spectra Energy Stock-Based Award were distributed to each holder of Duke Energy Stock-Based Awards for each award held at the time of the spin-off. The Spectra Energy Stock-Based Awards resulting from the conversion are considered to have been issued under the 2007 LTIP.

Spectra Energy allocated pre-tax stock-based compensation expense included in continuing operations to Union Gas for 2012 and 2011 as follows, the components of which are further described below:

($millions)	**2012**	2011
Phantom stock	**1**	1
Performance awards	**1**	2
Total	**2**	3

The Company recognized a nominal tax benefit in Net income associated with stock-based compensation expense in 2012. The Company did not recognize a tax benefit in 2011.

Stock Options

	Options	**Weighted-Average Exercise Price U.S. $**	**Weighted-Average Remaining Life (in years)**	**Aggregate Intrinsic Value (millions U.S. $)**
Outstanding, beginning of year	160,115	24	4.2	1
Transfers out	(36,900)	22		
Exercised	(28,562)	25		
Forfeited	(6,753)	32		
Outstanding, end of year	87,900	25	3.8	–
Options exercisable at year-end	87,900	25	3.8	–

The Company did not award non-qualified stock options to employees during 2012 or 2011. As of December 31, 2012 all stock options are fully vested, and as a result, the Company does not expect to recognize future compensation costs related to stock options.

Stock Awards

	Performance Awards		**Phantom Stock Awards**	
	Units	**Weighted-Average Grant Date Fair Value U.S. $**	**Units**	**Weighted-Average Grant Date Fair Value U.S. $**
Outstanding, beginning of year	184,669	25	170,109	20
Transfers out	(33,700)	31	(49,700)	20
Granted	48,600	28	29,900	31
Vested	(63,134)	15	(45,220)	13
Outstanding, end of year	136,435	28	105,089	26
Awards expected to vest	132,161	28	102,010	26

Performance Awards

Under the 2007 LTIP, the Company can also grant stock-based and cash-based performance awards. The performance awards generally vest over three years at the earliest, if performance metrics are met. The cash-based awards will be settled in cash at vesting. The Company granted 24,300 stock-based awards in 2012 and 31,800 stock-based awards in 2011, with fair values of U.S. $1 million for each of the grants to employees. The Company granted 24,300 cash-based awards in 2012 and 31,800 cash-based awards in 2011, with fair values of less than $1 million in 2012 and U.S. $1 million in 2011. The unvested and outstanding performance awards granted contain market conditions based on the total shareholder return of Spectra Energy common stock relative to a pre-defined peer group. The stock-based and cash-based awards are valued using the Monte Carlo valuation method. The cash-based awards are re-measured at each reporting period until settlement.

Weighted-Average Assumptions for Stock-Based Performance Awards

	2012	2011
Risk free interest rate	**0.4%**	1.2%
Expected life (years)	**3**	3
Expected volatility Spectra Energy	**25.1%**	37.7%
Expected volatility Peer Group	**15.8-41.5%**	21.2-59.6%
Market Index	**20.3%**	30.3%

The risk-free rate of return was determined based on a yield of three year U.S. Treasury bonds on the grant date. The expected volatility was established based on historical volatility over three years using daily stock price observations. A shorter period was used if three years of data was not available. Because the award payout includes dividend equivalents, no dividend yield assumption is required.

The total fair value of the performance shares vested was U.S. $1 million in both 2012 and 2011. As of December 31, 2012, the Company expects to recognize U.S. $1 million of future compensation cost related to stock awards over a weighted-average period of less than two years.

Phantom Stock Awards

Stock-based phantom awards granted under the 2007 LTIP generally vest over three years. The Company granted 29,900 phantom awards in 2012 and 47,200 phantom awards in 2011, with fair values of U.S. $1 million in both 2012 and 2011.

The total fair value of the phantom shares vested was U.S. $1 million in both 2012 and 2011. As of December 31, 2012, the Company expects to recognize U.S. $1 million of future compensation cost related to stock awards over a weighted-average period of less than two years.

11. Fair Value Measurements

Financial instruments recorded at fair value on the Consolidated Balance Sheets are valued using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

Level 1

Level 1 valuations represent quoted unadjusted prices for identical instruments in active markets.

Level 2 Valuation Techniques

Fair values of the Company’s financial instruments that are actively traded in the secondary market, including Long-term debt, are determined based on market-based prices. These valuations may include inputs such as quoted market prices of the exact or similar instruments, broker or dealer quotations, or alternative pricing sources that may include models or matrix pricing tools, with reasonable levels of price transparency.

Level 3 Valuation Techniques

Level 3 valuation techniques include the use of pricing models, discounted cash flow methodologies or similar techniques where at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation.

Financial Instruments

The fair values of financial instruments that are recorded and carried at book value are summarized in the following table. Judgment is required in interpreting market data to develop the estimates of fair value. These estimates are not necessarily indicative of the amounts that could have been realized in current markets.

	December 31, 2012		December 31, 2011	
($millions)	**Book Value**	**Approximate Fair Value**	Book Value	Approximate Fair Value
Long-term debt, including current maturities[(a)]	**2,290**	**2,844**	2,290	2,849

[(a)] Excludes unamortized items.

The fair value of the Company's Long-term debt is determined based on market-based prices as described in the Level 2 valuation technique above.

The fair values of Cash and cash equivalents, Accounts receivable, net and Accounts payable and accrued charges, Short-term borrowings and Commercial paper are not materially different from their carrying amounts because of the short-term nature of these instruments or because the stated rates approximate market rates.

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligation. The maximum exposure to credit risk of the Company at period end is the carrying value of its financial assets. The Company's principal customers for natural gas transportation and storage services are industrial end-users, marketers, local distribution companies and utilities. The Company's distribution customers are primarily industrial and residential end-users. These concentrations of customers may affect the Company's overall credit risk.

The Company, in the normal course of its operations, provides gas loans to other parties from its holdings of gas in storage. The replacement amount of gas loans at December 31, 2012 is $61 million receivable (2011 - $64 million receivable). The Company manages its credit exposure related to gas loans by subjecting these parties to the same credit policies it uses for all customers, and obtaining collateral when appropriate.

The Company manages its credit risk on Cash and cash equivalents by dealing solely with reputable banks and financial institutions. To manage its credit risk on Accounts receivable, net the Company performs ongoing credit reviews of all its customers. In cases where the credit quality of a customer does not meet the Company's requirements, a cash deposit, letter of credit or parental guarantee is required. Deposits held by the Company at December 31, 2012 amounted to $40 million (2011 - $48 million). Significant financial difficulties of the debtor, the probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the account receivable may be uncollectible and therefore should be included in the allowance for doubtful accounts.

Union Gas continues to utilize its established risk management policies and procedures to ensure the appropriate monitoring of customer credit positions and, based on current evaluations, does not expect any significant negative impacts associated with these positions.

The following table sets forth details of the age of trade receivables that are not impaired as well as the allowance for the doubtful accounts:

($millions)	**December 31, 2012**	December 31, 2011
Current	**249**	263
30 Days over due	**9**	10
60 Days over due	**3**	4
90+ Days over due	**6**	7
Total trade accounts receivable	**267**	284
Allowance for doubtful accounts	**(5)**	(4)
Total trade accounts receivable, net[14]	**262**	280

For the years ended December 31, 2012 and 2011, no one customer accounted for more than 10% of sales or 10% of receivables.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has credit facilities available to help meet short-term financing needs (note 7).

The following are the contractual maturities of the undiscounted cash flows of financial liabilities as at December 31, 2012:

($millions)	Total	2013	2014–2015	2016–2017	Thereafter
Short-term borrowings	9	9	–	–	–
Commercial paper	374	374	–	–	–
Accounts payable and accrued charges	685	685	–	–	–
Long-term debt (including principal and interest)	4,247	150	573	552	2,972
Total	5,315	1,218	573	552	2,972

12. Employee Benefit Plans

Retirement Plans

The Company maintains registered and non-registered, contributory and non-contributory defined benefit (DB Plans) and defined contribution (DC Plan) retirement plans covering substantially all employees. The DB Plans provide retirement benefits based on each plan participant's years of service and final average earnings. Under the DC Plan, company contributions are determined according to the terms of the plan and based on each plan participant's age, years of service and current eligible earnings. The Company also provides non-registered DB Plans to all employees who retire under a registered DB Plan and whose pension is limited by the maximum pension limits under the Income Tax Act.

The Company's policy is to fund the retirement plans, where applicable, on an actuarial basis to provide assets sufficient to meet benefits to be paid to plan participants or as required by legislation or plan terms. Total contributions to the DB Plans were $59 million in 2012 and $89 million in 2011. Contributions of $5 million in 2012 and $5 million in 2011 were made to the Company's DC Plan. The Company anticipates that in 2013 it will make total contributions of approximately $59 million to its DB Plans and $6 million to its DC Plan.

[14] The carrying amount of accounts receivable is impacted by changes in gas prices, which may fluctuate significantly from year to year.

Actuarial gains and losses are amortized over the average remaining service period of active employees. The average remaining service periods of active employees covered by the registered and non-registered DB Plans are 10 years and 14 years respectively. The Company determines the market-related value of plan assets using a calculated value that recognizes changes in fair value of the plan assets over three years.

Registered and Non-registered Pension Plans

Change in Projected Benefit Obligation and Change in Fair Value of Plan Assets

($millions)	**2012**	2011 (note 2)
Change in Projected Benefit Obligation		
Projected benefit obligation, beginning of year	**745**	637
Service cost	**18**	12
Interest cost	**32**	33
Actuarial loss	**21**	92
Participant contributions	**3**	3
Benefits paid	**(32)**	(32)
Projected benefit obligation, end of year	**787**	745
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	**591**	529
Actual return on plan assets	**37**	2
Benefits paid	**(32)**	(32)
Employer contributions	**59**	89
Plan participants' contributions	**3**	3
Plan assets, end of year	**658**	591
Net amount recognized[a]	**(129)**	(154)
Accumulated Benefit Obligation	**734**	695

[a] Recognized in Regulatory and other liabilities on the Consolidated Balance Sheets.

The DB Plans had accumulated benefit obligations in excess of plan assets.

Amounts Recognized in Accumulated Other Comprehensive Income (AOCI)

($millions)	**December 31, 2012**	December 31, 2011 (note 2)
Net actuarial loss	**328**	327
Prior service costs	**8**	10
Total amounts recognized in AOCI	**336**	337

Components of Net Periodic Pension Costs

($millions)	2012	2011 (note 2)
Net Periodic Pension Cost		
Service cost benefit earned	**18**	12
Interest cost on projected benefit obligation	**32**	33
Expected return on plan assets	**(43)**	(34)
Amortization of prior service cost	**2**	1
Amortization of loss	**26**	21
Net periodic pension cost	**35**	33
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial loss	**27**	124
Amortization of actuarial loss	**(26)**	(21)
Amortization of prior service cost	**(2)**	(1)
Total recognized in other comprehensive income	**(1)**	102
Total Recognized in Net Periodic Pension Cost and Other Comprehensive Income	**34**	135

At December 31, 2012, approximately $25 million of actuarial losses will be amortized from AOCI on the Consolidated Balance Sheets into net periodic pension cost in 2013.

At December 31, 2012, approximately $2 million of prior service costs will be amortized from AOCI on the Consolidated Balance Sheets into net periodic pension costs in 2013.

Assumptions Used for Pension Benefits Accounting

	2012	2011
Benefit Obligations		
Discount rate	**4.15%**	4.30%
Salary increase	**3.25%**	3.25%
Net Periodic Benefit Cost		
Discount rate	**4.30%**	5.25%
Salary increase	**3.25%**	3.25%
Expected long-term rate of return on plan assets	**7.10%**	7.00%

The discount rates used to determine the benefit obligations are the rates at which the benefit obligations could be effectively settled. The discount rates are developed from yields on available high-quality bonds and reflect each plan’s expected cash flows.

The long-term rates of return for the plan assets as of December 31, 2012 were developed using weighted-average calculations of expected returns based primarily on future expected returns across classes considering the use of active asset managers applied against the plans’ respective targeted asset mix.

Registered Pension Plan Assets

Asset Category	Target Allocation	**December 31, 2012**	December 31, 2011
U.S. equity securities	14%	**14%**	14%
Canadian equity securities	28%	**28%**	27%
Other equity securities	13%	**13%**	13%
Fixed income securities	45%	**45%**	46%
Total	100%	**100%**	100%

Pension plan assets are maintained in a master trust. The investment objective of the master trust is to achieve reasonable returns on trust assets, subject to a prudent level of portfolio risk, for the purpose of enhancing the security of benefits for plan participants. The asset allocation targets were set after considering the investment objective and the risk profile with respect to the trust. Equities are held for their high expected return. Other equity and fixed income securities are held for diversification. Investments within asset classes are diversified to achieve broad market participation and reduce the effects of individual managers or investments. The Company regularly reviews its actual asset allocation and periodically rebalances its investments to the targeted allocation when considered appropriate.

The following table summarizes the fair values of pension plan assets recorded at each fair value hierarchy level, as determined in accordance with the valuation techniques described in note 11:

($millions)	**Total**	**Level 1**	**Level 2**	**Level 3**
December 31, 2012				
Cash and cash equivalents	4	4	–	–
Fixed income securities	297	287	10	–
Equity securities	356	258	98	–
Other	1	–	–	1
Total	658	549	108	1
December 31, 2011				
Cash and cash equivalents	4	4	–	–
Fixed income securities	268	257	11	–
Equity securities	317	227	90	–
Other	2	–	–	2
Total	591	488	101	2

Expected Benefit Payments

($millions)	**2013**	**2014**	**2015**	**2016**	**2017**	**2018–2022**
Expected benefit payments	35	37	38	40	41	177

Other Post-Retirement Benefit Plans

The Company provides health care and life insurance benefits for retired employees on a non-contributory basis predominantly under defined contribution plans. Employees are eligible for these benefits if they have met age and service requirements at retirement, as defined in the plans. The other post-retirement benefit plans are not funded.

Other Post-Retirement Benefit Plans – Change in Projected Benefit Obligation and Fair Value of Plan Assets

($millions)	**2012**	2011 (note 2)
Change in Benefit Obligation		
Accumulated post-retirement benefit obligation, beginning of year	**81**	68
Service cost	**3**	2
Interest cost	**3**	4
Actuarial loss (gain)	**(17)**	9

Accumulated post-retirement benefit obligation, end of year	**67**	81
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	**–**	–
Benefits paid	**(3)**	(2)
Employer contributions	**3**	2
Plan assets, end of year	**–**	–
Net amount recognized[a]	**67**	81

[a] Recognized in Regulatory and other liabilities on the Consolidated Balance Sheets.

Other Post-Retirement Benefit Plans – Amounts Recognized in AOCI

($millions)	**December 31, 2012**	December 31, 2011 (note 2)
Net actuarial loss recognized in AOCI	**8**	26

($millions)	**2012**	2011 (note 2)
Other Post-Retirement Benefit Plans – Components of Net Periodic Benefit Cost		
Service cost benefit earned	**3**	2
Interest cost on accumulated post-retirement benefit obligation	**3**	4
Amortization of loss	**1**	–
Net periodic other post-retirement benefit cost	**7**	6
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial loss (gain)	**(17)**	9
Amortization of actuarial gain	**(1)**	–
Total recognized in other comprehensive income	**(18)**	9
Total recognized in Net Periodic Benefit Cost and Other Comprehensive Income	**(11)**	15

Other Post-Retirement Benefits Plans – Assumptions Used for Benefits Accounting

	2012	2011
Benefit Obligations		
Discount rate for post-retirement plans	**4.20%**	4.33%
Salary increase	**3.25%**	3.25%
Net Periodic Benefit Cost		
Discount rate for post-retirement plans	**4.33%**	5.31%
Salary increase	**3.25%**	3.25%

The discount rates used to determine the post-retirement obligations are the rates at which the benefit obligations could be effectively settled. The discount rates for the plans are developed from yields on available high-quality bonds in each country and reflect each plan's expected cash flows.

Assumed Health Care Cost Trend Rates

	2012	2011
Health care cost trend rate assumed for next year	**7.00%**	7.50%
Rate to which the cost trend rate is assumed to decline	**5.00%**	5.00%
Year that the rate reaches the ultimate trend rate	**2017**	2017

Sensitivity to Changes in Assumed Health Care Cost Trend Rates

($millions)	**1% Point Increase**	1% Point Decrease
Effect on total service and interest costs	**1**	(1)
Effect on post-retirement benefit obligations	**5**	(4)

Other Post-Retirement Benefit Plans – Payments and Receipts

The Company expects to make future benefit payments, which reflect expected future service, as appropriate. The following benefit payments are expected to be paid over each of the next five years and thereafter.

($millions)	**2013**	**2014**	**2015**	**2016**	**2017**	**2018–2022**
Expected benefit payments	3	3	3	3	3	19

Retirement Savings Plan

The Company has employee savings plans available to eligible employees. Employees may participate in a matching contribution where the Company matches a certain percentage of before-tax employee contributions of up to 5% of eligible pay per pay period. The Company expensed pre-tax employer matching contributions of $7 million in 2012 and $7 million in 2011.

13. Income Taxes

Income Tax Expense Components

($millions)	**2012**	2011 (note 2)
Current		
Federal	**30**	36
Provincial	**18**	14
Total current tax expense	**48**	50
Deferred		
Federal	**(7)**	2
Provincial	**(1)**	6
Total deferred tax expense	**(8)**	8
Total Income taxes	**40**	58

Reconciliation of Income Tax Expense at the Combined Federal and Ontario Statutory Tax Rate to Actual Income Tax Expense

($millions)	**2012**	2011 (note 2)
Income before income taxes	**210**	259
Statutory income tax rate	**26.5%**	28.25%
Statutory income tax rate applied to accounting income	**55**	73
Increase/(decrease) resulting from:		
Deferred tax expense resulting from Ontario tax rate change	**4**	–
Deferred regulatory income tax payable/receivable recorded through tax expense	**(23)**	(19)
Other – net	**4**	4
Total income tax expense	**40**	58
Effective rate of income tax	**19.0%**	22.4%

Net Deferred Income Tax Liability Components

($millions)	**December 31, 2012**	December 31, 2011 (note 2)
Deferred income tax liabilities		
Accelerated depreciation rates	**316**	286
Regulatory asset	**79**	59
Other	**(43)**	(52)
Total deferred income tax liabilities	**352**	293
Deferred income tax assets		
Reserves	**11**	6
Regulatory liability	**2**	2
Other	**1**	–
Total deferred income tax assets	**14**	8
Net deferred income tax liabilities	**338**	285

The above deferred tax amounts have been classified in the Consolidated Balance Sheets as follows:

($millions)	**December 31, 2012**	December 31, 2011 (note 2)
Current assets	**14**	8
Long-term liabilities	**(352)**	(293)
	(338)	(285)

Reconciliation of Gross Unrecognized Income Tax Benefits

($millions)	**December 31, 2012**	December 31, 2011 (note 2)
Balance, beginning of year	**22**	22
Increases related to prior year tax positions	**3**	3
Decreases related to prior year tax positions	**–**	(3)
Increases related to current year tax positions	**1**	1
Reductions due to lapse of statute of limitations	**–**	(1)
Balance, end of year	**26**	22

Unrecognized tax benefits totalled $26 million at December 31, 2012. Of this, $17 million would reduce the effective tax rate if recognized on or after January 1, 2013. The Company recorded an increase of $4 million in gross unrecognized tax benefits during 2012. This resulted in a $4 million increase in tax expense.

The Company recognized potential accrued interest related to unrecognized tax benefits as interest expense. $1 million of interest expense was recognized in both 2012 and 2011. Accrued interest totalled $4 million at December 31, 2012 and $3 million at December 31, 2011.

Although uncertain, the Company believes it is reasonably possible that the total amount of unrecognized tax benefits could decrease by $19 million prior to December 31, 2013. The anticipated changes in unrecognized tax benefits relate to the expiration of statutes of limitations, expected audit settlements and expected changes to legislation.

The Company remains subject to examination for income tax returns for years 2006 through 2011.

14. Related Party Transactions

The Company purchases gas, storage and transportation services at prevailing market prices and under normal trade terms from related parties. During 2012, these purchases totalled $41 million (2011 – $56 million). The Company also provides storage and transportation services to related parties which totalled $1 million during 2012 (2011 – $1 million).

The Company provided administrative, management and other services to related parties totalling $14 million during 2012 (2011 – $12 million), which were billed and recovered at cost. Charges from related parties for administrative and other goods and services were $10 million during 2012 (2011 – $9 million).

At December 31, 2012 the Company had receivable balances of $4 million (2011 – $4 million) and payable balances of $10 million (2011 – $7 million) with related parties, all of which are recorded in Accounts receivable, net and Accounts payable and accrued charges, respectively.

In the normal course of operations, the Company provides or obtains funds from Westcoast on an unsecured basis. During 2012, the Company did not provide funds to Westcoast. The balance outstanding at December 31, 2012 was a payable of $9 million (2011 – $99 million payable). During 2012, interest paid on amounts owing totalled less than $1 million (2011 – less than $1 million). Interest on these loans is calculated based on the monthly average of 30-day banker's acceptance rates.

In addition, the Company made dividend payments to GLBE of $162 million during 2012 (2011 – $145 million).

15. Guarantees

The Company has various financial guarantees which are issued in the normal course of business. The Company enters into these arrangements to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Consolidated Balance Sheets. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company's potential exposure under these agreements can range from a specific dollar amount to an unlimited dollar amount depending on the nature of the claim and the particular transaction. The Company is unable to estimate the total potential amount of future payments under these agreements due to several factors, such as unlimited exposure under certain guarantees.

16. Contingencies

The Company, in the course of its operations, is subject to environmental and other claims, lawsuits and contingencies. Accruals are made in instances where it is probable that liabilities will be incurred and where such liabilities can be reasonably estimated. The Company has no reason to believe that the ultimate outcome of these matters could have a significant impact on its Consolidated Financial Statements.

17. Subsequent Events

Management has evaluated significant events and transactions that occurred from January 1, 2013 through March 8, 2013, the date the financial statements were filed, and no subsequent events requiring disclosure were noted.

The Consolidated Financial Statements and all information in this report have been prepared by and are the responsibility of management. The Consolidated Financial Statements have been prepared in conformity with generally accepted accounting principles in the United States and include certain estimated amounts, which are based on informed judgements to ensure fair representation in all material respects. When alternative accounting methods exist, management has chosen those it considers most appropriate.

Management depends upon Union Gas' system of internal controls and formal policies and procedures to ensure the consistency, integrity and reliability of accounting and financial reporting, and to provide reasonable assurance that assets are safeguarded and that transactions are properly executed in accordance with management's authorization. Management is also supported and assisted by a program of internal audit services.

The Board of Directors is responsible for ensuring that management fulfils its responsibility for financial reporting and for final approval of the Consolidated Financial Statements.

The Board of Directors meets regularly with management, the internal auditors and the shareholders' auditors to review the Consolidated Financial Statements, the Independent Auditor's Report and other auditing and accounting matters to ensure that each group is properly discharging its responsibilities.

The shareholders' auditors have full and free access to the Board of Directors, as does the Director of Internal Audit Services.

Deloitte LLP performed an independent audit of the 2013 and 2012 Consolidated Financial Statements in this report. Their independent professional opinion on the fairness of these Consolidated Financial Statements is included in the Independent Auditor's Report.

Independent Auditor's Report

To the Shareholders of
Union Gas Limited

We have audited the accompanying consolidated financial statements of Union Gas Limited, which comprise the consolidated balance sheets as at December 31, 2013 and December 31, 2012, and the consolidated statements of operations and comprehensive income, consolidated statements of equity, and consolidated statements of cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Union Gas Limited as at December 31, 2013 and December 31, 2012 and the results of its operations and its financial performance and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

UNION GAS LIMITED
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
DECEMBER 31, 2013 AND 2012

1. Summary of Operations and Significant Accounting Policies

The terms ("Union Gas" or "the Company") as used in these Consolidated Financial Statements refer collectively to Union Gas Limited and its subsidiary unless the context suggest otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Union Gas. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (Westcoast). Westcoast is an indirect wholly-owned subsidiary of Spectra Energy Corp (Spectra Energy).

Nature of Operations

Union Gas owns and operates natural gas distribution, storage and transmission facilities in Ontario. The Company distributes natural gas to customers in northern, southwestern and eastern Ontario and provides natural gas storage and transportation services for other utilities and energy market participants. The property, plant and equipment of the Company consist primarily of pipeline, storage and compression facilities used in the distribution, storage and transportation of natural gas.

Basis of Presentation

The Consolidated Financial Statements of the Company include the accounts of the Company and its subsidiary, Huron Tipperary Limited Partnership I, of which the Company owns 75%.

The Consolidated Financial Statements of the Company have been prepared in accordance with generally accepted accounting principles in the United States (U.S. GAAP). All amounts are presented in millions of Canadian dollars except where noted.

In 2011, Canadian securities regulators approved the Company's election to report its financial statements in accordance with U.S. GAAP instead of International Financial Reporting Standards (IFRS), effective January 1, 2012 through December 31, 2014. In November 2013, the Company applied to Canadian securities regulators to extend its exemptive relief to continue reporting under U.S. GAAP until after a final framework for accounting for rate-regulated activities is available under IFRS. In February 2014, Canadian securities regulators approved the extension of the Company's exemptive relief to continue reporting under U.S. GAAP until the earlier of January 1, 2019, and the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation.

Use of Estimates

The preparation of Consolidated Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Actual amounts could differ from these estimates. Management's significant estimates include unbilled revenue, income tax expense, employee future benefit expense, estimated useful life of property, plant and equipment and asset retirement obligations.

Regulation

The Company is regulated by the Ontario Energy Board (OEB) pursuant to the provisions of the *Ontario Energy Board Act, (1998)*, which is part of a package of legislation known as the *Energy Competition Act, (1998)*. This legislation provides an opportunity for different forms of regulation and increased competition in the energy (electricity and natural gas) industry in Ontario. The Company is subject to regulation with respect to the rates that it may charge its customers, system expansion or facility abandonment, adequacy of service, public safety aspects of pipeline system construction and certain accounting principles. The OEB has determined that it will forbear from regulating the prices for long-term storage services. The Storage Forbearance Decision created an unregulated storage operation within the Company and provides the framework required to support new storage investments.

The OEB is mandated to approve rates that are just and reasonable. Utility earnings are regulated by the OEB under cost of service regulation, on the basis of a return on rate base for a future period. Under cost of service regulation, a rate application process leads to the implementation of new rates intended to provide a utility with the opportunity to earn an allowed rate of return. The actual rate of return achieved by the Company may vary from the rate allowed by the OEB as a result of unexpected changes in weather, average use per customer, inflation, the price of competing fuels, interest rates, general economic conditions and its ability to achieve forecasted revenues and manage costs.

Rates effective January 1, 2013 were approved by the OEB on the basis of the traditional cost of service framework. Effective January 1, 2014, the Company began a five year incentive regulation term. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts.

The Company follows U.S. GAAP, which may differ for regulated operations from those otherwise expected in non rate-regulated businesses. As a result, the Company records assets and liabilities that result from the regulated ratemaking process that may not be recorded under U.S. GAAP for non rate-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because they are probable of future recovery in customer rates. Regulatory liabilities generally represent obligations to make refunds to customers for previous collections for costs that are not likely to be incurred, or for certain net revenues beyond a pre-established threshold. Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as applicable regulatory changes and recent rate orders to other regulated entities. Management believes the existing regulatory assets are probable of recovery. This determination reflects the current political and regulatory climate at the provincial and national levels, and is subject to change in the future. If future recovery of costs ceases to be probable, the asset write-offs could be recognized in current period earnings.

Revenue Recognition

Revenues from the transportation, storage, distribution and sales of natural gas are recognized when either the service is provided or the product is delivered and collection is reasonably assured. Revenues related to these services provided or products delivered but not yet billed are estimated each month.

Gas Sales and Cost of Gas

Gas sales revenue is recorded on the basis of regular meter readings and estimates of customer volume usage since the last meter reading date to the end of the reporting period applied using OEB approved rates. Cost of gas is recorded using amounts approved by the OEB in the determination of customer sales rates. Differences between the OEB approved reference amounts and those costs actually incurred are deferred on the Consolidated Balance Sheets for future disposition subject to approval by the OEB.

In determining the quantities of gas delivered and received, differences arise from the measurement process. The Company includes in the Cost of gas an estimated amount of these differences based upon the methodology used by the OEB in the determination of rates for storage, transmission and distribution of gas. Annual fluctuations from the estimated level are recognized in earnings during the year.

As part of the Company’s OEB-approved incentive regulation framework, an earnings sharing mechanism exists whereby earnings above an allowable return on equity are shared with ratepayers as a reduction in earnings during the year, if applicable. As the Company was in a cost of service framework for 2013, earnings sharing was not applicable.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term investments, with an original maturity of three months or less.

Income Taxes

Deferred income taxes are recognized for differences between the financial reporting and tax bases of assets and liabilities at enacted statutory tax rates in effect for the years in which the differences are expected to reverse. The effect on deferred taxes of a change in tax rates is recognized in income in the period that includes the enactment date. Actual income taxes could vary from these estimates due to the future changes in income tax law or results from the final review of tax returns by federal and provincial tax authorities.

Financial statement effects on tax positions are recognized in the period in which it is more likely than not that the position will be sustained upon examination, the position is effectively settled or when the statute of limitations to challenge the position has expired. Interest related to the unrecognized tax benefits is recorded as Interest expense.

Inventories

Gas in storage for resale to customers is carried at weighted average cost approved by the OEB in the determination of customer sales rates. The difference between the approved cost and the actual cost of the gas purchased is deferred on the Consolidated Balance Sheets for future disposition subject to approval by the OEB. Inventories of materials and supplies are valued at the lower of average cost or net realizable value.

Property, Plant and Equipment and Depreciation

Property, plant and equipment is stated at historical cost less accumulated depreciation and amortization. The Company capitalizes all construction-related direct labour and material costs, as well as indirect construction costs. Indirect costs include general engineering and the cost of funds used during construction. The costs of renewals and betterments that extend the useful life or increase the expected output of property, plant and equipment are also capitalized. The cost of repairs, replacements and major maintenance projects that do not extend the useful life or increase the expected output of property, plant and equipment are expensed as incurred.

Regulated depreciation is computed based on the asset’s average service life using the straight-line method. Unregulated depreciation is computed based on management’s assumption of useful life using the straight-line method.

When regulated property, plant and equipment is retired, the original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation and amortization. When entire regulated operating units are sold or non-regulated property, plant and equipment is retired, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced. Any gain or loss is recorded in earnings, unless otherwise required by the applicable regulatory body.

Asset Retirement Obligations

The Company recognizes asset retirement obligations (AROs) for legal commitments associated with the retirement of long-lived assets that result from the acquisition, construction, development and/or normal use of the asset and conditional AROs in which the timing or method of settlement are conditional on a future event that may or may not be within the Company’s control. The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made and is added to the carrying amount of the associated asset. This additional carrying amount is depreciated over the estimated useful life of the asset.

Stock-Based Compensation

Union Gas employees participate in a stock-based compensation plan sponsored by Spectra Energy. For employee awards, equity classified and liability classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests, the date the employee becomes retirement-eligible, or the date the award market condition is met. Awards, including stock options, granted to employees that are already retirement-eligible are deemed to have vested immediately upon issuance, and therefore, compensation cost for those awards is recognized on the date such awards are granted.

In addition, certain Union Gas employees that previously participated in the Company's 1989 Long Term Incentive Share Plan have the ability to receive a portion of their converted stock option awards as a stock appreciation right (SAR) paid in cash. Union Gas accounts for these by measuring the amount by which the quoted market price of the underlying stock exceeds the SAR base stock price at the balance sheet date.

Pension and Other Post-Retirement Benefits

The Company fully recognizes the overfunded or underfunded status of pension and other postretirement benefit plans as Regulatory and other assets, Accounts payable and accrued charges, or Regulatory and other liabilities on the Consolidated Balance Sheets. A plan's funded status is the difference between the fair value of plan assets and the plan's benefit obligation. The Company records deferred plan costs and income (unrecognized losses and gains, and unrecognized prior service costs and credits) in Accumulated other comprehensive loss, until they are amortized to be recognized as a component of benefit expense within Operating and maintenance expenses in the Consolidated Statements of Operations and Comprehensive Income. See note 11 for further discussion.

New Accounting Pronouncements

There were no significant accounting pronouncements adopted during 2013 or 2012 that had a material impact on the Company's Consolidated Financial Statements.

2. Regulatory Matters

Regulatory Assets and Liabilities

The Company recorded the following assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities. See note 1 for further discussion.

($millions)	Financial Statement Location	**December 31, 2013**	December 31, 2012	Recovery/Settlement Period
Regulatory assets [(a)]				
Customer deferrals	Accounts receivable, net	**44**	44	Less than 1 year
Gas in storage inventory [(b)]	Inventories	**2**	15	Less than 1 year
Other deferrals – long-term	Regulatory and other assets	**2**	1	2 – 5 years
Deferred income taxes – long-term	Regulatory and other assets	**327**	298	2 years – exceeds remaining life of asset
Total regulatory assets		**375**	358	
Regulatory liabilities [(a)]				
Other deferrals – current	Accounts payable and accrued charges	**7**	9	Less than 1 year
Customer deferrals	Accounts payable and accrued charges	**55**	58	Less than 1 year
Gas cost deferrals	Accounts payable and accrued charges	**8**	49	Less than 1 year
Asset removal costs [(b)]	Regulatory and other liabilities	**376**	444	Exceeds remaining life of asset
Total regulatory liabilities		**446**	560	

[(a)] All regulatory assets and liabilities are excluded from rate base unless otherwise noted.
[(b)] Included in rate base.

The Company has regulatory assets of $327 million as of December 31, 2013 and $298 million as of December 31, 2012 related to deferred income tax liabilities. Under the current OEB-authorized rate structure, income tax costs are recovered in rates based on the current income tax payable and do not include accruals for deferred income tax. However, as income taxes become payable as a result of the reversal of timing differences that created the deferred income taxes, it is expected that rates will be adjusted to recover these taxes. Since substantially all of these timing differences are related to property, plant and equipment costs, recovery of these regulatory assets is expected to occur over the life of those assets.

The Company has regulatory liabilities associated with plant removal costs of $376 million as of December 31, 2013 and $444 million as of December 31, 2012. These regulatory liabilities represent collections from customers under approved rates for future asset removal activities that are expected to occur associated with its regulated facilities. During the year, the Company revised the assumption regarding the expected future cost of abandoning distribution service pipelines resulting in a decrease to the regulatory liability of $99 million. Refer to note 8 for further details.

In addition, the Company has regulatory liabilities of $8 million as of December 31, 2013 and $49 million as of December 31, 2012 representing gas cost collections from customers under approved rates that exceed the actual cost of gas for the associated periods. The Company files quarterly with the OEB to ensure that customers' rates reflect future expected prices based on published forward-market prices. The difference between the approved and actual cost of gas is deferred for future repayment to or refund from customers.

Rate Related Information

The Company's distribution rates, effective January 1, 2013, were approved by the OEB following a cost of service application since 2012 was the final year of a multi-year incentive regulation framework that began January 1, 2008.

In October 2013, the OEB approved a new five-year incentive regulation framework for the Company, which the Company will use to determine the rates it will charge customers for natural gas delivery services beginning January 1, 2014. The parameters of the new framework were determined through a settlement process and negotiated agreement with the key stakeholders who regularly participate in the Company's rates applications and who represent the interests of the Company's customers.

The new incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts. The framework allows for:

- annual inflationary rate increases, offset by a productivity factor of 60% of inflation, such that the annual net rate escalator in each year is 40% of inflation,
- rate increases or decreases in the small volume customer classes where average use declines or increases,
- certain adjustments to base rates,
- the continued pass-through of gas commodity, upstream transportation and demand side management costs,
- the additional pass-through of costs associated with major capital investments and certain fuel variances,
- an allowance for unexpected cost changes that are outside of management's control,
- equal sharing of tax changes between the Company and its customers, and
- an earnings sharing mechanism that permits the Company to fully retain the return on equity from utility operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.

In October 2013, the Company filed an application with the OEB for new rates effective January 1, 2014 pursuant to the above framework. The OEB declared the Company's existing rates as interim, and a decision from the OEB on this application is expected in 2014.

Non-Commodity Deferral Account Disposition

In November 2012 the OEB issued its decision on the treatment of 2011 revenues derived from the optimization of upstream transportation contracts. The OEB determined that these 2011 revenues would be treated as a reduction to gas costs instead of optimization revenues and included in utility earnings. Optimization revenues had been classified as utility earnings for 2008, 2009 and 2010. This decision, including the effect on the treatment of optimization revenues for 2012, resulted in a net charge of $39 million to the Company on the Consolidated Statements of Operations and Comprehensive Income in 2012. In December 2012, the Company appealed the OEB's decision on the disposition of the 2011 non-commodity deferral account balances to the Ontario Divisional Court (the Court). The basis of the appeal was impermissible retroactive ratemaking. A hearing was held in October 2013 and a decision from the Court was released in December 2013. The Company was unsuccessful in that the majority of the Court was of the view that the OEB did not engage in retroactive ratemaking. The dissenting justice was of the view that the OEB did engage in retroactive ratemaking. This decision can be appealed to the Ontario Court of Appeal (Court of Appeal) if that court grants leave to appeal. In January 2014, the Company filed a notice of motion seeking leave to appeal to the Court of Appeal. A decision from the Court of Appeal on the notice of motion is expected in 2014.

In May 2013, the Company filed an application with the OEB for the annual disposition of the 2012 non-commodity deferral account balances. The application included a proposal that revenues derived from the optimization of upstream transportation contracts in 2012 be treated as optimization revenues and included in utility earnings rather than a reduction to gas costs. The net impact for the 2012 non-commodity deferral account balances, including the impact of earnings sharing, would be a receivable from customers of less than $1 million. If the OEB instead finds that the 2012 revenues earned from the optimization of upstream transportation contracts should be treated as a reduction to gas costs, 90% of which are to be credited to customers, the combined impact would be a refund payable to customers of approximately $17 million, comprised of $39 million in Accounts payable and accrued charges and $22 million in Accounts receivable, net, which is reflected on the Consolidated Balance Sheets at December 31, 2013 and 2012. A hearing was held in October 2013 and a decision from the OEB is pending.

3. Gas Imbalances

The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Consolidated Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

At December 31, 2013 Accounts receivable, net and Accounts payable and accrued charges include $484 million (2012 – $250 million) related to gas imbalances and gas balancing services.

4. Inventories

Gas in storage includes gas for delivery to customers and for use in the Company's operations. Inventories of materials and supplies are for use in the Company's operations.

($millions)	**December 31, 2013**	December 31, 2012
Gas in storage	**142**	182
Materials and supplies	**18**	17
	160	199

5. Property, Plant and Equipment, net

($millions)	**Useful Life**	**December 31, 2013**	December 31, 2012
	(years)

Total accumulated depreciation		**2,277**	2,180
Total accumulated amortization		**63**	56
Total Property, plant and equipment, net		**4,847**	4,567

The Company had no capital leases at December 31, 2013 or 2012.

95% of the Company's property, plant and equipment is regulated with estimated useful lives based on rates approved by the OEB. Composite weighted-average depreciation rates were 2.99% for 2013 and 3.25% for 2012.

Amortization expense of intangible assets totalled $15 million in 2013 and $15 million in 2012. Estimated amortization expense for the next five years is as follows:

($millions)	**2014**	**2015**	**2016**	**2017**	**2018**
Estimated amortization expense	14	11	7	3	2

6. Debt and Credit Facilities

Summary of Debt and Related Terms

($millions)		**December 31, 2013**	December 31, 2012
7.90%	1994 Series debentures, due February 24, 2014	**150**	150

Less: unamortized debt discount		**3**	3
Add: commercial paper		**336**	374
Total debt		**2,873**	2,661
Less: current maturities of long-term debt		**150**	–
Less: commercial paper		**336**	374
Total long-term debt		**2,387**	2,287

The Company's long-term debt is unsecured. Principal repayment requirements on long-term debt are as follows:

($millions)	**Total**	**2014**	**2015**	**2016**	**2017**	**2018**	**Thereafter**
Long-term debt [(a)]	2,537	150	150	200	125	400	1,512

[(a)] Excludes commercial paper of $336 million.

Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants including a limitation on the payment of dividends. As of December 31, 2013 and 2012, the Company is in compliance with all such covenants.

Total interest expense on long-term debt in 2013 was $155 million (2012 – $150 million).

Available Credit Facility and Restrictive Debt Covenants

			Commercial Paper Outstanding at	
($millions)	**Expiration Date**	**Credit Facility Capacity**	**December 31, 2013**	December 31, 2012
Multi-year syndicated [(a)]	2016	400	336	374

[(a)] The credit facility contains a covenant requiring the debt-to-total capitalization ratio to not exceed 75% and a provision which requires the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. The ratio was 67% at December 31, 2013 (2012 – 68%).

The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under the credit facility. As of December 31, 2013 and 2012 there were no letters of credit issued under the revolving credit facility or revolving borrowings outstanding. A majority of the Company's short-term cash requirements are funded through the issuance of commercial paper. The weighted average rate on outstanding commercial paper as of December 31, 2013 was 1.14% (2012 – 1.12%). The weighted average days to maturity on outstanding commercial paper as of December 31, 2013 was 10 days (2012 – 8 days).

The Company's credit agreement contains various financial and other covenants, including the maintenance of certain financial ratios. Failure to meet those covenants beyond applicable grace periods could result in accelerated due dates and/or termination of the agreement. As of December 31, 2013 and 2012, the Company was in compliance with those covenants. In addition, the credit agreement allows for the acceleration of payments or termination of the agreement due to non-payment, or in some cases, due to the acceleration of other significant indebtedness of the borrower or some of its subsidiaries.

Total interest expense on short-term debt in 2013 was $3 million (2012 – $4 million).

7. Preferred Stock

		Outstanding			
	Authorized	**December 31, 2013**	December 31, 2012	**December 31, 2013**	December 31, 2012
	(shares)	*(shares)*		*($millions)*	
Class A	202,072				
5.5% Series A		**47,672**	47,672	**3**	3
6% Series B		**90,000**	90,000	**5**	5
5% Series C		**49,500**	49,500	**2**	2
4.88% Class B, Series 10	Unlimited	**4,000,000**	4,000,000	**100**	100
				110	110

The Class A, Series A and C Preferred stock are cumulative and redeemable at $50.50 per share. The Company is obligated to offer to purchase $170,000 of Series A and $140,000 of Series C shares annually at the lowest price obtainable, but not exceeding $50 per share.

The Class A, Series B Preferred stock are cumulative and redeemable at $55 per share at the option of the Company.

The Class B, Series 10 Preferred stock are cumulative and redeemable at $25 per share at the option of the Company and, at the option of the holders, convertible back into Series 11 shares once every five years commencing January 1, 2014. The holders of the Class B, Series 10 Preferred stock did not exercise their option on January 1, 2014 and their next optional conversion date is January 1, 2019. Union Gas may redeem at any time all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2018.

The Company has an unlimited number of authorized 4.79% Class B, Series 11 Preferred stock. These shares are cumulative and redeemable at $25 per share at the option of the Company, and at the option of the holders, convertible back into Series 10 shares every five years. At December 31, 2013 and December 31, 2012 none of these shares were issued or outstanding.

The shares are not subject to any sinking fund or mandatory redemption and are not convertible into any other type of securities other than preferred stock. As these shares are not solely in the control of the Company, they have been classified as temporary equity on the Consolidated Balance Sheets.

8. Asset Retirement Obligations

The Company's AROs relate to the legal obligation to disconnect, purge and cap abandoned pipelines, capping abandoned storage wells, and in some buildings, special handling and disposition of asbestos if it is disturbed.

The Company has non-asbestos AROs which include easements and some railway license agreements relating to pipeline assets located on land which the Company does not own. The Company has not recognized a liability in regard to the non-asbestos ARO because the fair value of the ARO cannot be reasonably estimated. The Company's pipeline system is considered a critical component of its business and is expected to be maintained and remain in place indefinitely. Natural gas supplies are also considered sufficient for the Company to operate in the long-term. The Company has determined that sufficient information to estimate the fair value of an ARO is not available because the assets are considered permanent with indeterminate useful lives and that sufficient information is not available to estimate a range of potential settlement dates in order to employ a present value technique to estimate fair value.

AROs are adjusted each period for liabilities incurred or settled during the period, accretion expense and any revisions made to the estimated cash flows.

During the year, the Company revised its estimated future cash flow assumptions resulting in an ARO increase of $183 million, with an offsetting increase of $115 million to Property, plant and equipment – cost, and $31 million to Accumulated depreciation and amortization and a decrease of $99 million to Regulatory and other liabilities. The cash flow change assumptions were substantially related to the expected future cost of abandoning distribution service pipelines.

Reconciliation of Changes in Asset Retirement Obligation Liabilities

($millions)	**December 31, 2013**	December 31, 2012
Balance, beginning of year	**143**	134
Accretion expense	**7**	7
Liabilities settled	**(5)**	(1)
Revisions in estimated cash flows	**183**	3
Balance, end of year	**328**	143

9. Stock-Based Compensation

Under the Long Term Incentive Share Option Plan 1989 (1989 Plan), the Company's parent company, Westcoast has granted certain stock options to its employees, including employees of Union Gas. Stock options are granted at an exercise price that equals the market price as defined in the 1989 Plan of Westcoast's shares on the date of grant. The 1989 Plan also provides for share appreciation rights under which the holder of a stock option may, in lieu of exercising the option, exercise the share appreciation right.

The Spectra Energy 2007 Long-Term Incentive Plan (the 2007 LTIP), as amended and restated, provides for the granting of stock options, restricted stock awards and units, unrestricted stock awards and units, and other equity-based awards, to employees and other key individuals who perform services for Spectra Energy. A maximum of 40 million shares of common stock may be awarded under the 2007 LTIP. Union Gas employees participate in the 2007 LTIP.

Restricted, performance and phantom stock awards granted under the 2007 LTIP typically become 100% vested on the three-year anniversary of the grant date. The equity-classified and liability-classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability-classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests, the date the employee becomes retirement-eligible, or the date the award market condition is met.

Options granted under the 2007 LTIP are issued with exercise prices equal to the fair market value of Spectra Energy common stock on the grant date, have ten year terms and generally vest over a three year term. Compensation expense related to stock options is recognized over the requisite service period. The requisite service period for stock options is the same as the vesting period, with the exception of retirement eligible employees, who have shorter requisite service periods ending when the employees become retirement eligible. Spectra Energy issues new shares upon exercising or vesting of share-based awards. The Black-Scholes option-pricing model is used to estimate the fair value of options at grant date. All outstanding stock options are fully vested and, as a result, the Company does not expect to recognize future compensation costs related to stock options.

Spectra Energy allocated pre-tax stock-based compensation expense included in continuing operations to Union Gas for 2013 and 2012 as follows, the components of which are further described below:

($millions)	**2013**	2012
Phantom stock	**1**	1
Performance awards	**2**	1
Total	**3**	2

The Company recognized a nominal tax benefit in Net income associated with stock-based compensation expense in both 2013 and in 2012.

Stock Options

	Options	**Weighted-Average Exercise Price U.S. $**	**Weighted-Average Remaining Life (in years)**	**Aggregate Intrinsic Value (millions U.S.$)**
Outstanding, beginning of year	87,900	25	3.8	–
Exercised	(5,650)	12		
Forfeited	(1,250)	12		
Outstanding, end of year	81,000	26	3.2	1
Options exercisable at year-end	81,000	26	3.2	1

The Company did not award non-qualified stock options to employees during 2013 or 2012. As of December 31, 2013 all stock options are fully vested, and as a result, the Company does not expect to recognize future compensation costs related to stock options.

Stock Awards

	Performance Awards		**Phantom Stock Awards**	
	Units	**Weighted-Average Grant Date Fair Value U.S. $**	**Units**	**Weighted-Average Grant Date Fair Value U.S. $**
Outstanding, beginning of year	136,435	28	105,089	26
Transfers out	(1,900)	27	(1,200)	29
Granted	57,200	37	36,400	30
Vested	(40,967)	31	(38,778)	21
Forfeited	(8,760)	31	(5,894)	30
Outstanding, end of year	142,008	39	95,617	29
Awards expected to vest	138,870	39	93,229	29

Performance Awards

Under the 2007 LTIP, the Company can also grant stock-based and cash-based performance awards. The performance awards generally vest over three years at the earliest, if performance metrics are met. The cash-based awards will be settled in cash at vesting. The Company granted 28,600 stock-based awards in 2013 and 24,300 stock-based awards in 2012, with fair values of U.S. $1 million for each of the grants to employees. The Company granted 28,600 cash-based awards in 2013 and 24,300 cash-based awards in 2012, with fair values of U.S. $1 million in 2013 and less than U.S. $1 million in 2012. The unvested and outstanding performance awards granted contain market conditions based on the total shareholder return of Spectra Energy common stock relative to a pre-defined peer group. The stock-based and cash-based awards are valued using the Monte Carlo valuation method. The cash-based awards are re-measured at each reporting period until settlement.

Weighted-Average Assumptions for Stock-Based Performance Awards

	2013	2012
Risk free interest rate	**0.4%**	0.4%
Expected life (years)	**3**	3
Expected volatility Spectra Energy	**21.0%**	25.1%
Expected volatility Peer Group	**13.3 – 32.8%**	15.8 – 41.5%
Market Index	**16.3%**	20.3%

The risk-free rate of return was determined based on a yield of three year U.S. Treasury bonds on the grant date. The expected volatility was established based on historical volatility over three years using daily stock price observations. A shorter period was used if three years of data was not available. Because the award payout includes dividend equivalents, no dividend yield assumption is required.

The total fair value of the performance awards vested was U.S. $1 million in both 2013 and 2012. As of December 31, 2013, the Company expects to recognize U.S. $2 million of future compensation cost related to performance awards over a weighted-average period of less than two years.

Phantom Stock Awards

Stock-based phantom awards granted under the 2007 LTIP generally vest over three years. The Company awarded 36,400 phantom awards in 2013 and 29,900 phantom awards in 2012, with fair values of U.S. $1 million in both 2013 and 2012.

The total fair value of the phantom awards vested was U.S. $1 million in both 2013 and 2012. As of December 31, 2013, the Company expects to recognize U.S. $1 million of future compensation cost related to phantom awards over a weighted-average period of less than two years.

10. Fair Value Measurements

Financial instruments recorded at fair value on the Consolidated Balance Sheets are valued using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

Level 1

Level 1 valuations represent quoted unadjusted prices for identical instruments in active markets.

Level 2 Valuation Techniques

Fair values of the Company's financial instruments that are actively traded in the secondary market are determined based on market-based prices. These valuations may include inputs such as quoted market prices of the exact or similar instruments, broker or dealer quotations, or alternative pricing sources that may include models or matrix pricing tools, with reasonable levels of price transparency. The fair value of the Company's pension plan assets designated as Level 2 financial instruments is determined through the market approach valuation technique using observable inputs including matrix pricing and market corroborated pricing.

Level 3 Valuation Techniques

Level 3 valuation techniques include the use of pricing models, discounted cash flow methodologies or similar techniques where at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. The fair value of the Company's pension plan assets designated as Level 3 financial instruments is determined through the market approach valuation technique using unobservable inputs including investment manager pricing for private placements and private equities.

Financial Instruments

The fair values of financial instruments that are recorded and carried at book value are summarized in the following table. Judgment is required in interpreting market data to develop the estimates of fair value. These estimates are not necessarily indicative of the amounts that could have been realized in current markets.

	December 31, 2013		December 31, 2012	
($millions)	**Book Value**	**Fair Value**	Book Value	Fair Value
Long-term debt, including current maturities[(a)]	**2,540**	**2,877**	2,290	2,844

[(a)] Excludes unamortized items.

The fair value of the Company's Long-term debt is determined based on market-based prices as described in the Level 2 valuation technique described above.

The fair values of Cash and cash equivalents, Accounts receivable, net, Accounts payable and accrued charges, Short-term borrowings and Commercial paper are not materially different from their carrying amounts because of the short-term nature of these instruments or because the stated rates approximate market rates.

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligation. The maximum exposure to credit risk of the Company at period end is the carrying value of its financial assets. The Company's principal customers for natural gas transportation and storage services are industrial end-users, marketers, local distribution companies and utilities. The Company's distribution customers are primarily industrial and residential end-users. These concentrations of customers may affect the Company's overall credit risk.

The Company, in the normal course of its operations, provides gas loans to other parties from its holdings of gas in storage. The replacement amount of gas loans at December 31, 2013 is $132 million receivable (2012 – $61 million receivable). The Company manages its credit exposure related to gas loans by subjecting these parties to the same credit policies it uses for all customers, and obtaining collateral when appropriate.

The Company manages its credit risk on Cash and cash equivalents by dealing solely with reputable banks and financial institutions. To manage its credit risk on Accounts receivable, net the Company performs ongoing credit reviews of all its customers. In cases where the credit quality of a customer does not meet the Company's requirements, a cash deposit, letter of credit or parental guarantee is required. Deposits held by the Company at December 31, 2013 amounted to $35 million (2012 – $40 million). Significant financial difficulties of the debtor, the probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the account receivable may be uncollectible and therefore should be included in the allowance for doubtful accounts.

The Company continues to utilize its established risk management policies and procedures to ensure the appropriate monitoring of customer credit positions and, based on current evaluations, does not expect any significant negative impacts associated with these positions.

The following table sets forth details of the age of trade receivables that are not impaired as well as the allowance for the doubtful accounts:

($millions)	**December 31, 2013**	December 31, 2012
Current	**300**	249
30 Days over due	**11**	9
60 Days over due	**4**	3
90+ Days over due	**7**	6
Total trade accounts receivable	**322**	267
Allowance for doubtful accounts	**(6)**	(5)
Total trade accounts receivable, net[12]	**316**	262

For the years ended December 31, 2013 and 2012, no one customer accounted for more than 10% of sales or 10% of receivables.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has credit facilities available to help meet short-term financing needs (note 6).

The following are the contractual maturities of the undiscounted cash flows of financial liabilities as at December 31, 2013:

($millions)	**Total**	**2014**	**2015 – 2016**	**2017 – 2018**	**Thereafter**
Commercial paper	336	336	–	–	–
Accounts payable and accrued charges	874	874	–	–	–
Long-term debt (including principal and interest)	4,437	300	618	741	2,778
Total	5,647	1,510	618	741	2,778

11. Employee Benefit Plans

Retirement Plans

The Company maintains registered and non-registered, contributory and non-contributory defined benefit (DB Plans) and defined contribution (DC Plan) retirement plans covering substantially all employees. The DB Plans provide retirement benefits based on each plan participant's years of service and final average earnings. Under the DC Plan, company contributions are determined according to the terms of the plan and based on each plan participant's age, years of service and current eligible earnings. The Company also provides non-registered DB Plans to all employees who retire under a registered DB Plan and whose pension is limited by the maximum pension limits under the Income Tax Act.

The Company's policy is to fund the retirement plans, where applicable, on an actuarial basis to provide assets sufficient to meet benefits to be paid to plan participants or as required by legislation or plan terms. Total contributions to the DB Plans were $54 million in 2013 and $59 million in 2012. Contributions of $6 million in 2013 and $5 million in 2012 were made to the Company's DC Plan. The Company anticipates that in 2014 it will make total contributions of approximately $20 million to its DB Plans and $6 million to its DC Plan.

Actuarial gains and losses are amortized over the average remaining service period of active employees. The average remaining service periods of active employees covered by the registered and non-registered DB Plans is

[12] The carrying amount of accounts receivable is impacted by changes in gas prices, which may fluctuate significantly from year to year.

10 years. The Company determines the market-related value of plan assets using a calculated value that recognizes changes in fair value of the plan assets over three years.

Registered and Non-registered Pension Plans

Change in Projected Benefit Obligation and Change in Fair Value of Plan Assets

($millions)	**2013**	2012
Change in Projected Benefit Obligation		
Projected benefit obligation, beginning of year	**787**	745
Service cost	**20**	18
Interest cost	**32**	32
Actuarial (gain) loss	**(60)**	21
Participant contributions	**3**	3
Benefits paid	**(34)**	(32)
Projected benefit obligation, end of year	**748**	787
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	**658**	591
Actual return on plan assets	**80**	37
Benefits paid	**(34)**	(32)
Employer contributions	**54**	59
Plan participants' contributions	**3**	3
Plan assets, end of year	**761**	658
Net amount recognized[a]	**13**	(129)
Accumulated Benefit Obligation	**707**	734

[a] At December 31, 2013 the Consolidated Balance Sheets includes $47 million of non-current pension assets recognized in Regulatory and other assets, $33 million of non-current pension liabilities in Regulatory and other liabilities, and $1 million of current pension liabilities in Accounts payable and accrued charges.

The table above includes non-registered pension plans that are not funded and had projected benefit obligations of $34 million at December 31, 2013 and $36 million at December 31, 2012. At December 31, 2013 there were no registered DB plans with accumulated benefit obligations in excess of plan assets. Non-registered DB plans with accumulated benefit obligations in excess of plan assets had projected benefit obligations of $34 million and accumulated benefit obligations of $32 million.

Amounts Recognized in Accumulated Other Comprehensive Income (AOCI)

($millions)	**December 31, 2013**	December 31, 2012
Net actuarial loss	**210**	328
Prior service costs	**6**	8
Total amounts recognized in AOCI, pre-tax	**216**	336

Components of Net Periodic Pension Costs

($millions)	**2013**	2012
Net Periodic Pension Cost		
Service cost benefit earned	**20**	18
Interest cost on projected benefit obligation	**32**	32
Expected return on plan assets	**(47)**	(43)
Amortization of prior service cost	**2**	2
Amortization of loss	**25**	26
Net periodic pension cost	**32**	35
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial (gain) loss	**(93)**	27
Amortization of actuarial loss	**(25)**	(26)
Amortization of prior service cost	**(2)**	(2)
Total recognized in other comprehensive income	**(120)**	(1)
Total Recognized in Net Periodic Pension Cost and Other Comprehensive Income	**(88)**	34

At December 31, 2013, approximately $18 million of actuarial losses will be amortized from AOCI on the Consolidated Balance Sheets into net periodic pension cost in 2014.

At December 31, 2013, approximately $2 million of prior service costs will be amortized from AOCI on the Consolidated Balance Sheets into net periodic pension costs in 2014.

Assumptions Used for Pension Benefits Accounting

	2013	2012
Benefit Obligations		
Discount rate	**4.81%**	4.15%
Salary increase	**3.25%**	3.25%
Net Periodic Benefit Cost		
Discount rate	**4.15%**	4.30%
Salary increase	**3.25%**	3.25%
Expected long-term rate of return on plan assets	**7.10%**	7.10%

The discount rates used to determine the benefit obligations are the rates at which the benefit obligations could be effectively settled. The discount rates are developed from yields on available high-quality bonds and reflect each plan’s expected cash flows.

The long-term rates of return for the plan assets as of December 31, 2013 were developed using weighted-average calculations of expected returns based primarily on future expected returns across classes considering the use of active asset managers applied against the plans’ respective targeted asset mix.

Registered Pension Plan Assets

Asset Category	Target Allocation	**December 31, 2013**	December 31, 2012
U.S. equity securities	14%	**18%**	14%
Canadian equity securities	28%	**26%**	28%
Other equity securities	13%	**13%**	13%
Fixed income securities	45%	**43%**	45%
Total	100%	**100%**	100%

Pension plan assets are maintained in a master trust. The investment objective of the master trust is to achieve reasonable returns on trust assets, subject to a prudent level of portfolio risk, for the purpose of enhancing the security of benefits for plan participants. The asset allocation targets were set after considering the investment objective and the risk profile with respect to the trust. Equities are held for their high expected return. Other equity and fixed income securities are held for diversification. Investments within asset classes are diversified to achieve broad market participation and reduce the effects of individual managers or investments. The Company regularly reviews its actual asset allocation and periodically rebalances its investments to the targeted allocation when considered appropriate.

The following table summarizes the fair values of pension plan assets recorded at each fair value hierarchy level, as determined in accordance with the valuation techniques described in note 10:

($millions)	**Total**	**Level 1**	**Level 2**	**Level 3**
December 31, 2013				
Cash and cash equivalents	4	4	–	–
Fixed income securities	324	324	–	–

Other	–	–	–	–
Total	761	642	119	–
December 31, 2012				
Cash and cash equivalents	4	4	–	–
Fixed income securities	297	287	10	–
Equity securities	356	258	98	–
Other	1	–	–	1
Total	658	549	108	1

Expected Benefit Payments

($millions)	**2014**	**2015**	**2016**	**2017**	**2018**	**2019 – 2023**
Expected benefit payments	36	38	40	42	43	228

Other Post-Retirement Benefit Plans

The Company provides health care and life insurance benefits for retired employees on a non-contributory basis predominantly under defined contribution plans. Employees are eligible for these benefits if they have met age and service requirements at retirement, as defined in the plans. The other post-retirement benefit plans are not funded.

Other Post-Retirement Benefit Plans – Change in Projected Benefit Obligation and Fair Value of Plan Assets

($millions)	**2013**	2012
Change in Benefit Obligation		
Accumulated post-retirement benefit obligation, beginning of year	**67**	81
Service cost	**2**	3
Interest cost	**3**	3
Actuarial gain	**(5)**	(17)
Benefits paid	**(3)**	(3)
Accumulated post-retirement benefit obligation, end of year	**64**	67
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	–	–
Benefits paid	**(3)**	(3)
Employer contributions	**3**	3
Plan assets, end of year	–	–
Net amount recognized[a]	**64**	67

[a] $61 million is recognized in Regulatory and other liabilities and $3 million is recognized in Accounts payable and accrued charges on the Consolidated Balance Sheets.

Other Post-Retirement Benefit Plans – Amounts Recognized in AOCI

($millions)	**December 31, 2013**	December 31, 2012
Net actuarial loss recognized in AOCI	**3**	8

($millions)	**2013**	2012
Other Post-Retirement Benefit Plans – Components of Net Periodic Benefit Cost		
Service cost benefit earned	**2**	3
Interest cost on accumulated post-retirement benefit obligation	**3**	3
Amortization of loss	–	1
Net periodic other post-retirement benefit cost	**5**	7
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial gain	**(5)**	(17)
Amortization of actuarial loss	–	(1)
Total recognized in other comprehensive income	**(5)**	(18)
Total recognized in Net Periodic Benefit Cost and Other Comprehensive Income	–	(11)

Other Post-Retirement Benefits Plans – Assumptions Used for Benefits Accounting

	2013	2012
Benefit Obligations		
Discount rate for post-retirement plans	**4.83%**	4.20%
Salary increase	**3.25%**	3.25%
Net Periodic Benefit Cost		
Discount rate for post-retirement plans	**4.20%**	4.33%
Salary increase	**3.25%**	3.25%

The discount rates used to determine the post-retirement obligations are the rates at which the benefit obligations could be effectively settled. The discount rates for the plans are developed from yields on available high-quality bonds in each country and reflect each plan's expected cash flows.

Assumed Health Care Cost Trend Rates

	2013	2012
Health care cost trend rate assumed for next year	**6.50%**	7.00%
Rate to which the cost trend rate is assumed to decline	**5.00%**	5.00%
Year that the rate reaches the ultimate trend rate	**2017**	2017

Sensitivity to Changes in Assumed Health Care Cost Trend Rates

($millions)	**1% Point Increase**	1% Point Decrease
Effect on total service and interest costs	**1**	–
Effect on post-retirement benefit obligations	**5**	(4)

Other Post-Retirement Benefit Plans – Payments and Receipts

The Company expects to make future benefit payments, which reflect expected future service, as appropriate. The following benefit payments are expected to be paid over each of the next five years and thereafter.

($millions)	**2014**	**2015**	**2016**	**2017**	**2018**	**2019 – 2023**
Expected benefit payments	3	3	3	3	4	19

Savings Plan

The Company has employee savings plans available to eligible employees. Employees may participate in a matching contribution where the Company matches a certain percentage of before-tax employee contributions of up to 5% of eligible pay per pay period. The Company expensed pre-tax employer matching contributions of $8 million in 2013 and $7 million in 2012.

12. Income Taxes

Income Tax Expense Components

($millions)	**2013**	2012
Current		
Federal	**12**	30
Provincial	**6**	18
Total current tax expense	**18**	48
Deferred		
Federal	**2**	(7)
Provincial	**1**	(1)
Total deferred tax expense	**3**	(8)
Total Income taxes	**21**	40

Reconciliation of Income Tax Expense at the Combined Federal and Ontario Statutory Tax Rate to Actual Income Tax Expense

($millions)	**2013**	2012
Income before income taxes	**228**	210
Statutory income tax rate	**26.5%**	26.5%
Statutory income tax rate applied to accounting income	**60**	55
Increase/(decrease) resulting from:		
Deferred tax expense resulting from Ontario tax rate change	–	4
Enacted Canadian federal income tax legislation[a]	**(16)**	–
Deferred income tax adjustments related to rate regulated operations	**(23)**	(23)
Other – net	–	4
Total income tax expense	**21**	40
Effective rate of income tax	**9.2%**	19.0%

[a] Due to the recognition of tax benefits associated with favourable Canadian federal income tax legislation enacted on June 26, 2013 (Enacted Legislation). The Enacted Legislation contained changes that resulted in increased tax deductions and has a beneficial impact for the tax years 2008 and forward.

Net Deferred Income Tax Liability Components

($millions)	**December 31, 2013**	December 31, 2012
Deferred income tax liabilities		
Accelerated depreciation rates	**328**	316
Regulatory asset	**86**	79
Other	**(6)**	(43)
Total deferred income tax liabilities	**408**	352
Deferred income tax assets		
Reserves	–	11
Regulatory liability	**2**	2
Other	**1**	1
Total deferred income tax assets	**3**	14
Net deferred income tax liabilities	**405**	338

The above deferred tax amounts have been classified in the Consolidated Balance Sheets as follows:

($millions)	**December 31, 2013**	December 31, 2012
Current assets	**3**	14
Long-term liabilities	**(408)**	(352)
	(405)	(338)

Reconciliation of Gross Unrecognized Income Tax Benefits

($millions)	**December 31, 2013**	December 31, 2012
Balance, beginning of year	**26**	22
Increases related to prior year tax positions	**2**	3
Decreases related to prior year tax positions	**(13)**	–
Increases related to current year tax positions	**1**	1
Audit settlements	**(1)**	–
Reductions due to lapse of statute of limitations	**(4)**	–
Balance, end of year	**11**	26

Unrecognized tax benefits totalled $11 million at December 31, 2013. Of this, $2 million would reduce the effective tax rate if recognized on or after January 1, 2014. The Company recorded a decrease of $15 million in gross unrecognized tax benefits during 2013. This resulted in a $15 million decrease in tax expense.

The Company recognized potential accrued interest related to unrecognized tax benefits as interest expense. A $2 million credit was recorded to interest expense in 2013 compared to a $1 million expense in 2012. Accrued interest totalled $2 million at December 31, 2013 and $4 million at December 31, 2012.

Although uncertain, the Company believes it is reasonably possible that the total amount of unrecognized tax benefits could decrease by $5 million prior to December 31, 2014. The anticipated changes in unrecognized tax benefits relate to the expiration of statutes of limitations and expected audit settlements.

The Company remains subject to examination for income tax returns for years 2009 through 2012.

13. Related Party Transactions

The Company purchases gas, storage and transportation services at prevailing market prices and under normal trade terms from related parties. During 2013, these purchases totalled $83 million (2012 – $41 million). The Company also provides storage and transportation services to related parties which totalled $1 million during 2013 (2012 – $1 million).

The Company provided administrative, management and other services to related parties totalling $13 million during 2013 (2012 – $14 million), which were billed and recovered at cost. Charges from related parties for administrative and other goods and services were $11 million during 2013 (2012 – $10 million).

At December 31, 2013 the Company had receivable balances of $5 million (2012 – $4 million) and payable balances of $29 million (2012 – $10 million) with related parties, all of which are recorded in Accounts receivable, net and Accounts payable and accrued charges, respectively.

In the normal course of operations, the Company provides or obtains funds from Westcoast on an unsecured basis. There was no balance outstanding on these loans at December 31, 2013 (2012 – $9 million payable). During 2013, interest paid on these loans totalled less than $1 million (2012 – less than $1 million) and interest received on these loans totalled less than $1 million (2012 – $nil). Interest on these loans is calculated based on the monthly average of 30-day banker’s acceptance rates.

In May 2013, the Company signed a promissory note to borrow up to $150 million from GLBE on an unsecured basis. Funds from this promissory note are used for general corporate purposes. There was no balance outstanding at December 31, 2013. During 2013, interest paid on amounts owing totalled less than $1 million. Interest on amounts owing is calculated based on the monthly average of 30-day banker’s acceptance rates.

In addition, the Company made dividend payments to GLBE of $149 million during 2013 (2012 – $162 million).

14. Guarantees

The Company has various financial guarantees which are issued in the normal course of business. The Company enters into these arrangements to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Consolidated Balance Sheets. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company’s potential exposure under these agreements can range from a specific dollar amount to an unlimited dollar amount depending on the nature of the claim and the particular transaction. The Company is unable to estimate the total potential amount of future payments under these agreements due to several factors, such as unlimited exposure under certain guarantees.

15. Contingencies

The Company, in the course of its operations, is subject to environmental and other claims, lawsuits and contingencies. Accruals are made in instances where it is probable that liabilities will be incurred and where such liabilities can be reasonably estimated. The Company has no reason to believe that the ultimate outcome of these matters could have a significant impact on its Consolidated Financial Statements.

16. Subsequent Events

Management has evaluated significant events and transactions that occurred from January 1, 2014 through March 11, 2014, the date the financial statements were filed, and no subsequent events requiring disclosure were noted.

The Consolidated Financial Statements and all information in this report have been prepared by and are the responsibility of management. The Consolidated Financial Statements have been prepared in conformity with generally accepted accounting principles in the United States and include certain estimated amounts, which are based on informed judgements to ensure fair representation in all material respects. When alternative accounting methods exist, management has chosen those it considers most appropriate.

Management depends upon Union Gas' system of internal controls and formal policies and procedures to ensure the consistency, integrity and reliability of accounting and financial reporting, and to provide reasonable assurance that assets are safeguarded and that transactions are properly executed in accordance with management's authorization. Management is also supported and assisted by a program of internal audit services.

The Board of Directors is responsible for ensuring that management fulfils its responsibility for financial reporting and for final approval of the Consolidated Financial Statements.

The Board of Directors meets regularly with management, the internal auditors and the shareholders' auditors to review the Consolidated Financial Statements, the Independent Auditor's Report and other auditing and accounting matters to ensure that each group is properly discharging its responsibilities.

The shareholders' auditors have full and free access to the Board of Directors, as does the Director of Internal Audit Services.

Deloitte LLP performed an independent audit of the 2014 and 2013 Consolidated Financial Statements in this report. Their independent professional opinion on the fairness of these Consolidated Financial Statements is included in the Independent Auditor's Report.

Independent Auditor's Report

To the Shareholders of
Union Gas Limited

We have audited the accompanying consolidated financial statements of Union Gas Limited, which comprise the consolidated balance sheets as at December 31, 2014 and December 31, 2013, and the consolidated statements of operations and comprehensive income, consolidated statements of equity, and consolidated statements of cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of Union Gas Limited as at December 31, 2014 and December 31, 2013 and its financial performance and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

UNION GAS LIMITED
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
DECEMBER 31, 2014 AND 2013

1. Summary of Operations and Significant Accounting Policies

The terms ("Union Gas" or "the Company") as used in these Consolidated Financial Statements refer collectively to Union Gas Limited and its subsidiary unless the context suggests otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Union Gas. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (Westcoast). Westcoast is an indirect wholly-owned subsidiary of Spectra Energy Corp (Spectra Energy).

Nature of Operations

Union Gas owns and operates natural gas distribution, storage and transmission facilities in Ontario. The Company distributes natural gas to customers in northern, southwestern and eastern Ontario and provides natural gas storage and transportation services for other utilities and energy market participants. The property, plant and equipment of the Company consist primarily of pipeline, storage and compression facilities used in the distribution, storage and transportation of natural gas.

Basis of Presentation

The Consolidated Financial Statements of the Company include the accounts of the Company and its subsidiary, Huron Tipperary Limited Partnership I (HTLP), of which the Company owns 75%. Subsequent to the year-end, the Company acquired the remaining 25% of HTLP. See note 16 for further information.

The Consolidated Financial Statements of the Company have been prepared in accordance with generally accepted accounting principles in the United States (U.S. GAAP). All amounts are presented in millions of Canadian dollars except where noted.

In February 2014, Canadian securities regulators approved the extension of the Company's exemptive relief to continue reporting under U.S. GAAP instead of International Financial Reporting Standards (IFRS) until the earlier of January 1, 2019, and the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation.

Use of Estimates

The preparation of the Consolidated Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Actual amounts could differ from these estimates.

Regulation

The Company is regulated by the Ontario Energy Board (OEB) pursuant to the provisions of the *Ontario Energy Board Act, (1998)*, which is part of a package of legislation known as the *Energy Competition Act, (1998)*. This legislation provides an opportunity for different forms of regulation and increased competition in the energy (electricity and natural gas) industry in Ontario. The Company is subject to regulation with respect to the rates that it may charge its customers, system expansion or facility abandonment, adequacy of service, public safety aspects of pipeline system construction and certain accounting principles. The OEB has determined that it will forbear from regulating the prices for long-term storage services. The Storage Forbearance Decision created an unregulated storage operation within the Company and provides the framework required to support new storage investments.

The OEB is mandated to approve rates that are just and reasonable. Utility earnings are regulated by the OEB under cost of service regulation, on the basis of a return on rate base for a future period. Under cost of service regulation, a rate application process leads to the implementation of new rates intended to provide a utility with the opportunity to earn an allowed rate of return. The actual rate of return achieved by the Company may vary from the rate allowed by the OEB as a result of unexpected changes in weather, average use per customer, inflation, the price of competing fuels, interest rates, general economic conditions and its ability to achieve forecasted revenues and manage costs.

Rates effective January 1, 2013 were approved by the OEB on the basis of the traditional cost of service framework. Effective January 1, 2014, the Company began a five year incentive regulation term. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts.

The Company follows U.S. GAAP, which may differ for regulated operations from those otherwise expected in non rate-regulated businesses. As a result, the Company records assets and liabilities that result from the regulated ratemaking process that may not be recorded under U.S. GAAP for non rate-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because they are probable of future recovery in customer rates. Regulatory liabilities generally represent obligations to make refunds to customers for previous collections for costs that are not likely to be incurred. Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as applicable regulatory changes and recent rate orders to other regulated entities. Management believes the existing regulatory assets are probable of recovery. This determination reflects the current political and regulatory climate at the provincial and national levels, and is subject to change in the future. If future recovery of costs ceases to be probable, the asset write-offs could be recognized in current period earnings.

Revenue Recognition

Revenues from the transportation, storage, distribution and sales of natural gas are recognized when either the service is provided or the product is delivered and collection is reasonably assured. Revenues related to these services provided or products delivered but not yet billed are estimated each month.

Gas Sales and Cost of Gas

Gas sales revenue is recorded on the basis of regular meter readings and estimates of customer volume usage since the last meter reading date to the end of the reporting period applied using OEB approved rates. Cost of gas is recorded using amounts approved by the OEB in the determination of customer sales rates. Differences between the OEB approved reference amounts and those costs actually incurred are deferred on the Consolidated Balance Sheets for future disposition subject to approval by the OEB.

In determining the quantities of gas delivered and received, differences arise from the measurement process. The Company includes in the Cost of gas an estimated amount of these differences based upon the methodology used by the OEB in the determination of rates for storage, transmission and distribution of gas. Annual fluctuations from the estimated level are recognized in earnings during the year.

As part of the Company's OEB-approved incentive regulation framework, an earnings sharing mechanism exists whereby earnings above an allowable return on equity are shared with ratepayers as a reduction in earnings during the year, if applicable.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term investments, with an original maturity of three months or less.

Income Taxes

Deferred income taxes are recognized for differences between the financial reporting and tax bases of assets and liabilities at enacted statutory tax rates in effect for the years in which the differences are expected to reverse. The effect on deferred taxes of a change in tax rates is recognized in income in the period that includes the enactment date. Actual income taxes could vary from these estimates due to the future changes in income tax law or results from the final review of tax returns by federal and provincial tax authorities.

Financial statement effects on tax positions are recognized in the period in which it is more likely than not that the position will be sustained upon examination, the position is effectively settled or when the statute of limitations to challenge the position has expired. Interest related to the unrecognized tax benefits is recorded as Interest expense.

Inventories

Gas in storage for resale to customers is carried at weighted average cost approved by the OEB in the determination of customer sales rates. The difference between the approved cost and the actual cost of the gas purchased is deferred on the Consolidated Balance Sheets for future disposition subject to approval by the OEB. Inventories of materials and supplies are valued at the lower of average cost or net realizable value.

Property, Plant and Equipment and Depreciation

Property, plant and equipment is stated at historical cost less accumulated depreciation and amortization. The Company capitalizes all construction-related direct labour and material costs, as well as indirect construction costs. Indirect costs include general engineering and the cost of funds used during construction. The costs of renewals and betterments that extend the useful life or increase the expected output of property, plant and equipment are also capitalized. The cost of repairs, replacements and major maintenance projects that do not extend the useful life or increase the expected output of property, plant and equipment are expensed as incurred.

Regulated depreciation is computed based on the asset's average service life using the straight-line method. Unregulated depreciation is computed based on management's assumption of useful life using the straight-line method.

When regulated property, plant and equipment is retired, the original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation and amortization. When entire regulated operating units are sold or non-regulated property, plant and equipment is retired, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced. Any gain or loss is recorded in earnings, unless otherwise required by the applicable regulatory body.

Asset Retirement Obligations

The Company recognizes asset retirement obligations (AROs) for legal commitments associated with the retirement of long-lived assets that result from the acquisition, construction, development and/or normal use of the asset and conditional AROs in which the timing or method of settlement are conditional on a future event that may or may not be within the Company's control. The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made and is added to the carrying amount of the associated asset. This additional carrying amount is depreciated over the estimated useful life of the asset.

Stock-Based Compensation

Union Gas employees participate in a stock-based compensation plan sponsored by Spectra Energy. For employee awards, equity-classified and liability-classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests, the date the employee becomes retirement-eligible, or the date the award market condition is met. Awards, including stock options, granted to employees that are already retirement-eligible are deemed to have vested immediately upon issuance, and therefore, compensation cost for those awards is recognized on the date such awards are granted.

Pension and Other Post-Retirement Benefits

The Company fully recognizes the overfunded or underfunded status of pension and other post-retirement benefit plans as Regulatory and other assets, Accounts payable and accrued charges, or Regulatory and other liabilities on the Consolidated Balance Sheets. A plan's funded status is the difference between the fair value of plan assets and the plan's benefit obligation. The Company records deferred plan costs and income (unrecognized losses and gains, and unrecognized prior service costs and credits) in Accumulated other comprehensive loss, until they are amortized to be recognized as a component of benefit expense within Operating and maintenance expenses in the Consolidated Statements of Operations and Comprehensive Income. See note 11 for further discussion.

New Accounting Pronouncements

In May 2014, the Financial Accounting Standards Board issued an Accounting Standards Update (ASU) on Revenue from Contracts with Customers, Topic 606, which supersedes the revenue recognition requirements of Topic 605, Revenue Recognition, and clarifies the principles of recognizing revenue. For the Company, this ASU is effective for the reporting period beginning January 1, 2017 and is to be applied retrospectively. The Company is currently evaluating the potential impact to the Consolidated Financial Statements. There were no significant accounting pronouncements adopted during 2014 that had a material impact on the Company's Consolidated Financial Statements.

2. Regulatory Matters

Regulatory Assets and Liabilities

The Company recorded the following assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities. See note 1 for further discussion.

($millions)	Financial Statement Location	**December 31, 2014**	December 31, 2013	Recovery/Settlement Period
Regulatory assets[a]				
Customer deferrals	Accounts receivable, net	**42**	44	Less than 1 year
Gas cost deferrals	Accounts receivable, net	**67**	—	Less than 1 year
Gas in storage inventory	Inventories	**8**	2	Less than 1 year
Other deferrals – long-term	Regulatory and other assets	**1**	2	2 – 4 years
Deferred income taxes – long-term[b]	Regulatory and other assets	**362**	327	2 years – exceeds remaining life of asset
Total regulatory assets		**480**	375	
Regulatory liabilities[a]				
Other deferrals – current[b]	Accounts payable and accrued charges	**7**	7	Less than 1 year
Customer deferrals	Accounts payable and accrued charges	**28**	55	Less than 1 year
Gas cost deferrals	Accounts payable and accrued charges	**—**	8	Less than 1 year
Asset removal costs[b]	Regulatory and other liabilities	**375**	376	Exceeds remaining life of asset
Total regulatory liabilities		**410**	446	

[a] All regulatory assets and liabilities are excluded from rate base unless otherwise noted.

[b] All or a portion of the balance is included in rate base.

The Company has regulatory assets of $362 million as of December 31, 2014 and $327 million as of December 31, 2013 related to deferred income tax liabilities. Under the current OEB-authorized rate structure, income tax costs are recovered in rates based on the current income tax payable and do not include accruals for deferred income tax. However, as income taxes become payable as a result of the reversal of timing differences that created the deferred income taxes, it is expected that rates will be adjusted to recover these taxes. Since substantially all of these timing differences are related to property, plant and equipment costs, recovery of these regulatory assets is expected to occur over the life of those assets.

The Company has regulatory liabilities associated with plant removal costs of $375 million as of December 31, 2014 and $376 million as of December 31, 2013. These regulatory liabilities represent collections from customers under approved rates for future asset removal activities that are expected to occur associated with its regulated facilities. During 2013, the Company revised the assumption regarding the expected future cost of abandoning distribution service pipelines resulting in a decrease to the regulatory liability of $99 million. Refer to note 8 for further details.

In addition, the Company has regulatory assets of $67 million as of December 31, 2014 and regulatory liabilities of $8 million as of December 31, 2013 representing gas cost collections from customers under approved rates that vary from the actual cost of gas for the associated periods. The Company files an application quarterly with the OEB to ensure that customers' rates are updated to reflect published forward-market prices. The difference between the approved and actual cost of gas is deferred for future repayment to or refund from customers.

Rate Related Information

The Company's distribution rates, beginning January 1, 2014 are set under a five-year incentive regulation framework. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts. The framework allows for:

- annual inflationary rate increases, offset by a productivity factor of 60% of inflation, such that the annual net rate escalator in each year is 40% of inflation,
- rate increases or decreases in the small volume customer classes where average use declines or increases,
- certain adjustments to base rates,
- the continued pass-through of gas commodity, upstream transportation and demand side management costs,
- the additional pass-through of costs associated with major capital investments and certain fuel variances,
- an allowance for unexpected cost changes that are outside of management's control,
- equal sharing of tax changes between the Company and its customers, and
- an earnings sharing mechanism that permits Union Gas to fully retain the return on equity from utility operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.

In September 2014, the Company filed an application with the OEB for new rates effective January 1, 2015 pursuant to the above framework. In December 2014, the OEB approved the application with an implementation date of January 1, 2015.

Annual Deferral Account Disposition

In November 2012, the OEB determined that revenues derived from the optimization of upstream transportation contracts in 2011 would be treated as a reduction to gas costs rather than being treated as optimization revenues and included in utility earnings. Optimization revenues had been classified as utility earnings for 2008, 2009 and 2010 and subsequently for 2012 as described in the following paragraph. This decision was appealed to the Ontario Divisional Court on the basis of impermissible retroactive ratemaking. The appeal was dismissed in December 2013. In May 2014, the Company filed a notice of appeal to the Ontario Court of Appeal and a hearing was held in December 2014. A decision from the Ontario Court of Appeal is expected in 2015.

In May 2013, the Company filed an application with the OEB for the annual disposition of the 2012 deferral account balances. A decision on that application was issued by the OEB in March 2014, resulting in a net benefit of $10 million to earnings. The OEB determined, among other things, that revenues derived from the optimization of upstream transportation contracts in 2012 will be treated as optimization revenues and included in utility earnings rather than a reduction to gas costs. As a result, the Company recognized revenue, net of earnings sharing, of $17 million on the Consolidated Statements of Operations and Comprehensive Income in the first quarter of 2014.

Also included within the May 2013 application was a proposal to establish a new deferral clearing variance account to capture differences between deferral balances approved for disposition and amounts prospectively refunded to or recovered from customers and a request to finalize the incentive amounts owing to the Company from the 2011 Demand Side Management (DSM) program. The OEB found in its March 2014 decision that establishing a new deferral clearing variance account was not appropriate under the parameters of the Company's 2008 through 2012 incentive regulation framework, resulting in a charge of $5 million for the over-refund of the 2011 deferral account balances. The OEB also found that certain adjustments were required to the 2011 DSM incentive amounts, resulting in a charge of $2 million. These charges, totaling $7 million, were also recognized on the Consolidated Statements of Operations and Comprehensive Income in the first quarter of 2014.

The resulting balance for the 2012 deferral accounts was a net refund payable to customers of $2 million which was refunded over a six month period that began July 1, 2014.

In May 2014, the Company filed an application with the OEB for the annual disposition of the 2013 deferral account balances, except for the DSM deferral accounts. The combined impact of the 2013 deferral account balances is a payable to customers of approximately $22 million which is primarily reflected as Accounts payable and accrued charges on the Consolidated Balance Sheets at December 31, 2014 and 2013. In October 2014, the OEB approved the balances with no significant impact to the amounts filed. The net payable to customers is being refunded over a six month period that began January 1, 2015.

Demand Side Management

In December 2014, the Company filed an application with the OEB for the disposition of the 2013 DSM deferral and variance account balances. As a result of this application, the Company has a receivable from customers of approximately $10 million. A hearing and decision from the OEB is expected in 2015.

3. Gas Imbalances

The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Consolidated Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

At December 31, 2014 Accounts receivable, net and Accounts payable and accrued charges include $660 million (2013 - $484 million) related to gas imbalances and gas balancing services.

4. Inventories

Gas in storage includes gas for delivery to customers and for use in the Company's operations. Inventories of materials and supplies are for use in the Company's operations.

($millions)	**December 31, 2014**	December 31, 2013
Gas in storage	**221**	142
Materials and supplies	**18**	18
	239	160

5. Property, Plant and Equipment, net

($millions)	Useful Life	**December 31, 2014**	December 31, 2013
	(years)		
Plant			
Natural gas transmission	32 - 58	**1,819**	1,701

Total accumulated depreciation		**2,399**	2,277
Total accumulated amortization		**74**	63
Total Property, plant and equipment, net		**5,154**	4,847

The Company had no capital leases at December 31, 2014 or 2013.

95% of the Company's property, plant and equipment is regulated with estimated useful lives based on rates approved by the OEB. Composite weighted-average depreciation rates were 3.00% for 2014 and 2.99% for 2013.

Amortization expense of intangible assets totalled $17 million in 2014 and $15 million in 2013. Estimated amortization expense for the next five years is as follows:

($millions)	**2015**	**2016**	**2017**	**2018**	**2019**
Estimated amortization expense	16	12	9	6	4

6. Debt and Credit Facilities

Summary of Debt and Related Terms

Less: Current maturities of long-term debt		**150**	150
Less: Commercial paper		**270**	336
Total Long-term debt		**2,687**	2,387

The Company's long-term debt is unsecured. Principal repayment requirements on long-term debt are as follows:

($millions)	**Total**	**2015**	**2016**	**2017**	**2018**	**2019**	**Thereafter**
Long-term debt[(a)]	2,840	150	200	125	400	—	1,965

[(a)] Excludes commercial paper of $270 million.

Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants including a limitation on the payment of dividends. As of December 31, 2014 and 2013, the Company is in compliance with all such covenants.

Total interest expense on long-term debt in 2014 was $159 million (2013 – $155 million).

Available Credit Facility and Restrictive Debt Covenants

			Commercial Paper Debt Outstanding at	
($millions)	**Expiration Date**	**Credit Facility Capacity**	**December 31, 2014**	December 31, 2013
Multi-year syndicated [(a)]	2019	500	**270**	336

[(a)] The credit facility contains a covenant requiring the debt-to-total capitalization ratio, as defined in the agreement, to not exceed 75% and a provision which requires the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. The ratio was 68% at December 31, 2014 (2013 – 67%).

On December 10, 2014, the Company amended the revolving credit agreement. The facility was increased to $500 million and its expiration date was extended to 2019.

The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under the credit facility. As of December 31, 2014 and 2013 there were no letters of credit issued or revolving borrowings outstanding under the revolving credit facility. A majority of the Company's short-term cash requirements are funded through the issuance of commercial paper. The weighted average rate on outstanding commercial paper as of December 31, 2014 was 1.22% (2013 – 1.14%). The weighted average days to maturity on outstanding commercial paper as of December 31, 2014 was 12 days (2013 – 10 days).

The Company's credit agreement contains various financial and other covenants, including the maintenance of certain financial ratios. Failure to meet those covenants beyond applicable grace periods could result in accelerated due dates and/or termination of the agreement. As of December 31, 2014 and 2013, the Company was in compliance with those covenants. In addition, the credit agreement allows for the acceleration of payments or termination of the agreement due to non-payment, or in some cases, due to the acceleration of other significant indebtedness of the borrower or its subsidiary.

Total interest expense on short-term debt in 2014 was $1 million (2013 – $3 million).

7. Preferred Stock

		Outstanding			
	Authorized	**December 31, 2014**	December 31, 2013	**December 31, 2014**	December 31, 2013
	(shares)	*(shares)*		*($millions)*	
Class A	202,072				
5.5% Series A		**47,672**	47,672	**3**	3
6% Series B		**90,000**	90,000	**5**	5
5% Series C		**49,500**	49,500	**2**	2
4.88% Class B, Series 10	Unlimited	**4,000,000**	4,000,000	**100**	100
				110	110

The Class A, Series A and C Preferred stock are cumulative and redeemable at $50.50 per share. The Company is obligated to offer to purchase $170,000 of Series A and $140,000 of Series C shares annually at the lowest price obtainable, but not exceeding $50 per share.

The Class A, Series B Preferred stock are cumulative and redeemable at $55 per share at the option of the Company.

The Class B, Series 10 Preferred stock are cumulative and redeemable at $25 per share at the option of the Company and, at the option of the holders, convertible back into Series 11 shares once every five years commencing January 1, 2014. The holders of the Class B, Series 10 Preferred stock did not exercise their option on January 1, 2014 and their next optional conversion date is January 1, 2019. Union Gas may redeem at any time all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2018.

The Company has an unlimited number of authorized 4.79% Class B, Series 11 Preferred stock. These shares are cumulative and redeemable at $25 per share at the option of the Company, and at the option of the holders, convertible back into Series 10 shares every five years. At December 31, 2014 and December 31, 2013 none of these shares were issued or outstanding.

The shares are not subject to any sinking fund or mandatory redemption and are not convertible into any other type of securities other than preferred stock. As these shares are not solely in the control of the Company, they have been classified as temporary equity on the Consolidated Balance Sheets.

8. Asset Retirement Obligations

The Company's AROs relate to the legal obligation to disconnect, purge and cap abandoned pipelines, capping abandoned storage wells, and in some buildings, special handling and disposition of asbestos if it is disturbed.

The Company has non-asbestos AROs which include easements and some railway license agreements relating to pipeline assets located on land which the Company does not own. The Company has not recognized a liability in regard to the non-asbestos ARO because the fair value of the ARO cannot be reasonably estimated. The Company's pipeline system is considered a critical component of its business and is expected to be maintained and remain in place indefinitely. Natural gas supplies are also considered sufficient for the Company to operate in the long-term. The Company has determined that sufficient information to estimate the fair value of an ARO is not available because the assets are considered permanent with indeterminate useful lives and that sufficient information is not available to estimate a range of potential settlement dates in order to employ a present value technique to estimate fair value.

AROs are adjusted each period for liabilities incurred or settled during the period, accretion expense and any revisions made to the estimated cash flows.

During 2013, the Company revised its estimated future cash flow assumptions resulting in an ARO increase of $183 million, with an offsetting increase of $115 million to Property, plant and equipment - cost, and $31 million to Accumulated depreciation and amortization and a decrease of $99 million to Regulatory and other liabilities. The cash flow change assumptions were substantially related to the expected future cost of abandoning distribution service pipelines.

Reconciliation of Changes in Asset Retirement Obligation Liabilities

($millions)	**December 31, 2014**	December 31, 2013
Balance, beginning of year	**328**	143
Accretion expense	**16**	7
Liabilities settled	**(6)**	(5)
Revisions in estimated cash flows	**30**	183
Balance, end of year	**368**	328

9. Stock Based Compensation

The Spectra Energy 2007 Long-Term Incentive Plan (the 2007 LTIP), as amended and restated, provides for the granting of stock options, restricted stock awards and units, unrestricted stock awards and units, and other equity-based awards, to employees and other key individuals who perform services for Spectra Energy. A maximum of 40 million shares of common stock may be awarded under the 2007 LTIP. Union Gas employees participate in the 2007 LTIP.

Stock based performance awards generally vest over three years at the earliest, if performance metrics are met. Spectra Energy granted 38,200 performance awards in 2014 and 57,200 in 2013, with fair values of U.S. $2 million for 2014 and $2 million for 2013 to Union Gas' employees. The total fair value of the performance awards vested was U.S. $1 million in 2014 and 2013. As of December 31, 2014, the Company expects to recognize U.S. $2 million of future compensation cost related to performance awards over a weighted-average period of less than one year.

Stock based phantom awards generally vest over three years. Spectra Energy awarded 24,200 phantom awards in 2014 and 36,400 in 2013, with fair values of U.S. $1 million for both 2014 and 2013 to Union Gas' employees. The total fair value of the phantom awards vested was U.S. $1 million in both 2014 and 2013. As of December 31, 2014, the Company expects to recognize U.S. $1 million of future compensation cost related to phantom awards over a weighted-average period of less than two years.

	Performance Awards		**Phantom Awards**	
	Units	**Weighted-Average Grant Date Fair Value U.S. $**	**Units**	**Weighted-Average Grant Date Fair Value U.S. $**
Outstanding, beginning of year	142,008	39	95,617	29
Transfers out	(7,600)	38	(12,200)	27
Granted	38,200	46	24,200	37
Vested	(38,598)	33	(26,253)	26
Forfeited	(7,491)	39	(2,492)	33
Outstanding, end of year	126,519	35	78,872	32
Awards expected to vest	124,609	35	77,657	32

10. Fair Value Measurements

Financial instruments recorded at fair value on the Consolidated Balance Sheets are valued using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

Level 1

Level 1 valuations represent quoted unadjusted prices for identical instruments in active markets.

Level 2 Valuation Techniques

Fair values of the Company's financial instruments that are actively traded in the secondary market are determined based on market-based prices. These valuations may include inputs such as quoted market prices of the exact or similar instruments, broker or dealer quotations, or alternative pricing sources that may include models or matrix pricing tools, with reasonable levels of price transparency. The fair value of the Company's pension plan assets designated as Level 2 financial instruments is determined through the market approach valuation technique using observable inputs including matrix pricing and market corroborated pricing.

Level 3 Valuation Techniques

Level 3 valuation techniques include the use of pricing models, discounted cash flow methodologies or similar techniques where at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. The fair value of the Company's pension plan assets designated as Level 3 financial instruments is determined through the market approach valuation technique using unobservable inputs including investment manager pricing for private placements and private equities.

Financial Instruments

The fair values of financial instruments that are recorded and carried at book value are summarized in the following table. Judgment is required in interpreting market data to develop the estimates of fair value. These estimates are not necessarily indicative of the amounts that could have been realized in current markets.

	December 31, 2014		December 31, 2013	
($millions)	**Book Value**	**Fair Value**	Book Value	Fair Value
Long-term debt, including current maturities[a]	**2,840**	**3,323**	2,540	2,877

[a] Excludes unamortized items.

The fair value of the Company's Long-term debt is determined based on market-based prices as described in the Level 2 valuation technique described above.

The fair values of Cash and cash equivalents, Accounts receivable, net, Accounts payable and accrued charges, Short-term borrowings and Commercial paper are not materially different from their carrying amounts because of the short-term nature of these instruments or because the stated rates approximate market rates.

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligation. The maximum exposure to credit risk of the Company at period end is the carrying value of its financial assets. The Company's principal customers for natural gas transportation and storage services are industrial end-users, marketers, local distribution companies and utilities. The Company's distribution customers are primarily industrial and residential end-users. These concentrations of customers may affect the Company's overall credit risk.

The Company, in the normal course of its operations, provides gas loans to other parties from its holdings of gas in storage. The replacement amount of gas loans at December 31, 2014 is $102 million receivable (2013 – $132 million receivable). The Company manages its credit exposure related to gas loans by subjecting these parties to the same credit policies it uses for all customers, and obtaining collateral when appropriate.

The Company manages its credit risk on Cash and cash equivalents by dealing solely with reputable banks and financial institutions. To manage its credit risk on Accounts receivable, net the Company performs ongoing credit reviews of all its customers. In cases where the credit quality of a customer does not meet the Company's requirements, a cash deposit, letter of credit or parental guarantee is required. Deposits held by the Company at December 31, 2014 amounted to $37 million (2013 – $35 million). Significant financial difficulties of the debtor, the probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the account receivable may be uncollectible and therefore should be included in the allowance for doubtful accounts.

The Company continues to utilize its established risk management policies and procedures to ensure the appropriate monitoring of customer credit positions and, based on current evaluations, does not expect any significant negative impacts associated with these positions.

The following table sets forth details of the age of trade receivables that are not impaired as well as the allowance for the doubtful accounts:

($millions)	**December 31, 2014**	December 31, 2013
Current	**316**	300
30 Days over due	**13**	11
60 Days over due	**5**	4
90+ Days over due	**12**	7
Total trade accounts receivable	**346**	322
Allowance for doubtful accounts	**(6)**	(6)
Total trade accounts receivable, net[a]	**340**	316

[a] The carrying amount of accounts receivable is impacted by changes in gas prices, which may fluctuate significantly from year to year.

For the years ended December 31, 2014 and 2013, no one customer accounted for more than 10% of sales or 10% of receivables.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has credit facilities available to help meet short-term financing needs (note 6).

The following are the contractual maturities of the undiscounted cash flows of financial liabilities as at December 31, 2014:

($millions)	**Total**	**2015**	**2016-2017**	**2018-2019**	**Thereafter**
Commercial paper	270	270	—	—	—
Accounts payable and accrued charges	1,117	1,117	—	—	—
Long-term debt (including principal and interest)	4,931	308	603	609	3,411
Total	6,318	1,695	603	609	3,411

11. Employee Benefit Plans

Retirement Plans

The Company maintains registered and non-registered, contributory and non-contributory defined benefit (DB Plans) and defined contribution (DC Plan) retirement plans covering substantially all employees. The DB Plans provide retirement benefits based on each plan participant's years of service and final average earnings. Under the DC Plan, company contributions are determined according to the terms of the plan and based on each plan participant's age, years of service and current eligible earnings. The Company also provides non-registered DB Plans to all employees who retire under a registered DB Plan and whose pension is limited by the maximum pension limits under the Income Tax Act.

The Company's policy is to fund the retirement plans, where applicable, on an actuarial basis to provide assets sufficient to meet benefits to be paid to plan participants or as required by legislation or plan terms. Total contributions to the DB Plans were $18 million in 2014 and $54 million in 2013. Contributions of $6 million in both 2014 and 2013 were made to the Company's DC Plan. The Company anticipates that in 2015 it will make total contributions of approximately $11 million to its DB Plans and $6 million to its DC Plan.

Actuarial gains and losses are amortized over the average remaining service period of active employees. The average remaining service periods of active employees covered by the registered and non-registered DB Plans is 10 years. The Company determines the market-related value of plan assets using a calculated value that recognizes changes in fair value of the plan assets over three years.

Registered and Non-Registered Pension Plans

Change in Projected Benefit Obligation and Change in Fair Value of Plan Assets

($millions)	**2014**	2013
Change in Projected Benefit Obligation		
Projected benefit obligation, beginning of year	**748**	787
Service cost	**15**	20
Interest cost	**35**	32
Actuarial loss (gain)	**98**	(60)
Participant contributions	**3**	3
Benefits paid	**(36)**	(34)
Projected benefit obligation, end of year	**863**	748
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	**761**	658
Actual return on plan assets	**86**	80
Benefits paid	**(36)**	(34)
Employer contributions	**18**	54
Plan participants' contributions	**3**	3
Expected non-investment expenses	**(3)**	—
Plan assets, end of year	**829**	761
Net amount recognized[a]	**(34)**	13
Accumulated Benefit Obligation	**812**	707

[a]At December 31, 2014 the Consolidated Balance Sheets includes $5 million of non-current pension assets recognized in Regulatory and other assets, $37 million of non-current pension liabilities in Regulatory and other liabilities, and $2 million of current pension liabilities in Accounts payable and accrued charges.

The table above includes non-registered pension plans that are not funded and had projected benefit obligations of $39 million at December 31, 2014 and $34 million at December 31, 2013. At December 31, 2014 there were no registered DB plans with accumulated benefit obligations in excess of plan assets. Non-registered DB plans with accumulated benefit obligations in excess of plan assets had projected benefit obligations of $39 million and accumulated benefit obligations of $36 million.

Amounts Recognized in Accumulated Other Comprehensive Income (AOCI)

($millions)	**December 31, 2014**	December 31, 2013
Net actuarial loss	**256**	210
Prior service costs	**5**	6
Total amounts recognized in AOCI, pre-tax	**261**	216

Components of Net Periodic Pension Costs

($millions)	**2014**	2013
Net Periodic Pension Cost		
Service cost benefit earned	**18**	20
Interest cost on projected benefit obligation	**35**	32
Expected return on plan assets	**(52)**	(47)
Amortization of prior service cost	**1**	2
Amortization of loss	**18**	25
Net periodic pension cost	**20**	32
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial (gain) loss	**64**	(93)
Amortization of actuarial loss	**(18)**	(25)
Amortization of prior service cost	**(1)**	(2)
Total recognized in other comprehensive income	**45**	(120)
Total Recognized in Net Periodic Pension Cost and Other Comprehensive Income	**65**	(88)

At December 31, 2014, approximately $22 million of actuarial losses will be amortized from AOCI on the Consolidated Balance Sheets into net periodic pension cost in 2015.

At December 31, 2014, approximately $1 million of prior service costs will be amortized from AOCI on the Consolidated Balance Sheets into net periodic pension costs in 2015.

Assumptions Used for Pension Benefits Accounting

	2014	2013
Benefit Obligations		
Discount rate	**4.00%**	4.81%
Salary increase	**3.25%**	3.25%
Net Periodic Benefit Cost		
Discount rate	**4.81%**	4.15%
Salary increase	**3.25%**	3.25%
Expected long-term rate of return on plan assets	**7.40%**	7.10%

The discount rates used to determine the benefit obligations are the rates at which the benefit obligations could be effectively settled. The discount rates are developed from yields on available high-quality bonds and reflect each plan’s expected cash flows.

The long-term rates of return for the plan assets in 2014 were developed using weighted-average calculations of expected returns based primarily on future expected returns across classes considering the use of active asset managers applied against the plans’ respective targeted asset mix.

Registered Pension Plan Assets

Asset Category	Target Allocation	**December 31, 2014**	December 31, 2013
U.S. equity securities	17%	**17%**	18%
Canadian equity securities	25%	**25%**	26%
Other equity securities	13%	**13%**	13%
Fixed income securities	45%	**45%**	43%
Total	100%	**100%**	100%

Pension plan assets are maintained in a master trust. The investment objective of the master trust is to achieve reasonable returns on trust assets, subject to a prudent level of portfolio risk, for the purpose of enhancing the security of benefits for plan participants. The asset allocation targets were set after considering the investment objective and the risk profile with respect to the trust. Equities are held for their high expected return. Other equity and fixed income securities are held for diversification. Investments within asset classes are diversified to achieve broad market participation and reduce the effects of individual managers or investments. The Company regularly reviews its actual asset allocation and periodically rebalances its investments to the targeted allocation when considered appropriate.

The following table summarizes the fair values of pension plan assets recorded at each fair value hierarchy level, as determined in accordance with the valuation techniques described in note 10:

($millions)	**Total**	**Level 1**	**Level 2**	**Level 3**
December 31, 2014				
Cash and cash equivalents	2	2	—	—
Fixed income securities	372	372	—	—
Equity securities	455	270	185	—
Total	829	644	185	—
December 31, 2013				
Cash and cash equivalents	4	4	—	—
Fixed income securities	324	324	—	—
Equity securities	433	314	119	—
Total	761	642	119	—

Expected Benefit Payments

($millions)	**2015**	**2016**	**2017**	**2018**	**2019**	**2020-2024**
Expected benefit payments	40	42	44	46	47	255

Other Post-Retirement Benefit Plans

The Company provides health care and life insurance benefits for retired employees on a non-contributory basis predominantly under defined contribution plans. Employees are eligible for these benefits if they have met age and service requirements at retirement, as defined in the plans. The other post-retirement benefit plans are not funded.

Other Post-Retirement Benefit Plans - Change in Projected Benefit Obligation and Fair Value of Plan Assets

($millions)	**2014**	2013
Change in Benefit Obligation		
Accumulated post-retirement benefit obligation, beginning of year	**64**	67
Service cost	**1**	2
Interest cost	**3**	3

Net actuarial loss recognized in AOCI	**4**	3

($millions)	**2014**	2013
Other Post-Retirement Benefit Plans - Components of Net Periodic Benefit Cost		
Service cost benefit earned	**1**	2
Interest cost on accumulated post-retirement benefit obligation	**3**	3
Net periodic other post-retirement benefit cost	**4**	5
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial gain	**1**	(5)
Total recognized in other comprehensive income	**1**	(5)
Total recognized in Net Periodic Benefit Cost and Other Comprehensive Income	**5**	—

Other Post-Retirement Benefits Plans - Assumptions Used for Benefits Accounting

	2014	2013
Benefit Obligations		
Discount rate for post-retirement plans	**4.00%**	4.83%
Salary increase	**3.25%**	3.25%
Net Periodic Benefit Cost		
Discount rate for post-retirement plans	**4.83%**	4.20%
Salary increase	**3.25%**	3.25%

The discount rates used to determine the post-retirement obligations are the rates at which the benefit obligations could be effectively settled. The discount rates for the plans are developed from yields on available high-quality bonds in Canada and reflect each plan's expected cash flows.

Assumed Health Care Cost Trend Rates

	2014	2013
Health care cost trend rate assumed for next year	**6.00%**	6.50%
Rate to which the cost trend rate is assumed to decline	**5.00%**	5.00%
Year that the rate reaches the ultimate trend rate	**2017**	2017

Sensitivity to Changes in Assumed Health Care Cost Trend Rates

($millions)	**1% Point Increase**	1% Point Decrease
Effect on total service and interest costs	**1**	—
Effect on post-retirement benefit obligations	**5**	(4)

Other Post-Retirement Benefit Plans - Payments and Receipts

The Company expects to make future benefit payments, which reflect expected future service, as appropriate. The following benefit payments are expected to be paid over each of the next five years and thereafter.

($millions)	**2015**	**2016**	**2017**	**2018**	**2019**	**2020-2024**
Expected benefit payments	3	3	3	3	4	19

Savings Plan

The Company has employee savings plans available to eligible employees. Employees may participate in a matching contribution where the Company matches a certain percentage of before-tax employee contributions of up to 5% of eligible pay per pay period. The Company expensed pre-tax employer matching contributions of $8 million in both 2014 and 2013.

12. Income Taxes

Income Tax Expense Components

($millions)	**2014**	2013
Current		
Federal	**16**	12

Total deferred tax expense	**13**	3
Total Income taxes	**36**	21

Reconciliation of Income Tax Expense at the Combined Federal and Ontario Statutory Tax Rate to Actual Income Tax Expense

($millions)	**2014**	2013
Income before income taxes	**231**	228
Statutory income tax rate	**26.5%**	26.5%
Statutory income tax rate applied to accounting income	**61**	60
Increase/(decrease) resulting from:		
Enacted Canadian federal income tax legislation[a]	—	(16)
Deferred income tax adjustments related to rate regulated operations	**(27)**	(23)
Other - net	**2**	—
Total income tax expense	**36**	21
Effective rate of income tax	**15.6%**	9.2%

[a] Due to the recognition of tax benefits associated with favourable Canadian federal income tax legislation enacted on June 26, 2013 (Enacted Legislation). The Enacted Legislation contained changes that resulted in increased tax deductions and has a beneficial impact for the tax years 2008 and forward.

Net Deferred Income Tax Liability Components

($millions)	**December 31, 2014**	December 31, 2013
Deferred income tax liabilities		
Accelerated depreciation rates	**344**	328
Regulatory asset	**94**	86
Reserves	**27**	—
Other	**(23)**	(6)
Total deferred income tax liabilities	**442**	408
Deferred income tax assets		
Regulatory liability	—	2
Other	—	1
Total deferred income tax assets	—	3
Net deferred income tax liabilities	**442**	405

The above deferred tax amounts have been classified in the Consolidated Balance Sheets as follows:

($millions)	**December 31, 2014**	December 31, 2013
Current liabilities	**(25)**	3
Long-term liabilities	**(417)**	(408)
	(442)	(405)

Reconciliation of Gross Unrecognized Income Tax Benefits

($millions)	**December 31, 2014**	December 31, 2013
Balance, beginning of year	**11**	26
Increases related to prior year tax positions	**9**	2
Decreases related to prior year tax positions	**—**	(13)
Increases related to current year tax positions	**2**	1
Audit settlements	**—**	(1)
Reductions due to lapse of statute of limitations	**(3)**	(4)
Balance, end of year	**19**	11

Unrecognized tax benefits totalled $19 million at December 31, 2014. Of this, $14 million would reduce the effective tax rate if recognized on or after January 1, 2015. The Company recorded an increase of $8 million in gross unrecognized tax benefits during 2014. This resulted in an $8 million increase in tax expense.

The Company recognized potential accrued interest related to unrecognized tax benefits as interest expense. A $1 million benefit was recorded to interest expense in 2014 compared to a $2 million expense in 2013. Accrued interest totalled $2 million at December 31, 2014 and $2 million at December 31, 2013.

Although uncertain, the Company believes it is reasonably possible that the total amount of unrecognized tax benefits could decrease by $12 million prior to December 31, 2015. The anticipated changes in unrecognized tax benefits relate to the expiration of statutes of limitations and expected audit settlements.

The Company remains subject to examination for income tax returns for years 2009 through 2013.

13. Related Party Transactions

The Company purchases gas and storage services at prevailing market prices and under normal trade terms from related parties. During 2014, these purchases totalled $140 million (2013 – $83 million). The Company also provides storage and transportation services to related parties which totalled $1 million during 2014 (2013 – $1 million).

The Company provided administrative, management and other services to related parties totalling $17 million during 2014 (2013 – $13 million), which were billed and recovered at cost. Charges from related parties for administrative and other goods and services were $17 million during 2014 (2013 – $11 million).

At December 31, 2014 the Company had receivable balances of $10 million (2013 – $5 million) and payable balances of $14 million (2013 – $29 million) with related parties, all of which are recorded in Accounts receivable, net and Accounts payable and accrued charges, respectively.

In the normal course of operations, the Company provides or obtains funds from Westcoast on an unsecured basis. The balance outstanding at December 31, 2014 was a payable of $48 million (2013 – $nil). During 2014, interest paid on these loans totalled less than $1 million (2013 – less than $1 million) and interest received on these loans totalled less than $1 million (2013 – less than $1 million). Interest on these loans is calculated based on the monthly average of 30-day banker's acceptance rates.

The Company also has a promissory note to borrow up to $150 million from GLBE on an unsecured basis. Funds from this promissory note are used for general corporate purposes. There was no balance outstanding at December 31, 2014 or 2013.

In addition, beginning in 2014, the Company declared and paid a common stock dividend on an annual rather than quarterly basis. For 2014, the Company paid dividends to GLBE of $100 million (2013 – $149 million).

14. Guarantees

The Company has various financial guarantees which are issued in the normal course of business. The Company enters into these arrangements to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Consolidated Balance Sheets. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company's potential exposure under these agreements can range from a specific dollar amount to an unlimited dollar amount depending on the nature of the claim and the particular transaction. The Company is unable to estimate the total potential amount of future payments under these agreements due to several factors, such as unlimited exposure under certain guarantees.

15. Contingencies

The Company, in the course of its operations, is subject to environmental and other claims, lawsuits and contingencies. Accruals are made in instances where it is probable that liabilities will be incurred and where such liabilities can be reasonably estimated. The Company has no reason to believe that the ultimate outcome of these matters could have a significant impact on its Consolidated Financial Statements.

16. Subsequent Events

On January 30, 2015, Union Gas purchased the remaining 25% of HTLP. Total consideration for the transaction consisted of $2.25 million in cash. This purchase resulted in an increase to Paid-in Capital of approximately $6 million ($4 million net of tax) and a decrease to Non-controlling interest of approximately $8 million.

Management has evaluated significant events and transactions that occurred from January 1, 2015 through March 6, 2015, the date the financial statements were filed, and no other subsequent events requiring disclosure were noted.

The Financial Statements and all information in this report have been prepared by and are the responsibility of management. The Financial Statements have been prepared in conformity with generally accepted accounting principles in the United States of America and include certain estimated amounts, which are based on informed judgements to ensure fair representation in all material respects. When alternative accounting methods exist, management has chosen those it considers most appropriate.

Management depends upon Union Gas Limited's system of internal controls and formal policies and procedures to ensure the consistency, integrity and reliability of accounting and financial reporting, and to provide reasonable assurance that assets are safeguarded and that transactions are properly executed in accordance with management's authorization. Management is also supported and assisted by a program of internal audit services.

The Board of Directors (the Board) is responsible for ensuring that management fulfils its responsibility for financial reporting and for final approval of the Financial Statements.

The Board meets regularly with management, the internal auditors and the shareholders' auditors to review the Financial Statements, the Independent Auditor's Report and other auditing and accounting matters to ensure that each group is properly discharging its responsibilities.

The shareholders' auditors have full and free access to the Board, as does the Director of Internal Audit Services.

Deloitte LLP performed an independent audit of the 2015 and 2014 Financial Statements in this report. Their independent professional opinion on the fairness of these Financial Statements is included in the Independent Auditor's Report.

Independent Auditor's Report

To the Shareholders of
Union Gas Limited

We have audited the accompanying financial statements of Union Gas Limited, which comprise the balance sheets as at December 31, 2015 and December 31, 2014, and the statements of operations and comprehensive income, statements of equity, and statements of cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements present fairly, in all material respects, the financial position of Union Gas Limited as at December 31, 2015 and December 31, 2014, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

UNION GAS LIMITED
NOTES TO FINANCIAL STATEMENTS
DECEMBER 31, 2015 AND 2014

1. Summary of Operations and Significant Accounting Policies

The terms "Union Gas" or "the Company" as used in these Financial Statements refer to Union Gas Limited unless the context suggests otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Union Gas. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (Westcoast). Westcoast is an indirect wholly-owned subsidiary of Spectra Energy Corp (Spectra Energy).

Nature of Operations

Union Gas owns and operates natural gas distribution, storage and transmission facilities in Ontario. The Company distributes natural gas to customers in northern, southwestern and eastern Ontario and provides natural gas storage and transportation services for other utilities and energy market participants. The property, plant and equipment of the Company consist primarily of pipeline, storage and compression facilities used in the distribution, storage and transportation of natural gas.

Basis of Presentation

The Financial Statements of the Company include the standalone accounts of the Company. On June 1, 2015 the Company dissolved its subsidiary, Huron Tipperary Limited Partnership I (HTLP), transferring HTLP's assets and liabilities to the Company with no material financial impact to the Company. Comparative figures for 2014 are shown consolidated with HTLP.

The Financial Statements of the Company have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP). All amounts are presented in millions of Canadian dollars except where noted.

In 2014, Canadian securities regulators approved the extension of the Company's exemptive relief to continue reporting under U.S. GAAP instead of International Financial Reporting Standards (IFRS) until the earlier of January 1, 2019, and the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation.

Use of Estimates

The preparation of the Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Actual amounts could differ from these estimates.

Regulation

The Company is regulated by the Ontario Energy Board (OEB) pursuant to the provisions of the *Ontario Energy Board Act, (1998)*, which is part of a package of legislation known as the *Energy Competition Act, (1998)*. This legislation provides an opportunity for different forms of regulation and increased competition in the energy (electricity and natural gas) industry in Ontario. The Company is subject to regulation with respect to the rates that it may charge its customers, system expansion or facility abandonment, adequacy of service, public safety aspects of pipeline system construction and certain accounting principles. The OEB has determined that it will forbear from regulating the prices for long-term storage services. The Storage Forbearance Decision created an unregulated storage operation within the Company and provides the framework required to support new storage investments.

The OEB is mandated to approve rates that are just and reasonable. Utility earnings are regulated by the OEB under cost of service regulation, on the basis of a return on rate base for a future period. Under cost of service regulation, a rate application process leads to the implementation of new rates intended to provide a utility with the opportunity to earn an allowed rate of return. The actual rate of return achieved by the Company may vary from the rate allowed by the OEB as a result of unexpected changes in weather, average use per customer, inflation, the price of competing fuels, interest rates, general economic conditions and its ability to achieve forecasted revenues and manage costs.

Effective January 1, 2014, the Company began a five year incentive regulation term. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts.

As part of the Company's OEB-approved incentive regulation framework, an earnings sharing mechanism exists whereby earnings in excess of 100 basis points above the allowable return on equity are shared with ratepayers as a reduction in earnings during the year, if applicable.

The Company follows U.S. GAAP, which may differ for regulated operations from those otherwise expected in non rate-regulated businesses. As a result, the Company records assets and liabilities that result from the regulated ratemaking process that may not be recorded under U.S. GAAP for non rate-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because they are probable of future recovery in customer rates. Regulatory liabilities generally represent obligations to make refunds to customers for previous collections for costs that are not likely to be incurred. Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as applicable regulatory changes and recent rate orders to other regulated entities. Management believes the existing regulatory assets are probable of recovery. This determination reflects the current political and regulatory climate at the provincial and national levels, and is subject to change in the future. If future recovery of costs ceases to be probable, the asset write-offs could be recognized in current period earnings.

Revenue Recognition

Revenues from the transportation, storage, distribution and sales of natural gas are recognized when either the service is provided or the product is delivered and collection is reasonably assured. Revenues related to these services provided or products delivered but not yet billed are estimated each month.

Gas Sales and Cost of Gas

Gas sales revenue is recorded on the basis of regular meter readings and estimates of customer volume usage since the last meter reading date to the end of the reporting period applied using OEB approved rates. Cost of gas is recorded using amounts approved by the OEB in the determination of customer sales rates. Differences between the OEB approved reference amounts and those costs actually incurred are deferred on the Balance Sheets for future disposition subject to approval by the OEB.

In determining the quantities of gas delivered and received, differences arise from the measurement process. The Company includes in the cost of gas an estimated amount of these differences based upon the methodology used by the OEB in the determination of rates for storage, transmission and distribution of gas. Annual fluctuations from the estimated level are recognized in earnings during the year.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term investments, with an original maturity of three months or less.

Income Taxes

Deferred income taxes are recognized for differences between the financial reporting and tax bases of assets and liabilities at enacted statutory tax rates in effect for the years in which the differences are expected to reverse. The effect on deferred taxes of a change in tax rates is recognized in income in the period that includes the enactment date. Actual income taxes could vary from these estimates due to the future changes in income tax law or results from the final review of tax returns by federal and provincial tax authorities.

Financial statement effects on tax positions are recognized in the period in which it is more likely than not that the position will be sustained upon examination, the position is effectively settled or when the statute of limitations to challenge the position has expired. Interest related to the unrecognized tax benefits is recorded as Interest expense on the Statements of Operations and Comprehensive Income.

Inventories

Gas in storage for resale to customers is carried at weighted average cost approved by the OEB in the determination of customer sales rates. The difference between the approved cost and the actual cost of the gas purchased is deferred on the Balance Sheets for future disposition subject to approval by the OEB. Inventories of materials and supplies are valued at the lower of average cost or net realizable value.

Property, Plant and Equipment and Depreciation

Property, plant and equipment is stated at historical cost less accumulated depreciation and amortization. The Company capitalizes all construction-related direct labour and material costs, as well as indirect construction costs. Indirect costs include general engineering and the cost of funds used during construction. The costs of renewals and betterments that extend the useful life or increase the expected output of property, plant and equipment are also capitalized. The cost of repairs, replacements and major maintenance projects that do not extend the useful life or increase the expected output of property, plant and equipment are expensed as incurred.

Regulated depreciation is computed based on the asset's average service life using the straight-line method. Unregulated depreciation is computed based on management's assumption of useful life using the straight-line method.

When regulated property, plant and equipment is retired, the original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation and amortization. When entire regulated operating units are sold or non-regulated property, plant and equipment is retired, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced. Any gain or loss is recorded in earnings, unless otherwise required by the applicable regulatory body.

Asset Retirement Obligations (AROs)

The Company recognizes AROs for legal commitments associated with the retirement of long-lived assets that result from the acquisition, construction, development and/or normal use of the asset and conditional AROs in which the timing or method of settlement are conditional on a future event that may or may not be within the Company's control. The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made and is added to the carrying amount of the associated asset. This additional carrying amount is depreciated over the estimated useful life of the asset.

Stock-Based Compensation

Union Gas employees participate in a stock-based compensation plan sponsored by Spectra Energy. For employee awards, equity-classified and liability-classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests, the date the employee becomes retirement-eligible, or the date the award market condition is met. Awards, including stock options, granted to employees that are already retirement-eligible are deemed to have vested immediately upon issuance, and therefore, compensation cost for those awards is recognized on the date such awards are granted.

Pension and Other Post-Retirement Benefits

The Company fully recognizes the overfunded or underfunded status of pension and other post-retirement benefit plans as Regulatory and other assets, Accounts payable and accrued charges, or Regulatory and other liabilities on the Balance Sheets. A plan's funded status is the difference between the fair value of plan assets and the plan's benefit obligation. The Company records deferred plan costs and income (unrecognized losses and gains, and unrecognized prior service costs and credits) in Accumulated other comprehensive loss, until they are amortized to be recognized as a component of benefit expense within Operating and maintenance expenses in the Statements of Operations and Comprehensive Income. See note 12 for further discussion.

New Accounting Pronouncements

In April 2015, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2015-03, "*Interest-Imputation of Interest (Subtopic 835-30): Simplifying the Presentation of Debt Issuance Costs*", which requires that debt issuance costs be presented on the balance sheet as a direct deduction from the carrying amount of the related debt liability, rather than as a deferred charge asset. The Company adopted this standard on December 31, 2015. The adoption of this ASU resulted in the retrospective adjustment of the December 31, 2014 Balance Sheet, which resulted in the presentation of $11 million of debt issuance costs previously reported in Regulatory and other assets as a reduction to Long-term debt. In addition, $12 million of debt issuance costs are presented as a reduction of Long-term debt on the Company's December 31, 2015 Balance Sheet.

In July 2015, the FASB issued ASU No. 2015-11, "*Inventory (Topic 330): Simplifying the Measurement of Inventory*", which simplifies the subsequent measurement of inventory by requiring inventory to be measured at the lower of cost and net realizable value. This ASU is effective for the Company January 1, 2016 and is not expected to have a material impact on the Company's Financial Statements.

In July 2015, the FASB decided to defer the effective date of the revenue standard ASU No. 2014-09, "*Revenue from Contracts with Customers (Topic 606),*" for one year and to permit entities to early adopt the standard as of the original effective date. ASU No. 2014-09 supersedes the revenue recognition requirements of "*Revenue Recognition (Topic 605)*" and clarifies the principles of recognizing revenue. This ASU is effective for the Company January 1, 2018. The Company is currently evaluating this ASU and its potential impact.

In November 2015, the FASB issued ASU No. 2015-17, "*Accounting for Income Taxes (Topic 740): Balance Sheet Classification of Deferred Taxes."* This ASU simplifies the balance sheet presentation of deferred income taxes by requiring deferred tax liabilities and assets be classified as noncurrent in a classified balance sheet. The Company adopted this standard on December 31, 2015 and applied it prospectively. The adoption of this ASU did not have a material impact on the Company's Financial Statements.

In January 2016, the FASB issued ASU 2016-01, "*Financial Instruments--Overall (Subtopic 825-10): Recognition and Measurement of Financial Assets and Financial Liabilities,*" which amends the classification and measurement of financial instruments. Changes primarily affect the accounting for equity investments, financial liabilities under the fair value option, and the presentation and disclosure requirements for financial instruments. This ASU is effective for the Company beginning after December 15, 2017. Early adoption is not permitted. The Company is currently evaluating this ASU and its potential impact.

2. Acquisitions

On January 30, 2015, Union Gas purchased the remaining 25% of HTLP. Total consideration for the transaction consisted of $2.25 million in cash. This purchase resulted in an increase to Paid-in capital of approximately $6 million ($4 million net of tax) and a decrease to Non-controlling interest of approximately $8 million. The Company dissolved HTLP on June 1, 2015 which did not have a significant impact to the Company's Financial Statements.

3. Regulatory Matters

Regulatory Assets and Liabilities

The Company recorded the following assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities. See note 1 for further discussion.

($millions)	Financial Statement Location	**December 31, 2015**	December 31, 2014	Recovery/Settlement Period
Regulatory assets[a]				
Customer deferrals	Accounts receivable, net	**43**	42	Less than 1 year
Gas cost deferrals	Accounts receivable, net	**—**	67	Less than 1 year
Gas in storage inventory	Inventories	**53**	8	Less than 1 year
Other deferrals – long-term	Regulatory and other assets	**—**	1	2 – 3 years
Deferred income taxes – long-term[b]	Regulatory and other assets	**403**	362	2 years – remaining life of asset
Total regulatory assets		**499**	480	
Regulatory liabilities[a]				
Other deferrals – current[b]	Accounts payable and accrued charges	**7**	7	Less than 1 year
Customer deferrals	Accounts payable and accrued charges	**1**	28	Less than 1 year
Gas cost deferrals	Accounts payable and accrued charges	**67**	—	Less than 1 year
Asset removal costs[b]	Regulatory and other liabilities	**357**	375	Exceeds remaining life of asset
Total regulatory liabilities		**432**	410	

[a] All regulatory assets and liabilities are excluded from rate base unless otherwise noted.

[b] All or a portion of the balance is included in rate base.

The Company has regulatory assets of $403 million as of December 31, 2015 and $362 million as of December 31, 2014 related to deferred income tax liabilities. Under the current OEB-authorized rate structure, income tax costs are recovered in rates based on the current income tax payable and do not include accruals for deferred income tax. However, as income taxes become payable as a result of the reversal of timing differences that created the deferred income taxes, it is expected that rates will be adjusted to recover these taxes. Since substantially all of these timing differences are related to property, plant and equipment costs, recovery of these regulatory assets is expected to occur over the life of those assets.

The Company has regulatory liabilities associated with plant removal costs of $357 million as of December 31, 2015 and $375 million as of December 31, 2014. These regulatory liabilities represent collections from customers under approved rates for future asset removal activities that are expected to occur associated with its regulated facilities.

In addition, the Company has regulatory liabilities of $67 million as of December 31, 2015 and regulatory assets of $67 million as of December 31, 2014 representing gas cost collections from customers under approved rates that vary from the actual cost of gas for the associated periods. The Company files an application quarterly with the OEB to ensure that customers' rates are updated to reflect published forward-market prices. The difference between the approved and actual cost of gas is deferred for future repayment to or refund from customers.

Rate Related Information

The Company's distribution rates, beginning January 1, 2014 are set under a five-year incentive regulation framework. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts. The framework allows for:

- annual inflationary rate increases, offset by a productivity factor of 60% of inflation, such that the annual net rate escalator in each year is 40% of inflation,
- rate increases or decreases in the small volume customer classes where average use declines or increases,
- certain adjustments to base rates,
- the continued pass-through of gas commodity, upstream transportation and demand side management costs,
- the additional pass-through of costs associated with major capital investments and certain fuel variances,
- an allowance for unexpected cost changes that are outside of management's control,
- equal sharing of tax changes between the Company and its customers, and
- an earnings sharing mechanism that permits the Company to fully retain the return on equity from utility operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.

Demand Side Management (DSM)

In December 2015, the Company filed an application with the OEB for the disposition of the 2014 DSM deferral and variance account balances. As a result of this application, the Company has a receivable from customers of approximately $11 million which is reflected as Accounts receivable, net on the Balance Sheets at December 31, 2015 and December 31, 2014. A hearing and decision from the OEB is expected in 2016.

4. Gas Imbalances

The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

At December 31, 2015 Accounts receivable, net and Accounts payable and accrued charges include $350 million (2014 - $660 million) related to gas imbalances and gas balancing services.

5. Inventories

Gas in storage includes gas for delivery to customers and for use in the Company's operations. Inventories of materials and supplies are for use in the Company's operations.

Other	**(23)**	(23)
Total deferred income tax liabilities	**451**	442

The above deferred tax amounts have been classified in the Balance Sheets as follows:

($millions)	**December 31, 2015**	December 31, 2014
Current liabilities	—	(25)
Long-term liabilities	**(451)**	(417)
	(451)	(442)

Reconciliation of Gross Unrecognized Income Tax Benefits

($millions)	**December 31, 2015**	December 31, 2014
Balance, beginning of year	**19**	11
Increases related to prior year tax positions	**11**	9
Increases related to current year tax positions	**2**	2
Reductions due to lapse of statute of limitations	**(4)**	(3)
Balance, end of year	**28**	19

Unrecognized tax benefits totalled $28 million at December 31, 2015. Of this, $26 million would reduce the effective tax rate if recognized on or after January 1, 2016. The Company recorded a net increase of $9 million in gross unrecognized tax benefits in 2015. This was a result of $4 million attributable to deferred tax liability and $13 million increase in income tax expense.

The Company recognized potential accrued interest related to unrecognized tax benefits as interest expense. A $1 million benefit was recorded to interest expense in 2015 compared to a $1 million benefit in 2014. Accrued interest totalled $1 million at December 31, 2015 and $2 million at December 31, 2014.

Although uncertain, the Company believes it is reasonably possible that the total amount of unrecognized tax benefits could decrease by $20 million prior to December 31, 2016. The anticipated changes in unrecognized tax benefits relate to the expiration of statutes of limitations and expected audit settlements.

The Company remains subject to examination for income tax returns for years 2009 through 2014.

7. Property, Plant and Equipment, net

($millions)	Useful Life	**December 31, 2015**	December 31, 2014
	(years)		
Plant

9. Related Party Transactions

The Company occasionally perform services for and incur costs on behalf of the Company's affiliates, which are subsequently reimbursed. Likewise, certain affiliates may perform services for or incur costs on behalf of the Company, which are then reimbursed by the Company. These transactions are in the normal course of operations and are recorded at exchange amounts agreed to between the related parties.

In addition, Spectra Energy and its affiliates perform centralized corporate functions for the Company, pursuant to an agreement with Spectra Energy and its affiliates, including legal, accounting, compliance, treasury, information technology and other areas, as well as certain engineering and other services. The Company reimburses Spectra Energy and its affiliates for the expenses to provide these services as well as other expenses they incur on the Company's behalf. Spectra Energy and its affiliates charge such expenses based on the cost of actual services provided or using various allocation methodologies based on the Company's percentage of assets, employees, earnings or other measures, as compared to Spectra Energy's other affiliates.

The Company's transactions with affiliated companies are as follows:

($millions), net	**2015**	**2014**
Spectra Energy Empress L.P.	(6)	(10)
Spectra Energy Gas Transmission LLC	(7)	6
Total[a]	(13)	(4)

[a]At December 31, 2015, $14 million (2014 – $10 million) is recognized in Accounts payable and accrued charges and $1 million (2014 – $6 million) is recognized in Accounts receivable, net on the Balance Sheets.

In the normal course of operations, the Company provides or obtains funds from Westcoast on an unsecured basis. The balance outstanding at December 31, 2015 was a payable of $56 million (December 31, 2014 – payable of $48 million). During 2015, interest paid on these loans totalled less than $1 million (2014 – less than $1 million) and interest received on these loans totalled less than $1 million (2014 – less than $1 million). Interest on these loans is calculated based on the monthly average of 30-day banker's acceptance rates.

The Company also has a promissory note to borrow up to $150 million from GLBE on an unsecured basis. Funds from this promissory note are used for general corporate purposes. There was no balance outstanding at December 31, 2015 or December 31, 2014.

In addition, beginning in 2014, the Company declared and paid common stock dividends on an annual rather than quarterly basis, and as a result, the Company made a dividend payment to GLBE of $50 million during 2015 (2014 – $100 million).

10. Debt and Credit Facilities

Summary of Debt and Related Terms

Long-term debt principal (including current maturities)		**3,140**	2,840
Less: Unamortized debt discount		**7**	3
Less: Debt issue costs		**12**	11
Add: Commercial paper		**207**	270
Total debt		**3,328**	3,096
Less: Current maturities of long-term debt		**200**	150
Less: Commercial paper		**207**	270
Total Long-term debt		**2,921**	2,676

The Company's long-term debt is unsecured. Principal repayment requirements on long-term debt are as follows:

($millions)	**Total**	**2016**	**2017**	**2018**	**2019**	**2020**	**Thereafter**
Long-term debt[(a)]	3,140	200	125	400	—	—	2,415

(a) Excludes commercial paper of $207 million.

Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants including a limitation on the payment of dividends. As of December 31, 2015 and 2014, the Company is in compliance with all such covenants.

Total interest expense on long-term debt in 2015 was $163 million (2014 – $159 million).

Available Credit Facility and Restrictive Debt Covenants

($millions)	Expiration Date	Credit Facility Capacity	Commercial Paper Debt Outstanding at December 31, 2015	December 31, 2014
Multi-year syndicated [a]	2019	500	**207**	270

[a] The credit facility contains a covenant requiring the debt-to-total capitalization ratio, as defined in the agreement, to not exceed 75% and a provision which requires the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. The ratio was 67.8% at December 31 2015 (December 31, 2014 – 68.3%).

The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under the credit facility. As of December 31, 2015 and December 31, 2014 there were no letters of credit issued or revolving borrowings outstanding under the credit facility. The majority of the Company's short-term cash requirements are funded through the issuance of commercial paper. The weighted average rate on outstanding commercial paper as of December 31, 2015 was 0.86% (2014 – 1.22%). The weighted average days to maturity on outstanding commercial paper as of December 31, 2015 was 9 days (2014 – 12 days).

The Company's credit agreement contains various financial and other covenants, including the maintenance of certain financial ratios. Failure to meet those covenants beyond applicable grace periods could result in accelerated due dates and/or termination of the agreement. As of December 31, 2015 and December 31, 2014, the Company was in compliance with those covenants. In addition, the credit agreement allows for the acceleration of payments or termination of the agreement due to non-payment, or in some cases, due to the acceleration of other significant indebtedness of the borrower.

Total Interest paid on short term debt in 2015 was $1 million (2014 - $1 million).

11. Preferred Stock

	Authorized	Outstanding December 31, 2015	December 31, 2014	December 31, 2015	December 31, 2014
	(shares)	*(shares)*		*($millions)*	
Class A	202,072				
5.5% Series A		**47,672**	47,672	**3**	3
6% Series B		**90,000**	90,000	**5**	5
5% Series C		**49,500**	49,500	**2**	2
4.88% Class B, Series 10	Unlimited	**4,000,000**	4,000,000	**100**	100
				110	110

The Class A, Series A and C Preferred stock are cumulative and redeemable at $50.50 per share. The Company is obligated to offer to purchase $170,000 of Series A and $140,000 of Series C shares annually at the lowest price obtainable, but not exceeding $50 per share.

The Class A, Series B Preferred stock are cumulative and redeemable at $55 per share at the option of the Company.

The Class B, Series 10 Preferred stock are cumulative and redeemable at $25 per share at the option of the Company and, at the option of the holders, convertible back into Series 11 shares once every five years commencing January 1, 2014. The holders of the Class B, Series 10 Preferred stock did not exercise their option on January 1, 2014 and their next optional conversion date is January 1, 2019. Union Gas may redeem at any time all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2018.

The Company has an unlimited number of authorized 4.79% Class B, Series 11 Preferred stock. These shares are cumulative and redeemable at $25 per share at the option of the Company, and at the option of the holders, convertible back into Series 10 shares every five years. At December 31, 2015 and December 31, 2014 none of these shares were issued or outstanding.

The shares are not subject to any sinking fund or mandatory redemption and are not convertible into any other type of securities other than preferred stock. As these shares are not solely in the control of the Company, they have been classified as temporary equity on the Balance Sheets.

12. Employee Benefit Plans

Retirement Plans

The Company maintains registered and non-registered, contributory and non-contributory defined benefit (DB Plans) and defined contribution (DC Plan) retirement plans covering substantially all employees. The DB Plans provide retirement benefits based on each plan participant's years of service and final average earnings. Under the DC Plan, company contributions are determined according to the terms of the plan and based on each plan participant's age, years of service and current eligible earnings. The Company also provides non-registered DB Plans to all employees who retire under a registered DB Plan and whose pension is limited by the maximum pension limits under the Income Tax Act.

The Company's policy is to fund the retirement plans, where applicable, on an actuarial basis to provide assets sufficient to meet benefits to be paid to plan participants or as required by legislation or plan terms. Total contributions to the DB Plans were $6 million during the twelve months ended December 31, 2015 and $18 million during the twelve months ended December 31, 2014. Contributions of $6 million in both 2015 and 2014 were made to the Company's DC Plan. The Company anticipates that in 2016 it will make total contributions of approximately $4 million to its DB Plans and $6 million to its DC Plan.

Actuarial gains and losses are amortized over the average remaining service period of active employees. The average remaining service periods of active employees covered by the registered and non-registered DB Plans is 11 years. The Company determines the market-related value of plan assets using a calculated value that recognizes changes in fair value of the plan assets over three years.

Registered and Non-Registered Pension Plans

Change in Projected Benefit Obligation and Change in Fair Value of Plan Assets

($millions)	**2015**	2014
Change in Projected Benefit Obligation

Amortization of prior service cost	**(1)**	(1)
Total recognized in other comprehensive income	**(16)**	45
Total Recognized in Net Periodic Pension Cost and Other Comprehensive Income	**7**	65

At December 31, 2015, approximately $16 million of actuarial losses will be amortized from AOCI on the Balance Sheets into net periodic pension cost in 2016.

At December 31, 2015, approximately $1 million of prior service costs will be amortized from AOCI on the Balance Sheets into net periodic pension costs in 2016.

Assumptions Used for Pension Benefits Accounting

	2015	2014
Benefit Obligations		
Discount rate	**4.03%**	4.00%
Salary increase	**3.00%**	3.25%
Net Periodic Benefit Cost		
Discount rate	**4.00%**	4.81%
Salary increase	**3.25%**	3.25%
Expected long-term rate of return on plan assets	**7.40%**	7.40%

The discount rates used to determine the benefit obligations are the rates at which the benefit obligations could be effectively settled. The discount rates are developed from yields on available high-quality bonds and reflect each plan's expected cash flows.

The long-term rates of return for the plan assets in 2015 were developed using weighted-average calculations of expected returns based primarily on future expected returns across classes considering the use of active asset managers applied against the plans' respective targeted asset mix.

Registered Pension Plan Assets

Asset Category	Target Allocation	**December 31, 2015**	December 31, 2014
U.S. equity securities	17%	**18%**	17%
Canadian equity securities	25%	**24%**	25%
Other equity securities	13%	**13%**	13%
Fixed income securities	45%	**45%**	45%
Total	100%	**100%**	100%

Pension plan assets are maintained in a master trust. The investment objective of the master trust is to achieve reasonable returns on trust assets, subject to a prudent level of portfolio risk, for the purpose of enhancing the security of benefits for plan participants. The asset allocation targets were set after considering the investment objective and the risk profile with respect to the trust. Equities are held for their high expected return. Other equity and fixed income securities are held for diversification. Investments within asset classes are diversified to achieve broad market participation and reduce the effects of individual managers or investments. The Company regularly reviews its actual asset allocation and periodically rebalances its investments to the targeted allocation when considered appropriate.

The following table summarizes the fair values of pension plan assets recorded at each fair value hierarchy level, as determined in accordance with the valuation techniques described in note 14:

($millions)	**Total**	**Level 1**	**Level 2**	**Level 3**
December 31, 2015				
Cash and cash equivalents	3	3	—	—

Effect on post-retirement benefit obligations	**4**	(3)

Other Post-Retirement Benefit Plans - Payments and Receipts

The Company expects to make future benefit payments, which reflect expected future service, as appropriate. The following benefit payments are expected to be paid over each of the next five years and thereafter.

($millions)	**2016**	**2017**	**2018**	**2019**	**2020**	**2021-2025**
Expected benefit payments	2	3	3	3	3	17

Retirement/Savings Plan

The Company has employee savings plans available to eligible employees. Employees may participate in a matching contribution where the Company matches a certain percentage of before tax employee contributions of up to 5% of eligible pay per pay period. The Company expensed pre-tax employer matching contributions of $8 million in both the twelve months ended December 31, 2015 and 2014.

13. Asset Retirement Obligations

The Company's AROs relate to the legal obligation to disconnect, purge and cap abandoned pipelines, capping abandoned storage wells, and in some buildings, special handling and disposition of asbestos if it is disturbed.

The Company has non-asbestos AROs which include easements and some railway license agreements relating to pipeline assets located on land which the Company does not own. The Company has not recognized a liability in regard to the non-asbestos ARO because the fair value of the ARO cannot be reasonably estimated. The Company's pipeline system is considered a critical component of its business and is expected to be maintained and remain in place indefinitely. Natural gas supplies are also considered sufficient for the Company to operate in the long-term. The Company has determined that sufficient information to estimate the fair value of an ARO is not available because the assets are considered permanent with indeterminate useful lives and that sufficient information is not available to estimate a range of potential settlement dates in order to employ a present value technique to estimate fair value.

AROs are adjusted each period for liabilities incurred or settled during the period, accretion expense and any revisions made to the estimated cash flows.

Reconciliation of Changes in Asset Retirement Obligation Liabilities

($millions)	**December 31, 2015**	December 31, 2014
Balance, beginning of year	**368**	328
Accretion expense	**17**	16
Liabilities settled	**(7)**	(6)
Revisions in estimated cash flows	**62**	30
Balance, end of year	**440**	368

14. Fair Value Measurements

Financial instruments recorded at fair value on the Balance Sheets are valued using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

Level 1

Level 1 valuations represent quoted unadjusted prices for identical instruments in active markets.

Level 2 Valuation Techniques

Fair values of the Company's financial instruments that are actively traded in the secondary market are determined based on market-based prices. These valuations may include inputs such as quoted market prices of the exact or similar instruments, broker or dealer quotations, or alternative pricing sources that may include models or matrix pricing tools, with reasonable levels of price transparency. The fair value of the Company's pension plan assets designated as Level 2 financial instruments is determined through the market approach valuation technique using observable inputs including matrix pricing and market corroborated pricing.

Level 3 Valuation Techniques

Level 3 valuation techniques include the use of pricing models, discounted cash flow methodologies or similar techniques where at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. The fair value of the Company's pension plan assets designated as Level 3 financial instruments is determined through the market approach valuation technique using unobservable inputs including investment manager pricing for private placements and private equities.

There were no transfers between levels during the year ended December 31, 2015.

Financial Instruments

The fair values of financial instruments that are recorded and carried at book value are summarized in the following table. Judgment is required in interpreting market data to develop the estimates of fair value. These estimates are not necessarily indicative of the amounts that could have been realized in current markets.

	December 31, 2015		December 31, 2014	
($millions)	**Book Value**	**Fair Value**	Book Value	Fair Value
Long-term debt, including current maturities[(a)]	**3,140**	**3,538**	2,840	3,323

[(a)] Excludes unamortized items.

The fair value of the Company's Long-term debt is determined based on market-based prices as described in the Level 2 valuation technique described above.

The fair values of Cash and cash equivalents, Accounts receivable, net, Accounts payable and accrued charges, Short-term borrowings and Commercial paper are not materially different from their carrying amounts because of the short-term nature of these instruments or because the stated rates approximate market rates.

Credit risk

Credit risk is the risk of financial loss to the Company if a counterparty to a financial instrument fails to meet its contractual obligations. The maximum exposure to credit risk for the Company at period end is the carrying value of its financial assets. The Company's principal customers for natural gas transportation and storage services are industrial end-users, marketers, local distribution companies and utilities. The Company's distribution customers are primarily industrial and residential end-users. These concentrations of customers may affect the Company's overall credit risk.

The Company, in the normal course of its operations, provides gas loans to other parties from its holdings of gas in storage. The replacement cost of gas loans at December 31, 2015 is $51 million receivable (2014 - $102 million receivable). The Company manages its credit exposure related to gas loans by subjecting these parties to the same credit policies it uses for all customers, and obtaining collateral when appropriate.

The Company manages its credit risk on Cash and cash equivalents by dealing solely with reputable banks and financial institutions. To manage its credit risk on Accounts receivable, net the Company performs ongoing credit reviews of all its customers. In cases where the credit quality of a customer does not meet the Company's requirements, a cash deposit, letter of credit or parental guarantee is required. Deposits held by the Company at December 31, 2015 amounted to $40 million (2014 - $37 million). Significant financial difficulties of the debtor, the probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the account receivable may be uncollectible and therefore should be included in the allowance for doubtful accounts.

The Company continues to utilize its established risk management policies and procedures to ensure the appropriate monitoring of customer credit positions and, based on current evaluations, does not expect any significant negative impacts associated with these positions.

The following table sets forth details of the age of trade receivables that are not impaired as well as the allowance for the doubtful accounts:

($millions)	**December 31, 2015**	December 31, 2014
Current	**218**	316
30 Days over due	**10**	13
60 Days over due	**4**	5
90+ Days over due	**11**	12
Total trade accounts receivable	**243**	346
Allowance for doubtful accounts	**(6)**	(6)
Total trade accounts receivable, net[a]	**237**	340

[a] The carrying amount of accounts receivable is impacted by changes in gas prices, which may fluctuate significantly from year to year.

For the years ended December 31, 2015 and 2014, no one customer accounted for more than 10% of sales or 10% of receivables.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has credit facilities available to help meet short-term financing needs (note 10).

The following are the contractual maturities of the undiscounted cash flows of financial liabilities as at December 31, 2015:

($millions)	**Total**	**2016**	**2017-2018**	**2019-2020**	**Thereafter**
Commercial paper	207	207	—	—	—
Accounts payable and accrued charges	793	793	—	—	—
Long-term debt (including principal and interest)	5,468	359	816	227	4,066
Total	6,468	1,359	816	227	4,066

15. Stock Based Compensation

The Spectra Energy 2007 Long-Term Incentive Plan (the 2007 LTIP), as amended and restated, provides for the granting of stock options, restricted stock awards and units, unrestricted stock awards and units, and other equity-based awards, to employees and other key individuals who perform services for Spectra Energy. A maximum of 40 million shares of common stock may be awarded under the 2007 LTIP. Union Gas employees participate in the 2007 LTIP.

Stock based performance awards generally vest over three years at the earliest, if performance metrics are met. Spectra Energy granted 36,100 performance awards in 2015 and 38,200 in 2014, with fair values of U.S. $2 million for both 2015 and 2014 to Union Gas employees. There were no performance awards vested in 2015 and the total fair value of the performance awards vested in 2014 was U.S. $1 million. As of December 31, 2015, the Company expects to recognize U.S. $2 million of future compensation cost related to performance awards over a weighted-average period of less than one year.

Stock based phantom awards generally vest over three years. Spectra Energy awarded 22,650 phantom awards in 2015 and 24,200 in 2014, with fair values of U.S. $1 million for both 2015 and 2014 to Union Gas employees. The total fair value of the phantom awards vested was U.S. $1 million in both 2015 and 2014. As of December 31, 2015, the Company expects to recognize U.S. $1 million of future compensation cost related to phantom awards over a weighted-average period of less than two years.

	Performance Awards		**Phantom Awards**	
	Units	**Weighted-Average Grant Date Fair Value U.S. $**	**Units**	**Weighted-Average Grant Date Fair Value U.S. $**
Outstanding, beginning of year	126,519	35	78,872	32
Granted	36,100	48	22,650	37
Vested	—	—	(25,902)	31
Forfeited	(42,516)	21	(523)	19
Outstanding, end of year	120,103	39	75,097	26
Awards expected to vest	116,070	39	74,186	26

16. Guarantees

The Company has various financial guarantees which are issued in the normal course of business. The Company enters into these arrangements to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Balance Sheets. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company's potential exposure under these agreements can range from a specific dollar amount to an unlimited dollar amount depending on the nature of the claim and the particular transaction. The Company is unable to estimate the total potential amount of future payments under these agreements due to several factors, such as unlimited exposure under certain guarantees.

17. Contingencies

The Company, in the course of its operations, is subject to environmental and other claims, lawsuits and contingencies. Accruals are made in instances where it is probable that liabilities will be incurred and where such liabilities can be reasonably estimated.

In November 2015, the Ontario Ministry of the Environment and Climate Change issued and posted a proposed draft Director's Order (the Order) naming the Company, along with other parties, as an impacted property owner in connection with a contaminated site adjacent to a property of the Company in Hamilton. If issued in its current form, the Order would require all parties to act jointly to develop a Conceptual Site Model to fully delineate the extent of the soil and groundwater contamination and to assess remedial measures, if necessary. In December 2015, the Company requested that the Ministry revise the proposed draft Order to more properly focus only on the party responsible for the contamination, as opposed to those parties impacted by the contamination. The Company is of the view that the cost of any potential remedial measures, if any, cannot be estimated at this time.

Other than the potential contingency noted above, of which the impact is unknown, the Company has no reason to believe that the ultimate outcome of these matters could have a significant impact on its Financial Statements.

18. Subsequent Events

Management has evaluated significant events and transactions that occurred from January 1, 2016 through March 3, 2016, the date the financial statements were filed, and no subsequent events requiring disclosure were noted.

The Financial Statements and all information in this report have been prepared by and are the responsibility of management. The Financial Statements have been prepared in conformity with generally accepted accounting principles in the United States of America and include certain estimated amounts, which are based on informed judgements to ensure fair representation in all material respects. When alternative accounting methods exist, management has chosen those it considers most appropriate.

Management depends upon Union Gas Limited's system of internal controls and formal policies and procedures to ensure the consistency, integrity and reliability of accounting and financial reporting, and to provide reasonable assurance that assets are safeguarded and that transactions are properly executed in accordance with management's authorization. Management is also supported and assisted by a program of internal audit services.

The Board of Directors (the Board) is responsible for ensuring that management fulfils its responsibility for financial reporting and for final approval of the Financial Statements.

The Board meets regularly with management, the internal auditors and the shareholders' auditors to review the Financial Statements, the Independent Auditor's Report and other auditing and accounting matters to ensure that each group is properly discharging its responsibilities.

The shareholders' auditors have full and free access to the Board, as does the Director of Internal Audit Services.

Deloitte LLP performed an independent audit of the 2016 and 2015 Financial Statements in this report. Their independent professional opinion on the fairness of these Financial Statements is included in the Independent Auditor's Report.

Independent Auditor's Report

To the Shareholders of
Union Gas Limited

We have audited the accompanying financial statements of Union Gas Limited, which comprise the balance sheets as at December 31, 2016 and December 31, 2015, and the statements of operations and comprehensive income, statements of equity, and statements of cash flows for the years then ended, and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements present fairly, in all material respects, the financial position of Union Gas Limited as at December 31, 2016 and December 31, 2015, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

UNION GAS LIMITED
NOTES TO FINANCIAL STATEMENTS
DECEMBER 31, 2016 AND 2015

1. Summary of Operations and Significant Accounting Policies

The terms "Union Gas" or "the Company" as used in these Financial Statements refer to Union Gas Limited unless the context suggests otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Union Gas. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (Westcoast). Westcoast is an indirect wholly-owned subsidiary of Spectra Energy Corp (Spectra Energy).

On September 6, 2016, Spectra Energy announced that it entered into a definitive merger agreement with Enbridge Inc. (Enbridge). Under this agreement, Enbridge and Spectra Energy will combine in a stock-for-stock merger transaction, which values Spectra Energy's stock at approximately $37 billion, based on the closing price of Enbridge common shares as of September 2, 2016. This transaction was approved by the boards of directors and shareholders of both Spectra Energy and Enbridge and has received all necessary regulatory approvals. The transaction is expected to close on February 27, 2017.

Upon completion of the proposed merger, Spectra Energy shareholders will receive 0.984 Enbridge common shares for each share of Spectra Energy stock they own. The consideration to be received is valued at U.S. $40.33 per Spectra Energy share, based on the closing price of Enbridge common shares as of September 2, 2016, representing an approximate 11.5% premium to the closing price of Spectra Energy stock as of September 2, 2016. Upon completion of the merger, Enbridge shareholders are expected to own approximately 57% of the combined company and Spectra Energy shareholders are expected to own approximately 43%.

As a result of this transaction, Enbridge and its subsidiaries will own Union Gas through their ownership of Spectra Energy.

Nature of Operations

Union Gas owns and operates natural gas distribution, storage and transmission facilities in Ontario. The Company distributes natural gas to customers in northern, southwestern and eastern Ontario and provides natural gas storage and transportation services for other utilities and energy market participants. The property, plant and equipment of the Company consist primarily of pipeline, storage and compression facilities used in the distribution, storage and transportation of natural gas.

Basis of Presentation

The Financial Statements of the Company include the standalone accounts of the Company and have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP). All amounts are presented in millions of Canadian dollars except where noted.

In 2014, Canadian securities regulators approved the extension of the Company's exemptive relief to continue reporting under U.S. GAAP instead of International Financial Reporting Standards (IFRS) until the earlier of January 1, 2019, and the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation.

Use of Estimates

The preparation of the Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Actual amounts could differ from these estimates.

Regulation

The Company is regulated by the Ontario Energy Board (OEB) pursuant to the provisions of the *Ontario Energy Board Act, (1998)*, which is part of a package of legislation known as the *Energy Competition Act, (1998)*. This legislation provides an opportunity for different forms of regulation and increased competition in the energy (electricity and natural gas) industry in Ontario. The Company is subject to regulation with respect to the rates that it may charge its customers, system expansion or facility abandonment, adequacy of service, public safety aspects of pipeline system construction and certain accounting principles. The OEB has determined that it will forbear from regulating the prices for long-term storage services. The Storage Forbearance Decision created an unregulated storage operation within the Company and provides the framework required to support new storage investments.

The OEB is mandated to approve rates that are just and reasonable. Utility earnings are regulated by the OEB under cost of service regulation, on the basis of a return on rate base for a future period. Under cost of service regulation, a rate application process leads to the implementation of new rates intended to provide a utility with the opportunity to earn an allowed rate of return. The actual rate of return achieved by the Company may vary from the rate allowed by the OEB as a result of unexpected changes in weather, average use per customer, inflation, the price of competing fuels, interest rates, general economic conditions and its ability to achieve forecasted revenues and manage costs.

Effective January 1, 2014, the Company began a five year incentive regulation term. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts.

As part of the Company's OEB-approved incentive regulation framework, an earnings sharing mechanism exists whereby earnings in excess of 100 basis points above the benchmark return on equity are shared with ratepayers as a reduction in earnings during the year, if applicable.

The Company follows U.S. GAAP, which may differ for regulated operations from those otherwise expected in non rate-regulated businesses. As a result, the Company records assets and liabilities that result from the regulated ratemaking process that may not be recorded under U.S. GAAP for non rate-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because they are probable of future recovery in customer rates. Regulatory liabilities generally represent obligations to make refunds to customers for previous collections for costs that are not likely to be incurred. Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as applicable regulatory changes and recent rate orders to other regulated entities. Management believes the existing regulatory assets are probable of recovery. This determination reflects the current political and regulatory climate at the provincial and national levels, and is subject to change in the future. If future recovery of costs ceases to be probable, the asset write-offs could be recognized in current period earnings.

Revenue Recognition

Revenues from the transportation, storage, distribution and sales of natural gas are recognized when either the service is provided or the product is delivered and collection is reasonably assured. Revenues related to these services provided or products delivered but not yet billed are estimated each month.

Gas Sales and Cost of Gas

Gas sales revenue is recorded on the basis of regular meter readings and estimates of customer volume usage since the last meter reading date to the end of the reporting period applied using OEB approved rates. Cost of gas is recorded using amounts approved by the OEB in the determination of customer sales rates. Differences between the OEB approved reference amounts and those costs actually incurred are deferred on the Balance Sheets for future disposition subject to approval by the OEB.

In determining the quantities of gas delivered and received, differences arise from the measurement process. The Company includes in the cost of gas an estimated amount of these differences based upon the methodology used by the OEB in the determination of rates for storage, transmission and distribution of gas. Annual fluctuations from the estimated level are recognized in earnings during the year.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term investments, with an original maturity of three months or less.

Income Taxes

Deferred income taxes are recognized for differences between the financial reporting and tax bases of assets and liabilities at enacted statutory tax rates in effect for the years in which the differences are expected to reverse. The effect on deferred taxes of a change in tax rates is recognized in income in the period that includes the enactment date. Actual income taxes could vary from these estimates due to the future changes in income tax law or results from the final review of tax returns by federal and provincial tax authorities.

Financial statement effects on tax positions are recognized in the period in which it is more likely than not that the position will be sustained upon examination, the position is effectively settled or when the statute of limitations to challenge the position has expired. Interest related to the unrecognized tax benefits is recorded as Interest expense on the Statements of Operations and Comprehensive Income.

Inventories

Gas in storage for resale to customers is carried at weighted average cost approved by the OEB in the determination of customer sales rates. The difference between the approved cost and the actual cost of the gas purchased is deferred on the Balance Sheets for future disposition subject to approval by the OEB. Inventories of materials and supplies are valued at the lower of average cost or net realizable value.

Property, Plant and Equipment and Depreciation

Property, plant and equipment is stated at historical cost less accumulated depreciation and amortization. The Company capitalizes all construction-related direct labour and material costs, as well as indirect construction costs. Indirect costs include general engineering and the cost of funds used during construction. The costs of renewals and betterments that extend the useful life or increase the expected output of property, plant and equipment are also capitalized. The cost of repairs, replacements and major maintenance projects that do not extend the useful life or increase the expected output of property, plant and equipment are expensed as incurred.

Regulated depreciation is computed based on the asset's average service life using the straight-line method. Unregulated depreciation is computed based on management's assumption of useful life using the straight-line method.

When regulated property, plant and equipment is retired, the original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation and amortization. When entire regulated operating units are sold or non-regulated property, plant and equipment is retired, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced. Any gain or loss is recorded in earnings, unless otherwise required by the applicable regulatory body.

Asset Retirement Obligations (AROs)

The Company recognizes AROs for legal commitments associated with the retirement of long-lived assets that result from the acquisition, construction, development and/or normal use of the asset and conditional AROs in which the timing or method of settlement are conditional on a future event that may or may not be within the Company's control. The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made and is added to the carrying amount of the associated asset. This additional carrying amount is depreciated over the estimated useful life of the asset.

Stock-Based Compensation

Union Gas employees participate in a stock-based compensation plan sponsored by Spectra Energy. For employee awards, equity-classified and liability-classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests, the date the employee becomes retirement-eligible, or the date the award market condition is met. Awards, including stock options, granted to employees that are already retirement-eligible are deemed to have vested immediately upon issuance, and therefore, compensation cost for those awards is recognized on the date such awards are granted.

Pension and Other Post-Retirement Benefits

The Company fully recognizes the overfunded or underfunded status of pension and other post-retirement benefit plans as Regulatory and other assets, Accounts payable and accrued charges, or Regulatory and other liabilities on the Balance Sheets. A plan's funded status is the difference between the fair value of plan assets and the plan's benefit obligation. The Company records deferred plan costs and income (unrecognized losses and gains, and unrecognized prior service costs and credits) in Accumulated other comprehensive loss, until they are amortized to be recognized as a component of benefit expense within Operating and maintenance expenses in the Statements of Operations and Comprehensive Income. See note 12 for further discussion.

New Accounting Pronouncements

In May 2014, the FASB issued ASU 2014-09,*"Revenue from Contracts with Customers (Topic 606),"* in an effort to improve revenue recognition practices across entities and industries. The ASU introduces a single, principles-based revenue recognition model which centers on the core principle of an entity recognizing revenue in a manner that depicts the transfer of goods and services to customers at an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods and services. Since its release, the FASB has issued multiple amendments clarifying and/or amending ASU 2014-09. The Company has substantially completed a review of contracts with customers in relation to the requirements of ASU 2014-09. While the Company has not identified any material difference in the amount or timing of revenue recognition for the categories the Company has reviewed to date, the evaluation is not complete and the Company has not concluded on the overall impacts of adopting this standard. In addition, the Company is in the process of implementing appropriate changes to business processes, systems and controls to support the recognition and disclosure requirements under the new standard. ASU 2014-09 is effective for the Company on January 1, 2018 and allows for either full retrospective or modified retrospective adoption.

In January 2016, the FASB issued ASU 2016-01, "*Financial Instruments - Overall (Subtopic 825-10): Recognition and Measurement of Financials Assets and Financial Liabilities,*" which amends the classification and measurement of financial instruments. Changes primarily affect the accounting for equity investments, financial liabilities under the fair value option, and the presentation and disclosure requirements for financial instruments. This ASU is effective for the Company beginning after December 15, 2017. Early adoption is not permitted. The Company is currently evaluating this ASU and its potential impact.

In February 2016, the FASB issued Accounting Standards Update (ASU) No. 2016-02, "*Leases (Topic 842),*" to improve the financial reporting around leasing transactions. The new guidance requires companies to begin recording assets and liabilities arising from those leases classified as operating leases under previous guidance. Furthermore, the new guidance will require significant additional disclosures about the amount, timing and uncertainty of cash flows from leases. Topic 842 retains a distinction between finance leases and operating leases. The classification criteria for distinguishing between finance leases and operating leases are substantially similar to the classification criteria for distinguishing between capital leases and operating leases in previous guidance. The result of retaining a distinction between finance leases and operating leases is that under the lessee accounting model in Topic 842, the effect of leases in the statement of comprehensive income and the statement of cash flows is largely unchanged from previous guidance. This ASU is effective for the Company January 1, 2019. The Company is currently evaluating this ASU and its potential impact.

In March 2016, the FASB issued ASU No. 2016-09, "*Compensation-Stock Compensation (Topic 718): Improvements to Employee Share-Based Payment Accounting,*" which simplifies several aspects of the accounting for share-based payment award transactions. The update requires classification changes for certain tax cash flows within the statement of cash flows and requires all excess tax benefits and tax deficiencies to be recorded through the Statement of Operations. In addition, the update provides an accounting policy election around forfeitures and raises the threshold for liability classification of share-based awards withheld for tax withholding requirements. This ASU is effective for the Company January 1, 2017. This ASU is not expected to have a material impact on the Company's Financial Statements.

In June 2016, the FASB issued ASU No. 2016-13, "*Financial Instruments-Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments,*" to replace the incurred loss impairment methodology with a methodology that reflects expected credit losses and requires the consideration of a broader range of reasonable and supportable information to inform credit loss estimates. This ASU is effective for the Company January 1, 2020. The Company is currently evaluating this ASU and its potential impact.

In August 2016, the FASB issued ASU No. 2016-15, "*Statement of Cash Flows (Topic 230): Classification of Certain Cash Receipts and Cash Payments,*" to provide guidance on specific cash flow issues with the objective of reducing the existing diversity in practice. This ASU is effective for the Company January 1, 2018. The Company is currently evaluating this ASU and its potential impact.

In November 2016, the FASB issued ASU No. 2016-18, *"Statement of Cash Flows (Topic 230): Restricted Cash,"* to address the diversity in the classification and presentation of changes in restricted cash and restricted cash equivalents on the statement of cash flows. The update requires that restricted cash and restricted cash equivalents be included with Cash and cash equivalents when reconciling the beginning-of-period and end-of-period total amounts shown on the Statement of Cash Flows. This ASU is effective for the Company on January 1, 2018. The Company is currently evaluating this ASU and its potential impact.

2. Regulatory Matters

Regulatory Assets and Liabilities

The Company recorded the following assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities. See note 1 for further discussion.

($millions)	Financial Statement Location	**December 31, 2016**	December 31, 2015	Recovery/Settlement Period
Regulatory assets[a]				
Customer deferrals	Accounts receivable, net	**82**	43	Less than 1 year
Gas in storage inventory	Inventories	**13**	53	Less than 1 year
Deferred income taxes – long-term[b]	Regulatory and other assets	**462**	403	2 years – exceeds remaining life of asset
Total regulatory assets		**557**	499	
Regulatory liabilities[a]				
Other deferrals – current[b]	Accounts payable and accrued charges	**7**	7	Less than 1 year
Customer deferrals	Accounts payable and accrued charges	**16**	1	Less than 1 year
Gas cost deferrals	Accounts payable and accrued charges	**13**	67	Less than 1 year
Asset removal costs[b]	Regulatory and other liabilities	**394**	357	Exceeds remaining life of asset
Total regulatory liabilities		**430**	432	

[a] All regulatory assets and liabilities are excluded from rate base unless otherwise noted.

[b] All or a portion of the balance is included in rate base.

The Company has regulatory assets of $462 million as of December 31, 2016 and $403 million as of December 31, 2015 related to deferred income tax liabilities. Under the current OEB-authorized rate structure, income tax costs are recovered in rates based on the current income tax payable and do not include accruals for deferred income tax. However, as income taxes become payable as a result of the reversal of timing differences that created the deferred income taxes, it is expected that rates will be adjusted to recover these taxes. Since substantially all of these timing differences are related to property, plant and equipment costs, recovery of these regulatory assets is expected to occur over the life of those assets.

The Company has regulatory liabilities associated with plant removal costs of $394 million as of December 31, 2016 and $357 million as of December 31, 2015. These regulatory liabilities represent collections from customers under approved rates for future asset removal activities that are expected to occur associated with its regulated facilities.

In addition, the Company has regulatory liabilities of $13 million as of December 31, 2016 and $67 million as of December 31, 2015 representing gas cost collections from customers under approved rates that vary from the actual cost of gas for the associated periods. The Company files an application quarterly with the OEB to ensure that customers' rates are updated to reflect published forward-market prices. The difference between the approved and actual cost of gas is deferred for future repayment to or refund from customers.

Rate Related Information

The Company's distribution rates, beginning January 1, 2014 are set under a five-year incentive regulation framework. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts. The framework allows for:

- annual inflationary rate increases, offset by a productivity factor of 60% of inflation, such that the annual net rate escalator in each year is 40% of inflation,
- rate increases or decreases in the small volume customer classes where average use declines or increases,
- certain adjustments to base rates,
- the continued pass-through of gas commodity, upstream transportation and demand side management costs,
- the additional pass-through of costs associated with major capital investments and certain fuel variances,
- an allowance for unexpected cost changes that are outside of management's control,
- equal sharing of tax changes between the Company and its customers, and
- an earnings sharing mechanism that permits the Company to fully retain the return on equity from utility operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.

Annual Deferral Account Disposition

In April 2016, the Company filed an application with the OEB for the annual disposition of the 2015 deferral account balances. The impact was a net receivable from customers of approximately $23 million. In August 2016, a decision from the OEB was received approving recovery from ratepayers which began October 1, 2016.

Demand Side Management (DSM)

In June 2016, a decision from the OEB was received approving recovery of the 2014 DSM deferral and variance account balances from ratepayers. The Company began recovery of approximately $11 million from customers on October 1, 2016.

In March 2016, the Company filed a Draft Rate Order with the OEB for rates effective January 1, 2016 based on the OEB's February 24, 2016 updated Decision and Order on the 2015-2020 DSM Plan. In May 2016, a decision from the OEB was received approving recovery in rates of the incremental 2016 DSM related charges from ratepayers of approximately $24 million effective January 1, 2016. The impact on a typical residential customer ranged from an increase of $7 to $9 annually, depending on the customer's location within the Company's service territory. These charges are being recovered over a six month period which began July 1, 2016 for general service rate classes and as a one-time adjustment for contract rate classes that was made in July 2016.

As part of the Company's 2017 rates application, the Company has included an approved DSM budget of approximately $58 million in 2017 rates. The 2017 budget was approved as part of the OEB Revised Decision in the 2015-2020 DSM Plan proceeding.

3. Restricted Cash

The Company had $37 million of restricted funds at December 31, 2016, with $15 million classified as Accounts receivable net, and $22 million classified as Regulatory and other assets. These restricted funds are related to money received from the Province of Ontario (the Province) under the Green Investment Fund program. The funds from this program are to be used by May 31, 2019 to help eligible homeowners reduce their energy consumption and greenhouse gas emissions. The Company is acting as an intermediary for the transfer of funds between the Province and approximately 12,000 eligible homeowners.

Changes in restricted balances are presented within Investing Activities on the Company's Statements of Cash Flows.

4. Gas Imbalances

The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

At December 31, 2016 Accounts receivable, net and Accounts payable and accrued charges include $410 million (2015 – $350 million) related to gas imbalances and gas balancing services.

5. Inventories

Gas in storage includes gas for delivery to customers and for use in the Company's operations. Inventories of materials and supplies are for use in the Company's operations.

($millions)	**December 31, 2016**	December 31, 2015
Gas in storage	**222**	279
Materials and supplies	**23**	20
	245	299

6. Income Taxes

Income Tax Expense Components

Other - net	**5**	4
Total income tax expense	**21**	28
Effective rate of income tax	**9.3%**	13.0%

Net Deferred Income Tax Liability Components

($millions)	**December 31, 2016**	December 31, 2015
Deferred income tax liabilities		
Accelerated depreciation rates	**405**	370
Regulatory asset	**121**	105
Reserves	**20**	(1)
Other	**(30)**	(23)
Total deferred income tax liabilities	**516**	451

Reconciliation of Gross Unrecognized Income Tax Benefits

($millions)	**December 31, 2016**	December 31, 2015
Balance, beginning of year	**28**	19
Increases related to prior year tax positions	**8**	11
Increases related to current year tax positions	**3**	2
Reductions due to lapse of statute of limitations	**(1)**	(4)
Balance, end of year	**38**	28

Unrecognized tax benefits totalled $38 million at December 31, 2016. Of this, $37 million would reduce the effective tax rate if recognized on or after January 1, 2017. The Company recorded a net increase of $10 million in gross unrecognized tax benefits in 2016. This was a result of $1 million attributable to deferred tax liability and $11 million increase in income tax expense.

The Company recognized potential accrued interest related to unrecognized tax benefits as interest expense. Nil was recorded to interest expense in 2016 compared to a $1 million benefit in 2015. Accrued interest totalled $1 million at December 31, 2016 and $1 million at December 31, 2015.

Although uncertain, the Company believes it is reasonably possible that the total amount of unrecognized tax benefits could decrease by $11 million prior to December 31, 2017. The anticipated changes in unrecognized tax benefits relate to the expiration of statutes of limitations and expected audit settlements.

The Company remains subject to examination for income tax returns for years 2009 through 2015.

7. Property, Plant and Equipment, net

($millions)	Useful Life	**December 31, 2016**	December 31, 2015
	(years)

Total Property, plant and equipment, net		**6,508**	5,678

The Company had no capital leases at December 31, 2016 or 2015.

95% of the Company's property, plant and equipment is regulated with estimated useful lives based on rates approved by the OEB. Composite weighted-average depreciation rates were 2.90% for 2016 and 2.97% for 2015.

The Company capitalized interest of $12 million in 2016 and $7 million in 2015.

Amortization expense of intangible assets totaled $17 million in 2016 and $18 million in 2015. Estimated amortization expense for the next five years is as follows:

($millions)	**2017**	**2018**	**2019**	**2020**	**2021**
Estimated amortization expense	15	12	10	8	7

Total Regulatory and other liabilities	**602**	509

[(a)]Includes $22 million (2015 - $nil) related to the Green Investment Fund program. See Note 3.

9. Related Party Transactions

The Company occasionally performs services for and incurs costs on behalf of the Company's affiliates, which are subsequently reimbursed. Likewise, certain affiliates may perform services for or incur costs on behalf of the Company, which are then reimbursed by the Company. These transactions are in the normal course of operations and are recorded at exchange amounts agreed to between the related parties.

In addition, Spectra Energy and its affiliates perform centralized corporate functions for the Company, pursuant to an agreement with Spectra Energy and its affiliates, including legal, accounting, compliance, treasury, information technology and other areas, as well as certain engineering and other services. The Company reimburses Spectra Energy and its affiliates for the expenses to provide these services as well as other expenses they incur on the Company's behalf. Spectra Energy and its affiliates charge such expenses based on the cost of actual services provided or using various allocation methodologies based on the Company's percentage of assets, employees, earnings or other measures, as compared to Spectra Energy's other affiliates.

The Company's transactions with affiliated companies are as follows:

Spectra Energy Gas Transmission LLC	**(1)**	(7)
Total[(a)]	**(1)**	(13)

(a)At December 31, 2016, $5 million (2015 – $14 million) is recognized in Accounts payable and accrued charges and $4 million (2015 – $1 million) is recognized in Accounts receivable, net on the Balance Sheets.

In the normal course of operations, the Company provides or obtains funds from Westcoast on an unsecured basis. The balance outstanding at December 31, 2016 was a payable of $253 million (December 31, 2015 – payable of $56 million). During 2016, interest paid on these loans totalled less than $1 million (2015 – less than $1 million) and interest received on these loans totalled less than $1 million (2015 – less than $1 million). Interest on these loans is calculated based on the monthly average of 30-day banker's acceptance rates.

The Company also has a promissory note to borrow up to $150 million from GLBE on an unsecured basis. Funds from this promissory note are used for general corporate purposes. There was no balance outstanding at December 31, 2016 or December 31, 2015.

In 2016, no common stock dividend payments were made to GLBE (2015 – $50 million).

Less: Current maturities of long-term debt		**125**	200
Less: Commercial paper		**333**	207
Total Long-term debt		**3,295**	2,921

The Company's long-term debt is unsecured. Principal repayment requirements on long-term debt are as follows:

($millions)	**Total**	**2017**	**2018**	**2019**	**2020**	**2021**	**Thereafter**
Long-term debt[(a)]	3,440	125	400	—	—	200	2,715

(a) Excludes commercial paper of $333 million.

Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants including a limitation on the payment of dividends. As of December 31, 2016 and 2015, the Company is in compliance with all such covenants.

Total interest expense on long-term debt in 2016 was $169 million (2015 – $163 million).

Available Credit Facility and Restrictive Debt Covenants

			Commercial Paper Debt Outstanding at	
($millions)	**Expiration Date**	**Credit Facility Capacity**	**December 31, 2016**	December 31, 2015
Multi-year syndicated [(a), (b)]	2021	700	**333**	207

[(a)] The credit facility contains a covenant requiring the debt-to-total capitalization ratio, as defined in the agreement, to not exceed 75% and a provision which requires the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. The ratio was 69.0% at December 31 2016 (December 31, 2015 – 67.8%).

[(b)] In April 2016, the Company amended the revolving credit agreement. The facility was increased from $500 million to $700 million and its expiration date was extended from 2019 to 2021.

The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under the credit facility. As of December 31, 2016 and December 31, 2015 there were no letters of credit issued or revolving borrowings outstanding under the credit facility. The majority of the Company's short-term cash requirements are funded through the issuance of commercial paper. The weighted average rate on outstanding commercial paper as of December 31, 2016 was 0.87% (2015 – 0.86%). The weighted average days to maturity on outstanding commercial paper as of December 31, 2016 was 8 days (2015 – 9 days).

The Company's credit agreement contains various financial and other covenants, including the maintenance of certain financial ratios. Failure to meet those covenants beyond applicable grace periods could result in accelerated due dates and/or termination of the agreement. As of December 31, 2016 and December 31, 2015, the Company was in compliance with those covenants. In addition, the credit agreement allows for the acceleration of payments or termination of the agreement due to non-payment, or in some cases, due to the acceleration of other significant indebtedness of the borrower.

Total Interest paid on short term debt in 2016 was $1 million (2015 – $1 million).

11. Preferred Shares

		Outstanding			
	Authorized	**December 31, 2016**	December 31, 2015	**December 31, 2016**	December 31, 2015
	(shares)	*(shares)*		*($millions)*	
Class A	202,072				
5.5% Series A		**47,672**	47,672	**3**	3
6% Series B		**90,000**	90,000	**5**	5
5% Series C		**49,500**	49,500	**2**	2
4.88% Class B, Series 10	Unlimited	**4,000,000**	4,000,000	**100**	100
				110	110

The Class A, Series A and C Preferred shares are cumulative and redeemable at $50.50 per share. The Company is obligated to offer to purchase $170,000 of Series A and $140,000 of Series C shares annually at the lowest price obtainable, but not exceeding $50 per share.

The Class A, Series B Preferred shares are cumulative and redeemable at $55 per share at the option of the Company.

The Class B, Series 10 Preferred shares are cumulative and redeemable at $25 per share at the option of the Company and, at the option of the holders, convertible back into Series 11 shares once every five years commencing January 1, 2014. The holders of the Class B, Series 10 Preferred shares did not exercise their option on January 1, 2014 and their next optional conversion date is January 1, 2019. The Company may redeem at any time all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2018.

The Company has an unlimited number of authorized 4.79% Class B, Series 11 Preferred shares. These shares are cumulative and redeemable at $25 per share at the option of the Company, and at the option of the holders, convertible back into Series 10 shares, commencing on January 15, 2026 and on each fifth anniversary thereafter (each such anniversary, a Series 11 Conversion Date). Additionally, these shares are redeemable at $25.50 per share at the option of the Company on any date after January 15, 2026 that is not a Series 11 Conversion Date. At December 31, 2016 and December 31, 2015 none of these shares were issued or outstanding.

The shares are not subject to any sinking fund or mandatory redemption and are not convertible into any other type of securities other than preferred shares. As these shares are not solely in the control of the Company, they have been classified as temporary equity on the Balance Sheets.

12. Employee Benefit Plans

Retirement Plans

The Company maintains registered and non-registered, contributory and non-contributory defined benefit (DB Plans) and defined contribution (DC Plan) retirement plans covering substantially all employees. The DB Plans provide retirement benefits based on each plan participant's years of service and final average earnings. Under the DC Plan, company contributions are determined according to the terms of the plan and based on each plan participant's age, years of service and current eligible earnings. The Company also provides non-registered DB Plans to all employees who retire under a registered DB Plan and whose pension is limited by the maximum pension limits under the Income Tax Act.

The Company's policy is to fund the retirement plans, where applicable, on an actuarial basis to provide assets sufficient to meet benefits to be paid to plan participants or as required by legislation or plan terms. Total contributions to the DB Plans were $4 million during the twelve months ended December 31, 2016 and $6 million during the twelve months ended December 31, 2015. Contributions of $6 million in both 2016 and 2015 were made to the Company's DC Plan. The Company anticipates that in 2017 it will make total contributions of approximately $15 million to its DB Plans and $6 million to its DC Plan.

Actuarial gains and losses are amortized over the average remaining service period of active employees. The average remaining service periods of active employees covered by the registered and non-registered DB Plans is 13 years. The Company determines the market-related value of plan assets using a calculated value that recognizes changes in fair value of the plan assets over three years.

Registered and Non-Registered Pension Plans

Change in Projected Benefit Obligation and Change in Fair Value of Plan Assets

($millions)	**2016**	2015
Change in Projected Benefit Obligation		
Projected benefit obligation, beginning of year	**877**	863
Service cost	**19**	20
Interest cost	**35**	34
Actuarial (gain) loss	**22**	(5)
Participant contributions	**4**	4
Benefits paid	**(40)**	(39)
Projected benefit obligation, end of year	**917**	877
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	**842**	829
Actual return on plan assets	**47**	45
Benefits paid	**(40)**	(39)
Employer contributions	**4**	6
Plan participants' contributions	**4**	4
Expected non-investment expenses	**(3)**	(3)
Plan assets, end of year	**854**	842
Net amount recognized	**(63)**	(35)

Accumulated Benefit Obligation	**866**	824

($millions)	**2016**	2015
Net amount recognized		
Current Liabilities - Other	**(2)**	(2)
Deferred Credits and Other Liabilities - Regulatory and Other	**(88)**	(61)
Other Assets - Other	**27**	28
Total net amount recognized	**(63)**	(35)

The table above includes non-registered pension plans that are not funded and had projected benefit obligations of $47 million at December 31, 2016 and $42 million at December 31, 2015. At December 31, 2016 plans with accumulated benefit obligations in excess of plan assets had projected benefit obligations of $519 million, accumulated benefit obligations of $475 million and fair value of plan assets of $428 million.

Amounts Recognized in Accumulated Other Comprehensive Income (AOCI)

($millions)	**2016**	2015
Net actuarial loss	**257**	241
Prior service costs	**2**	4
Total amounts recognized in AOCI, pre-tax	**259**	245

Components of Net Periodic Pension Costs

($millions)	**2016**	2015
Net Periodic Pension Cost		
Service cost benefit earned	**22**	22
Interest cost on projected benefit obligation	**35**	34
Expected return on plan assets	**(57)**	(56)
Amortization of prior service cost	**1**	1
Amortization of loss	**17**	22
Net periodic pension cost	**18**	23
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial (gain) loss	**32**	7
Amortization of actuarial loss	**(17)**	(22)
Amortization of prior service cost	**(1)**	(1)
Total recognized in other comprehensive income	**14**	(16)
Total Recognized in Net Periodic Pension Cost and Other Comprehensive Income	**32**	7

At December 31, 2016, approximately $14 million of actuarial losses will be amortized from AOCI on the Balance Sheets into net periodic pension cost in 2017.

At December 31, 2016, approximately $1 million of prior service costs will be amortized from AOCI on the Balance Sheets into net periodic pension costs in 2017.

Assumptions Used for Pension Benefits Accounting

	2016	2015
Benefit Obligations		
Discount rate	**3.81%**	4.03%
Salary increase	**3.00%**	3.00%
Net Periodic Benefit Cost		
Discount rate	**4.03%**	4.00%
Salary increase	**3.00%**	3.25%
Expected long-term rate of return on plan assets	**7.15%**	7.40%

The discount rates used to determine the benefit obligations are the rates at which the benefit obligations could be effectively settled. The discount rates are developed from yields on available high-quality bonds and reflect each plan's expected cash flows.

The long-term rates of return for the plan assets in 2016 were developed using weighted-average calculations of expected returns based primarily on future expected returns across classes considering the use of active asset managers applied against the plans' respective targeted asset mix.

Registered Pension Plan Assets

Asset Category	Target Allocation	**December 31, 2016**	December 31, 2015
U.S. equity securities	15%	**16%**	18%
Canadian equity securities	23%	**28%**	24%
Other equity securities	15%	**15%**	13%
Fixed income securities	39%	**41%**	45%
Other investments	8%	**—%**	—%
Total	100%	**100%**	100%

Pension plan assets are maintained in a master trust. The investment objective of the master trust is to achieve reasonable returns on trust assets, subject to a prudent level of portfolio risk, for the purpose of enhancing the security of benefits for plan participants. The asset allocation targets were set after considering the investment objective and the risk profile with respect to the trust. Equities are held for their high expected return. Other equity and fixed income securities are held for diversification. Investments within asset classes are diversified to achieve broad market participation and reduce the effects of individual managers or investments. The Company regularly reviews its actual asset allocation and periodically rebalances its investments to the targeted allocation when considered appropriate.

The following table summarizes the fair values of pension plan assets recorded at each fair value hierarchy level, as determined in accordance with the valuation techniques described in note 14:

($millions)	**Total**	**Level 1**	**Level 2**	**Level 3**
December 31, 2016				
Cash and cash equivalents	3	3	—	—
Fixed income securities	350	350	—	—
Equity securities	501	242	259	—
Total	854	595	259	—
December 31, 2015				
Cash and cash equivalents	3	3	—	—
Fixed income securities	375	375	—	—
Equity securities	464	205	259	—
Total	842	583	259	—

Expected Benefit Payments

($millions)	**2017**	**2018**	**2019**	**2020**	**2021**	**2022-2026**
Expected benefit payments	43	44	46	48	49	260

Other Post-Retirement Benefit Plans

The Company provides health care and life insurance benefits for retired employees on a non-contributory basis predominantly under defined contribution plans. Employees are eligible for these benefits if they have met age and service requirements at retirement, as defined in the plans. The other post-retirement benefits are not funded.

Other Post-Retirement Benefit Plans - Change in Projected Benefit Obligation and Fair Value of Plan Assets

($millions)	**2016**	2015
Change in Benefit Obligation		
Accumulated post-retirement benefit obligation, beginning of year	**63**	67
Service cost	**1**	2
Interest cost	**3**	2
Actuarial (gains) losses	**(4)**	(6)
Benefits paid	**(2)**	(2)
Accumulated post-retirement benefit obligation, end of year	**61**	63
Change in Fair Value of Plan Assets		
Plan assets, beginning of year	**—**	—
Benefits paid	**(2)**	(2)
Employer contributions	**2**	2
Plan assets, end of year	**—**	—
Net amount recognized[a]	**(61)**	(63)

[a] $59 million is recognized in Regulatory and other liabilities and $2 million is recognized in Accounts payable and accrued charges on the Balance Sheets.

Other Post-Retirement Benefit Plans - Amounts Recognized in AOCI

($millions)	**December 31, 2016**	December 31, 2015
Net actuarial (gain) loss recognized in AOCI	**(6)**	(2)

($millions)	**2016**	2015
Other Post-Retirement Benefit Plans - Components of Net Periodic Benefit Cost		
Service cost benefit earned	**1**	2
Interest cost on accumulated post-retirement benefit obligation	**3**	2
Net periodic other post-retirement benefit cost	**4**	4
Other Changes in Plan Assets and Benefit Obligations Recognized in Other Comprehensive Income		
Current year actuarial (losses) gains	**(4)**	(6)
Total recognized in other comprehensive income	**(4)**	(6)
Total recognized in Net Periodic Benefit Cost and Other Comprehensive Income	**—**	(2)

Other Post-Retirement Benefits Plans - Assumptions Used for Benefits Accounting

	2016	2015
Benefit Obligations		
Discount rate for post-retirement plans	**3.81%**	4.03%
Salary increase	**3.00%**	3.00%
Net Periodic Benefit Cost		
Discount rate for post-retirement plans	**4.03%**	4.00%
Salary increase	**3.00%**	3.25%

The discount rates used to determine the post-retirement obligations are the rates at which the benefit obligations could be effectively settled. The discount rates for the plans are developed from yields on available high-quality bonds in Canada and reflect each plan's expected cash flows.

Assumed Health Care Cost Trend Rates

	2016	2015
Health care cost trend rate assumed for next year	**5.00%**	5.50%
Rate to which the cost trend rate is assumed to decline	**5.00%**	5.00%
Year that the rate reaches the ultimate trend rate	**2017**	2017

Sensitivity to Changes in Assumed Health Care Cost Trend Rates

($millions)	**1% Point Increase**	1% Point Decrease
Effect on post-retirement benefit obligations	**3**	(3)

Other Post-Retirement Benefit Plans - Payments and Receipts

The Company expects to make future benefit payments, which reflect expected future service, as appropriate. The following benefit payments are expected to be paid over each of the next five years and thereafter.

($millions)	**2017**	**2018**	**2019**	**2020**	**2021**	**2022-2026**
Expected benefit payments	2	3	3	3	3	16

Retirement/Savings Plan

The Company has employee savings plans available to eligible employees. Employees may participate in a matching contribution where the Company matches a certain percentage of before tax employee contributions of up to 5% of eligible pay per pay period. The Company expensed pre-tax employer matching contributions of $8 million in both the twelve months ended December 31, 2016 and 2015.

13. Asset Retirement Obligations

The Company's AROs relate to the legal obligation to disconnect, purge and cap abandoned pipelines, capping abandoned storage wells, and in some buildings, special handling and disposition of asbestos if it is disturbed.

The Company has non-asbestos AROs which include easements and some railway license agreements relating to pipeline assets located on land which the Company does not own. The Company has not recognized a liability in regard to the non-asbestos ARO because the fair value of the ARO cannot be reasonably estimated. The Company's pipeline system is considered a critical component of its business and is expected to be maintained and remain in place indefinitely. Natural gas supplies are also considered sufficient for the Company to operate in the long-term. The Company has determined that sufficient information to estimate the fair value of an ARO is not available because the assets are considered permanent with indeterminate useful lives and that sufficient information is not available to estimate a range of potential settlement dates in order to employ a present value technique to estimate fair value.

AROs are adjusted each period for liabilities incurred or settled during the period, accretion expense and any revisions made to the estimated cash flows.

Reconciliation of Changes in Asset Retirement Obligation Liabilities

($millions)	**December 31, 2016**	December 31, 2015
Balance, beginning of year	**440**	368
Accretion expense	**20**	17
Liabilities settled	**(7)**	(7)
Revisions in estimated cash flows	**(36)**	62
Balance, end of year	**417**	440

14. Fair Value Measurements

Financial instruments recorded at fair value on the Balance Sheets are valued using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

Level 1

Level 1 valuations represent quoted unadjusted prices for identical instruments in active markets.

Level 2 Valuation Techniques

Fair values of the Company's financial instruments that are actively traded in the secondary market are determined based on market-based prices. These valuations may include inputs such as quoted market prices of the exact or similar instruments, broker or dealer quotations, or alternative pricing sources that may include models or matrix pricing tools, with reasonable levels of price transparency. The fair value of the Company's pension plan assets designated as Level 2 financial instruments is determined through the market approach valuation technique using observable inputs including matrix pricing and market corroborated pricing.

Level 3 Valuation Techniques

Level 3 valuation techniques include the use of pricing models, discounted cash flow methodologies or similar techniques where at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. The fair value of the Company's pension plan assets designated as Level 3 financial instruments is determined through the market approach valuation technique using unobservable inputs including investment manager pricing for private placements and private equities.

There were no transfers between levels during the year ended December 31, 2016.

Financial Instruments

The fair values of financial instruments that are recorded and carried at book value are summarized in the following table. Judgment is required in interpreting market data to develop the estimates of fair value. These estimates are not necessarily indicative of the amounts that could have been realized in current markets.

	December 31, 2016		December 31, 2015	
($millions)	**Book Value**	**Fair Value**	Book Value	Fair Value
Long-term debt, including current maturities[a]	**3,440**	**3,888**	3,140	3,538

[a] Excludes unamortized items.

The fair value of the Company's Long-term debt is determined based on market-based prices as described in the Level 2 valuation technique described above.

The fair values of Cash and cash equivalents, Accounts receivable, net, Accounts payable and accrued charges, Short-term borrowings and Commercial paper are not materially different from their carrying amounts because of the short-term nature of these instruments or because the stated rates approximate market rates.

Credit risk

Credit risk is the risk of financial loss to the Company if a counterparty to a financial instrument fails to meet its contractual obligations. The maximum exposure to credit risk for the Company at period end is the carrying value of its financial assets. The Company's principal customers for natural gas transportation and storage services are industrial end-users, marketers, local distribution companies and utilities. The Company's distribution customers are primarily industrial and residential end-users. These concentrations of customers may affect the Company's overall credit risk.

The Company, in the normal course of its operations, provides gas loans to other parties from its holdings of gas in storage. The replacement cost of gas loans at December 31, 2016 is $84 million receivable (2015 – $51 million receivable). The Company manages its credit exposure related to gas loans by subjecting these parties to the same credit policies it uses for all customers, and obtaining collateral when appropriate.

The Company manages its credit risk on Cash and cash equivalents by dealing solely with reputable banks and financial institutions. To manage its credit risk on Accounts receivable, net the Company performs ongoing credit reviews of all its customers. In cases where the credit quality of a customer does not meet the Company's requirements, a cash deposit, letter of credit or parental guarantee is required. Deposits held by the Company at December 31, 2016 amounted to $39 million (2015 – $40 million). Significant financial difficulties of the debtor, the probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the account receivable may be uncollectible and therefore should be included in the allowance for doubtful accounts.

The Company continues to utilize its established risk management policies and procedures to ensure the appropriate monitoring of customer credit positions and, based on current evaluations, does not expect any significant negative impacts associated with these positions.

The following table sets forth details of the age of trade receivables that are not impaired as well as the allowance for the doubtful accounts:

($millions)	**December 31, 2016**	December 31, 2015
Current	**275**	218
30 Days over due	**10**	10
60 Days over due	**3**	4
90+ Days over due	**6**	11
Total trade accounts receivable	**294**	243
Allowance for doubtful accounts	**(5)**	(6)
Total trade accounts receivable, net[a]	**289**	237

[a] The carrying amount of accounts receivable is impacted by changes in gas prices, which may fluctuate significantly from year to year.

For the years ended December 31, 2016 and 2015, no one customer accounted for more than 10% of sales or 10% of receivables.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has credit facilities available to help meet short-term financing needs (note 10).

The following are the contractual maturities of the undiscounted cash flows of financial liabilities as at December 31, 2016:

($millions)	Total	2017	2018-2019	2020-2021	Thereafter
Commercial paper	333	333	—	—	—
Accounts payable and accrued charges	878	878	—	—	—
Long-term debt (including principal and interest)	5,961	297	686	459	4,519
Total	7,172	1,508	686	459	4,519

15. Stock Based Compensation

The Spectra Energy 2007 Long-Term Incentive Plan (the 2007 LTIP), as amended and restated, provides for the granting of stock options, restricted stock awards and units, unrestricted stock awards and units, and other equity-based awards, to employees and other key individuals who perform services for Spectra Energy. A maximum of 53 million shares of common stock may be awarded under the 2007 LTIP. Union Gas employees participate in the 2007 LTIP.

Stock based performance awards generally vest over three years at the earliest, if performance metrics are met. Spectra Energy granted 35,950 performance awards in 2016, 36,100 in 2015, and 38,200 in 2014, with fair values of U.S. $2 million for 2016, 2015 and 2014 to Union Gas employees. The total fair value of performance awards vested was U.S. $1 million in both 2016 and 2014. No performance awards vested in 2015. As of December 31, 2016, the Company expects to recognize U.S. $2 million of future compensation cost related to performance awards over a weighted-average period of less than one year.

Stock based phantom awards generally vest over three years. Spectra Energy awarded 34,575 phantom awards in 2016, 22,650 in 2015, and 24,200 in 2014, with fair values of U.S. $1 million for 2016, 2015, and 2014 to Union Gas employees. The total fair value of the phantom awards vested was U.S. $1 million in 2016, 2015 and 2014. As of December 31, 2016, the Company expects to recognize U.S. $1 million of future compensation cost related to phantom awards over a weighted-average period of less than two years.

Options granted under the 2007 LTIP are issued with exercise prices equal to the fair market value of our common stock on the grant date, have ten-year terms and vest rateably over a three-year term. Compensation expense related to stock options is recognized over the requisite service period. The requisite service period for stock options is the same as the vesting period, with the exception of retirement eligible employees, who have shorter requisite service periods ending when the employees become retirement eligible. The Company issues new shares upon exercising or vesting of share-based awards. The Black-Scholes option-pricing model is used to estimate the fair value of options at grant date.

Stock Awards

	Performance Awards		Phantom Awards	
	Units	Weighted-Average Grant Date Fair Value U.S. $	Units	Weighted-Average Grant Date Fair Value U.S. $
Outstanding, beginning of year	120,103	39	75,097	26
Transfers out	(1,850)	42	(2,390)	31
Granted	35,950	53	34,575	29
Vested	(32,664)	33	(29,481)	30
Forfeited	(19,182)	37	(3,763)	34
Outstanding, end of year	102,357	49	74,038	39
Awards expected to vest	99,192	49	72,797	39

Stock Options

	Options	Weighted-Average Exercise Price U.S.$	Weighted-Average Remaining Life (in years)	Aggregate Intrinsic Value U.S.$ (in millions)
Outstanding at beginning of year	66,100	26	1.1	—
Granted	36,600	28	—	—
Exercised	(54,300)	26	—	—
Outstanding at end of year	48,400	28	6.9	1
Options exercisable at year-end	11,800	26	0.1	—

The Company awarded 36,600 non-qualified stock options to employees during 2016, with a fair value of U.S. $1 million. We did not award any non-qualified stock options to employees during 2015 or 2014.

Weighted-Average Assumptions for Option Pricing

	2016
Risk-free rate of return	1.4%
Expected life	6 years
Expected volatility	22.7%
Expected dividend yield	5.7%

The risk-free rate of return was determined based on a yield curve of U.S. Treasury rates ranging from six months to ten years and a period commensurate with the expected life of the options granted. The expected volatility was established based on historical volatility over six years using daily stock price observations. The expected dividend yield was determined based on the most recent annual dividend and the stock price at the time of grant.

As of December 31, 2016, future compensation costs related to stock options over a weighted-average period of less than 2 years was not significant.

16. Guarantees

The Company has various financial guarantees which are issued in the normal course of business. The Company enters into these arrangements to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Balance Sheets. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company's potential exposure under these agreements can range from a specific dollar amount to an unlimited dollar amount depending on the nature of the claim and the particular transaction. The Company is unable to estimate the total potential amount of future payments under these agreements due to several factors, such as unlimited exposure under certain guarantees.

17. Contingencies

The Company, in the course of its operations, is subject to environmental and other claims, lawsuits and contingencies. Accruals are made in instances where it is probable that liabilities will be incurred and where such liabilities can be reasonably estimated.

In April 2016, the Ontario Ministry of the Environment and Climate Change (MOECC) issued a Director's Order (Order) naming the Company, along with other parties, as an impacted property owner in connection with a contaminated site adjacent to a property of the Company in Hamilton. The Order requires all parties to act jointly to develop a Conceptual Site Model (CSM) to fully delineate the extent of the soil and groundwater contamination and to assess remedial measures, if necessary. In May 2016, the Company appealed the Order, which should have been issued to the party responsible for the contamination and the owner of the source of the contamination, as opposed to those parties impacted by the contamination. In June 2016, the Environmental Review Tribunal (Tribunal), on consent of the MOECC's Director, stayed the application of parts of the Order on the condition that a Preliminary CSM (PCSM) be provided to the MOECC's Director, which in fact was delivered (with cooperation from the owners of the immediately adjacent owners, including the Company) in December 2016. The MOECC has provided its preliminary responses to the PCSM. In February 2017, the Tribunal extended the stay of the Order until May 9, 2017, pending a technical conference to be attended by the MOECC and the owners of the immediately adjacent properties in order to determine next steps. The risk of material environmental liability is unknown at this time. No amount has been accrued.

Other than the potential contingency noted above, of which the impact is unknown, the Company has no reason to believe that the ultimate outcome of these matters could have a significant impact on its Financial Statements.

18. Subsequent Events

Management has evaluated significant events and transactions that occurred from January 1, 2017 through February 26, 2017. On January 31, 2017, the Company received a $30 million capital contribution from GLBE in respect of the common shares of the Company.

The Financial Statements and all information in this report have been prepared by and are the responsibility of management. The Financial Statements have been prepared in conformity with generally accepted accounting principles in the United States of America and include certain estimated amounts, which are based on informed judgements to ensure fair representation in all material respects. When alternative accounting methods exist, management has chosen those it considers most appropriate.

Management depends upon Union Gas Limited's system of internal controls and formal policies and procedures to ensure the consistency, integrity and reliability of accounting and financial reporting and to provide reasonable assurance that assets are safeguarded and that transactions are properly executed in accordance with management's authorization. Management is also supported and assisted by a program of internal audit services.

The Board of Directors (the Board) is responsible for ensuring that management fulfils its responsibility for financial reporting and for final approval of the Financial Statements.

The Board meets regularly with management, the internal auditors and the shareholders' auditors to review the Financial Statements, the Independent Auditor's Report and other auditing and accounting matters to ensure that each group is properly discharging its responsibilities.

The shareholders' auditors have full and free access to the Board, as does the Director of Internal Audit Services.

PricewaterhouseCoopers LLP performed an independent audit of the 2017 Financial Statements, as described in their Independent Auditor's Report.

Deloitte LLP performed an independent audit of the 2016 Financial Statements, as described in their Independent Auditor's Report, included in the 2016 Annual Report.

Independent Auditor's Report

To the Shareholders of
Union Gas Limited

We have audited the accompanying financial statements of Union Gas Limited, which comprise the balance sheet as at December 31, 2017 and the statement of operations and comprehensive income, equity, and cash flows for the year then ended, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

Management's responsibility for the financial statements
Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's responsibility
Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion.

PricewaterhouseCoopers LLP
PwC Tower, 18 York Street, Suite 2600, Toronto, Ontario, Canada M5J 0B2
T: +1 416 863 1133, F: +1 416 365 8215

Opinion

In our opinion, the financial statements present fairly, in all material respects, the financial position of Union Gas Limited as at December 31, 2017 and its results of operations and its cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Other matter

The financial statements at December 31, 2016 and for the year then ended, were audited by another auditor who expressed an unmodified opinion on those consolidated financial statements in their report dated February 26, 2017.

UNION GAS LIMITED
NOTES TO FINANCIAL STATEMENTS
DECEMBER 31, 2017 AND 2016

1. Summary of Operations and Significant Accounting Policies

The terms "Union Gas" or "the Company" as used in these Financial Statements refer to Union Gas Limited unless the context suggests otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Union Gas. Union Gas' common shares are held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (Westcoast). Westcoast is an indirect wholly-owned subsidiary of Spectra Energy Corp (Spectra Energy).

On February 27, 2017 Enbridge Inc. (Enbridge) and Spectra Energy completed a stock-for-stock merger transaction (the Merger) pursuant to which Enbridge acquired all of the issued and outstanding common shares of Spectra Energy. As a result of the Merger, Enbridge and its subsidiaries own Union Gas through their ownership of Spectra Energy.

Nature of Operations

Union Gas owns and operates natural gas distribution, storage and transmission facilities in Ontario. The Company distributes natural gas to customers in northern, southwestern and eastern Ontario and provides natural gas storage and transportation services for other utilities and energy market participants. The property, plant and equipment of the Company consist primarily of pipeline, storage and compression facilities used in the distribution, storage and transportation of natural gas.

Basis of Presentation

The Financial Statements of the Company include the standalone accounts of the Company and have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP). All amounts are presented in millions of Canadian dollars except where noted.

In 2014, Canadian securities regulators approved the extension of the Company's exemptive relief to continue reporting under U.S. GAAP instead of International Financial Reporting Standards (IFRS) until the earlier of January 1, 2019, and the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation.

Use of Estimates

The preparation of the Financial Statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amount of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities. Significant estimates and assumptions used in the preparation of the Financial Statements include, but are not limited to: estimates of revenue; carrying values of regulatory assets and liabilities; unbilled revenues; depreciation rates and carrying value of property, plant and equipment; amortization rates and carrying value of intangible assets; fair value of financial instruments; provisions for income taxes; assumptions used to measure retirement and Other Postretirement Benefits (OPEB); commitments and contingencies; and fair value of Asset Retirement Obligations (ARO). Actual amounts could differ from these estimates.

Regulation

The Company is regulated by the Ontario Energy Board (OEB) pursuant to the provisions of the *Ontario Energy Board Act, (1998)*, which is part of a package of legislation known as the *Energy Competition Act, (1998)*. This legislation provides an opportunity for different forms of regulation and increased competition in the energy (electricity and natural gas) industry in Ontario. The Company is subject to regulation with respect to the rates that it may charge its customers, system expansion or facility abandonment, adequacy of service, public safety aspects of pipeline system construction and certain accounting principles. The OEB has determined that it will forbear from regulating the prices for long-term storage services. The Storage Forbearance Decision created an unregulated storage operation within the Company and provides the framework required to support new storage investments.

The OEB is mandated to approve rates that are just and reasonable. Utility earnings are regulated by the OEB under cost of service regulation, on the basis of a return on rate base for a future period. Under cost of service regulation, a rate application process leads to the implementation of new rates intended to provide a utility with the opportunity to earn an allowed rate of return. The actual rate of return achieved by the Company may vary from the rate allowed by the OEB as a result of unexpected changes in weather, average use per customer, inflation, the price of competing fuels, interest rates, general economic conditions and its ability to achieve forecasted revenues and manage costs.

Effective January 1, 2014, the Company began a five year incentive regulation term. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts.

As part of the Company's OEB-approved incentive regulation framework, an earnings sharing mechanism exists whereby earnings in excess of 100 basis points above the benchmark return on equity are shared with ratepayers as a reduction in earnings during the year, if applicable.

The Company follows U.S. GAAP, which may differ for regulated operations from those otherwise expected in non rate-regulated businesses. As a result, the Company records assets and liabilities that result from the regulated ratemaking process that may not be recorded under U.S. GAAP for non rate-regulated entities. Regulatory assets generally represent incurred costs that have been deferred because they are probable of future recovery in customer rates. Regulatory liabilities generally represent obligations to make refunds to customers for previous collections for costs that are not likely to be incurred. Management continually assesses whether the regulatory assets are probable of future recovery by considering factors such as applicable regulatory changes and recent rate orders to other regulated entities. Management believes the existing regulatory assets are probable of recovery. This determination reflects the current political and regulatory climate at the provincial and national levels, and is subject to change in the future. If future recovery of costs ceases to be probable, the asset write-offs could be recognized in current period earnings.

Revenue Recognition

Revenues from the transportation, storage, distribution and sales of natural gas are recognized when either the service is provided or the product is delivered and collection is reasonably assured. Revenues related to these services provided or products delivered but not yet billed are estimated each month. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's franchise areas.

Gas Sales and Cost of Gas

Gas sales revenue is recorded on the basis of regular meter readings and estimates of customer volume usage since the last meter reading date to the end of the reporting period applied using OEB approved rates. Cost of gas is recorded using amounts approved by the OEB in the determination of customer sales rates. Differences between the OEB approved reference amounts and those costs actually incurred are deferred on the Balance Sheets for future disposition subject to approval by the OEB.

In determining the quantities of gas delivered and received, differences arise from the measurement process. The Company includes in the cost of gas an estimated amount of these differences based upon the methodology used by the OEB in the determination of rates for storage, transmission and distribution of gas. Annual fluctuations from the estimated level are recognized in earnings during the year.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term investments, with an original maturity of three months or less.

Derivative Instruments and Hedging

Cash Flow Hedges

The Company uses cash flow hedges to manage its exposure to changes in currency exchange rates related to unregulated storage revenues. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded under Other comprehensive income/loss (OCI) and is reclassified to earning when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and is recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Balance Sheet as current and long-term assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Operating activities on the Statement of Cash Flows.

Income Taxes

The liability method of accounting for income taxes is followed. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. For the Company's regulated operations, a deferred income tax liability is recognized with a corresponding regulatory asset to the extent taxes can be recovered through rates. Any interest and/or penalty incurred related to tax is reflected in Income tax expense.

Inventories

Gas in storage for resale to customers is carried at reference prices approved by the OEB in the determination of customer sales rates. The difference between the approved cost and the actual cost of the gas purchased is deferred on the Balance Sheets for future disposition subject to approval by the OEB. Inventories of materials and supplies are valued at the lower of average cost or net realizable value.

Property, Plant and Equipment and Depreciation

Property, plant and equipment is stated at historical cost less accumulated depreciation and amortization. The Company capitalizes all construction-related direct labour and material costs, as well as indirect construction costs. Indirect costs include general engineering and the cost of funds used during construction. The costs of renewals and betterments that extend the useful life or increase the expected output of property, plant and equipment are also capitalized. The cost of repairs, replacements and major maintenance projects that do not extend the useful life or increase the expected output of property, plant and equipment are expensed as incurred.

Regulated depreciation is computed based on the asset's average service life using the straight-line method. Unregulated depreciation is computed based on management's assumption of useful life using the straight-line method.

When regulated property, plant and equipment is retired, the original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation and amortization. When entire regulated operating units are sold or non-regulated property, plant and equipment is retired, the cost is removed from the property account and the related accumulated depreciation and amortization accounts are reduced. Any gain or loss is recorded in earnings, unless otherwise required by the applicable regulatory body.

Intangible Assets

Intangible assets consists of computer software and greenhouse gas (GHG) compliance instruments. The GHG compliance instruments are purchased by the Company for itself and most of its customers in order to meet Cap and Trade compliance obligations in the Province of Ontario (the Province). Purchased GHG compliance instruments are recorded at their original cost and are not amortized, as they will be used to satisfy compliance obligations as they come due. Computer software is amortized on a straight line basis.

Asset Retirement Obligations

The Company recognizes AROs for legal commitments associated with the retirement of long-lived assets that result from the acquisition, construction, development and normal use of the asset and conditional AROs in which the timing or method of settlement are conditional on a future event that may or may not be within the Company's control. The fair value of a liability for an ARO is recognized in the period in which it is incurred if a reasonable estimate of fair value can be made and is added to the carrying amount of the associated asset. This additional carrying amount is depreciated over the estimated useful life of the asset.

Stock-Based Compensation

Union Gas employees participate in a stock-based compensation plan sponsored by Enbridge, subsequent to the Merger. For employee awards, equity-classified and liability-classified stock-based compensation cost is measured at the grant date based on the fair value of the award. Liability classified stock-based compensation cost is re-measured at each reporting period until settlement. Related compensation expense is recognized over the requisite service period, which generally begins on the date the award is granted through the earlier of the date the award vests, the date the employee becomes retirement-eligible, or the date the award market condition is met. Awards, including stock options, granted to employees that are already retirement-eligible are deemed to have vested immediately upon issuance, and therefore, compensation cost for those awards is recognized on the date such awards are granted.

Pension and Other Postretirement Benefits

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management's best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality.

The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. Net benefit cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Interest cost of pension plan obligations;
- Expected return on pension plan assets;

- Amortization of the prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between actual vs. expected plan experience, which include differences between the expected rate of return on plan assets and the actual rate of return for that period, differences in salary, inflation, retirement and termination experience. The actuarial gains and losses also include the impact of changes in the actuarial assumptions used to determine the accrued benefit obligation from one year end to the other.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

The Company also maintains supplemental pension plans that provide pension benefits in excess of the basic plans for certain employees.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contribution occurs.

The Company also provides Postretirement benefits other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and Postretirement benefit plans is recognized as Regulatory and other assets, Accounts payable and accrued charges, or Regulatory and other liabilities on the Balance Sheets. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax, until they are amortized to be recognized as a component of benefit expense within Operating and maintenance expenses in the Statements of Operations and Comprehensive Income. See note 15 for further discussion.

Commitments and Contingencies

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or a liability has been incurred, and the amount of the impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probably loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

New Accounting Pronouncements

Revenue from Contracts with Customers

Accounting Standards Update (ASU) 2014-09 was issued in May 2014 with the intent of significantly enhancing consistency and comparability of revenue recognition practices across entities and industries. The new standard establishes a single, principles-based five-step model to be applied to all contracts with customers and introduces new and enhanced disclosure requirements. It also requires the use of more estimates and judgments than the present standards in addition to additional disclosures. The new standard is effective January 1, 2018. The new standard permits either a full retrospective method of adoption with restatement of all prior periods presented, or a modified retrospective method with the cumulative effect of applying the new standard recognized as an adjustment to opening retained earnings in the period of adoption. The Company has decided to adopt the revenue standard using the modified retrospective method.

The Company has reviewed its revenue contracts in order to evaluate the effect of the new standard on its revenue recognition practices. Based on this assessment, the Company does not anticipate any material differences in the amount or timing of revenue recognition under the new standard.

In addition, the Company is in the process of implementing appropriate changes to business processes, systems and controls to support the recognition and disclosure requirements of the new standard and has developed and tested processes to generate the new disclosures which will be required commencing in the first quarter of 2018.

Recognition and Measurement of Financial Assets and Liabilities

ASU 2016-01 was issued in January 2016 with the intent to address certain aspects of recognition, measurement, presentation and disclosure of financial assets and liabilities. Investments in equity securities, excluding equity method and consolidated investments, are no longer classified as trading or available-for-sale securities. All investments in equity securities with readily determinable fair values are classified as investments at fair value through net income. Investments in equity securities without readily determinable fair values are measured using the fair value measurement alternative, and are recorded at cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for an identical or similar investments of the same issuer. Investments in equity securities measured using the fair value measurement alternative are reviewed for indicators of impairment each reporting period. Fair value of financial instruments for disclosure purposes is measured using exit price. The accounting update is effective January 1, 2018 and will be applied on a prospective basis. The Company does not expect the adoption of this accounting update to have a material impact on the Company's Financial Statements.

Recognition of Leases

ASU 2016-02 was issued in February 2016 with the intent to increase transparency and comparability among organizations. It requires lessees of operating lease agreements to recognize key lease assets and lease liabilities on the Balance Sheet and disclose additional key information about lease agreements. The accounting update also replaces the current definition of a lease and requires that an arrangement be recognized as a lease when a customer has the right to obtain substantially all of the economic benefits from the use of an asset, as well as the right to direct the use of the asset. The Company is currently gathering a complete inventory of its lease contracts in order to assess the impact of the new standard on the Company's Financial Statements. The accounting update is effective January 1, 2019 and will be applied using a modified retrospective approach.

Improvements to Employee Share-Based Payment Accounting

Effective January 1, 2017, the Company adopted ASU 2016-09 and applied certain amendments on a modified retrospective basis with the remaining amendments applied on a prospective basis. The new standard was issued with the intent of simplifying and improving several aspects of accounting for share-based payment transactions including the income tax consequences, classification of awards as either equity or liabilities, and classification on the Statement of Cash Flows. The adoption of the pronouncement did not have a material impact on the Company's Financial Statements.

Accounting for Credit Losses

ASU 2016-13 was issued in June 2016 with the intent of providing financial statement users with more useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. Current treatment uses the incurred loss methodology for recognizing credit losses that delays the recognition until it is probable a loss has been incurred. The accounting update adds a new impairment model, known as the current expected credit loss model, which is based on expected losses rather than incurred losses. Under the new guidance, an entity recognizes as an allowance its estimate of expected credit losses, which the Financial Accounting Standards Board believes will result in more timely recognition of such losses. The Company is currently assessing the impact of the new standard on the Company's Financial Statements. The accounting update is effective January 1, 2020.

Simplifying Cash Flow Classification

ASU 2016-15 was issued in August 2016 with the intent of reducing diversity in practice of how certain cash receipts and cash payments are classified in the Statement of Cash Flows. The new guidance addresses eight specific presentation issues. The accounting update is effective January 1, 2018 and will be applied on a retrospective basis. The Company has assessed the eight specific presentation issues and the adoption of this accounting standard does not have a material impact on the Company's Financial Statements.

Clarifying the Presentation of Restricted Cash in the Statement of Cash Flows

ASU 2016-18 was issued in November 2016 with the intent to clarify guidance on the classification and presentation changes in Restricted cash and restricted cash equivalents within the Statement of Cash Flows. The amendments require that changes in Restricted cash and restricted cash equivalents be included with Cash and cash equivalents when reconciling the opening and closing period amounts shown on the Statement of Cash Flows. The Company currently presents the changes in Restricted cash and restricted cash equivalents under operating activities in the Statement of Cash Flows. The accounting update is effective January 1, 2018 and will be applied on a retrospective basis. The Company will amend the presentation in the Statement of Cash Flows to include restricted cash and restricted cash equivalents with Cash and cash equivalents and the Company will retrospectively reclassify all periods presented.

Improving the Presentation of Net Periodic Benefit Cost related to Defined Benefit Plans

ASU 2017-07 was issued in March 2017 primarily to improve the income statement presentation of the components of net periodic pension cost and net periodic postretirement benefit cost for an entity's sponsored defined benefit pension and other postretirement plans. In addition, only the service-cost component of net benefit cost is eligible for capitalization. The accounting update is effective January 1, 2018 and will be applied on a retrospective basis for the income statement presentation component and on a prospective basis for the capitalization component. The Company does not expect the adoption of this accounting update to have a material impact on the Company's Financial Statements.

Clarifying Guidance on the Application of Modification Accounting on Stock Compensation

ASU 2017-09 was issued in May 2017 with the intent to clarify the scope of modification accounting and when it should be applied to a change to the terms or conditions of a share based payment award. Under the new guidance, modification accounting is required for all changes to share based payment awards, unless all of the following are met: 1) there is no change to the fair value of the award, 2) the vesting conditions have not changed, and 3) the classification of the award as an equity instrument or a debt instrument has not changed. The accounting update is effective January 1, 2018 and will be applied on a prospective basis. The Company does not expect the adoption of this accounting update to have a material impact on the Company's Financial Statements.

2. Regulatory Matters

Regulatory Assets and Liabilities

The Company recorded the following assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities. See note 1 for further discussion.

($millions)	Financial Statement Location	**December 31, 2017**	December 31, 2016	Recovery/Settlement Period
Regulatory assets[(a)]				
Non-gas commodity deferrals	Accounts receivable and other	**74**	82	Less than 1 year
Gas in storage inventory[(b)]	Inventories	**—**	13	Less than 1 year
Deferred income taxes – long-term[(c) (d)]	Regulatory and other assets	**530**	462	Over the remaining life of the assets
Total regulatory assets		**604**	557	
Regulatory liabilities[(a)]				
Deferred income taxes – current[(c)]	Accounts payable and accrued charges	**7**	7	Less than 1 year
Non-gas commodity deferrals	Accounts payable and accrued charges	**16**	16	Less than 1 year
Gas cost deferrals[(e)]	Accounts payable and accrued charges	**4**	13	Less than 1 year
Gas in storage inventory[(b)]	Inventories	**21**	—	Less than 1 year
Asset removal costs[(c) (f)]	Regulatory and other liabilities	**432**	394	Over the remaining life of the assets
Total regulatory liabilities		**480**	430	

(a) All regulatory assets and liabilities are excluded from rate base unless otherwise noted.

(b) Gas in storage is recorded at reference prices approved by OEB. In the absence of rate-regulation, inventory would be valued at the lower of cost or market value.

(c) All or a portion of the balance is included in rate base.

(d) Under the current OEB-authorized rate structure, income tax costs are recovered in rates based on the current income tax payable and do not include accruals for deferred income tax. However, as income taxes become payable as a result of the reversal of timing differences that created the deferred income taxes, it is expected that rates will be adjusted to recover these taxes. Since substantially all of these timing differences are related to property, plant and equipment costs, recovery of these regulatory assets is expected to occur over the life of those assets.

(e) These regulatory liabilities represent gas cost collections from customers under approved rates that vary from the actual cost of gas for the associated periods. The Company files an application quarterly with the OEB to ensure that customers' rates are updated to reflect published forward-market prices. The difference between the approved and actual cost of gas is deferred for future repayment to or refund from customers.

(f) These regulatory liabilities represent collections from customers under approved rates for future asset removal activities that are expected to occur associated with its regulated facilities.

Rate Related Information

The Company's distribution rates, beginning January 1, 2014 are set under a five-year incentive regulation framework. The incentive regulation framework establishes new rates at the beginning of each year through the use of a pricing formula rather than through the examination of revenue and cost forecasts. The framework allows for:

- annual inflationary rate increases, offset by a productivity factor of 60% of inflation, such that the annual net rate escalator in each year is 40% of inflation,
- rate increases or decreases in the small volume customer classes where average use declines or increases,

- certain adjustments to base rates,
- the continued pass-through of gas commodity, upstream transportation and demand side management costs,
- the additional pass-through of costs associated with major capital investments and certain fuel variances,
- an allowance for unexpected cost changes that are outside of management's control,
- equal sharing of tax changes between the Company and its customers, and
- an earnings sharing mechanism that permits the Company to fully retain the return on equity from utility operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.

Annual Non-Gas Commodity Deferral Accounts Disposition

Non-gas commodity deferral accounts are filed for approval of disposition annually and typically collected or recovered over six months. In August 2017, the OEB approved collection of the 2016 non-gas commodity deferral account balances of $43 million beginning October 1, 2017.

Demand Side Management (DSM)

In December 2017, after receiving final audit results, the Company filed an application with the OEB for the disposition of the 2015 DSM deferral account balances. The impact is a net receivable from customers of approximately $8 million. Union Gas has requested a decision from the OEB in the first quarter of 2018 to allow recovery from customers to begin in the second quarter of 2018.

Application to Amalgamate

In November 2017, the Company and Enbridge Gas Distribution Inc. (EGD), an affiliate of the Company, (together, the Applicants) filed an application with the OEB to amalgamate, in accordance with the OEB's guidance for Mergers, Acquisitions, Amalgamations and Divestitures (MAAD), with an effective date of January 1, 2019. Under the OEB's MAAD policy, the Applicants are seeking to defer rate rebasing for ten years to allow the utilities to identify and leverage best practices and implement integrated solutions. This filing initiated the regulatory review process which will continue through 2018 with a decision from the OEB expected in the second half of 2018.

Subsequent to the above application, also in November 2017, Union Gas and EGD submitted a second, related, application. The application seeks an order approving a rate setting mechanism for the ten year rebasing period effective January 1, 2019 that would apply if Enbridge proceeds with the amalgamation of the Company and EGD. The Applicants are seeking approval of a price cap mechanism which includes an annual rate escalation at inflation; continues to pass through certain costs; allows for pass through of capital expenditures in excess of an OEB approved threshold; and allows for non-routine adjustments with a materiality threshold of $1 million.

The final decision on whether to proceed with the amalgamation is subject to the completion of the regulatory process and Union Gas, EGD, and Enbridge's review and assessment of the regulatory outcomes and their respective Board of Directors approvals.

3. Restricted Cash

The Company had $13 million of restricted funds at December 31, 2017. At December 31, 2016, the Company had $37 million of restricted funds, with $15 million classified as Restricted cash and $22 million classified as Regulatory and other assets. These restricted funds are related to money received from the Province under the Green Investment Fund (GIF) program. The purpose of the GIF program is to reduce the GHG emissions in the residential sector. The Company's use of the funds is limited to eligible capital expenditures for the purpose of executing the program. The Company will manage the GIF program separately from its core regulated activities. There is no earnings impact relating to the GIF program. Any unspent funds must be returned to the Province at the expiry of the agreement on May 31, 2019, or should the Province elect to terminate the agreement at any time prior to is expiration date.

Changes in restricted balances are presented within Operating Activities on the Company's Statements of Cash Flows.

4. Accounts Receivable and Other

($millions)	**December 31, 2017**	December 31, 2016
Trade receivables	**209**	161
Unbilled revenue	**202**	133
Gas imbalances[a]	**251**	410
Regulatory assets – current	**74**	82
Other	**29**	20
Allowance for doubtful accounts	**(6)**	(5)
Total Accounts receivable and other	**759**	801

[a] The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

5. Inventories

Gas in storage includes gas for delivery to customers and for use in the Company's operations. Inventories of materials and supplies are for use in the Company's operations.

($millions)	**December 31, 2017**	December 31, 2016
Gas in storage	**140**	222
Materials and supplies	**23**	23
Total Inventories	**163**	245

6. Income Taxes

Income Tax Rate Reconciliation

($millions)	**2017**	2016
Income before income taxes	**251**	226
Canadian federal statutory income tax rate	**15.0%**	15.0%
Expected federal taxes at statutory rate	**38**	34
Increase (decrease) resulting from:		
Provincial income taxes	**—**	5
Part VI.1 tax, net of federal Part 1 deduction	**8**	5
Deferred income tax adjustments related to rate regulated operations	**(31)**	(25)
Other	**1**	2
Income tax expense	**16**	21
Effective income tax rate	**6.4%**	9.3%

Components of Pretax Earnings and Income Taxes

($millions)	**2017**	2016
Current income taxes	**33**	13
Deferred income taxes (recovery) expense	**(17)**	8
Income taxes expense	**16**	21

Components of Deferred Income Taxes

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are as follows:

($millions)	**December 31, 2017**	December 31, 2016
Deferred income tax liabilities		
Property, plant and equipment	**(445)**	(405)
Regulatory assets	**(139)**	(121)
Other	**(15)**	(22)
Total deferred income tax liabilities	**(599)**	(548)
Deferred income tax assets		
Pension	**35**	32
Total deferred income tax assets	**35**	32
Net deferred income tax liabilities	**(564)**	(516)

Unrecognized Tax Benefits

($millions)	**December 31, 2017**	December 31, 2016
Unrecognized tax benefits at beginning of year	**38**	28
Gross increases related to prior year tax positions	**7**	8
Gross decreases related to prior year tax positions	**(2)**	—
Gross increases related to current year tax positions	**3**	3
Reductions due to lapse of statute of limitations	**(1)**	(1)
Unrecognized tax benefits at end of year	**45**	38

The unrecognized tax benefits as at December 31, 2017, if recognized, would reduce the Company's annual effective income tax rate. Although uncertain, the Company believes it is reasonably possible that the total amount of unrecognized tax benefits could decrease by $35 million prior to December 31, 2018. The anticipated changes in unrecognized tax benefits relate to the expiration of statutes of limitations and expected audit settlements.

The Company recognizes accrued interest and penalties related to unrecognized tax benefits as a component of income taxes. Income taxes for the year ended December 31, 2017 included $nil (2016 – $nil) interest and penalties. As at December 31, 2017, interest and penalties of $1 million (2016 – $1 million) have been accrued.

The Company remains subject to examination for income tax returns for years 2009 through 2016.

7. Property, Plant and Equipment, net

($millions)	Useful Life	**December 31, 2017**	December 31, 2016
	(years)		
Plant			
Natural gas transmission	20 - 58	**3,242**	2,734
Natural gas distribution	25 - 60	**4,887**	4,697
Storage	10 - 50	**1,187**	924
Land rights and rights of way	48 - 61	**141**	137
Other buildings and improvements	2 - 42	**63**	62
Equipment	4 - 15	**80**	82
Vehicles	6	**60**	57
Land	—	**94**	90
Construction in progress	—	**40**	349
Other	15 - 18	**17**	21
Total Property, plant and equipment		**9,811**	9,153
Total accumulated depreciation and amortization		**2,898**	2,727
Total Property, plant and equipment, net		**6,913**	6,426

The Company had no capital leases at December 31, 2017 or 2016.

96% of the Company’s property, plant and equipment is regulated with estimated useful lives based on rates approved by the OEB. Composite weighted-average depreciation rates were 2.73% for 2017 and 2.76% for 2016.

The Company capitalized interest of $8 million in 2017 and $11 million in 2016.

8. Intangible Assets, net

($millions)	**December 31, 2017**	December 31, 2016
Intangible assets	**410**	116
Less: Accumulated amortization	**42**	34
Intangible assets, net	**368**	82

Intangible assets consists of computer software and GHG compliance instruments. As of January 31, 2017, GHG compliance instruments were purchased by the Company for itself and most of its customers in order to meet Cap and Trade compliance obligations in the Province. Purchased GHG compliance instruments are recorded at their original cost and are not amortized, as they will be used to satisfy compliance obligations as they come due. Computer software is amortized on a straight line basis over a period of 4 – 10 years.

The Company capitalized interest of $nil in 2017 and $1 million in 2016 related to software.

All of the Company's computer software was developed or obtained for internal use.

Amortization expense of intangible assets totaled $19 million in 2017 and $15 million in 2016. Estimated amortization expense for the next five years is as follows:

($millions)	**2018**	**2019**	**2020**	**2021**	**2022**
Estimated amortization expense	21	19	17	10	4

9. Regulatory and Other Assets and Liabilities

($millions)	**December 31, 2017**	December 31, 2016
Deferred income taxes – long-term (note 2)	**530**	462
Restricted cash	**—**	22
Goodwill	**12**	12
Pension assets	**33**	27
Balancing gas	**56**	67
Major spare parts	**10**	10
Other	**2**	2
Total Regulatory and other assets	**643**	602
Asset removal costs (note 2)	**432**	394
Pension liabilities	**167**	147
Unrecognized tax benefits	**45**	38
GIF payable	**—**	22
GHG compliance liabilities[a]	**238**	—
Other	**2**	1
Total Regulatory and other liabilities	**884**	602

[a] Under Cap and Trade regulation in the Province, the Company is required to meet GHG compliance obligations for most of its customers' use of natural gas as well as for emissions from its own operations. The Company will be required to relieve its compliance liability through the submission of compliance instruments following the completion of the initial compliance period of January 1, 2017 through December 31, 2020.

10. Accounts Payable and Accrued Charges

($millions)	**December 31, 2017**	December 31, 2016
Gas imbalances[a]	**251**	410
Accrued liabilities	**199**	170
Trade payables	**127**	142
Security deposits	**43**	39
Interest payable	**37**	37
Contractual holdbacks	**27**	34
Regulatory liabilities – current	**27**	36
Taxes payable	**19**	10
Total Accounts payable and accrued charges	**730**	878

[a] The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Balance Sheet dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

11. Related Party Transactions

The Company occasionally performs services for and incur costs on behalf of Enbridge, Spectra Energy and its affiliates (related parties), which are subsequently reimbursed. Likewise, certain related parties may perform services for or incur costs on behalf of the Company, which are then reimbursed by the Company. The Company also provides and purchases gas, storage and transportation services to related parties. These transactions are in the normal course of operations and are recorded at exchange amounts agreed to between the related parties.

In addition, related parties perform centralized corporate functions for the Company, pursuant to agreements with related parties, including legal, accounting, compliance, treasury, information technology and other areas, as well as certain engineering and other services. The Company reimburses related parties for the expenses to provide these services as well as other expenses they incur on the Company's behalf. Related parties charge such expenses based on the cost of actual services provided or using various allocation methodologies based on the Company's percentage of assets, employees, earnings or other measures, as compared to Enbridge and Spectra Energy's other related parties.

In the normal course of operations, the Company provides or obtains funds from Westcoast on an unsecured basis. The Company also has a promissory note to borrow up to $150 million from GLBE on an unsecured basis.

On July 31, 2017, the Company entered into a Gas Storage Service Agreement (GSSA) with EGD, a new affiliated company under common control as a result of the Merger, whereby the Company contracted all of EGD's unregulated storage space and deliverability effective September 2017. In conjunction with the GSSA, the Company entered into a Storage Contracts Assignment Agreement with EGD whereby the Company took assignment of EGD's customer contracts related to the assigned unregulated storage space, effective September 2017. On September 29, 2017, EGD novated all of its derivative instruments relating to foreign exchange forward contracts to the Company.

The Company's transactions with related parties are as follows:

($millions)	Storage and transportation revenue	Gas commodity, storage and transportation expense	Shared service charges (receipts)[a]	Total

4.20%	Series 12, due June 2, 2044	**500**	500
3.80%	Series 15, due June 1, 2046	**250**	250
3.59%	Medium term note debentures, due November 22, 2047	**250**	—
Long-term debt principal (including current maturities)		**3,815**	3,440
Less: Unamortized debt discount		**7**	7
Less: Debt issue costs		**15**	13
Add: Commercial paper		**485**	333
Total debt		**4,278**	3,753
Less: Current maturities of long-term debt		**400**	125
Less: Commercial paper		**485**	333
Total Long-term debt		**3,393**	3,295

The Company's long-term debt is unsecured. Principal repayment requirements on long-term debt are as follows:

($millions)	**Total**	**2018**	**2019**	**2020**	**2021**	**2022**	**Thereafter**
Long-term debt[(a)]	3,815	400	—	—	200	125	3,090

[(a)] Excludes commercial paper of $485 million.

Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants including a limitation on the payment of dividends. As of December 31, 2017 and 2016, the Company is in compliance with all such covenants.

Total interest expense on long-term debt in 2017 was $171 million (2016 – $169 million).

Available Credit Facility and Restrictive Debt Covenants

			Commercial Paper Debt Outstanding at	
($millions)	**Expiration Date**	**Credit Facility Capacity**	**December 31, 2017**	December 31, 2016
Multi-year syndicated [(a)]	2021	700	**485**	333

[(a)] The credit facility contains a covenant requiring the debt-to-total capitalization ratio, as defined in the agreement, to not exceed 75% and a provision which requires the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. The ratio was 67.6% at December 31, 2017 (December 31, 2016 – 69.0%). Commercial paper issuances, net of discount, are back-stopped by the credit facility.

The available credit facility carried a weighted average standby fee of 0.085% on the unused portion.

The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under the credit facility. As of December 31, 2017 and December 31, 2016 there were no letters of credit issued or revolving borrowings outstanding under the credit facility. The majority of the Company's short-term cash requirements are funded through the issuance of commercial paper. The weighted average rate on outstanding commercial paper as of December 31, 2017 was 1.28% (2016 – 0.87%). The weighted average days to maturity on outstanding commercial paper as of December 31, 2017 was fourteen days (2016 – 8 days).

The Company's credit agreement contains various financial and other covenants, including the maintenance of certain financial ratios. Failure to meet those covenants beyond applicable grace periods could result in accelerated due dates and/or termination of the agreement. As of December 31, 2017 and December 31, 2016, the Company was in compliance with those covenants. In addition, the credit agreement allows for the acceleration of payments or termination of the agreement due to non-payment, or in some cases, due to the acceleration of other significant indebtedness of the borrower.

Total interest paid on short term debt in 2017 was $6 million (2016 – $1 million).

The Company and certain affiliates have, in aggregate, access to a $400 million demand letter of credit facility. As of December 31, 2017, the Company had no outstanding letters of credit under this facility.

13. Preferred Shares

		Outstanding			
	Authorized	**December 31, 2017**	December 31, 2016	**December 31, 2017**	December 31, 2016
	(shares)	*(shares)*		*($millions)*	
Class A	202,072				
5.5% Series A		**47,672**	47,672	**3**	3
6% Series B		**90,000**	90,000	**5**	5
5% Series C		**49,500**	49,500	**2**	2
4.88% Class B, Series 10	Unlimited	**4,000,000**	4,000,000	**100**	100
				110	110

The Class A, Series A and Class A, Series C Preferred Shares are cumulative and redeemable at $50.50 per share. The Company is obligated to offer to purchase $170,000 of Series A and $140,000 of Series C shares annually at the lowest price obtainable, but not exceeding $50 per share.

The Class A, Series B Preferred Shares are cumulative and redeemable at $55 per share at the option of the Company.

The Class B, Series 10 Preferred Shares are cumulative and redeemable at $25 per share at the option of the Company and, at the option of the holders, convertible back into Series 11 shares once every five years commencing

January 1, 2014. The holders of the Class B, Series 10 Preferred shares did not exercise their option on January 1, 2014 and their next optional conversion date is January 1, 2019. The Company may redeem at any time all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2018.

The Company has an unlimited number of authorized 4.79% Class B, Series 11 Preferred Shares. These shares are cumulative and redeemable at $25 per share at the option of the Company, and at the option of the holders, convertible back into Series 10 shares, commencing on January 15, 2026 and on each fifth anniversary thereafter (each such anniversary, a Series 11 Conversion Date). Additionally, these shares are redeemable at $25.50 per share at the option of the Company on any date after January 15, 2026 that is not a Series 11 Conversion Date. At December 31, 2017 and December 31, 2016 none of these shares were issued or outstanding.

The shares are not subject to any sinking fund or mandatory redemption and are not convertible into any other type of securities other than Preferred shares. As these shares are not solely in the control of the Company, they have been classified as temporary equity on the Balance Sheets.

14. Share Capital

On January 31, 2017, the Company received a $30 million capital contribution from GLBE in respect of the Common shares of the Company. There were no Common shares issued as a result of this transaction.

15. Pension and Other Postretirement Benefits

Pension Plans

The Company maintains registered and non-registered, contributory and non-contributory pension plans which provide defined benefit and/or defined contribution pension benefits covering substantially all employees. The Company also maintains supplemental pension plans that provide pension benefits in excess of the basic plans for certain employees.

Defined Benefit Plans

Benefits payable from the defined benefit plans are based on each plan participant’s years of service and final average remuneration. The Company’s contributions are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities.

Defined Contribution Plans

Contributions are generally based on each plan participant’s age, years of service and current eligible remuneration. For defined contribution plans, benefit costs equal amounts required to be contributed by the Company.

Other Postretirement Benefits

OPEB primarily includes supplemental health and dental, health spending accounts and life insurance coverage for qualifying retired employees on a non-contributory basis. The OPEB plans are not funded.

Benefit Obligation, Plan Assets and Funded Status

The following table details the changes in the benefit obligation, the fair value of plan assets and the recorded asset or liability for the Company's defined benefit pension plans and OPEB plans.

	Pension		OPEB	
($millions)	**2017**	2016	**2017**	2016
Change in benefit obligation				
Benefit obligation, at beginning of year	**917**	877	**61**	63
Service cost	**23**	19	**1**	1
Interest cost	**35**	35	**2**	3
Actuarial loss (gain)	**43**	22	**2**	(4)
Participant contributions	**4**	4	**—**	—
Benefits paid	**(43)**	(40)	**(2)**	(2)
Plan amendments	**—**	—	**(1)**	—
Benefit obligation, end of year [(a)]	**979**	917	**63**	61
Change in plan assets				
Fair value of plan assets, beginning of year	**854**	842	**—**	—
Actual return on plan assets	**73**	47	**—**	—
Benefits paid	**(43)**	(40)	**(2)**	(2)

Expected non-investment expenses	**—**	(3)	**—**	—
Fair value of plan assets, end of year	**904**	854	**—**	—
Underfunded status at end of year	**(75)**	(63)	**(63)**	(61)

	Pension		OPEB	
($millions)	**2017**	2016	**2017**	2016
Underfunded status at end of year				
Current Liabilities – Other	**(2)**	(2)	**(2)**	(2)
Deferred Credits and Other Liabilities – Regulatory and Other	**(106)**	(88)	**(61)**	(59)
Other Assets – Other	**33**	27	**—**	—
Underfunded status at end of year	**(75)**	(63)	**(63)**	(61)

[(a)] For pension plans, the benefit obligation is the projected benefit obligation. For OPEB plans, the benefit obligation is the accumulated postretirement benefit obligation. The accumulated benefit obligation for the Company's pension plans was $917 million as at December 31, 2017 (2016 – $866 million).

At December 31, 2017, pension plans with accumulated benefit obligations in excess of plan assets had projected benefit obligations of $574 million (2016 – $519 million), accumulated benefit obligations of $517 million (2016 – $475 million), and plan assets with a fair value of $466 million (2016 – $428 million).

Amounts Recognized in Accumulated Other Comprehensive Income (AOCI)

The amounts of pre-tax AOCI relating to the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
($millions)	**2017**	2016	**2017**	2016
Net actuarial loss (gain)	**269**	257	**(4)**	(6)
Prior service cost	**1**	2	**(1)**	—
Total amounts recognized in AOCI, pre-tax	**270**	259	**(5)**	(6)

Net Benefit Costs Recognized

The components of net benefit cost and other amounts recognized in pre-tax OCI related to the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
($millions)	**2017**	2016	**2017**	2016
Net Benefit Costs				
Service cost	**23**	22	**1**	1
Interest cost	**35**	35	**2**	3
Expected return on plan assets	**(57)**	(57)	**—**	—
Amortization of actuarial loss and prior service cost	**15**	18	**—**	—
Net defined benefit and OPEB costs	**16**	18	**3**	4
Defined contribution benefit costs	**6**	6	**—**	—
Net benefit costs recognized	**22**	24	**3**	4
Amount recognized in Other Comprehensive Income				
Prior service cost	**—**	—	**(1)**	—
Net actuarial loss (gain) arising during the year	**26**	32	**2**	(4)
Amortization of actuarial loss and prior service cost	**(15)**	(18)	**—**	—
Total amount recognized in other comprehensive income	**11**	14	**1**	(4)
Total amount recognized in Comprehensive Income	**33**	38	**4**	—

The Company estimates that approximately $22 million related to pension plans and $nil related to OPEB plans at December 31, 2017 will be reclassified from AOCI into net income in the next 12 months.

Actuarial Assumptions

The weighted average assumptions made in the measurement of the benefit obligations and net benefit cost of the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
	2017	2016	**2017**	2016
Benefit Obligations				
Discount rate	**3.53%**	3.81%	**3.58%**	3.81%
Rate of salary increase	**3.04%**	3.00%	**3.22%**	3.00%
Net Benefit Costs				
Discount rate	**3.81%**	4.03%	**3.81%**	4.03%
Rate of salary increase	**3.00%**	3.00%	**3.47%**	3.00%
Rate of return on plan assets	**6.90%**	7.15%	**N/A**	N/A

Assumed Health Care Cost Trend Rates

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	2017	2016
Health care cost trend rate assumed for next year	**5.37%**	5.00%
Rate to which the cost trend rate is assumed to decline (the ultimate trend rate)	**4.36%**	5.00%
Year that the rate reaches the ultimate trend rate	**2034**	2017

A 1% point change in the assumed health care cost trend rate would have the following effects for the year ended December 31, 2017:

($millions)	**1% Point Increase**	**1% Point Decrease**
Effect on total service and interest costs	**1**	**—**
Effect on accumulated postretirement benefit obligations	**2**	**(2)**

Plan Assets

Pension plan assets are maintained in a master trust. The investment objective of the master trust is to achieve reasonable returns on trust assets, subject to a prudent level of portfolio risk, for the purpose of enhancing the security of benefits for plan participants. The asset allocation targets were set after considering the investment objective and the risk profile with respect to the trusts. Equities are held for their high expected return. Other equity and fixed income securities are held for diversification. Investments within asset classes are diversified to achieve broad market participation and reduce the effects of individual managers or investments. The Company regularly reviews its actual asset allocation and periodically rebalances its investments to the targeted allocation when considered appropriate.

The asset allocation targets and major categories of plan assets are as follows:

Asset Category	**Target Allocation**	**December 31, 2017**	December 31, 2016
Equity securities	40%	**59%**	59%
Fixed income securities	45%	**41%**	41%
Other	15%	**—%**	—%
Total	100%	**100%**	100%

The following table summarizes the fair value of plan assets for the Company's pension plans recorded at each fair value hierarchy level, as determined in accordance with the valuation techniques described in note 17:

($millions)	Total	Level 1	Level 2	Level 3
December 31, 2017				
Cash and cash equivalents	4	4	—	—
Equity securities	532	249	283	—
Fixed income securities	368	368	—	—
Total	904	621	283	—
December 31, 2016				
Cash and cash equivalents	3	3	—	—
Equity securities	501	242	259	—
Fixed income securities	350	350	—	—
Total	854	595	259	—

Expected Benefit Payments and Employer Contributions

($millions)	2018	2019	2020	2021	2022	2023-2027
Pension	44	45	46	48	48	254
OPEB	2	2	3	3	3	16

In 2018, the Company expects to contribute approximately $20 million and $2 million to the pension plans and OPEB plans, respectively.

Retirement Savings Plan

In addition to the retirement plans discussed above, the Company also has defined contribution employee savings plans available to eligible employees. Employees may participate in a matching contribution where the Company matches a certain percentage of before-tax employee contributions of up to 5% of eligible pay per pay period. The Company expensed pre-tax employer matching contributions of $8 million in both 2017 and 2016.

16. Asset Retirement Obligations

The Company's AROs relate to the legal obligation to disconnect, purge and cap abandoned pipelines, capping abandoned storage wells, and in some buildings, special handling and disposition of asbestos if it is disturbed.

The Company has non-asbestos AROs which include easements and some railway license agreements relating to pipeline assets located on land which the Company does not own. The Company has not recognized a liability in regard to the non-asbestos ARO because the fair value of the ARO cannot be reasonably estimated. The Company's pipeline system is considered a critical component of its business and is expected to be maintained and remain in place indefinitely. Natural gas supplies are also considered sufficient for the Company to operate in the long-term.

AROs are adjusted each period for liabilities incurred or settled during the period, accretion expense and any revisions made to the estimated cash flows.

Reconciliation of Changes in Asset Retirement Obligation Liabilities

The liability for the expected cash flows as recognized in the Financial Statements reflect discount rates ranging from 4.22% to 5.50% (2016 – 4.22% to 5.50%). A reconciliation of movements in the Company's ARO is as follows:

($millions)	**December 31, 2017**	December 31, 2016
Balance, beginning of year	**417**	440
Accretion expense	**19**	20
Liabilities incurred	**5**	7
Liabilities settled	**(8)**	(7)
Revisions in estimated cash flows	**(34)**	(43)
Balance, end of year	**399**	417

17. Risk Management and Financial Instruments

The Company's earnings, cash flows and OCI are subject to movements in natural gas prices and foreign exchange rates. Portions of these risks are borne by customers through certain regulatory mechanisms. Corporate risk management policies, processes and systems have been designed by the ultimate parent, Enbridge, to mitigate these risks.

The following summarizes the types of risks to which the Company is exposed and any applicable risk management instruments used to mitigate them.

Commodity Price Risk

Fluctuations in natural gas prices affect the Company's gas purchase costs for the Company's own operating requirements as well as for the gas supply costs the Company incurs for and collect from their system customers. The Company's gas procurement policy primarily includes contracts with pricing mechanisms that reflect monthly and daily variations in the price of gas. Commodity price volatility and absolute price levels also impact the amount of natural gas used by customers. Fluctuations in natural gas prices are borne by the customer in accordance with OEB directive.

Foreign Exchange Risk

Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. The Company generates certain revenues denominated in U.S. dollars. As a result, the Company’s earnings and cash flows are exposed to fluctuations resulting from U.S. dollars exchange rate variability.

During the third quarter of 2017, Union Gas took assignment of a number of EGD customer storage contracts, some of which were denominated in U.S. dollars. EGD also novated, to Union Gas, cash flow hedges that were used to manage exposure to changes in currency exchange rates in the assigned storage contracts.

Derivative Instruments

At December 31, 2017, the Company had approximately $1 million related to derivative instruments used as foreign exchange cash flow hedges (2016 – $nil), included in Accounts receivable and other and Regulatory and other assets. This amount is recorded at fair value as described below.

The Company's derivative instruments relating to foreign exchange forward contracts mature through 2023 and have a notional principal of $21 million (U.S. $17 million) (2016 – $nil).

Fair Value Measurements

Financial instruments recorded at fair value on the Balance Sheets are valued using a fair value hierarchy that reflects the significance of the inputs used in making the measurements. The fair value hierarchy has the following levels:

Level 1

Level 1 valuations represent quoted unadjusted prices for identical instruments in active markets.

Level 2 Valuation Techniques

Fair values of the Company's financial instruments that are actively traded in the secondary market are determined based on market-based prices. These valuations may include inputs such as quoted market prices of the exact or similar instruments, broker or dealer quotations, or alternative pricing sources that may include models or matrix pricing tools, with reasonable levels of price transparency. The fair value of the Company's pension plan assets designated as Level 2 financial instruments is determined through the market approach valuation technique using observable inputs including matrix pricing and market corroborated pricing. The fair value of foreign exchange contracts are also determined through the market value approach based on the extrapolation of observable future prices and rates. The fair value of other financial instruments relating to pension assets is disclosed in note 15.

Level 3 Valuation Techniques

Level 3 valuation techniques include the use of pricing models, discounted cash flow methodologies or similar techniques where at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. The fair value of the Company's pension plan assets designated as Level 3 financial instruments is determined through the market approach valuation technique using unobservable inputs including investment manager pricing for private placements and private equities.

There were no transfers between levels during the year ended December 31, 2017.

Financial Instruments

The fair values of financial instruments that are recorded and carried at book value are summarized in the following table. Judgment is required in interpreting market data to develop the estimates of fair value. These estimates are not necessarily indicative of the amounts that could have been realized in current markets.

	December 31, 2017		December 31, 2016	
($millions)	**Book Value**	**Fair Value**	Book Value	Fair Value
Long-term debt, including current maturities[a]	**3,815**	**4,327**	3,440	3,888

[a] Excludes unamortized items.

The fair value of the Company's Long-term debt is determined based on market-based prices as described in the Level 2 valuation technique described above.

The fair values of Cash and cash equivalents, Accounts receivable and other, Accounts payable and accrued charges, Short-term borrowings and Commercial paper are not materially different from their carrying amounts because of the short-term nature of these instruments or because the stated rates approximate market rates.

Credit risk

Credit risk is the risk of financial loss to the Company if a counterparty to a financial instrument fails to meet its contractual obligations. The maximum exposure to credit risk for the Company at period end is the carrying value of its financial assets. The Company's principal customers for natural gas transportation and storage services are industrial end-users, marketers, local distribution companies and utilities. The Company's distribution customers are primarily industrial and residential end-users. These concentrations of customers may affect the Company's overall credit risk.

The Company, in the normal course of its operations, provides gas loans to other parties from its holdings of gas in storage. The replacement cost of gas loans at December 31, 2017 is $93 million receivable (2016 – $84 million receivable). The Company manages its credit exposure related to gas loans by subjecting these parties to the same credit policies it uses for all customers, and obtaining collateral when appropriate.

The Company manages its credit risk on Cash and cash equivalents by dealing solely with reputable banks and financial institutions. To manage its credit risk on Accounts receivable, the Company performs ongoing credit reviews of all its customers. In cases where the credit quality of a customer does not meet the Company's requirements, a cash deposit, letter of credit or parental guarantee is required. Deposits held by the Company at December 31, 2017 amounted to $43 million (2016 – $39 million). Significant financial difficulties of the debtor, the probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the account receivable may be uncollectible and therefore should be included in the allowance for doubtful accounts.

Entering into derivative financial instruments may also result in exposure to credit risk. The Company has entered into risk management transactions with institutions that possess investment grade credit ratings.

The Company continues to utilize its established risk management policies and procedures to ensure the appropriate monitoring of customer credit positions and, based on current evaluations, does not expect any significant negative impacts associated with these positions.

The following table sets forth details of the age of trade receivables that are not impaired as well as the allowance for the doubtful accounts:

($millions)	**December 31, 2017**	December 31, 2016
Current	**386**	275
30 Days over due	**13**	10
60 Days over due	**4**	3
90+ Days over due	**8**	6
Total trade accounts receivable	**411**	294
Allowance for doubtful accounts	**(6)**	(5)
Total trade accounts receivable, net[a]	**405**	289

[a] The carrying amount of accounts receivable is impacted by changes in gas prices, which may fluctuate significantly from year to year.

For the years ended December 31, 2017 and 2016, no one customer accounted for more than 10% of sales or 10% of receivables.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations as they become due. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. The Company has credit facilities available to help meet short-term financing needs (note 12).

The following are the contractual maturities of the undiscounted cash flows of financial liabilities as at December 31, 2017:

($millions)	Total	2018	2019-2020	2021-2022	Thereafter
Commercial paper	485	485	—	—	—
Accounts payable and accrued charges	730	730	—	—	—
Long-term debt (including principal and interest)	6,503	570	294	607	5,032
Total	7,718	1,785	294	607	5,032

18. Stock Based Compensation

Until the close of the Merger, the Spectra Energy Corp 2007 Long-Term Incentive Plan (the 2007 LTIP), as amended and restated, provided for the granting of stock options, restricted and unrestricted stock awards and units, and other equity-based awards, to employees and other key individuals who performed services for Spectra Energy, including certain employees of Union Gas.

Performance and phantom awards granted under the 2007 LTIP typically became 100% vested on a three-year anniversary of the grant date. Options granted under the 2007 LTIP were issued with exercise prices equal to the fair market value of Spectra Energy common stock on the grant date, has ten-year terms and vested ratably over a three-year term.

Upon the close of the Merger or shortly thereafter, most Performance awards under the 2007 LTIP vested except for a portion of performance awards which were converted to 0.984 of Enbridge common stock that would time-vest at the end of 2018 if employment is continued. Likewise, Phantom awards were converted to 0.984 of Enbridge common stock that will vest as originally scheduled under the 2007 LTIP if employment is continued. The 2007 LTIP ceased after the Merger and qualified Union Gas employees may participate in a long-term incentive plan under Enbridge thereafter. There was no compensation expense recognized under a new long-term incentive plan under Enbridge in 2017.

Spectra Energy (and Enbridge after the Merger) allocated to Union Gas pre-tax stock-based compensation expense included in Operating Income for 2017 and 2016 as follows, the components of which are described further below:

Performance Awards

Under the 2007 LTIP, Spectra Energy granted stock-based performance awards. The performance awards generally vested over three years at the earliest, if performance metrics were met. The then unvested and outstanding performance awards granted previously contained market conditions based on the total shareholder return of Spectra Energy common stock relative to a pre-defined peer group. The equity-classified awards with market conditions were valued using the Monte Carlo valuation method.

Pre-tax compensation expense recorded by the Company for the years ended December 31, 2017 and 2016 for Performance awards were $2 million annually. The total fair value of the Performance awards vested was U.S. $6 million in 2017 and U.S. $1 million in 2016.

Phantom Awards

Under the 2007 LTIP, Spectra Energy also granted stock-based phantom awards. The phantom awards generally vested over three years. The liability-classified awards settled in cash at vesting. The liability-classified awards were remeasured at each reporting period until settlement.

Pre-tax compensation expense recorded by the Company for the years ended December 31, 2017 and 2016 for Phantom awards were $2 million annually. The total fair value of the Phantom awards vested was U.S. $1 million in 2017 and U.S. $1 million in 2016.

19. Guarantees

The Company has various financial guarantees which are issued in the normal course of business. The Company enters into these arrangements to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Balance Sheets. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company's potential exposure under these agreements can range from a specific dollar amount to an unlimited dollar amount depending on the nature of the claim and the particular transaction. The Company is unable to estimate the total potential amount of future payments under these agreements due to several factors, such as unlimited exposure under certain guarantees.

20. Changes in Working Capital

($millions)	**December 31, 2017**	December 31, 2016
GHG compliance liabilities	**238**	—
Accounts receivable	**(114)**	(126)
Inventories	**19**	40
Accounts payable and accrued charges	**75**	35
Income tax receivable	**(9)**	(5)
Accumulated other comprehensive loss	**15**	19
Other	**14**	23
Total Changes in working capital	**238**	(14)

21. Commitments and Contingencies

Commitments

The table below is a summary of the Company's commitments, not otherwise disclosed in the Financial Statements, due by period.

($millions)	**Total**	**2018**	**2019**	**2020**	**2021**	**2022**	**Thereafter**
Operating leases	33	7	6	7	6	7	—
Purchase obligations[a]	2,407	509	260	213	165	146	1,114
Total commitments	2,440	516	266	220	171	153	1,114

[a] Includes: firm capacity payments that provide the Company with uninterrupted firm access to natural gas transportation and storage; contractual obligations to purchase physical quantities of natural gas; contracts for software and consulting or advisory services; and contractual obligations for engineering, procurement and construction costs for pipeline projects. Due to a timing uncertainty, all procurement obligations have been included in 2018 as the Company is unable to reasonably estimate the payments due by period.

Contingencies

The Company, in the course of its operations, is subject to environmental and other claims, lawsuits and contingencies. Accruals are made in instances where it is probable that liabilities will be incurred and where such liabilities can be reasonably estimated.

In April 2016, the Ontario Ministry of the Environment and Climate Change (MOECC) issued a Director’s Order (Order) naming the Company, along with other parties, as an impacted property owner in connection with a contaminated site adjacent to a property of the Company in Hamilton. In May 2016, the Company appealed the Order, and in June 2016, the Environmental Review Tribunal (Tribunal), on consent of the MOECC’s Director, stayed the application of parts of the Order. The Tribunal has extended the stay of the Order several times, which has allowed the owner of the property (with the cooperation of the adjacent owners) to prepare a plan of action, including discussions with the MOECC and other neighbours (City of Hamilton and Infrastructure Ontario). The Company continues to monitor the matter, and to cooperate with the owner of the source property, the MOECC and other adjacent owners. The risk of material environmental liability is unknown at this time.

Other than the potential contingency noted above, of which the impact is unknown, the Company has no reason to believe that the ultimate outcome of these matters could have a significant impact on its Financial Statements.

Tax Matters

The Company maintains tax liabilities related to uncertain tax positions. While fully supportable in the Company's view, these tax positions, if challenged by tax authorities, may not be fully sustained on review.

The Company
Enbridge Gas Distribution Inc. (EGD) is a regulated natural gas distribution utility, serving approximately two million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 15,500 customers in northern New York State through a wholly-owned subsidiary, St. Lawrence Gas Company (approximately 2% of total revenue). EGD is an indirect wholly-owned subsidiary of Enbridge Inc. (rated A (low)).

CP Limit: $700 million

Rating

Debt	Rating	Rating Action	Trend
Commercial Paper	R-1 (low)	Confirmed	Stable
Unsecured Debentures & Medium-Term Notes	A	Confirmed	Stable
Cum. & Cum. Redeemable Convertible Preferred Shares	Pfd-2 (low)	Confirmed	Stable

Ratings Update

DBRS has confirmed the Unsecured Debentures & Medium-Term Notes, Commercial Paper, and Cumulative & Cumulative Redeemable Convertible Preferred Share ratings of Enbridge Gas Distribution Inc. (EGD or the Company) at "A", R-1 (low) and Pfd-2 (low), respectively, all with Stable trends. The rating confirmation is based on EGD's low business risk operations, stable regulatory environment in Ontario, strong franchise area and stable financial profile.

EGD's low business risk profile is supported by a large customer base (approximately two million customers, the largest in Canada), which has allowed the Company to achieve operational efficiency and generate earnings in excess of approved return on equity (ROE) under the incentive regulation (IR) framework since 2008. The Company benefits from a stable regulatory system, having no exposure to gas price risk in Ontario, where it generates approximately 98% of its revenues. EGD's franchise area (largely in the Greater Toronto Area) is viewed as one of the most rapidly growing and economically strong service areas in Canada. Approximately 95% of the Company's earnings are contributed by relatively stable regulated distributions, transportation and storage, with the remainder contributed by unregulated storage business, which benefits from strong demand, due to its strategic locations.

EGD's financial profile remained stable in 2011, with all credit metrics being commensurate with DBRS's "A" rating guidelines. DBRS notes that the Company requires significant liquidity to finance working capital (mostly gas inventory for winter distributions). Given the low gas price environment, EGD's liquidity remains adequate to meet its operational needs. Over the medium term, moderate cash flow deficits are expected, due to a large capex program. However, EGD's current debt leverage is well below the regulatory capital structure of 36% equity, providing EGD with significant financial flexibility. DBRS expects the Company to remain prudent in funding its cash shortfalls and maintaining its credit metrics within the "A" rating category. In August 2011, the Company financed its $66 million acquisition of 15-megawatt (MW) solar power assets from its parent, Enbridge Inc., with equity, which was viewed as positive to the financial profile.

Rating Considerations

Strengths
(1) Stable regulatory framework
(2) Strong franchise area with a large customer base
(3) Reasonable balance sheet and credit metrics

Challenges
(1) Weather-related volume risk
(2) Low ROE and limited rate base growth
(3) Cash flow deficits

Financial Information

Enbridge Gas Distribution Inc.	For the year ended December 31				
($ millions)	**2011**	**2010**	**2009**	**2008**	**2007**

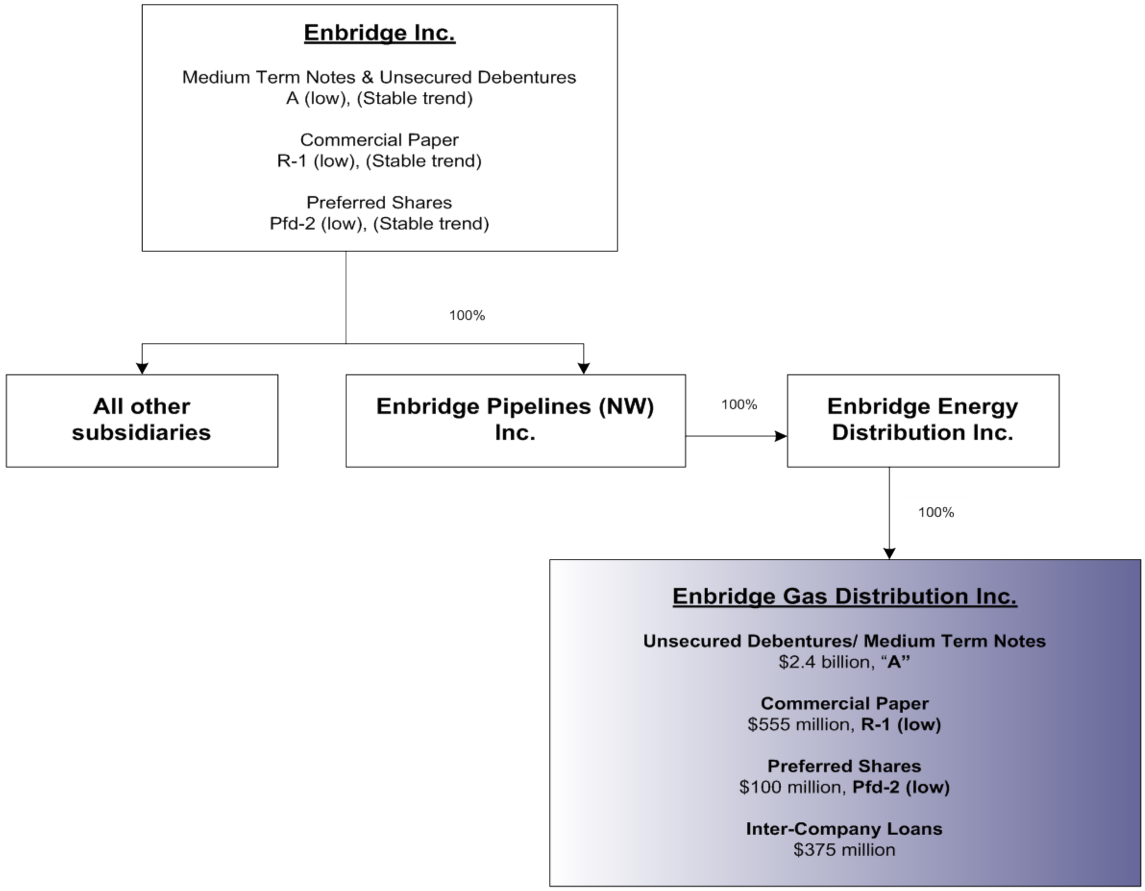
(1) Excludes inter-company loans and/or inter-company prefered dividend income and interest expense.

Enbridge Gas Distribution Inc.

Report Date:
April 4, 2012

Simplified Organizational Chart



Rating Considerations Details

Strengths

(1) Low business risk, stable regulatory framework. EGD's low risk business is viewed as low, underpinned by its gas distribution operations and a stable regulatory environment. Gas supply costs are adjusted quarterly and are passed through to customers. Currently, the Company operates under a long-term incentive regulation (IR) framework until 2013, which provides incentives for improved efficiency and long-term regulatory stability.

(2) Strong franchise, large customer base. EGD is the largest regulated natural gas distributor in Canada, serving approximately two million customers in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong. The size of the customer base allows the Company to achieve operational efficiency. EGD has generated returns on approved equity levels in excess of 100 basis points of approved ROE over the past four years.

(3) Reasonable balance sheet and credit metrics. EGD maintains a reasonable balance sheet and strong credit metrics commensurate with the current ratings. EGD is committed to maintaining its capital structure within the regulatory approved level of 64% debt/36% equity. The current debt leverage (56%) provides the Company with significant financial flexibility.

Challenges

(1) Volume risk due to weather. Weather remains the most significant risk, as forecast volumes – based on the normalized weather – are built into the Company's base rates, while actual usage varies with weather. Therefore, colder weather than normal in the forecast generally results in higher earnings compared to periods of warmer than normal weather.

(2) Limited rate base growing and low ROE during the IR period. Until the next cost-of-service (COS) application expected in 2013, the rate base growth will be limited and the relatively low current approved ROE of 8.39% will not be changed.

(3) Free cash flow deficits. Free cash flow deficits almost doubled in 2011 to $198 million as a consequence of increased dividend and growing capex. Negative free cash flow is expected to continue in 2012, since Capex is expected to remain high. While incremental cash flow is also expected to come from power solar assets (Amhersburg Solar Projects (15 MW), which were acquired from Enbridge Inc. in August 2011 for $66 million), cash contributions from these power projects will be very modest.

Actual ROE	10.79%	9.91%	11.32%	11.06%	10.58%

Summary

- The Company's earnings are contributed mainly by gas distribution operations (59% of 2011 net revenue) and gas transportation operations (31% of net revenue), with the remaining contributed by the storage business.
- Most earnings from gas distribution operations are generated by EGD, with a small portion (about 2% of revenues) contributed by its wholly-owned St. Lawrence, a natural gas distributor in New York State.
- The storage business includes regulated and unregulated facilities, with the latter accounting for approximately 5% of overall earnings (DBRS estimates).
- Earnings in regulated operations are mainly driven by rate base growth and approved ROE (both of which remained stable in 2011), as well as weather, which in 2011 was colder than 2010 and was largely responsible for a slight increase in earnings.
- In addition to colder weather, modest customer growth and higher distribution charges also contributed to the increase.
- DBRS notes that transportation revenue have declined since 2007, due to a gradual decrease in volumes.
- Earnings sharing represents EGD's 50% share of the actual return on the approved equity level (excluding the effect of weather), in excess of 100 basis points above the allowed ROE.
- Dividend income represents the cash income from EGD's $825 million investment in its affiliate (IPL System Inc.), the holder of the Company's $375 million intercompany loan outstanding at December 31, 2011. The interest expense on this loan was $27 million in 2011.

Outlook

- The Company's earnings, under normal weather conditions, should increase moderately in 2012, driven primarily by customer growth in the Company's franchise areas.
- The rate base and ROE are not expected to change until 2013, the rebasing year for EGD.
- The Company expects to add between 35,000 and 40,000 customers annually throughout the IR period.
- Earnings growth is also expected to come from power solar assets (Amhersburg Solar Projects (15 MW), which were acquired from Enbridge Inc. in August 2011 for $66 million). However, the earnings contribution from these power projects will be very modest.

(1) Excludes inter-company loans and/or inter-company dividend income and interest expense.

(*) In August 2011, EGD issued $66 million to finance its $66 million solar asset acquisition from Enbridge Inc.

Summary

- Higher earnings and depreciation contributed to increased cash flow from operations. However, in 2011 free cash flow deficits almost doubled to $198 million as a result of increased dividends and large capex.
- Higher capex in 2011 was mainly due to its customer care system and unregulated storage expansion.
- EGD has a targeted dividend payment of 90% to 100%, subject to maintaining a capital structure in line with regulatory levels.
- As a result, even the Company financed cash deficits with debt, though its capital structure remained stable (compared to 2010) and was well within the regulatory capital structure of 36% equity.
- Other key credit metrics: EBIT-interest coverage and cash flow-to-debt ratio remained stable and were in line with the "A" rating category.
- The Company issued $66 million in equity to finance its $66 million acquisition of solar assets from Enbridge Inc. However, due to the nature of inter-company transaction, the issuance of equity did not record in the cash flow statement in 2011, though the equity base increased by $66 million.

Outlook

- Capex for 2012 is expected to be approximately $440 million on capital projects and maintenance. Capital projects largely include the iron cast replacement program, construction of the technical training program and power generation.
- As a result, the Company is expected to generate free cash flow deficits of approximately $160 million in 2012. DBRS expects EGD to remain prudent in its financing of the cash shortfalls in order to maintain its balance sheet leverage within "A" rating guidelines.

Long-Term Debt Maturities and Liquidity

Bank Lines/Liquidity

Credit Facilities			As at Dec. 31, 2010
	Total Facilites	**Credit Facilities Draws**	**Available**
Committed lines of credit	700	545	155
Uncommitted lines of credit*	12	10	2
Total	712	555	157

* The uncommitted lines of credit are at St. Lawrence Gas, Inc.

- EGD requires relatively high liquidity to support its volatile and highly seasonal working capital needs and increased capital expenditures.
- Working capital requirements are very seasonal and heavily influenced by the volatility of gas prices.
- EGD has a $700 million CP program, of which $155 million was available at the end of 2011. The CP program is fully backed by a $700 million, 364-day revolving committed credit facility.
- DBRS views EGD's current liquidity as adequate. Nevertheless, a combination of cold weather and high gas prices could exhaust the Company's available liquidity. However, this scenario is unlikely, given the current low gas price environment.

Debt	As at Dec. 31, 2011 (CAD millions)
Commercial paper	555
Bank overdraft	7
Debentures	85
Medium-term notes	2,295
Total	**2,942**
Other and Deferred debt issue costs	(5)
Total Debt	**2,937**

Long-Term Debt Maturity schedule	Less than 1 year	1-3 years	3-5 years	Thereafter	Total
As at Dec. 31, 2011 (CAD millions)	-	400	-	1,974	2,374

- Refinancing the debt is still manageable, despite $400 million of debt due in the coming three years.
- In April 2011, EGD repaid its $150 million of 10.80% debentures. The Company then issued $100 million medium term notes (MTNs) at 4.95%, as well as additional draws on its credit facilities at lower interest rates. The company took the opportunity of a low interest rate environment to refinance, lowering interest expense for future years.
- EGD is subject to an EBIT interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
- The covenant does not apply to debt issuance for refinancing.
- The Company was in compliance with the test at fiscal year-end 2011.

Inter-company debt

- As of December 31, 2011, EGD owned $825 million of Class D, non-voting redeemable, retractable preferred shares of IPL System Inc. (IPL), which is 100% owned by Enbridge Inc.
- The Company owes IPL $375 million in loans, which is deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company.

Regulation

Regulatory Overview

The Ontario Energy Board (OEB) regulates EGD's gas storage, transmission and distribution businesses. Consumers in Ontario have been able to choose their natural gas supplier since 1985. The gas purchase cost is passed on to customers through quarterly adjustments; as a result, the Company's distribution margin is not impacted by the gas purchase cost.

Gas Distribution: Ontario

- In 2008, the Company moved to an IR methodology, with 2007 as the base year for a five-year term from 2008 to 2012. EGD can request a consultation in year four to consider an extension of the plan, to a maximum of an additional two years.
- Revenue escalation adjusts distribution revenues every year (50% of inflation in 2011 and 45% inflation in 2012), relying on an annual process to forecast volume and customer additions.
- The Company is allowed to have several costs and deferred accounts outside of revenue escalation formulae, including capex invested in new power generation and expenses above a defined threshold.
- The Company's 2011 ROE of 8.39% and deemed equity of 36% will remain unchanged until 2013.
- EGD will retain earnings in excess of the approved ROE up to a 100-basis point and will share equally with customers the actual return on the approved equity level (excluding the effects of weather) in excess of 100 basis points above the approved ROE.
- In September 2011, EGD filed an application with the OEB to adjust rates for 2012 pursuant to the approved IR formula. The OEB approved $1,004 million for 2012, or 98% of the requested amount. The rate adjustment was effective January 1, 2012.
- A hearing with respect to the remaining amount of $20 million (or 2%) was held by the OEB in January 2012, with a decision expected by April 2012.

Gas Distribution: New York

- The Company owns St. Lawrence Gas Company (SLG), which provides natural gas distribution services to 15,500 customers in New York State.
- The regulatory framework in New York is under cost of service and is viewed as stable. The approved ROE for 2011 was 10.5% on a deemed equity of 50%. Any earnings above 11% will be shared equally with customers. SLG had no earnings sharing in 2011 and 2010.
- Gas supply costs are adjusted annually.

Gas Storage

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates. Revenues from the unregulated storage business have increased since the OEB's change of EGD's pricing policy in 2007.

The Company
Enbridge Gas Distribution Inc. (EGD) is a regulated natural gas distribution utility, serving approximately two million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 15,500 customers in northern New York State through a wholly-owned subsidiary, St. Lawrence Gas Company (approximately 2% of total revenue). EGD is an indirect wholly owned subsidiary of Enbridge Inc. (rated A (low)).

Ratings Update

The credit profile of Enbridge Gas Distribution Inc. (EGD or the Company) has remained stable in Q1 2012, based on the latest financial results and regulatory development. The Company's rating is based on its low business risk operations, stable regulatory environment in Ontario, strong franchise area and stable financial profile.

EGD's low business risk profile is supported by a large customer base (approximately two million customers, the largest in Canada), which has allowed the Company to achieve operational efficiency and generate earnings in excess of approved return on equity (ROE) under the incentive regulation (IR) framework since 2008. The Company benefits from a stable regulatory system, having no exposure to gas price risk in Ontario, where it generates approximately 98% of its revenues. EGD's franchise area (largely in the Greater Toronto Area) is viewed as one of the most rapidly growing and economically strong service areas in Canada. Approximately 95% of the Company's earnings are contributed by relatively stable regulated distributions, transportation and storage, with the remainder contributed by unregulated storage business, which benefits from strong demand, due to its strategic locations. EGD will be under the cost-of-service (COS) year in 2013, which is expected to provide it an opportunity to obtain a larger rate base, higher allowed ROE (currently 8.39%) and higher deemed equity (currently 36%).

EGD's financial profile continued to remain stable in Q1 2012, with all credit metrics being commensurate with DBRS's "A" rating guidelines. DBRS notes that the Company requires significant liquidity to finance working capital (mostly gas inventory for winter distributions). Given the low gas price environment, EGD's liquidity remains adequate to meet its operational needs. Over the medium term, moderate cash flow deficits are expected, due to a large capex program. However, EGD's current debt leverage is well below the regulatory capital structure of 64% debt/36% equity, providing EGD with significant financial flexibility. DBRS expects the Company to remain prudent in funding its cash shortfalls and maintaining its credit metrics within the "A" rating category.

Rating Considerations

Strengths
(1) Stable regulatory framework
(2) Strong franchise area with a large customer base
(3) Reasonable balance sheet and credit metrics

Challenges
(1) Weather-related volume risk
(2) Low ROE and limited rate base growth
(3) Cash flow deficits

Rating Considerations Details

Strengths
(1) **Low business risk, stable regulatory framework.** EGD's low risk business is underpinned by its gas distribution operations and a stable regulatory environment. Gas supply costs are adjusted quarterly and are passed through to customers. Currently, the Company operates under a long-term IR framework until 2013, which provides incentives for improved efficiency and long-term regulatory stability.

(2) **Strong franchise, large customer base.** EGD is the largest regulated natural gas distributor in Canada, serving approximately two million customers in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong. The size of the customer base allows the Company to achieve operational efficiency. EGD has generated returns on approved equity levels in excess of 100 basis points of approved ROE over the past four years.

(3) **Reasonable balance sheet and credit metrics.** EGD maintains a reasonable balance sheet and strong credit metrics commensurate with the current ratings. EGD is committed to maintaining its capital structure within the regulatory approved level of 64% debt/36% equity. The current debt leverage (56%) provides the Company with significant financial flexibility.

Challenges
(1) **Volume risk due to weather.** Weather remains the most significant risk, as forecast volumes – based on the normalized weather – are built into the Company's base rates, while actual usage varies with actual weather. Therefore, colder weather than normalized weather in the forecast generally results in higher earnings compared to periods of warmer than normalized weather.

(2) **Limited rate base growth and low ROE during the IR period.** Until the next COS application expected in 2013, the rate base growth will be limited and the relatively low current approved ROE of 8.39% will not be changed.

(3) **Free cash flow deficits.** Free cash flow deficits almost doubled in 2011 to $198 million as a consequence of increased dividend and growing capex. Negative free cash flow is expected to continue in 2012, since capex is expected to remain high. While incremental cash flow is also expected to come from power solar assets (Amhersburg Solar Projects (15 MW), which were acquired from Enbridge Inc. in August 2011 for $66 million), cash contributions from these power projects will be very modest.

Note: CGAAP columns are for the year ended December 31.

Summary

- The Company's earnings are contributed mainly by gas distribution operations (approximately 59% of 2011 net revenue) and gas transportation operations (31% of net revenue), with the remaining contributed by the storage business.
- Most earnings from gas distribution operations are generated by EGD, with a small portion (about 2% of revenues) contributed by its wholly-owned St. Lawrence, a natural gas distributor in New York State.
- The storage business includes regulated and unregulated facilities, with the latter accounting for approximately 5% of overall earnings (DBRS estimates).
- Earnings in regulated operations are mainly driven by rate base growth and approved ROE (both of which remained stable in 2011), as well as weather, which in 2011 was colder than 2010 and was largely responsible for a slight increase in earnings.
- DBRS notes that transportation revenue has declined since 2007, due to a gradual decrease in volumes.
- Earnings sharing represents EGD's 50% share of the actual return on the approved equity level (excluding the effect of weather), in excess of 100 basis points above the allowed ROE.
- Dividend income represents the cash income from EGD's $825 million investment in its affiliate (IPL System Inc.), the holder of the Company's $375 million inter-company loan outstanding at December 31, 2011. The interest expense on this loan was $27 million in 2011.

Outlook

- The Company's earnings, under normal weather conditions, should increase moderately in 2012, driven primarily by customer growth in the Company's franchise areas.
- The rate base and ROE are not expected to change until 2013, the rebasing year for EGD.
- The Company expects to add between 35,000 and 40,000 customers annually throughout the IR period.
- Earnings growth is also expected to come from power solar assets (Amhersburg Solar Projects (15 MW), which were acquired from Enbridge Inc. in August 2011 for $66 million). However, the earnings contribution from these power projects will be very modest.

Enbridge Gas Distribution Inc.

(1) Excludes inter-company loans and/or inter-company dividend income and interest expense.
(2) In August 2011, EGD issued $66 million to finance its $66 million solar asset acquisition from Enbridge Inc.

Summary

- Higher earnings and higher depreciation contributed to increased cash flow from operations. However, in 2011, free cash flow deficits increased as a result of increased dividends and large capex.
- Higher capex in 2011 was mainly due to its customer care system and unregulated storage expansion.
- EGD has a targeted dividend payment of 90% to 100%, subject to maintaining a capital structure in-line with regulatory levels.
- Despite debt financing, the Company's capital structure remained stable and was well within the regulatory capital structure of 36% equity.
- Other key credit metrics: EBIT-interest coverage and cash flow-to-debt ratio remained stable and were in line with the "A" rating category.
- The Company issued $66 million in equity to finance its $66 million acquisition of solar assets from Enbridge Inc. However, due to the nature of inter-company transaction, the issuance of equity did not record in the cash flow statement in 2011, though the equity base increased by $66 million.

Outlook

- Capex for 2012 is expected to be approximately $440 million on capital projects and maintenance. Capital projects largely include the iron cast replacement program, construction of the technical training program and power generation.
- As a result, the Company is expected to generate free cash flow deficits of approximately $160 million in 2012. DBRS expects EGD to remain prudent in its financing of the cash shortfalls in order to maintain its balance sheet leverage within "A" rating guidelines.

Long-Term Debt Maturities and Liquidity

Bank Lines/Liquidity

Credit Facilities			As at Mar. 31, 2012
	Total Facilities	Drawn	Available
Committed lines of credit	700	280	420
Uncommitted lines of credit*	12	9	3
Total	712	289	423

* The uncommitted lines of credit are at St. Lawrence Gas, Inc.

- EGD requires relatively high liquidity to support its volatile and highly seasonal working capital needs and increased capex.
- Working capital requirements are very seasonal and heavily influenced by the volatility of gas prices.
- EGD has a $700 million CP program, of which $420 million was available at the end of March 2012. The CP program is fully backed by a $700 million, 364-day revolving committed credit facility.
- DBRS views EGD's current liquidity as adequate. Nevertheless, a combination of cold weather and high gas prices could exhaust the Company's available liquidity. However, this scenario is unlikely, given the current low gas price environment.

Debt	As at Mar. 31, 2012 (CAD millions)
Commercial paper	280
Other ST borowings	27
LT debt	2,387
Total	**2,694**

Long-Term Debt Maturity schedule	<1 year	1-3 years	3-5 years	Thereafter	Total
As at Dec. 31, 2011 (CAD millions)	-	400	-	1,974	2,374

- Refinancing the debt is still manageable, despite $400 million of debt due in the coming three years.
- In April 2011, EGD repaid its $150 million of 10.80% debentures. The Company then issued $100 million medium-term notes at 4.95%, as well as additional draws on its credit facilities at lower interest rates. The company took the opportunity of a low interest rate environment to refinance, lowering interest expense for future years.
- EGD is subject to an EBIT interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
- The covenant does not apply to debt issuance for refinancing.
- The Company was in compliance with the test at fiscal year-end 2011 and Q1 2012.

Inter-company debt

- As of March 31, 2012, EGD owned $825 million of Class D, non-voting redeemable, retractable preferred shares of IPL System Inc. (IPL), which is 100% owned by Enbridge Inc.
- The Company owes IPL $375 million in loans, which is deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company.

Regulation

Regulatory Overview
The Ontario Energy Board (OEB) regulates EGD's gas storage, transmission and distribution businesses. Consumers in Ontario have been able to choose their natural gas supplier since 1985. The gas purchase cost is passed on to customers through quarterly adjustments; as a result, the Company's distribution margin is not impacted by the gas purchase cost.

Gas Distribution: Ontario
- In 2008, the Company moved to an IR methodology, with 2007 as the base year for a five-year term from 2008 to 2012. EGD can request a consultation in year four to consider an extension of the plan, to a maximum of an additional two years.
- Revenue escalation adjusts distribution revenues every year (50% of inflation in 2011 and 45% inflation in 2012), relying on an annual process to forecast volume and customer additions.
- The Company is allowed to have several costs and deferred accounts outside of revenue escalation formulae, including capex invested in new power generation and expenses above a defined threshold.
- The Company's 2011 ROE of 8.39% and deemed equity of 36% will remain unchanged until 2013.
- EGD will retain earnings in excess of the approved ROE up to 100 basis points and will share equally with customers the actual return on the approved equity level (excluding the effects of weather) in excess of 100 basis points above the approved ROE.
- In September 2011, EGD filed an application with the OEB to adjust rates for 2012 pursuant to the approved IR formula. The OEB approved $1,004 million for 2012, or 98% of the requested amount. The rate adjustment was effective January 1, 2012.
- A hearing with respect to the remaining amount of $20 million (or 2%) was held by the OEB in January 2012, with a decision expected by April 2012.
- In January 2012, the Company filed a COS application for 2013, requesting distribution revenue of $1,102 million. A decision on this application is expected later in 2012.

Gas Distribution: New York
- The Company owns St. Lawrence Gas Company (SLG), which provides natural gas distribution services to 15,500 customers in New York State.
- The regulatory framework in New York is under cost of service and is viewed as stable. The approved ROE for 2011 was 10.5% on a deemed equity of 50%. Any earnings above 11% will be shared equally with customers. SLG had no earnings sharing in 2011 and 2010.
- Gas supply costs are adjusted annually.

Gas Storage
- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates. Revenues from the unregulated storage business have increased since the OEB's change of EGD's pricing policy in 2007.

The Company
Enbridge Gas Distribution Inc. (EGD) is a regulated natural gas distribution utility, serving approximately two million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 15,700 customers in northern New York State through a wholly owned subsidiary, St. Lawrence Gas Company (approximately 2% of total revenue). EGD is an indirect wholly owned subsidiary of Enbridge Inc. (rated A (low)).

Ratings Update

DBRS has confirmed the ratings of Enbridge Gas Distribution Inc. (EGD or the Company) as listed above. The Company's rating is based on its low business risk, stable regulatory environment in Ontario, strong franchise area and stable financial profile.

EGD's low business risk profile is supported by a large customer base (approximately two million customers, the largest in Canada), which has allowed the Company to achieve operational efficiency and generate stable earnings and cash flow. In 2013, the rebasing year, EGD's approved return on equity (ROE) increased to 8.93% (8.39% in 2012) and distribution rates increased to $1,021 million ($1,004 million in 2012). However, the deemed equity component of the Company's capital structure remained unchanged at 36%. The Company benefits from a stable regulatory system, having no exposure to gas price risk in Ontario, where it generates approximately 98% of its revenue. EGD's franchise area (largely in the Greater Toronto Area) is viewed as one of the most rapidly growing and economically strong service areas in Canada. Approximately 94% of the Company's earnings are generated from relatively stable regulated distribution, transportation and storage business. The remainder is generated from the unregulated storage business, which benefits from strong demand due to its strategic locations.

EGD's financial profile remained stable in 2012, with all credit metrics being commensurate with DBRS's "A" rating guidelines. DBRS notes that the Company requires significant liquidity to finance working capital (mostly gas inventory for winter distributions). Given the low gas price environment, EGD's liquidity remains adequate to meet its operational needs. Over the medium term, moderate cash flow deficits are expected, due to the large capital expenditures (capex) program. However, EGD's current debt leverage of 55% is well within DBRS's "A" rating category, providing it with significant financial flexibility. DBRS expects the Company to remain prudent in funding its cash shortfalls and maintain its credit metrics within the "A" rating category.

Rating Considerations

Strengths
(1) Stable regulatory framework
(2) Strong franchise with a large customer base
(3) Reasonable balance sheet and credit metrics

Challenges
(1) Weather-related volume risk
(2) High dividend payout
(3) Free cash flow deficits

Enbridge Gas Distribution Inc.

Report Date:
March 15, 2013

Rating Considerations Details

Strengths
(1) **Stable regulatory framework.** EGD's low risk business is underpinned by its gas distribution operations and a stable regulatory environment. Gas supply costs are adjusted quarterly and are passed through to customers. The Company has rebased its rates in 2013 under the cost-of-service (COS) framework. Beyond 2013, the company is expected to continue to operate under an IR framework.

(2) **Strong franchise with a large customer base.** EGD is the largest regulated natural gas distributor in Canada, serving approximately two million customers in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong and its large customer base allows it to achieve operational efficiency.

(3) **Reasonable balance sheet and credit metrics.** EGD maintains a reasonable balance sheet and credit metrics commensurate with the current ratings. EGD is committed to maintaining its capital structure within the regulatory approved level of 64% debt and 36% equity. The current debt leverage (55% in 2012) provides the Company with significant financial flexibility within DBRS's "A" rating category.

Challenges
(1) **Weather-related volume risk.** Weather remains the most significant risk, as forecast volumes — based on the normalized weather — are built into the Company's base rates, while actual usage varies with actual weather. Therefore, colder-than-normal weather in a given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. However, normalized weather is updated annually for rate-making purposes by incorporating the most recent weather trend, thus mitigating any significant sustained exposure to weather risk.

(2) **High dividend payout.** EGD has a high targeted dividend payout ratio of 90% to 100% and over the past five years, its dividend payout ratio (based on net income before extra items) has averaged around 106%. However, EGD's dividend payout is subject to maintaining its capital structure in line with the regulatory approved levels.

(3) **Free cash flow deficits.** Free cash flow deficits continued to be higher than historical in 2012 ($198 million) as a consequence of growing capex. Negative free cash flow is expected to continue in 2013, since capex is expected to increase to approximately $560 million.

2012 Summary

- The Company's earnings are mainly generated from gas distribution operations (approximately 55% of 2012 total revenue) and gas transportation operations (28% of 2012 total revenue), with the remaining contributed by the storage business.
- Most of the gas distribution earnings are generated by EGD and a small portion (about 2% of revenues) is contributed by its wholly owned subsidiary, St. Lawrence Gas Company (SLG), a natural gas distributor in New York State.
- The storage business includes regulated and unregulated facilities, with the latter accounting for approximately 4% of overall earnings in 2012.
- Earnings in regulated operations are mainly driven by rate base growth and approved ROE (both of which remained stable in 2012), as well as weather, which was warmer in 2012 and resulted in a slight decrease in gas distribution margins.
- Transportation revenue has declined since 2008, mainly due to transportation customers shifting to system gas. As a result, net gas distribution revenues have increased.
- Earnings sharing represents EGD's 50% share of actual returns on equity (excluding the effect of weather) in excess of 100 basis points above the allowed ROE.
- Dividend income represents the cash income from EGD's $825 million investment in its affiliate (IPL System Inc.), the holder of the Company's $375 million inter-company loan outstanding at December 31, 2012. The interest expense on this loan was $27 million in 2012.

2013 Outlook

- The Company's earnings, under normal weather conditions, should increase moderately in 2013, driven primarily by customer growth in the Company's franchise areas and the increase in its rate base ($4,162 million for 2013).
- Following the COS application, the Company's ROE increased to 8.93% for 2013 from 8.39% in 2012 and its deemed equity remained unchanged at 36%.
- The Company expects to add between 35,000 and 40,000 customers annually.

(1) Excludes inter-company loans and/or inter-company dividend income and interest expense.

(2) In August 2011, EGD issued $66 million to finance its $66 million solar asset acquisition from Enbridge Inc.

(3) Adjusted for $89 million recognition in regulatory asset related to other postretirement benefits in 2012.

2012 Summary

- In 2012, the Company's cash flow from operations remained relatively stable. The $2 million decrease is due mainly to the warmer than expected weather and continued decrease in transportation volumes.
- Capex in 2012 remained high, above depreciation, as a result of system improvements, upgrades and expansion.
- EGD has a targeted dividend payout ratio of 90% to 100%. This is subject to maintaining its capital structure in line with the regulatory approved levels.
- The company financed its free cash flow deficit through debt and asset sales in 2012. The Company's capital structure remained stable and was in line with the regulatory capital structure of 36% equity.
- Other key credit metrics: EBIT-interest coverage and cash flow-to-debt ratio remained stable and were in line with the "A" rating category.

2013 Outlook

- Capex for 2013 is expected to be approximately $560 million on capital projects and maintenance. Capital projects largely include the Greater Toronto Area, Franklin County Expansion and Ottawa re-enforcement project.
- As a result, the Company is expected to generate free cash flow deficits of approximately $250 million to $280 million in 2013. DBRS expects EGD to remain prudent in its financing of cash shortfalls in order to maintain its balance sheet leverage within "A" rating guidelines.

Long-Term Debt Maturities and Liquidity

Bank Lines/Liquidity

Credit Facilities				As at Dec. 31, 2012
(CA$ millions)	**Total Facilities**	**Drawn**	**Available**	**Maturity**
Committed lines of credit	700	580	120	2014
Uncommitted lines of credit*	12	10	2	2014
Total	712	590	122	

* The uncommitted lines of credit are at St. Lawrence Gas, Inc.

- EGD requires relatively high liquidity to support its highly volatile (heavily influenced by gas prices) and seasonal working capital needs and increased capex.
- The Company's Commercial Paper program is fully backed by the $700 million, 364-day revolving committed credit facility ($120 million available as at December 31, 2012), which was extended in August 2012 for an additional year to August 2013, with a maturity date of August 2014.
- DBRS views EGD's current liquidity as adequate. Nevertheless, a combination of cold weather and high gas prices could exhaust the Company's available liquidity. However, this scenario is unlikely, given the current low gas price environment.

Debt	As at Dec. 31, 2012 (CA$ millions)
Commercial paper	580
Other ST borowings	21
LT debt	2,387
Total	**2,988**

Long-Term Debt Maturity Schedule	<1 year	1-3 years	3-5 years	Thereafter	Total
As at Dec. 31, 2012 (CA$ millions)	0	400	200	1,787	2,387

- Debt refinancing remains manageable, despite $400 million of debt due in the coming two years.
- The $800 million shelf prospectus filed in November 2010 expired during the fourth quarter of 2012. As a result, the Company filed an $800 million shelf prospectus in January 2013 that will be effective for a 25-month period.
- EGD is subject to an EBIT-interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuance for refinancing.
  - The Company was in compliance with the test at fiscal year-end 2012.

Inter-Company Debt
- As of March 31, 2012, EGD owned $825 million of Class D, non-voting redeemable, retractable preferred shares of IPL System Inc. (IPL), which is 100% owned by Enbridge Inc.
- The Company owes IPL $375 million in loans, which is deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company.

Regulation

Regulatory Overview

The Ontario Energy Board (OEB) regulates EGD's gas storage, transmission and distribution businesses. Consumers in Ontario have been able to choose their natural gas supplier since 1985. The gas purchase cost is passed on to customers through quarterly adjustments; as a result, the Company's distribution margin is not impacted by the gas purchase cost.

Gas Distribution: Ontario

- In January 2012, the Company filed an application with the OEB to set rates for 2013 on a COS basis and the OEB issued its final decision on February 7, 2013. The OEB approved a distribution revenue of $1,021 million for 2013 (95% of the requested amount; $1,004 million in 2012) effective January 1, 2013.
- The Company's ROE increased for 2013 to 8.93% from 8.39% in 2012 and the deemed equity of 36% remained unchanged for 2013.
- The $89 million in OPEB costs has been approved for recovery over a 20-year period commencing in 2013 on a straight-line basis. The rate order further provided for future OPEB and pension costs, determined on an accrual basis, to be recovered in rates.
- The Company is allowed to have several costs and deferred accounts outside of revenue escalation formula, including capex invested in new power generation and expenses above a defined threshold.
- EGD will retain earnings in excess of the approved ROE up to 100 basis points and will share the actual return on the approved equity level (excluding the effects of weather) in excess of 100 basis points above the approved ROE equally with customers under the IR framework.

Gas Distribution: New York

- The Company owns SLG, which provides natural gas distribution services to 15,700 customers in New York State.
- The Company is regulated by the New York State Public Service Commission under COS and is viewed as relatively stable.
- The approved ROE for 2012 was 10.5% on a deemed equity of 50%. Any earnings above 11% will be shared equally with customers. SLG had no earnings sharing in 2012, 2011 and 2010. SLG will continue to operate under the existing COS agreement in 2013.
- Gas supply costs are adjusted annually.
- In July 2012, SLG received regulatory approval to expand its operations to Franklin County in New York State.

Gas Storage

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates.
- Revenues from the unregulated storage business have increased since the OEB's change of EGD's pricing policy in 2007.

The Company
Enbridge Gas Distribution Inc. (EGD) is a regulated natural gas distribution utility, serving over two million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 15,800 customers in northern New York State through a wholly owned subsidiary, St. Lawrence Gas Company, Inc. (approximately 0.6% of 2013 consolidated EBIT). EGD is an indirect wholly owned subsidiary of Enbridge Inc. (rated A (low)).

Ratings Update

DBRS has confirmed the ratings of Enbridge Gas Distribution Inc. (EGD or the Company) as listed above. The Company's ratings are based on its low-risk business profile, supported by a stable regulatory environment in Ontario and a strong franchise area with a large customer base. The confirmation factors in DBRS's expectation that the Company will continue to finance its free cash flow deficits to maintain its credit ratios within DBRS's "A" rating category.

EGD's business risk profile is indicative of an "A" rating, underpinned by the following factors: (1) EGD operates under a stable regulatory system. In 2013, following the five-year Incentive Regulation (IR) period, EGD operated under the Cost-of Service (COS) system. The move to COS methodology provided the Company with an opportunity to rebase and earn a higher return on equity (ROE) (8.93% compared with 8.39% in the IR period), while the deemed equity remained unchanged at 36%, which is relatively low compared with other jurisdictions. Natural gas supply costs continue to be passed through to EGD's customers. (2) EGD's franchise area, primarily the Greater Toronto Area (GTA), is viewed as one of the most economically strong service areas in Canada. In addition, the Company's large customer base of over two million should provide it with a critical mass to meet or exceed its efficiency factor during the next IR term (2014-2018). The Company filed an IR application for the 2014-2018 period in July 2013, and the decision by the Ontario Energy Board (OEB) is expected in Q2 2014. Should the OEB render an unfavourable decision to the extent that it may have a materially negative impact on the Company's future earnings and cash flow, a negative rating action could follow (although this will not likely be the case).

EGD's financial profile reflects an "A" rating, with all credit metrics remaining solidly within the current rating range. However, two concerns over the near to medium term are as follows: (1) Significant liquidity is required to finance EGD's volatile working capital (mostly gas inventory for winter distributions). EGD's liquidity is currently viewed as adequate to meet its operational needs given low natural gas prices. Should natural gas prices increase significantly, DBRS expects EGD to properly manage its liquidity to cope with that situation. (2) Large free cash flow deficits are expected over the next two years because of the $686.5 million GTA Expansion project. EGD's parent (Enbridge Inc.) is expected to continue providing financial support for EGD. DBRS expects EGD to finance its cash flow shortfalls while maintaining the debt leverage within the regulatory capital structure and all other credit metrics within the DBRS "A" rating range. This project has been approved by the OEB and should provide good earnings growth once it is in service, which is expected to occur by the end of 2015.

Rating Considerations

Strengths
(1) Stable regulatory framework
(2) Strong franchise with a large customer base
(3) Reasonable balance sheet/solid credit metrics

Challenges
(1) Weather-related volume risk
(2) Large capex program
(3) High dividend payout

Rating Considerations Details

Strengths

(1) **Stable regulatory framework.** The regulatory framework in Ontario and the nature of the Company's natural gas distribution, transportation and storage operations , which are mostly regulated, have underpinned the Company's strong business risk profile. The Ontario regulatory regime provides the Company with the following benefits that support the "A" rating: (a) gas supply costs are passed through to customers, with quarterly adjustments to the rates; (b) the 2013 Settlement (under the COS framework) allowed EGD to rebase its rate base, to recover prudently incurred operating costs, and to earn a higher ROE than the 2008-2012 period; and (c) beyond 2013, the Company is expected to continue to operate under an IR framework (2014-2018), which affords the Company an opportunity to earn the allowed ROE through its operational efficiency.

(2) **Strong franchise with a large customer base.** EGD is the largest regulated natural gas distributor in Canada, serving over two million customers (2.065 million active customers at the end of 2013) in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong, and its large customer base allows it to achieve operational efficiency. This is an important consideration for when the Company begins operating under the next IR term where the Company needs to achieve operational efficiency either equal to or better than the productivity factor in the IR-formula.

(3) **Reasonable balance sheet and solid credit metrics.** EGD maintains a reasonable balance sheet and credit metrics commensurate with the current ratings. EGD is committed to maintaining its capital structure within the regulatory approved level of 64% debt and 36% equity. The current debt leverage (55.7% at the end of 2013) provides the Company with some financial flexibility with respect to its future financing plan for the GTA project.

Challenges

(1) **Weather-related volume risk.** Weather risk remains significant as forecast volumes (based on the normalized weather) are built into the Company's base rates, while actual usage varies with actual weather. Therefore, colder-than-normal weather in a given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. However, normalized weather is updated annually by incorporating the most recent weather trend, thus mitigating any significant sustained exposure to weather conditions.

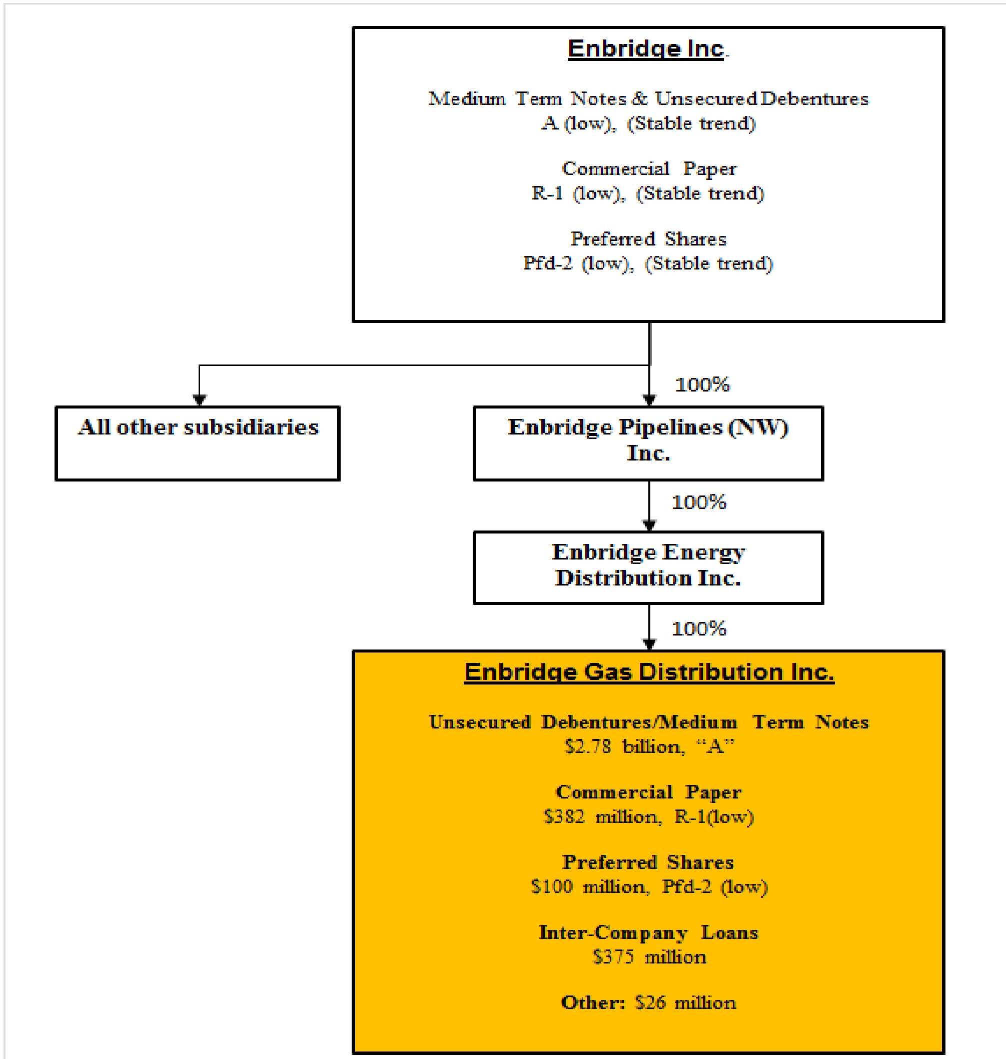
(2) **Large capex program.** The Company has a large capex program over the next two years, with $690 million estimated for 2014 and a larger amount expected for 2015. This large capex reflects the following factors: (a) high capex spending is required for system improvements and upgrades and (b) the financing of the 2014 portion of the GTA Expansion Project (see the GTA Project below). As a result, EGD is expected to generate large free cash flow deficits and will require external funds. DBRS expects the Company to maintain its debt leverage within the regulatory approved level and to maintain all other metrics within the DBRS "A" rating range, while carrying out its financing plan. DBRS also expects Enbridge Inc. to continue providing equity support for the Company in a timely fashion.

(3) **High dividend payout.** In general, EGD has a dividend payout ratio target of 90% to 100%, which DBRS views as high. Over the past five years, its dividend payout ratio, based on net income before extra items, has averaged around 116%. However, EGD's dividend payout is subject to maintaining the Company's capital structure in line with the regulatory approved level.

Enbridge Gas Distribution Inc.

Report Date:
March 12, 2014

Simplified Organizational Chart



Debt information as of December 31, 2013.

The Great Toronto Area Expansion Project (the GTA Project)

- The purpose of the GTA Project is to expand EGD's natural gas distribution system in the GTA to meet the demands of customer growth and to continue delivering safe and reliable natural gas to current and future customers.
- The proposed GTA project will consist of two segments of pipeline and related facilities to upgrade the existing system that delivers natural gas to several municipalities in Ontario.
- In January 2014, the OEB approved the project with the capital cost of $686.5 million.
- Construction is expected to start in late 2014, with completion targeted for the end of 2015.
- The Company is expected to fund this project with an appropriate mix of debt and equity to maintain its capital structure in line with the regulatory approved structure. DBRS expects the Company's parent to continue providing equity support for this project.
- During the construction, the Company's cash flow metrics are expected to weaken slightly from the 2013 level. However, once the project is fully in service, these metrics should return to the current level.

2013 Summary

- **Overall:** Higher earnings (before extraordinary items) reflected higher gas distribution earnings in Ontario due to colder weather, customer growth and higher allowed ROE. This increase was partially offset by (1) the elimination of earnings sharing under the 2013 Settlement and (2) lower transportation revenues.
- EGD's earnings are mainly generated from gas distribution operations (approximately 63% of 2013 total revenue) and gas transportation operations (28% of 2013 total revenue), with the storage business largely contributing the remaining earnings percentage.
- Most of the gas distribution earnings are generated by the Company's Ontario operations; a small portion (about 0.6% of EBIT) is contributed by its wholly owned subsidiary, St. Lawrence Gas Company, Inc. (SLG), a natural gas distributor in New York State.
- The decline of transportation revenues over the past three years reflected an eroding customer base caused by customer switch. By the end of 2013, the number of active customers was 251,434 (versus 364,027 in 2011).
- The storage business includes regulated and unregulated facilities, with the latter accounting for approximately 2.1% of EGD's consolidated EBIT in 2013.
- Beside weather impact, earnings in regulated operations are mainly driven by rate base growth, approved ROE (which was higher in 2013), and the Company's operational efficiency during the IR period.
- The earnings sharing was no longer in effect in 2013 in accordance with the 2013 Settlement. During the 2008-2012 term, the sharing mechanism represented EGD's 50% share of actual ROE (excluding the effect of weather) in excess of 100 basis points above the allowed ROE.
- Dividend income represents the cash income from EGD's $825 million investment in its affiliate (IPL System Inc.), the holder of the Company's $375 million inter-company loan outstanding at December 31, 2013. The interest expense on this loan was $27 million in 2013.

2014 Outlook

- The earnings outlook for 2014 is expected to be positive, given the cold weather conditions in Q1 2014. In the absence of an adverse regulatory decision on the Company's IR application for 2014-2018, customer growth is expected to continue to have a positive impact on EGD's 2014 earnings. EGD's ability to achieve a production efficiency equal to or better than the productivity factor in the IR-formula (which has yet to be determined by the OEB) is critical to attaining the approved ROE.
- Should the GTA Project be brought in service on time (i.e., the end of 2015) and within the approved budget, earnings beyond 2015 are expected to increase meaningfully.

(1) Excludes inter-company loans and/or inter-company dividend income and interest expense.
(*) Adjusted for $89 million recognition in regulatory asset related to other postretirement benefits in 2012.

2013 Summary

- EGD maintained a reasonable financial profile for the “A” rating category in 2013, with all credit metrics either remaining stable or improving slightly from the prior year.
- A large cash flow deficit was generated in 2013 mainly because of an increase in capex, which can largely be attributed to higher spending on improvements and upgrades to the distribution system and customer growth projects (including the Franklin County Expansion Project (the Franklin Project) in New York State).
- The dividend policy remained unchanged from previous years, with the payout ratio target of 90% to 100%, subject to EGD’s regulatory approved capital structure.
- The 2013 free cash flow deficit was mainly financed with a mix of debt and equity issuance. The issuance of equity was to maintain the capital structure within the regulatory structure (36% equity in 2013).

Note: In 2012, EGD sold its 99.9% partnership interest in Project Amherstburg (a power project) to Enbridge Income Fund (an affiliated entity) for $72 million. The cash proceeds were used to finance a portion of the Company’s cash flow deficit that year.

2014 Outlook

- Capex for 2014 is estimated to be approximately $690 million for capital projects and maintenance. This amount is much higher than the past three-year average of $484 million. This increase largely reflects the 2014 portion of capex spending on the GTA project.
- As a result, the Company is expected to generate a large free cash flow deficit in 2014. DBRS expects (1) EGD to remain prudent in its financing of cash shortfalls and (2) the Company’s parent to continue injecting equity into EGD, as it has in the past, to maintain the Company’s capital structure within the regulatory approved level and within DBRS’s “A” rating guidelines for a gas distribution company.

DBRS

Enbridge Gas Distribution Inc.

Report Date:
March 12, 2014

Liquidity and Long-Term Debt Maturities

Bank Lines/Liquidity

Credit Facilities				As at Dec. 31, 2013
(CA$ millions)	**Total Facilities**	**Drawn**	**Available**	**Maturity**
Committed line of credit	700	370	330	2015
Uncommitted line of credit*	13	12	1	2019
Total	713	382	331	

* The uncommitted line of credit is at St. Lawrence Gas Company, Inc.

- EGD requires relatively high liquidity to support its volatile and seasonal working capital needs, which are heavily influenced by natural gas prices.
- The Company has a commercial paper program of $700 million, which is fully backed by the $700 million, 364-day revolving unsecured committed credit facility, maturing in August 2015.
- DBRS views EGD's current liquidity as sufficient to finance its working capital requirements. However, a combination of cold weather and high gas prices could exhaust the Company's available liquidity, although this scenario is unlikely, given the current low gas price environment.

Debt	As at Dec. 31, 2013
(CA$ million)	
Commercial paper	370
Other ST borowings	23
LT debt	2,399
LT debt mature in one year	400

Long-Term Debt Maturity

Long-Term Debt Maturity Schedule	2014	2015	2016	2017	2018	Thereafter	Total
(CA$ million)							
As at Dec. 31, 2013 (CA$ millions)	400	1	2	201	2	2,193	2,799

- Given the Company's strong credit profile, the refinancing risk for the $400 million in medium-term notes due in 2014 remains manageable.
- EGD is subject to an EBIT-interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the test at the end of 2013.

Inter-Company Debt

- As of December 31, 2013, EGD owned $825 million of Class D, non-voting redeemable, retractable preferred shares of IPL System Inc. (IPL), which is 100% owned by Enbridge Inc.
- The Company owes IPL $375 million in loans, which is deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years, and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company.
- DBRS excludes this debt from its calculation of the Company's capital structure.

Regulation

Regulatory Overview

The OEB regulates EGD's gas storage, transmission and distribution businesses. Consumers in Ontario have been able to choose their natural gas supplier since 1985. The gas purchase cost is passed on to customers through quarterly adjustments; as a result, the Company's distribution margin is not affected by the gas purchase cost, subject to variances between total natural gas distributed by the Company and the amount of natural gas billed or billable to customers.

Gas Distribution: Ontario

- In 2013, the Company operated under the COS methodology pursuant to the 2013 Settlement. The Company retained the previous deemed equity level (36%). The allowed ROE was 8.93% (versus 8.39% in 2012). The earning sharing mechanism established under the 2008-2012 IR framework did not apply in the 2013 Settlement.
- The 2013 Settlement gave EGD the right to recover other post-retirement benefits (OPEB) costs of $89 million over a 20-year period, commencing 2013. It also provided for OPEB and pension costs determined on an accrued basis, to be recovered in rates.
- In July 2013, the Company filed an application for setting rates through a customized IR mechanism for the 2014-2018 period. A regulatory decision on the Company's application is expected in Q2 2014.
- DBRS does not expect the decision to have any changes that could have a negatively material impact on the Company's earnings and cash flows.

Gas Storage: Ontario

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers (since November 2006) within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates.

Transportation: National Energy Board (NEB)

- TransCanada Pipelines Limited (TransCanada) transports approximately 60% (7.4 billion cubic metres) of the annual natural gas requirements of EGD's customers; the remainder is obtained through contracts with Alliance Pipeline Canada, Alliance Pipeline U.S. and Vector Pipeline.
- The Company has Firm Transportation (FT) contracts with TransCanada for a portion of the requirement. Effective July 2013, the NEB approved new tolls on the FT service for TransCanada. Under the new tolls, the Company is required to pay TransCanada the demand component regardless of the volume transported.
- Transportation costs are passed through to customers.

Gas Distribution: New York

- The Company owns SLG, which provides natural gas distribution services to 15,800 customers in New York State.
- SLG is regulated by the New York State Public Service Commission under COS and is viewed as relatively stable.
- The approved ROE for 2013 was 10.5% (also 10.5% in 2012) on a deemed equity of 50% (also 50% in 2012). Any earnings above 11% will be shared equally with customers. SLG has had no earnings sharing since 2010 and will continue to operate under the existing COS agreement in 2014.
- SLG has no exposure to natural gas price risk, with gas supply costs being adjusted annually.
- SLG started construction in August 2012, following the July 2012 regulatory approval of the Franklin Project. The total capital cost over the five-year period is estimated to be USD 45 million. SLG is estimated to have spent approximately USD 38 million by the end of 2013. The Franklin Project is expected to add 4,400 potential customers to the system.

Rating Update

On March 13, 2015, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures & Medium-Term Notes (MTNs) rating of Enbridge Gas Distribution Inc. (EGD or the Company) at "A," the Company's Commercial Paper (CP) rating at R-1 (low) and its Cum. & Cum. Redeemable Convertible Preferred Shares at Pfd-2 (low). All trends are Stable. The Company's ratings are based on its low-risk business profile, supported by a reasonable and stable regulatory environment in Ontario and a strong franchise area with a large customer base of over two million. The confirmation incorporates risk faced by the Company with respect to financing and managing its $756 million Greater Toronto Area Project (GTA Project). The Stable trends factor in DBRS's expectation that (1) the GTA Project will be completed on time (expected by the end of 2015) and within budget, and (2) the Company will finance free cash flow deficits (as a result of the GTA Project and/or increased working capital needs due to rising natural gas prices) in an appropriate manner to maintain its credit ratios consistent with DBRS's "A" rating category, with leverage within the regulatory capital structure of 64% debt.

EGD's business risk profile remains strong and consistent with its current ratings, underpinned by the following factors: (1) EGD operates under a reasonable and stable regulatory system. In 2014, the Company began its five-year customized Incentive Regulation (IR) period through 2018. Higher return on equity (ROE) was allowed in 2014 and 2015 (compared with prior years), while forecast risk is mitigated meaningfully by the Company's having the ability to file annual updates on volume, capital cost and debt expenses. EGD can pass on to customers 100% of natural gas costs with quarterly adjustments. (2) EGD's franchise area, primarily the GTA, is viewed as one of the most economically strong service areas in Canada. In addition, the Company's large customer base of over two million should provide it with the critical mass to achieve or exceed the approved ROE over the five-year customized IR term (2014–2018) under normalized weather. However, the short-term challenge faced by the Company will be project risk management associated with the GTA Project (DBRS recognizes that Enbridge Inc. has a good track record in building pipeline projects in time and Continued on P.2

Issuer Description

Enbridge Gas Distribution Inc. (EGD) is a regulated natural gas distribution utility serving over two million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 16,000 customers in northern New York State through a wholly owned subsidiary, St. Lawrence Gas Company, Inc. EGD also provides transportation services (regulated) and storage services (regulated and unregulated).

EGD is an indirect wholly owned subsidiary of Enbridge Inc.

Rating Update (CONTINUED)

within budget). Any significant cost overruns or lengthy delays would face serious regulatory review after the current IR period, with no assurance that the regulator will allow EGD to recover such costs. In addition, EGD faces a regulatory lag associated with natural gas cost recovery, which could be up to two years (instead of a normal 12-month period) should natural gas prices increase significantly above the approved costs included in rates (such as Q1 2014). In this situation, continual liquidity support from the parent (Enbridge Inc.) is required.

EGD's credit metrics in 2014 remained consistent with its current ratings. However, in 2014, the Company had modestly higher leverage and lower cash flow metrics than in 2013 as a result of an increase in short-term debt to finance higher working capital needs. The increase in working capital was the result of higher inventory and gas prices during the 2014 winter and was financed with $204 million from EGD's affiliates (including Enbridge Inc., its parent) and its revolving facility. This short-term debt increase is expected to be paid down over the next 12 months as the Company recovers the extra gas costs from customers (approved by the regulator). In 2015, financing the large free cash flow deficit caused by the $1.0 billion expected capex is critical. DBRS expects (1) the parent to continue to inject equity to fund the equity portion of the GTA Project and (2) for EGD to maintain debt leverage within the regulatory capital structure. Should EGD's credit metrics weaken significantly from their current level, a negative rating action could occur.

Rating Considerations

Strengths

1. Stable regulatory framework.
The regulatory framework in Ontario and the nature of the Company's natural gas distribution, transportation and storage operations, which are mostly regulated, have underpinned the Company's strong business risk profile. The Ontario regulatory regime provides the Company with the following benefits that support the current rating: (a) Gas supply costs are passed through to customers, with quarterly adjustments to rates, subject to regulatory review; (b) The customized IR plan (2014-2018) provides EGD with the opportunity to earn the allowed ROE through its operational efficiency, with any over-earnings that exceed the allowed ROE for the year to be shared equally with ratepayers. Forecast risk during this customized IR period is mitigated through annual updates on volumes, capital cost, demand-side management as well as pension and post-retirement benefits (which are passed through to ratepayers).

2. Strong franchise with a large customer base.
EGD is the largest regulated natural gas distributor in Canada, serving over two million customers (2.098 million active customers at the end of 2014) in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong, and its large customer base provides it with the size and scale unavailable to smaller distributors to contain operating costs during its 2014-2018 customized IR period.

3. Reasonable balance sheet and solid credit metrics.
EGD maintains a reasonable balance sheet and solid credit metrics that have been consistently in line with the current ratings. EGD is committed to maintaining its capital structure within the regulatory approved level of 64% debt and 36% equity. The current debt leverage (61% at the end of 2014) provides the Company with some financial flexibility with respect to its 2015 financing plan for the GTA Project.

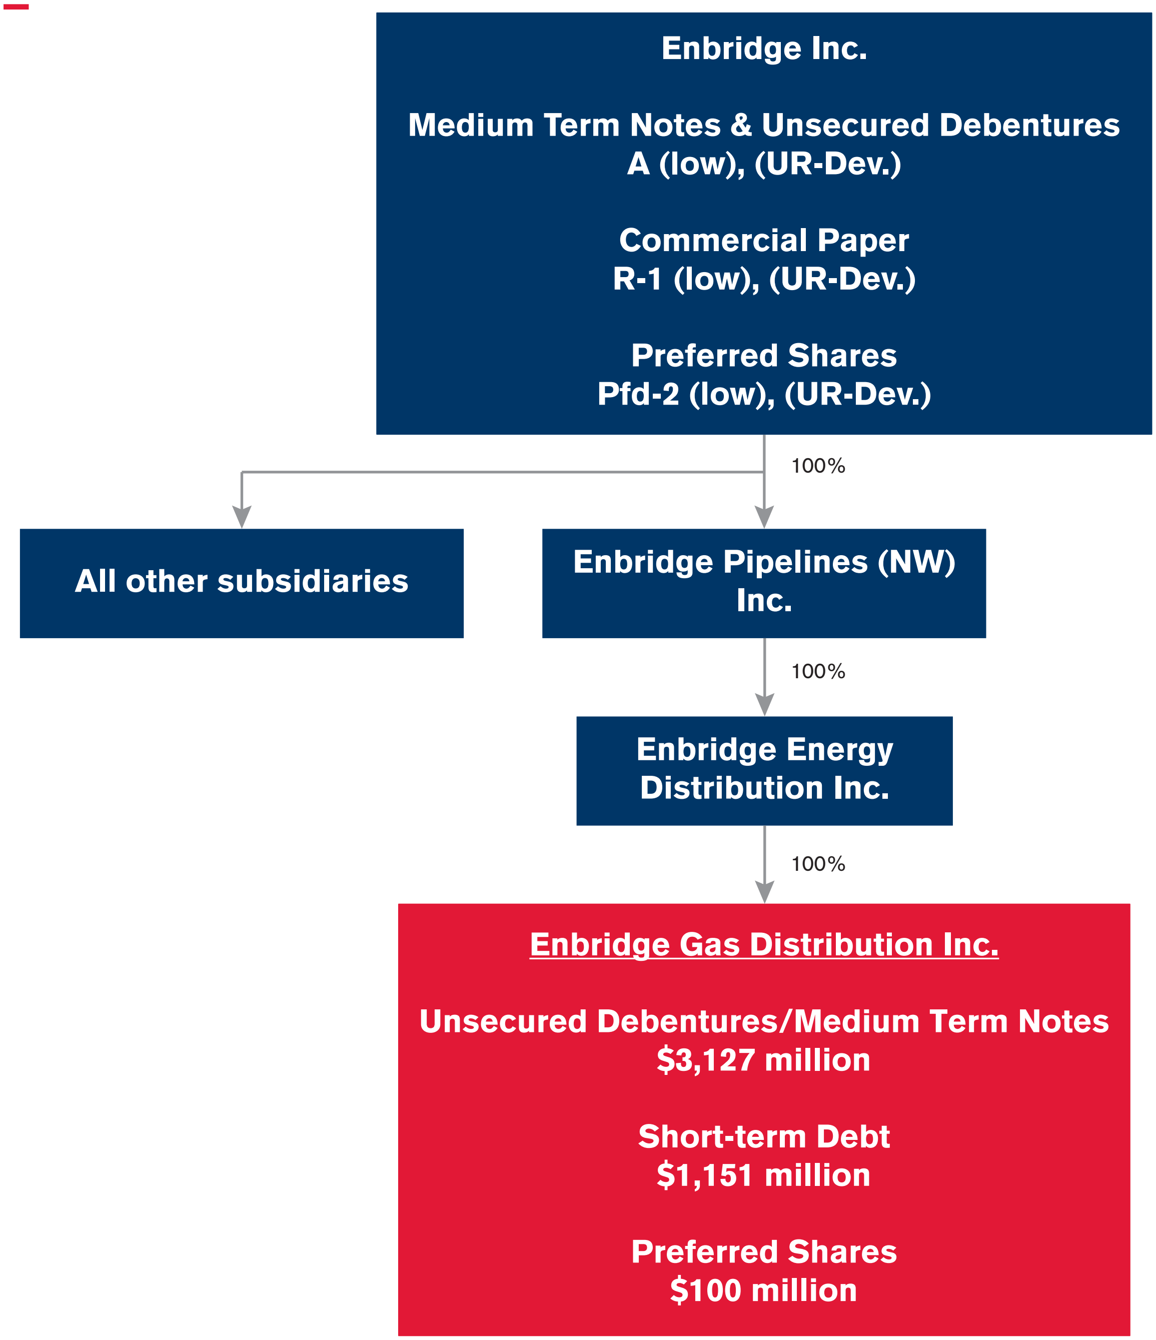
Challenges

1. Large capex program.
The Company has a large capex program, with an estimate of $1.0 billion for 2015 (annual capex in recent years has averaged approximately $527 million). This large capex reflects the following factors: (a) high capex spending is required for system improvements and upgrades and (b) the financing of the 2015 portion of the GTA Project (see the GTA Project below). As a result, EGD is expected to generate large free cash flow deficits and will require external funds. The rating confirmation incorporates DBRS's expectation that EGD will maintain its debt leverage within the regulatory approved level (64% debt) and to maintain all other metrics within the DBRS "A" rating range while carrying out its financing plan.

2. Weather-related volume risk.
Weather risk remains significant as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with actual weather; therefore, colder-than-normal weather in any given year generally results in higher earnings while the reverse is true for periods of warmer-than-normal weather. Normalized weather is, however, updated annually throughout the customized IR period by incorporating the most recent weather trend, thus mitigating any significant sustained exposure to weather conditions.

3. Managing operating costs.
EGD is in the second year of the five-year IR period. Managing its operating costs is critical for the Company to achieve or exceed allowed ROE. Earnings below the allowed ROE will not be recovered from the customers until it is 300 basis points (bps) below the allowed ROE. In that situation, the Company can request a regulatory review.

Simplified Organizational Chart



Debt information as of December 31, 2014.

The Great Toronto Area Expansion Project (the GTA Project)

- The purpose of the GTA Project is to expand EGD's natural gas distribution system in the GTA to meet the demands of customer growth and to continue delivering safe and reliable natural gas to current and future customers.
- The GTA Project will consist of two new segments of pipeline and related facilities to upgrade the existing system that delivers natural gas to several municipalities in the GTA.
- In January 2014, the Ontario Energy Board (OEB) approved the project with the estimated capital cost of approximately $756 million. Construction started in January 2015, with completion targeted by the end of 2015. The expenditure spending to date was approximately $200 million.
- The Company is expected to fund this project with cash flow from operations, equity injection from the parent and its new debt issuance. The funding will be subject to maintaining the debt leverage within the regulatory capital structure.

Note: Reported under U.S. GAAP except 2010, which was under Canadian GAAP.

Deemed equity (EGD)	36%	36%	36%	36%	36%
Approved ROE (EGD)	9.36%	8.93%	8.39%	8.39%	8.39%
Distribution rate base (CA$ millions)	4,421	4,162	4,011	3,957	3,838

Summary

- Overall: Higher net earnings in 2014 primarily reflected the following factors: (1) higher approved ROE, (2) colder weather in Ontario, (3) modest customer growth and (4) $12 million in earnings sharing with ratepayers that did not occur in 2013.
- The positive impact of the above items was partially offset by: (1) slightly lower distribution rates in 2014, (2) lower "other revenue" because of the OEB rate order and settlement allowing for recognition of regulatory assets in the prior year and (3) higher interest expense caused by higher debt.
- Net gas distribution revenue (excluding the natural gas cost) represents EGD's distribution margin earnings that are mainly generated from natural gas distribution operations. Weather, allowed ROE and customer growth were major factors that affected earnings for the year.
- Gas transportation service revenue has declined over the past three years, reflecting an eroding customer base caused by customer switches. By the end of 2014, the number of active customers was 210,815 (versus 364,027 in 2011).
- Other revenue includes largely storage revenue and other revenue arising from the OEB order and settlement.
- Dividend income represents the cash income from EGD's $825 million investment in its affiliate (IPL System Inc. (IPL)), the holder of the Company's $375 million intercompany loan outstanding at December 31, 2014. Interest expense on this loan was $29 million in 2014 ($27 million in 2013).

Outlook

- The earnings outlook for 2015 is expected to be positive, given the cold weather conditions in Q1 2015 and the continuation of customer growth in the GTA. Good operational efficiency is expected to be achieved given the Company's size and scale.
- Should the GTA Project be brought into service on time (expected by the end of 2015) and within the approved budget, earnings beyond 2015 are expected to increase meaningfully.

Financial Profile

	For the year ended December 31

1 Excludes inter-company subordinated loans.
2 Includes preferred dividends from IPL (less of interest expense on subordinated loans from IPL).
Note: Reported under U.S. GAAP except 2010, which was under Canadian GAAP.

Summary

- EGD maintained a reasonable financial profile for the current rating category in 2014, although its key credit metrics declined slightly from the prior year because of:
  - Increased debt levels to finance working capital requirements caused by higher gas inventory and gas prices. DBRS recognizes that a significant amount of this increase is short-term debt, borrowed from EGD's revolving facility and affiliate ($204 million). A substantial portion of this amount is expected to be paid down as the Company recovers from customers the variance of the actual gas cost and the gas cost embedded in rates over the next 12 months.
  - Approximately $293 million in free cash flow deficit (excluding working capital) due to increased capex for the year.
- Higher capex in 2014 was largely attributed to higher spending on the GTA Project and system improvements and upgrades as well as customer growth projects (including the Franklin County Expansion Project (Franklin Project) in New York State).
- The dividend policy in 2014 remained almost unchanged from previous years in the absolute term, but the payout as a percentage of net income was lower than the Company's target payout ratio of 90% to 100%. DBRS notes that the payout is subject to maintaining the regulatory capital structure.

Outlook

- Capex for 2015 is estimated to be approximately $1.0 billion for capital projects and maintenance. This amount is much higher than the past three-year average of $547 million. This increase largely reflects the 2015 portion of capex spending on the GTA Project.
- As a result, the Company is expected to generate a large free cash flow deficit in 2015, which is expected to be funded with new debt and equity injections from the parent. DBRS expects the parent to continue injecting equity into EGD, as it has in the past, to maintain the Company's capital structure within the regulatory approved level and within DBRS's "A" rating guidelines for a gas distribution company.

Liquidity and Long-Term Debt Maturities

Bank Lines/Liquidity (As at Dec. 31, 2014)

(CA$ millions)	Total Facilities	Drawn 1	Available	Maturity
Revolving term credit facility	1,000	935	65	Jul-16
Revolving credit facility from Enbridge Inc.	300	175	125	Jun-16
Committed line of credit*	8	8	0	2019
Uncommitted line of credit*	6	4	2	N/A
Total	**1,314**	**1,122**	**192**	

* The committed and uncommitted line of credit is at St. Lawrence Gas Company, Inc.
1 Includes commercial paper issuances, net of discount, that are backed by the $1.0 billion Revolving Term Credit Facility.

- EGD requires relatively high liquidity to finance its volatile and seasonal working capital needs, which are heavily influenced by natural gas prices and the weather. For example, the difference between the actual cost and the approved cost of natural gas reflected in rates was $673 million as at December 31, 2014. This amount requires financing until it is recovered from the customers.
- In May 2014, the OEB approved EGD's collection of a portion of the $568 million balance as at June 30, 2014, over a 24-month period beginning July 1, 2014.
- At the end of 2014, short-term debt increased significantly (by $758 million) to fund working capital needs because of colder-than-normal weather and higher natural gas prices (accounts receivable increased by $483 million and gas inventories increased by $181 million). The increase in accounts receivable will be recovered through rates within 12 months.
- The increase in short-term debt was financed with $204 million in intercompany short-term borrowings and the remainder from the revolving credit facility.
- In June 2014, in support of its working capital needs, the Company obtained a new $300 million revolving credit facility from Enbridge Inc., maturing in June 2016. As at December 31, 2014, $175 million was drawn on this facility.
- The Company's current CP program is $1.0 billion, which is fully backed by the $1.0 billion revolving term credit facility (unsecured) maturing in July 2016. As at December 31, 2014, approximately $935 million was outstanding.
- Currently, with the support of the parent, DBRS believes that EGD has sufficient liquidity to fund its working capital needs; however, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, the parent is expected to provide further liquidity support in a timely manner for EGD.

Long-term Debt Maturity (As at Dec. 31, 2014)

(CA$ million)	2015	2016	2017	2018	2019	Thereafter	Total
Medium-term notes	2	2	502	1	1	2,619	3,127

- The Company has no refinancing need until 2017 when $502 million of the MTNs will be due. The refinancing risk in 2017 is manageable for EGD given its strong credit quality.
- EGD is subject to an EBIT-interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the test at the end of 2014.

Intercompany Subordinated Loans

- As of December 31, 2014, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL, which is 100% owned by Enbridge Inc.
- The Company owes IPL $375 million in loans ($200 million due in 2049 and $175 million due in 2051), which is deeply subordinated to the debentures and MTNs. EGD is able to defer interest payments on the loans for up to five years and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company. The default of the subordinated loans cannot trigger a default of senior debt.
- Investment income in the form of dividends from IPL is approximately $66 million in 2014 whereas the interest expense on the subordinated loans from IPL was approximately $29 million.
- DBRS excludes the subordinated loans from its calculation of the Company's capital structure.
- EGD's preferred share rating was downgraded to Pfd-2 (low) from Pfd-2 in June 2001. This rating adjustment was technical in nature, reflecting the issuance of the higher-ranking intercompany subordinated loans, and was not related to any change in DBRS's outlook for the Company.

Regulation Update

Gas Distribution: Ontario

In 2013, the Company's rates were set based on the 2013 settlement relating to the cost-of-service (COS) rate application. In July 2014, the OEB rendered a decision on the Company's 2014-2018 customized IR application, with a subsequent decision and rate order provided in August 2014. The decision also approved final 2014 allowed revenues and rates with a ROE of 9.36% based on a 36% deemed common equity component of rate base. The key features of the customized IR plan include the following:

1. ***Annual allowed revenue updates for selected items that reduce forecast risk:***
   - Volumes to reflect updated customer conditions, contract market volumes and average use.
   - The customer care, demand-side management, pension and other post-employment benefits to be updated annually and to be treated as pass-through amounts from other approved mechanisms.
   - The cost of capital to be updated annually.
   - ROE to be updated using the OEB-approved parameters (using a formula).

2. ***Earning sharing:*** To the extent that the Company's actual return on the approved equity level represented by normalized earnings (excluding the effects of weather) exceeds the approved ROE for that year, the over-earnings will be shared equally between the Company and customers; however, the customers will not share earning deficits that are below the approved ROE.

3. ***Adjustments:*** Several approved deferral and variance accounts are in place for the recovery of costs that deviate from those assumed in developing the customized IR plan. The customized IR plan also includes a z-factor mechanism for the Company to recover expenses above a defined threshold ($1.5 million within a year), to the extent that any such expenses result from new regulatory orders and/or changes in statutory obligations.

4. ***Off ramps:*** An OEB review will be triggered if the Company's ROE on a normalized basis varies more than 300 bps (either negative or positive) relative to the approved ROE for that year. The regulatory review will determine the reasons for variance in earnings and could either result in adjustments to the customized IR plan or a return to COS regulation.

Gas Storage: Ontario

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers (since November 2006) within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates.

Transportation: National Energy Board

- TransCanada Pipelines Limited (TransCanada) transports approximately 69% (9.1 billion cubic metres) of the annual natural gas requirements of EGD's customers; the remainder is obtained through contracts with Alliance Pipeline Canada, Alliance Pipeline U.S. and Vector Pipeline.
- The Company has Firm Transportation (FT) contracts with TransCanada for a portion of the requirement. Effective July 2013, the National Energy Board (NEB) approved new tolls on the FT service for TransCanada. Under the new tolls, the Company is required to pay TransCanada the demand component regardless of the volume transported.
- Transportation costs are passed through to customers.

Gas Distribution: New York

- The Company owns St. Lawrence Gas Company, Inc. (SLG), which provides natural gas distribution services to 16,000 customers in New York State. SLG is regulated by the New York State Public Service Commission under COS and is viewed as relatively stable.
- The approved ROE for 2014 was 10.5% (2013: 10.5%) on a deemed equity of 50.0% (2013: 50.0%). Any earnings above 11.0% will be shared equally with ratepayers.
- SLG has no exposure to natural gas price risk as gas supply costs are adjusted annually, subject to regulatory review.
- SLG started construction on the Franklin Project in August 2012 following regulatory approval in July 2012. The total capital cost through 2018 is estimated to be USD 52 million. SLG is estimated to have spent approximately USD 48 million up December 31, 2014. The Franklin Project is expected to add 4,400 potential customers to the system.

Agreement with TransCanada

- In September 2013, EGD, Union Gas Limited and Gaz Métro Limited Partnership reached an agreement with TransCanada. The agreement intended to modify the tolling structure of TransCanada's Mainline System.
- In December 2014, the NEB substantially approved the term of the agreement through its approval of TransCanada's 2015-2020 Mainline toll application.
- Under the new toll structure, the Company has to pay TransCanada a fixed charge regardless of the volume consumed. Under the old toll structure, EGD paid a fixed charge and a variable charge, depending on the volume.
- All the transportation costs are passed through to customers.

Cum. & Cum. Redeemable Convertible Preferred Shares	Pfd-2 (low)	Confirmed	Stable

Rating Update

On March 18, 2016, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures & Medium-Term Notes rating of Enbridge Gas Distribution Inc. (EGD or the Company) at "A," as well as its Commercial Paper rating at R-1 (low) and its Cum. & Cum. Redeemable Convertible Preferred Shares at Pfd-2 (low). All trends are Stable. The rating confirmations reflect DBRS's view that the Company's business risk profile remains strong, underpinned by its strong service area, large customer base and reasonable customized Incentive Regulation (IR) plan from 2014 through 2018. The risk associated with the Greater Toronto Area Expansion Project (the GTA Project) has also been substantially reduced by the end of 2015, as it is close to completion. The confirmations and the Stable trends reflect EGD's good financial profile with solid credit metrics and reasonable liquidity.

DBRS views the Company's five-year customized IR as supportive of the current rating. EGD has the ability to file annual updates on volume and debt expenses, thereby significantly reducing forecast errors. Allowed return on equity (ROE) for 2016 is 9.19%. Although this is lower than the ROE of 9.30% in 2015, it remains higher than the ROE that is allowed for gas distribution in other Canadian jurisdictions. Fuel costs for EGD are additionally passed through to customers and adjusted quarterly. The Company has filed its 2016 rate application and the decision is expected to be issued in Q2 2016. DBRS does not expect the decision to have any material impact on EGD's earnings.

In January 2015, the Company began construction on the GTA Project, which will extend the distribution system to service the growing population in the GTA. The cost was initially estimated at $700 million, with the final cost estimated at $930 million. Cost overruns are not expected to be added to the rate base until the next re-basing year in 2019, exposing EGD to regulatory lags; however, DBRS considers this risk to be manageable with the Company's reasonable liquidity and good balance sheet. The GTA Project is expected to be completed by the end of Q1 2016. During this build-out, EGD's credit metrics have remained supportive of the current ratings. As the financing of the GTA Project is largely completed, DBRS does not expect any material change in credit metrics over the near to medium term.

Issuer Description

EGD is a regulated natural gas distribution utility, serving over two million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 16,000 customers in northern New York State through a wholly owned subsidiary, St. Lawrence Gas Company, Inc., and provides transportation services (regulated) and storage services (regulated and unregulated). EGD is an indirect wholly owned subsidiary of Enbridge Inc.

Rating Update (CONTINUED)

The Company has also maintained reasonable liquidity through the end of 2015, reflecting (1) over $700 million in undrawn facilities, (2) minimal long-term debt due in 2016 and (3) stable cash flow from operations.

Rating Considerations

Strengths

1. Supportive regulatory framework

The regulatory framework in Ontario and the nature of the Company's natural gas distribution, transportation and storage operations, which are mostly regulated, underpin the Company's strong business risk profile. The regulatory regime in Ontario provides the Company with the following benefits that support the current rating: (a) gas supply costs are passed through to customers, with quarterly adjustments to rates, subject to regulatory review; and (b) the customized IR plan (2014–2018) provides EGD the opportunity to earn the allowed ROE through operational efficiency, with the excess of the allowed ROE for the year to be shared equally with ratepayers. Forecast risk during this customized IR period is partially mitigated through annual updates on volumes, demand-side management (DSM), and pension and postretirement benefits (which are passed through to ratepayers).

2. Strong franchise with a large customer base

EGD is the largest regulated natural gas distributor in Canada, serving over 2.1 million active customers at the end of 2015 in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong compared to other service areas in Canada. EGD's large customer base provides it with the size and scale, unavailable to smaller distributors, to operate efficiently. This is very important during its 2014–2018 customized IR period.

3. Reasonable balance sheet and solid credit metrics

EGD maintains a reasonable balance sheet and solid credit metrics that have been consistent with the current ratings. EGD is committed to maintaining its capital structure within the regulatory capital structure of 64% debt and 36% equity.

Challenges

1. Weather-related volume risk

Weather risk remains significant as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with actual weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. However, normalized weather is updated annually throughout the customized IR period by incorporating the most recent weather trend, thus mitigating any significant sustained exposure to weather conditions.

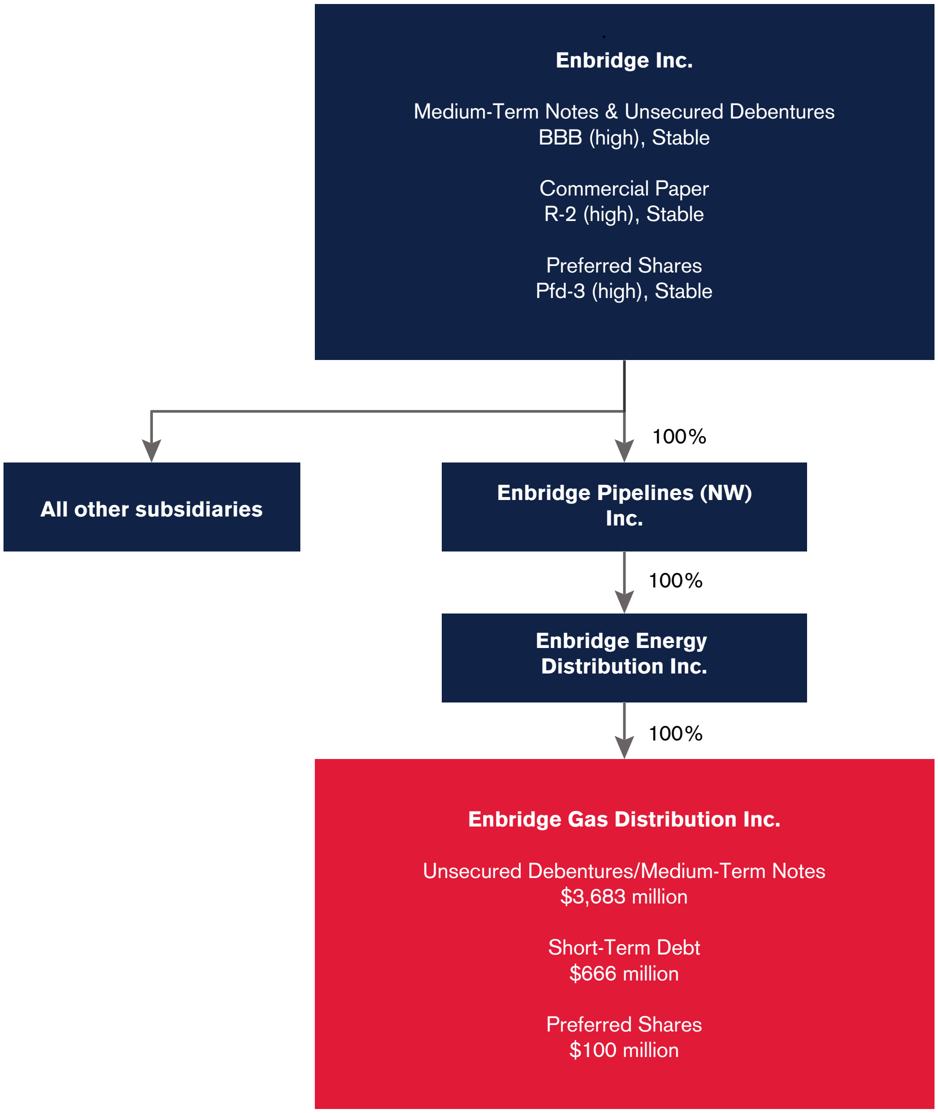
2. Managing operating costs under Incentive Regulation

EGD is in the midst of its five-year customized IR period. Managing operating costs is critical for the Company to achieve or exceed the allowed ROE. Earnings below the allowed ROE will not be recovered from customers unless actual ROE is 300 basis points below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag

EGD faces potential regulatory lag with respect to the recovery of natural gas costs. Although the Company is allowed to pass on to the customer all natural gas costs with quarterly adjustments, the potential regulatory lag still exists. In the event that natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, the cost overruns associated with the GTA project is not expected to be added to the rate base until the Company's rebasing in 2019.

Simplified Organizational Chart



Note: Debt information as of December 31, 2015.

The Great Toronto Area Expansion Project (the GTA Project)

- The purpose of the GTA Project is to expand EGD's natural gas distribution system in the GTA to meet the demands of customer growth and to continue delivering safe and reliable natural gas to current and future customers.
- The GTA Project will consist of two new segments of pipelines and related facilities to upgrade the existing system that delivers natural gas to several municipalities within the GTA.
- In January 2014, the Ontario Energy Board (OEB) approved the project with an estimate capital cost of approximately $756 million. Construction started in January 2015, with completion targeted by the end of 2015. The schedule and cost of the GTA Project were updated in the third quarter of 2015, with the updated cost to be approximately $930 and to be completed by March–April 2016 due to the complexity of the construction and the requirements from government and permitting agencies. Total spending on the GTA Project was approximately $750 million at the end of 2015.
- The Company funded this project with a mixture of cash flow from operations, equity injection from the parent and a new debt issuance. The funding is subject to maintaining the debt leverage within the regulatory capital structure.

Reported net income	234	246	217	212	173

1 Adjusted for $89 million recognition in regulatory asset related to other postretirement benefits in 2012. 2 Includes $63 million intercompany dividend income.

	2015	2014	2013	2012	2011
Deemed equity (EGD)	36%	36%	36%	36%	36%
Approved ROE (EGD)	9.30%	9.36%	8.93%	8.39%	8.39%
Distribution rate base (EGD) (CA$ millions)	4,957	4,421	4,162	4,011	3,957

2015 Summary

- Net income: EGD's net earnings before non-recurring items was in line with 2014 due to the following factors: (1) high gas distribution margins due to higher distribution charges and modest customer growth, (2) higher other revenue from higher pipeline and storage optimization sales and higher DSM incentive revenue, offset by (3) higher operating cost and higher depreciation cost due to the growing asset base.
- Earnings sharing, which reflects extra earnings above the allowed regulated earnings that would have to be shared with ratepayers, was lower in 2015.
- Non-recurring items reflected one-time severance costs and gain of asset sales incurred in 2015.
- Dividend Income represents the cash income from EGD's $825 million investment in its affiliate (IPL System Inc.), the holder of the Company's $375 million inter-company loan outstanding as at December 31, 2015. Interest expense on this loan was $27 million in 2015.
- Gas transportation service revenue represents services charged to customers who do not purchase natural gas from EGD.

2016 Outlook

- Assuming normal weather conditions, the earnings outlook for 2016 is modestly positive. This is due to the modestly higher earnings expected from continued growth in the rate base, especially due to the GTA Project. The expected increase is expected to be partially offset by a lower ROE (9.19% in 2016 versus 9.30% in 2015). Good operational efficiency is expected to be achieved, given the Company's size and scale.

Financial Profile

1 Excludes inter-company subordinated loans. 2 Includes preferred dividends from IPL (less of interest expense on subordinated loans from IPL).

2015 Summary

- EGD's credit metrics remained consistent with the current rating category in 2015.
- The debt-to-capital ratio remains higher than 2013 due to debt issued to finance the GTA Project. However, leverage of 60% continues to be in line with DBRS's "A" rating category.
- The Company generated an approximately $675 million free cash flow deficit (excluding working capital) due to high capex for the GTA Project.
- The dividend policy in 2015 remained relatively high at the targeted payout ratio of 90% to 100% of core net income. At this ratio, the regulatory capital structure should still be maintained.

2016 Outlook

- Given the estimated capex for 2016 of $700 million, DBRS estimates the Company's free cash flow deficit to be approximately $350 million. DBRS expects EGD to finance this deficit with a mix of debt and equity injection from its parent in a way that the debt-to-capital ratio will remain in line with the regulatory capital structure.
- Cash flow is expected to increase, reflecting the expected completion of the GTA project.

Liquidity and Long-Term Debt Maturities

Bank Lines/Liquidity

Credit Facilities As at Dec. 31, 2015

(CA$ millions)	Total Facilities	Drawn 1	Available	Maturity
Revolving term credit facility	1,000	595	405	July 2017
Revolving credit facility from Enbridge Inc.	300	0	300	May 2017
Committed line of credit *	10	8	2	2019
Uncommitted line of credit *	7	4	3	N/A
Total	1,317	607	710	

* The committed and uncommitted line of credit is at St. Lawrence Gas Company, Inc.
1 Includes commercial paper issuances, net of discount, that are backed by the $1.0 billion Revolving Term Credit Facility.

- EGD requires relatively high liquidity to finance its volatile and seasonal working capital needs, which are heavily influenced by natural gas prices and the weather.
- As of December 31, 2015, the Company's $300 million revolving credit facility from Enbridge Inc. was undrawn.
- The Company's current commercial paper program is $1.0 billion, which is fully backed by the $1.0 billion revolving term credit facility (unsecured), maturing in July 2017. As at December 31, 2015, approximately $595 million of commercial paper was outstanding.
- Currently, with the support of the parent, DBRS believes that EGD has sufficient liquidity to fund its working capital needs. However, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, the parent is expected to continue to provide further liquidity support in a timely manner for EGD, as evidenced in winter 2014.

Debt Maturities Table

As at Dec. 31, 2015 (CA$ million)	2016	2017	2018	2019	2020	Thereafter	Total
Medium-term notes	2	502	2	2	400	2,775	3,683

- The Company has $502 million of medium-term notes due in 2017. The refinancing risk is manageable given EGD's strong credit quality.
- EGD is subject to an EBIT-interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant at the end of 2015.

Inter-Company Subordinated Loans

- As of December 31, 2015, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL System Inc. (IPL), which is 100% owned by Enbridge Inc.
- The Company owes IPL $375 million in loans ($200 million due in 2049 and $175 million due in 2051), which is deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years, and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company. The default of the subordinated loans cannot trigger a default of senior debt.
- Investment income in the form of dividends from IPL is approximately $63 million in 2015, whereas the interest expense on the subordinated loans from IPL was approximately $27 million.
- DBRS excludes the subordinated loans from its calculation of the Company's capital structure.

Regulation

Regulatory Update 2015–2016

Gas Distribution: Ontario

In 2013, the Company's rates were based on the 2013 settlement relating to the cost-of-service (COS) rate application. In July 2014, the OEB rendered a decision on the Company's 2014–2018 customized IR application, with a subsequent decision and rate order provided in August 2014. The decision also approved final 2014 allowed revenues and rates with an ROE of 9.36% based on a 36% deemed common equity component of rate base. The revenue requirement is updated annually based on volumes, DSM, and pension and postretirement benefits (which are passed through to ratepayers). In May 2015, the OEB approved final rates for 2015. In December 2015, OEB approved interim rates for 2016.

The key features of the customized IR plan include the following:

1. **Annual allowed revenue updates for selected items that help reduce forecast risk:**
   - Volumes to reflect updated customer conditions, contract market volumes, and average use.
   - The customer care, DSM, pension and other post-employment benefits to be updated annually and be treated as pass-through amounts from other approved mechanisms.
   - The cost of capital to be updated annually (approved ROE 9.19% in 2016), using the OEB approved parameters.
2. **Earning sharing:** To the extent the Company's actual return on the approved equity level represented by normalized earnings (excluding the effects of weather) exceeds the approved ROE for that year, the over-earnings will be shared equally between the Company and customers. However, the customers will not share earning deficits that are below the approved ROE.
3. **Adjustments:** Several approved deferral and variance accounts are in place for the recovery of costs that deviate from those assumed in developing the customized IR plan. The customized IR plan also includes a z-factor mechanism for the Company to recover expenses above a defined threshold ($1.5 million within a year), to the extent any such expenses result from new regulatory orders and/or changes in statutory obligations.
4. **Off ramps:** An OEB review will be triggered if the Company's ROE on a normalized basis varies more than 300 basis points (either negative or positive) relative to the approved ROE for that year. The regulatory review will determine the reasons for variance in earnings and could either result in adjustments to the customized IR plan or a return to COS regulation.

Gas Storage: Ontario

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers (since November 2006) within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates.

Transportation: National Energy Board (NEB)

- TransCanada Pipelines Limited (TransCanada) transports approximately 73% (9.2 billion cubic meters) of the annual natural gas requirements of EGD's customers. The remainder is obtained through contracts with Alliance Pipeline Canada, Alliance Pipeline U.S. and Vector Pipeline.
- The Company has Firm Transportation (FT) contracts with TransCanada for a portion of the requirement. Effective July 2013, the NEB approved new tolls on the FT service for TransCanada. Under the new tolls, the Company is required to pay TransCanada the demand component regardless of the volume transported.
- Transportation costs are passed through to customers.

Gas Distribution: New York

- The Company owns St. Lawrence Gas Company, Inc. (SLG), which provides natural gas distribution services to 16,000 customers in New York State. SLG is regulated by the New York State Public Service Commission under COS and is viewed as relatively stable.
- The approved ROE for 2015 was 10.5% (2014: 10.5%) on deemed equity of 50% (2014: 50%). Any earnings above 11% will be shared equally with ratepayers.
- SLG has no exposure to natural gas price risk, with gas supply costs being adjusted annually, subject to regulatory review.
- SLG started construction on the Franklin Project in August 2012 following regulatory approval in July 2012. The total capital cost through 2018 is estimated to be USD 52 million. SLG has spent approximately USD 51 million by the end of 2015. The Franklin Project is expected to add 4,400 potential customers to the system.

Agreement with TransCanada Pipelines Limited (TCPL)

- In September 2013, EGD, Union Gas Limited and Gaz Metro Limited Partnership reached an agreement with TCPL. The agreement was intended to modify the tolling structure of TCPL's Mainline system.
- In December 2014, the NEB substantially approved the term of the agreement through its approval of TCPL's 2015–2020 Mainline toll application.
- Under the new toll structure, the Company has to pay TCPL a fixed charge regardless of the volume consumed. Under the old toll structure, EGD paid a fixed charge and a variable charge, depending on the volume.
- All the transportation costs are passed through to customers.

Rating Update

On September 8, 2016, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures & Medium-Term Notes rating of Enbridge Gas Distribution Inc. (EGD or the Company) at "A," as well as its Commercial Paper rating at R-1 (low) and its Cum. & Cum. Redeemable Convertible Preferred Shares at Pfd-2 (low). All trends are Stable. The confirmations were made concurrently with DBRS's decision to maintain the Under Review with Developing Implications status on all the ratings of Enbridge Inc. (ENB; rated BBB (high), UR-Dev.), the 100% owner of EGD, following the announcement that ENB had entered into an agreement to acquire Spectra Energy Corp. (SEC) in an all-share exchange transaction (the ENB-SEC Transaction; please see DBRS's ENB press release dated September 8, 2016). The confirmations of EGD's ratings reflect DBRS's view that EGD is assessed on a stand-alone basis and that its ratings are unaffected by the ENB-SEC Transaction because of the nature of its being a regulated utility and that it is strongly protected by the regulation.

The regulatory framework remains stable, as EGD is in the third year of a five-year customized Incentive Regulation (IR) plan through 2018. In May 2016, EGD received the final rate order on its 2016 rate application from the Ontario Energy Board (OEB). The decision allowed for $14 million for the recovery of revenue deficiency related to the January 2016 through June 2016 time period. This decision is viewed as positive, as it reflects the timely recovery of revenue deficiency should it arise and be deemed prudent by the OEB. Although return on equity (ROE) is lower in 2016 at 9.19% compared with 9.30% in 2015, DBRS does not expect any material impact on earnings.

From a business risk perspective, the completion of the Western and Eastern segments of the Greater Toronto Area expansion project (the GTA Project) in March 2016 significantly reduced the construction risk associated with the project. The remaining work on the GTA Project includes the installation and upgrade of two additional stations through 2017. The cost of the GTA Project is estimated to be approximately $930 million, of which approximately $845 million has been spent as of June 30, 2016.

The Company's financial profile for the 12 months to June 30, 2016, shows slightly weaker EBIT-to-interest and cash flow-to-debt ratios caused mainly by warmer weather, while the debt-to-capital ratio improved modestly mainly because of lower debt levels. However, the decrease in interest coverage and cash flow ratios are not material. Under normal weather conditions, DBRS expects these ratios to improve in 2017, as earnings and cash flow will benefit from a larger rate base with the GTA Project expected to be substantially completed in 2016. The Company's liquidity at the end of June 2016 remained solid, reflecting (1) over $465 million in undrawn facilities, (2) minimal long-term debt due in 2016 and (3) much lower capex in H2 2016 and 2017 than the 2015 to June 2016 period.

Financial Information

	6 mos. Jun. 30		12 mos. Jun. 30	Year ended December 31

1 Excludes inter-company subordinated loans. 2 Includes intercompany preferred dividends from IPL (less of interest expense on subordinated loans from IPL).

Issuer Description

EGD is a regulated natural gas distribution utility serving over 2.13 million customers in the central, eastern and the Niagara Peninsula regions of Ontario. EGD also distributes natural gas to approximately 16,000 customers in northern New York State through a wholly owned subsidiary, St. Lawrence Gas Company, Inc., and provides transportation services (regulated) and storage services (regulated and unregulated). EGD is an indirect wholly owned subsidiary of Enbridge Inc.

Rating Considerations

Strengths

1. Supportive regulatory framework

The regulatory framework in Ontario and the nature of the Company's natural gas distribution, transportation and storage operations, which are mostly regulated, underpin the Company's strong business risk profile. The regulatory regime in Ontario provides the Company with the following benefits that support the current rating: (a) gas supply costs are passed through to customers, with quarterly adjustments to rates, subject to regulatory review; and (b) the customized IR plan (2014–2018) provides EGD the opportunity to earn the allowed return on equity (ROE) of 9.19% in 2016 through operational efficiency, with the excess of the allowed ROE for the year to be shared equally with ratepayers. Forecast risk during this customized IR period is partially mitigated through annual updates on volumes, demand-side management (DSM) and pension and post-retirement benefits (which are passed through to ratepayers).

2. Strong franchise with a large customer base

EGD is the largest regulated natural gas distributor in Canada, serving approximately 2.13 million active customers at the end of June 2016 in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong compared with other service areas in Canada. EGD's large customer base provides it with the size and scale, unavailable to smaller distributors, to operate efficiently. This is very important during its 2014–2018 customized IR period.

3. Reasonable balance sheet and solid credit metrics

EGD maintains a reasonable balance sheet and solid credit metrics that have been consistent with the current ratings. EGD is committed to maintaining its capital structure within the regulatory capital structure of 64% debt and 36% equity. At the end of June 2016, the debt-to-capital ratio was 58.7%.

Challenges

1. Weather-related volume risk

Weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with actual weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. However, normalized weather is updated annually throughout the customized IR period by incorporating the most recent weather trend, thus mitigating any significant sustained exposure to weather conditions.

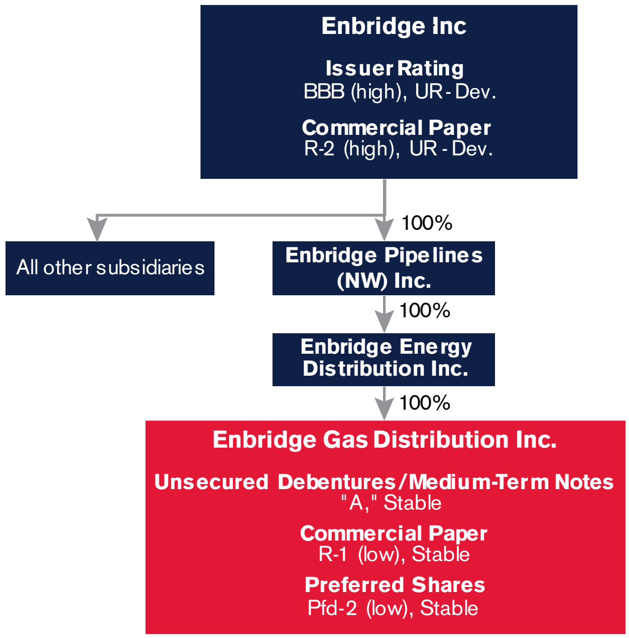
2. Managing operating costs under the Incentive Regulation

EGD is in the third year of its five-year customized IR period. Managing operating costs is critical for the Company to achieve or exceed the allowed ROE. Earnings below the allowed ROE will not be recovered from customers unless actual ROE is 300 basis points below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag

EGD faces potential regulatory lag with respect to the recovery of natural gas costs. Although the Company is allowed to pass on to customers all natural gas costs with quarterly adjustments, potential regulatory lag still exists. In the event that natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, the cost overruns associated with the GTA Project (estimated to be approximately $243 million) is not expected to be added to the rate base until the Company's rebasing in 2019.

Simplified Organizational Chart



As of September 15, 2016.

The Great Toronto Area Expansion Project (the GTA Project)

- The purpose of the GTA Project is to expand EGD's natural gas distribution system in the GTA to meet the demands of customer growth and to continue delivering safe and reliable natural gas to current and future customers.
- The GTA Project will consist of two new segments of pipelines and related facilities to upgrade the existing system that delivers natural gas to several municipalities within the GTA.
- In January 2014, the OEB approved the project with an estimated capital cost of approximately $687 million. Construction started in January 2015, with completion targeted by the end of 2015. The schedule and cost of the GTA Project were updated in the third quarter of 2015 to approximately $930 million with completion targeted for March–April 2016 because of the complexity of the construction and the requirements from government and permitting agencies. Total spending on the GTA Project was approximately $845 million at the end of June 2016.
- In March 2016, both the western and eastern segments were placed into service, with two additional stations expected to be installed and upgraded in 2017.
- The Company funded this project with a mixture of cash flow from operations, equity injection from the parent and a new debt issuance. The funding is subject to maintaining the debt leverage within the regulatory capital structure.

Summary

- **2015**: EGD's EBIT remained stable compared with 2014 as a result of the following factors: (1) high gas distribution margins caused by higher distribution charges and modest customer growth, (2) higher Other revenue from higher pipeline and storage optimization sales and higher DSM incentive revenue, offset by (3) higher operating cost and slightly higher depreciation expense caused by the growing asset base.
- **H1 2016**: EBIT was slightly lower than H1 2015, reflecting the following factors: (1) warmer weather in H1 2016, (2) higher depreciation expense because of a larger rate base, partially offset by (3) higher distribution charges from growth in rate base, customer count and lower storage and transportation costs.
- Earnings sharing reflects extra earnings above the allowed regulated earnings that would have to be shared with ratepayers. In 2014, 2015 and H1 2016, actual earnings from regulated assets exceeded the allowed regulated earnings, demonstrating good performance from EGD's regulated operations.
- Non-recurring items 2015 include one-time severance costs and gain on asset sales.
- Dividend Income includes the cash income (approximately $63 million in 2015 and $31 million in H1 2016) from EGD's $825 million investment in its affiliate, IPL System Inc. (IPL), the holder of the Company's $375 million inter-company loan outstanding as at June 30, 2016. Interest expense on this loan was $27 million in 2015 ($13 million for H1 2016).
- Gas transportation service revenue represents services charged to customers who do not purchase natural gas from EGD. Lower revenue in H1 2016 compared with H1 2015 was largely due to warmer weather in H1 2016.

Outlook

- Assuming normal weather conditions, the earnings outlook for 2016 is modestly positive. This is due to the modestly higher earnings expected from continued growth in the rate base, especially related to the GTA Project, and customer growth. This increase is expected to be partially offset by a lower ROE (9.19% in 2016 versus 9.30% in 2015). Earnings sharing is expected to continue to be positive for EGD because of its operational efficiency, given the Company's size and scale.

Financial Profile

1 Excludes inter-company subordinated loans. 2 Includes preferred dividends from IPL (less of interest expense on subordinated loans from IPL).

Summary

- EGD's financial profile remained solid, with all key credit metrics in LTM 2016 supportive of the current ratings.
  - The debt-to-capital ratio of 58.7% at June 30, 2016, was lower than the regulated capital structure of 64.0% debt. This ratio was supported by $200 million in equity injection from ENB in 2015.
  - The cash flow-to-debt ratio for LTM 2016 was slightly weaker than 2015 but remained within the "A" rating range.
  - EBIT-interest coverage remained strong, supported by the low interest rate environment.
- High capex in 2015 and LTM 2016 for the GTA Project was sufficiently financed with internally generated cash flows, an equity injection from the Company's parent and new debt issuance by EGD. Financing was consistent with the Company's plan, resulting in a stable capital structure.
- The dividend payout in terms of cash flow in 2015 and H1 2016 remained relatively low at around the 40% range. The Company's policy is to pay out 100% of earnings as dividends.

Outlook

- The Company's financial profile should remain stable over the medium term based on the following DBRS expectations: (1) The estimated capex for 2017 is expected to be lower than 2015 and 2016, as the GTA Project will be substantially completed by the end of 2016. Subsequently, the free cash flow deficit is expected to be significantly reduced. (2) Cash flow is expected to increase, as the rate base should grow meaningfully following the completion of the GTA Project, positively affecting the cash flow-to-debt ratio.

Liquidity and Long-Term Debt Maturities

Bank Lines/Liquidity

Credit Facilities

As at Jun. 30, 2016

(CA$ millions)	Total Facilities	Drawn [1]	Available	Maturity
Enbridge Gas Distribution Inc.	1,000	535	465	Jul. 2018
St. Lawrence Gas Company, Inc.	17	13	4	2019
Total	**1,017**	**548**	**469**	

[1] Includes commercial paper issuances, net of discount, that are backed by the $1.0 billion Revolving Term Credit Facility.

- EGD requires relatively high liquidity to finance its volatile and seasonal working capital needs, which are heavily influenced by natural gas prices and the weather.
- The Company had a $300 million revolving credit facility with ENB, but this facility expired in May 2016 and was not renewed.
- The Company's current commercial paper program of $1.0 billion is fully backed by the $1.0 billion revolving term credit facility (unsecured), maturing in July 2018.
- DBRS believes EGD has sufficient liquidity to fund its current working capital needs. However, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, ENB is expected to continue to provide liquidity support in a timely manner for the Company, as evidenced in winter 2014.

Debt Maturities Table

As at June 30, 2016 (CA$ million)	2016	2017	2018	2019	2020	Thereafter	Total
Medium-term notes and debenture	2	502	2	2	400	2,772	3,680

- EDG has approximately $502 million of medium-term notes due in 2017. The refinancing risk is manageable given EGD's strong credit quality.
- In addition to the above table, in August 2016, EDG issued $300 million medium-term notes (unsecured), maturing August 2026. The purpose of the debt issuance was to pay down short-term debt and for financing capital expenditures. DBRS conducted a pro forma review on the new debt issuance and is of a view that the Company's capital structure remains within the current rating range.
- EGD is subject to an EBIT-interest covenant of two times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant at the end of June 2016.

Inter-Company Subordinated Loans

- As of June 30, 2016, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL, which is 100% owned by ENB.
- The Company owes IPL $375 million in loans ($200 million due in 2049 and $175 million due in 2051), which are deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years, and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company. The default of the subordinated loans cannot trigger a default of senior debt.
- Investment income in the form of dividends from IPL was approximately $63 million in 2015 ($31 million for H1 2016), whereas the interest expense on the subordinated loans from IPL was approximately $27 million ($13 million for H1 2016).
- DBRS excludes the subordinated loans and its investment in IPL from its calculation of the Company's capital structure.

Regulation

2016 Rate Application

In January 2016, the OEB issued a decision on its multi-year demand side management (DSM). This decision allowed for an increase of 2016 costs, resulting in a revenue deficiency when compared with the 2016 interim order (issued in December 2015). In May 2016, the OEB approved the final rate order (the 2016 Final Order), effective as of January 1, 2016. The new rate was implemented on July 1, 2016. The 2016 Final Order allowed the Company to collect $14 million for the recovery of the revenue deficiency related to the January 2016 through June 2016 time period.

Gas Distribution: Ontario

In 2013, the Company's rates were based on the 2013 settlement relating to the cost-of-service (COS) rate application. In July 2014, the OEB rendered a decision on the Company's 2014–2018 customized IR application, with a subsequent decision and rate order provided in August 2014. The decision also approved final 2014 allowed revenues and rates with an ROE of 9.36% based on a 36% deemed common equity component of rate base. The revenue requirement is updated annually based on volumes, DSM, and pension and postretirement benefits (which are passed through to ratepayers). In May 2015, the OEB approved final rates for 2015. In December 2015, OEB approved interim rates for 2016.

The key features of the customized IR plan include the following:
1. Annual allowed revenue updates for selected items that help reduce forecast risk:

- Volumes are to reflect updated customer conditions, contract market volumes and average use.
- The customer care, DSM, pension and other post-employment benefits are to be updated annually and be treated as pass-through amounts from other approved mechanisms.
- The cost of capital is to be updated annually (approved ROE 9.19% in 2016) using the OEB approved parameters.

2. Earning sharing: To the extent the Company's actual return on the approved equity level represented by normalized earnings (excluding the effects of weather) exceeds the approved ROE for that year, the over-earnings will be shared equally between the Company and customers. However, customers will not share earning deficits that are below the approved ROE.

3. Adjustments: Several approved deferral and variance accounts are in place for the recovery of costs that deviate from those assumed in developing the customized IR plan. The customized IR plan also includes a z-factor mechanism for the Company to recover expenses above a defined threshold ($1.5 million within a year), to the extent any such expenses result from new regulatory orders and/or changes in statutory obligations.

4. Off ramps: An OEB review will be triggered if the Company's ROE on a normalized basis varies more than 300 basis points (either negative or positive) relative to the approved ROE for that year. The regulatory review will determine the reasons for variance in earnings and could either result in adjustments to the customized IR plan or a return to COS regulation.

Gas Storage: Ontario

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers (since November 2006) within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates.

Transportation: National Energy Board (NEB)

- TransCanada Pipelines Limited (TransCanada) transported approximately 73% of the annual natural gas requirements of EGD's customers in 2015. The remainder was transported through contracts with Alliance Pipeline Canada, Alliance Pipeline U.S., Vector Pipeline and others.
- The Company has Firm Transportation (FT) contracts with TransCanada for a portion of the requirement. Effective July 2013, the NEB approved new tolls on the FT service for TransCanada. Under the new tolls, the Company is required to pay TransCanada the demand component regardless of the volume transported.
- Transportation costs are passed through to customers.

Gas Distribution: New York

- The Company owns St. Lawrence Gas Company, Inc. (SLG), which provides natural gas distribution services to 16,000 customers in New York State. SLG is regulated by the New York State Public Service Commission under COS and is viewed as relatively stable.
- The approved ROE for 2015 was 10.5% (2014: 10.5%) on deemed equity of 50% (2014: 50%). Any earnings above 11% will be shared equally with ratepayers.
- SLG has no exposure to natural gas price risk, with gas supply costs being adjusted annually subject to regulatory review.
- SLG started construction on the Franklin Project in August 2012 following regulatory approval in July 2012. The total capital cost through 2018 is estimated to be USD 52 million. SLG had spent approximately USD 51 million by the end of 2015. The Franklin Project is expected to add 4,400 potential customers to the system.

Regulation (CONTINUED)

Agreement with TransCanada Pipelines Limited (TransCanada)

- In September 2013, EGD, Union Gas Limited and Gaz Métro Limited Partnership reached an agreement with TransCanada. The agreement was intended to modify the tolling structure of TransCanada's Mainline system.
- In December 2014, the NEB substantially approved the term of the agreement through its approval of TransCanada's 2015–2020 Mainline toll application.
- Under the new toll structure, the Company has to pay TransCanada a fixed charge regardless of the volume consumed. Under the old toll structure, EGD paid a fixed charge and a variable charge, depending on the volume.
- All transportation costs are passed through to customers.

Rating Update

On September 13, 2017, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures & Medium-Term Notes rating of Enbridge Gas Distribution Inc. (EGD or the Company) at "A," as well as its Commercial Paper rating at R-1 (low) and its Cum. & Cum. Redeemable Convertible Preferred Shares rating at Pfd-2 (low). All trends are Stable. The rating confirmations reflect EGD's stable business risk profile and good financial metrics as at June 30, 2017, albeit modestly weaker than in 2016.

EGD's business risk profile remained strong, supported by a large customer base and the stable regulatory framework in the Province of Ontario. EGD is in the fourth year of a five-year customized Incentive Regulation (IR) plan through 2018. In December 2016, EGD received the final rate order on its 2017 rate application from the Ontario Energy Board (OEB). The rate order lowered EGD's return on equity (ROE) for 2017 to 8.78% from 9.19% in 2016, while the deemed equity at 36.00% in the capital structure remains unchanged. DBRS does not view the decrease in ROE to have a material impact on EGD's earnings and cash flow, as EGD continues to benefit from a growing rate base.

The completion of the Western and Eastern segments of the Greater Toronto Area (GTA) expansion project (the GTA Project) in 2016 significantly reduced the construction risk associated with the project. The cost of the GTA Project is estimated to be approximately $875 million. Estimated cost overruns of approximately $185 million are not expected to be added to the rate base until the Company's rebasing year in 2019.

EGD's credit metrics have been under pressure during the construction of the GTA Project but remained solid in H1 2017. Although EGD's capital structure has been stable over the past few years, the cash flow-to-debt ratio and EBIT-to-interest coverage ratio in H1 2017 were negatively affected by lower earnings caused mainly by warmer weather and the timing of the cost recovery. However, these two ratios are expected to improve over the medium term, reflecting incremental cash flow from a higher rate base and a reduction in capital expenditures (capex). DBRS is of the view that given the current regulatory regime in Ontario, the rating upside is limited. However, a negative rating action is possible if any of the following occurs: (1) an adverse decision by the OEB or a change in EGD's business structure that negatively affects EGD's business risk profile or (2) the cash flow-to-debt ratio declines further, moving to below the "A" range, and is unlikely to recover within a reasonable time frame.

Issuer Description

EGD is a regulated natural gas distributor, serving approximately 2.15 million customers in Ontario as at September 1, 2017. Other operations include regulated transportation services and regulated and unregulated storage services.

Rating Considerations Details

Strengths

1. Low-risk regulated operations
The regulatory regime in Ontario provides the Company with the following benefits: (a) gas supply costs are passed through to customers, with quarterly adjustments to rates, subject to regulatory review, and (b) a customized IR plan (2014–2018) that provides EGD with the opportunity to earn the allowed ROE through operational efficiency, with the excess above the allowed ROE for each year to be shared equally with ratepayers. Forecast risk during this customized IR period is partially mitigated through annual updates on volumes (by EGD), demand-side management (DSM) and pension and post-retirement benefits (which are passed through to ratepayers).

2. Strong franchise area with a large customer base
EGD is the largest regulated natural gas distributor in Canada, serving approximately 2.15 million active customers in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong compared with other service areas in Canada. EGD's large customer base provides it with the size and scale to operate efficiently during its customized IR period.

3. Good financial profile
EGD maintains a good financial profile with a reasonable balance sheet and solid credit metrics. EGD is committed to maintaining its capital structure within the regulatory capital structure of 64% debt and 36% equity. Although the Company's cash flow-to-debt has been under pressure during the construction of the GTA Project in the past two years, it is expected to improve over the medium term as the rate base grows following the completion of the GTA Project in 2016.

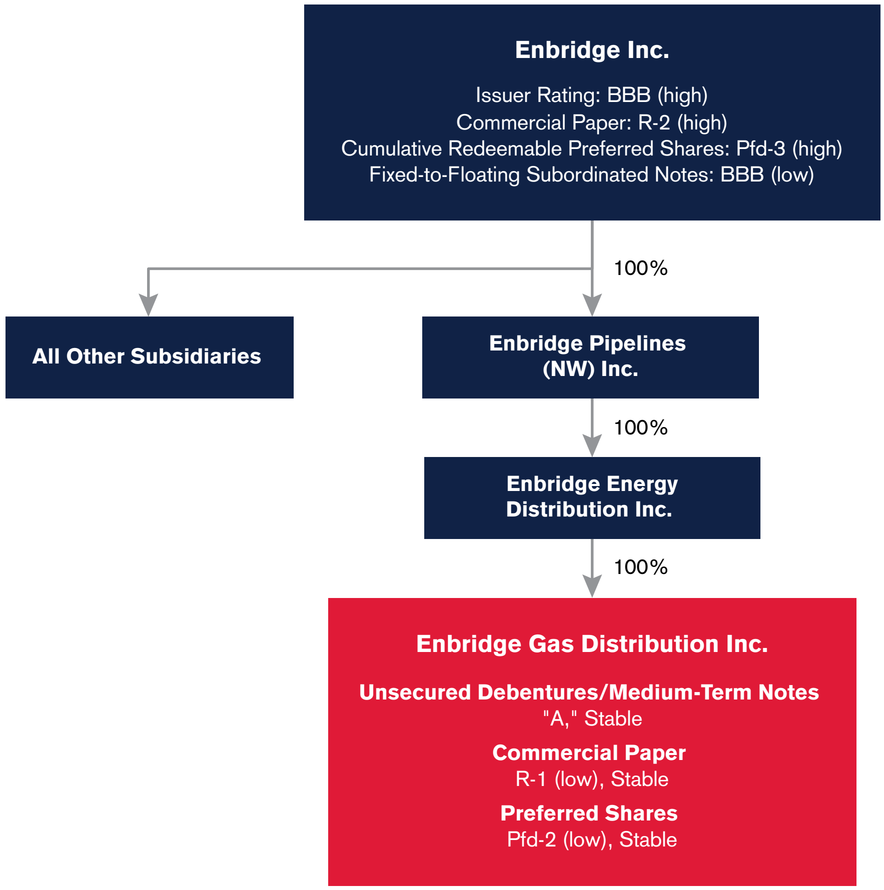
Challenges

1. Weather-related volume risk
Weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with the weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. However, normalized weather is updated annually throughout the customized IR period by incorporating the most recent weather trend, thereby mitigating any significant sustained exposure to weather conditions.

2. Managing operating costs under the IR plan
EGD is in the fourth year of its five-year customized IR plan. Managing operating costs is critical for the Company to achieve or exceed the allowed ROE. Earnings below the allowed ROE will not be recovered from customers unless actual ROE is 300 basis points below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag
EGD faces potential regulatory lag with respect to the recovery of natural gas costs. Although the Company is allowed to pass on to customers all natural gas costs with quarterly adjustments, potential regulatory lag still exists. In the event that natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, the cost overruns associated with the GTA Project (estimated to be approximately $185 million) are not expected to be added to the rate base until the Company's rebasing in 2019.

Simplified Organizational Chart



The GTA Project

- The GTA Project consists of two new segments of pipelines (Western and Eastern) and related facilities to upgrade the existing system that delivers natural gas to several municipalities within the GTA. During 2016, both the Western and Eastern segments were placed into service while related facilities will be upgraded throughout 2017.
- The schedule and cost of the GTA Project is estimated to be approximately $875 million. Total spending on the GTA Project was approximately $865 million as at the end June 2017.
- The Company funded this project with a mixture of cash flow from operations, equity injections from the parent and new debt issuances. The funding is subject to maintaining the debt leverage within the regulatory capital structure.
- In October 2016, EGD and TransCanada Pipelines Limited (TransCanada; rated A (low) with a Stable trend by DBRS) entered into an agreement in which TransCanada will provide firm transportation (FT) services from the Parkway Pipeline to TransCanada's Mainline Pipeline at Albion King's North. The Albion Pipeline was placed into service as part of the GTA Project. The transportation agreement has a 15-year term. The transportation costs are passed through to customers.

Recent Development

- On August 31, 2017, EGD announced the sale of its St. Lawrence Gas business (which serves approximately 16,003 customers) for approximately USD 70 million. The proposed sale will not have any impact on EGD's credit profile as it accounted for less than 1% of EGD's 2016 cash flow.

Earnings and Outlook

	6 mos. to June 30		12 mos. to June 30	Year ended December 31		
($ millions)	2017	2016	2017	2016	2015	2014

1 Includes inter-company preferred dividend income.

Summary

- **H1 2017:** EBIT was slightly lower than H1 2016, reflecting the following factors: (1) warmer weather in H1 2017 and (2) higher depreciation expense because of a larger rate base, partially offset by higher transportation revenues, higher distribution charges from growth in the rate base, a higher customer count and lower operating costs.
- Gas transportation service revenue represents services charged to customers who do not purchase natural gas from EGD. Higher transportation revenue in H1 2017 reflected new tariffs, which began in late 2016.
- Other revenue mostly represents revenues from storage operations, which include regulated and unregulated storage activities. Higher other revenues in H1 2017 largely reflected higher revenues from unregulated operations.
- Earnings sharing in the above table reflects the estimated amount of earnings above the allowed regulated earnings that would have to be shared with ratepayers.
- Other income includes dividends of approximately $32 million in H1 2017 ($63 million in 2016) from EGD's $825 million investment in its affiliate, IPL System Inc. (IPL), the holder of the Company's $375 million inter-company subordinated loans. Interest expense on the loans is approximately $27 million per year.

Outlook

- Assuming normal weather conditions in Q4 2017, the earnings outlook for 2017 is neutral to slightly negative, reflecting warmer weather in Q1 2017. The weather impact is expected to be partly offset by higher earnings because of continued growth in the rate base, especially related to the GTA Project. Earnings sharing is expected to continue to be positive for EGD as a result of its operational efficiency.

Dividends/cash flow	38.4%	34.9%	43.5%	41.3%	38.3%	37.0%

1 Debt excludes inter-company subordinated loans of $375 million.

Summary

- Except for the capital structure, EGD's other metrics have been under pressure during the GTA Project construction period but have remained solid and supportive of the current ratings.
  - The cash flow-to-debt ratio and EBIT-to-interest coverage in H1 2017 weakened slightly as a result of lower cash flow, which largely reflected the timing of cash flow from the GTA Project and lower earnings because of warmer weather during the period.
  - The debt-to-capital ratio as at June 30, 2017, was stronger than the regulated capital structure of 64% debt and 36% deemed equity. This reflected the fact that the equity base is supported by EGD's investments in IPL, as discussed on the previous page.
- High capex in 2015 and 2016 largely reflected capital spending on the GTA Project and system improvements and upgrades. Capex during this period was financed with internally generated cash flows, equity injections from EGD's parent and new debt issuance. Financing was consistent with the Company's plan to maintain the capital structure within the regulatory capital structure.
- The dividend payout in terms of cash flow has remained relatively low at around the 40% range.

Outlook

- DBRS expects the Company's capital structure to remain stable and its cash flow-to-debt and interest coverage ratios to improve over the medium term, as cash flow is expected to increase in line with the growing rate base.

Liquidity and Long-Term Debt Maturities

Bank Lines/Liquidity

Credit Facilities				As at June 30, 2017
($ millions)	Total Facilities	Used	Available	Maturity
Enbridge Gas Distribution Inc.	1,000	675	325	Jul. 2019
Total	**1,000**	**675**	**325**	

- EGD requires relatively high liquidity to finance its volatile and seasonal working capital needs, which are heavily influenced by natural gas prices and gas storage for the heating season.
- EGD's current commercial paper program of $1.0 billion is fully backed by the $1.0 billion revolving term credit facility (unsecured), maturing in July 2019.
- EGD has sufficient liquidity to fund its current working capital needs. However, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, Enbridge Inc. (Enbridge; rated BBB (high) with a Stable trend by DBRS) is expected to provide liquidity support in a timely manner for the Company, as evidenced in winter 2014. During the cold weather in 2014, as gas prices were extremely high, Enbridge set up a $300 million inter-company credit facility to support EGD. This inter-company facility was not renewed in 2016.

Debt Maturities Table

As at December 31, 2016	2017	2018	2019	2020	2021	Thereafter	Total
($ millions)							
Medium-term notes & debentures (EGD)	500	0	0	400	175	2,896	3,971

- Of the $500 million of medium-term notes due in 2017, $300 million was due in April and was refinanced through the credit facility while the remaining $200 million will mature in December 2017. EGD expects to refinance the maturities through funds from operations, the available credit facility and new debt issuances.
- EGD is subject to an EBIT-to-interest covenant of 2.0 times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant as at June 30, 2017.

Inter-Company Subordinated Loans

- As at June 30, 2017, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL, which is 100% owned by Enbridge.
- The Company owes IPL $375 million in loans ($200 million due in 2049 and $175 million due in 2051), which are deeply subordinated to the debentures and medium-term notes. EGD is able to defer interest payments on the loans for up to five years, and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company. A default of the subordinated loans cannot trigger a default of senior debt. The inter-company subordinated loans are excluded from the calculation of the debt-to-capital ratio.

Regulation

Rate Application

- In December 2016, the OEB approved the final rate order, effective January 1, 2017 (the 2017 Final Order). The 2017 Final Order is in accordance with the Company's approved customized IR plan.
  - Allowed ROE for 2017 is 8.78% compared with 9.19% for 2016.
  - The average rate base for 2017 is $6,024 million compared with $5,808 million for 2016.
- The Company filed its 2018 rate application in August 2017. A regulatory decision is expected in late 2017.
- EGD is currently in the fourth year of a five-year customized IR plan (2014–2018). The key features of the Company's customized IR plan include the following:

1. Annual allowed revenue updates for selected items that help reduce forecast risk:

- Volumes are to reflect updated customer conditions, contract market volumes and average use.
- The customer care, DSM, pension and other post-employment benefits are to be updated annually and be treated as pass-through amounts from other approved mechanisms.
- The cost of capital is to be updated annually, using the OEB-approved parameters.

2. Earnings sharing: To the extent the Company's actual return on the approved equity level represented by normalized earnings (excluding the effects of weather) exceeds the approved ROE for that year, the over-earnings will be shared equally between the Company and customers. However, customers will not share earning deficits that are below the approved ROE.

3. Adjustments: Several approved deferral and variance accounts are in place for the recovery of costs that deviate from those assumed in developing the customized IR plan. The customized IR plan also includes a Z-factor mechanism for the Company to recover expenses above a defined threshold ($1.5 million within a year), to the extent any such expenses result from new regulatory orders and/or changes in statutory obligations.

4. Off-ramps: An OEB review will be triggered if the Company's ROE on a normalized basis varies more than 300 basis points (either negative or positive) relative to the approved ROE for that year. The regulatory review will determine the reasons for variance in earnings and could either result in adjustments to the customized IR plan or a return to cost-of-service regulation.

Gas Storage: Ontario

- EGD's gas storage business is semi-regulated. The OEB does not regulate the prices of storage services to customers outside the Company's franchise area or the prices of storage services to new customers (since November 2006) within the franchise area. Existing customers within the Company's franchise area continue to be charged at cost-based rates.

Transportation: National Energy Board (NEB)

- TransCanada transported approximately 83%, or 9.9 billion cubic metres, of EGD's natural gas requirements in 2016. The remainder was transported through contracts with Alliance Pipeline Canada, Alliance Pipeline U.S., Vector Pipeline and others.
- The Company has FT contracts with TransCanada for a portion of the requirement. Effective July 2013, the NEB approved new tolls on the FT service for TransCanada. Under the new tolls, the Company is required to pay TransCanada the demand component regardless of the volume transported.
- Transportation costs are passed through to customers.
- In December 2014, the NEB substantially approved the term of the agreement between TransCanada, EGD, Union Gas Limited (rated "A" with a Stable trend by DBRS) and Gaz Métro Limited Partnership, which was entered into in March 2014. The agreement modified the tolling structure of TransCanada's Mainline system. Under the new toll structure, the Company has to pay TransCanada a fixed charge regardless of the volume consumed. Under the old toll structure, EGD paid a fixed charge and a variable charge, depending on the volume. All transportation costs are passed through to customers.

Ratings

Debt	Rating	Rating Action	Trend
Issuer Rating	A	Confirmed	Stable
Unsecured Debentures & Medium-Term Notes	A	Confirmed	Stable
Commercial Paper	R-1 (low)	Confirmed	Stable
Cum. & Cum. Redeemable Convertible Preferred Shares	Pfd-2 (low)	Confirmed	Stable

Rating Update

On September 7, 2018, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures & Medium-Term Notes rating of Enbridge Gas Distribution Inc. (EGD or the Company) at "A," as well as its Commercial Paper rating at R-1 (low) and its Cum. & Cum. Redeemable Convertible Preferred Shares rating at Pfd-2 (low). All trends are Stable. The rating confirmations reflect EGD's stable business risk profile through 2018 and its improved credit metrics as at June 30, 2018. The Stable trends reflect DBRS's expectation that the amalgamation of EGD and Union Gas Limited (Union Gas, rated "A," Stable trend by DBRS) (the Combined Entity), approved by the Ontario Energy Board (OEB) on August 30, 2018, and potentially taking effect in 2019, subject to Enbridge Inc.'s approval (Enbridge, rated BBB (high), Stable trend by DBRS), would not have a material impact on the Combined Entity's credit profile.

In December 2017, EGD received the final rate order from the OEB on its 2018 rate application (the OEB Decision), which increased EGD's return on equity (ROE) for 2018 to 9.00%, from 8.78% in 2017, and maintained the deemed equity in the capital structure at 36%. The increase in ROE will have a slight positive impact on EGD's earnings and cash flow in 2018. Following the amalgamation expected to be effective January 1, 2019, under the Combined Entity, the size of the franchise area and the number of customers will significantly increase. The key determinations in the OEB Decision are expected to provide a stable framework for the Combined Entity's operations to support the current ratings.

EGD's credit metrics have been under pressure during last few years because of large capex. However, higher earnings and cash flow, as well as lower debt levels, resulted in improved credit metrics in H1 2018. These metrics are not expected to materially change under the Combined Entity. DBRS expects the capital structure and the dividend policy for the Combined Entity to remain supportive of the current ratings because of the strong regulatory protection of a regulated utility in Ontario.

Based on DBRS's review of the OEB Decision, DBRS does not expect the ratings of the Combined Entity to change from EGD's ratings because the amalgamation would be a merger of two "A"-rated regulated entities operating in the same regulatory jurisdiction. However, a negative rating action could be taken if (1) there is an adverse regulatory change that has a negative impact on the Combined Entity's business profile or (2) the Company experiences a significant deterioration of its credit metrics on a sustained basis. These scenarios are considered unlikely by DBRS.

Issuer Description

EGD is a regulated natural gas distributor, serving approximately 2.19 million customers in Ontario as at June 30, 2018. Other operations include regulated transportation services and regulated and unregulated storage services.

Rating Considerations

Strengths

1. Low-risk regulated operations

Substantially all of EGD's assets are regulated by the OEB, which provides the Company with the following benefits: (a) relatively predictable earnings and cash flow and a reasonable mechanism for capex recovery under the current custom incentive regulation (IR) plan (2014–2018); (b) full recovery of gas supply costs with quarterly adjustments, subject to regulatory review; and (c) reduced forecast risk during the current IR period through annual update on volumes by EGD. The current IR period will end at the end of 2018. Following the OEB approval of the proposed amalgamation of EGD and Union Gas on August 30, 2018, and assuming Enbridge's approval, DBRS expects the regulatory regime to continue to remain stable going forward under the new rate-setting mechanism by the OEB (see Regulation section for more details).

2. Strong franchise area with a large customer base

EGD is currently the largest regulated natural gas distributor in Canada, serving approximately 2.19 million active customers in the central, eastern and Niagara Peninsula regions of Ontario. The Company's service area is viewed as economically strong compared with other service areas in Canada. EGD's large customer base provides it with the size and scale to operate efficiently during its custom IR period. Union Gas currently serves approximately 1.5 million customers in over 400 communities across northern, southern and eastern Ontario. If the amalgamation is successfully completed, the Combined Entity will have a much larger customer base of approximately 3.7 million.

3. Good financial profile

EGD maintains a good financial profile with a reasonable balance sheet and solid credit metrics. EGD is committed to maintaining its capital structure within the regulatory capital structure of 64% debt and 36% equity. Credit metrics improved in H1 2018, largely supported by a larger rate base and colder weather.

Challenges

1. Weather-related volume risk

Weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with the weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. However, normalized weather is updated annually throughout the custom IR period by incorporating the most recent weather trend, thereby mitigating any significant sustained exposure to weather conditions.

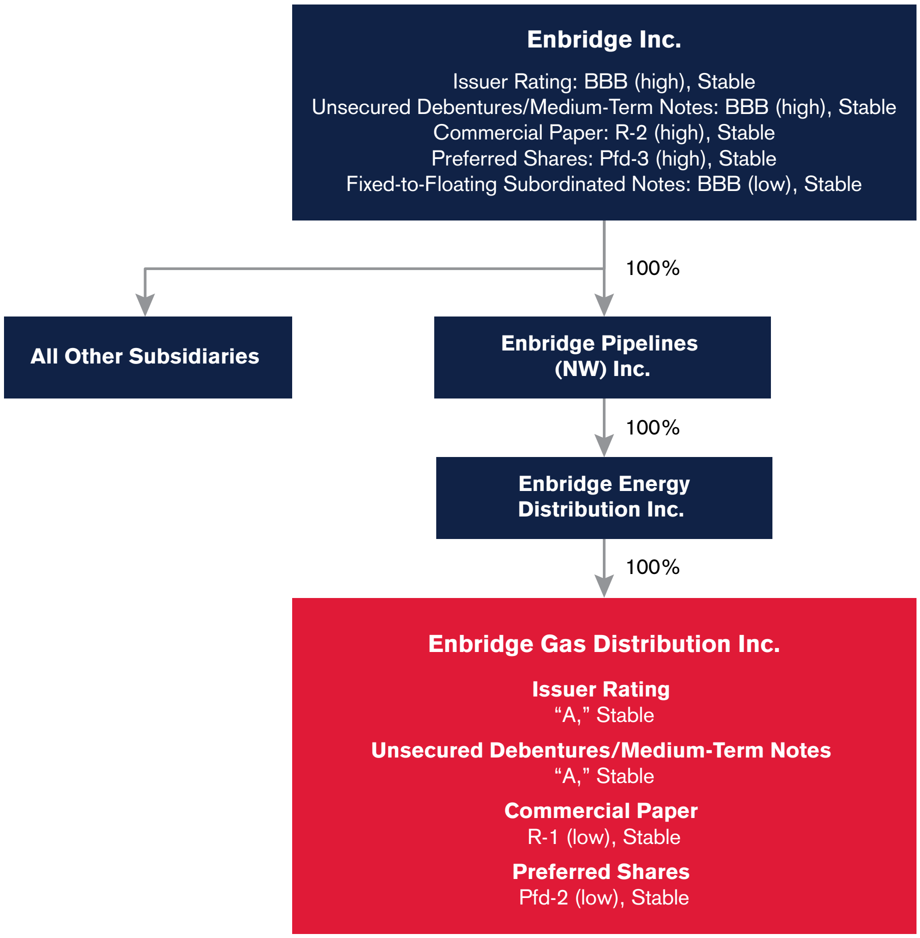
2. Managing operating costs under the IR plan

EGD is in the last year of its five-year custom IR plan. Managing operating costs is critical for the Company to achieve or exceed the allowed ROE. Earnings below the allowed ROE will not be recovered from customers unless actual ROE is 300 basis points below the allowed ROE, at which point the Company can request a regulatory review. DBRS expects the Combined Entity to continue to effectively manage its operating costs under the new rate-setting mechanism approved by the OEB (see Regulation section for more details).

3. Potential regulatory lag

EGD faces potential regulatory lag with respect to the recovery of natural gas costs. Although the Company can pass on to customers natural gas costs with quarterly adjustments, potential regulatory lag still exists. If natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does.

Simplified Organizational Chart



As of September 7, 2018.

- **The GTA Project:** The Greater Toronto Area (GTA) Project consists of two new segments of pipelines (Western and Eastern) and related facilities to upgrade the existing system that delivers natural gas to several municipalities within the GTA. During 2016, both the Western and Eastern segments were placed into service while related facilities were upgraded throughout 2017.
- **Transportation Contracts:** In March 2017, EGD and TransCanada Pipelines Limited (TransCanada; rated A (low) with a Stable trend by DBRS) entered into a 15-year agreement in which TransCanada will provide incremental pipeline transportation capacity (75,000 gigajoules/day) from the Parkway (GTA) in the EGD's franchise area. In October 2016, EGD and TransCanada entered into an agreement in which TransCanada will provide firm transportation services from the Parkway Pipeline to TransCanada's Mainline Pipeline at Albion King's North. The transportation agreement has a 15-year term. The transportation costs are passed through to customers.

Recent Development

- On August 30, 2018, the OEB approved the amalgamation application of EGD and Union Gas. The amalgamation still needs approval from Enbridge.
- On July 3, 2018, the Government of Ontario revoked the cap and trade program, but DBRS does not expect any material impact on the Company because costs related to compliance liabilities were passed through to customers via interim cap and trade unit rates.
- In August 2017, EGD announced the sale of its St. Lawrence Gas business (which serves approximately 16,003 customers) for approximately USD 70 million. The sale is expected to close in the first half of 2019.

Summary

- A significant increase in earnings in H1 2018 compared with H1 2017 reflected colder weather, higher gas distribution charges and modestly lower operating and maintenance costs.
- Revenues include Gas Transportation Service revenue, which represents services charged to customers who do not purchase natural gas from EGD. Transportation revenue in H1 2018 was consistent with H1 2017.
- Other revenue mostly represents revenues from storage operations, which include regulated and unregulated storage activities.
- Other income includes dividends of approximately $38 million in H1 2018 ($63 million in 2017) from EGD's $825 million investment in its affiliate, IPL Systems, Inc. (IPL), the holder of the Company's $375 million inter-company subordinated loans. Interest expense on the loans is approximately $27 million per year.

Outlook

- Assuming normal weather conditions in Q4 2018, the earnings outlook for 2018 is positive, reflecting colder weather in Q1 2018 and continued growth in the rate base.

Dividends/Cash flow	70.8%	38.7%	134.4%	123.1%	41.7%	42.6%

1 Includes operating leases treated as debt. 2 Excludes interest on affiliate loans.

Summary

- EGD's credit ratios improved modestly in H1 2018, supported by higher cash flow and lower debt, resulting in stronger a cash flow-to-debt ratio for the 12 months ended June 30, 2018, compared with that of 2017.
- EBIT-to-interest coverage improved in H1 2018 because of higher operating income, as discussed in the Earning section.
- The debt-to-capital ratio as at June 30, 2018, remained relatively stable and was stronger than the regulated capital structure of 64% debt and 36% deemed equity. This reflected the fact that the equity base is supported by EGD's investments in IPL, as discussed on the previous page.

• Beginning 2017, EGD changed its dividend policy, paying dividends based on budgeted cash flow rather than budgeted earnings. As a result, significantly higher dividends were paid to the parent in 2017. The parent then injected equity back into EGD to maintain its capital structure and credit metrics at targeted levels.

Outlook

• DBRS expects the Company's credit metrics to remain stable in 2018. If the amalgamation is completed, DBRS also expects these ratios will not materially change for the Combined Entity because the Company will maintain its capital structure in line with the regulatory capital structure.

Liquidity and Long-Term Debt Maturities

Bank Lines/Liquidity

Credit Facilities

(CAD millions)	Total Facilities	Drawn [1]	Available	Maturity (As at June 30, 2018)
Enbridge Gas Distribution Inc.	1,017	794	223	July 2019
Total	**1,017**	**794**	**223**	

1 Includes commercial paper issuances, net of discount, that are backed by the $1.0 billion Revolving Term Credit Facility.

- EGD requires relatively high liquidity to finance its volatile and seasonal working capital needs, which are heavily influenced by natural gas prices and gas storage for the heating season.
- EGD's current commercial paper program of $1.0 billion is fully backed by the $1.0 billion revolving term credit facility (unsecured), maturing in July 2019.
- EGD has sufficient liquidity to fund its current working capital needs. However, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, Enbridge is expected to provide liquidity support in a timely manner for the Company.

Debt Maturities Table

	As at December 31, 2017						
(CAD millions)	2018	2019	2020	2021	2022	Thereafter	Total
Medium-term notes and debenture	0	0	400	175	0	3,205	3,780

- Refinancing risk is low, as EGD has no medium-term notes and debentures due in 2018 and 2019.
- EGD is subject to an EBIT-to-interest covenant of 2.0 times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant as at June 30, 2018.

Inter-Company Subordinated Loans

- As at June 30, 2018, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL, which is 100% owned by Enbridge.
- The Company owes IPL $375 million in loans ($200 million due in 2049 and $175 million due in 2051), which are deeply subordinated to the debentures and medium-term notes. EGD can defer interest payments on the loans for up to five years, and the deferred interest can be paid either by cash or by non-retractable preferred shares of the Company. A default of the subordinated loans cannot trigger a default of senior debt.

Regulation

Rate application

- In December 2017, the OEB approved the final rate order, effective January 1, 2018 (the 2018 Final Order). The 2018 Final Order is in accordance with the Company's approved Custom IR plan.
  - Allowed ROE for 2018 is 9.00% (8.78% for 2017).
  - The average rate base for 2018 is $6,500 million ($5,900 million for 2017).
- The OEB also approved a quarterly rate adjustment application in March 21, 2018.

The five-year Custom IR plan (2014–2018)

The key features of the Company's Custom IR plan include the following:

1. Annual allowed revenue updates for selected items that help reduce forecast risk:

- Volumes are to reflect updated customer conditions, contract market volumes and average use.
- The customer care, demand-side management, pension and other post-employment benefits are to be updated annually and be treated as pass-through amounts from other approved mechanisms.
- The cost of capital is to be updated annually, using the OEB-approved parameters.

2. Earnings sharing: To the extent the Company's actual return on the approved equity level represented by normalized earnings (excluding the effects of weather) exceeds the approved ROE for that year, the over-earnings will be shared equally between the Company and customers. However, customers will not share earning deficits that are below the approved ROE.

3. Adjustments: Several approved deferral and variance accounts are in place for the recovery of costs that deviate from those assumed in developing the Custom IR plan. The Custom IR plan also includes a Z-factor mechanism for the Company to recover expenses above a defined threshold ($1.5 million within a year), to the extent any such expenses result from new regulatory orders and/or changes in statutory obligations.

4. Off-ramps: An OEB review will be triggered if the Company's ROE on a normalized basis varies more than 300 basis points (either negative or positive) relative to the approved ROE for that year. The regulatory review will determine the reasons for variance in earnings and could either result in adjustments to the Custom IR plan or a return to cost-of-service regulation.

The EGD and Union Gas amalgamation

On August 30, 2018, OEB issued a decision on the application for the amalgamation of EGD and Union Gas. The OEB major key determinations in the decision are, among others, as follows:

- The OEB allows the Combined Entity to have a deferred rebasing period of five years, which means the next rebasing year application will be expected for 2024 rates. Enbridge had proposed a ten-year period, from 2019 through 2028.
- Annual rate changes during the deferred rebasing period is based on a price cap index (PCI), where PCI growth is driven by an inflation factor less a productivity factor of zero and a stretch factor of 0.3%.
- Earning sharing mechanism is the same as during the current IR plan.
- The Company's proposed Y-factors (flow-through costs) are accepted by the OEB, except for the cap and trade costs, which will be addressed in a separate proceeding.
- Z-factor mechanism threshold is increased to $5.5 million.
- The Company's proposed rate adjustments are accepted as filed.
- The Combined Entity is required to file a cost allocation study in 2019 for the legacy Union Gas service area to consider certain major projects.

DBRS does not expects the OEB key determinations on the amalgamation to have any material impact on the Combined Entity's business risk profile.

The Company

Union Gas Limited is a utility that provides natural gas distribution and transmission and storage services in southwestern, northern and eastern Ontario, serving approximately 1.35 million customers. It is a direct, wholly owned subsidiary of Westcoast Energy Inc. (rated A (low), Stable), which is indirectly owned by Spectra Energy Capital, LLC (rated BBB (high), Stable).

Rating

Debt	**Rating**	**Rating Action**	**Trend**
Unsecured Debentures/Medium-Term Note Debentures	A	Confirmed	Stable
Commercial Paper	R-1 (low)	Confirmed	Stable
Cumulative Redeemable Preferred Shares	Pfd-2	Confirmed	Stable

Rating Update

DBRS has confirmed the ratings of the Unsecured Debentures/Medium-Term Note Debentures, the Commercial Paper and the Cumulative Redeemable Preferred Shares of Union Gas Limited (Union or the Company) at "A," R-1 (low) and Pfd-2, respectively, all with Stable trends. The confirmations reflect relatively stable earnings contributions from Union's regulated businesses (i.e., gas distributions, regulated storage and gas transmission), which accounted for the majority of consolidated earnings, and Union's reasonable credit profile.

Union's financial performance continued to benefit from the continued expansion of higher-margin non-regulated natural gas storage facilities, offset by higher cost-cutting pressure in the regulated business (as a result of Union's regulatory regime having changed from a cost-of-service (COS) system to an incentive regulation (IR) framework in 2008). However, DBRS is concerned about rising non-regulated business exposure, affecting Union's overall business risk profile and increasing earnings volatility. Non-regulated earnings increased from 10% in 2008 to more than 20% in 2010 (DBRS estimate) and are expected to continue to rise over the medium term. DBRS views the Company's current 64% debt level target as rather high, given its rising non-regulated business exposure. DBRS notes that the Company has filed a rate case for the 2013 rebasing, asking for a 40% deemed equity (currently 36%). If its request is granted, DBRS expects Union to manage its balance sheet in line with the new regulatory capital structure and maintain greater financial flexibility, commensurate with the current rating category.

The IR framework creates uncertainty in the regulated business that did not exist under the COS system. Earnings from the regulated distribution business are under cost-saving pressure with the IR framework. Union is required to continue to identify cost-saving opportunities to overcome the productivity factor of 1.82% to improve its earnings. In addition, the Company is required to continue to manage its capital program effectively within its regulatory limits during the IR period since any extra capital investment as a result of its aging infrastructure may not be recovered in a timely fashion, which could weaken its credit metrics.

Rating Considerations

Strengths

(1) Reasonable regulatory environment
(2) Large customer base and strong service area
(3) Reasonable credit metrics
(4) Additional earnings growth from storage facilities

Challenges

(1) Volume risk and decline in customer usage
(2) Expansion in unregulated businesses
(3) Low allowed return on equity (ROE)
(4) Consistent free cash flow deficits

Rating Considerations Details

Strengths

(1) **Reasonable regulatory environment:** Union's gas distributions are in a stable and reasonable regulatory environment, which allows it to recover prudently incurred capital expenditures and earn a reasonable return on its investments. The Company currently has a five-year agreement under the IR framework (the Agreement) to the end of 2012. Under the Agreement, the Company may not recover operating costs that are not covered by the formula specified in the Agreement. However, DBRS still views Ontario's IR framework as reasonable as it provides Union with an incentive to improve its earnings beyond the allowed ROE and maintain reasonably stable cash flow.

(2) **Large customer base and strong service area:** Union's cash flow is supported by a large customer base (1.35 million) as it is one of the largest natural gas distributors in Canada and provides distribution, storage or transportation services to most gas-fired generation plants in Ontario. Moreover, the Company's service area covers more than 400 communities in northern, southwestern and eastern Ontario. Approximately 45% of this customer base is residential, which is less exposed to economic conditions.

(3) **Reasonable credit metrics:** For the 12 months ending September 30, 2011 (LTM 2011), Union's debt leverage ratio (61.1%), EBIT interest coverage (2.74 times (x)) and cash flow-to-debt ratio (15.6%) remained appropriate for its rating parameters. Union is committed to maintaining its common equity level in line with the 36% level approved by the Ontario Energy Board (OEB). Given Union's debt leverage strategy and the move to the IR framework, DBRS expects the Company to maintain EBIT interest coverage above 2.2x and cash flow-to-debt above 14.5%.

(4) **Additional earnings growth from storage facilities:** Union's Dawn storage facility (50 billion cubic feet of capacity) is the largest natural gas storage facility in Canada and is strategically connected to key pipelines that allow Union to transmit natural gas to other major Canadian and U.S. markets. The Company's continued expansion of its unregulated storage capacity is expected to provide additional earnings growth potential over the medium term and enable the Company to better manage gas inventory, thereby increasing operational flexibility.

Challenges

(1) **Volume risk and decline in customer usage:** Union is exposed to a degree of demand risk since its rates are based on forecast volumes, which are sensitive to changes in weather, economic conditions, natural gas prices and declines in customer usage. In addition, Union is experiencing a reduction in distribution throughput from energy conservation initiatives and the negative impact of the recent economic recession. This is partially mitigated by low natural gas prices, which support its competitiveness relative to other energy sources.

(2) **Expansion into unregulated business:** Union's intention to expand its unregulated storage segment may result in higher earnings volatility as DBRS views this segment as higher risk than the distribution business and the regulated storage business. Currently, the unregulated portion of Union's storage business comprises approximately one-third of its storage capacity, which is manageable.

(3) **Low allowed ROE:** Union is allowed to earn a fixed ROE of 8.54% for the 2008–2012 period, which is relatively weak compared with that of other utilities in Ontario. While the IR framework provides the Company with an incentive to earn higher returns than the allowed ROE, up to 200 basis points (bps), earnings levels greater than 200 bps will have to be shared with ratepayers on a 50/50 basis.

(4) **Cash flow deficits:** Union generated negative free cash flow (before working capital) in most years. Deficits for LTM 2011 were mainly due to higher dividends paid to the parent in 2010 (the cash flow surplus for the nine months ending September 2011 was due to a substantial reduction in dividends). These deficits have been largely financed with debt issuance. DBRS expects the Company to continue to manage its dividend policy in such a way as to maintain the debt leverage below or at the deemed equity of 36%.

Regulation

Regulatory Overview

Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.

Gas Distribution

Union's distribution rates are set under the Agreement, which expires by the end of 2012. The Agreement was approved by the OEB on January 17, 2008, with the associated annual rate changes implemented on April 1, 2008. Key elements of the Agreement include the following:

- Allowance for inflationary rate increases based on the consumer price index (CPI), offset by a productivity factor of 1.82% that is fixed for the duration of the Agreement.
- Allowance for additional rate adjustments in the small-volume customer classes to reflect the decline in the three-year average use per customer. A new deferral account was also established to capture declines in the variance between forecast and actual use per customer.
- Continued pass-through of gas commodity (adjusted quarterly), upstream transportation and demand-side management costs.
- An allowance for unexpected, prudent cost changes that are outside of management's control. These costs must not already be in the pricing formula in the Agreement.
- Allowed ROE of 8.54% fixed through 2012. An earnings sharing mechanism between the Company and its ratepayers stipulates that if, in any calendar year, the Company's actual gas distribution ROE is more than 200 bps above the allowed ROE, excess earnings will be shared 50/50 between Union and its customers.
- The deemed equity component also remains at 36% throughout the Agreement.
- In December 2009, the OEB issued a policy report, determining that Union's ROE should increase by 129 bps, which is expected to be incorporated in its application for 2013 rates.
- The current gas cost deferral accounts, storage accounts and other deferral accounts remain in place.
- The Agreement also provides that, in the event ROE is 300 bps below the allowed level, Union could file for relief.
- Pursuant to a subsequent agreement (2009), any earnings exceeding the 300 bps limit will have to be shared with the ratepayers on a 90/10 basis in favour of the ratepayers.
- The Company filed its 2013 rate application at the end of 2011; it is pending a hearing before the OEB.

Gas Storage

- On November 7, 2006, the OEB issued the decision that it would not regulate the price of storage services to customers outside Union's franchise area or of new storage services to customers in the franchise area.
- However, existing customers (representing two-thirds of its storage capacity) in the Company's franchise area continue to be charged at COS rates. The OEB decision also required Union to share long-term storage margins with ratepayers over a four-year phase-out period, which started in 2007 and ended in 2011.
- Given Union's large storage capacity and current strong gas fundamentals, the unregulated storage segment of its business allows Union to earn more profit from customers outside its franchise area and new customers in its franchise area.
- However, this upside is somewhat tempered by higher potential risk as rates for unregulated storage are market based, which makes them more volatile than COS rates. Presently, the unregulated portion of Union's storage business comprises approximately one-third of its total storage capacity.

Return on Common Equity	13.2%	12.6%	15.3%	15.5%	13.4%	13.8%	11.6%

Summary

- Union's earnings are principally from regulated gas distribution, regulated storage and transmission and unregulated storage (DBRS estimates that the current net unregulated earnings account for more than 20% of total earnings, up from 10% in 2008).
- Earnings in 2010 were higher than 2009, mainly as a result of the following factors:
  - A significant reduction in operating fuel costs (down $31 million).
  - Increases in transmission services and in long-term storage services.
  - A modest growth in new customers.
  - Higher earnings were offset: (1) by warmer weather in 2010 compared to 2009, which resulted in higher usage and; (2) higher pension costs.
- Earnings for the nine months ending September 30, 2011, were higher than the same period in 2010 mainly as a result of the following factors:
  - Colder weather (15% colder than the first nine months of 2010).
  - New customers (a $11 million increase in revenue).
  - Higher employee benefit costs offset the earnings increase.

Outlook

- DBRS anticipates that earnings from Union's gas distribution segment will remain relatively stable through 2012 until the next rate application has been settled.
- Although weather conditions are unpredictable, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management (DSM) initiative, to have a modest impact on customer usage, which should be offset by modest customer growth.
- Long-term earnings from unregulated storage are expected to increase, reflecting demand growth from gas-fired power generation in Union's service area and the Company's intention to expand the storage business.

Fixed-Charge Coverage	2.54x	2.31x	2.68x	2.53x	2.36x	2.35x	2.13x

Summary

- Overall, free cash flow (before working capital) was negative in most years, reflecting higher capex prior to 2009 and a substantial increase in dividends in 2010.
- Capex in 2010 and 2011 in the gas distribution business was largely used to maintain system reliability.
- Significant working capital fluctuations largely reflect variances in gas cost deferral accounts.
- Union financed deficits largely with debt.
- Dividends are primarily used to manage Union's capital structure at regulatory-approved levels (64% debt and 36% equity). Capex was reduced significantly in 2011, enabling the Company to use free cash flow to reduce the debt by $118 million, improving the debt-to-capital ratio to a reasonable level at 61.6%.
- The Company's interest coverage and cash flow ratios (LTM 2011) at 2.74x and 15.6%, respectively, were reasonably in line with the "A" rating category.

Outlook

- DBRS expects Union to continue to generate negative free cash flow over the near to medium term as capex increases from the 2010 level and its dividend policy maintains the debt leverage in line with the regulatory capital structure in the rate base.
- In 2012, capex is expected to exceed depreciation by approximately 30%, which is considered normal. DBRS expects extra capex (above the deprecation amount) in the regulated businesses to be added to the rate base in the re-basing year.
- Debt levels are expected to increase as the Company continues to finance cash shortfalls with debt. DBRS expects the debt leverage ratio to return to the 64% level in the medium term, which DBRS views as rather high for the current rating.
- Given the Company's debt leverage strategy and the move to the IR framework, DBRS expects Union to maintain its EBIT interest coverage above 2.2x and cash flow-to-debt ratio above 14.5%, which are in line with the current rating.

Liquidity and Long-Term Debt Maturities

Liquidity

Credit Facility*	As at September 30, 2011			
(C$ millions)	Maturity Date	Committed	CP	Available
Five-year syndicated credit facility	Jul. 2012	500	187	313
Total		500	187	313

- In December 2011, the five-year syndicate credit facility was reduced to $400 million from $500 million, maturing in December 2016. All the terms and conditions in the new facility remained unchanged.
- DBRS views Union's liquidity as sufficient for its working capital funding requirements. Union's $400 million five-year committed credit facility expires in July 2012 and is used to backstop the Company's $400 million commercial paper program.
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision that requires the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year.
- Union is generally subject to seasonality as a part of its business and as a result, its short-term debt (because of the need from more liquidity) and its gas inventory typically peak in the first and fourth quarters of every year.

Debt Maturity

Debt Maturity (C$ millions)	2012	2013	2014	2015	2016	2016+	Total
MTNs and Debentures	0	0	150	150	200	1,776	2,276

- The Company's debt maturity is well spread out, with no long-term debt due in 2012 and 2013, and the amounts due in 2014 and 2015 remain modest and within the financing capacity of the Company.
- The $500 million shelf prospectus, maturing in October 2012, contains a 75% maximum total debt-to-capitalization issuance covenant; in addition, any incremental debt is also subject to an interest coverage test of 2.0x. As at September 30, 2011, the Company was in compliance with all covenants.
- In June 2011, the Company issued $300 million in medium-term notes (MTNs; Series 9, 4.88%, due 2041) to refinance the $250 million MTNs due in May 2011 and for general corporate purposes.

Long-Term Debt

Long-term debt as at September 30, 2011*

The Company

Union Gas Limited is a utility that provides natural gas distribution, transmission and storage services in southwestern, northern and eastern Ontario, serving approximately 1.4 million customers. It is a direct, wholly owned subsidiary of Westcoast Energy Inc. (rated A (low), Stable), which is indirectly owned by Spectra Energy Capital, LLC (rated BBB (high), Stable).

Rating Update

DBRS has confirmed the ratings of Union Gas Limited (Union or the Company) as listed above. The rating confirmations reflect the relative stability of earnings from Union's regulated businesses (i.e., gas distributions, regulated storage and gas transmission), which accounted for the majority of consolidated earnings, and Union's reasonable credit profile.

In the Ontario Energy Board's (OEB) Decision for Union's 2013 cost-of-service (COS) application, the OEB approved a return on equity (ROE) of 8.93% (8.54% in 2012) and equity thickness of 36%. Rates are expected to increase in 2013 and have an impact of around 0% to 6% on the average annual total bill, depending on customer location and class. In addition, the OEB found that revenues associated with the optimization of upstream transportation contracts, effective in 2013, are to be considered a reduction of natural gas supply costs, 90% of which are to be credited to customers. As a result, 2012 earnings decreased due to this treatment and around $34 million will be refunded to customers. The OEB also had similar findings in November 2012 for 2011 upstream transportation optimization revenues (refund of $5 million). Union has appealed the November 2012 decision with the Ontario Divisional Court and a hearing and decision is expected by the end of 2013. The Decisions had no rating implications as the regulatory framework remained reasonable.

Union's financial performance continued to benefit from the ongoing expansion of higher-margin non-regulated natural gas storage facilities. However, DBRS is concerned about its rising exposure to the non-regulated business, which affects Union's overall business risk profile and increases potential earnings volatility. Non-regulated earnings increased to approximately 15% in 2012 (DBRS estimate) from 10% in 2008 and are expected to continue to rise over the medium term. The Company is expected to continue to generate free cash flow deficits over the medium term as a result of expansions and upgrades. DBRS expects the Company to finance free cash flow deficits through managing dividends and issuing debt in a prudent manner that will maintain its debt-to-capital ratio within DBRS's "A" rating range.

Rating Considerations

Strengths

(1) Reasonable regulatory environment
(2) Large customer base and strong service area
(3) Reasonable credit metrics
(4) Additional earnings growth from storage facilities

Challenges

(1) Volume risk and decline in customer usage
(2) Expansion in unregulated businesses
(3) Consistent free cash flow deficits
(4) Limited access to equity markets

Rating Considerations Details

Strengths

(1) **Reasonable regulatory environment.** Union's gas distribution business operates in a reasonable regulatory environment, which allows it to recover prudently incurred capital expenditures (capex) and earn a reasonable return on its investments. The Company is operating under the COS framework in 2013, which allows it to rebase its rates, and will operate under an incentive regulation (IR) framework in 2014 and beyond.

(2) **Large customer base and strong service area.** Union's cash flow is supported by a large customer base (1.4 million), as it is one of the largest natural gas distributors in Canada and provides distribution, storage or transportation services to most gas-fired generation plants in Ontario. Moreover, the Company's service area covers more than 400 communities in northern, southwestern and eastern Ontario. Approximately 45% of revenue is generated from residential customers, a segment less exposed to economic conditions.

(3) **Reasonable credit metrics.** For the 12 months ended December 31, 2012, Union's debt leverage ratio (64.2%), EBIT interest coverage (2.35 times (x)) and cash flow-to-debt ratio (14.0%) remained reasonable for its "A" rating. Union is committed to maintaining its common equity level, for the regulatory portion, in line with the approved equity of 36% by the OEB.

(4) **Additional earnings growth from storage facilities.** Union's Dawn storage facility (50 billion cubic feet of capacity) is the largest natural gas storage facility in Canada and is strategically connected to key pipelines that allow Union to transmit natural gas to other major Canadian and U.S. markets. The Company's continued expansion of its unregulated storage capacity as well as the change in traditional natural gas flow patterns is expected to provide additional earnings growth potential over the medium term.

Challenges

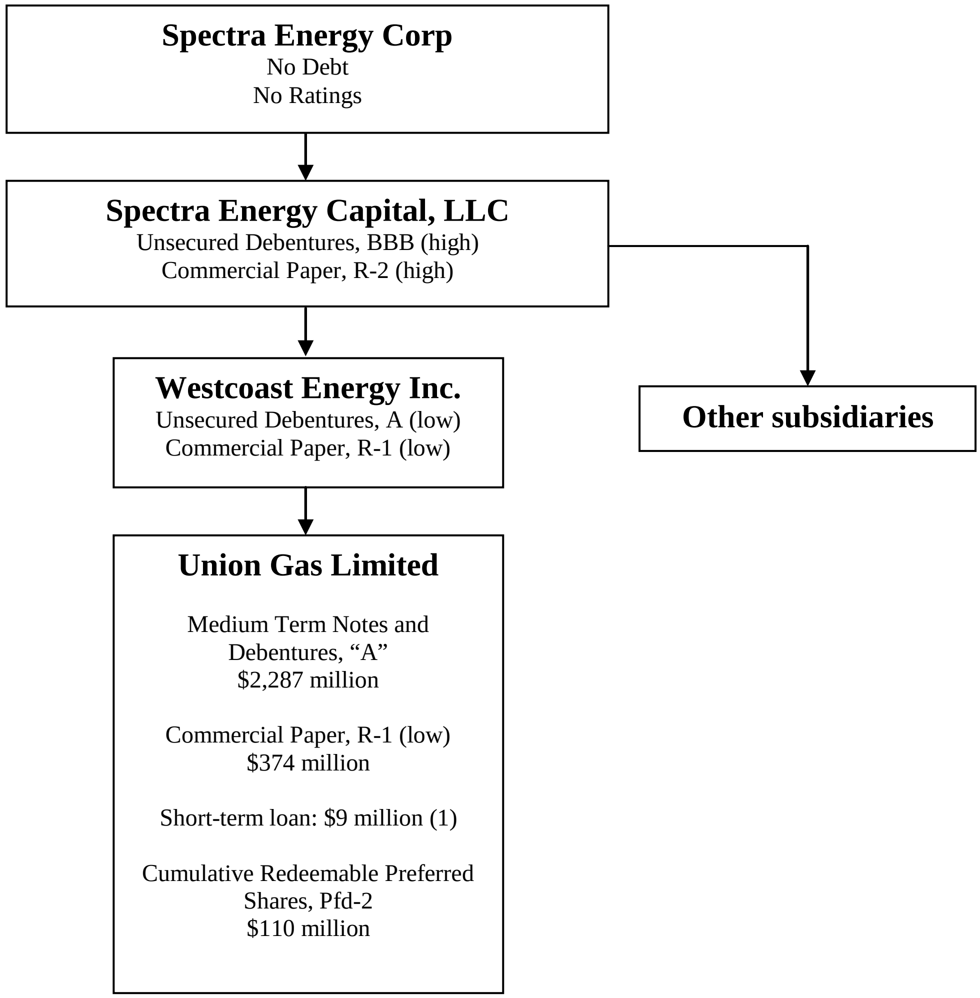
(1) **Volume risk and decline in customer usage.** Union is exposed to a degree of demand risk, since its rates are based on forecast volumes, which are sensitive to changes in weather, economic conditions, natural gas prices and declines in customer usage. Union is experiencing a reduction in distribution throughput due to energy conservation initiatives, declining normalized use per customer and warmer-than-expected weather conditions. This reduction is partially offset by lower natural gas prices, which support its competitiveness relative to other energy sources, and greater role for natural gas-fired generation plants in Ontario.

(2) **Expansion into unregulated business.** Union's intention to expand its unregulated storage segment may result in higher earnings volatility, as DBRS views this segment as higher risk than the regulated distribution and storage businesses. Currently, the unregulated portion of Union's storage business comprises approximately one-third of its storage capacity, which is a manageable level.

(3) **Consistent free cash flow deficits.** Union generated free cash flow deficits for the past five years and this is expected to continue in the medium term due to higher capex for storage and gas transmission projects. DBRS expects the Company to finance the deficits by managing dividends and issuing new debt in a prudent manner to maintain its debt-to-capital ratio within DBRS's "A" rating range.

(4) **Limited access to equity markets.** Union is a wholly owned subsidiary of Westcoast Energy Inc. (rated A (low)), which is indirectly owned by Spectra Energy Corp. This ownership structure limits Union's ability to access the equity markets directly. As a result, additional cash flow needs are largely financed through retaining earnings and issuing debt.

Organizational Chart (as of December 31, 2012)



(1) This is an intercompany loan from Westcoast Energy Inc.

Regulation

Regulatory Overview

Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.

Gas Distribution

- Union's distribution rates are set under a multi-year IR framework with rebasing under the COS framework between the IR periods.
- From 2008 to 2012, Union's rates were set under the IR framework.
- Union filed an application with the OEB in November 2011 to set its distribution rates effective January 1, 2013, under the COS framework.
- A settlement agreement for the application was reached and accepted by the OEB on July 10, 2012. For the unsettled issues, the OEB issued its decision on October 25, 2012.
- Among other things, the OEB approved rate increases that have an average annual impact on a customer's total bill of around 0% to 6% depending on the location and class.
  - In January 2013, the OEB approved Union's draft rate order, filed in December 2012. Union implemented the approved OEB rate order in February 2013.
- In addition, the OEB found that the revenues associated with the optimization of upstream transportation contracts effective in 2013 are to be considered a reduction of natural gas supply costs, 90% of which are to be credited to customers.
  - The OEB issued a decision on November 19, 2012, that certain 2011 revenues derived from the optimization of upstream transportation contracts would be refunded to customers as well. Union appealed this decision on the basis of impermissible retroactive ratemaking and a hearing and decision is expected by the end of 2013 by the Ontario Divisional Court.
- For 2013, the company has an approved ROE for 8.93% and a deemed equity component of 36%.
- The Company's gas cost deferral accounts, storage accounts and other deferral accounts remained in place.
- In 2013, the Company intends to apply to the OEB for another IR framework effective for 2014 and beyond.

Gas Storage

- Storage services outside Union's franchise area or new storage services to customers in the franchise area are not regulated by the OEB. This accounts for approximately one-third of storage capacity.
- Storage within Union Gas's service area is regulated under the COS regulation.
- On July 18, 2012, the OEB directed the Company to share short-term storage margins between the ratepayers and Union and to dispose of an incremental credit balance of $3 million to ratepayers. Combined with the 2011 IR earnings sharing ($3 million), a total of $6 million is refundable to customers. The implementation of the refund commenced October 1, 2012.

Earnings and Outlook

Distribution rate base	N/A	3,583	3,570	3,483	3,348

2012 Summary

- Union's earnings are principally generated from its regulated gas distribution, storage and transmission businesses. However, earnings from the unregulated storage business have continued to grow, accounting for over 15% of total earnings in 2012, up from around 10% in 2008 (DBRS estimate).
- Earnings in 2012 were slightly lower than 2011, mainly as a result of the following factors:
  - Decrease in customer usage of natural gas due to warmer weather (10% warmer than 2011).
  - Refund of certain revenues realized from the optimization of upstream transportation contracts to customers, due to a decision from the OEB in November 2012.
  - However, decreases in earnings were partially offset by lower earnings to be shared with customers, customer growth and increase in short-term transportation service.

2013 Outlook

- DBRS anticipates that earnings from Union's regulated gas distribution segment will remain relatively stable in 2013 as decreases in earnings are expected to be offset by modest customer growth and the increased role of natural gas-fired power generators.
- Although weather conditions are unpredictable, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management Initiative, to have a modest impact on customer usage. This could potentially be offset by modest customer growth.
- Long-term earnings from unregulated storage are expected to increase, reflecting an increase in demand for gas storage in Ontario and the Company's intention to expand the storage business.

(1) Adjusted for operating leases and accumulated other comprehensive income.

2012 Summary

- Cash flow from operations was lower in 2012 due to warmer-than-expected weather and the OEB's decision to refund certain revenues from the optimization of upstream transportation contracts.
- Free cash flow continued to be negative in 2012, reflecting higher dividends and lower cash flow from operations. However, the company had a minor cash flow deficit after accounting for working capital items.
- Capex was lower in 2012 compared to 2011, largely due to the completion of two large multi-year maintenance projects in 2011, partially offset by an increase in customer attachments.
- The dividends are primarily used to maintain Union's capital structure in line with regulatory-approved levels (64% debt and 36% equity since 2008).
- In 2012, key credit metrics remained within DBRS's "A" rating category.

2013 Outlook

- DBRS expects Union to continue to generate modest free cash flow deficits over the near to medium term as capex is expected to remain relatively high. In 2013, Union expects to spend approximately $364 million on expansion projects ($55 million) and maintenance and upgrades of existing pipelines and infrastructure ($309 million; mostly regulated).
- DBRS expects the Company to maintain its debt leverage in line with the "A" rating category in the medium term by managing free cash flow deficits through dividend management and debt issuances.
- The Company expects to maintain its regulatory-approved capital structure of 36% equity and 64% debt for its regulated assets.

Union Gas Limited

Report Date:
April 29, 2013

Liquidity and Long-Term Debt Maturities

Credit Facility				As at December 31, 2012
(CA$ millions)	**Maturity Date**	**Committed**	**CP**	**Available**
Five-year syndicated credit facility	2016	400	374	26
Total		400	374	26

- The Company's credit facility is mainly used to backstop its $400 million commercial paper program.
- DBRS views Union's liquidity as sufficient for its working capital funding requirements.
- Union is generally subject to seasonality as a part of its business and, as a result, its short-term debt and its gas inventory typically peak in the first and fourth quarters of every year ($374 million outstanding in commercial paper as at December 31, 2012).
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision requiring the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. As at December 31, 2012, the Company was in compliance with these covenants.

Debt Maturity (CA$ millions)	**2013**	**2014**	**2015**	**2016**	**2017**	**Thereafter**	**Total**
MTNs and Debentures	0	150	150	200	125	1,665	2,290

As at December 31, 2012.

- The Company's debt maturity is well spread out, with no long-term debt due in 2013. The amounts due from 2014 to 2017 remain modest and within the financing capacity of the Company.
- The Company filed a new $800 million base shelf prospectus expiring November 11, 2014, which provides for the issuance of medium-term note debentures. The new base shelf prospectus replaces the $500 million base shelf prospectus that expired on October 10, 2012. As at December 31, 2012, the Company has $800 million available for issuance under the new base shelf prospectus.
- Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants. Therefore, the Company can have a maximum total debt-to-capitalization of 75% and any incremental debt is subject to an interest coverage test of 2.0x. As at December 31, 2012, the Company was in compliance with all covenants.

The Company

Union Gas Limited is a utility that provides natural gas distribution, transmission and storage services in southwestern, northern and eastern Ontario, serving approximately 1.4 million customers. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly-owned limited partnership of Westcoast Energy Inc. (rated A (low)). Westcoast is indirectly owned by Spectra Energy Capital, LLC (rated BBB).

Rating Update

DBRS has confirmed the ratings of Union Gas Limited (Union or the Company) as listed above. The rating confirmation reflects DBRS expectation that: (1) Union's low risk regulated gas distribution business will continue to account for the bulk of the Company's earnings (~80% in 2013), providing stability; and (2) the Company will continue to fund capital expenditures while maintaining its key financial metrics.

Union's business risk profile is indicative of an "A" rating based on regulatory and franchise strengths of the Company's natural gas utility business in Ontario (Refer to "Assessment of Union's Regulatory Environment" on page 8). DBRS views the recent five year incentive regulation (IR) framework approved by the Ontario Energy Board (OEB) through a settlement process for 2014-2018 as reasonable due to the following factors: (1) allows the Company to earn a higher return on investment (ROE) than domestic peers on average; (2) provides predictable cash flow as capital expenditures (capex) are pre-approved, subject to certain criteria, for inclusion in the rate base; and (3) annual rate escalation each year at 40% of inflation. DBRS expects the Company to maintain its current financial profile by prudently financing its proposed capital expenditures on expansions and upgrades using a combination of operating cash flow, debt and managing dividend payouts.

In February 2014, the OEB provided regulatory approval for $423 million in capex to expand Union's Dawn to Parkway gas transmission system starting in 2015. The expansion is expected to help grow the rate base and diversify fuel sources, reducing its reliance on supply from Western Canada. The funding of this capex initiative is not expected to result in material deterioration of current credit metrics and remain within regulatory parameters.

One of the key challenges that could impact Union's future ratings is its growing exposure to the higher risk, non-regulated storage business. The confirmation assumes that the future mix between regulated earnings and non-regulated earnings will remain at or close to the current mix of 80%/20%.

Rating Considerations

Strengths	Challenges
(1) Reasonable regulatory environment	(1) Volume risk and decline in customer usage
(2) Large customer base and strong franchise	(2) Growing share of non-regulated business
(3) Stable credit metrics	(3) Consistent free cash flow deficits

Rating Considerations Details

Strengths

(1) Reasonable regulatory environment. Union's gas regulated distribution business operates under a reasonable regulatory environment, which allows it to recover prudently incurred capital expenditures (capex) and earn a reasonable return on its investments. The Company currently operates under a five-year incentive regulation (IR) framework (2014 to 2018) with rebasing under the cost-of-service (COS) framework in between. Union's regulated distribution business is not exposed to commodity price risk as gas supply costs are adjusted quarterly and passed through to customers.

(2) Large customer base and strong franchise. Union's cash flow is supported by a large customer base (1.4 million), which is growing at a steady rate of ~2%, making it one of the largest natural gas distributors in Canada. Union provides transportation and storage services to almost all, and distribution to most, gas-fired generation plants in Ontario. Moreover, the Company's franchise area covers more than 400 communities in northern, southwestern and eastern Ontario. Approximately 50% of its revenue is generated from residential customers, a segment that is less exposed to economic conditions.

(3) Reasonable credit metrics. For the 12 months ended September 30, 2013, Union's debt leverage ratio (63.0%), EBIT interest coverage (2.33 times (x)) and cash flow-to-debt ratio (14.5%) remained reasonable for its "A" rating. Union is committed to maintaining its capital structure for the regulated operations in line with the approved capital structure of 64% debt and 36% equity.

(4) Additional earnings growth from storage facilities. Union's Dawn storage facility (Approximately 155 billion cubic feet of capacity) is the largest natural gas storage facility in Canada and is strategically connected to key pipelines that allow Union to transmit natural gas to other major Canadian and U.S. markets. Changes in traditional natural gas flow patterns are expected to provide additional earnings growth potential over the medium term.

Challenges

(1) Volume risk and decline in customer usage. Union is exposed to a degree of demand risk, since its rates are based on forecast volumes, which are sensitive to changes in weather, economic conditions, natural gas prices and declines in customer usage. Union is experiencing a reduction in distribution throughput due to energy conservation initiatives, declining normalized use per customer and warmer-than-expected weather conditions. This reduction is partially offset by lower natural gas prices, which support its competitiveness relative to other energy sources, and greater role for natural gas-fired generation plants in Ontario.

(2) Growing share of non-regulated business. Union's non-regulated storage revenues may result in higher earnings volatility, as DBRS views this segment as higher risk than the regulated distribution and storage businesses. In 2012 the non-regulated portion of Union's storage business accounted for approximately 20% of EBIT (14% in 2008).

(3) Consistent free cash flow deficits. Union generated free cash flow deficits for the past five years and this is expected to continue in the medium term due to higher capex for storage and gas transmission projects. DBRS expects the Company to finance the deficits by managing dividends and issuing new debt in a prudent manner to maintain its debt-to-capital ratio within the regulatory levels.

(4) Limited access to equity markets. Union is a wholly owned subsidiary of Westcoast Energy Inc. (rated A (low)), which is indirectly owned by Spectra Energy Corp. This ownership structure limits Union's ability to access the equity markets directly. As a result, additional cash flow needs are largely financed through retained earnings and debt issuances.

(1) 2013 adjusted for $16 million decrease in taxes due to recognition of tax benefits for 2008 through 2012 tax years.
(2) N/A: Not available on a quarterly basis

2013 Summary

- Union's earnings are principally generated from its regulated gas distribution, storage and transmission businesses. However, earnings from the unregulated storage business have continued to grow, accounting for approximately 20% of EBIT in 2012, up from around 14% in 2008 (based on Union's regulatory filing).
- Earnings before non-recurring items in 9M2013 remained stable compared to 9M2012. The increase in the number of customers, rates and usage and favourable changes in taxes have been offset by higher employee benefit costs, lower short term transportation services, lower prices for storage services, and revenue sharing with customers from the optimization of upstream transportation contracts.

2014 Outlook

- DBRS anticipates that Union's earnings will likely increase modestly in 2014 due to distribution rate increases and customer growth.
- Although weather conditions are unpredictable, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management Initiative, to have a modest impact on customer usage. This could potentially be offset by modest customer growth.
- Long-term earnings from unregulated storage are expected to increase, reflecting an increase in demand for gas storage in Ontario and Company's intention to expand its storage capacity.

2013 Summary

- Overall, key credit metrics remain reasonable for the current rating category.
- Union generated free cash flow deficits for the past three years and this is expected to continue in the medium term due to higher capex for storage and gas transmission projects.
- Capex was significantly higher in 9M2013 compared to 9M2012, largely due to increased maintenance and expansion projects.
- The dividends are primarily used to maintain Union's capital structure in line with regulatory-approved levels (64% debt and 36% equity).

2014 Outlook

- DBRS expects Union to generate stable cash flows with higher capex in the medium term.
- DBRS expects the Company to maintain its leverage in line with the OEB approved capital structure by prudently managing debt levels and dividend payouts.

Liquidity and Long-Term Debt Maturities

Credit Facility (CA$ millions)	Maturity Date	Committed	CP	Available
			As at September 30, 2013.	
Five-year syndicated credit facility	2016	400	123	277
Total		400	123	277

- The Company's credit facility is mainly used to backstop its $400 million commercial paper program.
- DBRS views Union's liquidity as sufficient for its working capital funding requirements.
- Union is generally subject to seasonality as a part of its business and, as a result, its short-term debt and its gas inventory typically peak in the first and fourth quarters of every year ($123 million outstanding in commercial paper as at September 30, 2013).
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision requiring the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. As at September 30, 2013, the Company was in compliance with these covenants.

Debt Maturity (CA$ millions)	2014	2015	2016	2017	2018	Thereafter	Total
MTNs and Debentures	150	150	200	125	400	1,515	2,540

As at September 30, 2013.

- The Company's debt maturity is well spread out. $150 million of long-term debt is due in 2014. DBRS expects the refinancing risk to be minimal given Union's good access to debt capital markets. The amounts due from 2015 to 2018 remain modest and are also within the financing capacity of the Company.
- In July 2013, the Company issued $250 million of medium-term unsecured note debentures at 3.79% per annum, due July 10, 2023.
- The Company filed a new $800 million base shelf prospectus expiring November 11, 2014, which provides for the issuance of medium-term note debentures. The new base shelf prospectus replaces the $500 million base shelf prospectus that expired on October 10, 2012. As at September 30, 2013, the Company has $550 million available for issuance under the new base shelf prospectus.
- Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants. Therefore, the Company can have a maximum total debt-to-capitalization of 75% and any incremental debt is subject to an interest coverage test of 2.0x. As at September 30, 2013, the Company was in compliance with all covenants.

Regulation

Regulatory Overview

Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB. (Refer to "Assessment of Union's Regulatory Environment." on Page 8)

Gas Distribution

- The regulatory environment in Ontario for natural gas distributors is viewed as reasonable.
- Union's distribution rates are set under a multi-year IR framework with rebasing under the COS framework between the IR periods.
- From 2014 to 2018, Union will be regulated under the IR framework. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60%; thus the annual net rate escalator in each year is 40% of inflation.
- Union filed an application with the OEB in October 2013 for new rates effective January 1, 2014. If approved, the impact on a typical residential customer would range from an increase of $2 annually to a decrease of $20 annually depending on location. A decision is expected in the first half of 2014.
- For 2014 to 2018, the Company has an approved ROE for 8.93% and a deemed equity component of 36%.
- The Company will be able to continue to pass through gas commodity, upstream transportation and demand side management costs. It will also be allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers, and an earnings sharing mechanism.
- The earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers and share 90% of any earnings above 10.93% with customers.
- In May 2013, Union filed an application with the OEB for the annual disposition of the 2012 non-commodity deferral account balances. The application included a proposal that revenues derived from the optimization of its upstream transportation contracts in 2012 were to be treated as optimization revenues and included in utility earnings rather than a reduction to gas costs. If the OEB finds this to be treated as a reduction to gas costs, 90% of which are to be credited to customer, this would result in a refund payable of approximately $17 million. A hearing was held in October 2013 and a decision is pending. DBRS does not expect this to have a material impact on Union's ratings.
  - The OEB issued a decision on November 19, 2012, that certain 2011 revenues derived from the optimization of upstream transportation contracts would be refunded to customers as well. Union appealed this decision on the basis of impermissible retroactive ratemaking and a hearing was held in October 2013. A decision is pending.

Gas Storage

- Storage services outside Union's franchise area or new storage services to customers in the franchise area are not regulated by the OEB. This accounts for approximately one-third of storage capacity.
- Storage within Union Gas's service area is regulated under the COS regulation.

Assessment of Union's Regulatory Environment

Criteria	Score	Analysis
(1) Deemed Equity	Excellent Very Good Satisfactory **Below Average** Poor	The OEB allows Union to have a deemed equity of 36%, which is consistent with the other gas distributors in Ontario. However, deemed equity is below peer utilities in Canada and the United States.
(2) Allowed ROE	Excellent Very Good **Satisfactory** Below Average Poor	For 2014 to 2018, the Company has an approved ROE of 8.93%. In addition, the earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers and share 90% of any earnings above 10.93% with customers.
(3) Energy Cost Recovery	Excellent **Very Good** Satisfactory Below Average Poor	The Company is able to fully pass through gas commodity, upstream transportation and demand side management costs on a quarterly basis. It is also allowed additional pass-through of costs associated with major capital investments, certain fuel variances and an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
(4) COS vs. IRM	Excellent Very Good **Satisfactory** Below Average Poor	Union's distribution rates are set under a five year IR framework with rebasing under the COS framework between the IR periods. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60% of inflation; thus the annual net rate escalator in each year is 40% of inflation.
(5) Capital Cost Recovery	Excellent **Very Good** Satisfactory Below Average Poor	Major capital costs are pre-approved by the regulator and added to rate base after the completion. Other capital spending after the base year will not be approved until the next rate application and approval of the rate base.

Criteria	Score	Analysis
(6) Political Interference	Excellent **Very Good** Satisfactory Below Average Poor	There is low degree of government influence. Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.
(7) Retail Rate	Excellent **Very Good** Satisfactory Below Average Poor	In the natural gas sector, the OEB regulates Ontario's natural gas utilities which are required to submit the rates they propose to charge their customers to the Board for review and approval. The cost of natural gas distributed by Union Gas is set by the OEB at 13.3052 ¢/m3 (January 2014), which is higher than rates charged by Enbridge (11.7412 ¢/m3) but generally lower compared to other provinces in Canada. Rates are dictated by commodity costs and transportation tolls on pipelines. Economic environment in Ontario is considered good.
(8) Stranded Cost Recovery	**Excellent** Very Good Satisfactory Below Average Poor	Union has very limited history of stranded costs.
(9) Rate Freeze	**Excellent** Very Good Satisfactory Below Average Poor	Rates are based on the market price of natural gas plus distribution and servicing costs. Rates have not been frozen within the past decade.
(10) Market Structure (Deregulation)	Excellent Very Good **Satisfactory** Below Average Poor	The natural gas sector is partially deregulated such that a portion of consumers can choose their supplier. Union Gas does not produce or extract natural gas but provides storage and transportation services. There is reasonable regulatory oversight on distribution rates.

Rating Update

DBRS Limited (DBRS) has confirmed the ratings of Union Gas Limited (Union or the Company) as listed above. The ratings reflect Union's relatively low risk gas distribution business, which operates under a reasonable regulatory framework, and are supported by the Company's economically stable service territory with a large customer base that is growing at a steady rate. Union's financial risk profile has remained reasonable with key credit metrics in the current rating category.

Union's business risk profile is supported by a reasonable regulatory environment in Ontario and predictable earnings from the Company's regulated business, which accounts for over 80% of earnings. Union operates under a five-year incentive regulation framework (IR; 2014–2018), which provides predictable cash flows and annual rate escalation at 40% of inflation. The IR also affords the Company an opportunity to earn 150 basis points above the allowed return on equity (ROE) of 8.93% through its operational efficiency and an earnings sharing mechanism with its customers. Natural gas supply costs continue to be passed through to customers, which mitigates commodity price risk for Union. DBRS believes the IR framework is well suited to Union's large multi-year capital programs that require certainty of funding in advance as capex is pre-approved by the Ontario Energy Board (OEB), reducing regulatory lag. The Company's distribution business serves 1.4 million customers, largely in residential and commercial markets in more than 400 communities across Ontario, and provides Union the ability to better weather economic downturns. Although the Company's regulated distribution and storage business accounts for the bulk of the Company's earnings, a portion of earnings are generated from its unregulated storage business (14% of EBIT in 2013), which could expose the Company to some earnings volatility. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates.

DBRS expects capex, largely related to Dawn to Parkway transmission and storage expansions, to remain relatively high (approximately $400 million annually in 2015 and 2016), resulting in the Company's generating negative free cash flows over the medium term. The new infrastructure is needed to offset the declining supplies from Western Canada and support diverse and competitive gas supply options from Marcellus and Utica. Union's credit metrics could come under pressure as major capital projects are executed; however, the impact is expected to be moderate, as the assets are placed into service and form part of the Company's regulatory rate base, enhancing earnings. In addition, DBRS expects the Company to maintain a fairly flexible dividend policy, which helps to maintain its regulated capital structure (64% debt/36% equity).

Issuer Description

Union Gas Limited is a utility that provides natural gas distribution, transmission and storage services in southwestern, northern and eastern Ontario, serving approximately 1.4 million customers. Union Gas' common stock is held by Great Lakes Basin Energy L.P. (GLBE), a wholly owned limited partnership of Westcoast Energy Inc. (rated A (low)). Westcoast is indirectly owned by Spectra Energy Capital, LLC (rated BBB).

Rating Considerations

Strengths

1. Reasonable regulatory environment

Union's gas regulated distribution business operates under a reasonably stable regulatory environment, which provides predictable cash flows and allows the Company to earn a reasonable return on its investments as major capex is pre-approved. The Company currently operates under a five-year IR framework (2014 to 2018), with rebasing under the cost-of-service (COS) framework in between. Union's regulated distribution business is not exposed to commodity price risk, as gas supply costs are adjusted quarterly and passed through to customers.

2. Large customer base and strong franchise

Union's cash flow is supported by a large customer base (1.4 million), which is growing at a steady rate of approximately 2%, making it one of the largest natural gas distributors in Canada. Union provides transportation and storage services to almost all—and distribution to most—gas-fired generation plants in Ontario. The Company's Dawn storage facility (156 billion cubic feet of capacity) acts as a gateway for Marcellus/Utica gas and is strategically connected to key pipelines transporting natural gas to major Canadian and U.S. markets. Long-term demand for natural gas in Ontario is expected to remain relatively stable with continued growth in peak day demands. Moreover, the Company's franchise area covers more than 400 communities in northern, southwestern and eastern Ontario. Approximately 50% of Union's revenue is generated from residential customers, a segment that is less exposed to economic downturns.

3. Reasonable credit metrics

For the 12 months ended September 30, 2014, Union's debt-to-capital ratio (63.7%), EBIT interest coverage (2.5 times (x)) and cash flow-to-debt (13.6%) remained reasonable for its rating category. Union is committed to maintaining its capital structure for the regulated operations in line with the regulatory capital structure of 64% debt and 36% equity.

Challenges

1. Consistent free cash flow deficits

Union has generated free cash flow deficits for the past five years, and this is expected to continue in the medium term due to higher capex for storage and transmission projects. DBRS expects the Company to finance the deficits by managing dividends and issuing new debt in a prudent manner and maintain its debt-to-capital ratio within regulatory levels.

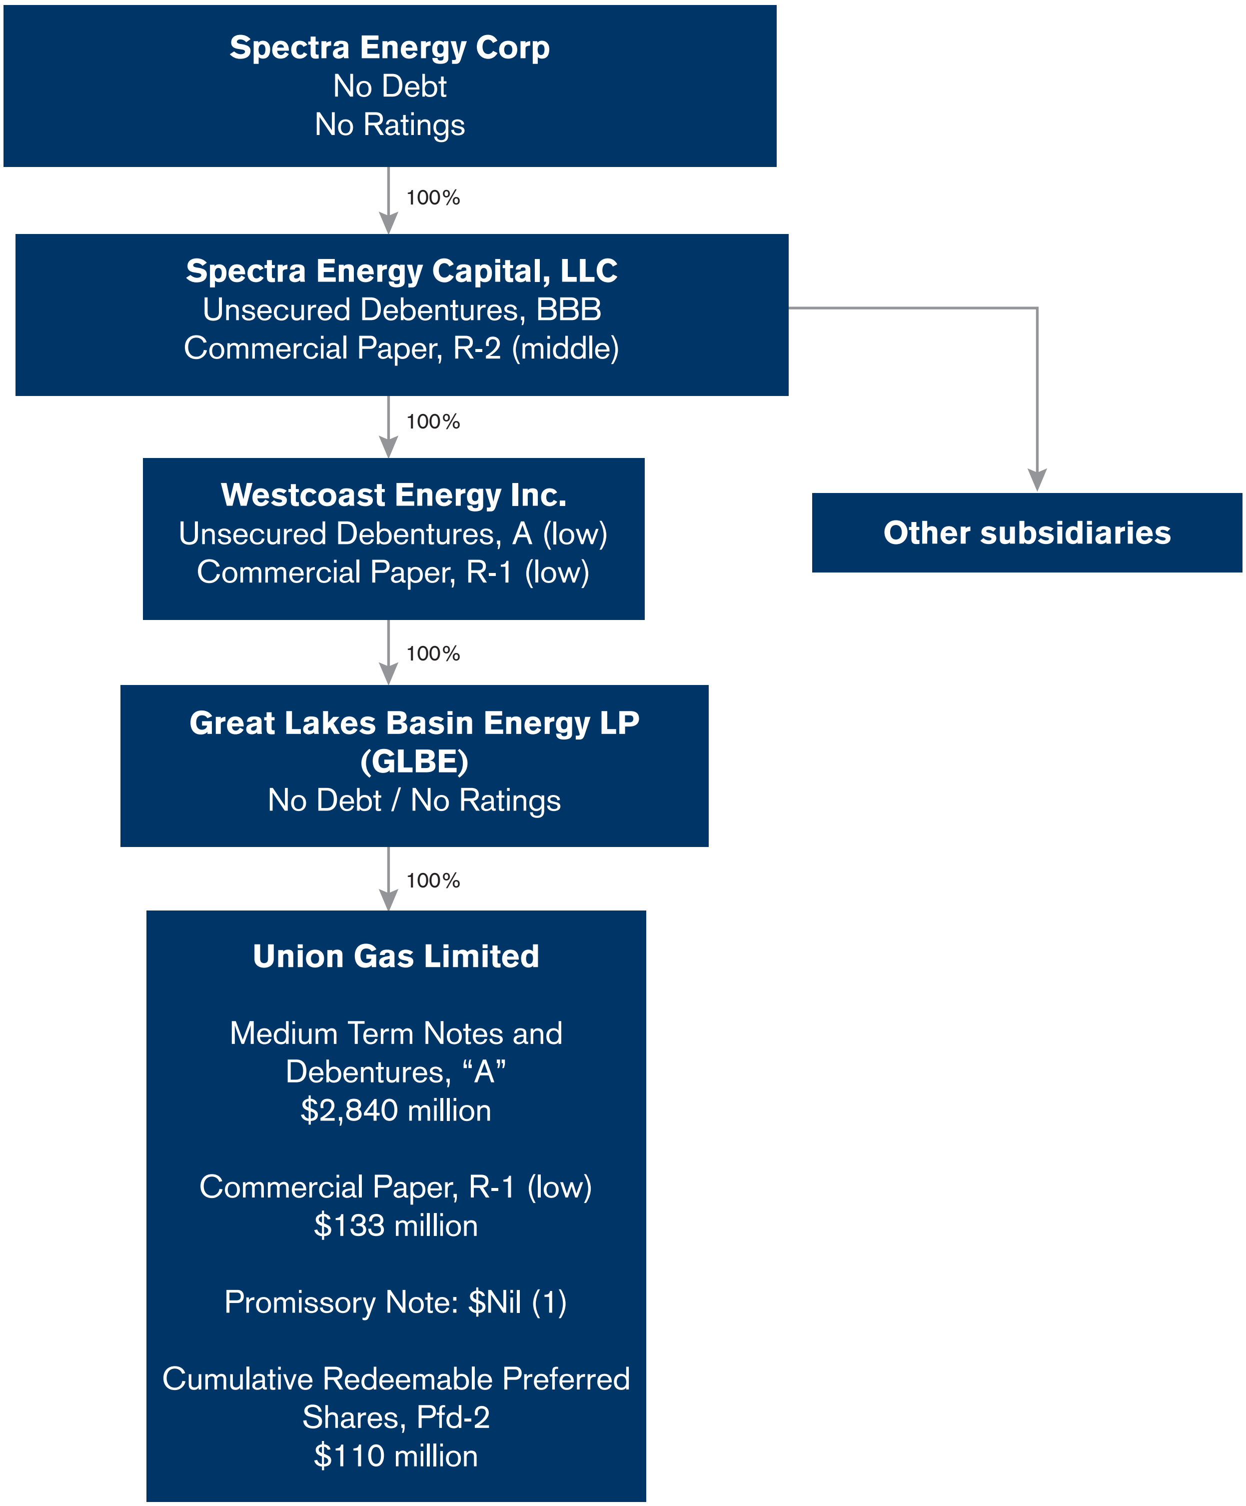
2. Seasonality and Volume risk

Union is exposed to a degree of demand risk, since its rates are based on forecast volumes, which are sensitive to changes in weather. Natural gas rates approved by the OEB assume normal weather conditions. Since a majority of the gas distributed by Union to the residential and commercial markets is used for space heating and is charged using volume-based rates, differences from normal weather could have a significant effect on the consumption of gas and on the Company's financial results. However, DBRS notes that under the IR framework, Union is allowed to recover shortfalls relative to normalized consumption on an annual basis with a one-year lag, and has also increased fixed monthly charges for residential and small commercial customers to partially mitigate the impact of volume changes.

3. Earnings volatility of non-regulated storage

Union's non-regulated storage earnings may result in earnings volatility. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates. In 2013, Union's non-regulated storage business accounted for approximately 14% of EBIT (20% in 2012).

Organizational Chart (as at September 30, 2014)



(1) The Company also has a promissory note to borrow up to $150 million from GLBE on an unsecured basis.

1 2013 adjusted for $16 million decrease in taxes due to recognition of tax benefits for 2008 through 2012 tax years. 2 n/a: not available on a quarterly basis

2014 Summary

- Union's earnings are principally generated from its regulated gas distribution, storage and transmission businesses. However, earnings from the unregulated storage business, which carries some earnings volatility resulting from fluctuating demand and rates, contributed approximately 14% of 2013 EBIT (20% in 2012).
- The natural gas distribution business is subject to seasonality related to volume-based rates and the significant effect of the winter heating season on volumes.
- EBIT increased for 9M2014 compared with 9M2013 primarily resulting from higher customer usage of natural gas because of colder weather, in addition to customer growth.

2015 Outlook

- DBRS anticipates that Union's earnings will likely increase modestly in 2015 as a result of distribution rate increases and customer growth.
- Although weather conditions are unpredictable, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management Initiative, to have a modest impact on customer usage. This will likely be offset by modest annual customer growth of approximately 2%.

1 Adjusted for operating leases and accumulated other comprehensive income.

2014 Summary

- Overall, key credit metrics remain reasonable for the current rating category.
- Operating cash flow remains predictable and has improved over time in line with an increasing rate base.
- Capex has been relatively high because of the construction of compressors and related facilities at the Parkway compressor station. These projects were pre-approved by the OEB in January 2014 for rate recovery and will be in service in the fall of 2015.
- Dividends are primarily used to maintain Union's capital structure in line with regulatory-approved levels (64% debt and 36% equity); as a result, dividends paid are low at $2 million for 9M2014. Starting in 2014, Union plans to pay dividends annually instead of quarterly.
- Union has generated free cash flow deficits for the past five years, and this is expected to continue in the medium term because of higher capex for storage and transmission projects. Free cash flow deficits are debt financed.
- Changes in non-cash working capital was higher for 9M2014 because of the seasonality of the business, and Q3 inventory injections exceeded withdrawals, resulting in increased short-term borrowings.
- Q4 2014 earnings were in line with expectations and marginally affected by lower customer usage related to the warmer weather.

2015 Outlook

- Capex for 2015 is expected to be approximately $450 million, largely associated with Dawn to Parkway expansions. Financing of the capex program is not expected to have a material impact on the Company's financial profile. DBRS expects the Company to maintain its leverage in line with the OEB-approved capital structure by prudently managing debt levels and dividend payouts.
- In September 2014, Union applied for OEB approval for construction of the Dawn to Parkway 2016 Expansion Project. This project involves the installation of a new compressor, modifications to existing facilities and construction of natural gas pipelines. These facilities will provide incremental capacity on the transmission system and are supported by contracts with Union's storage and transmission customers. The total capital cost is expected to be $416 million with an in-service date of Q4 2016.

Liquidity and Long-Term Debt Maturities

Credit Facility as at September 30, 2014

(CA$ millions)	Maturity Date	Committed	CP	Available
Five-year syndicated credit facility	2016	400	133	267

- The Company's credit facility is mainly used to backstop its $400 million commercial paper program, which supports Company's working capital needs.
- DBRS views Union's liquidity as sufficient for its working capital funding requirements.
- Union is generally subject to seasonality as a part of its business, and as a result, its short-term debt and its gas inventory typically peak in the first and fourth quarters of every year.
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision requiring the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. As at September 30, 2014, the Company was in compliance with these covenants.

Debt Maturity as at September 30, 2014

(CA$ millions)	2015	2016	2017	2018	Thereafter	Total
MTNs and Debentures	150	200	125	400	1,965	2,840

- The Company's debt maturity is well spread out, and $150 million of long-term debt is due in 2015. DBRS expects the refinancing risk to be minimal, given Union's good access to debt capital markets. The amounts due from 2016 to 2018 remain modest and are also within the financing capacity of the Company.
- In June 2014, the Company issued 2.76% $200 million of medium-term unsecured note debentures due June 2021 and 4.20% $250 million medium-term note debentures due June 2044.
- The Company filed a new $1.5 billion base shelf prospectus expiring January 3, 2017, which provides for the issuance of medium-term note debentures. The new base shelf prospectus replaces the $800 million base shelf prospectus that expired November 11, 2014.
- Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants. Therefore, the Company can have a maximum total debt-to-capitalization of 75%, and any incremental debt is subject to a minimum interest coverage test of 2.0x. As at September 30, 2014, the Company was in compliance with all covenants.

Regulation

Regulatory Overview

Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB. (Refer to "Assessment of Union's Regulatory Environment" on page 8). The regulatory environment in Ontario for natural gas distributors is viewed as reasonable.

Gas Distribution

- Union's distribution rates are set under a multi-year IR framework with rebasing under the COS framework between the IR periods.
- From 2014 to 2018, Union will be regulated under the IR framework. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60%; thus, the annual net rate escalator in each year is 40% of inflation.
- For 2014 to 2018, the Company has an approved ROE for 8.93% and a deemed equity component of 36%. The earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
- The Company is allowed to pass through gas commodity, upstream transportation and demand side management costs to customers. It will also be allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
- In September 2014, Union filed an application with the OEB for new rates effective January 1, 2015. The impact of the new rates on a typical residential customer would range from an increase of $1 to $4 annually, depending on the location within its service territory. The OEB approved the new rates on December 19, 2014.

Gas Storage

- Storage services outside Union's franchise area or new storage services to customers in the franchise area are not regulated by the OEB. This accounts for approximately one-third of storage capacity.
- Storage within Union Gas's service area is regulated under the COS regulation.

Upstream Regulation – LDCs settlement

- In September 2013, Eastern Canadian LDCs Union Gas, Gaz Métro Limited Partnership and Enbridge Gas Distribution Inc. reached a settlement agreement with TransCanada that provides market access to supplies at Dawn and Niagara, provides long-term market and toll certainty, eliminates all regulatory and legal challenges and allows TransCanada a reasonable opportunity to recover its costs.
- In December 2013, TransCanada filed an application with the National Energy Board (NEB) for approval of tolls and services for 2015 through 2020, as provided for in the settlement agreement. The NEB approved the application in November 2014.

Assessment of Union's Regulatory Environment

Criteria	Score	Analysis
Deemed Equity	Excellent Good Satisfactory **Below Average** Poor	The OEB allows Union to have a deemed equity of 36%, which is consistent with the other gas distributors in Ontario. However, deemed equity is below peer utilities in Canada and the United States.
Allowed ROE	Excellent Good **Satisfactory** Below Average Poor	For 2014 to 2018, the Company has an approved ROE of 8.93%. In addition, the earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
Energy Cost Recovery	Excellent **Good** Satisfactory Below Average Poor	The Company is able to fully pass through gas commodity, upstream transportation and demand side management costs on a quarterly basis. It is also allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
COS vs. IRM	Excellent Good **Satisfactory** Below Average Poor	Union's distribution rates are set under a five-year IR framework with rebasing under the COS framework between the IR periods. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60% of inflation; thus, the annual net rate escalator in each year is 40% of inflation.
Capital Cost Recovery	Excellent **Good** Satisfactory Below Average Poor	Major capital costs are pre-approved by the regulator and added to rate base after the completion. Other capital spending after the base year will not be approved until the next rate application and approval of the rate base.
Political Interference	Excellent **Good** Satisfactory Below Average Poor	There is low degree of government influence. Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.
Retail Rate	Excellent **Good** Satisfactory Below Average Poor	In the natural gas sector, the OEB regulates Ontario's natural gas utilities, which are required to submit the rates they propose to charge their customers to the Board for review and approval. The cost of natural gas distributed by Union Gas is set by the OEB at 18.9887 ¢/m3 (January 2015), which is higher than rates charged by Enbridge (18.3160 ¢/m3) but generally lower compared with other provinces in Canada. Rates are dictated by commodity costs and transportation tolls on pipelines. Economic environment in Ontario is considered good.
Stranded Cost Recovery	**Excellent** Good Satisfactory Below Average Poor	Union has very limited history of stranded costs.
Rate Freeze	**Excellent** Good Satisfactory Below Average Poor	Rates are based on the market price of natural gas plus distribution and servicing costs. Rates have not been frozen within the past decade.
Market Structure (Deregulation)	Excellent Good **Satisfactory** Below Average Poor	The natural gas sector is partially deregulated such that a portion of consumers can chose their supplier. Union Gas does not produce or extract natural gas but provides storage and transportation services. There is reasonable regulatory oversight on distribution rates.

Rating Update

On February 9, 2016, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures/Medium-Term Note Debentures rating of Union Gas Limited (Union or the Company) at "A," the Company's Commercial Paper rating at R-1 (low) and its Cumulative Redeemable Preferred Shares rating at Pfd-2. All trends are Stable. The ratings confirmation reflects Union's relatively low risk gas distribution business, which operates under a reasonable regulatory framework in an economically stable service territory with a large customer base that is growing at a steady rate. The Company's financial risk profile also remains reasonable with key credits metrics that are supportive of the current ratings.

Union's business risk profile is supported by a reasonable regulatory environment in Ontario and predictable earnings from the Company's regulated business, which account for nearly 90% of earnings (approximately 88% of EBIT in 2014). Union operates under a five-year incentive regulation framework (IR; 2014–2018), which provides predictable cash flows and annual rate escalation at 40% of inflation. The IR also affords the Company an opportunity to earn up to 150 basis points above the allowed return on equity (ROE) of 8.93% through operational efficiency after adjusting for an earnings sharing mechanism with its customers. Natural gas supply costs are passed through to customers, mitigating commodity price risk for Union. The Company's distribution business serves 1.4 million customers, largely in residential and commercial markets in more than 400 communities across Ontario, and provides Union the ability to better weather economic downturns. Although the Company's regulated distribution and storage business accounts for the bulk of the Company's earnings, earnings generated from its unregulated storage business (12% of EBIT in 2014) could expose the Company to some earnings volatility. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates.

Union's capital spending program on transmission and storage expansions is expected to remain relatively high (approximately $750 million in 2015 and $1.0 billion in 2016), resulting in the Company's generating negative free cash flows over the medium term. DBRS expects Union's credit metrics to come under pressure, with cash flow-to-debt and debt to capital ratios moving into the "BBB" category, as major capital projects are executed; however, the impact is expected to be mitigated by incremental earnings as projects are completed and placed into service, forming part of the Company's regulatory rate base. In addition to supply diversity, these new infrastructure projects are needed to bring competitively priced Marcellus/Utica natural gas supplies to Eastern Canada.

Issuer Description

Union Gas Limited is a utility that provides natural gas distribution, transmission and storage services in Southwestern, Northern and Eastern Ontario, serving approximately 1.4 million customers. Union Gas' common stock is held by Great Lakes Basin Energy L.P., a wholly owned limited partnership of Westcoast Energy Inc. (rated A (low)). Westcoast is indirectly owned by Spectra Energy Capital, LLC (rated BBB).

Rating Update

DBRS also expects the Company to maintain a flexible dividend policy in order to maintain its regulatory capital structure (64% debt/36% equity). While DBRS does not expect Union's ratings to be upgraded in the medium term, ratings could be negatively affected should leverage exceed the regulatory capital structure and remain elevated for a sustained period.

Rating Considerations

Strengths

1. Reasonable regulatory environment

Union's gas regulated distribution business operates under a reasonable regulatory environment, which provides predictable cash flows and allows the Company to earn a reasonable return on its investments. The Company currently operates under a five-year IR framework (2014 to 2018), with rebasing under the cost-of-service (COS) framework in between. Union's regulated distribution business is not exposed to commodity price risk, as gas supply costs are adjusted quarterly and passed through to customers.

2. Large customer base and strong franchise

Union's cash flow is supported by a large customer base (1.4 million), which is growing at a steady rate, making it one of the largest natural gas distributors in Canada. Union provides transportation and storage services to almost all, and distribution to most, gas-fired generation plants in Ontario. The Company's Dawn storage facility (157 billion cubic feet of capacity) acts as a gateway for Marcellus/Utica gas and is strategically connected to key pipelines transporting natural gas to major Canadian and U.S. markets. Long-term demand for natural gas in Ontario is expected to remain relatively stable with continued growth in peak day demands. Moreover, the Company's franchise area covers more than 400 communities in Northern, Southwestern and Eastern Ontario. Approximately 50% of Union's revenue is generated from residential customers, a segment that is less exposed to economic downturns.

3. Reasonable credit metrics

For the 12 months ended September 30, 2015, Union's lease-adjusted debt-to-capital ratio (63.8%), EBIT interest coverage (2.39 times (x)) and cash flow-to-debt (13.6%) remained reasonable for its rating category. Union is committed to maintaining its capital structure for the regulated operations in line with the regulatory capital structure of 64% debt and 36% equity.

Challenges

1. Consistent free cash flow deficits

Union has generated free cash flow deficits for the past five years, and this is expected to continue in the medium term because of higher capex for storage and transmission projects. DBRS expects the Company to finance the deficits by managing dividends and issuing new debt in a prudent manner, and to maintain its debt-to-capital ratio within regulatory levels.

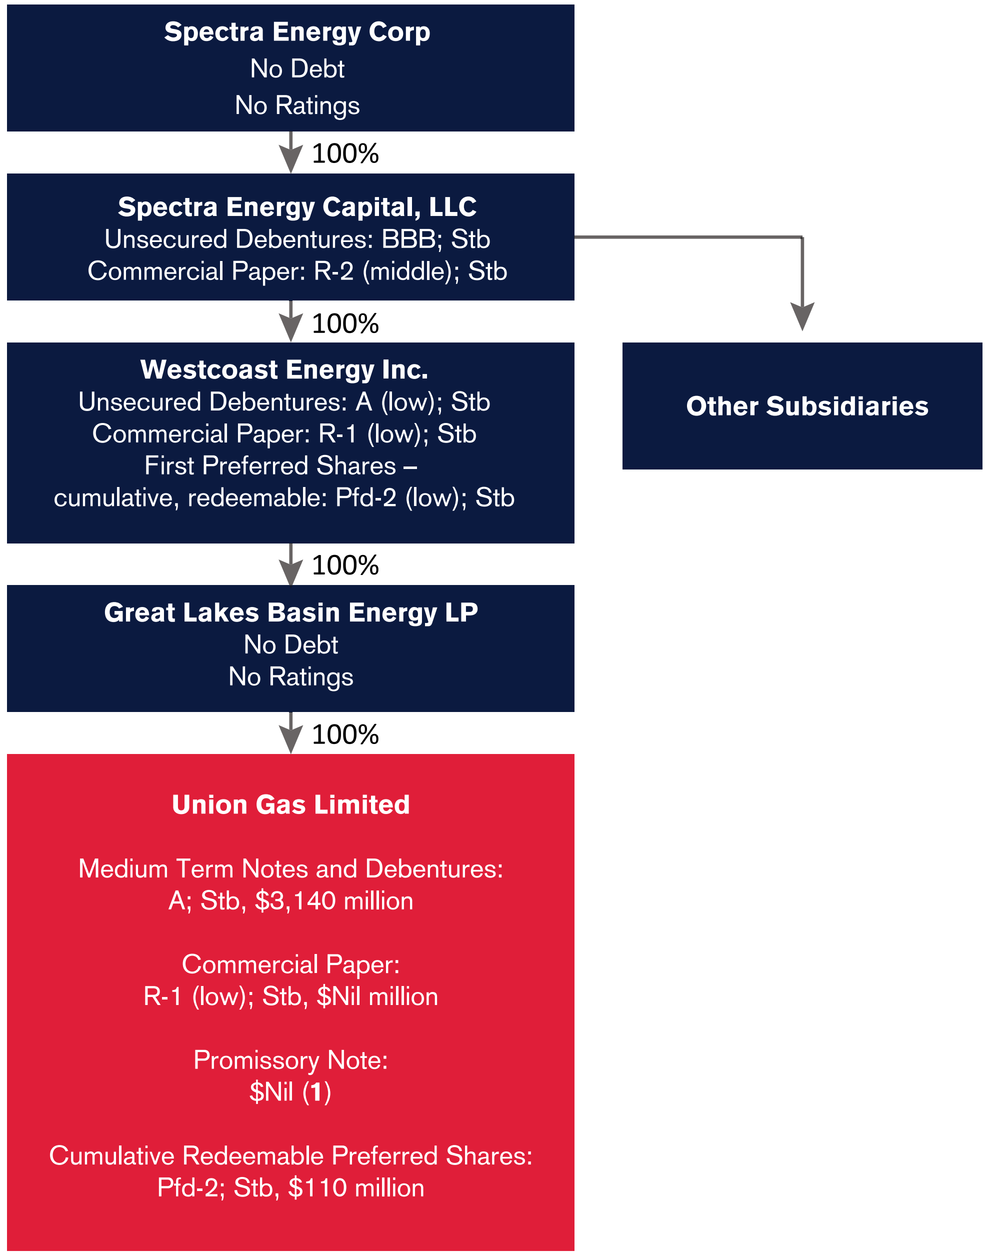
2. Seasonality and volume risk

Union is exposed to a degree of demand risk, since its rates are based on forecast volumes, which are sensitive to changes in weather. Natural gas rates approved by the Ontario Energy Board (OEB) assume normal weather conditions. Since a majority of the gas distributed by Union to the residential and commercial markets is used for space heating and is charged using volume-based rates, differences from normal weather could have a significant effect on the consumption of gas and on the Company's financial results. However, DBRS notes that under the IR framework, Union is allowed to recover shortfalls relative to normalized consumption on an annual basis with a one-year lag. The Company has also increased fixed monthly charges for residential and small commercial customers to partially mitigate the impact of volume changes.

3. Earnings volatility of non-regulated storage

Union's non-regulated storage earnings may result in earnings volatility. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates. In 2014, Union's non-regulated storage business accounted for approximately 12% of EBIT (14% in 2013).

Organizational Chart (as at September 30, 2015)



1 The Company has a promissory note to borrow up to $150 million from Great Lakes Basin Energy L.P. on an unsecured basis.

3 n/a: not available on a quarterly basis.

2015 Summary

- Nearly 90% of Union's earnings are generated from its regulated gas distribution, storage and transmission businesses. The balance is generated from unregulated storage business, which carries some earnings volatility resulting from fluctuating demand and rates.
- The natural gas distribution business is subject to seasonality related to volume-based rates and the significant effect of the winter heating season on volumes.
- EBIT was marginally lower in the first nine months of 2015 (9M 2015), as a result of the slight increase in the Gas distribution margin resulting from increases in the number of customers and higher increased industrial usage, which were largely offset by decreased residential customer usage caused by warmer weather and lower storage and transportation revenues.

2016 Outlook

- DBRS anticipates that Union's earnings will likely increase modestly in 2016 as a result of rate base growth, distribution rate increases and customer growth.
- Although weather conditions are unpredictable, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management Initiative, to have a modest impact on customer usage. This will likely be offset by modest annual customer growth of approximately 1% to 2%.

Total dividend payout ratio	1.4%	1.4%	54.2%	53.0%	79.6%	97.1%	73.1%

2015 Summary

- Overall, key credit metrics remain reasonable for the current rating category.
- Operating cash flow remains predictable and has improved over time, on an annual basis, in line with an increasing rate base. Operating cash flow was slightly lower in 9M 2015 because of higher storage and transportation revenues in 9M 2014, which benefitted from the March 2014 OEB decision (resulted in certain 2012 revenues realized from the optimization of upstream transportation contacts as utility earnings being included in 9M 2014), and higher cash taxes paid in 9M 2015.
- Capex has been relatively high because of spending on the 2015 Dawn-Parkway expansion project (in service Q4 2015) and the Burlington-Oakville project (expected in service H2 2016). The capital cost of the 2015 Dawn-Parkway was $432 million, and the capital cost of the Burlington-Oakville project is expected to be $120 million.
- Dividends are primarily used to maintain Union's capital structure in line with regulatory-approved levels (64% debt and 36% equity). Dividends paid were $2 million for 9M 2015 and 9M 2014, reflecting ongoing preferred share dividends. Common stock dividends are paid on an annual basis, usually in the fourth quarter, and totalled approximately $100 million in 2014.
- Union has generated free cash flow deficits for the past five years, and this is expected to continue in the medium term because of higher capex for storage and transmission expansion projects.
- During 9M 2015, Free cash flow deficits were offset by positive changes in non-cash working capital items, caused by seasonal lower inventory levels and over collection of gas costs from customers, which reduced the Company's reliance on debt financing.

2016 Outlook

- Capex for 2016 is expected to be approximately $1.0 billion, largely associated with Dawn-Parkway expansions. Financing of the capex program is not expected to have a material impact on the Company's financial profile. DBRS expects the Company to maintain its leverage in line with the OEB-approved capital structure by prudently managing debt levels and dividend payouts. Union's expansion projects also benefit from the regulated cost of service framework.

Financial Profile (CONTINUED)

- The 2016 and 2017 Dawn-Parkway expansions have been approved for construction and rate recovery. The total cost of both projects is over $1 billion, and their aim is to increase capacity along the Dawn-Parkway system to meet market interest for supply. Customers for this capacity include Enbridge, Gaz Metro, TransCanada and others.

Liquidity and Long-Term Debt Maturities

Credit Facility

As at September 30, 2015 ($ millions)	Maturity Date	Committed	CP	Available
Five-year syndicated credit facility	2019	500	0	500

- The Company's credit facility is mainly used to backstop its $500 million commercial paper program, which supports Company's working capital needs.
- DBRS views Union's liquidity as sufficient for its working capital funding requirements.
- Union is generally subject to seasonality as a part of its business, and as a result, its short-term debt and its gas inventory typically peak in the first and fourth quarters of every year.
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision requiring the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. As at September 30, 2015, the Company was in compliance with these covenants.

Debt Maturity Schedule

As at September 30, 2015 ($ millions)	2016	2017	2018	2019	Thereafter	Total
MTNs and Debentures	200	125	400	0	2,415	3,140

- The Company's debt maturity is well spread out, and $200 million of long-term debt is due in 2016. DBRS expects the refinancing risk to be minimal, given Union's good access to debt capital markets. The amounts due from 2016 to 2019 remain modest and are also within the financing capacity of the Company.
- In September 2015, the Company issued $200 million of 3.19% medium-term note debentures due September 2025 and $250 million of 4.20% Series 12 medium-term note debentures due June 2044.
- Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants. Therefore, the Company can have a maximum total debt-to-capitalization of 75%, and any incremental debt is subject to a minimum interest coverage test of 2.0x. As at September 30, 2015, the Company was in compliance with all covenants.

Regulation

Regulatory Overview

Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB. (Refer to "Assessment of Union's Regulatory Environment" on page 9). The regulatory environment in Ontario for natural gas distributors is viewed as reasonable.

Gas Distribution

- Union's distribution rates are set under a multi-year IR framework with rebasing under the COS framework occurring between the IR periods.
- From 2014 to 2018, Union will be regulated under the IR framework. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60%; thus, the annual net rate escalator in each year is 40% of inflation.
- For 2014 to 2018, the Company has an approved ROE of 8.93% and a deemed equity component of 36%. The earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
- The Company is allowed to pass through gas commodity, upstream transportation and demand side management costs to customers. It will also be allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
- On December 9, 2015, Union filed an application to for the quarterly rate adjustment mechanism commencing Jan 1, 2016. The application also implemented rates approved by the OEB in Union's 2016 Rates proceeding (Decision and Rate Order issued December 3, 2015). The combined annual bill impacts for a typical residential customer range from a decrease of $49.48 to $47.76 depending on location. The application was approved on December 22, 2015.

Gas Storage

- Storage services outside Union's franchise area or new storage services to customers in the franchise area are not regulated by the OEB. This accounts for approximately one-third of storage capacity.
- Storage within Union Gas's service area is regulated under the COS regulation.

Regulation (CONTINUED)

Upstream Regulation – Local Distribution Companies (LDCs) settlement

- In October 2014, TransCanada filed an application with the National Energy Board to convert one of its mainline gas pipelines to transport oil (part of the Energy East Project) and construct a new natural gas pipeline to replace the capacity in eastern Ontario and Québec (Eastern Mainline Project)
- In August 2015, it was announced that TransCanada had reached an agreement in principle with Eastern LDCs, including Union, addressing supply concerns caused by the Energy East and Eastern Mainline projects. Keys terms stated that TransCanada will size the Eastern Mainline Project to meet all firm service requirements resulting from 2016 and 2017 new capacity open seasons plus approximately 50 mmcf/d of additional capacity. In addition, TransCanada agreed to ensure a long-term benefit to natural gas consumers in Eastern Ontario and Québec of at least $100 million through to 2050.
- In October 2015, TransCanada, Union Gas, Enbridge Gas Distribution Inc. and Gaz Métro Limited Partnership executed a definitive agreement that protects the interests of natural gas customers and markets in Ontario and Québec, which aligned with the previously mentioned agreement.

Assessment of Union's Regulatory Environment

Criteria	Score	Analysis
Deemed Equity	Excellent Good Satisfactory **Below Average** Poor	The OEB allows Union to have a deemed equity of 36%, which is consistent with the other gas distributors in Ontario. However, deemed equity is below peer utilities in Canada and the United States.
Allowed ROE	**Excellent** Good Satisfactory Below Average Poor	For 2014 to 2018, the Company has an approved ROE of 8.93%. In addition, the earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
Energy Cost Recovery	Excellent **Good** Satisfactory Below Average Poor	The Company is able to fully pass through gas commodity and upstream transportation costs on a quarterly basis and demand side management costs on an annual basis. It is also allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
Capital Cost Recovery	Excellent **Good** Satisfactory Below Average Poor	Major capital costs are pre-approved by the regulator and added to rate base after the completion. Other capital spending after the base year will not be approved until the next rate application and approval of the rate base.
COS vs. IRM	Excellent Good **Satisfactory** Below Average Poor	Union's distribution rates are set under a five-year IR framework with rebasing under the COS framework between the IR periods. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60% of inflation; thus, the annual net rate escalator in each year is 40% of inflation.
Political Interference	Excellent **Good** Satisfactory Below Average Poor	There is low degree of government influence. Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.
Retail Rate	Excellent **Good** Satisfactory Below Average Poor	In the natural gas sector, the OEB regulates Ontario's natural gas utilities, which are required to submit the rates they propose to charge their customers to the Board for review and approval. The cost of natural gas distributed by Union Gas is set by the OEB at 9.4846 ¢/m3 (January 2016), which is lower than rates charged by Enbridge (11.7485 ¢/m3) and generally lower compared with other provinces in Canada. Rates are dictated by commodity costs and transportation tolls on pipelines. Economic environment in Ontario is considered good.
Stranded Cost Recovery	**Excellent** Good Satisfactory Below Average Poor	Union has very limited history of stranded costs.
Rate Freeze	**Excellent** Good Satisfactory Below Average Poor	Rates are based on the market price of natural gas plus distribution and servicing costs. Rates have not been frozen within the past decade.
Market Structure (Deregulation)	Excellent **Satisfactory** Poor	The natural gas sector is partially deregulated such that a portion of consumers can chose their supplier. Union Gas does not produce or extract natural gas but provides storage and transportation services. There is reasonable regulatory oversight on distribution rates.

Rating Update

On February 9, 2017, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures/Medium-Term Note Debentures rating of Union Gas Limited (Union or the Company) at "A," the Company's Commercial Paper rating at R-1 (low) and its Cumulative Redeemable Preferred Shares rating at Pfd-2. All trends are Stable. The rating confirmations reflect Union's relatively low-risk gas distribution business, which operates under a reasonable regulatory framework in an economically stable service territory with a large growing customer base.

DBRS rates Union on a stand-alone basis and does not assume any credit support from its ultimate parent, Spectra Energy Capital, LLC (Spectra, rated BBB, Stable). DBRS has determined that the merger between Enbridge Inc. (rated BBB (high), Under Review with Developing Implications) and Spectra, which was announced in September 2016, does not have an impact on the stand-alone credit quality of Union. (Please refer to the DBRS press release "DBRS Confirms Spectra Energy Capital, LLC and Rated Subsidiaries, Removes UR-Dev. Status," dated September 8, 2016.)

DBRS's assessment of Union's business risk considers the reasonable cost-of-service-based regulatory framework in Ontario, which provides a majority of the Company's earnings. Union operates under a five-year incentive regulation framework (IR; 2014 to 2018), which allows a return on equity (ROE) of 8.93% and provides predictable cash flows. Natural gas supply costs are passed through to customers, mitigating commodity price risk, with annual rate escalation indexed at 40% of inflation. Major capital expenditures are pre-approved by the Ontario Energy Board for inclusion in rates as projects are completed and placed in service. DBRS notes that, although the Company's regulated distribution and storage business accounts for the bulk of the Company's earnings, earnings generated from its unregulated storage business (approximately 13% of EBIT in 2015) could expose the Company to some earnings volatility. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates.

Union's credit metrics have been pressured over the past few years because of high capex spending. DBRS expects Union's capital spending program primarily on transmission expansions to be relatively high for the full year 2016 (approximately $1.0 billion in 2016 compared with approximately $750 million in 2015). As major projects (2016 Dawn-Parkway and the Burlington to Oakville) were placed in service in Q4 2016, capex for 2017 is expected to be slightly lower. DBRS expects the incremental full-year cash flow from projects placed in service and lower capex needs to result in a gradual improvement in credit metrics in 2017. In the medium term, the ratings could come under pressure should the Company fail to maintain its debt-to-capital ratio in line with the regulatory capital structure of 64% debt and 36% equity or should cash flow-to-debt remain below the 15% level on a sustained basis.

Issuer Description

Union Gas Limited is a utility that provides natural gas distribution, transmission and storage services in Southwestern, Northern and Eastern Ontario, serving approximately 1.4 million customers. Union Gas' common stock is held by Great Lakes Basin Energy L.P., a wholly owned limited partnership of Westcoast Energy Inc. (rated A (low)). Westcoast is indirectly owned by Spectra Energy Capital, LLC (rated BBB).

Rating Considerations

Strengths

1. Reasonable regulatory environment

Union's gas regulated distribution business operates under a reasonable regulatory environment, which provides predictable cash flows and allows the Company to earn a reasonable return on its investments. The Company currently operates under a five-year IR framework (2014 to 2018), with rebasing under the cost-of-service (COS) framework in between. Union's regulated distribution business is not exposed to commodity price risk, as gas supply costs are adjusted quarterly and passed through to customers.

2. Large customer base and strong franchise

Union's cash flow is supported by a large customer base (1.4 million), which is growing at a steady rate, making Union one of the largest natural gas distributors in Canada. Union provides transportation and storage services to almost all, and distribution to most, gas-fired generation plants in Ontario. The Company's Dawn storage facility (163 billion cubic feet (bcf) capacity) acts as a gateway for Marcellus/Utica gas supply and is strategically connected to key pipelines transporting natural gas to major Canadian and U.S. markets. Long-term demand for natural gas in Ontario is expected to remain relatively stable with continued growth in peak day demands. Union Gas' transmission system has an effective peak daily demand capacity of 7.2 bcf per day. Moreover, the Company's franchise area covers more than 400 communities in Northern, Southwestern and Eastern Ontario. Approximately 50% of Union's revenue is generated from residential customers, a segment that is less exposed to economic downturns.

3. Growing rate base

Union's regulated rate base has grown in the past few years with the addition of major transmission and expansion of storage assets to reach over $ 4.0 billion in 2016. The growing rate base is expected to benefit earnings and cash flow for the Company going forward.

Challenges

1. Consistent free cash flow deficits

Union has generated free cash flow deficits because of higher capex primarily for transmission expansions. This is expected to moderate in the next two years as several projects are completed and placed in service. DBRS expects the Company to finance the deficits prudently by managing debt levels, dividend payouts and infusion of equity in order to maintain an improved cash flow coverage and its debt-to-capital ratio within regulatory levels.

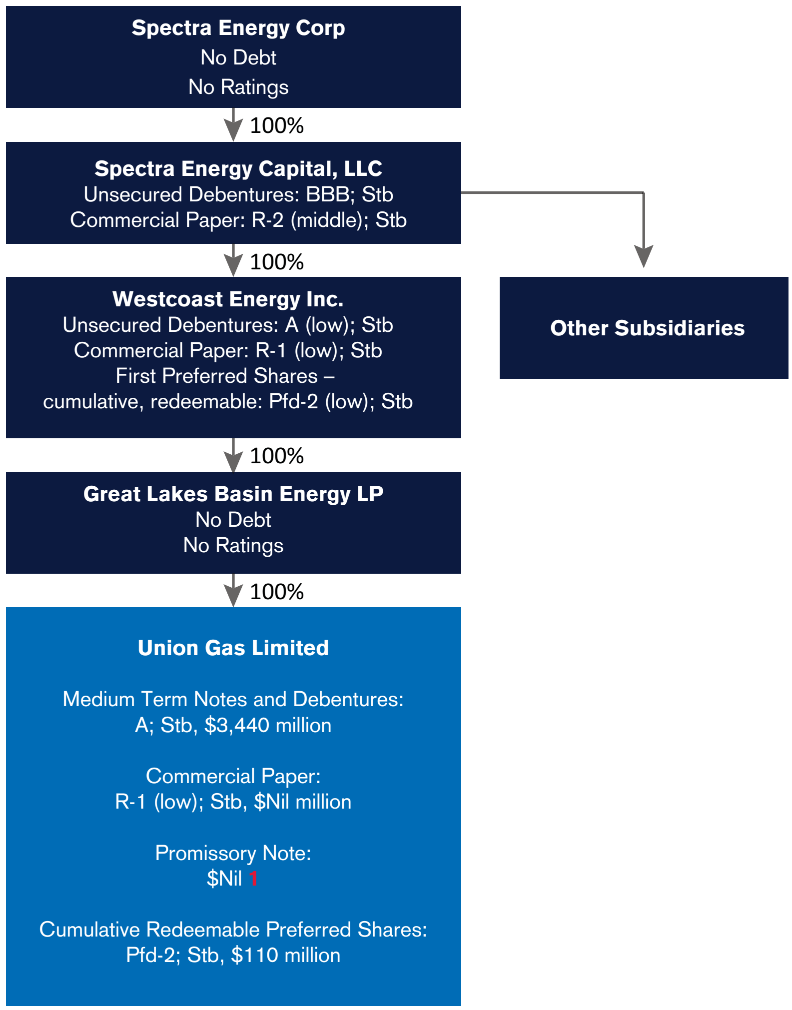
2. Seasonality and volume risk

The natural gas distribution business is subject to seasonality related to volume-based rates and the significant effect of the winter heating season on volumes. Union is exposed to a degree of demand risk, since its rates are based on forecast volumes, which are sensitive to changes in weather. Natural gas rates approved by the OEB assume normal weather conditions. Since a majority of the gas distributed by Union to the residential and commercial markets is used for space heating and is charged using volume-based rates, differences from normal weather could have a significant effect on the consumption of gas and on the Company's financial results. However, DBRS notes that under the IR framework, Union is allowed to recover shortfalls relative to normalized consumption on an annual basis with a one-year lag. The Company has also increased fixed monthly charges for residential and small commercial customers to partially mitigate the impact of volume changes.

3. Earnings volatility of non-regulated storage

Union's non-regulated storage earnings add some volatility in earnings. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates. In 2015, Union's non-regulated storage business accounted for approximately 13% of EBIT (12% in 2014).

Simplified Organizational Chart (as at September 30, 2016)



1 The Company has a promissory note to borrow up to $150 million from Great Lakes Basin Energy L.P. on an unsecured basis.

1 n/a: not available on a quarterly basis.

2016 Summary

- Approximately 90% of Union's earnings are generated from its regulated gas distribution, storage and transmission businesses. The balance is generated from the Company's unregulated storage business, which carries some earnings volatility resulting from seasonal fluctuation in demand and rates.
- Earnings before Interest and Taxes (EBIT) were marginally higher in the first nine months of 2016 (9M 2016) relative to 9M 2015 as a result incremental revenue from the 2015 Dawn-Parkway expansion project and higher storage pricing, partly offset by increased depreciation from projects placed into service.

2017 Outlook

- DBRS anticipates that Union's earnings will likely increase modestly in 2017 as a result of rate base growth, distribution rate increases and customer growth.
- Although weather conditions are unpredictable, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management Initiative, to have a modest impact on customer usage. This will likely be offset by modest annual customer growth of approximately 1% to 2%.

Total dividend payout ratio	1.3%	1.4%	26.5%	28.2%	52.6%	79.6%	97.1%

2016 Summary

- Union's key credit metrics have been pressured in the past few years because of the Company's capital program.
- Operating cash flow remains reasonably predictable and has generally improved in line with an increasing rate base. Operating cash flow was slightly higher in 9M 2016 relative to 9M 2015 because of higher storage and transportation revenues.
- Capex has been relatively high because of spending on the 2016 Dawn-Parkway expansion project ($400 million; in service Q4 2016) and the Burlington-Oakville project ($120 million; in service Q4 2016). Full-year capex for 2016 is expected to be approximately $1.0 billion.
- Union Gas has a flexible dividend policy. Dividends are primarily used to maintain Union's capital structure in line with regulatory-approved levels (64% debt and 36% equity). Dividends paid were $2 million for 9M 2016 and 9M 2015, reflecting ongoing preferred share dividends. Common stock dividends to Union's parent are paid on an annual basis, usually in the fourth quarter, and totalled $53 million in 2015.
- Union has generated free cash flow (before working capital changes) deficits because of high capex primarily for transmission expansion projects. This is expected to moderate in the medium term as projects are completed and placed in service.

2017 Outlook

- The 2016 financial plan estimated $500 million of expansion capex for 2017. An updated 2017 financial plan has not yet been released. Expansion capex for 2017 will include the 2017 Dawn-Parkway expansion and Panhandle Reinforcement project. Union's current expansion projects benefit from the regulated utility COS framework. At a total cost of $620 million, the 2017 Dawn-Parkway expansion has been approved for construction and rate recovery. The Dawn-Parkway expansions aim to increase capacity along the Dawn-Parkway system linking gas supply from the Marcellus/Utica to meet market demand. Customers for this capacity include Enbridge, Gaz Metro, TransCanada and others.
- The $265 million Panhandle Reinforcement project application was filed for OEB approval in June 2016, and approval is expected in H1 2017. The purpose of the project is to increase capacity on the Panhandle system to serve market growth in Southern Ontario.
- DBRS expects the Company to maintain its leverage in line with the OEB-approved capital structure by prudently managing debt levels, dividend payouts and infusion of equity.

Liquidity and Long-Term Debt Maturities

Credit Facility

As at September 30, 2016 ($ millions)	Maturity Date	Committed	CP	Available
Five-year syndicated credit facility	2021	700	0	700

- The Company's credit facility is mainly used to backstop its $700 million commercial paper program, which supports the Company's working capital needs.
- DBRS views Union's liquidity as sufficient for its working capital funding requirements.
- Union is generally subject to seasonality as a part of its business, and as a result, its short-term debt and its gas inventory typically peak in the first and fourth quarters of every year.
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision requiring the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. As at September 30, 2016, the Company was in compliance with these covenants.

Debt Maturity Schedule

As at September 30, 2016 ($ millions)	2017	2018	2019	2020	Thereafter	Total
MTNs and Debentures	125	400	0	0	2,915	3,440

- The Company's debt maturity is well spread out and manageable. DBRS expects the refinancing risk to be minimal, given Union's good access to debt capital markets.
- In May 2016, the Company issued $250 million of 2.81% medium-term note debentures due June 2026 and $250 million of 3.80% medium-term note debentures due June 2046.
- Under the terms of the trust indentures relating to certain debentures, the Company has agreed to several covenants. Therefore, the Company can have a maximum total debt-to-capitalization of 75%, and any incremental debt is subject to a minimum interest coverage test of 2.0 times (x). As at September 30, 2016, the Company was in compliance with all covenants.

Regulation

Regulatory Overview

- Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB (refer to section titled "Assessment of Union's Regulatory Environment"). The regulatory environment in Ontario for natural gas distributors is viewed as reasonable.

Gas Distribution

- Union's distribution rates are set under a multi-year IR framework, with rebasing under the COS framework occurring between the IR periods.
- From 2014 to 2018, Union will be regulated under the IR framework. Under this framework, the Company will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60%; thus, the annual net rate escalator in each year is 40% of inflation.
- For 2014 to 2018, the Company has an approved ROE of 8.93% and a deemed equity component of 36%. The earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
- The Company is allowed to pass through gas commodity, upstream transportation and demand side management costs to customers. It will also be allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
- On December 9, 2016, Union filed an application to for the quarterly rate adjustment mechanism commencing January 1, 2017. The application also implemented rates approved by the OEB in Union's 2017 Rates proceeding (Decision and Rate Order issued December 8, 2016) and rates previously approved on an interim basis to recover the cost consequences of Union's proposed cap-and-trade compliance plan (Interim Rate Order issued November 25, 2016). The combined annual bill increase for a typical residential customer ranged from $10.46 to $99.55, depending on location. The application was approved on December 21, 2016.

Gas Storage

- Storage services outside Union's franchise area or new storage services to customers in the franchise area are not regulated by the OEB. This accounts for approximately one-third of storage capacity.
- Storage within Union's service area is regulated under the COS regulation.

Upstream Regulation – Local Distribution Companies (LDCs) settlement

- In October 2014, TransCanada filed an application with the National Energy Board (NEB) to convert one of its mainline gas pipelines to transport oil (part of the Energy East Project) and construct a new natural gas pipeline to replace the capacity in eastern Ontario and Québec (Eastern Mainline Project).
- In August 2015, it was announced that TransCanada had reached an agreement in principle with Eastern LDCs, including Union, addressing supply concerns caused by the Energy East and Eastern Mainline projects. Keys terms stated that TransCanada will size the Eastern Mainline Project to meet all firm service requirements resulting from 2016 and 2017 new capacity open seasons plus approximately 50 mmcf/d of additional capacity. In addition, TransCanada agreed to ensure a long-term benefit to natural gas consumers in Eastern Ontario and Québec of at least $100 million through to 2050.
- In October 2015, TransCanada, Union Gas, Enbridge Gas Distribution Inc. and Gaz Métro Limited Partnership executed a definitive agreement that protects the interests of natural gas customers and markets in Ontario and Québec, which aligned with the previously mentioned agreement.
- On January 27, 2017, the NEB announced that a new hearing panel was assigned to review the Energy East and Eastern Mainline applications and that the new hearing panel had voided all decisions made by the previous hearing panel. The hearings for these applications have restarted from the beginning.

Assessment of Union's Regulatory Environment

Criteria	Score	Analysis
Deemed Equity Ratio	Excellent Good Satisfactory **Below Average** Poor	The OEB allows Union to have a deemed equity of 36%, which is consistent with the other gas distributors in Ontario. However, deemed equity is below peer utilities in Canada and the United States.
Allowed ROE	Excellent Good **Satisfactory** Below Average Poor	For 2014 to 2018, the Company has an approved ROE of 8.93%. In addition, the earnings sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
Energy Cost Recovery	Excellent **Good** Satisfactory Below Average Poor	The Company is able to fully pass through gas commodity and upstream transportation costs on a quarterly basis and demand side management costs on an annual basis. It is also allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings sharing mechanism.
Capital and Operating Cost Recoveries	Excellent **Good** Satisfactory Below Average Poor	Major capital costs are pre-approved by the regulator and added to the rate base after completion. Other capital spending after the base year will not be approved until the next rate application and approval of the rate base.
COS vs. IRM	Excellent Good **Satisfactory** Below Average Poor	Union's distribution rates are set under a five-year IR framework, with rebasing under the COS framework between the IR periods. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60% of inflation; thus, the annual net rate escalator in each year is 40% of inflation.
Political Interference	Excellent **Good** Satisfactory Below Average Poor	There is low degree of government influence. Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.
Stranded Cost Recovery	**Excellent** Good Satisfactory Below Average Poor	Union has very limited history of stranded costs.
Rate Freeze	**Excellent** Good Satisfactory Below Average Poor	Rates are based on the market price of natural gas plus distribution and servicing costs. Rates have not been frozen within the past decade.

Rating Update

On February 7, 2018, DBRS Limited (DBRS) confirmed the Issuer Rating and Unsecured Debentures/Medium-Term Note Debentures rating of Union Gas Limited (Union or the Company) at "A," the Company's Commercial Paper rating at R-1 (low) and its Cumulative Redeemable Preferred Shares rating at Pfd-2. All trends are Stable. The rating confirmations largely reflect Union's relatively low-risk gas distribution business, which operates under a supportive regulatory framework in an economically stable service territory with a large and growing customer base.

DBRS rates Union on a stand-alone basis and does not assume any credit support from its ultimate parent, Enbridge Inc. (Enbridge; rated BBB (high), Stable by DBRS). On November 2, 2017, Union and Enbridge Gas Distribution Inc. (EGD; rated "A," Stable by DBRS) filed a Mergers, Acquisitions, Amalgamation and Divestitures application with the Ontario Energy Board (OEB) to amalgamate. Enbridge expects the regulatory review to take the better part of 2018. Enbridge will seek approval from its Board of Directors to proceed with the amalgamation based on an assessment of the final regulatory approvals from the OEB, which is anticipated to take place in Q3 2018. Should the amalgamation not proceed, Union will file a new five-year incentive regulation (IR) framework application for 2019, and beyond. DBRS will continue to monitor the progress of the application as more information becomes available.

DBRS's assessment of the Company's business risk considers the supportive cost of service (COS)-based regulatory framework in Ontario, which provides a vast majority of Union's earnings. The Company has operated under an IR framework from 2014 to 2018, which allowed for a return on equity (ROE) of 8.93% and provided predictable cash flows. Natural gas supply costs are passed through to customers, mitigating commodity price risk, with annual rate escalation indexed at 40% of inflation. Major capital expenditures (capex) are pre-approved by the OEB for inclusion in rates as projects are completed and placed in service. DBRS notes that, although the Company's regulated distribution and storage business accounts for the bulk of Union's earnings, earnings generated from its unregulated storage business (approximately 12% of EBITDA in 2017) could expose the Company to some earnings volatility. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates.

Issuer Description

Union is a utility that provides natural gas distribution, transmission and storage services in Southwestern, Northern and Eastern Ontario, serving approximately 1.5 million customers. Union's common stock is held by Great Lakes Basin Energy L.P., a wholly owned limited partnership of Westcoast Energy Inc. (Westcoast; rated A (low), Stable by DBRS). Westcoast is indirectly owned by its ultimate parent, Enbridge.

Rating Update (CONTINUED)

Union's credit metrics have been pressured over the past few years because of high capex spending, primarily on transmission expansions. DBRS expects Union's capital spending program to be relatively high at approximately $1.0 billion in 2017 ($751 million spent for the nine months ended September 30, 2017 (9M 2017)). As major projects (including the 2017 Dawn-Parkway Expansion and the Panhandle Reinforcement Project) were placed in service in the second half of 2017 (H2 2017), capex for 2018 is expected to be lower. DBRS expects the incremental full-year cash flow from projects placed in service and the lower capex needs to result in a gradual improvement in credit metrics in 2018. In the medium term, the ratings could come under pressure should the Company fail to maintain its debt-to-capital ratio in line with the regulatory capital structure of 64% debt and 36% equity or should cash flow-to-debt remain below the "A" rating range on a sustained basis.

Rating Considerations

Strengths

1. Supportive regulatory environment
Union's gas-regulated distribution business operates under a supportive regulatory environment, which provides predictable cash flows and allows the Company to earn a reasonable return on its investments. The Company currently operates under a five-year IR framework (2014 to 2018), with rebasing under the COS framework in between IR periods. Union's regulated distribution business is not exposed to commodity price risk, as gas supply costs are adjusted quarterly and passed through to customers.

2. Large customer base and strong franchise
Union's cash flow is supported by a large customer base (1.5 million), which is growing at a steady rate, making Union one of the largest natural gas distributors in Canada. The Company provides transportation and storage services to almost all, and distribution to most, gas-fired generation plants in Ontario. Union's Dawn storage facility (163 billion cubic feet (bcf) capacity) acts as a gateway for Western Canadian and Appalachian gas supply and is strategically connected to key pipelines transporting natural gas to major Canadian and U.S. markets. Long-term demand for natural gas in Ontario is expected to remain relatively stable with continued growth in peak daily demand. Union's transmission system has an effective peak daily demand capacity of 7.2 bcf. Moreover, the Company's franchise area covers more than 400 communities in Northern, Southwestern and Eastern Ontario. Approximately 60% of Union's revenue is generated from residential and commercial customers, a segment that is less exposed to economic downturns.

3. Growing rate base
Union's regulated rate base has grown in the past few years with the addition of major transmission and expansion of storage assets to reach over $5.5 billion in 2017 ($4.8 billion in 2016). The growing rate base is expected to benefit earnings and cash flow for the Company going forward.

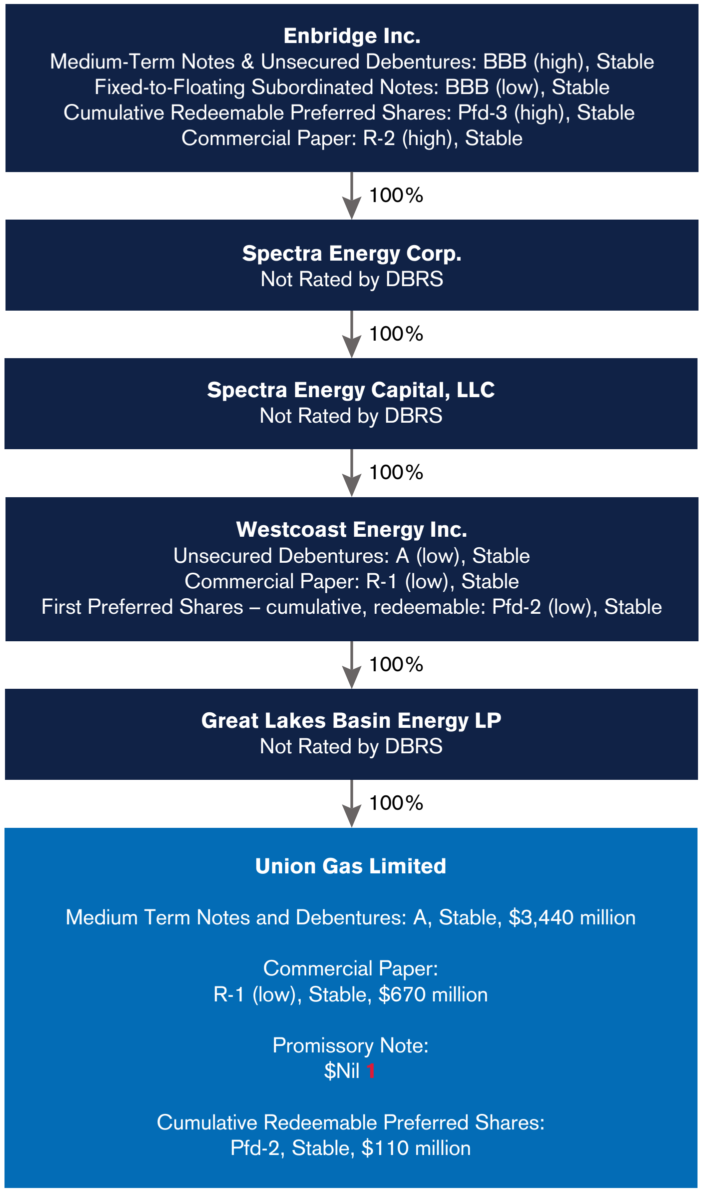
Challenges

1. Consistent free cash flow deficits
Union has generated free cash flow deficits because of higher capex primarily for transmission expansions. This is expected to moderate in the next two years as several projects have been completed and placed in service. In the interim, DBRS expects the Company to finance the deficits prudently by managing debt levels, dividend payouts and infusion of equity in order to maintain an improved cash flow coverage and keep its debt-to-capital ratio within regulatory levels.

2. Seasonality and volume risk
The natural gas distribution business is subject to seasonality related to volume-based rates and the significant effect of the winter heating season on volumes. Union is exposed to a degree of demand risk since its rates are based on forecast volumes, which are sensitive to changes in weather. Natural gas rates approved by the OEB assume normal weather conditions. Since a majority of the gas distributed by Union to the residential and commercial markets is used for space heating and is charged using volume-based rates, differences from normal weather could have a significant effect on the consumption of gas and on the Company's financial results. However, DBRS notes that under the IR framework, Union is allowed to recover shortfalls relative to normalized consumption on an annual basis with a one-year lag. The Company has also increased fixed monthly charges for residential and small commercial customers to partially mitigate the impact of volume changes.

3. Earnings volatility of non-regulated storage
Union's non-regulated storage earnings add some volatility in earnings. DBRS views this segment as higher risk than the regulated distribution and storage business because of the impact of seasonality on storage demand and rates. In 2017, Union's non-regulated storage business accounted for approximately 12% of EBITDA.

Simplified Organizational Chart (as at September 30, 2017)



1 The Company has a promissory note to borrow up to $150 million from Great Lakes Basin Energy L.P. on an unsecured basis.

1 n/a: not available on a quarterly basis.

Summary

- Approximately 88% of Union's EBITDA is generated from its regulated gas distribution, storage and transmission businesses. The balance is generated from the Company's unregulated storage business, which carries some earnings volatility resulting from seasonal fluctuation in demand and rates.
- The Company's EBITDA increased in 2016 primarily as a result of an increase in transportation revenue from the 2015 Dawn-Parkway Expansion project and higher storage pricing.
- For 9M 2017, the Company's EBITDA was marginally higher as it benefitted from additional revenue from the 2016 Dawn-Parkway Expansion and Burlington-Oakville pipeline projects. Earnings before interest and taxes (EBIT) remained relatively unchanged as the increase in operating revenue was largely offset by an increase in depreciation expense from projects placed into service.

Outlook 2018

- DBRS anticipates that Union's earnings will likely improve modestly in the near term as a result of customer growth and higher storage and transportation revenue from major capital projects placed in service H2 2017.
- Barring the impact of unpredictable weather conditions, DBRS expects ongoing energy conservation programs, including the Company's Demand Side Management Initiative, to have a modest impact on customer usage. However, any impact on earnings is mitigated through the regulatory framework. Furthermore, the Company expects modest annual customer growth of approximately 1% to 2%.

Cash flow/debt	10.7%	11.9%	10.8%	11.3%	11.0%	13.4%	14.4%	14.0%
EBIT interest coverage (times)	2.26	2.38	2.17	2.24	2.27	2.43	2.48	2.35
Total dividend payout ratio	1.3%	1.3%	1.4%	1.5%	28.2%	52.6%	79.6%	97.1%

Summary

- Operating cash flow was higher in year-end (YE) 2016 relative to YE2015, as a result of stronger earnings and lower tax installments. Operating cash flow remained stable in 9M 2017, relative to 9M 2016.
- The Company's capex has been relatively high over the last two years as a result of spending on transmission expansion projects, including:
  - The 2016 Dawn-Parkway Expansion project ($363 million; in service Q4 2016).
  - Burlington-Oakville pipeline project ($85 million; in service Q4 2016).
  - 2017 Dawn-Parkway Expansion project ($620 million; in service Q3 2017).
  - Panhandle Reinforcement Project ($243 million; in service Q4 2017).
- The elevated capex program has resulted in Union generating free cash flow deficits that have been largely funded by additional debt. Consequently, the Company's key credit metrics continue to be pressured. However, DBRS expects the pressure to abate in 2018, as the Company realizes the full impact of the incremental cash flow from projects placed in service in 2017.
- Union has a flexible dividend policy. Dividends are primarily used to maintain Union's capital structure in line with regulatory-approved levels (64% debt and 36% equity).

Outlook 2018

- DBRS expects Union's full-year capex for 2017 to be comparable with 2016 capex spending.
- DBRS expects overall capex to trend lower in 2018 as a result of lower spending on expansion projects.
- DBRS expects the Company to maintain its leverage in line with the OEB-approved capital structure by prudently managing debt levels, dividend payouts and infusion of equity.

Liquidity and Long-Term Debt Maturities

Credit Facility

(As at Sep. 30, 2017; $ millions)	Maturity Date	Committed	CP	Available
Multi-year syndicated	2021	700	670	30

- The Company's credit facility is mainly used to backstop its $700 million commercial paper program that supports Union's working capital needs.
- DBRS views the Company's liquidity as adequate to support its working capital funding requirements.
- Union is generally subject to seasonality as a part of its business and, as a result, its short-term debt and its gas inventory typically peak in the first and fourth quarters of every year.
- The facility contains a maximum 75% debt-to-capital covenant and includes a provision requiring the Company to repay all borrowings under the facility for a period of two days during the second quarter of each year. As at September 30, 2017, the Company was in compliance with the covenants.

Debt Maturity Schedule

(As at Sep. 30, 2017; $ millions)	2018	2019	2020	2021	Thereafter	Total
MTNs and Debentures	400	0	0	200	2,840	3,440

- Union's debt maturity is well spread out and manageable. DBRS expects the refinancing risk to be minimal, given the Company's good access to debt capital markets.
- In November 2017, the Company issued $250 million 2.88% medium term note debentures (unsecured), due November 2027, and $250 million 3.59% medium term note debentures (unsecured), due November 2047.
- Under the terms of the trust indentures relating to certain debentures, Union has agreed to several covenants. Therefore, the Company can have a maximum total debt-to-capitalization of 75%, and any incremental debt is subject to a minimum interest coverage test of 2.0 times (x). As at September 30, 2017, the Company was in compliance with all covenants.

Regulation

Regulatory Overview

- Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB (refer to the section titled "Assessment of Union's Regulatory Environment"). The regulatory environment in Ontario for natural gas distributors is viewed as supportive.

Gas Distribution

- Union's distribution rates are set under a multi-year IR framework, with rebasing under the COS framework occurring between the IR periods.
- From 2014 to 2018, Union will be regulated under the IR framework. Under this framework, the Company will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60%; thus, the annual net rate escalator in each year is 40% of inflation.
- For 2014 to 2018, the Company has an approved ROE of 8.93% and a deemed equity component of 36%. The earnings-sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers, and share 90% of any earnings above 10.93% with customers.
- The Company is allowed to pass through to its customers gas commodity and upstream transportation costs on a quarterly basis and demand side management costs on annual basis. It is also allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings-sharing mechanism.
- In September 2017, the Company filed an application with the OEB for new rates effective January 1, 2018, pursuant to an IR framework. The application as approved in January 2018 with the impact on a typical residential customer varying from $9 to $14 per annum, depending on the customer's location.
- The Company is also allowed to recover costs related to the implementation and operation of the Province of Ontario's of Cap and Trade program from its customers. As part of its compliance plan, the Company files a separate application with the OEB to recover the costs associated with the Cap and Trade program.
- On November 2, 2017, Union and EGD filed an application with the OEB to amalgamate. Enbridge expects that the regulatory review will take the better part of 2018. Enbridge's final decision on the amalgamation is dependent on OEB's approval and Enbridge's assessment of the regulatory outcomes.

Gas Storage

- Storage services outside Union's franchise area or new storage services to customers in the franchise area are not regulated by the OEB. This accounts for approximately one-third of storage capacity.
- Storage within Union's service area is regulated under the COS regulation.

Assessment of Union's Regulatory Environment

Criteria	Score	Analysis
Deemed Equity Ratio	Excellent Good Satisfactory **Below Average** Poor	The OEB allows Union to have a deemed equity of 36%, which is consistent with the other gas distributors in Ontario. However, deemed equity is below peer utilities in Canada and the United States.
Allowed ROE	Excellent Good **Satisfactory** Below Average Poor	For 2014 to 2018, the Company has an approved ROE of 8.93%. In addition, the earnings-sharing mechanism permits Union to fully retain the ROE from regulated operations up to 9.93%, share 50% of any earnings between 9.93% and 10.93% with customers and share 90% of any earnings above 10.93% with customers.
Energy Cost Recovery	Excellent **Good** Satisfactory Below Average Poor	The Company is able to fully pass through gas commodity and upstream transportation costs on a quarterly basis and demand side management costs on an annual basis. It is also allowed additional pass-through of costs associated with major capital investments and certain fuel variances, an allowance for unexpected cost changes that are outside of management's control, equal sharing of taxes between customers and an earnings-sharing mechanism.
Capital and Operating Cost Recoveries	Excellent **Good** Satisfactory Below Average Poor	Major capital costs are pre-approved by the regulator and added to the rate base after completion. Other capital spending after the base year will not be approved until the next rate application and approval of the rate base.
COS vs. IRM	Excellent Good **Satisfactory** Below Average Poor	Union's distribution rates are set under a five-year IR framework, with rebasing under the COS framework between the IR periods. Under this framework, Union will be able to increase rates annually by an inflation factor, which will be offset by a productivity factor of 60% of inflation; thus, the annual net rate escalator in each year is 40% of inflation.
Political Interference	Excellent **Good** Satisfactory Below Average Poor	There is low degree of government influence. Union's gas storage, transmission and distribution businesses are regulated by the OEB. However, rates for storage services to customers outside of Union's franchise area and rates for new storage services to customers within Union's franchise area are not regulated by the OEB.
Stranded Cost Recovery	**Excellent** Good Satisfactory Below Average Poor	Union has very limited history of stranded costs.
Rate Freeze	**Excellent** Good Satisfactory Below Average Poor	Rates are based on the market price of natural gas plus distribution and servicing costs. Rates have not been frozen within the past decade.

Summary:

Enbridge Gas Distribution Inc.

Credit Rating:	A-/Stable/--

Rationale

The ratings on Toronto-based Enbridge Gas Distribution Inc. (EGD) reflect Standard & Poor's Ratings Services' view of the company's excellent business risk profile and significant financial risk profile. In our opinion, supporting the excellent business risk profile are Enbridge Gas' low-risk, regulated cash flow; position as a monopoly gas network business; and lack of direct commodity price risk. The company has exposure to weather-induced variability in gas demand and cash flow and relatively high stand-alone leverage, which we believe offset these strengths.

EGD is a regulated natural gas distribution business that serves primarily eastern Ontario, including the Toronto region and Ottawa. It is an indirectly held, wholly owned subsidiary of Enbridge Inc. (A-/Stable/--). The company had about C$3.1 billion in debt as of Sept. 30, 2012.

The corporate credit rating on Enbridge Gas reflects our stand-alone evaluation of the company; at the current level, the ratings on ultimate parent, Enbridge, do not constrain the ratings on EGD. However, a material intercorporate lending arrangement between the parent and subsidiary links the credit profiles of the two. Accordingly, any decline in the rating on the parent would likely result in a similar decline in the rating on Enbridge Gas.

The company's low risk regulated cash flow supports its excellent business risk profile, in our opinion. Consistent and predictable regulatory decisions from its regulator, the Ontario Energy Board (OEB), support our view. Underpinning stable cash flows are rates that are reset based on cost of service methodology between periods of incentive regulation that last five years. During incentive periods, revenues and related rates are affected primarily by inflation and a regulator-established productivity factor. EGD does not face any commodity price risk because it passes the cost of gas to customers through an established quarterly adjustment mechanism.

We believe Enbridge Gas' natural monopoly and favorable markets support its competitive position. The company has limited bypass risk, and competition faces competition from oil and electricity. It continues to experience growth in customer numbers among its residential, commercial, and industrial customers.

EGD continues to be somewhat exposed to weather-induced variability in gas demand and related cash flows. Under the current regulatory framework, revenue shortfalls can result from lower-than-forecast volumes (typically from a warmer-than-expected winter). This shortfall can lead to somewhat greater volatility in earnings compared with those of other regulated utilities in Canada. Weather volatility led to an approximately 5% decline in funds from operations (FFO) through the first nine months of 2012.

Credit metrics for the stand-alone rating are relatively weak, in our view, with adjusted FFO (AFFO)-to-debt of 14.6% in the past 12 months. The company maintained relatively stable credit metrics from 2008-2011, which covered the first four years of the current incentive regulation period. AFFO-to-debt averaged about 17%.

Liquidity

We believe EGD has adequate liquidity as per our criteria. Our assessment incorporates the following expectations and assumptions:

- We expect the company's sources over uses to exceed 1.2x during the next 12 months, even in the unlikely event that EBITDA declines by 15%.
- Enbridge Gas will continue to have solid relationships with its banks, a generally high standing in credit markets, and very prudent risk management.
- We expect sources of liquidity in the next 12 months to include FFO of about C$500 million, and revolver availability of about C$132 million and low levels of cash on hand as of Sept. 30, 2012.
- Uses of funds are forecast to include capital spending of about C$500 million and reduced dividends, net of reinvestment to finance growth.
- We also expect parental support if required, provided the parent had economic incentive to do so.

We expect the company to continue complying with all of its covenants.

Outlook

The stable outlook reflects our expectations of EGD's continued sound operations and a fair regulatory environment. Given the intercorporate transaction links in the ratings to the parent, a positive outlook or upgrade during our two-year outlook horizon is unlikely unless Enbridge's credit profile also improves. A negative outlook or downgrade could occur if we were to lower the rating on the parent.

Table Of Contents

Summary:
Enbridge Gas Distribution Inc.

Corporate Credit Rating	A-/Stable/--
Profile Assessments	
BUSINESS RISK	EXCELLENT
FINANCIAL RISK	SIGNIFICANT

Vulnerable — Excellent

Highly leveraged — Minimal

Rationale

Business Risk: Excellent	Financial Risk: Significant
• Highly stable cash flows supported by regulated natural gas distribution, with commodity cost flow through • Exposure to variations in weather, which can reduce gas consumption and revenues	• Financial metrics that we believe will be relatively weak for the next two years

Outlook: Stable

The stable outlook reflects Standard & Poor's Ratings Services' expectations of Enbridge Gas Distribution Inc.'s (EGD) continued sound operations and a fair regulatory environment. We have equalized the ratings on EGD with those on parent Enbridge Inc.

Downside scenario

A negative outlook or downgrade could occur if we were to lower the rating on the parent.

Upside scenario

Given the intercorporate transaction links in the ratings to the parent, a positive outlook or upgrade during our two-year outlook horizon is unlikely unless Enbridge's credit profile also improves.

Standard & Poor's Base-Case Scenario

Our base-case assumptions include moderate volume growth in its jurisdiction and no major changes to its customer mix. We expect the regulatory environment to remain stable.

Assumptions

- Volume growth of approximately 2%
- Cost-of-service regulation in 2013, with a return to incentive-based mechanisms in 2014
- Funds from operations (FFO) of approximately C$400 million
- Maintenance of the regulated 64%-36% capital structure

Key Metrics

	2012A	2013E	2014E
AFFO/debt	17.7%	13%-14%	13-14%
Debt/EBITDA	4.3x	5.0x-5.5x	5.0x-5.5x
FFO interest coverage	4.3x	2.7x-3.2x	2.7x-3.2x

AFFO--Adjusted funds from operations. FFO--Funds from operations. A--Actual. E--Estimate.

Business Risk: Excellent

The "excellent" business risk profile reflects our view of the highly stable regulated cash flows from natural gas distribution in its jurisdiction. EGD expects to spend significant capex in coming years to replace and expand infrastructure –- we expect that the regulator will preapprove this. The company is operating under a cost-of-service methodology in 2013, and will transition back to incentive regulation in 2014. We expect no changes to the regulatory environment, and that EGD will continue to earn its allowed return on equity.

Financial Risk: Significant

We view the financial risk profile as "significant". EGD has a high degree of allowed leverage for regulatory purposes, and the regulated capital structure allows for more leverage than similar electrical local distribution companies. We expect to see stable financial metrics in the 13%-14% AFFO-to-debt range in the coming two years, with no change to the capital structure.

Liquidity: Adequate

We view Enbridge Gas' liquidity as "adequate" under our criteria for the next 12 months, with sources less uses being positive, and sources minus uses being greater than 1.2x.

Principal Liquidity Sources

- Committed credit facility availability of C$130 million
- Debt and share issuance of about C$650 million
- FFO of C$300 million-C$315 million

Principal Liquidity Uses

- Dividends to the parent of C$220 million
- Capex of C$650 million-C$680 million

Related Criteria And Research

- Methodology: Business Risk/Financial Risk Matrix Expanded, Sept. 18, 2012

Business And Financial Risk Matrix

	Financial Risk					
Business Risk	Minimal	Modest	Intermediate	Significant	Aggressive	Highly Leveraged
Excellent	AAA/AA+	AA	A	A-	BBB	--
Strong	AA	A	A-	BBB	BB	BB-
Satisfactory	A-	BBB+	BBB	BB+	BB-	B+
Fair	--	BBB-	BB+	BB	BB-	B
Weak	--	--	BB	BB-	B+	B-
Vulnerable	--	--	--	B+	B	B- or below

Note: These rating outcomes are shown for guidance purposes only. The ratings indicated in each cell of the matrix are the midpoints of the likely rating possibilities. There can be small positives and negatives that would lead to an outcome of one notch higher or lower than the typical matrix outcome. Moreover, there will be exceptions that go beyond a one-notch divergence. For example, the matrix does not address the lowest rungs of the credit spectrum (i.e., the 'CCC' category and lower). Other rating outcomes that are more than one notch off the matrix may occur for companies that have liquidity that we judge as "less than adequate" or "weak" under our criteria, or companies with "satisfactory" or better business risk profiles that have extreme debt burdens due to leveraged buyouts or other reasons. For government-related entities (GREs), the indicated rating would apply to the standalone credit profile, before giving any credit for potential government support.

Enbridge Gas Distribution Inc.

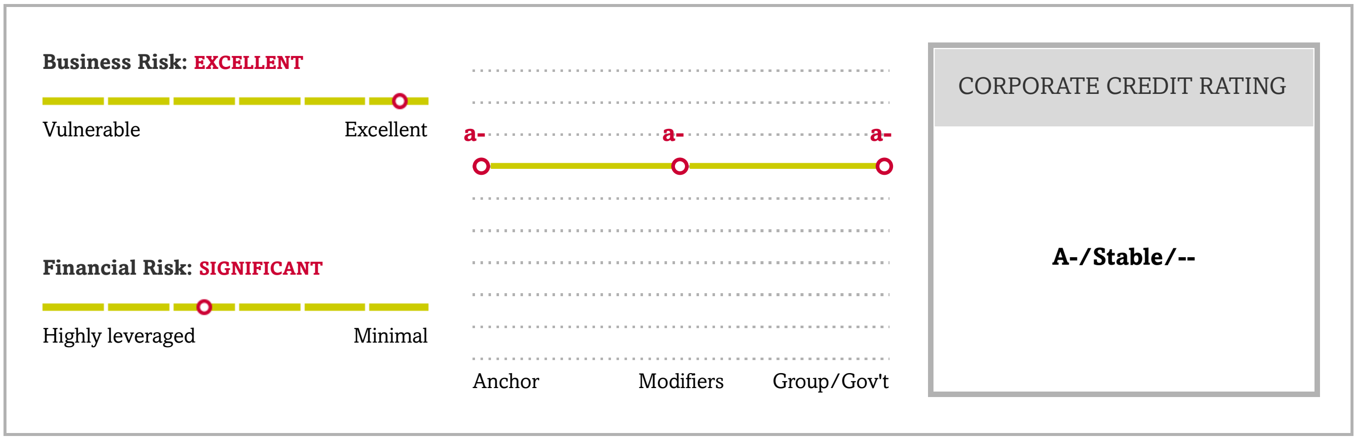
Primary Credit Analyst:
Gerald F Hannochko, Toronto 416-507-2589; gerald.hannochko@standardandpoors.com

Secondary Contact:
Stephen R Goltz, Toronto (1) 416-507-2592; stephen.goltz@standardandpoors.com

Table Of Contents

Summary:

Enbridge Gas Distribution Inc.



Rationale

Business Risk: Excellent	Financial Risk: Significant
• Diversified asset base primarily in low-volatility liquids pipelines and regulated natural gas distribution, with smaller contribution from sponsored investments, gas pipelines, and other services • Lack of direct commodity exposure for those segments, with market fundamentals and long-term contracts driving stable volumes	• Weak financial metrics for Standard & Poor's Ratings Services' two-year forecast period • Expected very high capital expenditures in the next several years, which will pressure financial metrics and require significant external financing

Outlook: Stable

The stable outlook on Enbridge Gas Distribution Inc. reflects that on Enbridge Inc. The stable outlook reflects our view that Enbridge's cash flow from both the existing businesses and new developments will remain very stable. We believe credit metrics, although weak for the ratings, will remain above established thresholds.

Downside scenario

A lowering of adjusted funds from operations (AFFO)-to-debt below 13% would likely result in a downgrade. Deterioration in the business risk or a failure to deliver the capital program on time and budget could also result in a lower rating.

Upside scenario

An upgrade during our two-year outlook horizon is unlikely without a material amount of deleveraging such that AFFO-to-debt improves above 20%.

Standard & Poor's Base-Case Scenario

Assumptions

- Volume flows on the mainline will remain stable
- The large capital program will exceed C$8 billion, funded through hybrids, drop-downs, debt, and equity
- Dividend growth will remain stable at about 7%
- No regulatory or permitting delays at major projects that would impair in service dates

Key Metrics

	2013A	2014E	2015E
EBITDA Margin	14.7%	15%-17%	19%-21%
AFFO/debt	12.2%	11%-13%	12%–14%
Debt/EBITDA	6.0x	6.0x–7.0x	5.5x–6.5x

AFFO--Adjusted funds from operations. A--Actual. E--Estimate.

Business Risk: Excellent

We view Enbridge's business risk as "excellent," with an "excellent" competitive position. The company generates a significant portion of its cash flow through tolls on the liquids pipelines and earnings from regulated gas distribution. Although the competitive tolling settlement expose Enbridge to a higher degree of volume risk, the fundamentals of increasing Alberta crude oil production and constrained export capacity bode well for seeing volumes remain strong. The company does not take direct commodity risk on the pipelines, and the contract profile is long-term with generally creditworthy counterparties. We expect new projects to feature long-term contracts that limit volume risk, with no commodity exposure that generate stable cash flows.

Gas distribution accounts for approximately 15% of cash flow, and we believe consistent and predictable regulation, commodity cost pass-through, and a demonstrated ability to earn the allowed return on equity established by the regulator support the excellent competitive position.

Financial Risk: Significant

We view Enbridge's financial risk profile as "significant". A very large capital program to expand existing and build new liquids pipelines will pressure financial metrics for the next several years. We expect that there will be very limited headroom above our 13% AFFO-to-debt downgrade threshold, and that financial policy, including the mix of external financing and dividend growth, will be crucial to maintaining the rating.

Liquidity: Adequate

We view Enbridge Inc.'s liquidity as "adequate." Sources less uses is positive, and sources over uses is greater than 1.2x. We believe the company will continue to have solid relationships with its banks, a generally high standing in credit markets, and generally prudent risk management.

Principal Liquidity Sources	Principal Liquidity Uses
• Expected FFO of C$4.4 billion-C$4.6 billion • Committed credit facilities availability of C$12.0 billion–C$12.5 billion • Equity and hybrid issuances of C$2.8 billion–C$2.9 billion	• Capital expenditures of C$8.7 billion–C$8.9 billion • Dividends of C$1.3 billion–C$1.5 billion

Other Modifiers

The modifying factors had no effect on the ratings.

Group Influence

We view Enbridge Pipelines Inc. and Enbridge Gas Distribution as "core" to parent Enbridge Inc. Our assessment equalizes the ratings on them with that on the parent.

Table Of Contents

Summary:

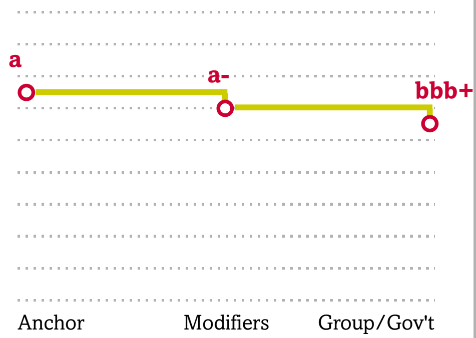
Enbridge Gas Distribution Inc.

Business Risk: **EXCELLENT**

Vulnerable — Excellent

Financial Risk: **INTERMEDIATE**

Highly leveraged — Minimal



CORPORATE CREDIT RATING

BBB+/Stable/--

Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• A relatively transparent and predictable regulatory regime • Commodity costs that are passed through • The ability to recover all prudently incurred fixed and variable operating costs • Diverse and relatively stable customer base	• Stable regulated cash flow • Credit metrics at low end of financial risk profile

Outlook: Stable

The stable outlook on Enbridge Gas Distribution Inc. (EGD) reflects the consolidated outlook on its parent group Enbridge Inc. (Enbridge) because Standard & Poor's Ratings Services' views EGD to be "core" to the Enbridge group under its group rating methodology.

The stable outlook on Enbridge reflects our assessment of the underlying operational and financial stability of the operating companies. We expect these operating subsidiaries, including EGD, to continue generating stable and predictable cash flow during our outlook period. We believe credit metrics, although weak for the ratings, will remain above established thresholds.

Downside scenario

Although unlikely, we could lower the 'a-' SACP on EGD should there be a material negative change in our assessment of the regulatory framework in Ontario, major cost overruns in its capital programs or an adverse regulatory decision that results in our expectation of adjusted funds from operations (AFFO)-to-debt to fall and stay below 11%. However, because we deem the subsidiary to be "core" to Enbridge this will not impact our 'BBB+' final rating on EGD unless the group credit profile (GCP) of 'bbb+' were also to deteriorate. Given EGD's relative size in the group, and all else being equal, we would not expect a decline in its performance and stand-alone credit profile (SACP) alone to negatively affect the GCP.

We expect EGD will continue generating stable cash flow under custom Incentive rate-setting method in 2015 and 2016 as it continues to execute its capital expenditure plan. We therefore expect that its SACP will be unchanged at 'a-' during our two-year outlook horizon.

Upside scenario

We could raise EGD's SACP by removing the "negative" comparable ratings analysis (CRA) if the company decides to adopt a more conservative leverage target improving its AFFO-to-debt to above 18% permanently, although we consider this unlikely during our outlook horizon. Nevertheless, under those circumstances, the ratings on EGD would remain the same as those on Enbridge, capped by the GCP of 'bbb+', unless the GCP at the parent level also improved, which we do not expect during our outlook period. In addition, we do not expect an improvement in EGD's SACP alone to drive an increase to the parent's GCP given their relative sizes.

Standard & Poor's Base-Case Scenario

EGD is Canada's largest natural gas distribution utility operator. The company operates more than 37,600 kilometers of gas distribution pipelines throughout the province of Ontario. EGD is a wholly owned subsidiary of Enbridge. The ratings' key driver continues to be the Ontario Energy Board's (OEB) regulatory framework and the utility's performance within it.

Assumptions

- EGD will continue to focus on its regulated natural gas distribution operations and remains contained in its unregulated activities
- It will not experience any adverse and material regulatory decisions and that the regulatory regime will remain transparent and stable
- The company will earn close to its allowed return on equity of 9.30% in 2015 and 9.19% in 2016 on its deemed capital structure
- Customer growth will be about 35,000 customers per year
- Gas distribution rates for 2014-2018 will be set under OEB's relatively new custom incentive rate-making (CIR)
- Dividend payout to parent will remain at 100% of earnings

Key Metrics

	2014A	2015E	2016E
AFFO/debt	12.4	12%-14%	13%-15%
Debt/EBITDA	6.4x	5.5x-6.5x	4.5x-5.5x

AFFO--Adjusted funds from operations. A--Actual. E--Estimated.

Business Risk: Excellent

EGD's "excellent" business risk profile reflects our assessment of the OEB regulatory framework that underpins the company's predictable and steady cash flow. In our view, the regulatory process is transparent, consistent, and predictable. Supporting consistency and predictability are the use of standard methodology applied to all utilities in its jurisdiction, including a transparent formula for allowed returns, and a consistent deemed capital structure that has not changed for many years. In addition, during times of change, the regulator follows a public process of study and consultation that allows management to adjust to new regulatory or market developments.

Gas distribution rates are typically determined in a timely fashion and allow for the recovery of prudently incurred operating and capital costs and the opportunity to earn a modest return. Furthermore, several mechanisms support timely recovery of material and unexpected capital costs, including rate riders and (in some circumstances) the ability to request a rate-reset hearing.

Under the Ontario regulatory regime, natural gas distributors, including EGD, have an obligation to ensure adequate supply of natural gas which increases operational risk; however the company has been able to mitigate this with diverse sources supply of natural gas. The completion of the Greater Toronto Area (GTA) project will diversify EGD's sources of natural gas supply, including the Western Canada Sedimentary Basin (WCSB), Chicago, Dawn, and Niagara (Marcellus/Utica formations) as opposed to being primarily dependent on WCSB before the expansion. Furthermore commodity costs (natural gas) flow through rates, thereby limiting EGD's exposure to commodity risk and associated cash flow volatility.

Our view of the business risk assessment also reflects our expectation that the company's customer profile will be stable, with majority of the gas distribution revenues coming from residential customers, who are less sensitive to macroeconomic stresses and business cycles. However, demand for natural gas in the residential-based customer class can change due to weather-driven changes, plus the lack of weather normalization in the rate structure can result in cash flow volatility.

Financial Risk: Intermediate

Our assessment of EGD's financial risk is "intermediate". We base this on our forecast AFFO-to-debt metric of 12%-14%, at the low end of the "intermediate" financial risk category during our outlook horizon. We use the low-volatility table when assessing the utility's cash flows to reflect the stability and predictability of the cash flow stream and that majority of the company's cash flows and operations are at the low end of the utility risk spectrum in gas distribution. EGD has completed a cost-of-service (COS) application under the CIR framework in 2014. In our forecast, we included the recovery of the purchase gas variance account and expect additional capital spending associated with the GTA project to be recover in the next COS application in 2019 subject to prudency testing.

The "excellent" business risk and "intermediate" financial risk profiles produce a split anchor score of 'a+/a'. We choose the lower score to reflect the weaker business risk of the gas distribution operation in Ontario relative to other utility operators. In Ontario, gas distributors have an obligation to supply natural gas and tariff rates are not subject to weather normalization which other utility operators such as electricity distribution are not subject to.

Liquidity: Adequate

Our view on EGD's liquidity is "adequate." We expect that liquidity sources will be adequate to cover uses more than 1.1x in the next 12 months. We expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our view, EGD has sound relationships with its banks and generally prudent financial risk management. In the event of an unexpected financial stress situation, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve the credit metrics.

Principal Liquidity Sources	Principal Liquidity Uses
• Cash FFO of about C$630 million in the next 12 months • Committed credit facilities availability of about C$470 million as of September 2015, maturing from 2017-2019	• Capital expenditure of about C$620 million over the next 12 months • Dividends of about C$225 million over the next 12 months

Other Modifiers

We assigned a "negative" CRA modifier to EGD to reflect the company's overall credit strength. EGD's AFFO-to-debt was about 12.5% in 2014. During the outlook period, we project AFFO-to-debt of 12%-14%, at the low end of the "intermediate" financial risk category, which warrants a "negative" CRA assessment.

Group Influence

We base our ratings of EGD on our SACP of the company, and our view that the subsidiary is "core" to the Enbridge group. We believe that EGD is unlikely to be sold, and that its operations in regulated gas distribution is integral to the overall group strategy of Enbridge, itself essentially a large diversified holding company with operations in transporting crude oil and natural gas gathering, transporting, treatment and processing operations. We believe that senior management has demonstrated a long-term commitment of support. The parent has a track record of providing equity and liquidity support to EGD as required. The subsidiary is successful at what it does, it has been operating for more than five years (so there is no startup risk), and we are not aware of any ongoing performance problems that could result in underperformance against the group management earnings targets. We believe the parent is well aware of the limited returns allowed for regulated utilities and has shown consistent support of the subsidiary during a period of major capital growth. Furthermore, the parent and subsidiary are closely linked and share the same brand.

However, in our view, there are insufficient insulating factors to achieve ratings separation between EGD and its parent, based on our criteria, so the final rating on the subsidiary is linked to that on Enbridge, resulting in a negative one-notch impact.

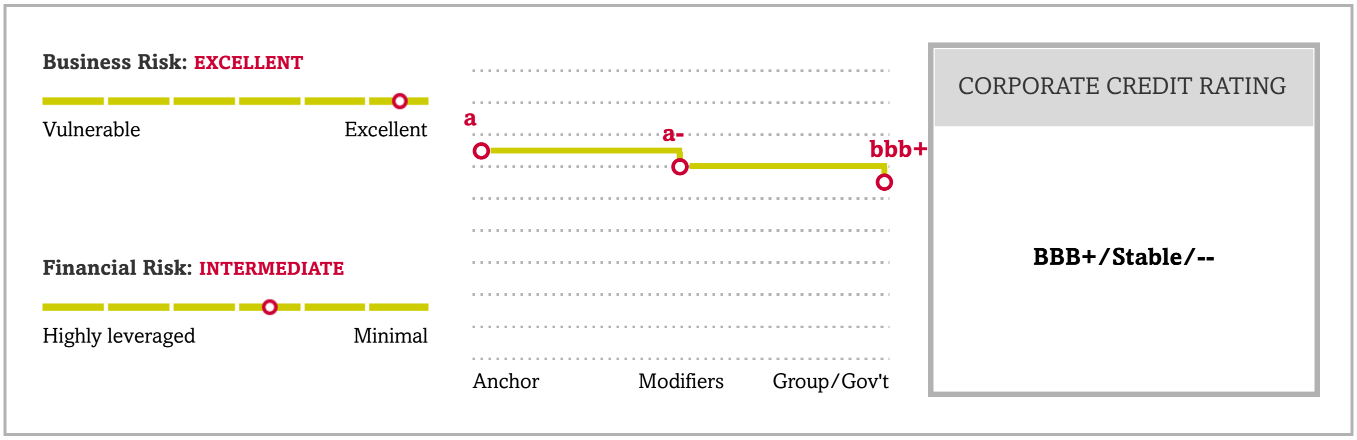
Table Of Contents

Summary:
Enbridge Gas Distribution Inc.



Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• A relatively transparent and predictable regulatory regime • Commodity costs that are passed through • The ability to recover all prudently incurred fixed and variable operating costs • A coverage area that includes most of Ontario's largest cities, with a diverse and relatively stable customer base	• Stable regulated cash flow • Credit metrics at low end of financial risk profile

Outlook: Stable

The stable outlook on Enbridge Gas Distribution Inc. (EGD) reflects the consolidated outlook on its parent group Enbridge Inc. (Enbridge) because S&P Global Ratings views EGD to be core to the Enbridge group under its group rating methodology.

The stable outlook on Enbridge reflects our assessment of the underlying operational and financial stability of the operating companies. We expect these operating subsidiaries, including EGD, to continue generating stable and predictable cash flow during our outlook period. We believe credit metrics, although weak for the ratings, will remain above established thresholds.

Downside scenario

Although unlikely, we could lower the 'a-' SACP on EGD should there be a material negative change in our assessment of the regulatory framework in Ontario, major cost overruns in its capital programs or an adverse regulatory decision that results in our expectation of adjusted funds from operations (AFFO)-to debt to fall and stay below 11%. However, because we deem the subsidiary to be core to Enbridge this will not affect our 'BBB+' final rating on EGD unless the group credit profile (GCP) of 'bbb+' were also to deteriorate. Given the company's relative size in the group, and all else being equal, we would not expect a decline in its performance and stand-alone credit profile (SACP) alone to negatively affect the GCP.

We expect EGD will continue generating stable cash flow under custom incentive rate-making (CIR) mechanism in 2016 and 2017 as it continues to execute its capital expenditure plan. We therefore expect that the 'a-' SACP will not change during our two-year outlook horizon.

Upside scenario

We could raise EGD's SACP if the company decides to adopt a more conservative leverage target improving its sustained AFFO-to-debt to above 18%, although we consider this unlikely during our outlook horizon. Nevertheless, under those circumstances, the ratings on EGD would remain the same as those on Enbridge, capped by the GCP of 'bbb+', unless the GCP at the parent level also improved, which we do not expect during our outlook period. In addition, we do not expect an improvement in EGD's SACP alone to drive an increase to the parent's GCP given their relative sizes.

Our Base-Case Scenario

EGD is Canada's largest natural gas distribution utility operator. The company operates more than 37,600 kilometers of gas distribution pipelines throughout the province of Ontario. EGD is a wholly owned subsidiary of Enbridge. The ratings' key driver continues to be the relationship between EGD and its parent. The key driver of EGD's SACP continues to be the Ontario Energy Board's (OEB) regulatory framework and the utility's performance within it.

Assumptions

- EGD will continue to focus on its regulated natural gas distribution operations and remains contained in its unregulated activities
- It will not experience any adverse and material regulatory decisions and that the regulatory regime will remain transparent and stable
- The company will earn close to its allowed return on equity of 9.19% in 2016 and 8.78% in 2017 on its deemed capital structure
- The utility will gain about 30,000 customers per year
- Gas distribution rates for 2017 and 2018 will be set under OEB's CIR framework
- Dividend payout to parent will remain at 100% of earnings
- Enbridge would provide timely equity injection to EGD
- The cap and trade carbon tax will be a pass-through to ratepayers and have no impact on EGD's financial statistics

Key Metrics

	2015A	2016E	2017E
AFFO/debt	12.00	13%-14%	13%-14%
Debt/EBITDA	6.58x	5.0x-5.5x	5.0x-5.5x

AFFO--Adjusted funds from operations. A--Actual. E--Estimated.

Business Risk: Excellent

EGD's excellent business risk profile reflects our assessment of the OEB regulatory framework that underpins the company's predictable and steady cash flow. In our view, the regulatory process is transparent, consistent, and predictable. Supporting consistency and predictability are the use of standard methodology applied to all utilities in its jurisdiction, including a transparent formula for allowed returns, and a consistent deemed capital structure that has not changed for many years. In addition, during times of change, the regulator follows a public process of study and consultation that allows management to adjust to new regulatory or market developments.

Gas distribution rates are typically determined in a timely fashion and allow for the recovery of prudently incurred operating and capital costs and the opportunity to earn a modest return. Furthermore, several mechanisms support timely recovery of material and unexpected capital costs, including rate riders and (in some circumstances) the ability to request a rate-reset hearing.

Under the Ontario regulatory regime, natural gas distributors, including EGD, have an obligation to ensure adequate supply of natural gas which increases operational risk; however, the company has been able to mitigate this with diverse sources of natural gas. The completion of the Greater Toronto Area (GTA) project will diversify EGD's sources of natural gas supply, including the Western Canada Sedimentary Basin (WCSB), Chicago, Dawn, and Niagara (Marcellus/Utica formations), as opposed to depending primarily on WCSB before. Furthermore, commodity costs (natural gas) flow through rates and are recovered through a quarterly adjustment mechanism, thereby limiting EGD's exposure to commodity risk and associated cash flow volatility.

Our view of the business risk assessment also reflects our expectation that the company's customer profile will be stable, with majority of the gas distribution revenues coming from residential customers, who are less sensitive to macroeconomic stresses and business cycles. However, demand for natural gas in the residential-based customer class can change due to weather-driven changes, plus the lack of weather normalization in the rate structure exposes EGD to volume risk which can result in cash flow volatility.

The utility's service territory covers most of Ontario's largest cities including the GTA, where new homes construction has surged. As a result, we expect the utility would also benefit from a modest uptick in new customer growth.

Financial Risk: Intermediate

Our assessment of EGD's financial risk profile is intermediate. We base this on our forecast AFFO-to-debt metric of 13%-14%, at the low end of the intermediate financial risk category during our outlook horizon. We use the low-volatility table when assessing the utility's cash flows to reflect the stability and predictability of the cash flow stream and that majority of the company's cash flows and operations are at the low end of the utility risk spectrum in gas distribution. In our forecast, we expect EGD to recover additional capital spending associated with the GTA project in the next cost-of-service application in 2019 subject to prudency testing.

In 2015, the Government of Ontario passed legislation to establish a cap and trade program (carbon tax) to meet greenhouse gas compliance obligation. The regulation came into effect on July 2016. We expect the tax to remain pass-through to rate-payers and should have no impact on EGD's financial performance.

Liquidity: Adequate

Our view on EGD's liquidity is adequate. We expect that liquidity sources will be adequate to cover uses at 1.11x in the next 12 months. We expect that, in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our view, EGD has sound relationships with its banks and generally prudent financial risk management. In the event of an unexpected financial stress situation, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve the credit metrics.

Principal Liquidity Sources	Principal Liquidity Uses
• Cash FFO of about C$650 million in the next 12 months • Committed credit facilities availability of about C$485 million as of September 2016, maturing in 2018	• Debt maturities of about C$500 million over the next 12 months • Capital expenditure of about C$520 million over the next 12 months • Dividends of about C$280 million over the next 12 months

Other Modifiers

We assigned a negative comparable rating analysis (CRA) modifier to EGD, reflecting credit metrics are at the low end of the financial risk profile. EGD's AFFO-to-debt was about 12% in 2015. During the outlook period, we project AFFO-to-debt of about 13%-14%, also consistent with the low end of the intermediate FRP, which warrants a negative CRA assessment.

Group Influence

We base our ratings of EGD on our SACP of the company, and our view that the subsidiary remains a core entity to the Enbridge group notwithstanding the parent's proposed friendly merger with Spectra Energy Corp.

We believe that EGD is unlikely to be sold, and that its operations in regulated gas distribution is integral to the overall group strategy of Enbridge, itself essentially a large diversified holding company with operations in transporting crude oil and natural gas gathering, transporting, treatment and processing operations. We believe that senior management has demonstrated a long-term commitment of support. The parent has a track record of providing equity and liquidity support to EGD as required. The subsidiary is successful at what it does, it has been operating for many years (so there is no startup risk), and we are not aware of any ongoing performance problems that could result in underperformance against the group management earnings targets. We believe the parent is well aware of the limited returns allowed for regulated utilities and has shown consistent support of the subsidiary during a period of major capital growth. Furthermore, the parent and subsidiary are closely linked and share the same brand.

However, in our view, there are insufficient insulating factors to achieve ratings separation between EGD and its parent, based on our criteria, so the final rating on the subsidiary is linked to that on Enbridge, resulting in a negative one-notch impact.

Research Update:

Enbridge Gas Distribution Corporate Credit Rating Raised To 'A-' From 'BBB+' On Insulation Protection

Overview

- We are raising our ratings on Enbridge Gas Distribution (EGD), including our long-term corporate credit and senior unsecured debt ratings to 'A-' from 'BBB+'.
- The upgrade reflects our view that the regulatory restriction and Enbridge's strategy with respect to EGD preserve the utility's credit strength and are consistent with our view of an insulated subsidiary.
- The stable outlook reflects our expectation that EGD will continue generating stable and predictable cash flows from its regulated gas distribution business.
- The stable outlook also reflects our expectation that Amalco (the combine entity from the potential amalgamation) will continue to be insulated and that the regulatory restriction and Enbridge's strategy toward Amalco to preserve the combine utilities' credit strength remains unchanged.

Rating Action

On Nov. 20, 2017, S&P Global Ratings raised its long-term corporate credit on Ontario-based utility operator Enbridge Gas Distribution (EGD) to 'A-' from 'BBB+'. S&P Global Ratings also raised its issue-level ratings on EGD's senior unsecured debentures to 'A-' from 'BBB+', its preferred stock global scale rating to 'BBB' from 'BBB-', and its preferred stock Canada scale rating to 'P-2' from 'P-2(Low)'. At the same time, S&P Global Ratings affirmed its 'A-1(Low)' Canada scale rating on the utility's commercial paper program. The outlook is stable.

Rationale

The upgrade reflects our view that the regulatory restriction and parent Enbridge Inc.'s strategy with respect to EGD will continue to preserve the utility's credit strength and are consistent with our view of insulation on a subsidiary. Specifically, the regulatory restriction limits EGD's business activities and requires the utility to maintain the common equity thickness at the regulatory deemed capital structure. This restriction will prevent the subsidiary from supporting the group to the extent that it would impair the utility's stand-alone creditworthiness. Furthermore, we expect that similar insulation features will continue through to the recently announced potential amalgamation of EGD and Union Gas Ltd. (UGL) that was announced on Nov. 2, 2017 with the filing of the merger, amalgamation, acquisition, and divestiture application to the Ontario Energy Board (OEB). In addition, we expect Enbridge's current strategy with respect to its regulated gas distribution utilities, including both EGD and UGL, will continue through Amalco (the combine entity from the potential amalgamation), preserving the credit strength of the regulated utilities.

Our view of EGD's business risk has not changed. The company continues to operate under a supportive regulatory regime. The OEB, the regulator for the Province of Ontario, continues to provide a transparent, consistent, and independently operated regulatory framework that supports a stable and predictable cash flow model, which we view as a key credit strength.

Under the current framework, natural gas distributors, including EGD, have an obligation to ensure an adequate supply of natural gas, which increases operational risk. The company has been able to mitigate this with diverse sources of natural gas. The recent completion of the Greater Toronto Area project will diversify EGD's sources of natural gas supply. Furthermore, commodity costs flow through rates and are recovered through a quarterly adjustment mechanism, thereby limiting EGD's exposure to commodity risk and associated cash flow volatility.

The business risk assessment also reflects our expectation that EGD's customer profile will be stable, with the majority of the customer base in the residential and small business segments, which are less sensitive to macroeconomic stresses and business cycles. However, demand for natural gas in the residential customer class can change due to weather-driven fluctuations, plus the lack of weather normalization in the rate structure exposes EGD to volume risk, which can result in cash flow volatility. We do not expect the utility's customer composition to change materially over the next two years.

We continue to assess EGD's financial measures against our most permissive leverage benchmarks because the majority of the utility's cash flow is generated from the low end of the utility risk spectrum in gas distribution under a highly supportive regulatory framework. During the outlook period, we forecast adjusted funds from operations (AFFO)-to-debt of about 12%-13%, consistent with the significant financial risk profile (FRP). As a result, we revised EGD's FRP to significant from intermediate and revised the comparable rating analysis modifier to neutral from negative. This has no impact to EGD's stand-alone credit profile (SACP).

Our base-case scenario includes the following assumptions:

- EGD continues to focus on its regulated natural gas distribution operations and its unregulated activities remain a relatively small part of its overall business and cash flow mix
- EGD does not experience any adverse and material regulatory decisions and that the regulatory regime remains transparent and stable
- EGD to earn close to its allowed return on equity on its deemed capital structure
- New customer growth of about 1% per year

- Dividend payout to the parent at 100% of operating cash flow
- Enbridge provides timely equity injection to EGD to maintain its deemed capital structure
- The cap and trade carbon tax to be a pass-through to ratepayers and have no impact on EGD's financial metrics

Liquidity

We view EGD's liquidity as adequate. We expect that liquidity sources will be adequate to cover uses more than 1.1x in the next 12 months. We expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our view, EGD has sound relationships with its banks and generally prudent financial risk management. In the event of an unexpected financial stress situation, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve the credit metrics.

Principal liquidity sources are:

- Cash balance of C$3 million as of Sept. 30, 2017
- Cash funds from operations (FFO) of about C$570 million over the next 12 months
- Committed credit facilities availability of about C$245 million as of Sept. 30, 2017, maturing in 2019

Principal liquidity uses are:

- Debt maturities of C$200 million over the next 12 months
- Maintenance capital expenditure of about C$310 million over the next 12 months
- Dividends of about C$600 million over the next 12 months

Outlook

The stable outlook reflects our expectation that EGD will continue to generate stable and predictable cash flow. During the outlook period, we expect EGD's AFFO-to-debt to be about 12%-13%. In addition, the outlook reflects the consolidated outlook on parent Enbridge because S&P Global Ratings views EGD as an insulated subsidiary and allows the rating on the utility to be above the group credit profile (GCP).

Furthermore, the stable outlook reflects our expectation that EGD's insulation features will continue through to the new entity, Amalco, and Enbridge's strategy to preserve the combined utilities' credit strength will be unchanged.

Downside scenario

We could take a negative rating action on EGD should there be a material negative change in our assessment of the regulatory framework in Ontario, an increase in unregulated operations and cash flow beyond a modest amount, major cost overruns in its capital programs, or an adverse regulatory decision that results in our expectation that the utility's AFFO-to-debt will fall and stay below 11%.

In addition, we could lower the rating on EGD if we lower our GCP on Enbridge. This could happen if the parent's consolidated AFFO-to-debt ratio falls and stays below 11%, which could result from weaker financial performance due to mainline volumes falling below expectations, or more aggressive funding of the large combined capital program throughout our outlook period.

Alternatively, a negative rating action is possible if the company decides to amalgamate EGD and UGL without preserving the insulation provisions and credit quality of Amalco.

Upside scenario

A positive rating action on the utility is unlikely without an upgrade to the Enbridge GCP, which the consolidated rating on the parent determines, in conjunction with an upgrade to the SACP on EGD. This is because we cap our rating on the company at the lesser of the SACP or one notch above the GCP, given our assessment of the insulation measures in place that allow a one-notch separation as an insulated subsidiary.

An upgrade to EGD's SACP would require the company to improve financial measures with AFFO-to-debt approaching and staying above 14%, which could happen if the company's gas distribution margin increases substantially on a permanent basis. However, we do not expect this to happen during our outlook period, given rates are regulated.

An upgrade at the group level would require the company to improve financial measures with consolidated AFFO-to-debt above 15%-16% on a sustained basis. Given EGD's relatively small cash flow contribution to the Enbridge group, improvement to the company's financial measures alone would have a negligible impact on the ratings on Enbridge.

Issue Ratings

Capital structure

- EGD, the operating subsidiary, has about C$3,680 million of senior unsecured debentures.

Analytical conclusions

- Given that EGD is an investment-grade regulated utility and all the senior unsecured debt is at the operating subsidiary level, we do not consider it structurally subordinated. As a result, we equalize the issue-level rating on the unsecured debt with our 'A-' long-term corporate credit rating on the utility.

Research

Union Gas Ltd.

Primary Credit Analyst:
Gerald F Hannochko, Toronto (1) 416-507-2589; gerald_hannochko@standardandpoors.com

Secondary Contact:
Dylan S Singh, Toronto; dylan_singh@standardandpoors.com

Table Of Contents

Union Gas Ltd.

Major Rating Factors

Corporate Credit Rating
BBB+/Stable/A-2

Strengths:

- Dominant market position in gas distribution within franchise area
- Regulated cash flows, which bolster stability
- No commodity risk

Weaknesses:

- Exposure to weather-induced variability in gas demand
- High leverage

Rationale

The ratings on Union Gas Ltd., an Ontario-based natural gas distribution company, reflect Standard & Poor's Ratings Services' view of the consolidated credit profile of its ultimate parent, Spectra Energy Corp. (BBB+/Stable/--), and Spectra's strong business risk profile and significant financial risk profile. We view the company's management and governance as "fair". Union Gas' monopoly-like market position, largely regulated asset base, and stable cash flow generation also support the ratings, in our opinion. We believe that the company's significant financial risk profile and softer key credit ratios counterbalance these strengths.

Union Gas is the second-largest natural gas distribution utility in Canada, serving approximately 1.4 million customers in northern, southwestern, and eastern Ontario. The company has a very diverse customer base, in our view, with a large portion of residential customers that reduces volatility due to stable energy demands. In addition, it owns the largest gas storage facility in Canada, with a working storage capacity of 156 billion cubic feet (at the Dawn Storage, near Sarnia, Ont.) and operates a transmission system from Dawn to Oakville, Ont., which we believe enhances business integration by providing customers value-added midstream services. As of Sept. 30, 2012, Union has about C$2.6 billion of adjusted long-term debt.

We believe the company has an excellent stand-alone business risk profile that reflects its efficient regulated gas distribution network, attractive franchise region in Ontario, strategic ownership of natural gas storage and transmission assets in southern Ontario, and a regulatory mechanism in place that allows for a complete flow-through of commodity cost expense to customers and permits the utility to adjust rates quarterly. The Ontario Energy Board (OEB) regulates the company's distribution operations under a cost-of-service model where operating and interest costs are covered, and Union Gas is allowed to earn an allowed return on equity (ROE).

The company operated under an OEB-approved five-year incentive regulation agreement that began in 2008. It will be using cost-of-service for 2013 after which we believe it will return to the incentive mechanism beginning in 2014. Although the OEB denied its applications for increasing its equity thickness and ROE to 40% and 9% from 36% and 8.54%, respectively, we do not expect a material impact on our forecast credit metrics -- it maintains the status quo. Like other utilities, the regulated rates of return provide cash flow stability and visibility, supporting our assessment of the excellent stand-alone business risk profile. Union Gas is exposed to changes in natural gas demand stemming from weather, which we expect to slightly depress EBITDA in 2012. However, the magnitude of the change does not present a rating concern, and forecasts are based on normal weather.

While more than 80% of the company's revenue comes from regulated distribution business, and regulated storage accounts for about another 10% of revenue, Union Gas has an unregulated storage business (about one-third of total storage capacity) that can introduce some earnings volatility and alter its business risk profile. Although the storage and transmission assets enhance operating flexibility and enable the company to manage its gas inventories, providing the benefit of supply security, the unregulated storage assets are subject to market rates and market demand and can affect earnings.

The ratings incorporate Standard & Poor's review of Union Gas' regulatory framework and how the regulation influences Spectra's actions. Our view that regulatory protection is robust reflects the OEB's power and the provisions in the undertakings agreement. The undertakings agreement between Spectra and the OEB governs the financial and business activity of Union Gas to ensure operating sustainability. Given the OEB's legislated power and the critical nature of natural gas distribution services to consumers (particularly for heating, which is Union Gas' primary business), should Spectra's credit profile deteriorate quickly, the OEB might initiate more comprehensive monitoring of Union Gas' financial position leading to more stringent regulation on the company's operations.

We continue to equalize the ratings on Union Gas with those on the parent. Nevertheless, in our view, regulatory protection (through the OEB) is such that the ratings on the company might not remain limited by the ratings on Spectra in the event that the latter begins to deteriorate--which is consistent with our rating methodology that allows for rating separation of a utility and its parent in specific circumstances. Accordingly, rating separation is possible if Spectra's operational viability becomes questionable.

Liquidity

Union Gas's liquidity is adequate, in our view. We expect sources of liquidity will be sufficient to cover uses more than 1.2x in the next 12 months. Key factors in our liquidity assessment include the following:

- We expect that even in the event of a 15% decline in EBITDA, sources of funds will exceed uses.
- Sources of liquidity include funds from operations (FFO) of approximately C$384 million, and committed facility availability of approximately C$305 million.
- Uses of funds consist of expected capital spending of C$405 million and distributions to the parent, Spectra, of about C$117 million.

We believe the company has a sound relationship with its banks, and good access to the capital markets

Furthermore, we believe that, if necessary, parent Westcoast Energy Inc. (BBB+/Stable/--) would provide financial support to Union Gas in the form of equity injections or reduced dividends to maintain its capital structure at the required regulatory levels should existing liquidity sources fall short.

Union Gas renewed its credit facility to 2016, but reduced the size to C$400 million from C$500 million. The company generally uses the facility to backstop a commercial paper program and for short-term funding purposes. This decline reflects the decline in natural gas prices--Union Gas purchases gas for consumers and flows the full cost to them.

The facility contains a covenant that limits the company's debt-to-capitalization to 75% and as of September 2012, Union Gas complied with the covenant. It has no debt maturities until 2014, at which time C$150 million of notes will become due. We believe that the company will be able to access markets to refinance its maturities.

Outlook

The stable outlook on Union Gas reflects our consolidated outlook on parent Spectra. We believe that a rating action on Spectra would most likely flow through to the ratings on Union Gas. However, a one-notch downgrade at Spectra would not necessarily negatively affect the ratings on Union Gas.

The stable outlook on Spectra Energy ratings reflects our expectation that leverage measures will remain in an acceptable range through a commodity price cycle. We also expect the company to focus growth on fee-based businesses. We expect continued stability to come from the regulated transmission, storage, and distribution operations. We think the company's FFO to debt ratio will be roughly 14% to 20% under most commodity price assumptions. If it appears that the company will maintain an FFO to debt ratio above or below this range, we could raise or lower the rating. We could also lower the ratings if the company aggressively pursues higher-risk growth opportunities, if it finances projects disproportionately with debt, or if it cannot execute key projects without driving costs notably over budget.

Rating Methodology

We analyze Union Gas using our investor-owned utility key credit factors and our criteria outlining parent-subsidiary relationships. We have equalized the ratings on the company with those of its parent, Spectra, which is consistent with our parent-subsidiary rating methodology and our belief that there are insufficient regulatory or legal barriers at this time to allow for ratings separation between the two entities.

Business Description

Union Gas is a major Canadian natural gas storage, transmission and distribution company based in Ontario. The distribution business serves more than 1.4 million residential, commercial, and industrial customers in more than 400 communities across Ontario. It provides storage and transportation services to customer at its Dawn Hub facility in Sarnia, Ont.

Strong Business Risk Profile

Market position and operating efficiency

Union Gas serves most of Ontario, excluding the Toronto and Ottawa metropolitan areas. Forty-five percent of its customer base is residential, providing a degree of predictability with respect to energy demand and earnings.

For the transmission system and storage assets the system's key competitive advantage is its large storage capacity, which enables efficient use of pipeline interconnections and is beneficial to customers. Several elements underpin Union Gas' competitive advantage in storage and transmission, including location, market liquidity, operating flexibility, and access to high-volume end users. Its entrenched position in these areas and large capital costs creates barriers to entry and potential rivals would find gaining market share difficult.

Operational risk in terms of gas storage relates to its operation of the Dawn storage facilities. There have been no noticeable operational interruptions. Storage costs for two-thirds of its business are passed through to the customers. The remaining third is unregulated. Dawn is one of the largest storage facilities in North America and has storage of 166 petajoules (PJ), peak day withdrawal of 2.8PJ a day, and peak day injections of 2.2PJ a day. Though there is a high amount of injections and withdrawals, the storage caverns have been operated since the 1950s and there is no history of material problems with the facilities.

Regulation

Union Gas operates under an OEB-approved five-year incentive regulation (IR) plan where it adjusts distribution rates annually based on the previous year's revenue and a number of adjustment factors. The company will be operating under cost-of-service regulation in 2013 as a test year but we expect a return to the incentive regulation method in 2014.

Although the OEB does not allow commodity price hedging, the exposure to the spot price is mitigated by the regulatory deferral mechanism in place. The difference between actual payment to gas suppliers and collection from the customers (which is based on the OEB-approved commodity rates) is treated as regulatory assets and liability. These accounts are settled quarterly. Furthermore, the OEB-approved rates (based on a forecast of market price for the next 12 months) are reviewed every quarter and can be adjusted if necessary. This insulates the company from commodity price volatility.

In the event of disallowance of commodity costs pass-through, there would be material negative credit implications, although we do not expect it. The OEB rejected Union Gas' most recent request to increase its ROE to 9% from 8.54% and equity thickness to 36% from 40%. The board found that a deemed common equity ratio of 36% is appropriate for the 2013 test year, consistent with the deemed common equity ratio in place from 2007-2012. As a result, allowed returns are the status quo.

Capital expenditures

Due to the decline of exports at its Kirkwall station, and the threat of unused Dawn-Kirkwall capacity, Union Gas has implemented the Kirkwall Flow Reversal Project, an expansion project designed to make Kirkwall fully bidirectional. The OEB agrees that Kirkwall station has changed substantially over the year and has directed the company to undertake a review of the allocation of Kirkwall metering costs as part of its updated cost allocation study and to file in its 2014 rates filing.

Spectra announced a memorandum of understanding with Enbridge Inc. and DTE Energy Co. to jointly develop the NEXUS Gas transmission system. The proposed project will originate in northeastern Ohio, include approximately 250 miles of large diameter pipe and be capable of transporting a billion cubic feet a day of natural gas. The line follows existing utility corridors to an interconnection in Michigan and uses the existing Vector Pipeline system to reach the Ontario market. The new pipeline will serve local distribution companies, power generators, and industrial users in the

Ohio, Michigan, and Ontario markets. It will include interconnects with Union Gas' Dawn hub. Although the project is still in the early stages, it does represent a potential for increases in regulated or long-term contracted cash flows for the company.

Significant Financial Risk Profile

Accounting

Union Gas reports in Canadian dollars and prepares it financial statements in accordance to U.S. generally accepted accounting principles (GAAP). The company switched from Canadian GAAP as of Jan. 1, 2012. We make several adjustments to Union Gas' debt figure, mainly postretirement benefits obligations, gas in storage, asset retirement obligations and operating lease adjustments. These collectively added about C$130 million to adjusted debt outstanding, or 5% of total debt (see table 1).

Financial policy

Although Spectra determines financial policy, the regulated asset base with a deemed financial structure also influences the policy. The company provides gas loans from their holdings of gas in storage to other parties from its holdings of gas in storage. (Replacement cost of gas on loan is C$64 million as of Dec. 31, 2011) The parties are subject to the same credit policies used for all customers.

Cash flow adequacy

Union Gas' significant financial risk profile reflects what we believe is leverage that is high for the ratings and generally weak financial metrics. We forecast adjusted FFO-to-debt of approximately 14% in both 2013 and 2014, which reflects the stability of the company's cash flows. Our assumptions include a slight decline in EBITDA in 2012 from lower weather-related volumes, and modest improvements in 2013 back to the 2011 level. We expect capital expenditures to focus largely on maintenance capital in 2012, making up 85% of the approximately C$300 million budgeted for the year.

Table Of Contents

Research Update:

Union Gas Ltd. Ratings On CreditWatch Negative Following Placement On Parent Spectra Energy Corp.

Overview

- We are placing our ratings on Union Gas Ltd. On CreditWatch with negative implications.
- The placement reflects that on parent Spectra Energy Corp.
- We will resolve this CreditWatch placement when we resolve the placement on Spectra.

Rating Action

On June 17, 2013, Standard & Poor's Ratings Services placed its ratings, including its 'BBB+' long-term corporate credit rating, on Union Gas Ltd. on CreditWatch with negative implications.

The CreditWatch placement follows that on parent Spectra Energy Corp.

Rationale

The ratings on Union Gas, an Ontario-based natural gas distribution company, reflect Standard & Poor's view of the consolidated credit profile of its ultimate parent, Spectra, and the parent's "strong" business risk profile, "significant" financial risk profile, and "satisfactory" management and governance score. Union Gas' monopoly-like market position, largely regulated asset base, and stable cash flow generation also support the ratings, in our opinion. We believe that the company's significant financial risk profile and softer key credit ratios counterbalance these strengths.

Union Gas is the second-largest natural gas distribution utility in Canada, serving approximately 1.4 million customers in northern, southwestern, and eastern Ontario. The company has a very diverse customer base, in our view, with a large portion of residential customers that reduces volatility due to stable energy demands. In addition, it owns the largest gas storage facility in Canada, with a working storage capacity of 156 billion cubic feet (at the Dawn Storage, near Sarnia, Ont.) and operates a transmission system from Dawn to Oakville, Ont., which we believe enhances business integration by providing customers value-added midstream services. As of March 31, 2013, Union has about C$2.8 billion of adjusted long-term debt.

We believe the company has an excellent stand-alone business risk profile that reflects its efficient regulated gas distribution network, attractive franchise region in Ontario, strategic ownership of natural gas storage and transmission assets in southern Ontario, and a regulatory mechanism in place that allows for a complete flow-through of commodity cost expense to customers and permits the utility to adjust rates quarterly. The Ontario Energy Board regulates the company's distribution operations under a cost-of-service model where operating and interest costs are covered, and Union Gas is allowed to earn an allowed return on equity.

CreditWatch

We will resolve the CreditWatch placement when we resolve the placement on Spectra.

Research Update:

Union Gas Ltd. 'BBB+' Ratings Affirmed, Removed From CreditWatch Negative Following Downgrade To Parent

Overview

- We are affirming our ratings, including our 'BBB+' long-term corporate credit rating, on Union Gas Ltd.
- We are also removing the ratings from CreditWatch, where they were placed June 17, 2013.
- The rating action follows our downgrade to Spectra Energy Corp. to 'BBB' from 'BBB+' after the drop-down of assets to subsidiary Spectra Energy Partners L.P.
- Based on our 'a-' stand-alone credit profile at Union Gas, the 'BBB' rating on Spectra Energy Corp., and our assessment of the regulatory insulation from the parent, we believe that a one-notch differential between the ratings on the parent and that on Union Gas is warranted.

Rating Action

On Nov. 4, 2013, Standard & Poor's Ratings Services affirmed its ratings, including its 'BBB+' long-term corporate credit rating on Ontario-based natural gas distribution company Union Gas Ltd. The outlook is stable. At the same time, Standard & Poor's removed the ratings on CreditWatch, where they were placed with negative implications June 17, 2013.

This affirmation follows today's downgrade to parent Spectra Energy Corp. to 'BBB' from 'BBB+' after the drop-down of assets to subsidiary Spectra Energy Partners L.P. Based on our 'a-' stand-alone credit profile (SACP) at Union Gas, the 'BBB' rating on Spectra, and our assessment of the regulatory insulation from the parent, we believe that a one-notch differential between the ratings on the parent and that on Union Gas is warranted.

Rationale

The ratings on Union Gas reflect Standard & Poor's view of the consolidated credit profile of its ultimate parent, Spectra, and the parent's "strong" business risk profile, "significant" financial risk profile, and "satisfactory" management and governance score. Union Gas' monopoly-like market position, largely regulated asset base, generally supportive regulatory framework, and stable cash flow generation support an "excellent" business risk profile and an 'a-' SACP, in our opinion. We believe that the company's "significant" financial risk profile and softer key credit ratios counterbalance these strengths.

Union Gas is the second-largest natural gas distribution utility in Canada, serving approximately 1.4 million customers in northern, southwestern, and eastern Ontario. The company has a very diverse customer base, in our view, with a large portion of residential customers that reduces volatility due to stable energy demands. In addition, it owns the largest gas storage facility in Canada, with a working storage capacity of 156 billion cubic feet (at the Dawn Storage, near Sarnia, Ont.) and operates a transmission system from Dawn to Oakville, Ont., which we believe enhances business integration by providing customers value-added midstream services. As of June 30, 2013, Union had about C$2.1 billion of adjusted long-term debt.

We believe the company has an excellent stand-alone business risk profile that reflects its efficient regulated gas distribution network, attractive franchise region in Ontario, strategic ownership of natural gas storage and transmission assets in southern Ontario, and a regulatory mechanism in place that allows for a complete flow-through of commodity cost expense to customers and permits the utility to adjust rates quarterly. The Ontario Energy Board regulates the company's distribution operations under a cost-of-service model where operating and interest costs are covered, and Union Gas is allowed to earn an allowed return on equity.

We view the financial risk profile as significant. Financial metrics are forecast to improve in 2013 due to improved gas distribution volumes from more normal weather. We expect no change in allowed returns and equity thickness in 2013. We forecast adjusted funds from operations (FFO) to debt in the 13-15% range in 2013 and 2014.

Liquidity

We view Union Gas Ltd.'s liquidity as "adequate" under our criteria for the next 12 months. Sources over uses are greater than 1.2x and sources less uses is positive.

Principal liquidity sources include the following:
- Expected FFO of C$340 million-C$360 million
- Committed credit facilities availability of C$190 million-C$210 million
- Debt issuance of C$240 million-C$260 million

Principal liquidity uses include the following:
- Capital expenditures of C$380 million-C$400 million
- Dividends of C$130 million-C$150 million
- Negative working capital of about C$140 million-C$150 million

Outlook

The stable outlook on Union Gas reflects our consolidated outlook on parent Spectra. We believe that further rating action on Spectra will flow through to the ratings on Union Gas. We believe that the 'a-' SACP at Union, coupled with our assessment of regulatory insulation from the parent, would cap the rating at the SACP.

The stable outlook on Spectra reflects our expectations that debt leverage measures will remain acceptable for the ratings under most commodity price assumptions and the company will maintain its focus on fee-based businesses. We expect the company's FFO-to-debt ratio will be 14%-15% in 2013 and 2014. If Spectra maintains this ratio notably below this range, we could lower the ratings. We could also lower the ratings if the company aggressively pursues higher-risk growth opportunities. An upgrade is unlikely during our two-year outlook period, but would require improved financial measures, with FFO-to-debt of more than 17% in most commodity price cycles.

Research Update:

Union Gas Ltd. 'BBB+' Ratings Affirmed; Financial Risk Profile Revised To "Significant" From "Intermediate"

Overview

- Increased capital expenditures to finance the Dawn-Parkway facility expansion have tightened credit metrics for Union Gas Ltd., moving the financial risk profile into the "significant" category from "intermediate."
- We also removed the negative comparative ratings modifier we had used to highlight the possible shift in the financial risk profile.
- As a result, there is no change to the 'a-' stand-alone credit profile, and we are affirming our ratings on Union, including our 'BBB+' long-term corporate credit rating.
- We expect the company to keep its financial metrics stable at the high end of the significant financial risk profile during this period of capital expenditures.

Rating Action

On Aug. 29, 2014, Standard & Poor's Ratings Services affirmed its ratings on Ontario-based natural gas distribution company Union Gas Ltd, including its 'BBB+' long-term corporate credit rating. The outlook is stable.

Rationale

Union's Dawn-Parkway facility expansion is one of Union's largest capital expenditure to date. Although the Ontario Energy Board (OEB) has approved recovery of costs for the project, the expenditures have tightened the company's credit metrics in the medium term. As a result, we are revising our financial risk profile on Union to "significant" from "intermediate." We expect credit metrics to remain at the high end of the significant category as the company continues with its large capital program and subsequent recovery of costs through rates.

We view Union's business risk profile as "excellent," with an "excellent" competitive position that reflects the company's efficient regulated gas distribution network, its attractive franchise region in Ontario, its strategic ownership of natural gas storage and transmission assets in southern Ontario, and a regulatory mechanism that allows for a complete flow-through of commodity cost expense to customers and permits the utility to adjust rates quarterly. The OEB regulates Union's distribution operations under an incentive-based regulatory model from 2014 -2018. We view the regulatory environment as generally stable and transparent, and expect that the company will achieve the expected productivity gains and earn its allowed return on equity (ROE) at a minimum.

Although more than 80% of Union's revenue comes from regulated distribution business, and regulated storage accounts for about another 10% of revenue, the company has an unregulated storage business (about one-third of total storage capacity) that can introduce some earnings volatility and alter its business risk profile. Seasonal storage spreads had been weak through 2013, and we expect that to continue for the next 12-24 months. The storage and transmission assets enhance operating flexibility and enable Union to manage its gas inventories, providing the benefit of supply security, but the company's unregulated storage assets are subject to market rates and market demand and can affect earnings.

We assess Union's financial risk profile as "significant." We forecast that adjusted funds from operations (AFFO)-to-debt will be approximately 12% during our two-year outlook horizon. We expect capital expenditures to be higher than average in 2014 and 2015 as Union expands its distribution infrastructure. We also expect that the company will earn its allowed 8.93% ROE over the five-year term of its incentive-rate mechanism. We assign a neutral comparable rating analysis modifier to Union, having revised it from negative. The negative modifier reflected our expectation that financial metrics could weaken if the regulator approved large expansion projects, which has happened.

Our base-case scenario assumes the following:
- The company will earn its allowed 8.93% ROE
- Capital expenditures of approximately C$475 million per year for the next two years
- Dividend policy will remain consistent

Based on these assumptions, we arrive at the following credit measures for the next two years:
- AFFO-to-debt of about 12%
- Debt-to-EBITDA of approximately 5.4x

Liquidity

We view Union's liquidity as "adequate" with sources less uses being positive, and sources divided by uses as being greater than 1.1x. Even in the event of a 15% decline in EBITDA, the company's sources will still exceed its uses. We believe it is likely able to absorb, without refinancing, high-impact, low probability events.

Principal liquidity sources include the following:
- FFO of approximately C$375 million-C$390 million
- Credit facility availability of C$350 million

Principal liquidity uses include the following:
- Capex of approximately C$450 million

- Cash dividends of C$100 million-C$110 million

Outlook

The stable outlook on Union reflects our consolidated outlook on ultimate parent Spectra Energy Corp. We believe that a rating action on Spectra will flow through to the ratings on Union Gas. We also believe that the 'a-' stand-alone credit profile (SACP) at Union Gas, coupled with our assessment of regulatory insulation from the parent, would cap the rating at the SACP.

The stable outlook on Spectra reflects our expectation that debt leverage measures will remain acceptable for the rating under most commodity price assumptions and the company will maintain its focus on fee-based businesses. We expect Spectra's FFO-to-debt ratio will be 14%-15% in 2014.

Downside scenario

A decline in adjusted funds from operations to debt to below 9% at Union could lower the SACP; however, we would not lower the rating on the company unless the SACP equaled the group credit profile on Spectra.

Upside scenario

An upgrade is unlikely without an upgrade to the group credit profile, which the consolidated credit rating on Spectra determines. Our rating on Union is capped at the lessor of the SACP or one notch above the group credit profile, given our assessment of the regulatory and structural ring-fencing provisions that allow a one notch separation as an insulated subsidiary.

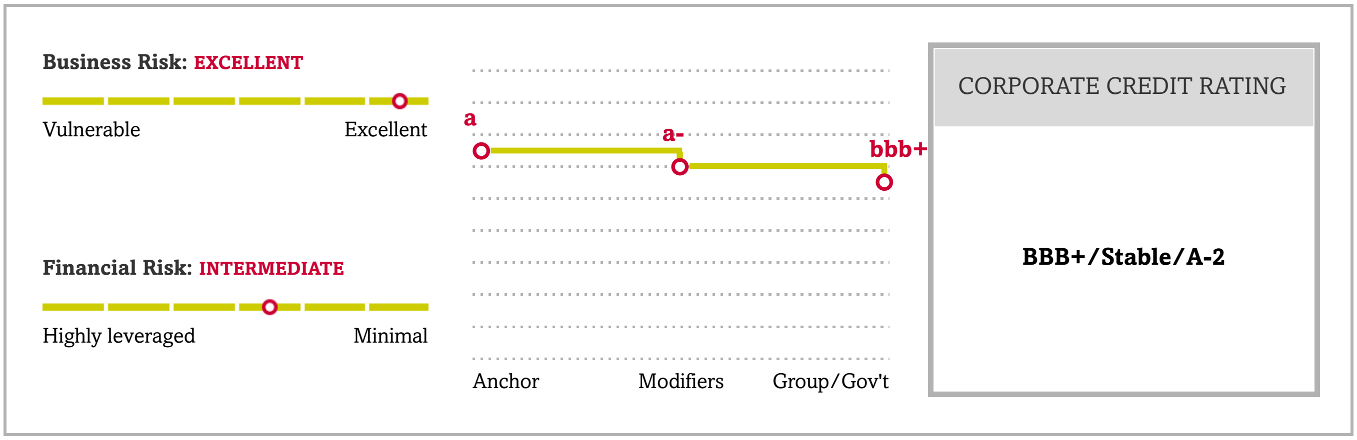
Stephen R Goltz, Toronto (1) 416-507-2592; stephen.goltz@standardandpoors.com

Table Of Contents

Summary:

Union Gas Ltd.



Rationale

Business Risk: Excellent	Financial Risk: Intermediate
• Regulated gas distribution monopoly in Ontario, with very low country and industry risk • Transition to incentive-based ratemaking from a cost-of-service ratemaking year in 2013, which Standard & Poor's Ratings Services doesn't expect to affect cash flows	• Stable financial metrics throughout our forecast period • Expected earnings of at least the previously allowed cost-of-service return on equity (ROE) under the incentive-rate mechanism

Outlook: Stable

The stable outlook on Union Gas Ltd. reflects our consolidated outlook on ultimate parent Spectra Energy Corp. We believe that a rating action on Spectra will flow through to the ratings on Union Gas. We believe that the 'a-' SACP at Union Gas, coupled with our assessment of regulatory insulation from the parent, would cap the rating at the stand-alone credit profile (SACP).

The stable outlook on Spectra reflects our expectation that debt leverage measures will remain acceptable for the rating under most commodity price assumptions and the company will maintain its focus on fee-based businesses. We expect Spectra's funds from operations (FFO)-to-debt ratio will be 14%-15% in 2014.

Downside scenario

A decline in adjusted funds from operations to debt to below 9% could lower the SACP; however, we would not lower the rating unless the SACP equaled the group credit profile.

Upside scenario

An upgrade is unlikely without an upgrade to the group credit profile, which is determined by the consolidated credit rating on parent Spectra. Union gas' credit rating is capped at the lessor of the SACP or one notch above the GCP given our assessment of the regulatory and structural ring-fencing provisions that allow a one notch separation as an insulated subsidiary.

Standard & Poor's Base-Case Scenario

Assumptions

- Expected earnings of at least its previously allowed cost-of-service ROE under the incentive-rate mechanism
- Incentive-based earnings based on an escalation factor of 40% of inflation, continued pass-through of commodity costs, and an earnings sharing mechanism that would see Union keep up to a 9.9% of ROE
- A rate base that will fully include a capital program of approximately C$300 million
- Dividends to Westcoast Energy Inc., its immediate parent, of approximately C$150 million

Key Metrics

	2013A	2014E	2015E
EBITDA Margin	32.5%	33%–35%	33%–35%
AFFO/debt	13.6%	13%-14%	13%–14%
Debt/EBITDA	5.0x	4.5x–5.5x	4.5x–5.5x

AFFO--Adjusted funds from operations. A--Actual. E--Estimate.

Business Risk: Excellent

We view Union's business risk profile as "excellent," with an "excellent" competitive position that reflects its efficient regulated gas distribution network, attractive franchise region in Ontario, strategic ownership of natural gas storage and transmission assets in southern Ontario, and a regulatory mechanism that allows for a complete flow-through of commodity cost expense to customers and permits the utility to adjust rates quarterly. The Ontario Energy Board (OEB) regulates Union Gas' distribution operations under an incentive-based regulatory model from 2014 -2018. We view the regulatory environment as generally stable and transparent, and we expect that the company will be able to achieve the expected productivity gains and earn its previously allowed ROE at a minimum.

Although more than 80% of Union Gas' revenue comes from regulated distribution business, and regulated storage accounts for about another 10% of revenue, the company has an unregulated storage business (about one-third of total storage capacity) that can introduce some earnings volatility and alter its business risk profile. Seasonal storage spreads have been weak through 2013, and we expect that to continue for the next 12-24 months. The storage and transmission assets enhance operating flexibility and enable Union Gas to manage its gas inventories, providing the benefit of supply security, but the unregulated storage assets are subject to market rates and market demand and can affect earnings.

Financial Risk: Intermediate

We assess Union Gas' financial risk profile as "intermediate." We forecast that AFFO-to-debt will be approximately 13% during our two-year outlook horizon. We expect capital expenditures to be slightly higher than average in 2014 and 2015 as Union Gas expands its distribution infrastructure.

Liquidity: Adequate

We view liquidity as "adequate." Sources less uses is positive, and sources over uses is greater than 1.1x. We believe the company will continue to have solid relationships with its banks, a generally high standing in credit markets, and generally prudent risk management.

Principal Liquidity Sources	Principal Liquidity Uses
• FFO of C$400 million–C$420 million • Credit revolver availability of C$90 million-C$110 million	• Capital expenditures of C$280 million–C$300 million • Cash dividends of C$140 million-C$150 million

Other Modifiers

We assess the comparable rating analysis modifier to be negative, reflecting our view that financial metrics might deteriorate if the regulator approves large capital programs.

Group Influence

We view Union Gas to be an insulated subsidiary to immediate parent Westcoast Energy and ultimate parent Spectra Energy, because we believe that there are structural and legal ring-fencing measures that allow for a one-notch uplift from the group credit profile of 'bbb', equivalent to the rating on Spectra.

McGRAW HILL FINANCIAL

Research

Summary:
Union Gas Ltd.

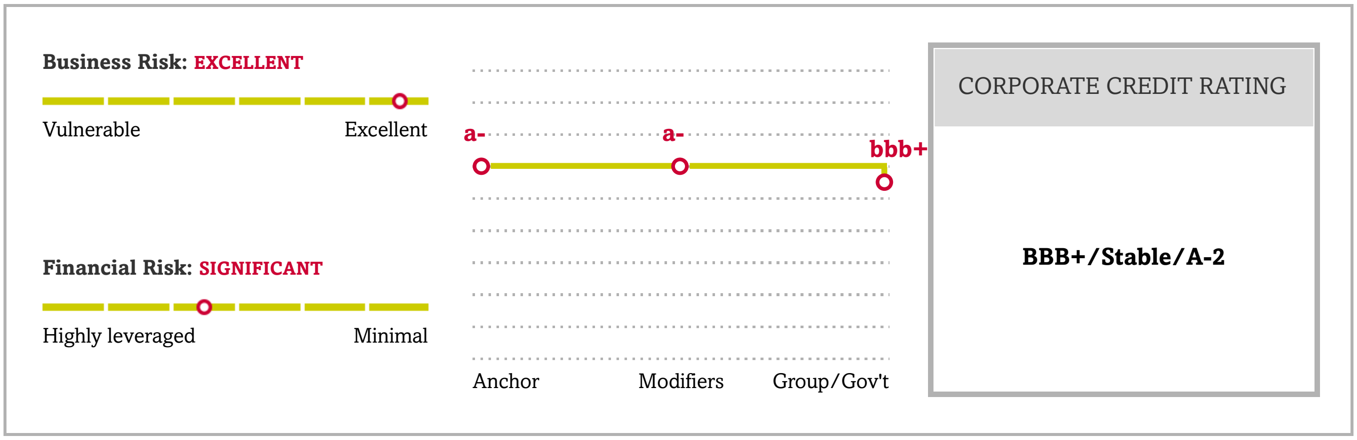
Primary Credit Analyst:
Stephen R Goltz, Toronto (416) 507-2592; stephen.goltz@standardandpoors.com

Secondary Contact:
Vinod Makkar, Toronto 416-507-3271; vinod.makkar@standardandpoors.com

Table Of Contents

Summary:

Union Gas Ltd.



Rationale

Business Risk: Excellent	Financial Risk: Significant
• Regulated gas distribution monopoly in Ontario, with very low country and industry risk • A relatively transparent and predictable regulatory regime, with passed-through commodity costs • Union Gas Ltd.'s ability to recover all its fixed and variable operating costs	• Stable financial metrics throughout Standard & Poor's Ratings Services' forecast period • Expected earnings of at least the previously allowed cost-of-service return on equity (ROE) under the incentive-rate mechanism

Outlook: Stable

The stable outlook on Union reflects our consolidated outlook on ultimate parent Spectra Energy Corp. We believe Union gas to be "strategically important" to Spectra under our group rating methodology.

The stable outlook on Spectra reflects our expectation that debt leverage measures will remain in an acceptable range for the rating under most commodity price assumptions and the company will maintain its focus on fee-based businesses. We expect Spectra's funds from operations (FFO)-to-debt ratio will be about 14% in 2015.

Downside scenario

Although we don't expect it, a material, adverse regulatory ruling or a significant increase in leverage leading to sustained deterioration in forecast adjusted FFO (AFFO)-to-debt below 9% could lead to a downgrade.

We could also lower the rating if we lower our group credit profile (GCP) on Spectra. This could happen if the company's FFO-to-debt ratio falls notably below 14% or it aggressively pursues higher-risk growth opportunities that change its business risk profile or pressures its credit metrics.

Upside scenario

An upgrade is unlikely without an upgrade to the GCP, which the consolidated rating on the parent determines. A higher rating would require Spectra to embrace more conservative financial policies and to improve financial measures, with FFO-to-debt of about 25% in most commodity price cycles.

We cap our rating on Union Gas at the lesser of the stand-alone credit profile or one notch above the GCP given our assessment of the regulatory and structural ring-fencing provisions that allow a one notch separation as an insulated subsidiary. Based on our current forecast and the company's current financial policy, which we do not expect will change, we believe the prospect of an upgrade is limited during our two-year outlook horizon.

Standard & Poor's Base-Case Scenario

Assumptions

- The regulatory regime will be relatively stable, and Union Gas will not experience any material, adverse regulatory decisions
- The company will continue to earn close to its allowed ROE on its deemed capital structure
- It will not make any material, debt-financed unregulated investments
- Rates in 2015 and 2016 will be established by the regulator under the OEB's incentive-rate mechanism (IRM)
- Dividends to Westcoast Energy Inc., its immediate parent, of C$100 million-C$125 million

Key Metrics

	2014A	2015E	2016E
AFFO/debt	12.8%	12%-14%	12%–14%
Debt/EBITDA	5.3x	5.0x–6.0x	5.0x–6.0x

AFFO--Adjusted funds from operations. A--Actual. E--Estimate.

Business Risk: Excellent

We view Union Gas' business risk profile as "excellent." We believe the company has an "excellent" competitive position, reflecting its efficient regulated gas distribution network, attractive franchise region in Ontario, strategic ownership of natural gas storage and transmission assets in southern Ontario, and a regulatory mechanism that allows for a complete flow-through of commodity cost expense to customers and permits the utility to adjust rates quarterly.

The Ontario Energy Board (OEB) regulates Union Gas' distribution operations under an incentive-based regulatory model from 2014 -2018. We view the regulatory environment as generally stable and transparent, and we expect the company will be able to achieve the expected productivity gains and earn its previously allowed ROE at a minimum.

Although more than 80% of Union Gas' revenue comes from regulated distribution business, and regulated storage accounts for about another 10% of revenue, the company has an unregulated storage business (about one-third of total storage capacity) that can introduce some earnings volatility and alter its business risk profile. The storage and transmission assets enhance operating flexibility and enable Union Gas to manage its gas inventories, providing the benefit of supply security, but the unregulated storage assets are subject to market rates and market demand and can affect earnings.

Financial Risk: Significant

We assess Union Gas' financial risk profile as "significant." We forecast that AFFO-to-debt will be 12%-14% during our two-year outlook horizon. We expect capital expenditures to be slightly higher than average in 2015 as the company expands its distribution infrastructure.

Liquidity: Adequate

We view liquidity as "adequate." Sources less uses is positive, and sources over uses is greater than 1.1x. We believe Union Gas will continue to have solid relationships with its banks, a generally high standing in credit markets, and generally prudent risk management.

Principal Liquidity Sources	Principal Liquidity Uses
• FFO of C$400 million–C$420 million • Revolver availability of C$500 million, expiring in 2019	• Capital spending of C$400 million-C$450 million in 2015 • A debt maturity of C$150 million in 2015 • Dividends of C$100 million-C$120 million in 2015

Group Influence

We view Union Gas to be an insulated subsidiary to immediate parent Westcoast and ultimate parent Spectra Energy, because we believe that there are structural and legal ring-fencing measures that allow for a one-notch uplift from the 'bbb' GCP, equivalent to the rating on Spectra.

Union Gas Ltd. On Watch Positive On Proposed Friendly Merger Between Enbridge Inc. And Spectra Energy Corp.

Primary Credit Analyst:
Andrew Ng, Toronto (416) 507-2545; andrew.ng@spglobal.com

Secondary Contact:
Stephen R Goltz, Toronto (416) 507-2592; stephen.goltz@spglobal.com

Table Of Contents

Research Update:

Union Gas Ltd. On Watch Positive On Proposed Friendly Merger Between Enbridge Inc. And Spectra Energy Corp.

Overview

- On Sept. 6, 2016, Enbridge Inc. announced its proposed C$37 billion (US$28 billion) friendly merger with Spectra Energy Corp., the ultimate parent company of Union Gas Ltd.
- As a result, we are placing our 'BBB+' long-term corporate credit and senior unsecured debt ratings on Union on CreditWatch with positive implications.
- The CreditWatch placement solely reflects the application of our group rating methodology criteria and our expectation that Union would likely be considered a core asset and remain an insulated subsidiary to the Enbridge group. We would likely raise our ratings on Union after the merger closes.
- We are also placing our 'BBB-' global scale and 'P-2(Low)' Canada scale preferred shares ratings on Union on CreditWatch with positive implications to reflect the flow-through impact on the potential upgrade.

Rating Action

On Sept. 6, 2016, S&P Global Ratings placed its 'BBB+' long-term corporate credit and senior unsecured debt ratings on Ontario-based regulated gas distributor Union Gas Ltd. on CreditWatch with positive implications based the announcement of the proposed friendly merger between Enbridge Inc. and Spectra Energy Corp., the ultimate parent of Union. At the same time, S&P Global Ratings placed its 'BBB-' global scale and 'P-2(Low)' Canada scale preferred shares ratings on CreditWatch with positive implications to reflect the flow-through impact of the potential upgrade on Union.

Rationale

The CreditWatch placement follows Enbridge's announcement of its C$37 billion (US$28 billion) proposed friendly merger with Spectra, which is the parent of Union at present. The CreditWatch placement solely reflects the application of our group rating methodology (GRM) criteria. Under our GRM framework, our ratings on Union are capped at one notch above our 'bbb' group credit profile (GCP) on Spectra, the current parent of Union, despite our 'a-' stand-alone credit profile (SACP) on Union. This is because existing structural and legal ring-fencing measures for Union only allows for a one-notch differential between the Union SACP and the Spectra GCP.

On close of the transaction we expect to maintain our 'BBB+' ratings and 'bbb+' GCP on Enbridge, which will become the new ultimate parent of Union. In addition, we expect Union would be a core asset and remain an insulated subsidiary under Enbridge. Furthermore, we expect existing structural and legal ring-fencing measures to remain unchanged, which continues to allow for a one-notch separation between our ratings on Union and our GCP on its parent. As a result, we could raise our ratings on Union to 'A-', one notch above our GCP on Enbridge.

CreditWatch

We will resolve the CreditWatch placement on Union once we resolve that on Spectra. This includes determining the final GCP on Enbridge following the closing of the transaction and our review of Union's strategic importance to Enbridge including the structural and legal ring-fencing provisions.

Summary:
Union Gas Ltd.

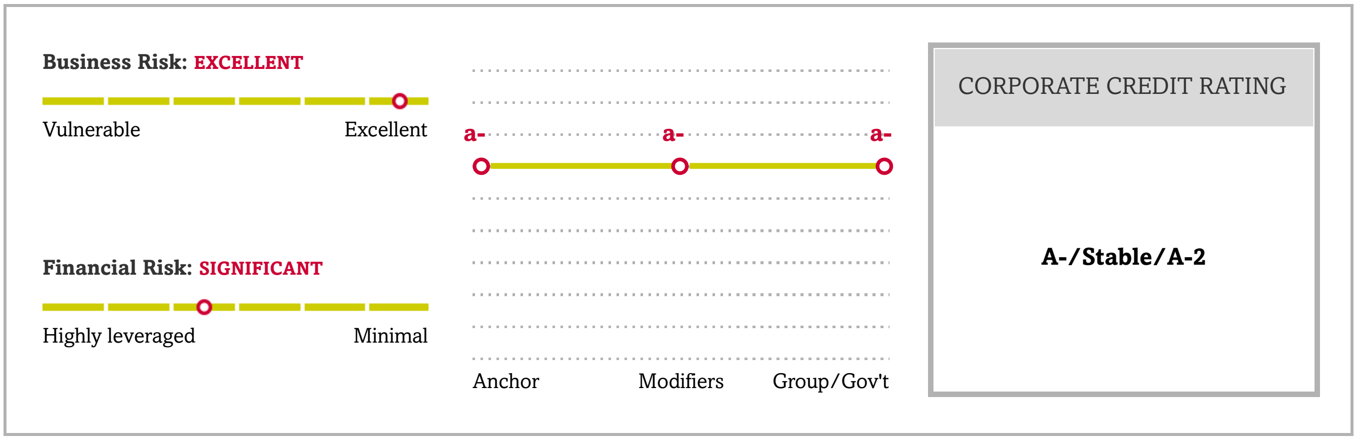
Primary Credit Analyst:
Andrew Ng, Toronto (416) 507-2545; andrew.ng@spglobal.com

Secondary Contact:
Stephen R Goltz, Toronto (416) 507-2592; stephen.goltz@spglobal.com

Table Of Contents

Summary:

Union Gas Ltd.



Rationale

Business Risk: Excellent	Financial Risk: Significant
• A relatively transparent and predictable regulatory regime • Natural gas and carbon tax costs that are passed through to rate payers • Limited geographical and regulatory diversity, with operations only in Ontario	• Stable, regulated cash flow • Capital programs spending to wind down in 2018 after the completion of the Dawn-Parkway Expansion project • Reliance on Enbridge Inc. (Enbridge), the parent, or its affiliates to provide timely equity injection to maintain deemed capital structure

Outlook: Stable

The stable outlook on Union Gas Ltd. reflects S&P Global Ratings' expectation that the company will continue to generate stable and predictable cash flows from its regulated gas distribution operation. We also expect Union will execute its planned capital programs on time and on budget.

The stable outlook also reflects our view that Enbridge, the parent, will maintain adjusted funds from operations (AFFO)-to-debt at the low end of the significant financial risk profile category, at 13%-14% through 2019. We believe that Enbridge will need to finance its aggressive capital program over the next two years with equity and hybrids to maintain financial metrics in the significant category.

Furthermore, the stable outlook on Union reflects our expectation that the company's insulation features will continue through to the potential new entity, Amalco, should Enbridge merge Union with Enbridge Gas Distribution Inc. (EGD); and Enbridge's strategy to preserve the combined utilities' credit strength will not change.

Downside scenario

We could lower the ratings on Union if the company experiences material operational issues, delays and cost overruns in capital projects implementation or adverse material regulatory decisions that leads to sustained deterioration in forecast AFFO-to-debt approaching 9% with no prospect of improvements.

Alternatively, we could also lower the rating on Union if we lower our group credit profile (GCP) on Enbridge. This could happen if Enbridge's consolidated AFFO-to-debt stays below 13% or debt-to-EBITDA remains above 5.5x, which could result from weaker financial performance due to mainline volumes falling below expectations, or a more aggressive funding of the large combined capital program throughout our outlook period.

Furthermore, we could also lower the rating on Union if Enbridge decides to amalgamate EGD and Union without preserving Amalco's insulation provisions and credit quality.

Upside scenario

An upgrade to Union is unlikely without an upgrade to the Enbridge GCP, which the consolidated rating on the parent determines, in conjunction with an improved stand-alone credit profile (SACP) on Union. This is because we cap our rating on Union at the lesser of the SACP or one notch above the GCP, given our assessment of the regulatory and structural ring-fencing provisions that allow a one notch separation as an insulated subsidiary.

An upgrade to Union's SACP would require the company to improve financial measures, with sustained AFFO-to-debt approaching 14%, which could happen if the company's gas distribution revenue increases substantially and permanently. However, we do not expect this to happen during our outlook period, given the regulated rates. An upgrade to Enbridge's GCP would require Enbridge to maintain AFFO-to-debt above 16%-17% or debt-to-EBITDA below 4.5x; and maintain the combined entity's increased scale, scope, and diversity. Given that Union's cash flow contribution to the Enbridge group is relatively small, improvement to Union's financial measures alone would have a negligible impact on the ratings on Enbridge.

Our Base-Case Scenario

Assumptions

- Union continues to continue focus on its regulated natural gas distribution operations and unregulated activities remain a relatively small part of overall business and cash flow mix
- It does not experience any adverse and material regulatory decisions and that the regulatory regime remains transparent and stable
- The company will earn close to its allowed return on equity on its deemed capital structure
- New customer growth will be about 1% per year
- There will be no dividends for fiscal 2017; dividends resume in fiscal 2018
- Enbridge, the parent, or its affiliates to provide timely equity injection to Union to maintain its deemed capital structure
- The cap and trade carbon tax will be a pass-through to ratepayers and have no impact on the company's financial metrics

Key Metrics

	2016A	2017E	2018E
AFFO/debt	10.5%	About 11%	11%-12%
Debt/EBITDA	5.7x	About 6x	About 6x

Note: Fully S&P Global Ratings-adjusted. AFFO--Adjusted funds from operations. A--Actual. E--Estimated.

Business Risk: Excellent

Our view of Union's business risk is unchanged. The utility continues to operate under the Ontario Energy Board's regulatory framework, which underpins its predictable and stable cash flow. The approved revenue requirement includes all operating, interest, and capital expenses and the opportunity to earn a modest return. In addition, several mechanisms support timely recovery of material and unexpected capital costs, including rate riders and (in some circumstances) the ability to request a rate-reset hearing.

Under the current framework, natural gas distributors, including Union, must ensure an adequate supply of natural gas, which increases operational risk. The company has mitigated this with diverse sources of natural gas. The recent completion of the Dawn-Parkway Expansion project allows Union to gain access to cheaper gas supply and to diversify its sources of gas supply. In addition, commodity costs flow through rates and are recovered through a quarterly adjustment mechanism, thereby limiting the company's exposure to commodity risk and associated cash flow volatility. Furthermore, the cap and trade carbon tax, recently introduced by the Ontario government, is also a flow-through to ratepayers and has no impact on the utility's financial measures.

The business risk assessment also reflects our expectation that Union's customer profile will be stable, with the majority of the customer base in the residential and small business segments, which are less sensitive to macroeconomic stresses and business cycles. However, demand for natural gas in the residential customer class can change due to weather-driven fluctuations, plus the lack of weather normalization in the rate structure exposes Union to volume risk, which can result in cash flow volatility. We do not expect the utility's customer composition to change materially over the next two years. However, the magnitude of the change does not present a rating risk, and forecasts are based on normalized weather.

Financial Risk: Significant

Our view of Union's financial risk is also unchanged. We continue to assess the company's financial measures against our most permissive leverage benchmarks because the majority of cash flow comes from the low end of the utility risk spectrum in gas distribution under a highly supportive regulatory framework. During the outlook period, we forecast AFFO-to-debt of about 11% in 2017 before improving to 11%-12% in 2018, following the Dawn-Parkway project's completion. Debt leverage will be high, with debt-to-EBITDA of about 6x in both 2017 and 2018. Modest growth in new customers of about 1% per year should slightly offset pressure on credit metrics.

Liquidity: Adequate

Our view of Union's liquidity is adequate. We expect that liquidity sources will be adequate to cover uses more than 1.1x in the next 12 months. We also expect that, in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our opinion, Union has sound relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve the credit metrics.

Principal Liquidity Sources	Principal Liquidity Uses
• Cash on hand of about C$31 million as of Sept 30, 2017 • Projected FFO of about C$520 million over the next 12 months • Committed credit facilities availability of about C$30 million (net of C$670 million commercial paper backstop) as of Sept 30, 2017, expiring in 2021 • Proceeds from debt issuances of about C$500 million from November 2017	• Debt maturity of about C$450 million over the next 12 months • Maintenance and committed capital spending of about C$500 million over the next 12 months

Group Influence

We continue to view Union as an insulated subsidiary within the Enbridge group, reflecting our view that the regulatory restriction and the parent's strategy with respect to Union will continue to preserve the utility's credit strength and are consistent with our view of insulation on a subsidiary. Specifically, the regulatory restriction limits Union's business activities and requires the utility to maintain the common equity thickness at the regulatory deemed capital structure. This restriction will prevent the subsidiary from supporting the group to the extent that it would impair its stand-alone creditworthiness. Furthermore, we expect that similar insulation features will continue through to Amalco; the potential merger with EGD was announced Nov. 2, 2017. In addition, we expect Enbridge's current strategy with respect to its regulated gas distribution utilities, including both EGD and Union, will continue through Amalco, preserving the regulated utilities' credit strength.

Issue Ratings

Subordination risk analysis

Capital structure

Union, the operating subsidiary, has about C$3.4 billion of senior unsecured debentures.

Analytical conclusions

Given that Union is an investment-grade regulated utility and all the senior unsecured debt is at the operating subsidiary level, we do not consider the debt structurally subordinated. As a result, we equalize the issue-level rating on the unsecured debt with our 'A-' long-term corporate credit rating on the utility.

Research Update:

Union Gas Ltd. Ratings Raised To 'A-' From 'BBB+' On Merger Between Parent Spectra Energy Corp. And Enbridge Inc.

Overview

- On Feb. 27, 2017, Enbridge Inc. announced the closing of the merger with Spectra Energy Corp.
- As a result, we are raising our long-term corporate credit and senior unsecured debt ratings on Spectra subsidiary Union Gas Ltd. to 'A-' from 'BBB+'.
- We are removing the ratings from CreditWatch, where they were placed with positive implications Sept. 6, 2016.
- The upgrade solely reflects the application of our group rating methodology criteria and reflects our view that Union is a core asset and insulated subsidiary to the Enbridge group.
- The stable outlook on Union reflects our expectation that the company will continue to generate stable and predictable cash flows from its regulated gas distribution operation.

Rating Action

On Feb. 28, 2017, S&P Global Ratings raised its long-term corporate credit and senior unsecured debt ratings on Ontario-based regulated gas distributor Union Gas Ltd.to 'A-' from 'BBB+', following the closing of the merger between parent Spectra Energy Corp. and Enbridge Inc. At the same time, S&P Global Ratings raised its global scale and Canada scale preferred shares ratings on Union to 'BBB' and 'P-2', respectively, from 'BBB-' and 'P-2 (Low)', respectively, reflecting the flow-through impact of the raised corporate credit rating. S&P Global Ratings removed these ratings from CreditWatch, where they were placed with positive implications Sept. 6, 2016. The outlook is stable.

As well, S&P Global Ratings also affirmed its 'A-2' short-term rating on the company, and its 'A-2' global scale and 'A-1(Low)' Canada scale commercial paper ratings on Union.

Rationale

The upgrade follows Enbridge's announcement on the closing of the merger with Spectra. The upgrade solely reflects the application of our group rating methodology (GRM) criteria. With the transaction's close Enbridge, with 'bbb+' group credit profile (GCP), is now the ultimate parent of Union, which has a stand-alone credit profile (SACP) of 'a-'. We believe Union is a valuable asset and strategic to the Enbridge group, even if the company's cash flow contribution to the Enbridge group is very small. We believe the company's regulated gas distribution operation complements the overall group strategy of Enbridge, itself a large diversified holding company with operations in transporting crude oil and natural gas gathering, transporting, treatment and processing operations. In addition, Enbridge owns Enbridge Gas Distribution Inc. (EGD), the largest regulated gas distributor in Ontario. Union's addition will further increase Enbridge's regulated gas distribution foot print in Ontario, covering nearly the entire province.

Based on our methodology, we rarely rate a utility higher than its parent. However, for Union, there are insulation measures in place that governs the company's financial and business activities to ensure operating sustainability. Specifically, major insulation measures include a minimum equity level requirement (which can limit dividend payouts), quarterly capital structure forecasts, asset sale restrictions, and financial penalties for noncompliance. These insulation measures prevent Union from supporting the group to the extent that it would in turn unduly impair the company's stand-alone credit worthiness. More important, these will not change under Enbridge's ownership. This allows for a one-notch rating separation between Union and its parent.

The fundamentals of Union's gas distribution operation have not changed following the merger. The company continues to operate under the Ontario Energy Board (OEB) regulatory framework, which underpins its predictable and stable cash flow. The approved revenue requirement includes all operating, interest, and capital expenses and the opportunity to earn a modest return. In addition, several mechanisms support timely recovery of material and unexpected capital costs, including rate riders and (in some circumstances) the ability to request a rate-reset hearing.

Commodity costs (specifically, natural gas) remain a complete flow-through to ratepayers and are recovered through a quarterly adjustment mechanism, thereby limiting Union's exposure to commodity risk and associated cash flow volatility. Furthermore, the cap and trade carbon tax, recently introduced by the Ontario government, is also a flow-through to ratepayers and has no impact on the company's financial measures.

Enbridge now owns virtually all of Ontario's gas distribution through Union and EGD. However, these two entities will continue to operate separately in their respective service regions. In our view, Union has a diverse customer base within its service territory with a large portion of residential customers. Demand for natural gas in the residential-based customer class can change due to weather-driven changes, which expose Union to volume risk. However, the magnitude of the change does not present a rating risk, and forecasts are based on normalized weather.

Under the Ontario regulatory framework, natural gas distributors, including Union, have an obligation to ensure adequate supply of natural gas.

Previously, gas distributors in Ontario have been depending primarily on gas supply from the Western Canada Sedimentary Basin (WCSB). However, the Dawn-Parkway Expansion project allows Union to gain access to cheaper gas supply and to diversify its sources of gas supply to include the WCSB, Chicago, Dawn, and Niagara (Marcellus/Utica formations). The Dawn-Parkway project has an estimated cost of C$1.5 billion, and should be complete by the end of 2017. We expect the large capital programs will pressure credit metrics during construction period until completion, after which the capital assets become part of the rate base.

Under our base-case scenario, we project that Union's financial performance will be adequate to support the ratings, with adjusted funds from operations (AFFO)-to-debt of about 11% in 2017 before improving to 11%-12% in 2018, following the Dawn-Parkway project's completion. Debt leverage will be high, with debt-to-EBITDA of about 6x in both 2017 and 2018. Modest growth in new customers (of about 20,000 per year) should slightly offset pressure on credit metrics. The recent surge in housing prices in the Greater Toronto Area (GTA) has resulted in homeowners moving to the outskirts of the GTA and beyond. Union's service territory covers along major highways that connect to the GTA, so we expect the utility could benefit from a modest uptick in customer growth, leading to new gas distribution revenue. Our base-case scenario also incorporates capital spending of about C$800 million in 2017 and C$400 million in 2018.

Liquidity

Our view of Union's liquidity is adequate. We expect that liquidity sources will be adequate to cover uses more than 1.1x in the next 12 months. We also expect that in the event of a 10% EBITDA decline, the company's sources of funds would still exceed its uses. In our opinion, Union has sound relationships with its banks and generally prudent financial risk management. In the event of unexpected financial stress, we believe the utility would scale back on its capital expenditures and has the flexibility to suspend dividend payments to preserve the credit metrics.

Principal liquidity sources include:
- Projected FFO of C$480 million-C$500 million over the next 12 months
- Committed revolver availability of C$700 million as of September 30, 2016 expiring in 2021

Principal liquidity uses include:
- Debt maturity of about C$125 million over the next 12 months
- Capital spending of about C$800 million over the next 12 months

Outlook

The stable outlook on Union reflects our expectation that the company will continue to generate stable and predictable cash flows from its regulated gas distribution operation. We also expect Union will execute its planned capital programs on time and budget.

The outlook also reflects our outlook on parent Enbridge. The stable outlook on Enbridge reflects our expectation that the consolidated entity will continue generating stable cash flows. We also expect that Enbridge will maintain AFFO-to-debt at the low end of the significant financial risk profile category, at about 14%.

Downside scenario

Although unlikely, we could lower the rating on Union if the company experiences material operational issues, delays, and cost overruns in capital projects implementation; or adverse material regulatory decisions that lead to sustained deterioration in forecast AFFO-to-debt approaching 9% with no prospect of improvements.

Also, we could also lower the rating on Union if we lower our group credit profile (GCP) on Enbridge. This could happen if the parent's consolidated AFFO-to-debt ratio falls and stays below 11%, which could result from weaker financial performance, due to mainline volumes falling below expectations, or more aggressive funding of the large combined capital program throughout our outlook period.

Upside scenario

An upgrade to Union is unlikely without an upgrade to the Enbridge GCP, which the consolidated rating on the parent determines, in conjunction with an upgrade to the stand-alone credit profile (SACP) of Union. This is because we cap our rating on the company at the lesser of the SACP or one notch above the GCP given our assessment of the insulation measures in place that allow a one notch separation as an insulated subsidiary.

An upgrade to Union's SACP would require the company to improve financial measures with AFFO-to-debt approaching and staying at 14%, which could happen if the company's gas distribution revenue increases substantially and permanently. However, we do not expect this to happen during our outlook period given rates are regulated. An upgrade to Enbridge's GCP would require the company to improve financial measures with consolidated AFFO-to-debt above 15%-16% on a sustained basis. Given Union's relatively small cash flow contribution to the Enbridge group, improvement to the company's financial measures alone would have a negligible impact on the ratings on Enbridge.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 8, Schedule 1, Attachment 2 – 2021 Audited Financial Statement

Question(s):

Under Note 2 Push-Down Accounting of the audited financial statements (AFS), it states that push-down accounting with respect to the accounts of Union Gas was applied. The carrying values of certain assets and liabilities of Union Gas transferred to EGD have been adjusted to reflect Enbridge Inc.'s (Enbridge) historical cost as at February 27, 2017, the date upon which Enbridge acquired common control of EGD and Union Gas.

Furthermore, under Note 7 Property, Plant & Equipment, it states that depreciation expense is $22M in incremental depreciation resulting from push-down accounting for the year ended December 31, 2021.

a) Please discuss how the accounting of Union Gas's assets and liabilities have been treated for regulatory purposes upon acquisition of EGD and Union Gas.

b) Please confirm that the historical costs for Union Gas's capital assets were adopted for regulatory purposes. If not confirmed, please discuss and explain why the implications of this are not reflected in the Accounting Policy Change Deferral Account.

Response:

a) The treatment of Union's assets and liabilities for regulatory purposes has been status quo since the acquisition of EGD and Union by Enbridge on February 27, 2017, aside from the material items listed below that were pushed down to Enbridge Gas as of the amalgamation of EGD and Union on January 1, 2019:

   i. Long Term Debt: In accordance with ASC 805, the net assets and liabilities of Union that were acquired were re-measured to fair value – this included long-term debt. The long-term debt that was recognized in Union's financial statements was re-measured to fair value, which resulted in an increase to the carrying value of long-term debt that was recognized in UGL's financial statements. As part of the Purchase Price Discrepancy (PPA), EGI recognized a regulatory asset in the same amount to offset the fair value bump to long-term debt. This regulatory asset is drawn down (amortized) annually, offsetting the $22 million PPA noted as depreciation in Note 7 of the Audited Financial Statements. Therefore, there is no impact to the utility results for this item.

ii. Pension: ASC 805 requires the recognition of a liability for the excess of the benefit obligation over the fair value of the plan assets, both re-measured at the acquisition date using current discount rates and assumptions established by the acquirer. Enbridge recognized an adjustment to increase the pension obligation and pension assets related to Union’s defined benefit pension plan. As part of the PPA, the accumulated other comprehensive income (AOCI) of approximately $250 million that was recorded in Union’s financial records in accordance with ASC 715 was eliminated on the acquisition date. The impacts noted above were pushed down to Enbridge Gas on amalgamation of EGD and Union, and Enbridge Gas recognized a regulatory asset within the APCDA to ensure continued recognition of the unamortized balance of actuarial gains/losses and past service costs. The balance has continued to be drawn down and recognized as pension expense. Therefore, there has been no impact to the utility results for this item. Please see response at Exhibit I.4.4-STAFF-133 for a continuity of the pre-2017 losses noted here.

b) Confirmed.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 8, Schedule 1, Attachment 2 – 2021 Audited Financial Statement

Question(s):

Under Note 2 Asset Retirement Obligations (ARO) of the AFS, it states that currently for the majority of assets, it is not possible to make a reasonable estimate of ARO due to the indeterminate timing and scope of the asset retirements.

Under Note 19 Environmental, it states that to the extent that Enbridge Gas is unable to recover payment for environmental liabilities from insurance or other potentially responsible parties, it will be responsible for payment of liabilities arising from environmental incidents associated with our operating activities.

a) Please clarify whether Enbridge Gas has AROs recorded in its financial statements.
   i. If yes, please explain how it is treated for regulatory purposes, where it is included in the application, and quantify the amount(s).

b) Please clarify whether Enbridge Gas has environmental liabilities recorded in its financial statements.
   i. If yes, please explain how it is treated for regulatory purposes, where it is included in the application, and quantify the amount(s).

Response:

a) Yes, Enbridge Gas has AROs recorded in its financial statements. However, the asset retirement obligations are not associated with regulated long-lived assets and therefore do not impact utility financial results.

b) No, Enbridge Gas does not have any environmental liabilities recorded in its financial statements.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Ref 1: Exhibit 1, Tab 8, Schedule 1, Attachment 2 – 2021 Audited Financial Statement (AFS)
Ref 2: EB-2012-0459, Decision with Reasons, July 17, 2014

Question(s):

In the 2021 AFSs, Note 5 shows long-term regulatory liabilities for the future removal and site restoration reserves of $1,543 million for 2021. Footnote 9 states that the amount consists of amounts collected from customers, with the approval of the OEB, to fund future costs of removal and site restoration relating to property, plant and equipment. These costs are collected as part of the depreciation expense charged on property, plant and equipment that is reflected in rates.

In the OEB's Decision for EGD's 2014-2018 Custom IR proceeding noted in Reference 2, the OEB approved the Constant Dollar Net Salvage (CDNS) method for site restoration costs (SRC). In that proceeding, EGD proposed to refund $259.8 million in excess SRC to ratepayers. The OEB decided that the refund would be increased by an additional $120 million and the SRC provision for 2014 to 2018 would be reduced by $85 million.

a) Please confirm that the $1,543 million of future removal and site restoration reserves shown in the 2021 AFS represents the amount that has been recovered from customers in rates as at December 31, 2021. If not confirmed, please explain what the amount represents.

b) Please provide the approximate amount of site restoration costs that have been recovered to date.
    i. Please confirm that this amount would be equal to the SRC provision in accumulated depreciation. If not confirmed, please explain why not.

c) On page 60 of Reference 2, it was estimated that EGD would require over $3 billion in the future to remove and replace assets at the end of their useful lives. Please provide the most current update on the estimated total future removal and replacement costs.

d) Please confirm that when SRC are incurred, actual SRC costs draw down the accumulated SRC reserve in accumulated depreciation. If not confirmed, please explain how SRC are recorded for regulatory purposes when incurred and confirm that there is no double counting of recovery of SRC.

e) In EGD's 2014 to 2018 Custom IR proceeding, the OEB required the SRC refund to be increased by an additional $120 million and the SRC provision for 2014 to 2018 to be reduced by $85 million. Please explain the implications of the OEB's decision to the SRC reserve and annual SRC provision in its 2021 AFS and for 2024 to 2028.

f) Please quantify the annual SRC provision from 2024 to 2028.
   ii. Please explain whether the annual SRC provision is equal to the SRC forecasted to be incurred from 2024 to 2028.
   iii. If the annual SRC provision is not equal to the SRC forecasted to be incurred from 2024 to 2028 are not equal, please provide the annual SRC forecasted to be incurred from 2024 to 2028.

g) When EGD was approved to transition from the Traditional method of accounting for SRC to the CDNS method in EGD's 2014 to 2018 Custom IR proceeding, the accumulated depreciation requirement (i.e. SRC reserve) was less than the requirement using the Traditional method. The difference between the two was approved to be returned to ratepayers. In the current rate application, Enbridge Gas is proposing that Union Gas transition from the Traditional Method to the CDNS method. For Union Gas, please quantify the SRC reserve under the Traditional method and the SRC reserve under the CDNS method.
   i. If there is no difference in the SRC reserve between the two methods, please explain why and how it is different from EGD's circumstances when EGD transitioned from the Traditional method to the CDNS method.
   ii. If there is a difference in the SRC reserve between the two methods, please explain the difference and Enbridge Gas's proposed treatment for the difference.

Response:

a) Not confirmed. The amount is the presumed amount recovered in rates, based on the salvage component in approved depreciation rates applied to actual gross plant values, net of actual removal and restoration costs incurred as of Dec. 31, 2021. The Company is not able to quantify the actual amount recovered in rates, which would have been based on applying approved salvage component of depreciation rates to the forecasts of gross plant, and then would have been subject to actual versus forecast customer and volumetric variances.

b) Enbridge Gas is not able to quantify the total amount of net salvage/site restoration costs it has recovered through depreciation to date, because as noted above the actual costs of removal and restoration have been netted against amounts recovered over time. Similarly, the site restoration cost provision included within accumulated depreciation reflects amounts recovered over time, net of costs incurred over time.

c) The estimated amount of future site restoration costs for all of Enbridge Gas's assets discounted to today's dollar equivalent is \$4.7 billion (\$21.3 billion undiscounted).

   The following response was prepared provided by Concentric:

   Please see response at Exhibit I.1.4.5-IGUA-14, Attachment 1 which provides the detailed CDNS calculations for each account. The currently estimated future cost of removal requirement is identified in the column "Future Salvage Requirement".

d) Confirmed.

e) The OEB's decision within EGD's custom incentive regulation (CIR) Application[1], which directed the refund of \$379.8 million in site restoration reserves to ratepayers, as compared to the proposed \$259.8, served to reduce the SRC reserve/liability reflected by the Company by \$379.8 million by the end of 2018 (or by an incremental \$120 million), as compared to what it would have been had the refund not occurred. That reduction in the reserve due to the amounts refunded carries on indefinitely, when considered discretely from any adjustments to the net salvage component of depreciation rates that are made and approved in subsequent depreciation studies. From a regulatory perspective, the reduction in the reserve increased utility rate base, as the reserve/liability is included as part of accumulated depreciation within rate base.

   With respect to the OEB's Decision which directed an \$85 million reduction to the forecast reserve amounts to be collected (through the net salvage component of depreciation rates) over the 2014 – 2018 CIR term, it has also served to reduce the SRC reserve/liability reflected by the Company, as compared to what it otherwise would have been absent the directive. In order to implement that directive, the net salvage component of the depreciation rates approved as part of that proceeding were adjusted (i.e. lowered), such that when they were applied to the forecast depreciable gross plant balances, it resulted in a cumulative \$85 million reduction in forecast depreciation expense over the 2014 to 2018 term, as compared to what it would have been based on the proposed depreciation rates. The actual reduction in the reserve that occurred over the 2014 to 2018 term would however have varied somewhat from the forecast \$85 million, as it reflected the impact of applying the

[1] EB-2012-0459.

approved depreciation rates to the actual gross plant balances that occurred over that term.

Since 2018, the annual provision for site restoration reserves, recognized as part of depreciation expense on EGD rate zone assets, continues to be lower than it otherwise would have been absent the OEB's direction. The approved depreciation rates (i.e. rates with a lower net salvage component) continue to be applied to actual depreciable gross plant balances, and will continue to be applied until such time as new depreciation rates inclusive of an updated net salvage component are approved, as are being requested within this proceeding. Therefore, as at December 31, 2021, a greater than $85 million reduction to the reserve has occurred as a result of the continued application of the OEB approved depreciation rates beyond 2018.

As of the end of 2023, the outstanding reserve amount will reflect the cumulative reduction that occurred as a result of applying the approved depreciation rates (reflecting a lower net salvage component) to actual EGD rate zone gross depreciable plant balances over the 2014 to 2023 period. Commencing in 2024 and through 2028, the annual site restoration cost provision, which will impact the outstanding reserve, will cease being directly impacted by the OEB's directive in EB-2012-0459, as it is expected that new depreciation rates, inclusive of updated net salvage components, will be approved and implemented.

f) The estimated annual SRC provision for 2023 to 2026 is shown in Table 1. Enbridge Gas is unable to provide the estimate from 2027 to 2028 due to the forecasting horizon used for planning purposes. The forecasts for 2025 and 2026 do not include the changes to depreciation expense reflected in the March 8, 2023 update. Please see response at Exhibit I.1.2-SEC-6.

Table 1

$ Million	2023	2024	2025	2026
Estimated SRC provision	$91.2	$118.6	$135.0	$141.3

i) The annual SRC provision is not equal to the SRC forecasted for 2024 to 2026. This is due to differences in the timing of the collection of the SRC vs the SRC expenditures.

ii) The annual SRC forecasted to be incurred for 2024 to 2026 is show in Table 2:

Table 2

$ Million	2023	2024	2025	2026
Forecasted SRC incurred	$61.4	$62.8	$60.5	$55.5

g) The following response was provided by Concentric:

Given the harmonization of the accounts, it is not possible to develop a theorical net salvage accumulated depreciation calculation separately for the EGD and Union assets. Furthermore, given that booked accumulated depreciation amounts related to the legacy EGD assets were based on the use of the CDNS method, it is not feasible to recalculate those balances on the assumption that a traditional method of salvage analysis had been used.

However, in order to be responsive to the question, Concentric has calculated the accumulated depreciation variance resulting from the comparison of the calculated accumulated depreciation using the CDNS method and booked accumulated depreciation amounts on the harmonized company using the actual accumulated depreciation balances. The calculation is summarized below:

Calculated accumulated depreciation (using CDNS method)	$1,197 million
Booked accumulated depreciation	$1,543 million
Surplus/(Deficiency)	$ 346 million

Enbridge Gas is proposing a remaining life depreciation calculation (as currently approved for both the EGD and Union systems). The above accumulated depreciation variance is embedded in the estimated remaining life depreciation accruals of each account in accordance with the remaining life calculations included in Section 8 of the Concentric depreciation study report.

Ref 1: Exhibit 1, Tab 8, Schedule 2, p.3
Ref 2: January 27, 2023, Evidence Corrections and Updates

Question(s):

Regarding reporting under USGAAP, Enbridge Gas stated that the Ontario Securities Commission and the Alberta Security Commission decided that Enbridge Gas can continue to use USGAAP for financial reporting purposes until January 1, 2027.

a) Please explain Enbridge Gas's views on adopting International Financial Reporting Standards (IFRS) for regulatory purposes if it is required to adopt IFRS for financial reporting purposes.

b) Please explain whether Enbridge Gas has assessed the implications of adopting IFRS. If yes, please discuss.

c) If Enbridge Gas is required to adopt IFRS during its IRM term, please discuss how Enbridge Gas will address this change for regulatory purposes (e.g. establishment of a DVA).

Response:

a) Enbridge Gas views the adoption of IFRS for regulatory purposes as appropriate upon adopting IFRS for financial reporting purposes. However, please see response at part c).

b) Enbridge Gas has not undertaken the necessary work to assess or quantify the differences between US GAAP and IFRS and any resulting implications. To understand the differences (if any), Enbridge Gas would be required to conduct a lengthy and complex assessment of the differences between US GAAP and IFRS as a whole. Enbridge Gas is aware that the International Accounting Standards Board has proposed a new rate-regulated accounting standard, which is expected to address some of the differences, however the substance of the final standard is unknown at this time.

c) If Enbridge Gas is required to adopt IFRS during its IRM term, Enbridge Gas believes that one viable option would be to establish a deferral account similar to the Accounting Policy Changes Deferral Account. However, Enbridge Gas would need to fully assess the implications for regulatory purposes at a time when the final rate-regulated IFRS standard is issued.

Ref 2: Exhibit 1, Tab 9, Schedule 1, Attachment 1
Ref 3: Exhibit 2, Tab 6, Schedule 1, p.35

Question(s):

In Table 1, Enbridge Gas listed accounting standard updates that had no impact or an immaterial impact on its revenue requirement. Enbridge Gas indicated that the update for ASU 2017-07 Improving the Presentation of Net Periodic Benefit Cost related to Defined Benefit Plans improves the income statement presentation of the components of net periodic pension cost and net periodic post-retirement benefit cost for an entity's sponsored defined benefit pension and other postretirement plans. OEB staff notes that the update also allows only the service cost component to be eligible for capitalization, when applicable.

Enbridge Gas also indicated that for ASU 2018-15 relating to cloud computing arrangements, the ASU specifies that an entity would apply Accounting Standards Codification 350-40, internal-use software, to determine which implementation costs related to a hosting arrangement that is a service contract should be capitalized and which should be expensed. Ref 2 shows capital expenditure integration project for the CIS Integration HANA cloud application of $11.8 million as at December 31, 2023.

a) Regarding ASU 2017-07, please confirm that the update relating to capitalization also did not have a material impact on Enbridge Gas's revenue requirement.

   i. If not confirmed, please quantify and explain the impact on the treatment of capitalization of pensions and Other Post Employment Benefits (OPEB) since the implementation of ASU 2017-07.

b) With regards to cloud computing, please explain Enbridge Gas's regulatory treatment for cloud computing and whether these costs are capitalized or expensed.

   i. Please provide a schedule showing all costs related to cloud computing as at December 31, 2023 broken down by project/category as applicable, and indicate whether each of these costs have been expensed or capitalized.

ii. Reference 3 states that Enbridge Gas has adopted cloud computing services, and that the transition to cloud computing services results in higher O&M costs (lower capital costs) as spending shifts away from capital. Please indicate which costs in response to part “b” above would have been historically treated as capital.

Response:

a) Confirmed.

b) In accordance with US GAAP, all cloud computing costs that do not pertain to implementation costs or costs related to software licenses, are expensed as incurred.

i. Cloud computing costs forecasted to be incurred in 2023 are provided at Table 1.

Table 1
2023 Cloud Computing Costs

Category ($ millions)	Expensed (a)	Capitalized (b)
New Capabilities	7.9	10.7
Shifted to Cloud	9.7	10.1
Totals	17.6	20.8

ii. The services related to the expenses in column (a) of the table would have been historically treated as capital. However, the traditional on-premise solution is not a one to one comparison with the cloud computing services expensed in column (a). The capital associated with an on-premise solution would be significantly higher. Therefore, the costs associated with the two methods are not a one to one comparison.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 8, Schedule 1, Attachment 4, p1

Question(s):

In the above reference noted, there is an adjustment to corporate income to derive utility income. Specifically, there is an adjustment of $4.4 million to gas sales and distribution, and gas costs as well as an adjustment of $0.4 million to transportation revenues. These adjustments relate to accelerated CCA.

Please elaborate further on the $4.4 Million and $0.4 Million accelerated CCA adjustments and explain why they would impact the revenues and costs of the utility.

Response:

The adjustments of $4.4 million to increase 2019 utility gas sales and distribution revenue, and $0.4 million to increase 2019 utility transportation revenues, were to eliminate 2018 accelerated CCA impacts related to EGD and Union that were recorded in 2019, but previously reflected in the 2018 utility results for each utility. As the enactment of Bill C-97, which enabled accelerated CCA, occurred in June 2019 but was effective in respect of capital expenditures made and placed into service on or after November 21, 2018, the impact related to applicable 2018 capital additions could not be recognized/accounted for within corporate accounting results until 2019. However, the 2018 utility results for each of EGD and Union, which were filed after the enactment of Bill C-97[1], incorporated the 2018 impacts of accelerated CCA. Within the 2018 results, revenues were reduced/debited, with a corresponding payable reflected in the Tax Variance Deferral Account, to eliminate the revenue requirement impact of accelerated CCA that was reflected in the 2018 utility income tax calculations. As the reduction in revenues was reflected in 2018 utility results, but recorded in 2019 corporate results, the reductions needed to be reversed/eliminated from the determination of 2019 utility results to ensure they were not double counted from a utility perspective.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 9, Schedule 1, p. 16

Question(s):

The OEB approved the amalgamation of EGD and Union Gas in EB-2017-0306/0307. As part of its decision on the amalgamation, the OEB also approved a ratemaking framework and a deferred rebasing period of 5 years. In order to deliver the integration benefits and the savings to be passed on to customers at rebasing, O&M costs associated with integration were tracked separately over the deferred rebasing term. Enbridge Gas has noted that these costs will no longer be required beyond 2023 and were not reflected in rates during the deferred rebasing term, and as such were borne by the utility. Also included are severance costs associated with any full-time equivalent (FTE) reductions brought about by restructuring.

a) Please confirm that integration costs incurred by Enbridge Gas or forecast to be incurred are not included in the 2024 OM&A costs.

b) Please confirm if Enbridge Gas has included any severance costs associated with FTE reductions brought about by restructuring in 2024 O&M costs or in the 2024 revenue requirement. Also, please provide any severance costs included in 2024 rates.

Response:

a) Confirmed. O&M integration costs are not included in the 2024 Test Year Forecast.

b) Confirmed, there are no severance costs related to integration restructuring in 2024 O&M costs or in the 2024 revenue requirement. Enbridge Gas has included $1.6 million in regular recurring severance charges within the 2024 Test Year Forecast for Central Functions Allocations.

EXPLANATORY NOTE

Enbridge Inc., a corporation existing under the *Canada Business Corporations Act*, qualifies as a foreign private issuer in the United States (US) for purposes of the *Securities Exchange Act of 1934, as amended* (the Exchange Act). Although, as a foreign private issuer, Enbridge Inc. is not required to do so, Enbridge Inc. currently files annual reports on Form 10-K, quarterly reports on Form 10-Q, and current reports on Form 8-K with the Securities and Exchange Commission (SEC) instead of filing the reporting forms available to foreign private issuers.

Enbridge Inc. intends to prepare and file a management proxy circular and related material under Canadian requirements. As Enbridge Inc.'s management proxy circular is not filed pursuant to Regulation 14A, Enbridge Inc. may not incorporate by reference information required by Part III of this Form 10-K from its management proxy circular. Accordingly, in reliance upon and as permitted by Instruction G(3) to Form 10-K, Enbridge Inc. will be filing an amendment to this Form 10-K containing the Part III information no later than 120 days after the end of the fiscal year covered by this Form 10-K.

CONVENTIONS

The terms "we", "our", "us" and "Enbridge" as used in this report refer collectively to Enbridge Inc. and its subsidiaries unless the context suggests otherwise. These terms are used for convenience only and are not intended as a precise description of any separate legal entity within Enbridge.

Unless otherwise specified, all dollar amounts are expressed in Canadian dollars, all references to "dollars" or "$" are to Canadian dollars and all references to "US$" are to US dollars. All amounts are provided on a before-tax basis, unless otherwise stated.

FORWARD-LOOKING INFORMATION

Forward-looking information, or forward-looking statements, have been included in this Annual Report on Form 10-K to provide information about us and our subsidiaries and affiliates, including management's assessment of our and our subsidiaries' future plans and operations. This information may not be appropriate for other purposes. Forward-looking statements are typically identified by words such as "anticipate", "believe", "estimate", "expect", "forecast", "intend", "likely", "plan", "project", "target" and similar words suggesting future outcomes or statements regarding an outlook. Forward-looking information or statements included or incorporated by reference in this document include, but are not limited to, statements with respect to the following: our corporate vision and strategy, including strategic priorities and enablers; expected supply of, demand for, exports of and prices of crude oil, natural gas, natural gas liquids (NGL), liquified natural gas (LNG) and renewable energy; energy transition and lower-carbon energy, and our approach thereto; environmental, social and governance (ESG) goals, practices and performance; industry and market conditions; anticipated utilization of our assets; dividend growth and payout policy; financial strength and flexibility; expectations on sources of liquidity and sufficiency of financial resources; expected strategic priorities and performance of the Liquids Pipelines, Gas Transmission and Midstream, Gas Distribution and Storage, Renewable Power Generation and Energy Services businesses; expected costs, benefits and in-service dates related to announced projects and projects under construction; expected capital expenditures; investable capacity and capital allocation priorities; share repurchases under our normal course issuer bid; expected equity funding requirements for our commercially secured growth program; expected future growth, development and expansion opportunities; expected optimization and efficiency opportunities; expectations about our joint venture partners' ability to complete and finance projects under construction; expected closing of acquisitions and dispositions and the timing thereof; expected benefits of transactions; expected future actions of regulators and courts, and the timing and impact thereof; toll and rate cases discussions and proceedings and anticipated timeline and impact therefrom, including Mainline Contracting and those relating to the Gas Transmission and Midstream and Gas Distribution and Storage businesses; operational, industry, regulatory, climate change and other risks associated with our businesses; and our assessment of the potential impact of the various risk factors identified herein.

Although we believe these forward-looking statements are reasonable based on the information available on the date such statements are made and processes used to prepare the information, such statements are not guarantees of future performance and readers are cautioned against placing undue reliance on forward-looking statements. By their nature, these statements involve a variety of assumptions, known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such statements. Material assumptions include assumptions about the following: the expected supply of, demand for, export of and prices of crude oil, natural gas, NGL, LNG and renewable energy; anticipated utilization of assets; exchange rates; inflation; interest rates; the COVID-19 pandemic and the duration and impact thereof; availability and price of labor and construction materials; the stability of our supply chain; operational reliability; maintenance of support and regulatory approvals for our projects; anticipated in-service dates; weather; the timing and closing of acquisitions and dispositions; the realization of anticipated benefits of transactions; governmental legislation; litigation; estimated future dividends and impact of our dividend policy on our future cash flows; our credit ratings; capital project funding; hedging program; expected earnings before interest, income taxes, and depreciation and amortization (EBITDA); expected earnings/(loss); expected future cash flows; and expected distributable cash flow. Assumptions regarding the expected supply of and demand for crude oil, natural gas, NGL, LNG and renewable energy, and the prices of these commodities, are material to and underlie all forward-looking statements, as they may impact current and future levels of demand for our services. Similarly, exchange rates, inflation and interest rates and the COVID-19 pandemic impact the economies and business environments in which we operate and may impact levels of demand for our services and cost of inputs, and are therefore inherent in all forward-looking statements. The most relevant assumptions associated with forward-looking statements regarding announced projects and projects *under construction, including estimated completion dates and expected capital expenditures, include the following: the availability and price of labor and construction materials; the stability of our supply chain; the effects of inflation and foreign exchange rates on labor and material costs; the effects of interest rates on borrowing costs; the impact of weather and customer, government, court and regulatory approvals on construction and in-service schedules and cost recovery regimes; and the COVID-19 pandemic and the duration and impact thereof.*

Our forward-looking statements are subject to risks and uncertainties pertaining to the successful execution of our strategic priorities, operating performance; legislative and regulatory parameters; litigation; acquisitions, dispositions and other transactions and the realization of anticipated benefits therefrom; operational dependence on third parties; dividend policy; project approval and support; renewals of rights-of-way; weather; economic and competitive conditions; public opinion; changes in tax laws and tax rates; exchange rates; inflation; interest rates; commodity prices; access to and cost of capital; political decisions; global geopolitical conditions; the supply of, demand for and prices of commodities and other alternative energy; and the COVID-19 pandemic, including but not limited to, those risks and uncertainties discussed in this Annual Report on Form 10-K and in our other filings with Canadian and US securities regulators. The impact of any one assumption, risk, uncertainty or factor on a particular forward-looking statement is not determinable with certainty as these are interdependent and our future course of action depends on management's assessment of all information available at the relevant time. Except to the extent required by applicable law, Enbridge assumes no obligation to publicly update or revise any forward-looking statement made in this Annual Report on Form 10-K or otherwise, whether as a result of new information, future events or otherwise. All forward-looking statements, whether written or oral, attributable to us or persons acting on our behalf, are expressly qualified in their entirety by these cautionary statements.

NON-GAAP AND OTHER FINANCIAL MEASURES

Part II. Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations *(MD&A) in this Annual Report on Form 10-K makes reference to non-GAAP and other financial measures, including EBITDA. EBITDA is defined as earnings before interest, income taxes and depreciation and amortization. Management uses EBITDA to assess performance of Enbridge and to set targets. Management believes the presentation of EBITDA gives useful information to investors as it provides increased transparency and insight into the performance of Enbridge.*

The non-GAAP and other financial measures are not measures that have a standardized meaning prescribed by the accounting principles generally accepted in the United States of America (US GAAP) and are not US GAAP measures. Therefore, these measures may not be comparable with similar measures presented by other issuers. A reconciliation of historical non-GAAP and other financial measures to the most directly comparable GAAP measures is set out in this MD&A and is available on our website. Additional information on non-GAAP and other financial measures may be found on our website, www.sedar.com or www.sec.gov.

PART I

ITEM 1. BUSINESS

Enbridge is a leading North American energy infrastructure company. Our core businesses include Liquids Pipelines, which consists of pipelines and terminals in Canada and the US that transport and export various grades of crude oil and other liquid hydrocarbons; Gas Transmission and Midstream, which consists of investments in natural gas pipelines and gathering and processing facilities in Canada and the US; Gas Distribution and Storage, which consists of natural gas utility operations that serve residential, commercial and industrial customers in Ontario and Québec; and Renewable Power Generation, which consists primarily of investments in wind and solar assets, as well as geothermal, waste heat recovery and transmission assets, in North America and Europe.

Enbridge is a public company, with common shares that trade on the Toronto Stock Exchange (TSX) and New York Stock Exchange (NYSE) under the symbol ENB. We were incorporated on April 13, 1970 under the Companies Ordinance of the Northwest Territories and were continued under the Canada Business Corporations Act on December 15, 1987.

A more detailed description of each of our businesses and underlying assets is provided below under *Business Segments*.

CORPORATE VISION AND STRATEGY

VISION

Our primary purpose as a company is to fuel people's quality of life in a safe, clean, and socially responsible manner. Our vision to be the leading energy infrastructure company in North America and beyond supports this purpose. In pursuing this vision, we seek to play a critical role in enabling the economic and social well-being of people across the world by providing access to affordable, reliable, and secure energy. Our infrastructure franchises transport, distribute, and generate energy, including liquids, natural gas, renewable power, and lower-carbon fuels. We recognize that the energy system is changing, and we aim to bridge to a cleaner energy future by investing in lower-carbon platforms while ensuring the continuity and stability that the world requires through the transition.

Our investor value proposition is founded on our ability to deliver predictable cash flows and a growing stream of dividends year-over-year through investment in, and efficient operation of, energy infrastructure assets that are strategically positioned between key supply basins and strong demand-pull markets. Our assets are underpinned by long-term contracts, regulated cost-of-service tolling frameworks, power purchase agreements (PPAs), and other low-risk commercial arrangements.

In addition, we strive to be a leader in worker and public safety, ESG, stakeholder relations, customer service, community investment, and employee engagement and satisfaction.

STRATEGY

Our strategy is underpinned by a deep understanding of energy supply and demand fundamentals. Through disciplined capital allocation that is aligned with our outlook on energy markets, we have become an industry leader with a diversified portfolio across both conventional and lower-carbon energies. Our assets have reliably generated low-risk, resilient cash flows through many commodity and economic cycles.

In order to continue to be an industry leader and value creator going forward, we maintain a robust strategic planning approach. We regularly conduct scenario and resiliency analysis on both our assets and business strategy. We test various value enhancement and maximization options, and we regularly engage with our Board of Directors (the Board) to ensure alignment and maintain active oversight, including updates and discussions throughout the year and a dedicated annual Strategic Planning session. Going forward, we plan to use this comprehensive approach to guide our investment and portfolio decisions.

Predictable growth is a hallmark of our investor value proposition. Our robust portfolio of project development opportunities and ongoing efficiency improvements should help drive mid-single digit growth in our distributable cash flow per share for years to come. We remain confident in our two-pronged growth strategy and expect to selectively invest in our diversified footprint of both conventional businesses and complementary lower-carbon platforms, such as renewables, Carbon Capture and Storage (CCS), Hydrogen (H2), and Renewable Natural Gas (RNG). Additionally, ESG continues to be integral to our strategy; we are committed to reducing our emissions, building lasting relationships with our stakeholders, and promoting diversity, equity, and inclusion.

In alignment with our strategy, we progressed several of our priorities in 2022. For example:

- Our Liquids Pipelines business delivered record Mainline volumes, increased ownership in and operatorship of the Gray Oak pipeline, and permitted a 2 million barrels (mmbl) storage expansion at Enbridge Ingleside Energy Center (EIEC), further bolstering our presence in the US Gulf Coast and global export markets.

- Our Gas Transmission and Midstream business successfully expanded our secured capital program notably with the T-South Expansion Program and T-North Expansion Program and acquired an equity stake in Woodfibre LNG Limited Partnership to capitalize on increasing global gas demand and supporting coal-to-gas conversions that are expected to help lower global energy emissions.

- Our Gas Distribution and Storage business added over 45,000 new customers, filed the rate rebasing application for 2024-2028 which proposes continuation of Incentive Rate-setting mechanisms, completed the Pathways to Net-Zero Emissions Study for Ontario, and progressed construction of three RNG projects and development of a green hydrogen blending project at Gazifère Inc. (Gazifère), a wholly-owned natural gas distribution company in Québec.

- Our Renewable Power Generation business accelerated its growth strategy with the acquisition of the renewable developer Tri Global Energy, LLC (TGE), securing 3.9 gigawatts (GW) of conditionally sold renewable generation projects and an additional 3 GW in development projects. In addition, the 480 megawatts (MW) Saint-Nazaire project, France’s first commercial-scale offshore wind in which Enbridge holds a stake, became fully operational in 2022. We are continuing to advance construction of three additional offshore wind projects in Europe.

- Our New Energy Technologies team, in collaboration with all of our business units, advanced our lower-carbon strategy, including building strategic partnerships to progress the Wabamun Carbon Hub in Alberta and lower-carbon hydrogen and ammonia production and export facilities in the US Gulf Coast.

- We have made meaningful progress towards our ESG goals, advancing construction of ten solar self-power projects, signing a landmark sale of a non-operating interest in pipelines in our Regional Oil Sands System to 23 Indigenous communities, and publishing our Indigenous Reconciliation Action Plan to further our engagement.

- We continue to recycle capital at attractive valuations, further optimizing and diversifying our portfolio. In addition, we are focused on improving efficiencies to increase our profitability and competitiveness.

These achievements are discussed in further detail in Part II. *Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.*

Looking ahead, our near-term strategic priorities remain similar to years past. As always, proactively advancing the safety of our assets, protecting the environment, and maintaining reliability of our system remain our top priorities. We are focused on enhancing the value of our existing assets, capitalizing on our extensive infrastructure, prioritizing in-franchise organic growth and export-driven opportunities, and developing lower-carbon platforms across all our businesses. We will continue to invest where we can advance our strategy, build sustainable competitive advantage, and achieve attractive risk-adjusted returns.

Our key strategic priorities include:

Safety and Operational Reliability
Safety and operational reliability are the foundation of our strategy. We strive to achieve and maintain industry leadership in all facets of safety - process, public, and personal - and ensure the highest standards of reliability and integrity across our system to protect our communities and the environment.

Extend Growth
The cornerstone of our growth lies in the successful execution of our slate of secured projects (currently $18 billion through 2028) on schedule and at the lowest practical cost, while maintaining the highest standards for safety, quality, customer satisfaction, and environmental and regulatory compliance. For a discussion of our current portfolio of capital projects refer to Part II. *Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Growth Projects - Commercially Secured Projects*.

Beyond that, we seek to continually identify additional high-quality growth opportunities across all our platforms. We expect to have sufficient equity self-funding capacity of about $5 to $6 billion per year to invest in growth without issuing any additional common equity and maintaining key credit metrics. We will remain disciplined and will strive to deploy capital towards the best uses, prioritizing balance sheet strength, investment in low capital intensity growth, and regulated utility or utility-like projects. We will carefully assess our remaining investable capacity, deploying capital to what we believe are the most value-enhancing opportunities available to us, including further organic growth, complementary accretive "tuck-in" acquisitions that improve our competitive positioning, share repurchases, or further deleveraging of our balance sheet.

Looking ahead, we see strong utilization of our existing network and opportunities for future growth within each of our businesses. For example, we expect that:

- Our liquids pipelines infrastructure will remain a vital connection between key supply basins and demand-pull markets such as the refinery hubs in the US Midwest, eastern Canada, and the US Gulf Coast. The emergence of CCS offers the potential to provide new growth opportunities over the long term.

- Our natural gas transmission business will seek extension and expansion opportunities driven by new load demand from gas-fired power generation, industrial growth, and coastal LNG plants. Looking forward, blending RNG and H2 production into our system should enhance asset longevity and enable us to offer a differentiated lower-carbon solution to customers.

- Our gas distribution and storage business will continue to grow through productivity enhancements, modernization investments, and facilities that blend H2 and RNG into the gas supply. We expect to continue to add customers over the next regulatory framework period to 2028. Additionally, we expect to expand our offerings to customers, including additional demand-side management, as well as resiliency and hybrid heating programs.

- Our enhanced renewable power capabilities position us well to capitalize on strong renewables growth in Europe and North America and execute on our large development program. We also plan to continue to progress our multi-year self-power program across our liquids and gas systems.

In addition, we aim to drive growth through an ongoing focus on optimization, modernization, productivity, and efficiency across all our businesses. Examples include: the application of drag-reducing agents and pump station modifications to optimize throughput on our liquids system, the execution of toll settlements and rate case filings to optimize revenue within our gas transmission franchises, the expansion of lower-carbon offerings to utility customers and investments in lower-carbon supply connections to the gas grid, and more generally, the creation of sustainable cost savings across the organization through innovation, process improvement and/or system enhancements.

Maintain a Strong Balance Sheet
The maintenance of our balance sheet strength is critical to our strategy. Our financing strategies are designed to retain strong, investment-grade credit ratings to ensure we have the financial capacity to meet our capital funding needs and the flexibility to manage capital market disruptions. Our current secured capital program can be readily financed through internally generated cash flow and available balance sheet capacity without issuance of additional common equity. We will seek to secure new growth within our "self-funded" equity model. In addition, we continue to look at opportunities to monetize non-core assets at attractive valuations. For further discussion on our financing strategies refer to Part II. *Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources*.

Disciplined Capital Allocation
We assess the latest fundamental trends, monitor the business landscape, and proactively conduct business development activities with the goal of identifying an industry-leading capital deployment opportunity set. We screen, analyze, and assess opportunities using a disciplined investment framework with the objective of effectively deploying capital to grow while achieving attractive risk-adjusted returns, within our low-risk "utility-like" business model.

All investment opportunities are evaluated based on their potential to advance our strategy, mitigate risks, support our ESG goals, and create additional financial flexibility. Our primary emphasis in the near term is on low capital intensity opportunities to enhance returns in existing businesses (organic expansions and optimizations), modernization of our systems, and utility rate-based investments. We also remain focused on larger projects where commercial constructs fit our investor value proposition and where we can effectively manage risks during the execution phase. In addition, we continue to assess other value-enhancing opportunities, such as accretive acquisitions that can complement our portfolio.

In evaluating typical investment opportunities, we also consider other potential capital allocation alternatives. Other alternatives for capital deployment depend on our current outlook and include further dividend increases, further debt reduction, and/or share repurchases.

Lead in Energy Transition Over Time
As the global population grows and standards of living continue to improve around the world, we expect energy demand to rise. At the same time, we, and our society, increasingly recognize the need for secure and reliable energy while reducing global greenhouse gas (GHG) emissions. Accordingly, energy systems around the world are being reshaped as industry participants, regulators, and consumers seek to lower emissions. As a diversified energy infrastructure company, we believe we are well positioned to play a key role in the energy transition by leading the development of the future energy systems with regulators and policy makers and partnering with customers on their lower-carbon strategies, while reducing our own carbon footprint.

We believe that diversification and innovation will play a significant role in the transition to a lower-carbon future. To date, we have made large investments in natural gas infrastructure and renewable energy assets, helping to decrease our emissions and further expand our platforms to enable energy transition across the globe. Our focus areas in renewable energy remain in offshore wind, utility-scale onshore projects, and integrated clean-energy offerings and solutions for customers. We are also taking a leadership role in other lower-carbon platforms like CCS, H2 and RNG where we can leverage our infrastructure, capabilities, and stakeholder relationships to accelerate growth and extend the value of our existing assets. Additionally, our new investments are expected to have a clear path to achieve net-zero emissions, in alignment with our ESG goals.

We work closely with our customers to maintain a pulse on the pace of the energy transition and are actively leveraging our ESG leadership and world-class execution capabilities to advance our positioning as a differentiated energy provider. We regularly test our assets under various transition scenarios to assess resiliency of our business.

STRATEGIC ENABLERS

Our commitment and progress on ESG, the capabilities and skills of our people, and how we utilize technology are core to executing our strategy and maintaining our competitive advantages.

Environmental, Social and Governance

Sustainability is integral to our ability to deliver energy in a safe and reliable manner. How well we perform as a steward of our environment; as a safe operator of essential energy infrastructure; as a diverse and inclusive employer; and as a responsible corporate citizen is inextricably linked to our ability to achieve our strategic priorities and create long-term value for all our stakeholders.

In 2022, we published our 21st annual Sustainability Report outlining our progress against our ESG goals[1]. In particular, we:

- Made meaningful progress towards our interim emissions intensity and net-zero GHG emissions goals through modernization and innovation of our system, efficiency improvements, and continued investment in solar self-power;
- Enhanced our efforts to ensure that our workforce and Board better reflect the diversity of our communities, empowering our workforce through employee resource groups and advancing on our diversity, equity, and inclusion commitments; and
- Continued to drive improvements towards our goal of zero safety incidents and injuries and progressed implementation of robust cyber defense programs.

Since setting our ESG targets in 2020, we have made considerable progress integrating sustainability into our strategy, governance, operations, and decision-making. We have linked ESG performance to incentive compensation and are making meaningful progress towards these targets by executing on our action plans.

1 *All percentages or specific goals regarding inclusion, diversity, equity and accessibility are aspirational goals which we intend to achieve in a manner compliant with state, local, provincial and federal law, including, but not limited to, US federal regulations, Equal Employment Opportunity Commission, Department of Labor and Office of Federal Contract Compliance Programs.*

At Enbridge, we aim to continuously strengthen our ESG approach and are undertaking the following additional actions:

- Proactively working with organizations advancing science-based guidelines for the midstream sector;
- Collaborating with key suppliers on emissions reduction plans; and
- Further developing lower-carbon energy partnerships to drive innovation across our businesses, with a focus on renewable power, RNG, H2 and CCS.

People
Our employees are essential to our success and our focus remains on enhancing the capabilities and skills of our people. We are evolving our people strategy to ensure we attract and retain the talent and leadership needed for today and tomorrow. This includes growing our focus on learning and development, and additional focus on overall well-being. We value diversity, and diverse thought, and have embedded inclusive practices in our programs, processes, and approach to people management. Furthermore, we strive to maintain industry competitive compensation, flexibility, and retention programs that provide both short- and long-term performance incentives.

Technology
We recognize the vital role technology plays in helping us achieve our strategic objectives. We are committed to pursuing innovation and technology solutions that further our safety and reliability, maximize revenues, improve efficiencies, and enable transition to new, cleaner energy solutions. We continue to strive to be on the leading edge of cyber security, by enhancing our capabilities and educating our workforce to protect our critical infrastructure system from increasing threats.

Our two Technology and Innovation labs, located in Calgary and Houston, embody our commitment to technology enabled business solutions and how we strive to entrench technology in our everyday operations.

We provide annual progress updates in our annual Sustainability Report which can be found at https://www.enbridge.com/sustainability-reports. ***Unless otherwise specifically stated, none of the information contained on, or connected to, the Enbridge website, including our annual Sustainability Report, is incorporated by reference in, or otherwise part of, this Annual Report on Form 10-K***.

BUSINESS SEGMENTS

Our activities are carried out through five business segments: Liquids Pipelines; Gas Transmission and Midstream; Gas Distribution and Storage; Renewable Power Generation; and Energy Services, as discussed below.

LIQUIDS PIPELINES

Liquids Pipelines consists of pipelines and terminals in Canada and the US that transport and export various grades of crude oil and other liquid hydrocarbons.

MAINLINE SYSTEM

The Mainline System is comprised of the Canadian Mainline and the Lakehead System. The Canadian Mainline is a common carrier pipeline system which transports various grades of crude oil and other liquid hydrocarbons within western Canada and from western Canada to the Canada/US border near Gretna, Manitoba and Neche, North Dakota and from the US/Canada border near Port Huron, Michigan and Sarnia, Ontario to eastern Canada and the northeastern US. The Canadian Mainline includes six adjacent pipelines with a combined operating capacity of approximately 3.1 million barrels per day (mmbpd) that connect with the Lakehead System at the Canada/US border, as well as five pipelines that deliver crude oil and refined products into eastern Canada and the northeastern US. Through our predecessors, we have operated, and frequently expanded, the Canadian Mainline since 1949. The Lakehead System is the portion of the Mainline System in the US. It is an interstate common carrier pipeline system regulated by the Federal Energy Regulatory Commission (FERC) and is the primary transporter of crude oil and liquid petroleum from western Canada to the US.

Tolling Framework

The Competitive Toll Settlement (CTS) which governed tolls paid for products shipped on the Canadian Mainline, with the exception of Lines 8 and 9 which are tolled on a separate basis, expired on June 30, 2021. The CTS was a 10-year negotiated agreement and provided for a Canadian Local Toll (CLT) for deliveries within western Canada, as well as an International Joint Tariff (IJT) for crude oil shipments originating in western Canada, on the Canadian Mainline, and delivered into the US, via the Lakehead System, and into eastern Canada. The IJT tolls were denominated in US dollars.

On December 19, 2019, we submitted an application to the Canada Energy Regulator (CER) to implement contracting on our Canadian Mainline System. On November 26, 2021, the CER denied the application on the basis that, among other things, contracting as proposed would result in a significant change to access on the Canadian Mainline and potentially inequitable outcomes to some shippers and non-shippers without a compelling justification.

Effective July 1, 2021, the Mainline System is on Interim Tolls which will remain in effect until new tolls are approved by the CER. In accordance with the terms of the CTS, Interim Tolls are equal to the CTS exit tolls on June 30, 2021 and are subject to finalization and adjustment applicable to the interim period, if any. We are currently exploring, with customers and other stakeholders, alternatives that may include: a modified and extended CTS, a new incentive rate-making agreement, or a cost-of-service rate-making structure. Any negotiated settlement would require CER approval before implementation. New tolling framework clarity is expected in 2023.

Shippers continue to nominate volumes on a monthly basis and we continue to allocate capacity to maximize the efficiency of the Mainline System.

Local tolls for service on the Lakehead System are not affected by Interim Tolls and continue to be established pursuant to the Lakehead System’s existing toll agreements. Under Interim Tolls, the Canadian Mainline’s share of the toll relating to pipeline transportation of a batch from any western Canada receipt point to the US border is equal to the toll applicable to that batch’s US delivery point, which is comprised of the IJT Benchmark Toll, the CTS Surcharges and the Line 3 Replacement IJT Surcharge, less the Lakehead System’s local toll to that delivery point. While on Interim Tolls, we will continue to refer to this amount as the Canadian Mainline IJT Residual Toll which is denominated in US dollars.

Lakehead System Local Tolls

Transportation rates are governed by the FERC for deliveries from the Canada/US border near Neche, North Dakota, Clearbrook, Minnesota and other points to principal delivery points on the Lakehead System. The Lakehead System periodically adjusts these transportation rates as allowed under the FERC's index methodology and tariff agreements, the main components of which are index rates and the Facilities Surcharge Mechanism. Index rates, the base portion of the transportation rates for the Lakehead System, are subject to an annual inflationary adjustment which cannot exceed established ceiling rates as approved by the FERC. The Facilities Surcharge Mechanism allows the Lakehead System to recover costs associated with certain shipper-requested projects through an incremental surcharge in addition to the existing base rates and is subject to annual adjustment on April 1 of each year. To the extent that the Lakehead System transportation rates materially under-recover the Lakehead System cost of service, an application can be made with the FERC to seek approval to increase the rates in order to bring recoveries in-line with costs.

On May 21, 2021, we filed a cost-of-service application to raise our base rates effective July 1, 2021. On June 30, 2021, the FERC issued an order to accept the rates subject to refund. This matter is currently in the FERC settlement process.

REGIONAL OIL SANDS SYSTEM

The Regional Oil Sands System includes five intra-Alberta long-haul pipelines: the Athabasca Pipeline, Waupisoo Pipeline, Woodland Pipeline, Wood Buffalo Extension/Athabasca Twin pipeline system and the Norlite Pipeline System (Norlite), as well as two large terminals: the Athabasca Terminal located north of Fort McMurray, Alberta and the Cheecham Terminal, located south of Fort McMurray, Alberta. The Regional Oil Sands System also includes numerous laterals and related facilities which currently provide access for oil sands production from twelve producing oil sands projects.

The combined capacity of the intra-Alberta long-haul pipelines is approximately 1,090 thousand barrels per day (kbpd) to Edmonton and 1,370 kbpd into Hardisty, with Norlite providing approximately 218 kbpd of diluent capacity into the Fort McMurray region. We have a 50% interest in the Woodland Pipeline and a 70% interest in Norlite. The Regional Oil Sands System is anchored by long-term agreements with multiple oil sands producers that provide cash flow stability and also include provisions for the recovery of some of the operating costs of this system.

On October 5, 2022, we completed a transaction with Athabasca Indigenous Investments Limited Partnership (Aii), a newly created entity representing 23 First Nation and Metis communities, pursuant to which Aii acquired an 11.6% non-operating interest in seven Regional Oil Sands pipelines in the Regional Oil Sands System. Pipelines included in the transaction are the Athabasca Pipeline, Wood Buffalo Extension/Athabasca Twin pipeline system and associated tanks, Norlite, Waupisoo Pipeline, Wood Buffalo Pipeline, Woodland Pipeline, and Woodland Extension.

GULF COAST AND MID-CONTINENT

Gulf Coast includes Seaway Crude Pipeline System (Seaway Pipeline), Flanagan South Pipeline (Flanagan South), Spearhead Pipeline, Gray Oak Pipeline and the EIEC, as well as the Mid-Continent System (Cushing Terminal).

We have a 50% interest in the 1,078 kilometer (670 mile) Seaway Pipeline, including the 805 kilometer (500 mile), 30-inch diameter long-haul system between Cushing, Oklahoma and Freeport, Texas, as well as the Texas City Terminal and Distribution System which serve refineries in the Houston and Texas City areas. Total aggregate capacity on the Seaway Pipeline system is approximately 950 kbpd. Seaway Pipeline also includes 8.8 million barrels of crude oil storage tank capacity on the Texas Gulf Coast.

Flanagan South is a 950 kilometer (590 mile), 36-inch diameter interstate crude oil pipeline that originates at our terminal at Flanagan, Illinois, a delivery point on the Lakehead System, and terminates in Cushing, Oklahoma. Flanagan South has a capacity of approximately 660 kbpd.

Spearhead Pipeline is a long-haul pipeline that delivers crude oil from Flanagan, Illinois, a delivery point on the Lakehead System, to Cushing, Oklahoma. The Spearhead pipeline has a capacity of approximately 193 kbpd.

The Gray Oak pipeline is a 1,368 kilometer (850 mile) crude oil system, which runs from the Permian Basin in West Texas to the US Gulf Coast. The Gray Oak pipeline has an expected average annual capacity of 900 kbpd and transports light crude oil. As of August 17, 2022, our effective economic interest in Gray Oak increased to 58.5% from 22.8% as a result of a joint venture merger transaction with Phillips 66 (P66) and we will be assuming operatorship of Gray Oak in the second quarter of 2023.

The Mid-Continent System is comprised of storage terminals at Cushing, Oklahoma (Cushing Terminal), consisting of over 110 individual storage tanks ranging in size from 78 to 570 thousand barrels. Total storage shell capacity of Cushing Terminal is approximately 26 million barrels. A portion of the storage facilities are used for operational purposes, while the remainder are contracted to various crude oil market participants for their term storage requirements. Contract fees include fixed monthly storage fees, throughput fees for receiving and delivering crude to and from connecting pipelines and terminals, and blending fees.

In October 2021, we acquired Moda Midstream Operating, LLC, which included the Ingleside Energy Center (renamed the Enbridge Ingleside Energy Center or EIEC), located near Corpus Christi, Texas. This terminal is comprised of 15.6 million barrels of storage and 1.5 million barrels per day of export capacity. We also acquired a 20% interest in the 670-kbpd Cactus II Pipeline, a 100% interest in the 300-kbpd Viola pipeline, and a 100% interest in the 350-thousand-barrel Taft Terminal. In November 2022, we acquired an additional 10% ownership interest in Cactus II Pipeline, bringing our total non-operating ownership to 30%.

OTHER
Other includes Southern Lights Pipeline, Express-Platte System, Bakken System and Feeder Pipelines and Other.

Southern Lights Pipeline is a single stream 180 kbpd 16/18/20-inch diameter pipeline that ships diluent from the Manhattan Terminal near Chicago, Illinois to three western Canadian delivery facilities, located at the Edmonton and Hardisty terminals in Alberta and the Kerrobert terminal in Saskatchewan. Both the Canadian portion of Southern Lights Pipeline and the US portion of Southern Lights Pipeline receive tariff revenues under long-term contracts with committed shippers. Southern Lights Pipeline capacity is 90% contracted with the remaining 10% of the capacity assigned for shippers to ship uncommitted volumes.

The Express-Platte System consists of the Express pipeline and the Platte pipeline, and crude oil storage of approximately 5.6 million barrels. It is an approximate 2,736 kilometer (1,700 mile) long crude oil transportation system, which begins at Hardisty, Alberta, and terminates at Wood River, Illinois. The 310 kbpd Express pipeline carries crude oil to US refining markets in the Rocky Mountains area, including Montana, Wyoming, Colorado and Utah. The 145 to 164 kbpd Platte pipeline, which interconnects with the Express pipeline at Casper, Wyoming, transports crude oil predominantly from the Bakken shale and western Canada to refineries in the Midwest. Express pipeline capacity is typically committed under long-term take-or-pay contracts with shippers. A small portion of Express pipeline capacity and all of the Platte pipeline capacity is used by uncommitted shippers who pay only for the pipeline capacity they actually use in a given month.

The Bakken System consists of the North Dakota System and the Bakken Pipeline System. The North Dakota System services the Bakken in North Dakota and is comprised of a crude oil gathering and interstate pipeline transportation system. The gathering system provides delivery to Clearbrook, Minnesota for service on the Lakehead system or a variety of interconnecting pipeline and rail export facilities. The interstate portion of the system has both US and Canadian components that extend from Berthold, North Dakota into Cromer, Manitoba.

Tariffs on the US portion of the North Dakota System are governed by the FERC. The Canadian portion is categorized as a Group 2 pipeline, and as such, its tolls are regulated by the CER on a complaint basis. Tolls on the interstate pipeline system are based on long-term take-or-pay agreements with anchor shippers.

We have an effective 27.6% interest in the Bakken Pipeline System, which connects the Bakken formation in North Dakota to markets in eastern PADD II and the US Gulf Coast. The Bakken Pipeline System consists of the Dakota Access Pipeline (DAPL) from the Bakken area in North Dakota to Patoka, Illinois, and the Energy Transfer Crude Oil Pipeline (ETCO) from Patoka, Illinois to Nederland, Texas. Current capacity is 750 kbpd of crude oil with the potential to be expanded through additional pumping horsepower. The Bakken Pipeline System is anchored by long-term throughput commitments from a number of producers.

Feeder Pipelines and Other includes a number of liquids storage assets and pipeline systems in Canada and the US.

Key assets included in Feeder Pipelines and Other are the Hardisty Contract Terminal and Hardisty Storage Caverns located near Hardisty, Alberta, a key crude oil pipeline hub in western Canada and the Southern Access Extension (SAX) pipeline which originates in Flanagan, Illinois and delivers to Patoka, Illinois. We have an effective 65% interest in the 300 kbpd SAX pipeline. The majority of the SAX pipeline's capacity is commercially secured under long-term take-or-pay contracts with shippers.

Feeder Pipelines and Other also includes Patoka Storage, the Toledo pipeline system and the Norman Wells (NW) System. Patoka Storage is comprised of four storage tanks with 480 thousand barrels of shell capacity located in Patoka, Illinois. The 101 kbpd Toledo pipeline system connects with the Lakehead System and delivers to Ohio and Michigan. The 45 kbpd NW System transports crude oil from Norman Wells in the Northwest Territories to Zama, Alberta and has a cost-of-service rate structure based on established terms with shippers.

COMPETITION

Competition for our liquids pipelines network comes primarily from infrastructure or logistics alternatives that transport liquid hydrocarbons from production basins in which we operate to markets in Canada, the US and internationally. Competition from existing and proposed pipelines is based primarily on access to supply, end use markets, the cost of transportation, contract structure and the quality and reliability of service. Additionally, volatile crude price differentials and insufficient pipeline capacity on either our or competitors' pipelines can make transportation of crude oil by rail competitive, particularly to markets not currently served by pipelines.

We believe that our liquids pipelines systems will continue to provide competitive and attractive options to producers in the Western Canadian Sedimentary Basin (WCSB), North Dakota, and the Permian Basin, due to our market access, competitive tolls and flexibility through our multiple delivery and storage points. We also employ long-term agreements with shippers, which mitigates competition risk by ensuring consistent supply to our liquids pipelines network. We have a proven track record of successfully executing projects to meet the needs of our customers.

SUPPLY AND DEMAND

We have an established and successful history of being the largest transporter of crude oil to the US, the world's largest market for crude oil. While we expect US demand for Canadian crude oil production will support the use of our infrastructure for the foreseeable future, North American and global crude oil supply and demand fundamentals are shifting, and we have a role to play in this transition by developing long-term transportation options that enable the efficient flow of crude oil from supply regions to end-user markets, both domestic and global.

The COVID-19 pandemic had a significant negative impact on the crude oil market in 2020 with decreased demand from the economic slowdown and government imposed mobility restrictions. However, since 2021, global crude oil demand has been recovering to levels close to pre-pandemic highs. International prices have strengthened to multi-year highs as global demand has outpaced the return of supply as publicly traded producers have adopted a more disciplined approach to capital allocation for new drilling.

Our Mainline System throughput, as measured at the Canada/US border at Gretna, Manitoba ended the year delivering 3.1 mmbpd. Refinery demand in the upper Midwest PADD II market has been strong given the economic recovery and enhanced mobility demand. On the US Gulf Coast, lower supply of heavy crude from Latin America and the Middle East is driving increased demand for Canadian heavy crude.

Global crude oil demand in most base case forecasts is expected to grow into the next decade, primarily driven by emerging economies in regions outside the Organization for Economic Cooperation and Development (OECD), such as India and China. In North America, demand growth for transportation fuels is expected to moderate over time due to vehicle fuel efficiency improvement and increasing sales of electric vehicles.

New supply to meet this growing demand is expected to primarily come from Organization of the Petroleum Exporting Countries (OPEC) countries and North America. Growth in supply from OPEC is anticipated to be led by Saudi Arabia and the United Arab Emirates with their significant low cost reserves and could be supplemented by the return of sanctioned Iranian production. Growth in North America is expected to be driven by the Permian Basin which is a large and cost competitive light crude oil resource base. In addition, heavy crude oil growth is expected from the WCSB as additional egress availability will support expansion of existing projects and some potential new greenfield facilities.

The anticipated combination of long-term demand growth in non-OECD nations, domestic demand contraction over time, and continued production growth in the Permian Basin and WCSB highlights the importance of our strategic asset footprint and reinforces the need for additional export oriented infrastructure. We believe that we are well positioned to meet these evolving supply and demand fundamentals through expansion of system capacity for incremental access to the US Gulf Coast, and through further development of our new EIEC in Corpus Christi, the largest crude oil export facility in North America.

Opposition to fossil fuel development in conjunction with evolving consumer preferences and new technology could underpin accelerated energy transition scenarios impacting long-term supply and demand of crude oil. We continue to closely monitor the evolution of all of these factors to be able to pro-actively adapt our business to help meet our customers' and society's energy needs.

GAS TRANSMISSION AND MIDSTREAM

Gas Transmission and Midstream consists of our investments in natural gas pipelines and gathering and processing facilities in Canada and the US, including US Gas Transmission, Canadian Gas Transmission, US Midstream and other assets.

US GAS TRANSMISSION

US Gas Transmission includes ownership interests in Texas Eastern Transmission, L.P. (Texas Eastern), Algonquin Gas Transmission, LLC (Algonquin), Maritimes & Northeast (M&N) (US and Canada), East Tennessee Natural Gas, LLC (East Tennessee), Gulfstream Natural Gas System, L.L.C. (Gulfstream), Sabal Trail Transmission, LLC (Sabal Trail), NEXUS Gas Transmission Pipeline, LLC (NEXUS), Valley Crossing Pipeline, LLC. (Valley Crossing), Southeast Supply Header, LLC (SESH), Vector Pipeline L.P. (Vector) and certain other gas pipeline and storage assets. The US Gas Transmission business primarily provides transmission and storage of natural gas through interstate pipeline systems for customers in various regions of the northeastern, southern and midwestern US.

The Texas Eastern interstate natural gas transmission system extends from supply and demand centers in the Gulf Coast region of Texas and Louisiana to supply and demand centers in Ohio, Pennsylvania, New Jersey and New York. Texas Eastern's onshore system has a peak day capacity of 12.04 billion cubic feet per day (bcf/d) of natural gas on approximately 13,765 kilometers (8,553 miles) of pipeline and associated compressor stations. Texas Eastern is also connected to four affiliated storage facilities that are partially or wholly-owned by other entities within the US Gas Transmission business.

The Algonquin interstate natural gas transmission system connects with Texas Eastern’s facilities in New Jersey and extends through New Jersey, New York, Connecticut, Rhode Island and Massachusetts where it connects to M&N US. The system has a peak day capacity of 3.09 bcf/d of natural gas on approximately 1,820 kilometers (1,131 miles) of pipeline with associated compressor stations.

M&N US has a peak day capacity of 0.83 bcf/d of natural gas on approximately 552 kilometers (343 miles) of mainline interstate natural gas transmission system, including associated compressor stations, which extends from northeastern Massachusetts to the border of Canada near Baileyville, Maine. M&N Canada has a peak day capacity of 0.55 bcf/d on approximately 885 kilometers (550 miles) of interprovincial natural gas transmission mainline system that extends from Goldboro, Nova Scotia to the US border near Baileyville, Maine. We have a 78% interest in M&N US and M&N Canada.

East Tennessee’s interstate natural gas transmission system has a peak day capacity of 1.86 bcf/d of natural gas, crosses Texas Eastern’s system at two locations in Tennessee and consists of two mainline systems totaling approximately 2,449 kilometers (1,522 miles) of pipeline in Tennessee, Georgia, North Carolina and Virginia, with associated compressor stations. East Tennessee has a LNG storage facility in Tennessee and also connects to the Saltville storage facilities in Virginia.

Gulfstream is an approximately 1,199 kilometer (745 mile) interstate natural gas transmission system with associated compressor stations. Gulfstream has a peak day capacity of 1.39 bcf/d of natural gas from Mississippi, Alabama, Louisiana and Texas, crossing the Gulf of Mexico to markets in central and southern Florida. We have a 50% interest in Gulfstream.

Sabal Trail is an approximately 832 kilometer (517 mile) interstate pipeline that provides firm natural gas transportation. Facilities include a pipeline, laterals and various compressor stations. The pipeline infrastructure is located in Alabama, Georgia and Florida, and adds approximately 1.0 bcf/d of capacity enabling the access of onshore gas supplies. We have a 50% interest in Sabal Trail.

NEXUS is an approximately 414 kilometer (257 mile) interstate natural gas transmission system with associated compressor stations. NEXUS transports natural gas from our Texas Eastern system in Ohio to our Vector interstate pipeline in Michigan, with peak day capacity of 1.4 bcf/d. Through its interconnect with Vector, NEXUS provides a connection to Dawn Hub, the largest integrated underground storage facility in Canada and one of the largest in North America, located in southwestern Ontario adjacent to the Greater Toronto Area. We have a 50% interest in NEXUS.

Valley Crossing is an approximately 285 kilometer (177 mile) intrastate natural gas transmission system, with associated compressor stations. The pipeline infrastructure is located in Texas and provides market access of up to 2.6 bcf/d of design capacity to the Comisión Federal de Electricidad, Mexico’s state-owned utility.

SESH is an approximately 462 kilometer (287 mile) interstate natural gas transmission system with associated compressor stations. SESH extends from the Perryville Hub in northeastern Louisiana where the shale gas production of eastern Texas, northern Louisiana and Arkansas, along with conventional production, is reached from six major interconnections. SESH extends to Alabama, interconnecting with 14 major north-south pipelines and three high-deliverability storage facilities and has a peak day capacity of 1.1 bcf/d of natural gas. We have a 50% interest in SESH.

Vector is an approximately 560 kilometer (348 mile) pipeline travelling between Joliet, Illinois in the Chicago area and Ontario. Vector can deliver 1.745 bcf/d of natural gas, of which 455 million cubic feet per day (mmcf/d) is leased to NEXUS. We have a 60% interest in Vector.

Transmission and storage services are generally provided under firm agreements where customers reserve capacity in pipelines and storage facilities. The vast majority of these agreements provide for fixed reservation charges that are paid monthly regardless of the actual volumes transported on the pipelines, plus a small variable component that is based on volumes transported, injected or withdrawn, which is intended to recover variable costs.

Interruptible transmission and storage services are also available where customers can use capacity if it exists at the time of the request and are generally at a higher toll than long-term contracted rates. Interruptible revenues depend on the amount of volumes transported or stored and the associated rates for this service. Storage operations also provide a variety of other value-added services including natural gas parking, loaning and balancing services to meet customers’ needs.

CANADIAN GAS TRANSMISSION

Canadian Gas Transmission is comprised of Westcoast Energy Inc.’s (Westcoast) British Columbia (BC) Pipeline, Alliance Pipeline and other minor midstream gas gathering pipelines.

BC Pipeline provides natural gas transmission services, transporting processed natural gas from facilities located primarily in northeastern BC to markets in BC and the US Pacific Northwest. It has a peak day capacity of 3.6 bcf/d of natural gas on approximately 2,950 kilometers (1,833 miles) of transmission pipeline in BC and Alberta, as well as associated mainline compressor stations. BC Pipeline is regulated by the CER under cost-of-service regulation.

Alliance Pipeline is an approximately 3,000 kilometer (1,864 mile) integrated, high-pressure natural gas transmission pipeline with approximately 860 kilometers (534 miles) of lateral pipelines and related infrastructure. It transports liquids-rich natural gas from northeast BC, northwest Alberta and the Bakken area in North Dakota to the Alliance Chicago gas exchange hub downstream of the Aux Sable Liquid Products LP natural gas liquids (NGL) extraction and fractionation plant at Channahon, Illinois. The system has a peak day capacity of 1.8 bcf/d of natural gas. We have a 50% interest in Alliance Pipeline.

The majority of transportation services provided by Canadian Gas Transmission are under firm agreements, which provide for fixed reservation charges that are paid monthly regardless of actual volumes transported on the pipeline, plus a small variable component that is based on volumes transported to recover variable costs. Canadian Gas Transmission also provides interruptible transmission services where customers can use capacity if it is available at the time of request. Payments under these services are based on volumes transported.

US MIDSTREAM
US Midstream includes a 42.7% interest in each of Aux Sable Liquid Products LP and Aux Sable Midstream LLC, and a 50% interest in Aux Sable Canada LP (collectively, Aux Sable). Aux Sable Liquid Products LP owns and operates a NGL extraction and fractionation plant at Channahon, Illinois, outside Chicago, near the terminus of Alliance Pipeline. Aux Sable also owns facilities connected to Alliance Pipeline that facilitate delivery of liquids-rich natural gas for processing at the Aux Sable plant. These facilities include the Palermo Conditioning Plant and the Prairie Rose Pipeline in the Bakken area of North Dakota, owned and operated by Aux Sable Midstream US, and Aux Sable Canada's interests in the Montney area of BC, comprising the Septimus Pipeline. Aux Sable Canada also owns a facility which processes refinery/upgrader offgas in Fort Saskatchewan, Alberta.

As of August 17, 2022, US Midstream also includes a 13.2% effective economic interest in DCP Midstream, LP (DCP). Prior to August 17, 2022, we had a 28.3% effective economic interest in DCP. DCP is a master limited partnership, with a diversified portfolio of assets, engaged in the business of gathering, compressing, treating, processing, transporting, storing and selling natural gas; producing, fractionating, transporting, storing and selling NGL; and recovering and selling condensate. DCP owns and operates more than 36 plants and approximately 86,905 kilometers (54,000 miles) of natural gas and natural gas liquids pipelines, with operations in nine states across major producing regions.

OTHER
Other consists primarily of our offshore assets. Enbridge Offshore Pipelines is comprised of 11 natural gas gathering and FERC regulated transmission pipelines and four oil pipelines. These pipelines are located in four major corridors in the Gulf of Mexico, extending to deepwater developments, and include almost 2,100 kilometers (1,300 miles) of underwater pipe and onshore facilities with total capacity of approximately 6.5 bcf/d.

COMPETITION
Our natural gas transmission and storage businesses compete with similar facilities that serve our supply and market areas in the transmission and storage of natural gas. The principal elements of competition are location, rates, terms of service, flexibility and reliability of service.

The natural gas transported in our business competes with other forms of energy available to our customers and end-users, including electricity, coal, propane, fuel oils, nuclear and renewable energy. Factors that influence the demand for natural gas include price changes, the availability of natural gas and other forms of energy, levels of business activity, long-term economic conditions, conservation, legislation, governmental regulations, the ability to convert to alternative fuels, weather and other factors.

Competition exists in all markets that our businesses serve. Competitors include interstate/interprovincial and intrastate/intraprovincial pipelines or their affiliates and other midstream businesses that transport, gather, treat, process and market natural gas or NGL. Because pipelines are generally the most efficient mode of transportation for natural gas over land, the most significant competitors of our natural gas pipelines are other pipeline companies.

SUPPLY AND DEMAND
Our gas transmission assets make up one of the largest natural gas transportation networks in North America, driving connectivity between prolific supply basins and major demand centers within the continent. Our systems have been integral to the transition in supply and demand markets over the last decade, and we expect to continue to play a part as the energy landscape evolves.

Natural gas production in the Appalachian and Permian basins has grown dramatically in the past decade. Today, these regions produce more than 47 bcf/d of natural gas on a combined basis. Improved technology and increased shale gas drilling have increased the supply of low-cost natural gas. As well, there has been, and continues to be, a corresponding increase in demand for our natural gas infrastructure in North America. Through a series of expansions and reversals on our core systems, combined with the execution of greenfield projects and strategic acquisitions, we have been able to meet the needs of both producers and consumers. Our US Gas Transmission systems were initially designed to transport natural gas from the Gulf Coast to the supply-constrained northeast markets. Our asset base now has the capability to transport diverse bi-directional supply to the northeast, southeast, Midwest, Gulf Coast and LNG markets on a fully subscribed and highly utilized basis.

The northeast market continues its role as a predominantly supply constrained region with steady demand. The bi-directional capabilities offered by our US Gas Transmission system allow us to deliver in an efficient manner to our regional customers. The region has seen an increase in natural gas supply due to the development of the Marcellus and Utica shales in the Appalachia region.

The southeast market is linked to multiple, highly liquid supply pools that include the Marcellus and Utica shale developments, offering consistent supply and stable pricing to a growing population of end-use customers across our multiple systems under long-term, utility-like arrangements.

With connectivity to Appalachian and western Canadian supply through our systems, the Midwest market has access to two of the lowest cost gas producing regions on the continent. As demand in the region is expected to continue to grow by over 2.0 bcf/d over the next decade, maintaining this link will remain important. Flexibility in supply for this market is especially critical to maintaining liquidity and price stability as natural gas continues to replace coal-fired generation.

Gulf Coast demand growth is being driven by an increase in the volume of LNG exports, an ongoing wave of gas-intensive petrochemical facilities, along with power generation and additional pipeline exports to Mexico. Demand in these markets in the region is anticipated to grow by more than 20.0 bcf/d through 2040. The Gulf Coast market has been the beneficiary of low-cost capacity on our assets as the relationship between supply and market centers has shifted. Such cost-effective capacity is difficult to access or replicate, offering existing shippers and transporters stability of capacity and utilization. Tide-water market access and proximity to Mexico continue to make this region a platform of global trade as pipeline and LNG exports continue their growth trajectory. In 2022, the US exported over 10.6 bcf/d of natural gas to LNG markets, primarily from the Gulf Coast region.

Western Canada, not unlike other supply hubs, is a source of low-cost supply seeking access to premium markets in North America and globally. One of the few vital links to demand centers in the Pacific Northwest are our own systems in the region, which are highly utilized. The continental supply profile has shifted to natural gas shale plays such as the Montney and Duvernay within western Canada. These supply shifts have shaped our growth strategies and affect the nature of the projects anticipated in the capital expenditures discussed below in Part II. *Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Growth Projects - Commercially Secured Projects.*

Global energy demand is expected to increase approximately 24% by 2050, according to the recently released International Energy Agency's Stated Policy Scenario, driven primarily by economic growth in non-OECD countries. According to the Stated Policy Scenario, natural gas will play an important role in meeting this energy demand, and gas consumption is anticipated to grow by approximately 13% during this period as one of the world's most significant energy sources. North American exports are expected to play a significant part in meeting global demand, underscoring the ability of our assets to remain highly utilized by shippers, and highlighting the need for incremental transportation solutions across North America, as well as further build-out of export facilities to meet international demand.

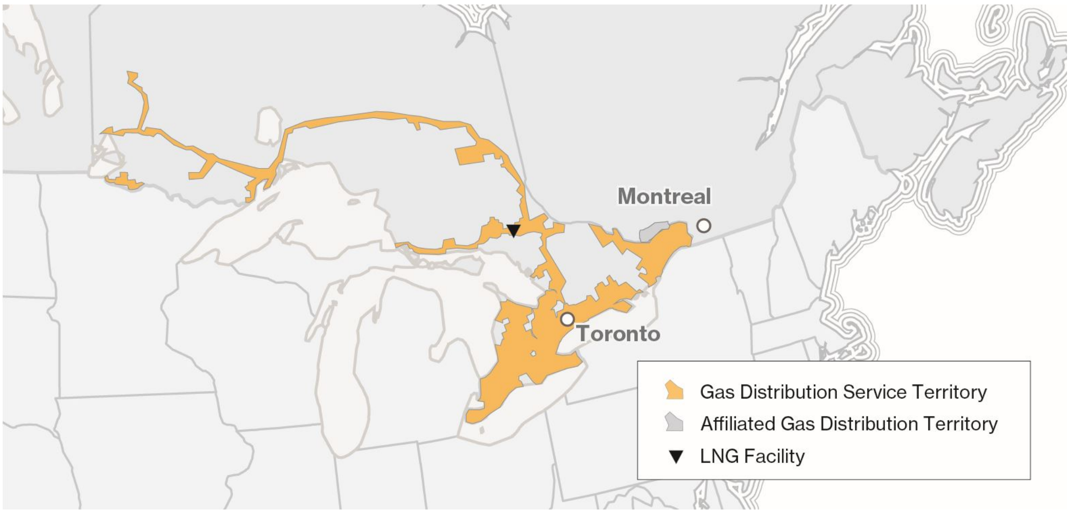
The long-term impacts of the Ukraine conflict on global gas markets are still unclear. Europe has experienced a rapid increase in natural gas prices, largely as a result of reduced natural gas supply from Russia. Global LNG markets have responded, and natural gas storage volumes entering the winter season in Europe were strong. However, these LNG cargos have largely been diverted from Asian markets, and over time the LNG market is expected to normalize.

Europe continues to seek lower-carbon gas supplies and has accelerated plans to develop hydrogen as an alternative to natural gas. The global hydrogen market is still relatively immature, but with incentives being put in place such as those in the US Inflation Reduction Act, hydrogen production at large scale is becoming increasingly commercialized, which has led to a growing export market. Given its proximity to low-cost natural gas supplies and suitable geologic storage for carbon dioxide (CO2), the US Gulf Coast is well positioned to be a leading export hub to supply blue hydrogen to international markets. Given these rapidly changing global fundamentals, and coupled with growing appetite for lower-carbon hydrogen, we believe we are well positioned to provide value-added solutions to shippers and meet both regional and international demand.

Opposition to natural gas development, including new pipeline projects, has been increasing in recent years. This may challenge continued growth of the North American gas market and the ability to efficiently connect supply and demand. We are responding to the need for regional infrastructure with additional investments in Canadian and US gas transportation facilities. Progress on the development and construction of our commercially secured growth projects is discussed in Part II. Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Growth Projects - Commercially Secured Projects.

GAS DISTRIBUTION AND STORAGE

Gas Distribution and Storage consists of our natural gas utility operations, the core of which is Enbridge Gas Inc. (Enbridge Gas), which serves residential, commercial and industrial customers throughout Ontario. This business segment also includes natural gas distribution activities in Québec.



ENBRIDGE GAS

Enbridge Gas is a rate-regulated natural gas distribution utility with storage and transmission services. Enbridge Gas' distribution system, supported by storage and compression assets, carries natural gas from the point of local supply to customers and serves residential, commercial and industrial customers across Ontario.

There are three principal interrelated aspects of the natural gas distribution business in which Enbridge Gas is directly involved: Distribution, Transportation and Storage.

Distribution

Enbridge Gas' principal source of revenue arises from distribution of natural gas to customers. The services provided to residential, small commercial and industrial heating customers are primarily on a general service basis, without a specific fixed term or fixed price contract. The services provided to larger commercial and industrial customers are usually on an annual contract basis under firm or interruptible service contracts. Under a firm contract, Enbridge Gas is obligated to deliver natural gas to the customer up to a maximum daily volume. The service provided under an interruptible contract is similar to that of a firm contract, except that it allows for service interruption at Enbridge Gas' option primarily to meet seasonal or peak demands. The Ontario Energy Board (OEB) approves rates for both contract and general services. The distribution system consists of approximately 149,000 kilometers (92,584 miles) of pipelines that carry natural gas from the point of local supply to customers.

Customers have a choice with respect to natural gas supply. Customers may purchase and deliver their own natural gas to points upstream of the distribution system or directly into Enbridge Gas' distribution system, or, alternatively, they may choose a system supply option, whereby customers purchase natural gas from Enbridge Gas' supply portfolio. To acquire the necessary volume of natural gas to serve its customers, Enbridge Gas maintains a diversified natural gas supply portfolio, acquiring supplies on a delivered basis in Ontario, as well as acquiring supply from multiple supply basins across North America.

Transportation

Enbridge Gas contracts for firm transportation service, primarily with TransCanada Pipelines Limited (TransCanada), Vector and NEXUS, to meet its annual natural gas supply requirements. The transportation service contracts are not directly linked with any particular source of natural gas supply. Separating transportation contracts from natural gas supply allows Enbridge Gas flexibility in obtaining its own natural gas supply and accommodating the requests of its direct purchase customers for assignment of TransCanada capacity. Enbridge Gas forecasts the natural gas supply needs of its customers, including the associated transportation and storage requirements.

In addition to contracting for transportation service, Enbridge Gas offers firm and interruptible transportation services on its own Dawn-Parkway pipeline system. Enbridge Gas' transmission system consists of approximately 5,500 kilometers (3,418 miles) of high pressure pipeline and five mainline compressor stations and has an effective peak daily demand capacity of 7.6 bcf/d. Enbridge Gas' transmission system also links an extensive network of underground storage pools at the Tecumseh Gas Storage facility and Dawn Hub (collectively, Dawn) to major Canadian and US markets, and forms an important link in moving natural gas from western Canada and US supply basins to central Canadian and northeastern US markets.

As the supply of natural gas in areas close to Ontario has continued to grow, there has been increased demand to access these diverse supplies at Dawn and transport them along the Dawn-Parkway pipeline system to markets in Ontario, eastern Canada and the northeastern US. Enbridge Gas delivered 2,162 bcf of gas through its distribution and transmission system in 2022. A substantial amount of Enbridge Gas' transportation revenue is generated by fixed annual demand charges, with the average length of a long-term contract being approximately 15 years and the longest remaining contract term being 18 years.

Storage
Enbridge Gas' business is highly seasonal as daily market demand for natural gas fluctuates with changes in weather, with peak consumption occurring in the winter months. Utilization of storage facilities permits Enbridge Gas to take delivery of natural gas on favorable terms during off-peak summer periods for subsequent use during the winter heating season. This practice permits Enbridge Gas to minimize the annual cost of transportation of natural gas from its supply basins, assists in reducing its overall cost of natural gas supply and adds a measure of security in the event of any short-term interruption of transportation of natural gas to Enbridge Gas' franchise areas.

Enbridge Gas' storage facility at Dawn is located in southwestern Ontario, and has a total working capacity of approximately 284 bcf in 34 underground facilities located in depleted gas fields. Dawn is the largest integrated underground storage facility in Canada and one of the largest in North America. Approximately 180 bcf of the total working capacity is available to Enbridge Gas for utility operations. Enbridge Gas also has storage contracts with third parties for 21 bcf of storage capacity.

Dawn offers customers an important link in the movement of natural gas from western Canadian and US supply basins to markets in central Canada and the northeast US. Dawn's configuration provides flexibility for injections, withdrawals and cycling. Customers can purchase both firm and interruptible storage services at Dawn. Dawn offers customers a wide range of market choices and options with easy access to upstream and downstream markets. During 2022, Dawn provided services such as storage, balancing, gas loans, transport, exchange and peaking services to over 200 counterparties.

A substantial amount of Enbridge Gas' storage revenue is generated by fixed annual demand charges, with the average length of a long-term contract being approximately four years and the longest remaining contract term being 14 years.

GAZIFÈRE
We wholly own Gazifère, a natural gas distribution company that serves approximately 44,000 customers in western Québec. Gazifère is regulated by the Québec Régie de l'énergie.

COMPETITION
Enbridge Gas' distribution system is regulated by the OEB and is subject to regulation in a number of areas, including rates. Enbridge Gas is not generally subject to third-party distribution competition within its franchise areas.

Enbridge Gas competes with other forms of energy available to its customers and end-users, including electricity, coal, propane and fuel oils. Factors that influence the demand for natural gas include weather, price changes, the availability of natural gas and other forms of energy, the level of business activity, conservation, legislation including the federal carbon pricing law, governmental regulations, the ability to convert to alternative fuels and other factors.

SUPPLY AND DEMAND
We anticipate that demand for natural gas in North America will stabilize over the long term with continued growth in peak day demands, however, there are risks to the natural gas market that may challenge its growth prospects. Net-zero carbon policies, evolving customer preferences for lower-carbon fuels and more efficient technologies, combined with increasing opposition to natural gas development in North America, may reduce the markets' ability to efficiently deploy capital to connect supply and demand. We monitor these factors closely to be able to develop our business strategy to align with shifts in customer preferences and public policy requirements.

We expect demand for natural gas connections in Ontario to maintain its recent growth profile due to continued population growth and with competitively priced natural gas expected to continue to provide a strong price advantage relative to alternate energy options, even with increasing carbon charges. Specific interest in natural gas connections is expected to come from communities that are not currently serviced by natural gas in Ontario.

Enbridge Gas continues to focus on promoting conservation and energy efficiency by undertaking activities focused on reducing natural gas consumption through various demand side management programs offered across all markets and sourcing supply with a smaller carbon footprint. In addition to our existing and proposed RNG programs, we are also expanding our efforts to source other lower-carbon supplies, such as responsibly sourced natural gas, and H2.

The storage and transportation marketplace continues to respond to changing natural gas supply dynamics, including a recovered supply environment which was negatively impacted by the global pandemic.

Over the past decade, growth in the North American gas supply landscape, driven mainly by the development of unconventional gas resources in the Montney, Permian, Marcellus and Utica supply basins, has resulted in lower annual commodity prices and narrower seasonal price spreads. However, over the past year, geopolitical unrest has increased and lead to elevated concerns with energy security in regions such as Europe and Asia. In response, one of the key supply sources supporting global energy security has been US LNG, which has introduced additional competition for North American supply. These market dynamics have resulted in higher and more volatile natural gas prices across many US and Canadian natural gas trading points. Unregulated storage values are primarily determined by the difference in value between winter and summer natural gas prices. Despite the recent volatility exhibited in natural gas prices, storage values have been relatively stable.

RENEWABLE POWER GENERATION

Renewable Power Generation consists primarily of investments in wind and solar assets, as well as geothermal, waste heat recovery, and transmission assets. In North America, assets are primarily located in the provinces of Alberta, Saskatchewan, Ontario and Québec, and in the states of Colorado, Texas, Indiana and West Virginia. We are also developing several solar self-power projects along our oil and gas rights-of-way in North America. In Europe, we hold equity interests in operating offshore wind facilities in the coastal waters of the United Kingdom, France, and Germany, as well as interests in several offshore wind projects under construction and active development in France and the United Kingdom.

Combined Renewable Power Generation investments represent approximately 2,175 MW of net generation capacity, which primarily consists of approximately:

- 1,389 MW generated by North American wind facilities;
- 377 MW generated by European offshore wind facilities;
- 187 MW to be generated by the Fécamp and Calvados Offshore Wind projects in France, both of which are currently under construction;
- 6 MW to be generated by the Provence Grand Large Floating Offshore Wind project in France, which is under construction; and
- 93 MW generated by North American solar facilities in operation, with an additional 97 MW in projects in pre-construction and under construction.

The vast majority of the power produced from these facilities is sold under long-term PPAs.

In September 2022, we acquired renewable energy project developer TGE with a development portfolio of wind, solar, and energy storage projects in Texas, Nebraska, Illinois, Indiana, Virginia, Pennsylvania, and Wyoming. TGE's development portfolio includes 3.9 GW of conditionally sold renewable generation projects and an additional 3 GW of wholly-owned projects in development. Following its acquisition of TGE, Enbridge became one of the top 15 renewable energy project developers in the US.

Renewable Power Generation also includes our 25% interest in the East-West Tie, a 450-MW transmission line in northwestern Ontario, which entered operations in March 2022.

JOINT VENTURES / EQUITY INVESTMENTS

The investments in the Canadian wind and solar assets (excluding self-power) and two of the US renewable assets are held within a joint venture in which we maintain a 51% interest and which we manage and operate.

We also own interests in European offshore wind facilities through the following joint ventures:

- a 24.9% interest in Rampion Offshore Wind, located in the United Kingdom;
- a 25.4% interest in Hohe See and Albatros Offshore Wind, located in Germany;
- a 25.5% interest in the Saint-Nazaire Offshore Wind project, located in France;
- a 25% interest in the Provence Grande Large Floating Offshore Wind project, under construction in France;
- a 17.9% interest in the Fécamp Offshore Wind project, under construction in France; and
- a 21.7% interest in the Calvados Offshore Wind project, under construction in France.

COMPETITION

Renewable Power Generation operates in the North American and European power markets, which are subject to competition and supply and demand fundamentals for power in the jurisdictions in which they operate. The majority of revenue is generated pursuant to long-term PPAs (or has been substantially hedged). As such, the financial performance is not significantly impacted by fluctuating power prices arising from supply/demand imbalances or the actions of competing facilities during the term of the applicable contracts. However, the renewable energy sector includes large utilities, small independent power producers and private equity investors, which are expected to aggressively compete for new project development opportunities and for the right to supply customers when contracts expire.

To grow in an environment of heightened competition, we strategically seek opportunities to collaborate with well-established renewable power developers and financial partners and to target regions with commercial constructs consistent with our low risk business model. In addition, we have expertise in completing and delivering large scale infrastructure projects.

SUPPLY AND DEMAND

Renewable power generation in North America and Europe is expected to grow significantly over the next 20 years due to the replacement of older fossil fuel-based sources of electricity generation in support of announced governmental carbon emissions reduction targets. Any additional governmental actions toward reducing emissions and/or increasing electrification will further accelerate renewable electricity demand growth and electrification across all sectors.

On the demand side, North American economic growth over the longer term and the continued electrification and transition to lower-carbon strategies within the residential, transportation and industrial sectors are expected to drive growing electricity demand. Furthermore, voluntary GHG emissions reduction targets are becoming increasingly expected by stakeholders, which is driving significant demand from corporate electricity end-users for clean electricity and environmental attributes. However, continued efficiency gains are expected to make the economy less energy-intensive and temper overall demand growth.

On the supply side in North America, legislation is accelerating the retirement of aging coal-fired generation, while generation from conventional nuclear power is also forecast to decline. As a result, North America requires significant new generation capacity from preferred technologies. Gas-fired and renewable energy facilities, including solar and wind (which make up the bulk of our renewable power assets), are generally the preferred sources to replace coal-fired generation due to their lower-carbon intensities. Governments are also proposing tax incentives to support low-emission and renewable energy generation resource development.

The falling capital and operating costs of wind and solar, combined with their improving capacity factors, are expected to continue the ongoing trend of making renewable energy more competitive and support investment over the long-term, regardless of available government incentives. Generation from renewable sources is expected to double over the next two decades in North America. Aside from the construction of new wind and solar facilities, other growth opportunities include repowering projects to increase output from, and extending the project-life of, our existing facilities.

In Europe, the renewable energy outlook is robust. Demand for electricity is expected to gradually increase over the next two decades, driven by electrification of transportation and buildings, and the desire to reduce reliance on gas sourced from Russia. Energy efficiency gains are expected to temper, but not eliminate, demand growth. Renewable power is expected to play a significant role in Europe’s ability to meet its aggressive lower-carbon and renewable energy targets.

On the supply side, the International Energy Agency expects coal to fall by more than 90% from 2020 levels, while nuclear is expected to fall by one-third, by 2040. Over the same period, it anticipates power generation from renewable sources will more than double, including installed (onshore and offshore) wind more than doubling and photovoltaics solar power nearly tripling. We, through our European joint ventures, continue to invest in offshore wind projects in the United Kingdom, France and Germany, and to explore opportunities, to meet the growing demand.

ENERGY SERVICES

The Energy Services businesses in Canada and the US provide physical commodity marketing and logistical services to North American refiners, producers, and other customers.

Energy Services is primarily focused on servicing customers across the value chain and capturing value from quality, time, and location price differentials when opportunities arise. To execute these strategies, Energy Services transports and stores on both Enbridge-owned and third party assets using a combination of contracted long-term and short-term pipeline, storage, railcar, and truck capacity agreements.

COMPETITION
Energy Services' earnings are primarily generated from arbitrage opportunities which, by their nature, can be replicated by competitors. An increase in market participants entering into similar arbitrage strategies could have an impact on our earnings. Efforts to mitigate competition risk include diversification of the marketing business by transacting at the majority of major hubs in North America and establishing long-term relationships with clients and pipelines.

ELIMINATIONS AND OTHER

Eliminations and Other includes operating and administrative costs that are not allocated to business segments, the impact of foreign exchange hedge settlements and the activities of our wholly-owned captive insurance subsidiaries. The principal activity of our captive insurance subsidiaries is providing insurance and reinsurance coverage for certain insurable property and casualty risk exposures of our operating subsidiaries and certain equity investments. Eliminations and Other also includes new business development activities and corporate investments.

REGULATION

GOVERNMENT REGULATION
Pipeline Regulation
Our Liquids Pipelines and Gas Transmission and Midstream assets are subject to numerous operational rules and regulations mandated by governments or applicable regulatory authorities, breaches of which could result in fines, penalties, operating restrictions and an overall increase in operating and compliance costs.

In the US, our interstate pipeline operations are subject to pipeline safety laws and regulations administered by the Pipeline and Hazardous Materials Safety Administration (PHMSA), an agency within the United States Department of Transportation (DOT). These laws and regulations require us to comply with a significant set of requirements for the design, construction, maintenance and operation of our interstate pipelines. These laws and regulations, among other things, include requirements to monitor and maintain the integrity of our pipelines and to operate them within permissible pressures.

PHMSA continues to review existing regulations and establish new regulations to support safety standards that are designed to improve operations integrity management processes. There remains uncertainty as to how these standards will be implemented, but it is expected that the changes will result in additional costs on new pipeline projects as well as on existing operations. In this climate of increasingly stringent regulation, pipeline failure or failures to comply with applicable regulations could result in reduction of allowable operating pressures as authorized by PHMSA, which would reduce available capacity on our pipelines. Should any of these risks materialize, it may have an adverse effect on our operations, capital expenditures, earnings, cash flows, financial condition and competitive advantage.

Our ability to establish transportation and storage rates on our US interstate natural gas facilities is subject to regulation by the FERC, whose rulings and policies could have an adverse impact on the ability to recover the full cost of operating these pipeline and storage assets, including a reasonable rate of return. Regulatory or administrative actions by FERC such as rate proceedings, applications to certify construction of new facilities, and depreciation and amortization policies can affect our business, including decreasing tariff rates and revenues and increasing our costs of doing business.

In Canada, our pipelines are subject to safety regulations administered by the CER or provincial regulators. Applicable legislation and regulations require us to comply with a significant set of requirements for the design, construction, maintenance and operation of our pipelines. Among other obligations, this regulatory framework imposes requirements to monitor and maintain the integrity of our pipelines.

As in the US, laws and regulations addressing pipeline safety in Canada were enacted over the past few years. The changes demonstrate an increased focus on the implementation of management systems to address key areas, such as emergency management, integrity management, safety, security and environmental protection. The CER also has authority to impose administrative monetary penalties for non-compliance with the regulatory regime it administers, as well as to impose financial requirements for future abandonment and major pipeline releases.

A key component of pipeline safety and reliability is the approach to integrity management that uses reliability targets and safety case assessments. A long history of extensive inline inspection has provided detailed knowledge of the assets in our pipeline systems. Our pipelines are assessed and maintained in a proactive manner ensuring reliability targets are met. Furthermore, the integrity management program has an independent step to check the results of integrity assessments to validate the effectiveness of the program and to ensure that the operational risk remains as low as reasonably practicable throughout the integrity inspection and assessment cycle. As inspection technology, pipeline materials and construction practices improve with time, and new data on threats and pipeline condition are gathered, our methods of maintaining fitness for service evolves, with a strong focus on continual improvement in every aspect of integrity management.

Our pipelines also face economic regulatory risk. Broadly defined, economic regulatory risk is the risk that governments or regulatory agencies reject proposed commercial arrangements, applications or policies, upon which future and current operations are dependent. Our pipelines are subject to the actions of various regulators, including the CER and the FERC, with respect to the tariffs and tolls. The rejection of applications for approval of new tariff structures or proposed commercial arrangements and changes in interpretation of existing regulations by courts or regulators could have an adverse effect on our revenues and earnings.

Gas Distribution and Storage
Our gas distribution and storage utility operations are regulated by the OEB and the Québec Régie de l’énergie, among others. To the extent that the regulators’ future actions are different from current expectations, the timing and amount of recovery or refund of amounts recorded in the Consolidated Statements of Financial Position, or amounts that would have been recorded in the Consolidated Statements of Financial Position in the absence of the effects of regulation, could be different from the amounts that are eventually recovered or refunded.

Enbridge Gas' distribution rates, commencing in 2019, are set under a five-year incentive regulation (IR) framework using a price cap mechanism. The price cap mechanism establishes new rates each year through an annual base rate escalation at inflation less a 0.3% productivity factor, annual updates for certain costs to be passed through to customers, and where applicable, the recovery of material discrete incremental capital investments beyond those that can be funded through base rates. The IR framework includes the continuation and establishment of certain deferral and variance accounts, as well as an earnings sharing mechanism that requires Enbridge Gas to share equally with customers any earnings in excess of 150 basis points over the annual OEB approved return on equity (ROE).

In October 2022, Enbridge Gas filed its application with the OEB to establish a 2024 through 2028 rate setting framework. The application and framework seek approval to establish 2024 base rates on a cost-of-service basis and to establish a price cap IR rate setting mechanism to be used for the remainder of the term (2025 - 2028). The OEB has determined it will hear the application in two phases, with Phase 1 addressing items that affect rates effective January 1, 2024, and Phase 2 addressing items that will affect rates subsequent to January 1, 2024. An OEB decision is expected on Phase 1 of the application in the second half of 2023.

Enbridge Gas continues to develop opportunities to support a lower-carbon future in Ontario. In 2021, we received OEB approval of an Integrated Resource Planning (IRP) framework and integrated the framework into our planning practices. The framework requires Enbridge Gas to consider facility and non-pipe demand and/or supply side alternatives (IRP alternatives) to address the systems needs of its regulated operations, where certain parameters have been met. The framework also allows Enbridge Gas to pursue an IRP alternative (or combination of IRP alternatives and facility alternative) where it is found to be in the best interests of Enbridge Gas and its customers, taking into account reliability and safety, cost-effectiveness, public policy, optimized scoping, and risk management. Enbridge Gas has reviewed its system needs as part of its 2023-2032 Asset Management Plan and is now evaluating the technical and economic feasibility of IRP alternatives for the projects. A summary of the IRP evaluation statuses has been filed as part of Enbridge Gas' 2024 Rebasing Application.

Renewable Power Generation
Renewable Power Generation is subject to numerous operational rules and regulations mandated by governments or applicable regulatory authorities, breaches of which could result in fines, penalties, operating restrictions and an overall increase in operating and compliance costs.

The North American Electric Reliability Council (NERC) is an international regulatory authority responsible for establishing and enforcing reliability standards to reduce risks to the reliability and security of the grid in Canada, the US, and Mexico. It is subject to oversight from the FERC in the US and provincial governments in Canada. The FERC has authority over many markets in the US and is tasked with ensuring safe, reliable, and secure interstate transmission of electricity, natural gas, and oil. This includes establishing reliability standards and determining certain pricing aspects of transmission development and access, among others. NERC and FERC standards and pricing decisions are also updated from time to time and could impact our operations, capital expenditures, earnings, and cash flows, though some of these impacts could be positive for our business.

At the US federal level, our Renewable Power Generation assets are subject to legislation overseen by the US Fish and Wildlife Service, which is aimed at reducing the impact of development and human activity on wildlife, along with other federal environmental permitting legislation. These federal environmental laws are subject to change from time to time which could require Enbridge to obtain new permits, update practices, or amend operations and operating expenditures.

In Canada, the Federal Government does not generally regulate the electricity sector though it has imposed a federal carbon price on other sectors via its output-based pricing system (OBPS) and has proposed a Clean Electricity Regulation (CE Regulation) that would require Canada's electricity grid reach net-zero by 2035. The CE Regulation is expected to come into effect in 2023.

Policy changes may also provide new opportunities for existing assets and new developments. The United States passed the Inflation Reduction Act in late 2022, which established long-term production and investment tax credits for renewable power generation, battery storage projects and for related manufacturing supply chains. Similarly, Canada proposed in its Fall Economic Statement competitive tax credits for renewable power generation and battery storage projects, which it anticipates passing in 2023. Changes to these tax programs could impact development plans.

Renewable Power Generation is also subject to Provincial and State regulations governing the energy resource mix on the grid, emissions levels of the electricity grid, and market regulations related to emergency operations, extreme weather preparedness, and market participation, among others. These regulations may change from time to time, which could impact Enbridge's operations and increase the costs of participating in regional electricity markets.

Our Renewable Power Generation assets in France and Germany each have federal policies in place and are subject to directives and regulations established and enforced by the European Union (EU). These include the Renewable Energy Directive (most recently, RED II passed set targets through 2030), the European Green Deal, and ongoing work on financing mechanisms and transmission directives and programs. The EU is also responsible for establishing environmental protection rules and permitting standards. During 2022, member states of the EU introduced extraordinary and temporary measures to address high energy prices including caps and demand reduction goals. As the minimum PPA prices in Germany and France will still be honored, there will not be any negative implications to our PPA prices. The federal policies and regulations in place are subject to change from time to time, which could impact our operations and related expenditures; however, the EU's general direction is to facilitate increased renewable power integration to its grid.

The United Kingdom (UK) government is responsible for establishing renewable energy and carbon pricing policies for the entire UK, as well as long-term electricity sector planning and procurement mechanisms and structure for auctions that are administered at the national level, e.g., England, Scotland, within the UK. Each country within the UK is also responsible for establishing its own environmental and permitting regulations. This process is still ongoing following Brexit and in some cases continues to result in more volatile merchant power prices; however, expanded interconnectors to Europe and policies aimed at increasing domestic renewable capacity are in progress. Government-imposed temporary price controls, effective January 1, 2023, were introduced during 2022 to address the significant increase in energy prices. The impact of merchant exposure on our Renewable Power Generation asset in the UK is limited by fixed revenue payments backed by the UK government.

Energy Services

Energy Services is regulated by government authorities in the areas of commodity trading, import and export compliance and the transportation of commodities. Non-compliance with governing rules and regulations could result in fines, penalties and operating restrictions. These consequences would have an adverse effect on operations, earnings, cash flows, financial condition and competitive advantage. Energy Services retains dedicated professional staff and has a robust regulatory compliance program (including targeted training) to mitigate these potential risks associated with the business.

In the US, commodity marketing is regulated by the Commodity Futures Trading Commission, the SEC, the Federal Trade Commission, the various commodity exchanges, the US Department of Justice and state regulators. The provincial and territorial securities regulators similarly regulate commodity marketing within Canada and are members of the Canadian Securities Administrators. These various regulators enforce, among other things, the prohibition of market manipulation, fraud and disruptive trading.

The export of natural gas out of Alberta is regulated by the Alberta Energy Regulator (AER). The import and export of commodities between Canada and the US is subject to regulation by the CER and the US Department of Energy, as well as customs authorities. In particular, import and export permits are required, with associated regular reporting requirements. Breaches of import and export rules and permits could result in an inability to perform day to day operations, and therein negatively impact the earnings of the business.

The transportation of crude oil and natural gas liquids by railcar or truck is regulated by the US DOT, Transport Canada and provincial regulation. Each jurisdiction requires compliance with security, safety, emergency management, and environmental laws and regulations related to ground transportation of commodities. Risks associated with transportation of crude or natural gas liquids include unplanned releases. In the event of a release, remediation of the affected area would be required. Energy Services engages third parties, such as Emergency Response Assistance Canada, the Chemical Transportation Emergency Center and the Canadian Transport Emergency Center to assist in such remediation.

ENVIRONMENTAL REGULATION

Pipeline Regulation

Our Liquids Pipelines and Gas Transmission and Midstream assets are subject to numerous federal, state and provincial environmental laws and regulations affecting many aspects of our present and future operations, including air emissions, water quality, water discharge and waste. These laws and regulations generally require us to obtain and comply with a wide variety of environmental licenses, permits and other approvals.

In particular, in the US, compliance with major Clean Air Act regulatory programs may cause us to incur significant capital expenditures to obtain permits, evaluate off-site impacts of our operations, install pollution control equipment, and otherwise assure compliance. Some states in which we operate are establishing new state implementation plans which have new emissions limits to comply with ozone standards regulated under the National Ambient Air Quality Standards. In 2015, the ozone standards were lowered once again from 75 parts per billion (ppb) to 70 ppb, which may require states to implement additional emissions regulations. The precise nature of these compliance obligations at each of our facilities has not been finally determined and may depend in part on future regulatory changes. In addition, compliance with new and emerging environmental regulatory programs may significantly increase our operating costs compared to historical levels.

In the US, climate change action is evolving at federal, state and regional levels. The Supreme Court decision in Massachusetts v. Environmental Protection Agency in 2007 established that GHG emissions were pollutants subject to regulation under the Clean Air Act. Pursuant to federal regulations, we are currently subject to an obligation to report our GHG emissions at our largest emitting facilities but are not generally subject to limits on emissions of GHGs. The current US presidential administration has also announced that policies designed to combat climate change and reduce GHG emissions will be a key legislative and regulatory priority, and thus stricter emissions limits and air quality enforcement actions are likely. In addition, a number of states have joined regional GHG initiatives, and a number are developing their own programs that would mandate reductions in GHG emissions. Public interest groups and regulatory agencies are increasingly focusing on the emission of methane associated with natural gas development and transmission as a source of GHG emissions. However, as the key details of future GHG restrictions and compliance mechanisms remain undefined, the likely future effects on our business are uncertain.

Canada has adopted a pan-Canadian approach to pricing carbon emissions to incent GHG emission reductions across all sectors of the economy. This approach was adopted in 2016 and entails both a consumer price on carbon, and an intensity-based system for industry which addresses competitiveness and carbon leakage. Provinces and territories may implement their own system of carbon pricing provided it meets the federal benchmark (and if they fail to do so the federal system will be imposed on them). In March 2022, Canada published its 2030 Emissions Reduction Plan (ERP) which builds on the Pan-Canadian Framework, and Net-Zero Emissions Accountability Act, and details the roadmap for Canada to meet its domestic climate target of a 40-45% reduction in GHG emissions by 2030 and attaining net-zero emissions by 2050. The ERP details the complementary policies and programs that Canada will enact to enable it to meet its domestic climate goal. Effective January 1, 2023, the federal carbon price was increased from $50 to $65 per tonne of carbon dioxide equivalent (tCO2e). This will increase by $15 per tonne and rise to $170 per tCO2e in 2030.

Gas Distribution and Storage
Our Gas Distribution and Storage operations, facilities and workers are subject to municipal, provincial and federal legislation which regulates the protection of the environment and the health and safety of workers. Environmental legislation primarily includes regulation of spills and emissions to air, land and water; hazardous waste management; the assessment and management of excess soil and contaminated sites; protection of environmentally sensitive areas, and species at risk and their habitats; and the reporting and reduction of GHG emissions.

Gas distribution system operation, as with any industrial operation, has the potential risk of abnormal or emergency conditions, or other unplanned events that could result in releases or emissions exceeding permitted levels. These events could result in injuries to workers or the public, adverse impacts to the environment, property damage and/or regulatory infractions including orders and fines. We could also incur future liability for soil and groundwater contamination associated with past and present site activities.

In addition to gas distribution, we also operate gas storage facilities and a small volume of oil and brine production in southwestern Ontario. Environmental risk associated with these facilities has the potential for unplanned releases. In the event of a release, remediation of the affected area would be required. There would also be potential for fines and orders under environmental legislation, and potential third-party liability claims by any affected landowners.

The gas distribution system and our other operations must maintain environmental approvals and permits from regulators to operate. As a result, these assets and facilities are subject to periodic inspections and/or audits. Reports are submitted to our regulators as required to demonstrate we are in good standing with our environmental requirements. Failure to maintain regulatory compliance could result in operational interruptions, fines, and/or orders for additional pollution control technology or environmental mitigation.

As environmental regulations continue to evolve and become more stringent, the cost to maintain compliance and the time required to obtain approvals continues to increase. A recent example includes the implementation of the new excess soil management requirements (Ontario Regulation 406/19) which has resulted in an increase in soil management costs and effort.

As in previous years, in 2022, we reported operational GHG emissions, including emissions from stationary combustion, flaring, venting and fugitive sources to Environment and Climate Change Canada (ECCC), the Ontario Ministry of Environment, Conservation and Parks, and a number of voluntary reporting programs. In accordance with the provincial GHG regulations, stationary combustion and flaring emissions related to storage and transmission operations were verified in detail by a third-party accredited verifier with no material discrepancies found.

Enbridge Gas utilizes emissions data management processes and systems to help with the data capture and mandatory and voluntary reporting needs. Quantification methodologies and emission factors are updated in our systems as required. Enbridge Gas continues to work with industry associations to refine quantification methodologies and emissions factors, as well as best management practices to minimize emissions.

In October 2018, the federal government confirmed that Ontario is subject to the federal government’s carbon pricing program, otherwise known as the Federal Carbon Pricing Backstop Program. This program consists of two components: a carbon charge levied on fossil fuels, including natural gas, and an OBPS.

The federal carbon charge took effect on April 1, 2019 at a rate of 3.91 cents/cubic meter (m3) of natural gas and is applicable to the majority of customers. Enbridge Gas is registered as a natural gas distributor with the Canada Revenue Agency and remits the federal carbon charge on a monthly basis. The charge increases annually on April 1 of each year by 1.96 cents/m3, rising to 9.79 cents/m3 in 2022. In December 2020, the federal government announced plans to increase the federal carbon price by $15 per tonne each year beginning in 2023, rising to $170 per tCO_2e in 2030. Enbridge Gas estimates that this will equate to a federal carbon charge on natural gas of approximately 33.31 cents/m3 in 2030.
