Exhibit 1

Question(s):

Following publication of the Notice of Application, the Ontario Energy Board (OEB) received several letters of comment. Sections 2.1.6 of the Filing Requirements state that distributors will be expected to file with the OEB their response to the matters raised within any letters of comment.

Please file a response to the matters raised in the letters of comment that were also copied to Enbridge Gas Inc. (Enbridge Gas). Going forward, please ensure that responses to any matters raised in subsequent comments or letters that the applicant receives are filed in this proceeding. Please ensure that name and contact information is redacted for public filings. All responses must be filed before the argument (submission) phase of this proceeding.

Response:

Please see Attachment 1 for Enbridge Gas's response to the matters raised within the letters of comment.

ENBRIDGE GAS RESPONSE TO EB-2022-0200 LETTERS OF COMMENT

On Oct. 31, 2022 Enbridge Gas filed an Application with the Ontario Energy Board (OEB) to initiate a regulatory process called Rebasing. This process will determine the fair and reasonable regulated distribution, transmission and storage rates that Enbridge Gas will charge customers in 2024 to recover the costs of serving them safely and reliably and the opportunity to earn a return over a 5-year period.

To determine the rates we will charge customers for the following four years from 2025 to 2028, we are proposing an incentive regulation structure, which uses a formula that includes such items as inflation. This incentive regulation structure is very similar to the one used to set our rates from 2019 to 2023 and is the rate-setting mechanism prescribed by the OEB.

This is the first Rebasing Application we have submitted to the OEB as an integrated utility. It reflects the effects of utility integration, service and rate harmonization, and investments needed to support continued safe and reliable service for customers.

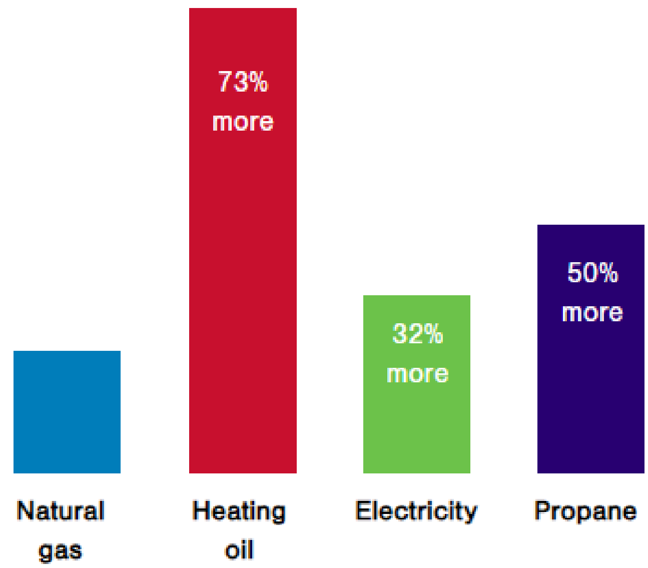
The OEB has a process to scrutinize our application and supporting evidence, which includes an opportunity for parties to file letters of comment. The OEB received over 300 letters of comment. Many of the letters asked the OEB not to approve a rate increase. Among the comments:

- Customers are financially strained and cannot manage further increases in their household bills.
- As there have been other Enbridge Gas bill increases over the past few years, there should be no further increases.
- Enbridge Gas is a monopoly, and our parent company, Enbridge Inc., is profitable.
- Concerns about the fairness of the rate harmonization plan and the information provided in the evidence accompanying the application.

This reply provides Enbridge Gas's response to the concerns raised.

Natural Gas and Affordability

Enbridge Gas passes on the cost of natural gas to its customers with no mark-up. Depending on market conditions, the cost of natural gas fluctuates. Within the last year natural gas prices have risen because of an increase in demand in North America after the COVID-19 shutdowns, and supply concerns caused by geopolitical uncertainty. Using data from the first quarter of 2023, the chart below shows natural gas continues to be the most cost-effective energy solution for homes and business, and costs significantly less than heating your home or business with electricity, oil or propane. Visit Natural Gas Prices Explained | Enbridge Gas for more information.



Our customers can save even more on their energy bills by improving the energy efficiency of their homes or businesses. Enbridge Gas provides a range of tools and education to give consumers and businesses the ability to manage their energy use. Visit Rebates & Energy Conservation | Enbridge Gas for more information.

We understand that energy affordability is a priority for our customers and we are committed to helping them manage their gas bills. Information on our customer support programs can be found at: Having Payment Difficulties | Enbridge Gas. Low-income customers having trouble paying their bill may qualify for emergency relief through the Low-income Energy Assistance Program. The program provides emergency relief with financial grants of up to $1,000 a calendar year. Customers can visit the United Way Simcoe Muskoka website for qualification information.

The Role of Enbridge Gas and the OEB

Natural gas distributors such as Enbridge Gas make significant investments to serve customers. Examples of the facilities we build, maintain and operate to serve customers are pipelines, storage facilities and compression stations. In Ontario, natural gas distributors such as Enbridge Gas are regulated by the OEB, the provincial energy regulator. One of the OEB's roles is to carefully review rate change applications, such as this 2024 rate application. While Enbridge Gas is an Enbridge Inc. company, only

Enbridge Gas's rates are subject to OEB jurisdiction. Additionally, we follow rules established by the OEB that govern our interactions with our parent company.

Customer Engagement

Customers are at the heart of our Application. We undertook extensive engagement with our customers, talking to more than 12,000 of them in 2021 and early 2022. They told us their priorities are energy affordability, reliability, and minimizing environmental impacts. This feedback is integrated into our business planning process.

Reflecting what customers told the utility is important to us. The proposed rates in this application will support a system that can continue to meet their needs safely and reliably in a cost-effective way, while at the same time helping them prudently prepare for the energy transition that is underway in the communities where they live, driven by existing and planned federal and provincial policies. A strong majority of customers themselves say they are willing to invest in the long-term health of the system, as well as low-carbon options and solutions to reduce impacts on the environment, through reasonable rate increases.

Savings and Cost Pressures

Customers are benefitting from the integration of Enbridge Gas Distribution and Union Gas. Despite the challenges of the global pandemic and with only five years to plan and carry out amalgamation initiatives, we will be passing $86 million in annual integration savings on to customers beginning in 2024. When you add in productivity initiatives, customers will benefit from more than $121 million in savings a year. This is offsetting the rising costs of operating our business and moderates the rate increases we believe are necessary to continue delivering safe and reliable service to our customers in 2024.

Harmonization

Since we began the process of integrating into one utility in 2019, many systems and services have been harmonized for a consistent and simplified customer experience. To further reflect the operations and services of a single utility, we are proposing to further align and simplify our rates and customer services, and to phase in changes to allow time to implement system changes and inform customers.

We are proposing to harmonize our three rate zones (EGD, Union North and Union South) into one rate zone and establish new harmonized rate classes to be implemented for general service customers in 2025 and for contract rate customers in 2026.

Harmonizing rate zones and rate classes will allow us to align, simplify and enhance rates and services to meet customer needs. It will give us the ability to treat customers across Ontario similarly, applying the same rates for the same service to customers in the same rate class, regardless of where they are. In addition, our customer communications, regulatory applications and reporting will be simplified.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ginoogaming First Nation (GFN)

Interrogatory

Reference:

Exhibit 1, Tab 1, Schedule 2, p. 5, para 17

Preamble:

EGI notes that that persons affected by the Application include the "customers resident or located in the municipalities, police villages and **First Nations reserves served by the Applicant**, together with those to whom the Applicant sells gas, or on whose behalf the Applicant distributes, transmits or stores natural gas." (emphasis added)

Question(s):

a) Please file any and all analysis EGI has performed in connection with how the Application will, or is anticipated to, affect the First Nations rights-holding communities:

   i. that EGI serves;
   ii. to which EGI sells gas; and
   iii. on whose behalf EGI distributes, transmits, or stores gas.

   If EGI has not undertaken any such analysis, please explain why no such analysis has been undertaken, in light of the statement in paragraph 17.

Response:

a) The Application involves among other things, a Decision for the approval of rates effective January 1, 2024, for all customers that Enbridge Gas serves. In Enbridge Gas's view, First Nations reserves served by Enbridge Gas will be affected by the Application in a similar manner to other organizations, individuals, and customers Enbridge Gas serves.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ginoogaming First Nation (GFN)

Interrogatory

Reference:

Exhibit 1, Tab 1, Schedule 2, p. 5, para 17
Enbridge Inc.'s Indigenous Peoples Policy[1] ("**IPP**")

Preamble:

Enbridge Inc.'s IPP provides that Enbridge will engage with "forthright and sincere consultation with Indigenous Peoples about Enbridge's projects **and operations** through processes that seek to achieve early and meaningful engagement". Enbridge also notes that the commitments made in the IPP are "a shared responsibility involving Enbridge **and its affiliates**, employees and contractors" and that they "will conduct business in a manner that reflects" the principles provided in the IPP.

Question(s):

a) Please place Enbridge Inc.'s IPP on the record in this proceeding.

b) Please indicate whether EGI adhered to the principles articulated in the IPP as it developed the Application. If yes, please discuss how EGI upheld the commitments in the IPP with respect to the Application. If no, please explain why not.

c) Please provide all internal policy frameworks and guidance other than the IPP that EGI relied on to guide its engagement and relationship with First Nations and how this informed EGI's development of the Application.

Response:

a) Please see response at Exhibit I.1.6-Three Fires-1 part a).

b) Please see response at Exhibit I.1.6-Three Fires-1 part b).

[1] Enbridge Inc., *Indigenous Peoples Policy*, (August 2022), available online: https://www.enbridge.com/-/media/Enb/Documents/About-Us/indigenous_peoples_policy_final.pdf?rev=839a88ff9657465aa0b039d139d98166&hash=B98D08567204E4E2468FA166EF955E88>.

c) The IPP is the primary policy framework that guides Enbridge Inc.'s (Enbridge) engagement with First Nations. In addition, the Indigenous Reconciliation Action Plan, which is provided in response at Exhibit I.1.6.Three Fires-1 part a), serves as a corporate roadmap for Enbridge's continued journey towards truth and reconciliation. Enbridge Gas's engagement is also informed by external requirements such as the OEB Environmental Guidelines for Hydrocarbon Pipelines and Facilities in Ontario as well as guidance provided by legal decisions. For the purposes of this application, consistent with its frameworks and external guidance, Enbridge Gas has not undertaken a consultation program commensurate with what would be undertaken in relation to an application for facilities that may have a potential impact on Aboriginal and treaty rights. Nevertheless, the overarching principles in the IPP, including the recognition of the importance of reconciliation between Indigenous peoples and broader society, will continue to guide Enbridge Gas's interactions with Indigenous communities and peoples.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Preamble:

In support of its application and proposed revenue requirement recovery from customers, EGI has retained, and presented evidence from, a number of external experts.

Question(s):

a) Please provide EGI's best estimate of the total cost for all of the external experts retained by EGI in support of its application.

b) Please provide the total OEB proceeding related regulatory costs included in EGI's 2024 test year revenue requirement.

Response:

a) Please see response at Exhibit I.1.2-CCC-3.

b) Total OEB and intervenor proceeding related regulatory costs included in Enbridge Gas's 2024 Test Year are $11.4 million.

13	2024 Test Year	EGI	317	111	428

Notes:

(1) Salaries and wages include overtime.

(2) Benefits include pension, incentives, and other post-employment benefits costs.

(3) Costs for employees that are part of CFs have been excluded from EGI compensation amounts starting in 2018 following the Enbridge Spectra merger as costs are allocated through the Central Function Cost Allocation Methodology.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-1-6

Question(s):

For each third-party report filed in the application, please i) provide a copy of the retainer agreement with the third-party, ii) confirm if Enbridge is relying on the evidence as expert evidence, iii) provide the names of the specific authors of the report.

Response:

i. Please see response at Exhibit I.1.2-CCC-3, Attachment 2 for third-party reports associated to Phase 1 of the Application.

ii. Confirmed. Enbridge Gas is relying on the evidence as expert evidence for third-party reports associated to Phase 1 of the Application.

iii. Please see response at Exhibit I.1.2-CCC-3, Attachment 1 for authors of third-party reports associated to Phase 1 of the Application.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 2, Schedule 1, pp. 13 and 19; Exhibit 1, Tab 8, Schedule 1, Attachment 10, p. 77; Exhibit 1, Tab 10, Schedule 4, p. 16

Question(s):

The Government of Canada has committed to reducing greenhouse gas (GHG) emissions by 40% below 2005 levels by 2030 and the Government of Ontario has committed to reducing GHG emissions by 30% below 2005 levels by 2030.

Enbridge Gas states that energy transition poses a significant increase to the risks faced by natural gas utilities. Enbridge Gas considered alternatives to respond to these increasing risks, including changes to the expected service life of assets and changes to its deemed equity ratio to address increased business risk.

For each of the following categories of community and system expansion projects, please respond to the questions that follow: (i) Natural Gas Expansion Program (NGEP) funded expansion projects; (ii) non-NGEP funded expansion projects that require the use of Contributions in Aid of Construction (CIAC), System Expansion Surcharges (SES), Temporary Connection Surcharges (TCS) or Hourly Allocation Factors; and (iii) other expansion projects that do not require any of the funding sources mentioned in categories (i) and (ii).

a) Please provide the number of projects that will be constructed by the end of 2028 in each category.

b) Please provide the total capital costs across all projects for each category.

c) If available, please provide the average capital cost per residential customer across all projects in each category.

d) Please provide the average amortization period, in years, across all projects in each category.

e) Given Enbridge Gas's statements regarding stranded asset risk that it is facing and considering that federal and provincial commitments to reducing GHGs are likely nearer term than the amortization period for the projects in these categories, please explain further what Enbridge Gas has done or is considering doing to manage the risk of stranded assets in each category.

Response:

(i) Natural Gas Expansion Program (NGEP) funded expansion projects:

a-b) Please see response at Exhibit I.1.2-CCC-12 part d)

c) Please see Table 1 for the average cost per customer specific to Community Expansion Phase 2 projects.

Table 1

i) Community Expansion - Average Cost	2023F	2024F	2025F	2026F	2027F	2028F	Total
Community Expansion	13,981,689	24,408,757	27,388,718	11,240,506	7,029,908	7,343,532	91,393,110
Customer Adds	579	1,257	2,019	1,802	1,388	1,053	8,098
Average Cost CE	**24,148**	**19,418**	**13,565**	**6,238**	**5,065**	**6,974**	**11,286**

Table 1 sets out the capital spend that was known and included in the current Application.

(ii) Non-NGEP funded expansion projects that require the use of Contributions in Aid of Construction (CIAC), System Expansion Surcharges (SES), Temporary Connection Surcharges (TCS) or Hourly Allocation Factors:

a) As described in part a) response part iii) below, the customer connection forecast is determined using the approach described in Exhibit 2, Tab 6, Schedule 2, page 66 of 288, Section 5.1.4.3 Customer Connections Forecast. In this section, Enbridge Gas explains that a primary data source used in predicting growth is historical housing starts from the Canadian Mortgage and Housing Corporation. While this data is augmented with information originating from direct contact with builders, developers and municipalities, it is primarily built on a macro-economic view using historical data, accounting for future Energy Transition assumptions; therefore, project specific Profitability Indexes which would drive Contribution in Aid of Construction (CIAC), System Expansion Surcharges (SES), Temporary Connection Surcharges (TCS) or Hourly Allocation Factors (HAF), are not projected as part of this forecast for non-NGEP funded expansion projects. Furthermore, the market for attachments funded through the latter three of these mechanisms is still relatively new, and therefore Enbridge Gas has very little historical data upon which to build a future forecast at the project level. Although Enbridge Gas does not forecast number of projects, by type or at the aggregate level, based on a three year historical average, Enbridge Gas estimates 1100-1200 projects will be constructed as a total for all project types, and for the time period, listed within this question.

b) The total estimated project cost, based on a 3-year average, is approximately $48 million for the 2023 to 2028 forecast period.

c) Enbridge Gas is unable to provide information regarding the cost per residential customer specific to projects that include CIAC, SES, TCS and HAF. Please see the Table 2 for the average cost per customer for all customer types regardless of whether there is payment. Note that overheads are excluded from the Customer Connections capital in the calculation of average cost per customer.

Table 2

ii) Customer Connection - Average Cost	2023F	2024F	2025F	2026F	2027F	2028F	Total
Customer Connections	176,813,537	194,442,250	192,920,500	191,600,178	187,657,823	181,618,178	1,125,052,466
Customer Adds	41,519	40,712	39,744	38,821	37,523	35,961	234,280
Average Cost	**4,259**	**4,776**	**4,854**	**4,935**	**5,001**	**5,050**	**4,802**
***Average Cost of Total Customer Connections and TCS forecast. Forecast is not split out by sector or by TCS.							

(iii) Other expansion projects that do not require any of the funding sources mentioned in categories (i) and (ii):

a) Specific system expansion projects which are executed under Enbridge Gas's Customer Connections program and pass the financial test under E.B.O 188 are not discretely identified within the current capital plan at the project level. The customer connection forecast is determined using the approach described in Exhibit 2, Tab 6, Schedule 2, page 66 of 288, Section 5.1.4.3 Customer Connections Forecast. Required capital to fund the program is determined using this approach, and projects are identified at a regional level closer to and often during the year of construction. Although Enbridge Gas does not forecast number of projects, by type or at the aggregate level, based on a 3 year historical average, Enbridge Gas estimates 6000-7000 projects will be constructed as a total for all project types, and for the time period, listed within this question.

b) The total estimated project cost, based on a 3-year average, is approximately $420 million for the 2023 to 2028 forecast period. Please see Exhibit 2, Tab 6, Schedule 2, page 75 of 288, Table 5.1.10-1 under Customer Connections Additions for details on capital costs.

c) Please see part ii) c) above.

d) It is the Company's understanding that the amortization period mentioned in this question refers to the revenue horizon of different types of projects. The average revenue horizon for all types of projects mentioned in the question is 40 years.

e) Please see response at Exhibit I.1.10-STAFF-34 part a).

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 2, Schedule 1, pp. 13 and 19

Question(s):

The Government of Canada has committed to reducing GHG emissions by 40% below 2005 levels by 2030, and to net-zero emissions by 2050, and the Government of Ontario has committed to reducing GHG emissions by 30% below 2005 levels by 2030.

The forecast capital expenditure for the 2024 Test Year is $1,491.7 million and includes supporting the demand for customer and system growth.

a) Is Enbridge Gas planning to construct by 2028 any non-NGEP supported community expansion projects that will require the use of CIAC, SES, TCS or Hourly Allocation Factors? If so, how many, where are they located, and in what years might they go into service?

b) For any projects identified in part (a), please:

   i. Comment on their feasibility
   ii. Explain how Enbridge Gas is assessing electrification as an alternative to natural gas (whether conventional, renewable, or hydrogen blended natural gas)
   iii. Comment on (and quantify, if possible) their overall average capital cost per residential customer (i.e., do not provide an updated average capital cost per residential customer for each project)
   iv. Confirm that their amortization period is 40 years; if not, please explain
   v. Explain what Enbridge Gas is doing to manage the risk of stranded assets considering that federal and provincial commitments to reducing GHGs are nearer term than the amortization period for these projects.

c) Is Enbridge Gas planning to construct by 2028 any non-NGEP supported community expansion projects that will not require the use of CIAC, SES, TCS or Hourly Allocation Factors? If so, how many, where are they located, and in what years might they go into service?

d) For any projects identified in part (c), please:

i. Comment on their feasibility
ii. Explain how Enbridge Gas is assessing electrification as an alternative to natural gas (whether conventional, renewable, or hydrogen blended natural gas)
iii. Comment on (and quantify, if possible) their overall average capital cost per residential customer (i.e., do not provide an updated average capital cost per residential customer for each project)
iv. Confirm that their amortization period is 40 years; if not, please explain
v. Explain what Enbridge Gas is doing to manage the risk of stranded assets considering that federal and provincial commitments to reducing GHGs are nearer term than the amortization period for these projects.

Response:

a) Please see response at Exhibit I.1.2-STAFF-2 part ii) a).

b)
i. All project feasibilities aim to achieve a PI>=1. Please see response at Exhibit I.1.15-ED-82 part c).

ii. Enbridge Gas interprets this question to mean how has the Company included electrification trends in customer attachment forecasts. Please see Exhibit 1, Tab 10, Schedule 4 for a summary of the planning assumptions in the Rebasing Application.

iii. Please see response at Exhibit I.1.2-STAFF-2 part ii) c).

iv. Please see response at Exhibit I.1.2-STAFF-2 part d).

v. Please see response at Exhibit I.1.10-STAFF-34 part a).

c) Please see response at Exhibit I.1.2-STAFF-2 part iii) a).

d)
i. All project feasibilities aim to achieve a PI>=1. Please see response at Exhibit I.1.15-ED-82 part c).

ii. Please see b) ii) above.

iii. Please see response at Exhibit I.1.2-STAFF-2 part iii) c).

iv. Please see response at Exhibit I.1.2-STAFF-2 part d).

v. Please see response at Exhibit I.1.10-STAFF-34 part a).

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Ex. 1/T2

Question(s):

Please provide all materials presented to the EGI Board of Directors and Enbridge Inc.'s Board of Directors with respect to this Application.

Response:

Please see:

- Attachment 1 – 2024 Rebasing Application Update presentation, which was provided to the Enbridge Gas Board of Directors and Enbridge's Board of Directors.

- Attachment 2 – Rebasing and Incentive Rate Mechanism Update presentations, includes quarterly updates provided to Enbridge's Board of Directors.

Please also see response at Exhibit I.1.2-SEC-76 for the materials provided to Enbridge management with respect to the Application.

2024 Rebasing Application Update

Board of Directors
Oct. 25, 2022

2024 Rebasing Context

ENBRIDGE

- First Cost of Service application since 2013 for both legacy utilities
  - GDS was able to defer cost of service rates in 2019 as a result of amalgamation
  - Seeking re-based cost of service rates effective Jan. 1, 2024 and inflation adjusted rates for 2025 – 2028
  - Ratepayers expect to receive the benefits of amalgamation in 2024, including lower costs and customer service benefits
- Affordability concerns dominate Ontario political landscape
  - Gas bills are at an all time high due to the impact of carbon charges and elevated commodity prices, eroding competitive advantage to electricity
- Climate action views of regulators and intervenors inconsistent with significant investments in gas infrastructure
  - GDS released "pathways to net zero" report that models diversified and electrification pathways, showing former is more affordable, reliable and resilient
  - Investments in energy efficiency, RNG, hydrogen and CCUS and electricity needed

Ratepayer groups are seeking benefits from utility amalgamation, affordable energy and climate action

Major Themes: 2024 Cost of Service

ENBRIDGE

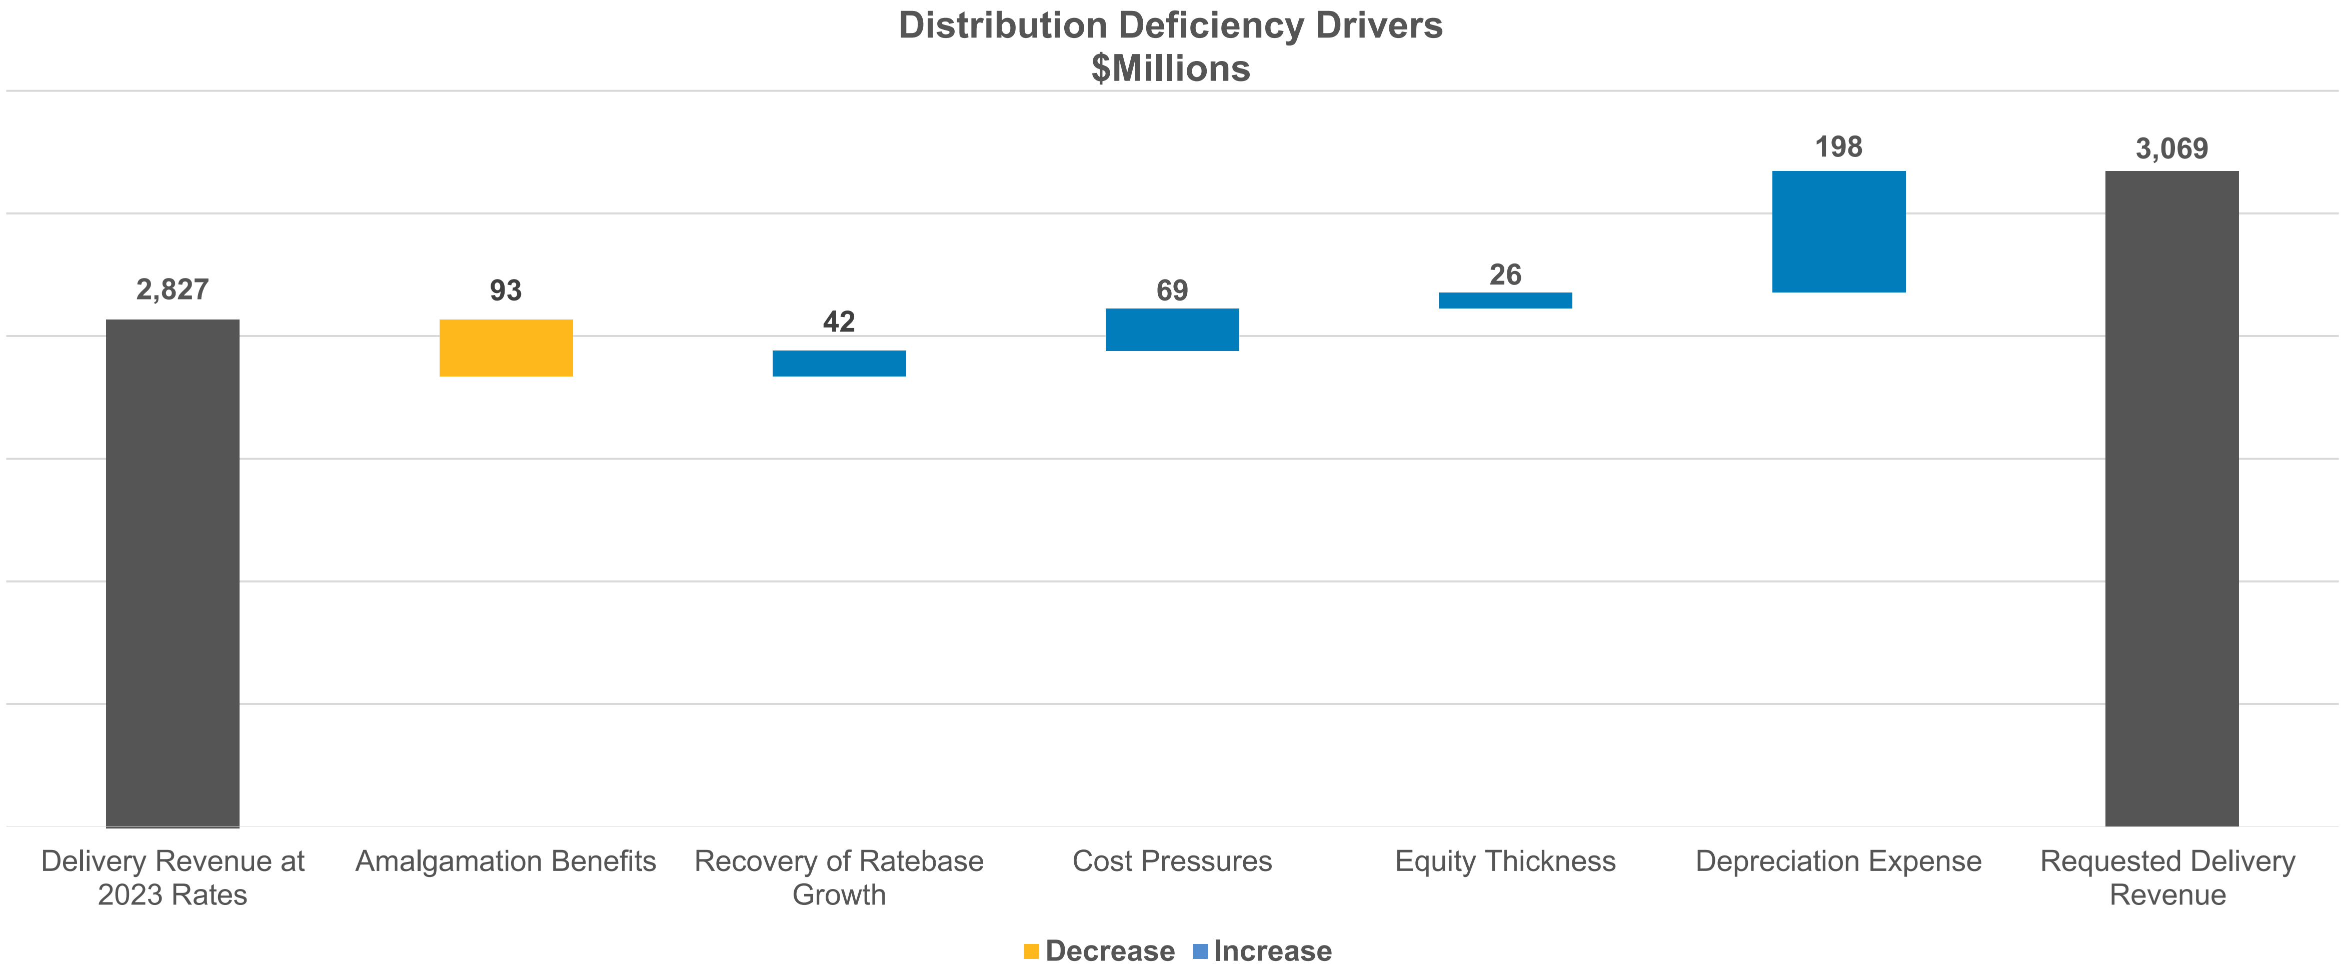
- Operations and Maintenance
  - Significant synergies during the deferred rebasing period offset by cost pressures due to inflation and increased safety, reliability and technology requirements
- Recovery of Capital Costs
  - Addition of depreciated cost of all capital additions from 2013 to 2023 and 2024 results in modest rate increase

- Equity Thickness
  - Energy transition has increased business risk since the 2013 capital structure determination
  - EGI at 36% equity has the lowest equity thickness of any comparable utility in North America
  - Proposal seeks 42% with a phased-in approach starting with 38% in 2024 to help mitigate impacts to rate-payers

- Depreciation Expense
  - Updated depreciation methodology and single depreciation rate for each combined asset account results in a significant increase in depreciation expense

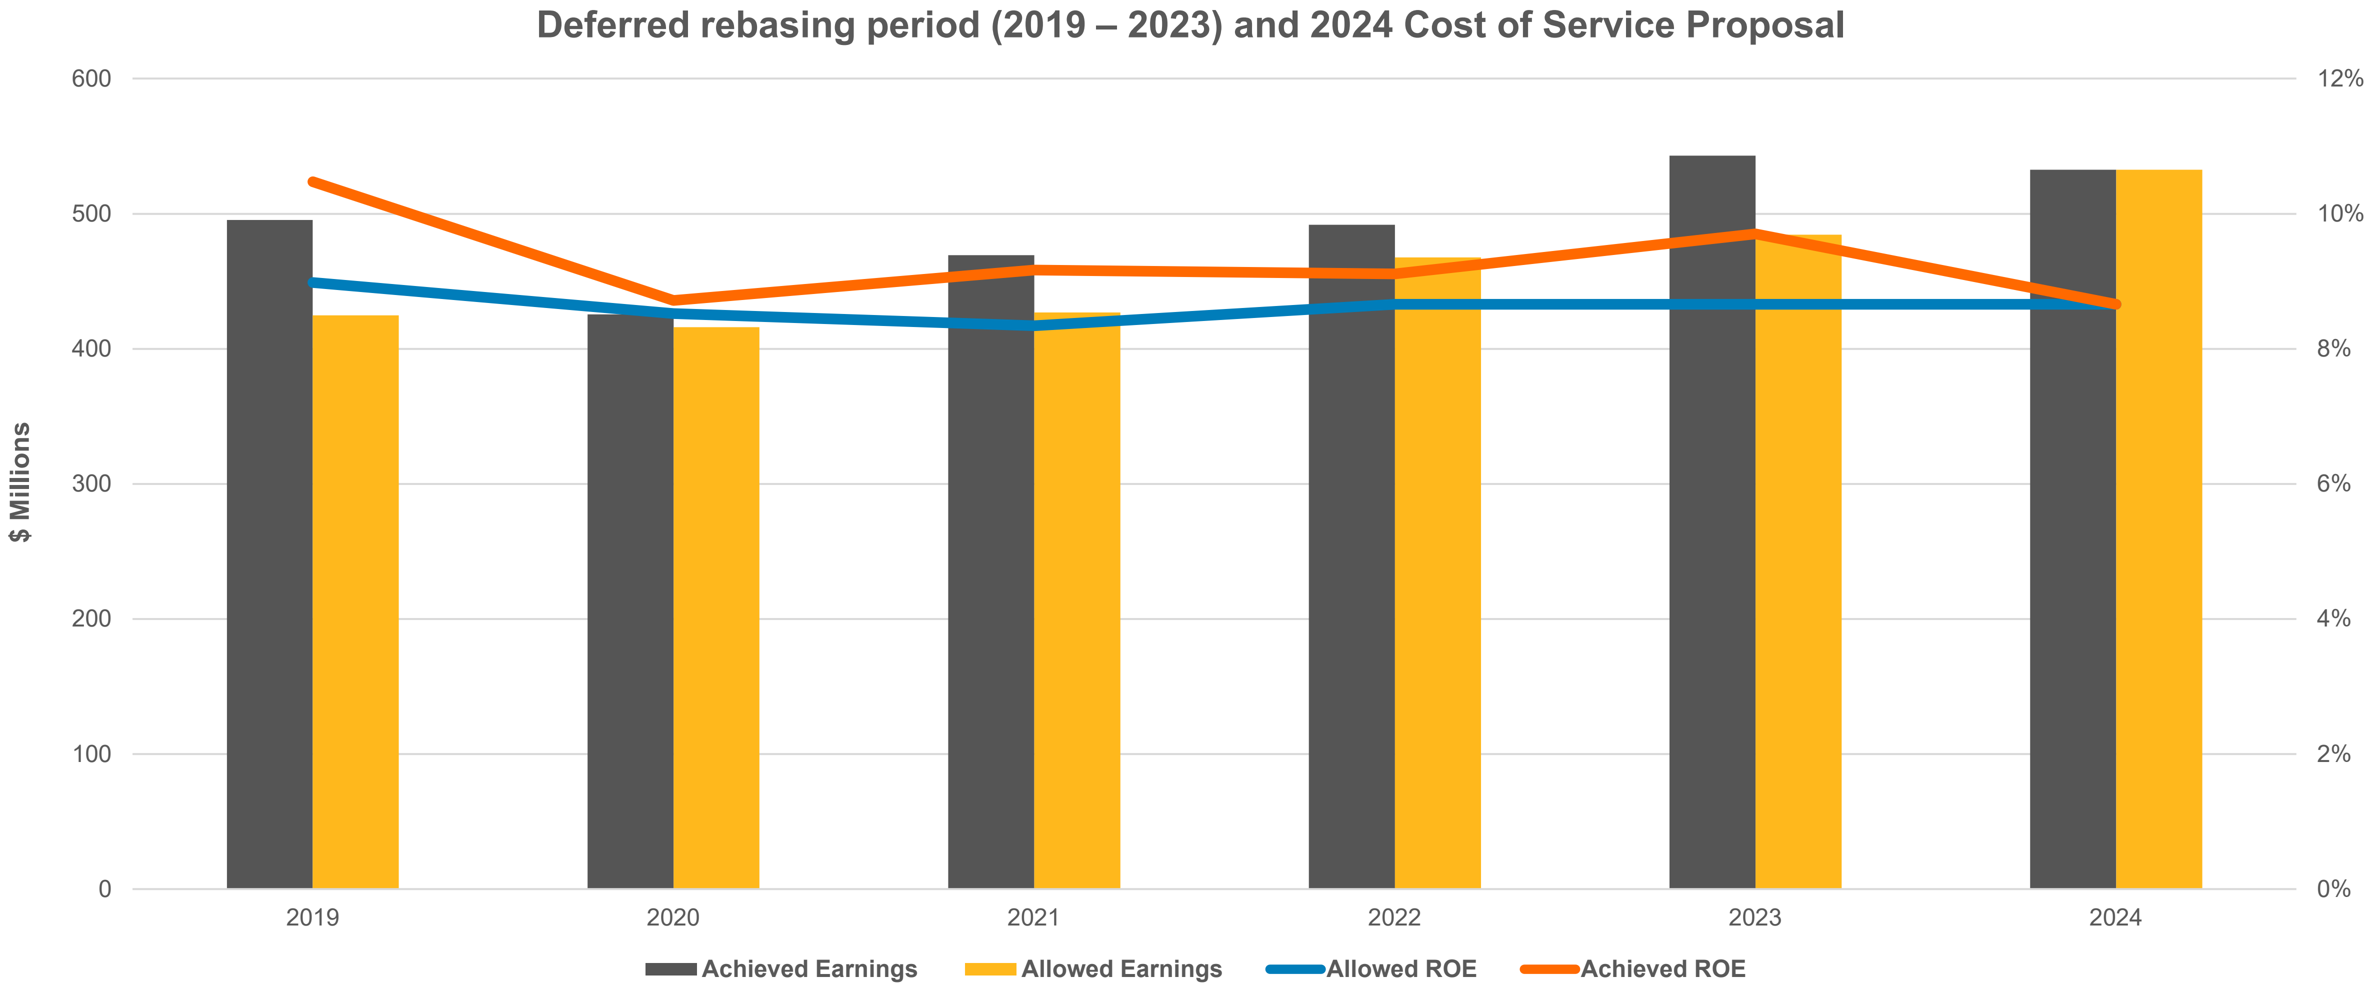
Rebasing proposal balances customer and shareholder needs

2024 Revenue Deficiency



8.6% increase in distribution revenue reflects a 4% average customer bill impact

Earnings 2019 – 2024



Deferred rebasing period achieved ROE ~70 bps above allowed

Major Themes: Incentive Ratemaking (2025 – 2028)

ENBRIDGE

- Rates will be set by using a Price Cap Formula calculated as (I - X) ± Y ± Z + ICM, where:
  - I = Weighted inflation factor, proposed 75:25 non labor inflation (GDP IPI) to labor (average hourly earnings)
  - X = productivity factor and stretch factor (1.35% “adder” to inflation proposed to reflect negative productivity)
  - Y = Costs not subject to Price Cap escalation (pass-through items such as gas costs, energy efficiency programs and specific costs afforded the passthrough treatment)
  - Z = costs associated with unforeseen events outside of management control (maintain existing $5.5M threshold)
  - ICM = Incremental Capital Module to seek funding for incremental capital projects that meet criteria of need, prudence and materiality and exceed the level supported by the formula
  - Earnings Sharing Mechanism, applicable if earnings exceed 150 basis points above allowed ROE, with 50/50 sharing between ratepayers and shareholders (same as current)

Independent consultant recommends rate increases exceeding inflation to reflect NA gas utility cost trends

Energy Transition Implications on Plan Period and Beyond

ENBRIDGE

Demand horizon	Major themes
Plan Period	Demonstrate criticality of gas assets for meeting Ontario's energy needs in an affordable, secure, reliable and resilient manner relative to electricity sector Reflect lower than historical customer and capacity additions as a result of energy transition policies Eliminate revenue volatility by implementing fixed charge recovery of fixed costs (2025/26 implementation) and deferral account treatment for volume variances starting in 2024. Optimize investments in gas carrying assets, demonstrate prudence by considering demand reductions and non pipeline solutions before adding pipe assets (Integrated Resource Planning), modest investments in lower carbon gas projects (RNG, hydrogen)
Net Zero	Commissioned third party study on net zero pathways to inform future policy direction. Diversified pathway including low carbon fuels is $200B and 27% less expensive than electrification pathway. Study presumes the displacement of natural gas with hydrogen over time, with larger volume flow from blended gas Demonstrate depreciation expense estimates based on 2050 Economic Planning Horizon

Harmonization proposals add complexity to case

ENBRIDGE

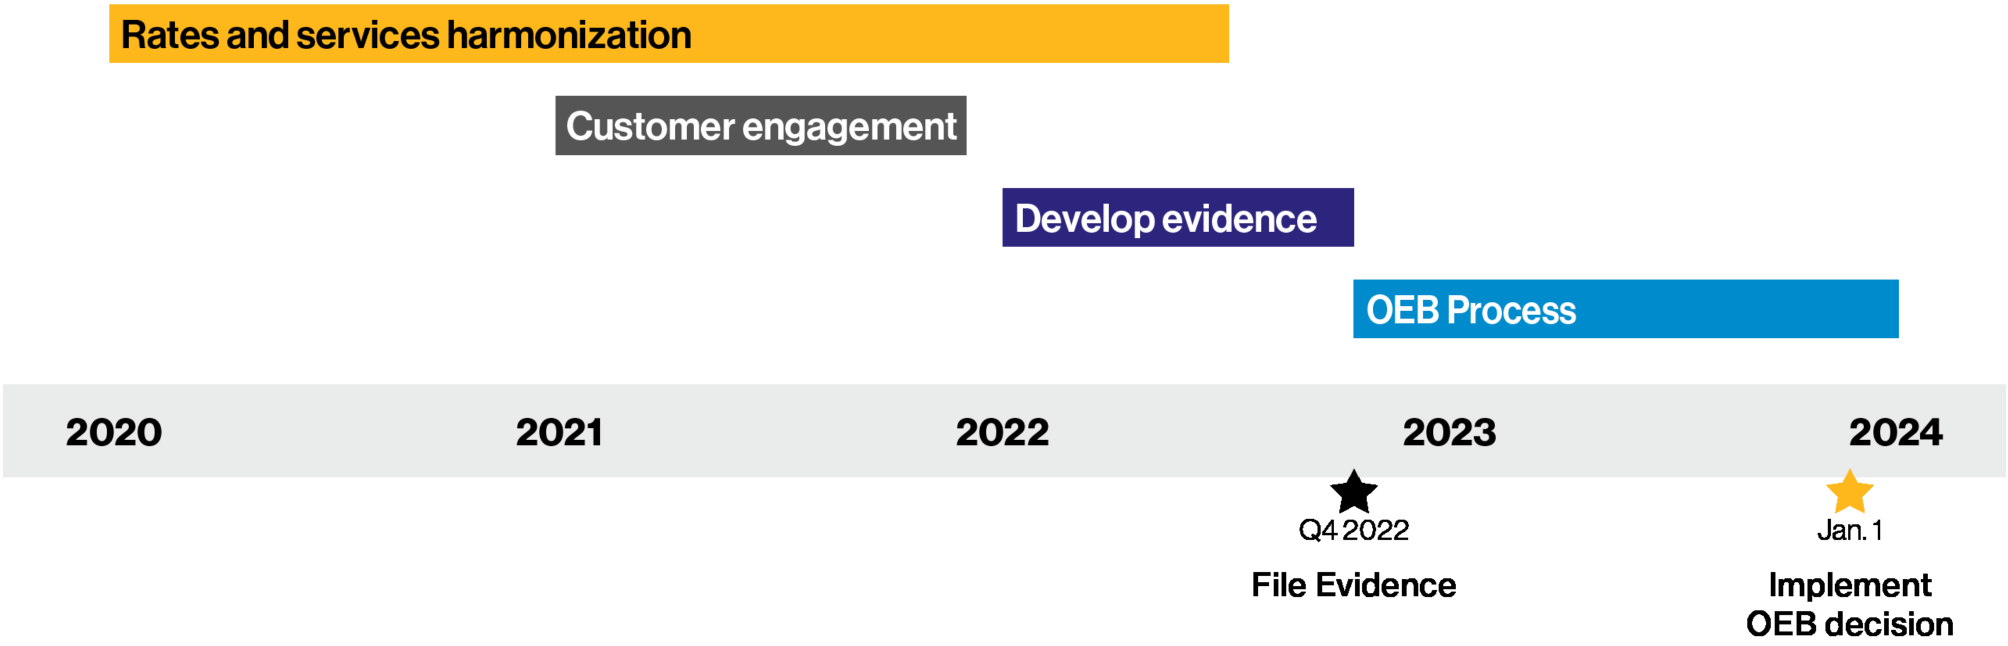
OEB requires cost allocation and rate harmonization proposals from amalgamation	Impacts on rates and timelines
Revised design criteria for gas supply procurement and distribution planning replacing legacy criteria	Rates impact: neutral When: 2024
Gas supply and delivery cost harmonized across province replacing geographical differentiation	Rates impact: range of decreases and increases When: 2024
Depreciation expense methodology replacing legacy approaches	Rates impact: significant to some customer groups When: 2024
Customer Service and Rate Harmonization across province	Rates impact: significant to some customer groups When: implemented in 2025 and 2026

Investigate options to contain scope or move to other process to manage Jan. 1, 2024 timeline

Next Steps

ENBRIDGE

- Oct. 31: File revenue requirement and incentive framework evidence
- Nov. 30: File cost allocation and rate design evidence including rate harmonization proposal



Gas Distribution and Storage Update

Board of Directors
February 1, 2022

Rebasing and Incentive Rate Mechanism

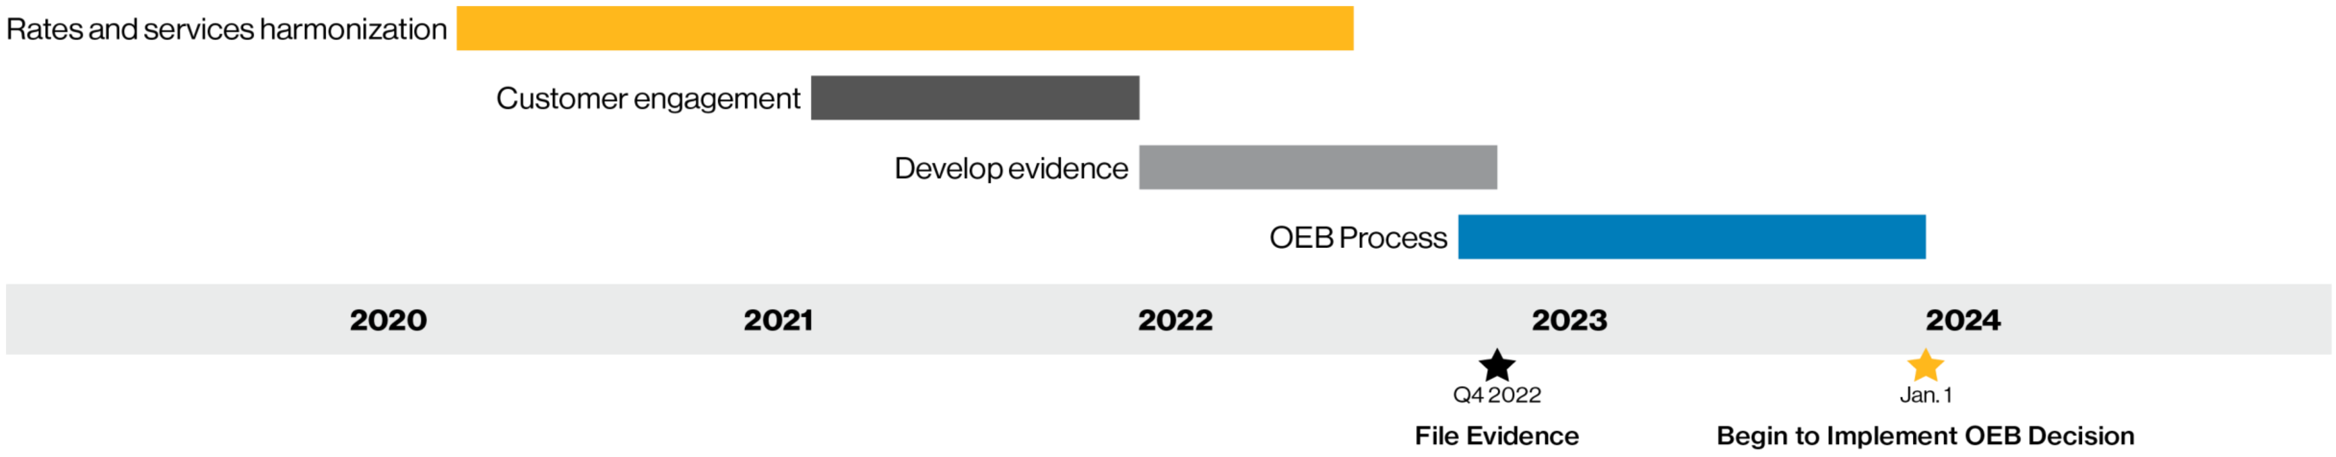
- Both legacy utilities have operated within a form of incentive rate mechanism since 2013, which was the last Cost of Service (rebasing) application for both utilities
- Since amalgamation in 2019, the utility has exceeded allowed ROE under a Price Cap Framework
- Rebasing application required for 2024 and incentive rate mechanism for 2025-2028

2024 rebasing requirements:

- Rates set to recover allowed cost to serve and allowed return on capital
- Transfer shareholder benefit from utility amalgamation (2019-2023) to ratepayers
- Rate zone and service harmonization

2025 – 2028 incentive framework: Price Cap

- Rates escalated annually for inflation and productivity factors
- Formula applied to 2024 Rates
- Incremental Capital Module for recovery of capital above a threshold amount



Gas Distribution and Storage Update

Board of Directors
April 26, 2022

Rebasing and Incentive Rate Mechanism

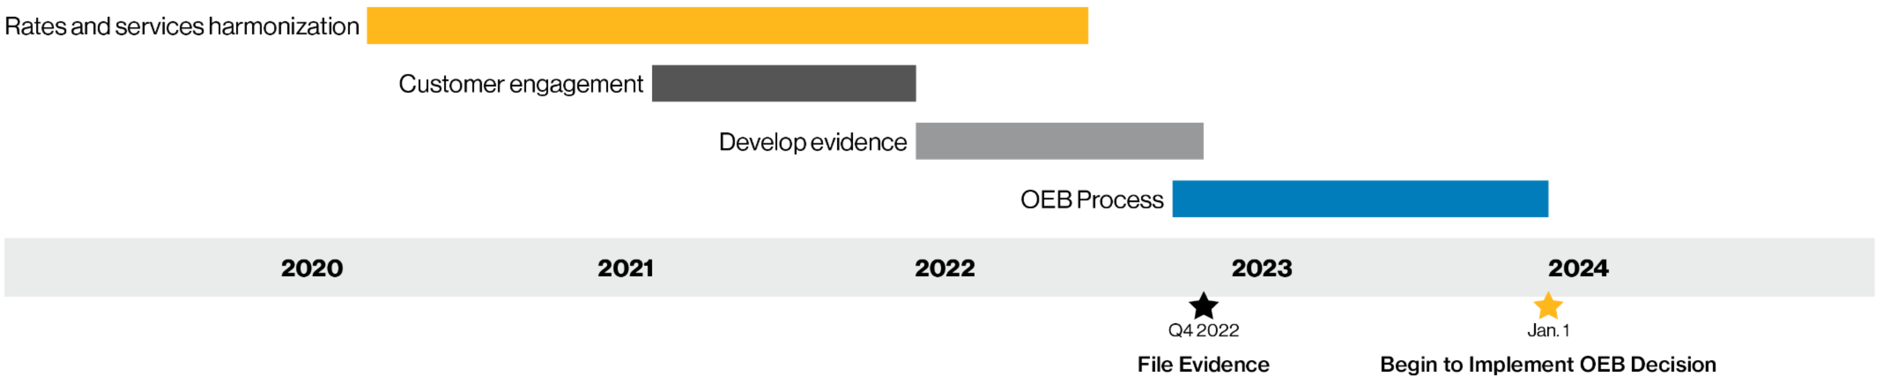
- Current MAADs* regulatory framework (2019-2023) incents integration of legacy utilities
- Cost of service (rebasing) application sets rates for 2024 then followed by incentive rate mechanism for 2025-2028

2024 rebased rates to propose:

- Integration related cost savings to be passed through to ratepayers
- Higher depreciation rates
- Single set of rates and services across franchise
- Energy transition impacts including a recommended increase in equity thickness

2025-2028 rate escalation mechanism similar to current:

- Annual factor applied to 2024 rates
- Sum of inflation index and a negative productivity factor
- Requirement to seek cost of service treatment for capital above a threshold amount (ICM)



Rebasing critical to set the economic framework for our business and to provide regulator insights into energy transition

* In 2018 the OEB issued its Decision under the Mergers Acquisitions Amalgamations Divestitures (MAADs) Policy relating to the utilities amalgamation filing

Gas Distribution and Storage Update

Board of Directors
July 18, 2022

Rebasing & Incentive Rate Mechanism 2024-28

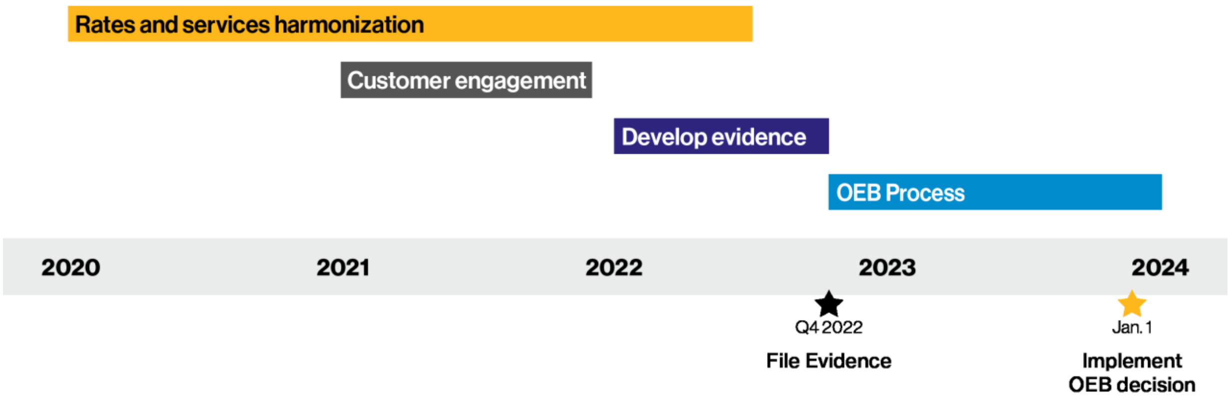
Current regulatory framework* (2019-2023) incented integration of legacy utilities. 2024 rates will be the first rebased (to cost of service) rates since 2014 and will be followed by a 4-year incentive-based rate mechanism.

2024 rebased rates to include:

- Cost savings from integration returned to ratepayers
- Cost increases from inflationary environment
- Return on installed 2024 rate base
- Proposal for higher harmonized depreciation expense and single set of rates and services across franchise
- Energy transition considerations
  - Higher equity thickness to reflect increased risk
  - Assurance of recovery of invested capital aligning with pace of transition

2025-2028 rate escalation mechanism to include:

- Inflation index, productivity factor, wage escalator
- Opportunity to earn above allowed return through efficiency gains
- Mitigation of capital risk through cost of service treatment for capital above a threshold amount (ICM)



Rebasing proceeding critical to set the economic framework for our business

* In 2018 the OEB issued its Decision under the Mergers Acquisitions Amalgamations Divestitures (MAADs) Policy relating to the utilities amalgamation filing

Gas Distribution & Storage Update

Board of Directors
January 31, 2023

ENBRIDGE®

Regulatory Update

ENBRIDGE

2024 Rebasing Application

- Seeking cost of service rates for 2024 and a price cap rate-setting incentive mechanism for 2025 – 2028
- Revenue deficiency due to cost pressures, higher depreciation expense and increase in equity thickness partially offset by synergies from amalgamation
- OEB process to hear the application and evidence underway. Expected decision on items that affect Jan. 1, 2024 rates in fall 2023

Next steps:

- Feb. 10: Interrogatories received by EGI
- March 8: EGI files responses to interrogatories
- March 22 – 28: Technical Conference
- May 9 – 17: Settlement Conference

Energy Conservation & Marketing

- Demand Side Management Plan application approval received from OEB
- $167MM annual budget in 2023, increasing by 3% plus CPI inflation
- Continued ability to earn shareholder incentive ~$6 – $9MM/year
- January 2023: Launched jointly funded Home Energy Retrofit Plus program that combines both NRCan's Greener Homes[1] and DSM funding
- Total conservation program funding increases to $330MM/year in 2023

Leave-to-Construct

- Four community expansion applications in various stage of regulatory review; an additional six to be filed by year-end
  - Represents ~6,100 new customer connections
- Three RNG leave-to-construct applications to be filed within 2023
  - Ridge Landfill RNG (2.3 MMscfd of RNG): pending approval
- Dawn to Corunna: OEB approved application as filed
- Panhandle Regional Expansion Project: application in abeyance; update due to OEB on or before Feb. 1, 2023

[1] Greener Homes is an NRCan program that is available between 2023 and 2027.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Question(s):

Please indicate to what extent EGI had discussions with the Ontario Government regarding this Application particularly with respect to energy transition. Please provide all materials, including letters, emails, and presentations related to any discussions with the Ontario Government regarding this Application.

Response:

Enbridge Gas held four meetings throughout September and October 2022 with the Ontario Ministry of Energy officials and staff to provide an overview of Enbridge Gas's Rebasing Application. The materials presented at the meetings are provided at Attachment 1 and Attachment 2. Enbridge Gas also distributed a Rebasing Application issue brief, provided at Attachment 3, to the Ontario Ministry of Energy in November 2022 as a follow up to the October briefings.

Enbridge Gas also provided briefing meetings in August and September 2022 to the Ontario Ministry of Energy and the Ontario Ministry of Environment, Conservation and Parks regarding the Pathways to Net-Zero Emissions for Ontario Report included in the Rebasing Application. This presentation is provided at Attachment 4.

In addition, a briefing meeting was held in October 2022 with the Ontario Ministry of Environment, Conservation and Parks regarding the Company's Renewable Natural Gas blending program included in the rebasing application. This presentation is provided at Attachment 5.

2024 OEB Rate Rebasing Application

ENBRIDGE
Life Takes Energy

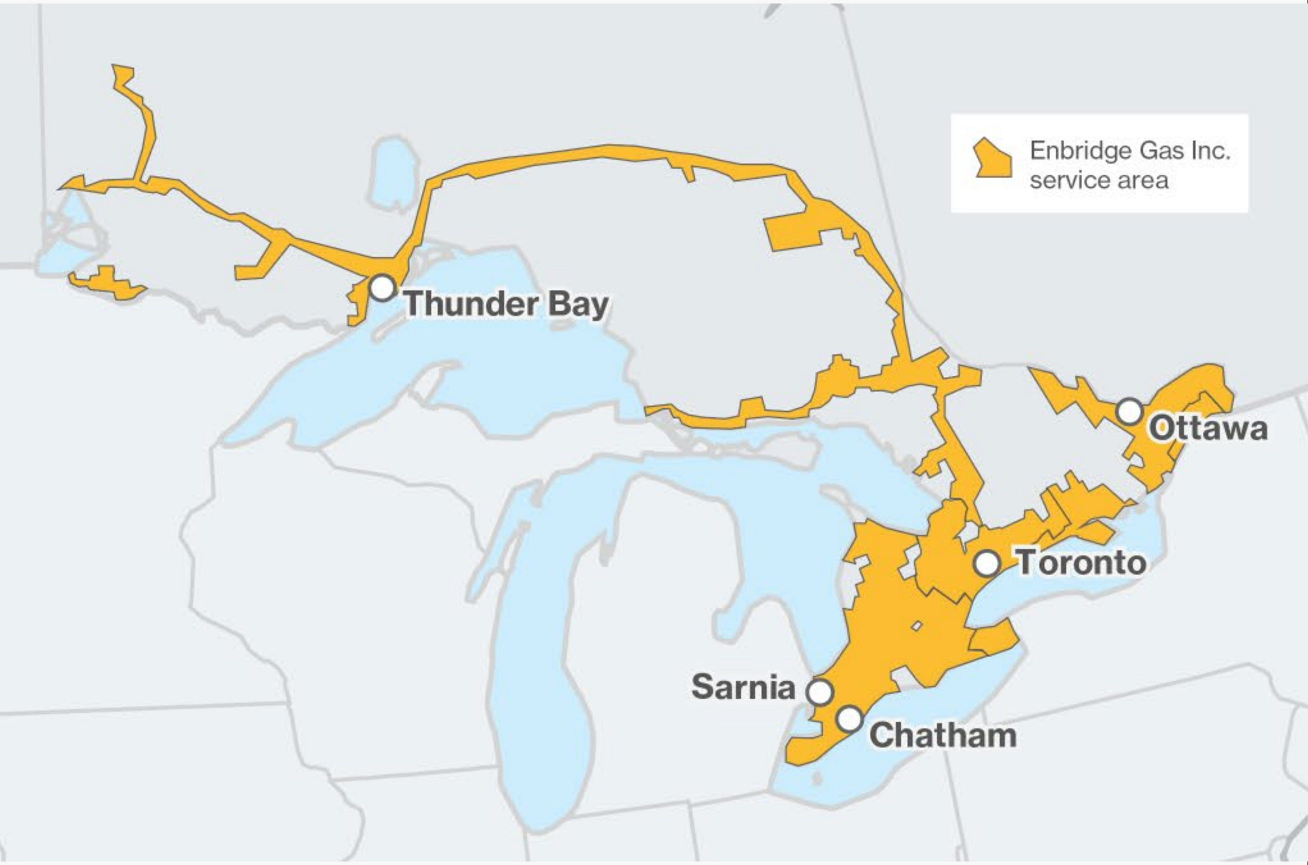
August 2022

Enbridge Gas Inc.

North America's largest gas storage, transmission and distribution company

We deliver the energy that enhances people's quality of life.

- **Values**
  Safety, Integrity, Respect, Inclusion.
- **Ambition**
  To be the sustainable and reliable energy provider of choice.
- **Experience**
  170+ years of experience in safe and reliable service.
- **Distribution Business**
  3.8M customers, heating >75% of Ontario homes and delivering 30% of Ontario's energy needs.
- **Dawn Storage Hub**
  Canada's largest integrated underground storage facility and one of the top gas trading hubs in North America.
- **Leading Ontario's transition to net-zero emissions**
  Advancing conservation, renewable gasses and clean technologies for heat, transportation and industrial processes.



Formed Jan. 1, 2019 from the amalgamation of Union Gas Limited and Enbridge Gas Distribution.

Overview

- OEB requires Enbridge Gas and other utilities to bring a cost of service application every 5 years to "rebase" or reset rates.
- Enbridge Gas last filed for cost of service rates in 2013 and had a deferred rebasing period (2019-23) due to the amalgamation of EGD and Union Gas
- Enbridge Gas will be filing in October, 2022 for new rates effective Jan 1, 2024 and a price cap formula for 2025-28
- Key themes include:
  - Increase in cost to serve customers in 2024
  - Harmonization of services, costs and rates
  - Energy Transition considerations and initiatives

Rebasing Application Timeline

Process Step	Estimated Timing
Notice	November, 2022
Interventions received	December, 2022
Procedural Order 1	January, 2023
Community meeting	January, 2023
Final issues list	early February, 2023
Interrogatories	mid-February to mid-March, 2023
Technical conference	late March to early April, 2023
OEB staff/Intervenor evidence	early April, 2023
IRs on intervenor evidence	late April, 2023
Settlement conference	early to mid-May, 2023
Oral Hearing	June, 2023
Argument (3 steps)	July to early August, 2023
Decision	October, 2023
Rate Order process	November, 2023
Implement new rates	January 1, 2024

Cost to Serve in 2024

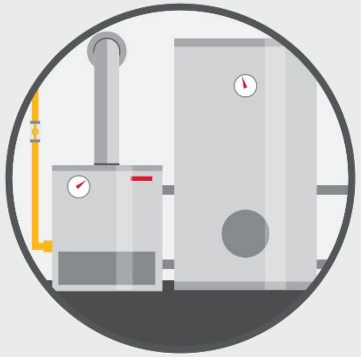
- Factors reducing costs include
  - Synergies realized by establishing integrated organization structures and aligning programs, processes and systems, including financial systems
  - Productivity savings examples include digital adoption and emergency call handling
- Factors increasing costs include
  - Inflation affecting several cost categories including fuel, postage, outside services
  - Safety and reliability through integrity and distribution protection (locates)
  - Bad debt increase from trend in arrears
  - Labour costs
  - Capital expenditures in excess of the amount supported by rates
  - Depreciation expense and equity thickness

Harmonization of legacy utilities

- Demand forecasting methodology and planning criteria
- Gas commodity price setting across province
- Depreciation rates for asset classes across province
- Customer attachment policies
- Cost allocation and Rate harmonization to a single rate handbook
  - Striving for single rate zone across province
  - Shift to straight fixed variable rate design for all rate classes
- Deferral and Variance accounts

Energy Transition in Rebasing Application

Optimizing Assets



- Implementation of Integrated Resource Planning through conservation, supply side alternatives to facilities
- Forecasting lower customer additions and smaller peak load additions

Green Gas

Reducing emissions via introducing low or no carbon gasses:

- Hydrogen: Power to Gas
- Renewable natural gas (RNG)

Conversion to Gas

Reducing emissions via displacing higher carbon fuels with natural gas in:

- Industrial processes
- Transportation

Gas Innovation

Reducing gas sector emissions via:

- Energy Transition Technology Fund (ETTF)
- Mention of CCUS

Evolving Gas Sector Systems

Reducing gas sector emissions via:

- Responsibly Sourced Gas (RSG)
- Reducing Enbridge Gas' Scope 1 emissions

Renewable Natural Gas

Blending Renewable Nature Gas

- RNG is created from processing existing waste, such as waste from food, agricultural or landfill sources. This waste is recovered, broken down using anerobic digestion and upgraded into RNG.
- This gas can be added to existing natural gas infrastructure and is a one-for-one replacement of conventional natural gas.
- Enbridge Gas is looking to evolve the current RNG program to make it easier for more customers to consume greater quantities low carbon energy.
- Taken steps to work towards incorporating energy transition in the gas supply commodity portfolio via the proposed Low Carbon Voluntary Program (LCVP) and the current Voluntary Renewable Natural Gas (VRNG).
- RNG, being carbon neutral, and exempt from the Carbon Charge, is one of the best ways to lower GHG emissions affordably.

Low Carbon Voluntary Program

- We will be seeking to increase our low carbon energy in system supply beginning at 1% in 2024 increasing by one percent per year until reaching 5% by 2028 with two mechanisms for cost recovery.
  - LCVP – will offer a customizable program to large volume sales service customers to upgrade their supply to RNG.
  - Incorporate the costs of low carbon energy that are not covered in the LCVP in the commodity reference price to have costs recovered as part of all system supply.
- Target customers are firm, large volume sales service.
- Customers have an annual option to elect that a portion of their following gas year's consumption is upgraded to RNG.

How will we Execute This?

- Enbridge will buy RNG in a large quantity and release a notice for customers to consider inclusion at the RNG Portfolio Rate.
- Large volume customers will have the ability to express interest and indicate the portion of their supply they'd like to upgrade to RNG.
- Customers will be charged for the RNG over the year for the quantity selected.
- Any quantity not voluntary elected by large volume customers, will be put into the natural gas distribution system as a part of all system supply.

Forecast Bill Impacts

RNG Blend Increase Costs for Average Residential Customer

RNG Bill Impacts	Blend %	Cumulative Annual Bill Increase	Cumulative Monthly Bill Increase Excluding FCC Impact	Cumulative Increase Over July 2022 Average Bill	Year over Year Increase
2024	1.0%	$ 22.84	$ 1.90	1.835%	
2025	2.0%	$ 45.83	$ 3.82	3.681%	1.85%
2026	3.0%	$ 68.88	$ 5.74	5.532%	1.85%
2027	4.0%	$ 91.90	$ 7.66	7.382%	1.85%
2028	5.0%	$ 114.92	$ 9.58	9.231%	1.85%

RNG Blend Increase Costs for Average Residential Customer with Carbon Charge Reduction

RNG Bill Impacts	Blend %	Cumulative Annual Bill Increase	Cumulative Monthly Bill Increase Including FCC Reduction	Cumulative Increase Over July 2022 Average Bill	Year over Year Increase
2024	1.0%	$ 18.99	$ 1.58	1.525%	
2025	2.0%	$ 36.66	$ 3.05	2.944%	1.42%
2026	3.0%	$ 52.90	$ 4.41	4.249%	1.30%
2027	4.0%	$ 67.69	$ 5.64	5.437%	1.19%
2028	5.0%	$ 81.03	$ 6.75	6.508%	1.07%

Enbridge will seek to place a cap of $2/month per percentage of RNG in the supply portfolio for average residential customers.

Benefits of a Blend

- Accessing made-in-Ontario RNG supply as soon as possible will allow the environmental benefits of RNG to remain in province and ensure Ontarians have access to the most economic supply of RNG while supply is still available. The longer Ontario waits, the higher the price we will be subject to.
- To give both large volume and small volume customers the best access to cost-effective RNG supply, Enbridge is aligning the RNG demand of these two types of customers with the proposed program and can seek cost-effective long term RNG contracts.
- RNG displacing conventional natural gas creates Clean Fuel Regulation Credits. The value of these credits is still developing as that market begins to become more active. The value of these credits generated could be streamed to customers to reduce the cost of RNG.

Environmental and Economical Benefits

- If we have ~40 projects to meet the supply needed in 2030 we'd have up to 1000 full-time jobs after development of the project, creating significant economical benefits.
- An RNG blend of 5% by 2028 will meet 7% of the government of Ontario's GHG emissions reduction goal with this alone.
  - The emissions reductions would be equivalent to removing 280,000 gas-powered vehicles from the road for one year.
  - Over 50% of Enbridge's customers supported a blend of up to 5% RNG in our 2022 customer engagement.

Q&A

Enbridge Gas
2024 Rebasing Follow-up

ENBRIDGE®
Life Takes Energy®

October, 2022

Key Components of Application

- Cost of service components:
  - Capital expenditures
  - Revenue forecast
  - Operating costs
  - Cost of capital
- Harmonization of forecasting methodologies (e.g. demand forecast) and planning assumptions (e.g. system design criteria, average use)
- Alignment and update of depreciation methodologies and depreciation study
- Equity thickness change
- Incentive rate mechanism
- Rates and services harmonization

Proposed Deficiency and Drivers

Energy Transition (ET) in Rebasing

- Enbridge Gas will present the following ET aspects in rebasing
  1. Role of natural gas in meeting Ontario's energy demand on an annual and peak basis during the rebasing period relative to the capabilities of the Ontario electricity sector
  2. How Enbridge Gas is mitigating future natural gas demand uncertainty during the rebasing and AMP planning horizons via the:
     - Integration of ET considerations into the application, with a focus on impacts to the AMP, finance and regulatory approaches
     - Maintenance of the gas system with consideration of natural gas demand uncertainty at the forefront
  3. Work undertaken to understand potential future pathways and their impacts on Enbridge Gas
     - Scan of government policies, plans and strategies
     - Customer engagement
     - Scenario analysis and pathways studies; a diversified pathway was found to achieve net-zero in Ontario more affordably, and with greater reliability, resiliency, consumer choice and industrial competitiveness.

Energy Transition (ET) in Rebasing

- Enbridge Gas will present the following ET aspects in rebasing - Continued

4. Enbridge Gas's ET Plan (ETP), which focuses on "safe bet" actions that Enbridge Gas is exploring, pursuing or proposing; these are actions that:
   - Support Ontario's near term GHG emissions reductions, including achievement of the 2030 target, and/or
   - are required, regardless of whether a diversified or an electrification pathway unfolds in Ontario, and/or
   - Maintains consumer choice, pathway optionality, and/or a safe and reliable gas system in a manner that considers pathway uncertainty

5. Enbridge Gas's ET safe bet rebasing specific proposals that, if approved, can drive continued GHG emissions reductions over the rebasing period while Ontario's Electrification and Energy Transition Panel completes their Pathways Report and next steps.

Low Carbon Voluntary Program Update

- We will be seeking to increase our low carbon energy in system supply beginning with 1% in 2025 and increasing by one percent per year until reaching 4% by 2028 with two mechanisms for cost recovery.
  - LCVP – will offer a customizable program to large volume sales service customers to upgrade a portion of their supply to RNG.
  - Incorporate the costs and benefits of low carbon energy that are not covered in the LCVP in the commodity reference price to have costs recovered as part of all system supply.
- An RNG blend of 4% by 2028 will meet 6% of the government of Ontario's GHG emissions reduction goal with this alone.
  - The emissions reductions would be equivalent to removing 230,000 gas-powered vehicles from the road for one year.
  - Over 50% of Enbridge's customers supported a blend of up to 5% RNG in our 2022 customer engagement.

RNG Forecast Bill Impacts

RNG Blend Increase Costs for Average Residential Customer

RNG Bill Impacts	Blend '	Cumulative Annual Bill Increase	Monthly Bill Increase Excluding FCC Impact	Cumulative Increase Over July 2022 Average Bill	Year over Year Increase
2025	1.0%	$ 22.91	$ 1.91	1.840%	1.84%
2026	2.0%	$ 45.92	$ 3.83	3.688%	1.85%
2027	3.0%	$ 68.93	$ 5.74	5.536%	1.85%
2028	4.0%	$ 91.94	$ 7.66	7.385%	1.85%

RNG Blend Increase Costs for Average Residential Customer with Carbon Charge Reduction

RNG Bill Impacts	Blend '	Cumulative Annual Bill Increase	Monthly Bill Increase Including FCC Reduction	Cumulative Increase Over July 2022 Average Bill	Year over Year Increase
2025	1.0%	$ 18.33	$ 1.53	1.472%	1.47%
2026	2.0%	$ 35.27	$ 2.94	2.833%	1.36%
2027	3.0%	$ 50.77	$ 4.23	4.078%	1.25%
2028	4.0%	$ 64.82	$ 5.40	5.207%	1.13%

These bill impacts are only if there is no voluntary pickup from large volume customers, Enbridge doesn't believe this will be the case.

Overall Rate Rebasing Bill impacts

- 2024 bill impacts are a function of
  - Revenue requirement deficiency
  - Cost allocation harmonization
  - Gas cost recovery implementation
- Rate class harmonization bill impacts
  - Planned for 2025 for general service rate classes and 2026 for contract rate classes
- Rate mitigation plan
  - Limited use

Total Bill Impacts – General Service

Rate Zone Rate Class	Total Bill Impact 2024	 Rate Class/Design Harmonization
EGD		
Rate 1	2% to 4%	0% to 2%
Rate 6	1% to 3%	2% to 4%
Union North West		
Rate 01	-4% to -2%	0% to 2%
Rate 10	-2% to 0%	-2% to 0%
Union North East		
Rate 01	-12% to -10%	0% to 2%
Rate 10	-12% to -10%	-2% to 0%
Union South		
Rate M1	8% to 10%	0% to 2%
Rate M2	5% to 7%	0% to 2%

- Bill impacts are preliminary estimates
- Total bill impact representative of a typical customer profile in each rate class
- Total bill impact assumes the total bill of a sales service customer
- 2024 total bill impact includes impact of disposition of deferral and variance accounts in 2024

Next steps

- Revenue requirement and IRM target filing October 31, cost allocation & rate design November 30
- Implementation – new rates effective January 1, 2024, with proposed harmonization of general service rate classes in 2025 and contract rate classes in 2026

Q&A

ENBRIDGE Issue Brief

Nov. 14, 2022

2024 Rebasing Application

Background

Enbridge Gas has filed an application to initiate a regulatory process which will determine the rates the utility can set for its customers for 2024 and the mechanism through which Enbridge Gas will set rates from 2025 to 2028. Because Enbridge Gas is a regulated entity, it applies to the Ontario Energy Board (OEB)—typically every five years—to approve a new "base" rate and a rate-setting formula for subsequent years.

Since its Oct. 31 filing, Enbridge Gas has now received a Letter of Direction (LoD) from the OEB that a Notice of Hearing for Enbridge Gas's rate rebasing application will be included in the Globe and Mail, the Toronto Star, National Post, 2 French papers and 2 Indigenous papers. All Enbridge Gas customers for whom Enbridge Gas has an email address will also be receiving an email with the same information. The OEB has directed Enbridge Gas to serve notice to all customers.

Key Messages

- Enbridge Gas has filed an application with the Ontario Energy Board (OEB) to initiate a regulatory process called rebasing to determine the fair and reasonable regulated distribution, transmission and storage rates that Enbridge Gas will charge customers in 2024 to recover the basic costs of serving our customers safely and reliably.
- In addition Enbridge Gas is proposing an incentive regulation structure which applies a formula that includes items such items as inflation to determine the rates we will charge customers for the following four years from 2025 to 2028. This incentive regulation structure is very similar to the one used to set the utility's rates from 2019 to 2023.
- Enbridge Gas is focussed on its customers and undertook extensive engagement with customers, talking to more than 12,000 in 2021 and early 2022. Those customers showed Enbridge they care most about energy affordability, reliability, and minimizing environmental impacts.
- The proposed rates in this application will support a system that can continue to meet customer needs safely and reliably in a cost-effective way, while at the same time helping to prudently prepare for the energy transition that is underway in the communities where they live, driven by existing and planned federal and provincial policies.
- The application is focused on delivering value to customers in four ways:
  1. Affordability
     - As a result of the amalgamation in 2019, Enbridge Gas is delivering significant benefits to customers, with productivity savings, customers will benefit from more than $120 million in sustained annual savings.
     - This is offsetting the rising costs of operating its business and moderates the rate increases necessary to continue delivering safe and reliable service to customers in 2024.
  2. Reliability
     - The application includes prudent long-term capital investment plans to ensure continued safe, reliable, cost-effective operations while also minimizing environmental impacts.
  3. Minimizing environmental impact

- The application includes Enbridge Gas' first Energy Transition Plan which lays out how it is proposing to balance customers' needs for continued access to a cost-effective supply of energy with actions that support Ontario's near-term GHG reduction goals.
- The long-term asset management plan reflects the OEB's Integrated Resource Planning Framework, a process that evaluates alternative ways to meet the demand for natural gas such as reducing gas use through conservation, to avoid or reduce the need to build new pipelines.

4. Simplification and harmonization of rates and services
    - Since the amalgamation in 2019, many systems and services were harmonized for a consistent and simplified customer experience. To further reflect the operations and services of a single utility, Enbridge Gas proposes to further align and simplify our rates and customer services, and to phase in these changes to allow time to implement system changes and inform customers.

- Taking all these items into account, Enbridge Gas is seeking a 4% increase in its 2024 revenues relative to 2023 to cover the rising costs of operating its business.
- Enbridge believes the proposed rates are reasonable and necessary to support the kind of energy solutions the engagement sessions showed they expect, to provide a consistent and improved customer experience, and to meet government goals addressing climate change, and incorporate more than $120 million in annual savings realized from productivity and the integration of the two legacy utilities.
- Included in the rebasing application, Enbridge Gas proposes to blend 1% of RNG starting in 2025 increasing to 4% by 2028. This program will be offered to large volume customers on a voluntary basis and if the target is not met Enbridge Gas proposed to share the rest of the commitment with all customers, capping the impact at $2 a month per customer.

Pathways to net zero:

Scenarios and actions for Ontario

Summary and recommendations for regulators and policymakers

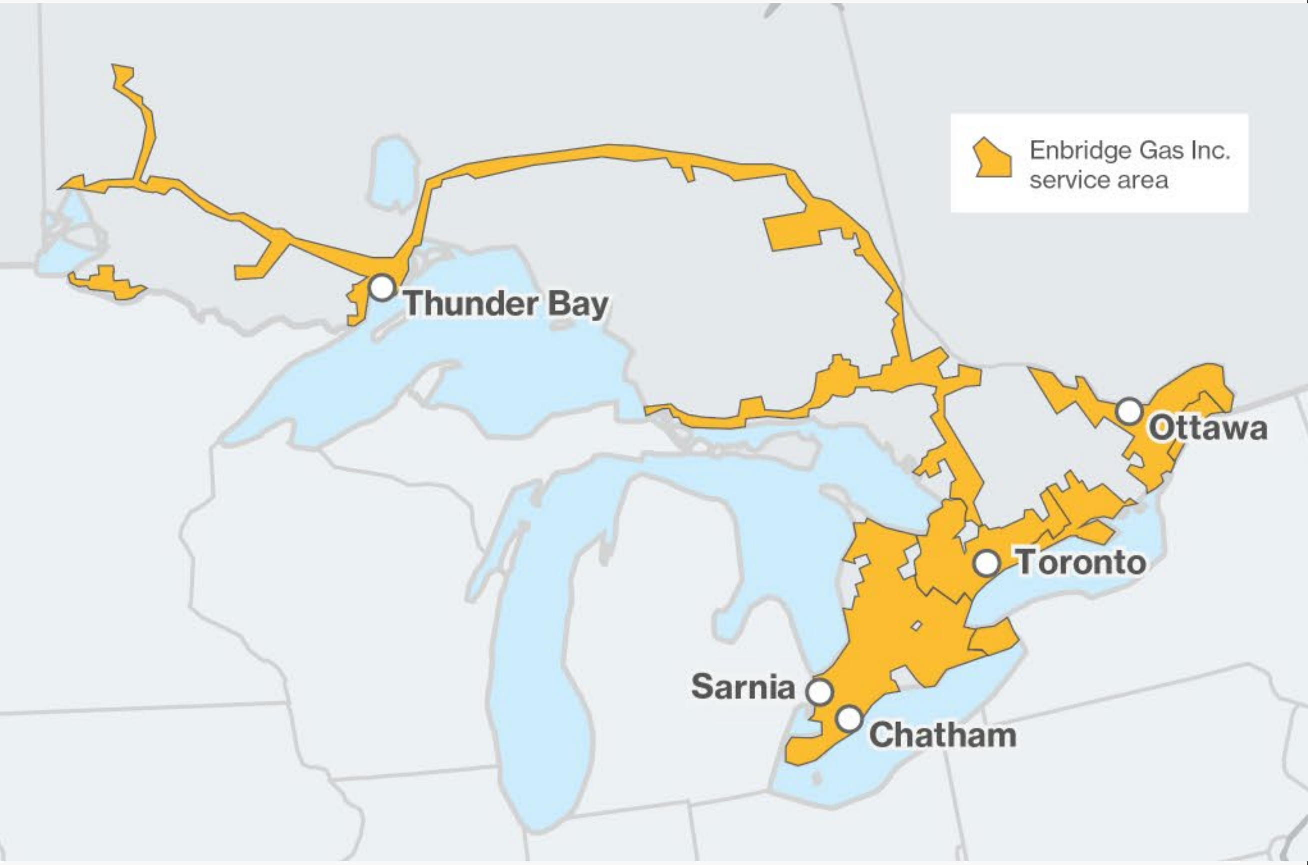
ENBRIDGE

Enbridge Gas Inc.

North America’s largest gas storage, transmission and distribution company

We deliver the energy that enhances people’s quality of life.

- **Values**
  Safety, Integrity, Respect, Inclusion.
- **Ambition**
  To be the sustainable and reliable energy provider of choice.
- **Experience**
  170+ years of experience in safe and reliable service.
- **Distribution Business**
  3.8M customers, heating >75% of Ontario homes and delivering 30% of Ontario's energy needs.
- **Dawn Storage Hub**
  Canada’s largest integrated underground storage facility and one of the top gas trading hubs in North America.
- **Leading Ontario’s transition to net-zero emissions**
  Advancing conservation, renewable gasses and clean technologies for heat, transportation and industrial processes.

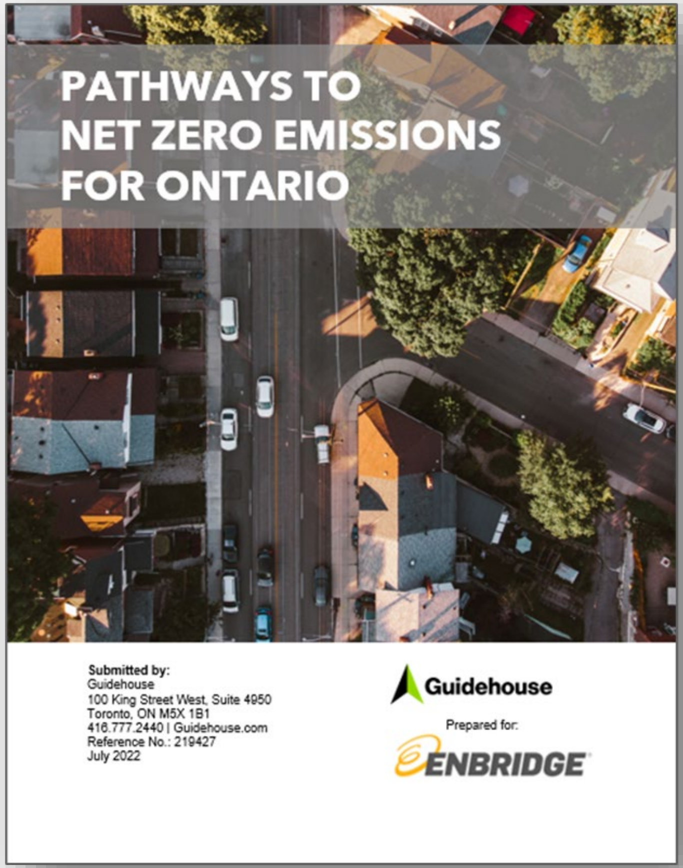


Formed Jan. 1, 2019 from the amalgamation of Union Gas Limited and Enbridge Gas Distribution.

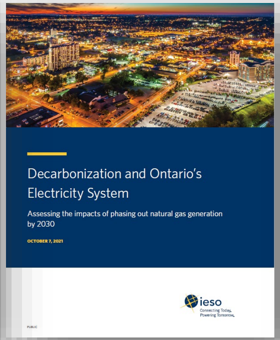
Executive summary

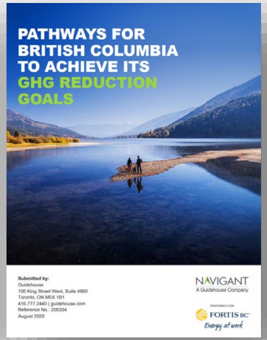
- Enbridge is committed to supporting the achievement of a clean energy future in Ontario.
  - Actively working on solutions to help meet Ontario's energy needs, while reducing emissions cost effectively.
  - Proactively engaged a consultant to evaluate energy system pathways to net zero.
- Approximately 30 percent of emissions in Ontario are from the use of natural gas.
- While Ontario is on track to meet its 2030 emission target of 30 percent below 2005 levels, achieving net zero requires more investment in renewables, lower emissions fuels and carbon capture.
- The gas distribution system in Ontario is a resource that can be leveraged to enable further GHG reductions beyond 2030, including net zero.

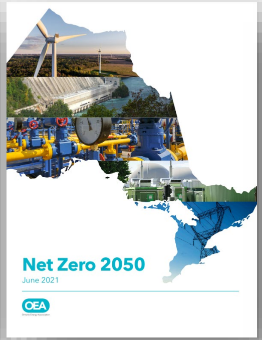
Executive summary

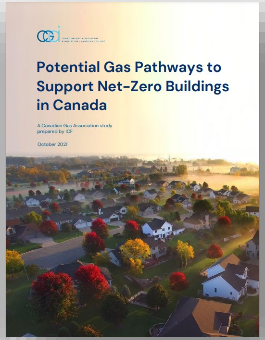


- **A diversified pathway is the most practical method to achieve net-zero emissions in Ontario.**
  - Achieving net zero will be expensive, regardless of the pathway.
  - As compared to an electrification pathway, a diversified pathway provides a lower cost, more reliable and resilient energy system, and greater consumer choice.
- This is further supported by studies conducted across North America and Europe.









Executive summary

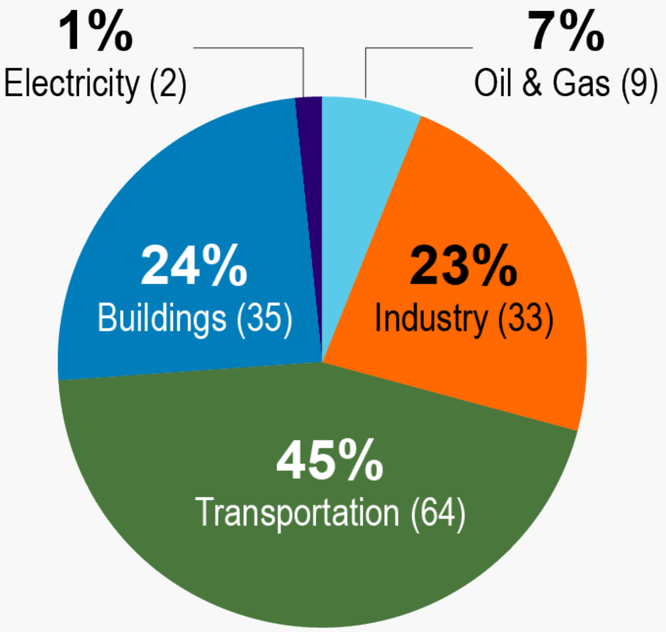
- Hybrid heating, hydrogen, renewable natural gas (RNG), and carbon capture and storage (CCS) are key elements of a diversified pathway.
- Regardless of the pathway chosen, there are “safe bet” actions that should be taken immediately for Ontario to reach net zero.
- Post-2030 targets are only achievable if investments in innovative technologies are made today
- Policies must be put in place now to enable investments.

Study approach

Two scenarios for Ontario’s energy sector

- Enbridge Gas engaged Guidehouse to evaluate two pathways to net zero:
  - **Diversified pathway***—end use electrification used in balance with low- and zero-carbon gases and natural gas paired with carbon capture.
  - **Electrification pathway**—deep electrification of all sectors with low- and zero-carbon gases and carbon capture used only where no reasonable alternative energy source exists.
- For each, the study assessed the overall feasibility based on costs, GHG emission reductions, system reliability and resiliency.
- The study also identifies what investments are needed in electricity, hydrogen and methane supply capacity, storage and infrastructure.

Emissions mix studied (143 MT)



Figures in brackets represent MT of CO2e.

*The study included sensitivity analysis which looked at how various changes in assumptions impacted the scenarios. The Diversified scenario with hybrid heating was found to be the most optimal approach to a Diversified pathway, therefore all results in this presentation are based on this Diversified scenario.

STUDY APPROACH

Pathway assumptions:

Sector	Diversified scenario	Electrification scenario	Shared assumptions
Buildings	• Gas heating transitions to low- or zero-carbon gas, including hydrogen and RNG • A large portion of residential buildings adopt hybrid heating • Some heating switches to air source and ground source heat pumps	• Electric heat pumps replace most natural gas heating in buildings • Remainder shifts to low- or zero-carbon gas	• Energy efficiency and building codes reduce heating energy demand
Transport	• Hydrogen and RNG fuel most heavy transport	• Biofuels, such as renewable diesel, fuel some heavy transport • Hydrogen limited to aviation via synthetic kerosene	• Battery-electric vehicles power light- and medium-duty transportation
Industry	• Medium- and high-temperature processes use hydrogen or methane gas with carbon capture and storage (CCS)	• Medium-temperature processes are electrified • High-temperature processes use hydrogen or methane gas with CCS	• Low-temperature processes are electrified

Study findings

STUDY FINDINGS

A diversified pathway that leverages both Ontario's gas and electric systems can achieve net zero, with greater:

Affordability

Achieves the same outcome as the electrification pathway at $202 billion less cost

Reliability

Meets the energy needs of Ontario homes and businesses, even on the hottest and coldest days of the year

Resiliency

Protects against impacts from extreme events, such as weather and cybersecurity incidents

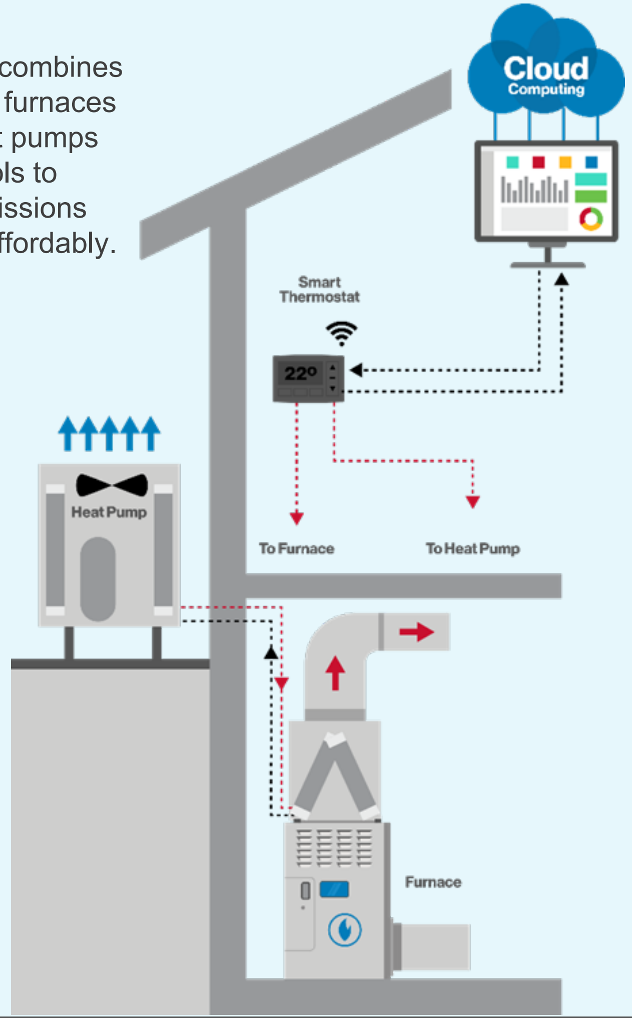
Consumer choice

Allows Ontario energy consumers the flexibility to make choices on the path to net zero

The lowest-cost pathway includes hybrid heating

- Increasing the amount of hybrid heating in the diversified pathway to 55 percent leads to lower peak electric system demand, reducing costs to achieve net zero.
- Hybrid heating uses both the electric and gas systems, increasing energy system reliability by having energy systems working together.
- Retrofitting equipment, rather than replacing it, is simpler and reduces costs for Ontarians
- Hybrid heating provides Ontarians confidence that they will have the energy they want, when they need it.

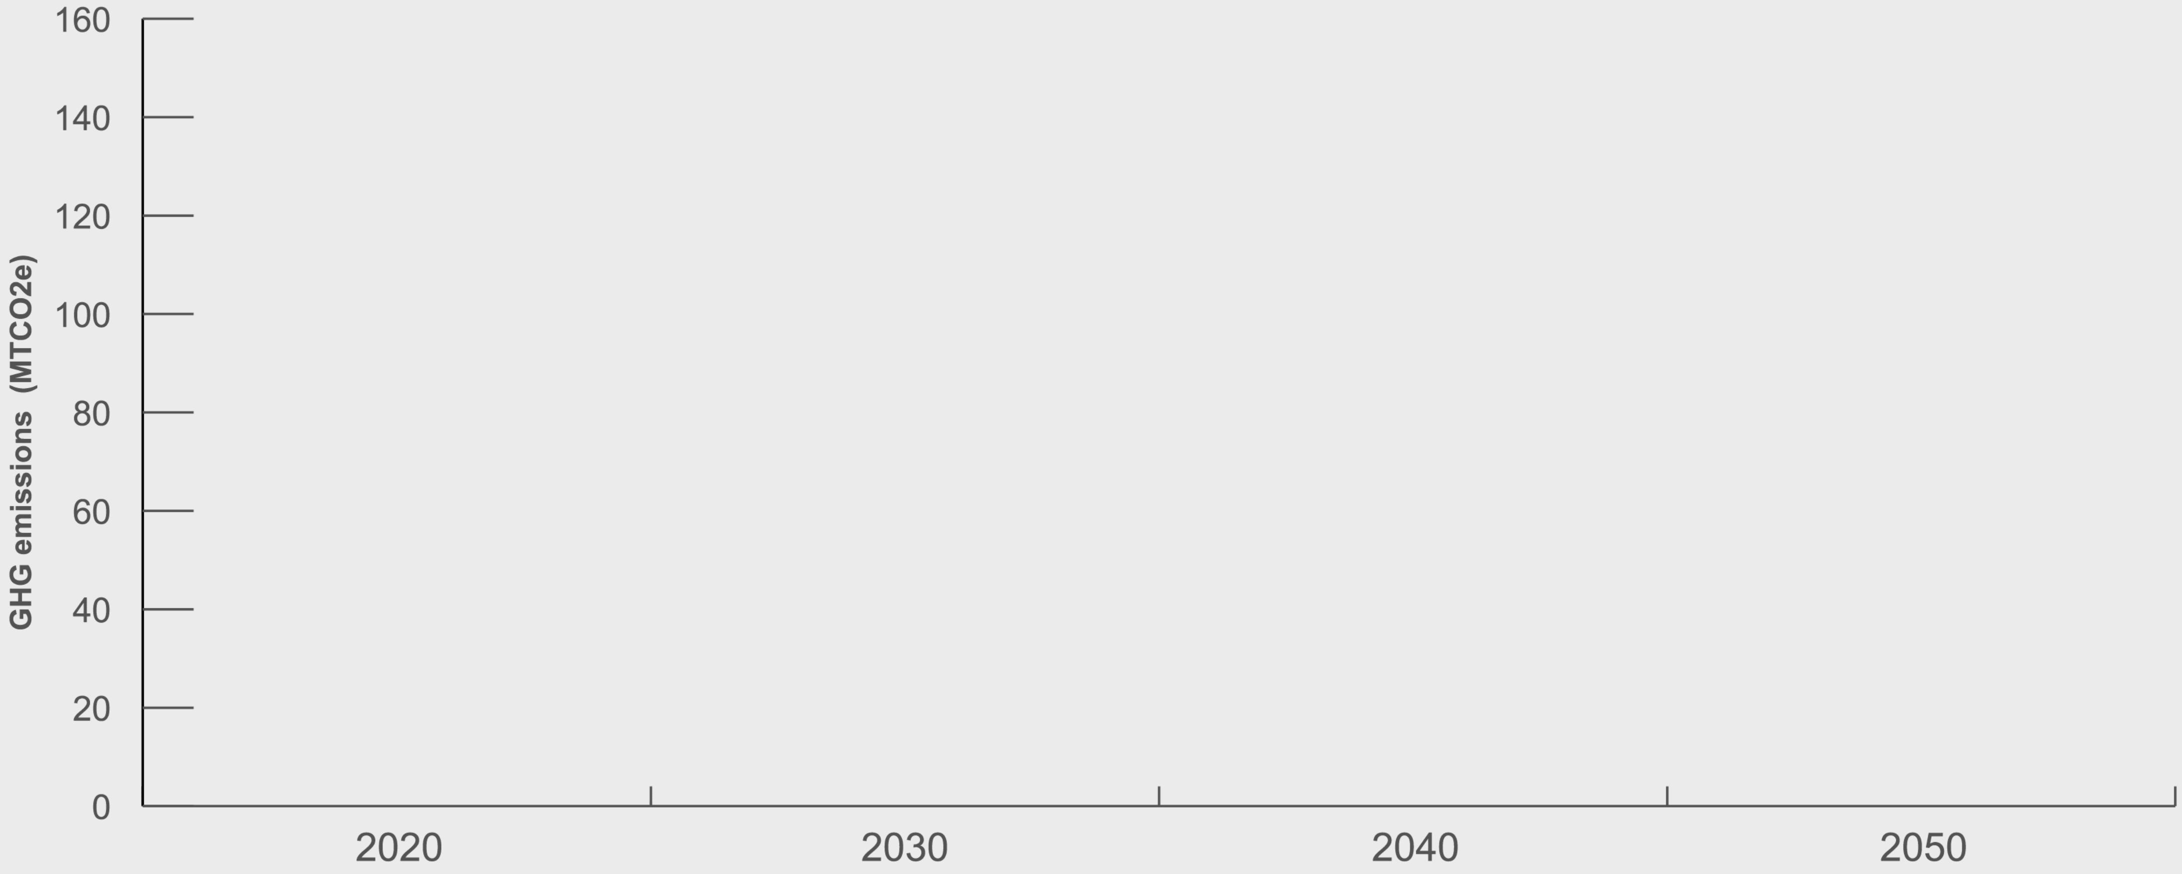
Hybrid heating combines natural gas-fired furnaces with electric heat pumps and smart controls to reduce GHG emissions practically and affordably.



Integrating the gas and electric heating systems is the lowest-cost pathway and increases system reliability.

STUDY FINDINGS

Feasibility and cost: both scenarios can achieve net zero by 2050



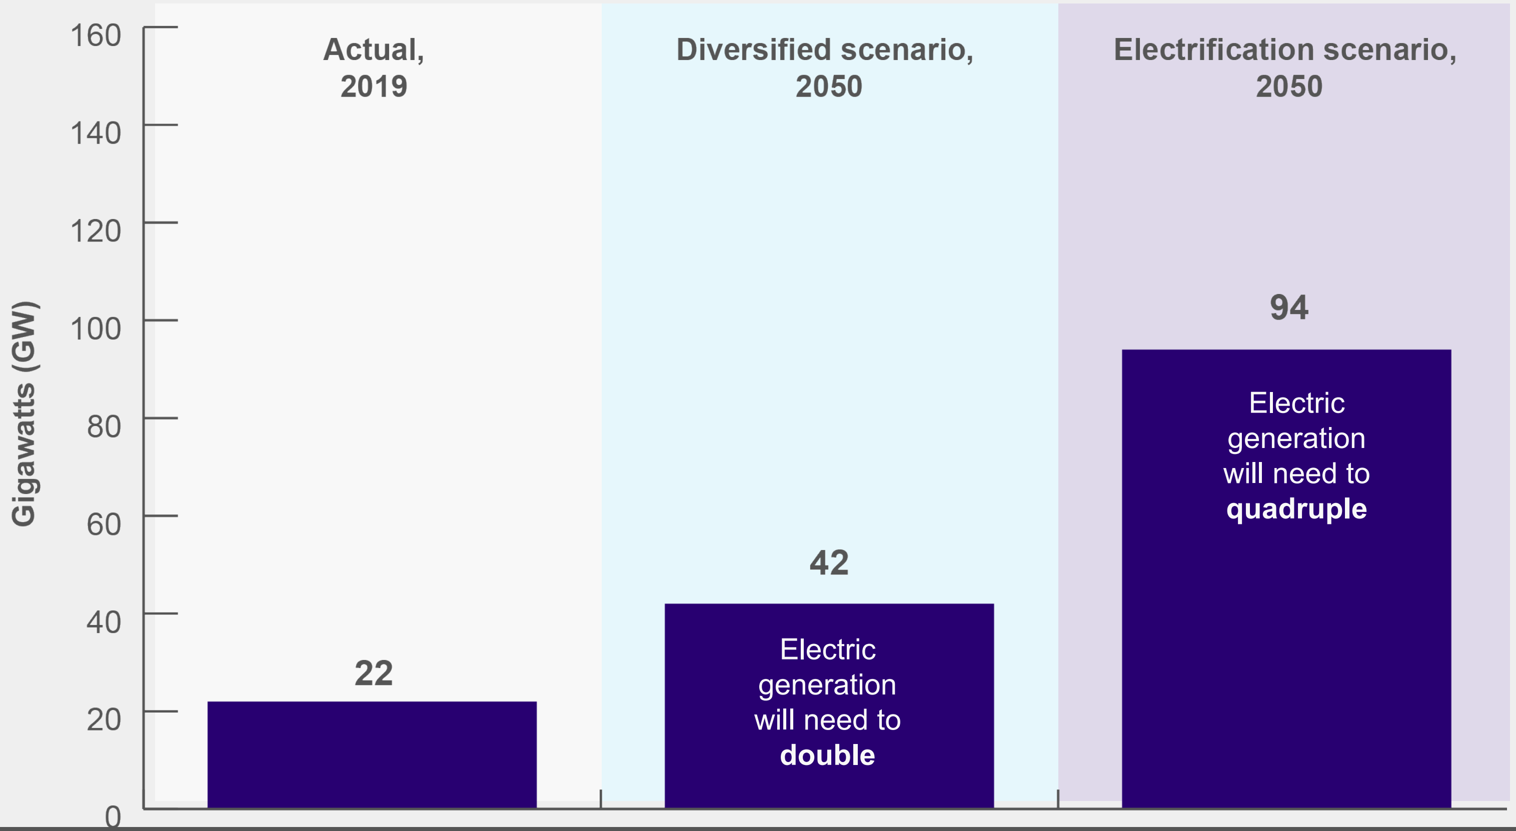
The electrification pathway will cost 27% more ($202 billion) than the diversified pathway.

STUDY FINDINGS

Meeting Ontario’s peak energy needs: electric system

- In either scenario, Ontario will need to significantly scale up electrical generation and infrastructure to meet increased demand as sectors are electrified.
- Both scenarios include energy efficiency, renewable generation and switching gas-fired generation to hydrogen to maintain reliability.

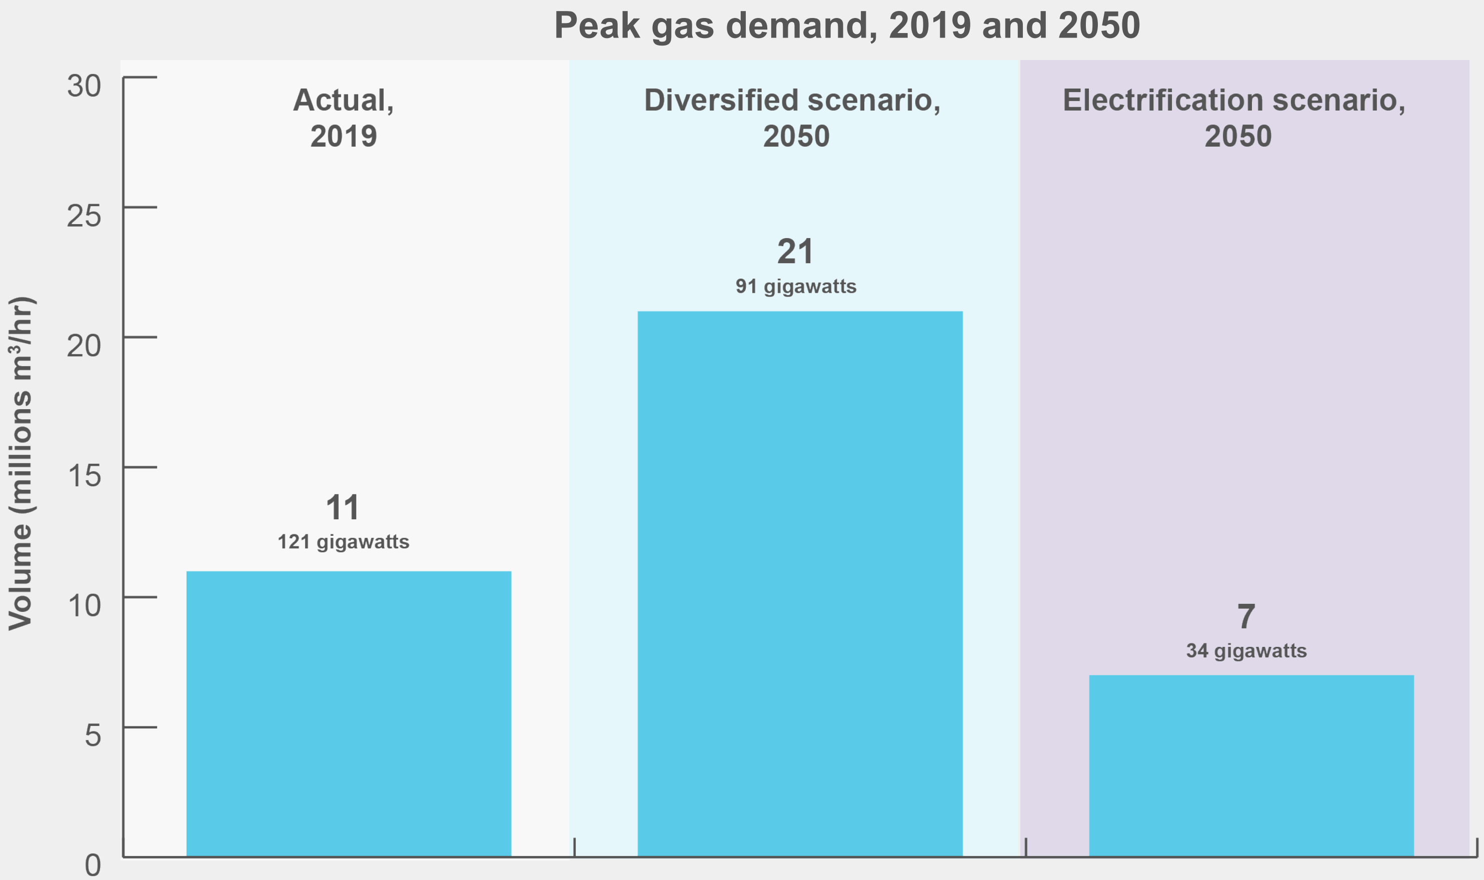
Peak electricity demand, 2019 and 2050



The diversified pathway lowers peak electricity demand, requiring less investment in the electricity system.

Meeting Ontario's peak energy needs: gas system

- In either scenario, energy efficiency, building and equipment upgrades and fuel switching lead to a decrease in gas peak on an energy basis.
- Both scenarios include hydrogen to decarbonize high-temperature industrial processes.
- The diversified scenario includes a larger amount of hydrogen, resulting in an increase in gas system peak on a volume basis.

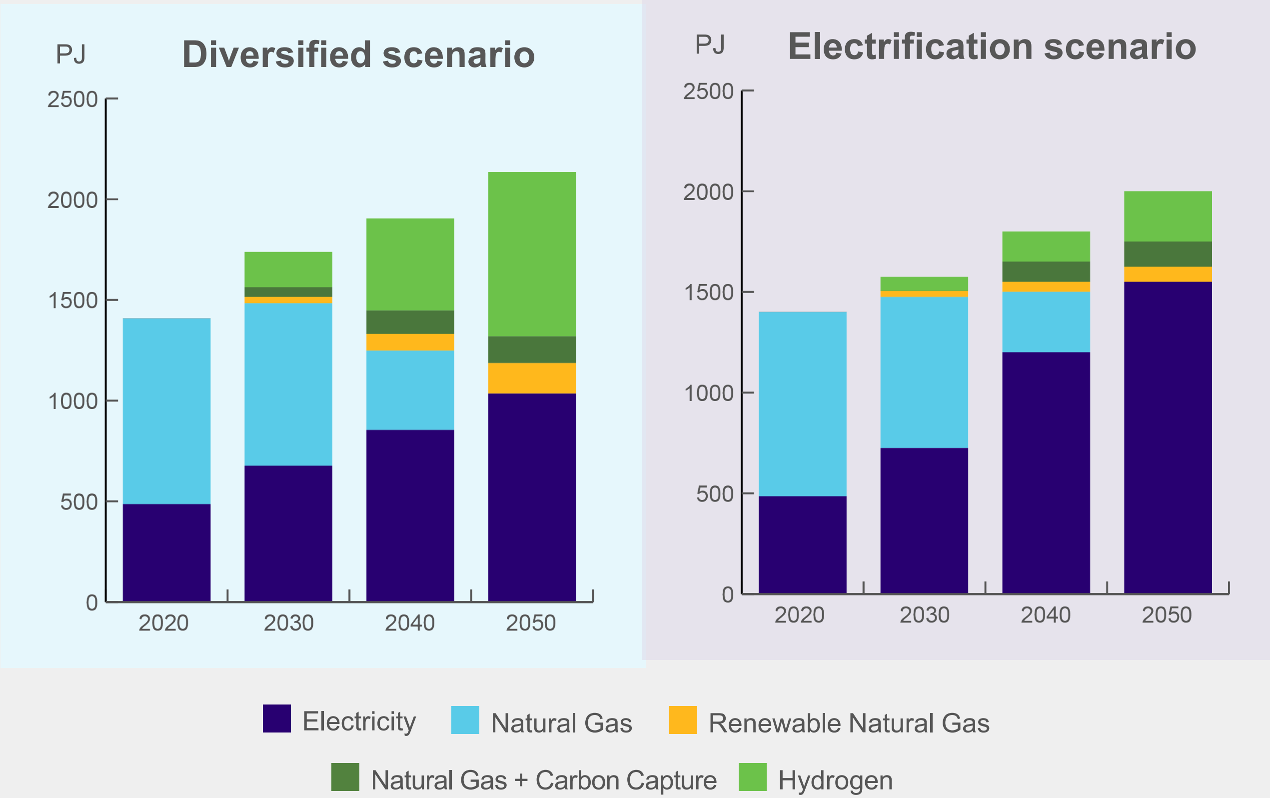


Ontario's gas system must evolve to meet increased demand for hydrogen in both scenarios.

Low-carbon gases, carbon capture are key to net zero

- Both scenarios rely on low-carbon gases such as RNG and hydrogen, and natural gas with CCS, particularly in sectors that are difficult to electrify.
- The diversified pathway uses low-carbon gasses, predominantly hydrogen, to:
  - Heat buildings
  - Provide peak energy supply, which costs less than the electrification pathway
  - Enhance grid reliability, as it acts as a storage asset for peak period power generation
  - Reduce costs to produce hydrogen for industry, compared to the electrification pathway

Energy supply mix by decade



The diversified pathway, with a greater mix of low-carbon gases, provides reliability and lower cost.

Optimizing the diversified scenario

- Modeling sensitivities show that changing the mix of energy solutions also changes the outcomes including the cost to achieve net zero.
- Further savings could be achieved by:
  - Decentralizing electricity generation by moving some renewable generation behind the meter, paired with battery storage.
  - Anticipated reduction in costs of wind and solar generation, battery storage, and hydrogen production and storage.
- Technological innovation will also be needed to achieve net zero more affordably.

Optimizing the diversified scenario requires integrated gas and electric system planning.

Recommended actions

RECOMMENDED ACTIONS

Four “safe-bet” actions needed today to reach net zero:

Maximize energy efficiency

Reduce energy use.

Optimize and integrate energy system planning

Coordinate electric and gas system planning.

Invest in low-carbon gases

Transition to increasing amounts of RNG and hydrogen over time.

Utilize carbon capture and storage

Invest in CCS for heavy industry and blue hydrogen production.

Maximize energy efficiency

- Energy efficiency is essential to success for any pathway to net zero.
- Enbridge's demand side management (DSM) programs have helped customers save 31 billion m^3 of natural gas, representing a cumulative reduction of 58 MT between 1995 and 2021*.

Actions to support:

- Continue to support increasing cost-effective natural gas conservation in Ontario, balancing bill impacts with the level of savings pursued.
- Continue to coordinate DSM offerings with new federal, provincial or municipal government funding for energy efficiency and GHG reduction programming. Ensure new funding does not displace or duplicate existing programs and that delivery is coordinated where reasonably possible to the benefit of program participants.

*Enbridge 2021 Sustainability Report, pg. 26. https://www.enbridge.com/~/media/Enb/Documents/Reports/Sustainability%20Report%202021/Enbridge-SR-2021.pdf

Optimize and integrate energy system planning

- Integrate gas and electric system planning to maintain the reliability and resilience Ontarians expect.
  - Include municipally led energy and climate planning initiatives that are funded and the impacts are quantifiable.
- Hybrid heating demonstrates the integration of gas and electric systems behind the meter.
- Gas-fired generation transitioned to low-carbon fuels will provide redundancy for renewables.

Actions to support:

- Model multiple diversified pathways as part of Ontario's Energy Transition Panel work.
- Encourage gas and electric planners to work together on long-term (20 yr.) demand scenario.
- Keep electric system low emissions, encourage the integration of renewables with storage and low carbon gases.
- Analyze the impact of wind power in Ontario.
- Develop regulatory structures that measure and value energy system resilience and require consideration of resilience.

Invest in low-carbon gases

- Hydrogen and RNG play a role in both pathways, particularly in the industrial sector.
- Ontario needs to invest now in the production of hydrogen and RNG to build and develop a market within the province while supporting the decarbonization of industry, heat, transportation and the gas system.
- Investing in hydrogen supports industrial decarbonization through hydrogen hubs and blending in the gas system to build scale within the market and reduce electrolyser costs for hydrogen production.

Actions to support:

- Define medium-term (2030) and long-term (2045) planning targets for RNG and hydrogen production.
- Investigate market measures and incentives that support RNG and hydrogen adoption.
- Expand the regulatory oversight of the Ontario Energy Board (OEB) to include a hydrogen regulatory framework.
- OEB must allow utilities to recover the cost of RNG and hydrogen at a different cost than natural gas and in line with the market price of these gases.

Utilize carbon capture & storage (CCS)

- CCS is needed to produce low-carbon hydrogen and to decarbonize hard-to-abate industrial processes and natural-gas fired electricity generation.

Actions to support:

- Amend regulations to enable geological sequestration of carbon dioxide, including the Oil, Gas and Salt Resources Act and the Mining Act.
- Enact a process for land rights acquisition to enable access to large blocks of subsurface pore space.
- Develop a regulatory framework for the approval of CCS projects.

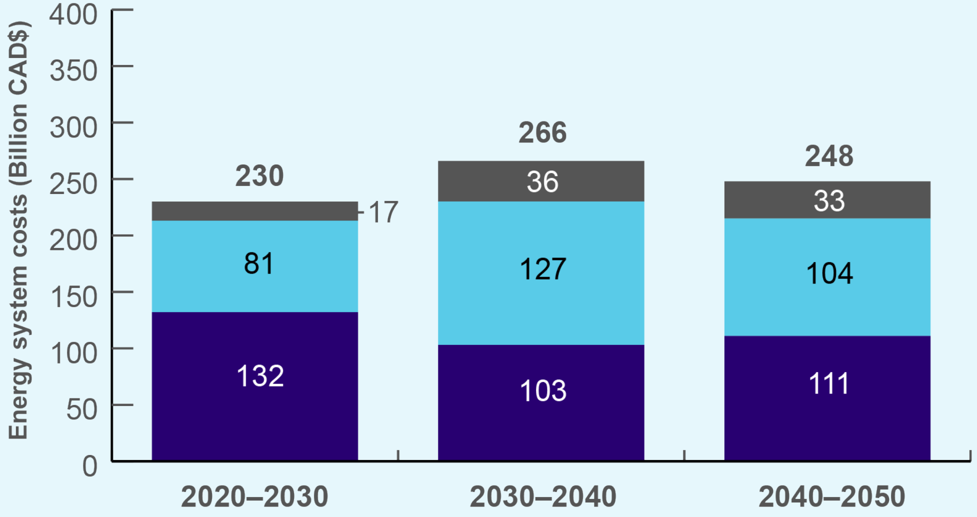
Q&A / Appendix

Cost Implications

Diversified scenario

- Gas System costs increase over time driven by the costs of deploying and operating new hydrogen and RNG production facilities, as well as adapting gas infrastructure to support increased hydrogen and RNG.
- Electricity system requires less new capacity required, driven primarily by investment in wind and solar capacity, transmission infrastructure.
- End user costs lower: Avoids need for building upgrades but increases over time as the adoption of heat pumps grow alongside investments in building retrofits and insulation.

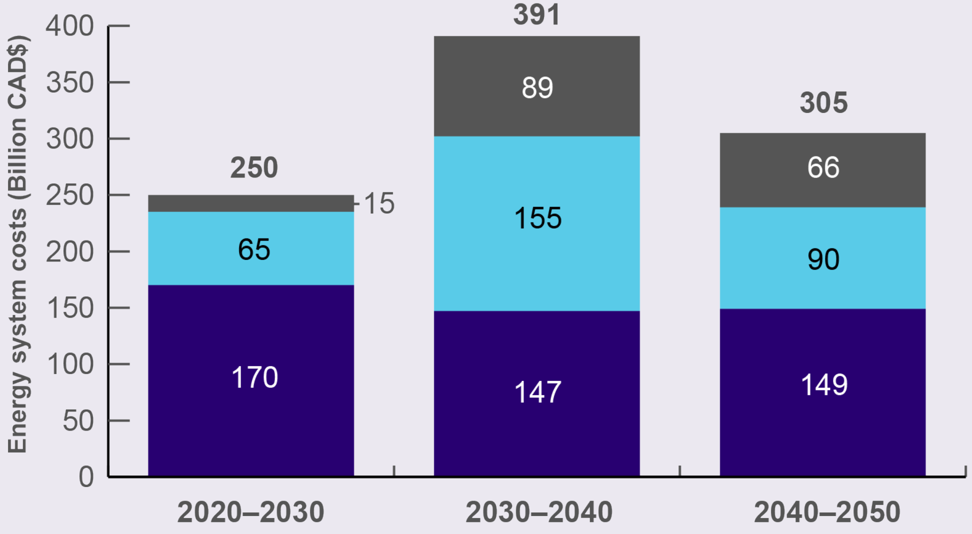
Diversified total cost: $744 billion



Electrification scenario

- Gas system costs higher reflecting continued use of natural gas through middle decades and increasing carbon price.
- Electricity system costs higher driven by higher peak demand (94GW) and required infrastructure to support.
- End users cost higher due to higher penetration of electric heat pumps and need for increased building retrofits to maintain home comfort.

Electrification total cost: $946 billion



Electricity System   Natural Gas System   End User Costs

Renewable Natural Gas

2024 OEB Rate Rebasing Application

October 2022

Overview

- OEB requires Enbridge Gas and other utilities to bring a cost of service application every 5 years to "rebase" or reset rates
- Enbridge Gas last filed for cost of service rates in 2013 and had a deferred rebasing period (2019-23) due to the amalgamation of EGD and Union Gas
- Enbridge Gas will be filing this month for new rates effective Jan 1, 2024 and a price cap formula for 2025-28
- Key themes include:
  - Increase in cost to serve customers in 2024
  - Harmonization of services, costs and rates
  - Energy Transition considerations and initiatives

Blending Renewable Natural Gas

- RNG is created from processing existing waste, such as waste from food, agricultural or landfill sources. This waste is recovered, broken down using anerobic digestion and upgraded into RNG.
- This gas can be added to existing natural gas infrastructure and is a one-for-one replacement of conventional natural gas.
- Enbridge Gas is looking to evolve the current RNG program to make it easier for more customers to consume greater quantities of low carbon energy.
- Enbridge Gas has taken steps to work towards incorporating energy transition in the gas supply commodity portfolio via the proposed Low Carbon Voluntary Program (LCVP) and the current Voluntary Renewable Natural Gas (VRNG).
- RNG, being carbon neutral, and exempt from the Federal Carbon Charge, is one of the best ways to lower GHG emissions affordably.

Low Carbon Voluntary Program

- We will be seeking to increase our low carbon energy in system supply beginning with 1% in 2025 and increasing by one percent per year until reaching 4% by 2028 with two mechanisms for cost recovery.
  - LCVP – will offer a customizable program to large volume sales service customers to upgrade a portion of their supply to RNG.
  - Incorporate the costs and benefits of low carbon energy that are not covered in the LCVP in the commodity reference price to have costs recovered as part of all system supply.

Benefits of a Blend

- Accessing made-in-Ontario RNG supply as soon as possible will allow the environmental benefits of RNG to remain in province and ensure Ontarians have access to the most economic supply of RNG while supply is still available. The longer Ontario waits, the higher the price we will be subject to.
- To give both large volume and small volume customers the best access to cost-effective RNG supply, Enbridge Gas is aligning the RNG demand of these two types of customers with the proposed program and can seek cost-effective long term RNG contracts.
- RNG displacing conventional natural gas creates Clean Fuel Regulation Credits. The value of these credits is still developing as that market begins to become more active. Enbridge Gas envisions that the value of these credits generated will be streamed to customers to reduce the cost of RNG.

Environmental and Economical Benefits

- If we have ~40 projects to meet the supply needed in 2030 we'd have up to 1000 full-time jobs after development of the project, creating significant economical benefits.
- An RNG blend of 4% by 2028 will meet 6% of the government of Ontario's GHG emissions reduction goal with this alone.
  - The emissions reductions would be equivalent to removing 230,000 gas-powered vehicles from the road for one year.
  - Over 50% of Enbridge's customers supported a blend of up to 5% RNG in our 2022 customer engagement.

Appendix

ENBRIDGE
Life Takes Energy

RNG Forecast Bill Impacts

RNG Blend Increase Costs for Average Residential Customer

RNG Bill Impacts	Blend :	Cumulative Annual Bill Increase	Monthly Bill Increase Excluding FCC Impact	Cumulative Increase Over July 2022 Average Bill	Year over Year Increase
2025	1.0%	$ 22.91	$ 1.91	1.840%	1.84%
2026	2.0%	$ 45.92	$ 3.83	3.688%	1.85%
2027	3.0%	$ 68.93	$ 5.74	5.536%	1.85%
2028	4.0%	$ 91.94	$ 7.66	7.385%	1.85%

RNG Blend Increase Costs for Average Residential Customer with Carbon Charge Reduction

RNG Bill Impacts	Blend :	Cumulative Annual Bill Increase	Monthly Bill Increase Including FCC Reduction	Cumulative Increase Over July 2022 Average Bill	Year over Year Increase
2025	1.0%	$ 18.33	$ 1.53	1.472%	1.47%
2026	2.0%	$ 35.27	$ 2.94	2.833%	1.36%
2027	3.0%	$ 50.77	$ 4.23	4.078%	1.25%
2028	4.0%	$ 64.82	$ 5.40	5.207%	1.13%

These bill impacts are only if there is no voluntary pickup from large volume customers, Enbridge doesn’t believe this will be the case. Enbridge will seek to place a cap of $2/month per percentage of RNG in the supply portfolio for average residential customers.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2

Question(s):

Please provide a complete list of all consulting/legal reports produced to support this Application. Please indicate if all of those reports have been included with the pre-filed evidence. Please file all of the Terms of Reference for each of those engagements. Please file those that have not been included with the pre-filed evidence. For each engagement, please indicate whether the work was retained through an RFP process. If not, please explain why not. Please set out the total costs expected for each of those engagements and indicate how those costs will be recovered.

Response:

Please see Attachment 1 for details on all of the consulting reports produced to support Enbridge Gas's requests in Phase 1. These reports are all included in pre-filed evidence.

Attachment 2 contains Terms of Reference for each of these engagements parts of which have been redacted for reasons set out in the Company's accompanying request for confidential treatment of certain information filed in this proceeding.

Costs have been expensed as incurred between 2019 to 2023, with the exception of the costs of studies included in Exhibit 1, Tab 10, Schedule 5, which are being recovered through the EGD and Union Gas Greenhouse Gas Emissions Administration Deferral Accounts[1]. Cost details are included in Attachment 1.

[1] $10,000 of the costs of the studies in Exhibit 1, Tab 10, Schedule 5 were related to rebasing and were therefore expensed as incurred.

Phase 1 Third-Party Reports

Report Name	Consultant	Author Name	Evidence Reference	RFP	Why not?	How are Costs Allocated?	Total Costs
Energy Transition Scenario Analysis	Posterity Group Consulting	Alex Tiessen, Erika Aruja, David Shipley	Exhibit 1, Tab 10, Schedule 5, Attachment 1	N	An RFP process was not used for the ETSA report as Enbridge Gas was able to leverage work Posterity Group had already completed with other internal departments rather than duplicating work.	GGEADA (9900 O&M)	$ 297,850.00
Pathways to Net Zero Emissions for Ontario	Guidehouse Inc.	Nicola Charles, Decker Ringo, Alvaro Lara, Marissa Moultak, David Mavins, and Andrea Roszell	Exhibit 1, Tab 10, Schedule 5, Attachment 2	Y		GGEADA	$ 320,259.50
Energy Transition Scenario Analysis - ETI	Posterity Group Consulting	Alex Tiessen, Erika Aruja, David Shipley	Exhibit 1, Tab 10, Schedule 6, Attachment 1	N	The ETI report developed by Posterity Group was not retained through an RFP as it was an extension of the ETSA Report also developed by Posterity Group, and the same model was required to compare the scenarios in the ETSA report to the scenario in the ETI report.	O&M	$ 52,000.00
Assessment of the Future Utilization of the Enbridge Gas Dawn to Parkway System	ICF Resources, LLC	Michael Sloan, Andrew Griffith	Exhibit 1, Tab 11, Schedule 1, Attachment 1	N	An RFP was not used as this work is a continuation of analysis previously completed by ICF, ICF is also recognized as a subject matter expert with considerable knowledge in this area.	O&M	$ 24,000.00
Enbridge Gas 2024 Rate Rebasing Customer Engagement	Innovative Research Group, Inc.	Greg Lyle, Susan Oakes	Exhibit 1, Tab 6, Schedule 1, Attachment 1	Y		O&M	$ 376,896.50
Enbridge Gas Inc: Overhead Capitalization Study	Ernst & Young LLP (EY)	Abbas Lakha, Andrew Grainger	Exhibit 2, Tab 4, Schedule 2, Attachment 1	N	Enbridge Gas had an exisiting consulting agreement with E&Y, this work was completed under that agreement.	O&M	$ 616,000.00
Natural Gas Volume Forecasting Benchmarking Study	Guidehouse Inc.	Peter Steele-Mosey	Exhibit 3, Tab 2, Schedule 2	Y		O&M	$ 99,000.00
Approaches to Gas Design Day	Guidehouse Inc.	Andrea Roszell	Exhibit 4, Tab 2, Schedule 3, Attachment 1	Y		O&M	$ 105,000.00
EGI Pension and Benefit Plans Estimated 2022-2024 Net Periodic Benefit Costs	Mercer	Scott Thompson, Edith Samuels, Jesse Little, Ken Chin	Exhibit 4, Tab 4, Schedule 2, Attachment 1	N	As Enbridge Inc.'s actuary, Mercer does all the valuations.	O&M	$ 402,808.00
Compensation Benchmarking Review Enbridge Gas Inc.	Mercer	Kenneth Yung	Exhibit 4, Tab 4, Schedule 3, Attachment 1	N	As one of Enbridge's primary compensation consultants, Mercer was approached to assist with this work.	O&M	$ 107,145.00
ENBRIDGE GAS INC. PENSION, SAVINGS AND BENEFITS PROGRAMS BENCHMARKING	Willis Towers Watson	Randy Colbert	Exhibit 4, Tab 4, Schedule 3, Attachment 2	N	WTW has provided benchmarking analysis in the past, for both UG and EGD, and having a consistent methodology over time is desirable. As such, we did not entertain alternate proposals.	O&M	$ 39,600.00
Enbridge Gas Inc. Central Functions Cost Allocation Methodology Review	Guidehouse Inc.	Craig Sabine, Mernaz Malozewski	Exhibit 4, Tab 4, Schedule 3, Attachment 3	Y		O&M	$ 405,928.00
2021 DEPRECIATION STUDY	Concentric Advisors, ULC	Larry Kennedy, Amanda Nori	Exhibit 4, Tab 5, Schedule 1, Attachment 1	Y		O&M	$ 390,085.00
ENBRIDGE GAS INC. COMMON EQUITY RATIO STUDY	Concentric Advisors, ULC	James M. Coyne, Daniel S. Dane	Exhibit 5, Tab 3, Schedule 1, Attachment 1	N	Enbridge Gas's view is that Concentric was uniquely positioned to act on its behalf in this manner because of their extensive experience in other juristrictions on Equity thickness and ROE. They have also produced expert evidence in the past on behalf of Enbridge Gas.	O&M	$ 397,650.67
						Phase 1 Total	$ 3,634,222.67

RE: Customer Engagement – Phase One Statement of Work

Dear Karen,

On behalf of Innovative Research Group Inc. (INNOVATIVE), I would like to thank you for the opportunity to work with Enbridge Gas Inc. (Enbridge) to conduct Phase One of the 2024 Rate Rebasing Customer Engagement.

As per our discussions, INNOVATIVE is being engaged to conduct a study as per the Terms of Project on the following page.

Once you have signed and returned this **Statement of Work**, INNOVATIVE will commence the work on this project.

We are looking forward to working with you. Once you have reviewed this letter, please sign and return to my attention. If you have any questions, please feel free to contact me at 416-642-6341.

Yours truly,

Susan Oakes
Vice President
Innovative Research Group Inc.
56 The Esplanade, Suite 310
Toronto, Ontario M5E 1A7

E-mail: soakes@innovativeresearch.ca

Qualitative Research

This is the development phase of the customer engagement program where we give customers an opportunity to identify key issues that they feel Enbridge needs to address.

Online Focus Groups with Residential Customers

Project Scope:

- Semi-structured discussions based on a written discussion guide
- 6-8 participants per session
- A total of 10 focus groups to provide regional and legacy coverage (see list below)
- All participants receive a monetary incentive of $100 for participating

Group Descriptions

Group	Region	Number
LUG North	Northern	2
LUG Central / East	Hamilton/Halton, Eastern	2
LUG South / West	Windsor/Chatham, London/Sarnia, Waterloo/Brantford	2
LEG GTA	Toronto (1), Central West (21) Central East (45 and 35)	2
LEG Other	Eastern (65), Niagara (76) Central West (53), Central East (47)	2

Focus group costs include project management, the finalization of the recruitment screener and moderator's guide, a combination of online and telephone recruitment of all participants, incentives, moderating, research consultant support and a report based on the research.

We will conduct two groups per evening, over a total of five evenings. The cost per evening is [redacted] bringing the total budget for the focus groups to [redacted]

IDIs with Small and Medium-Large Commercial Customers

Project Scope:

- Semi-structured discussions based on a written discussion guide
- A total of 20 interviews, divided evenly between small and med-lg customers
- The interviews will also be evenly divided between LUG and LEG customers
- A charitable donation in the amount of $100 will be made on behalf of each participant

Costs include project management, the finalization of the recruitment screener and interview guide, a combination of online and telephone recruitment of all participants, incentives (charitable donations), interviews by senior consultants (Susan Oakes and Julian Garas), and a report based on the research.

The total cost for the in-depth interviews is [redacted]

Total Phase One Project Costs

[redacted] + HST

- Invoice 1 of 2 (50%) upon project commencement
- Invoice 2 of 2 (50%) upon receipt of final report

July 22, 2021

RE: Customer Engagement – Phase Two Statement of Work [REVISED]

Dear Karen,

On behalf of Innovative Research Group Inc. (INNOVATIVE), I would like to thank you for the opportunity to work with Enbridge Gas Inc. (Enbridge) to conduct Phase Two of the 2024 Rate Rebasing Customer Engagement.

As per our discussions, INNOVATIVE is being engaged to conduct a study as per the Terms of Project on the following page.

Once you have approved this **Statement of Work**, INNOVATIVE will commence the work on this project.

We are looking forward to working with you. Once you have reviewed this letter, please send me an email with approval to proceed. If you have any questions, please feel free to contact me at 416-642-6341.

Yours truly,

Susan Oakes
Vice President
Innovative Research Group Inc.
56 The Esplanade, Suite 310
Toronto, Ontario M5E 1A7

E-mail: soakes@innovativeresearch.ca

Phase Two is the Refinement phase, and will involve surveys with residential customers, as well as small and medium-large commercial / industrial customers. INNOVATIVE will provide two reports for this phase: one for residential customers and one for commercial / industrial customers. Per our proposal, we have assumed in all cases Enbridge research staff will provide initial drafts of the surveys.

Residential Customers

With residential customers, we will conduct an online survey of 2,400 which will ensure representation across rate zones and regions. We will also conduct a telephone survey of 600 residential customers, with a regional distribution that is reflective of actual distribution across the province. The cost for telephone set-up assumes we are adjusting from the online survey. Demographic questions within the survey will allow us to identify low-income customers and other important customer segments for analysis purposes.

This budget is based on the current version of the survey, which is at 60 questions for residential customers. Note that open-ended questions are counted as three questions due to the extra time involved in coding verbatim responses.

Please note that we are not including incentives for residential customers.

Cost Breakdown	Online (n=2,400)	Telephone (n=600)
Set-up/platform	[redacted]	[redacted]
Data collection	[redacted]	[redacted]
Analysis and reporting	[redacted]	[redacted]
TOTAL:	[redacted]	[redacted]

Commercial / Industrial Customers

For the commercial and industrial customers, we will use a mixed methodology of online and telephone surveys. Customers will first be sent an email inviting them to complete an online survey, and reminders will encourage participation from those who don't respond initially. Depending on response rate, we will supplement with telephone interviews in order to arrive at a final sample of 200 small C/I customers and 200 Med-Large C/I customers.

The surveys will be identical with only slight adjustments in the language to accommodate the differences in methodology. *This budget is based on the current version of the survey, which is at 61 questions for commercial customers. Note that open-ended questions are counted as three questions due to the extra time involved in coding verbatim responses*. The telephone survey will include some questions to ensure we are directed to the most appropriate person.

Cost Breakdown	Online	Telephone
Set-up/platform	[redacted]	[redacted]
Analysis and reporting	[redacted]	
TOTAL FIXED COST:	[redacted]	[redacted]
CPI	[redacted]	[redacted]
Incentives (400 x $15+$350 admin)	[redacted]	[redacted]

Total Phase Two Project Costs

The total cost for Phase Two will depend on the number of interviews completed by phone with C/I customers vs the number completed online. The lowest and highest points of the range of total costs are shown below.

	Lowest Range (all C/I interviews completed online)	**Highest Range** (all C/I interviews completed by telephone)
Residential customers: online	[redacted]	[redacted]
Residential customers: telephone	[redacted]	[redacted]
Small & Med-Large C/I customers	[redacted]	[redacted]
Incentives	[redacted]	[redacted]
TOTAL:	[redacted]	[redacted]

- Invoice 1 of 2 (50% of lowest range cost) upon project commencement
- Invoice 2 of 2 (remaining cost based on mix of telephone and online C/I completes) upon receipt of final report

RE: Customer Engagement – Phase Three Statement of Work

Dear Karen,

On behalf of Innovative Research Group Inc. (INNOVATIVE), I would like to thank you for the opportunity to work with Enbridge Gas Inc. (Enbridge) to conduct Phase Three of the 2024 Rate Rebasing Customer Engagement.

As per our discussions, INNOVATIVE is being engaged to conduct a study as per the Terms of Project on the following page.

Once you have approved this **Statement of Work**, INNOVATIVE will commence the work on this project.

We are looking forward to working with you. Once you have reviewed this letter, please send me an email with approval to proceed. If you have any questions, please feel free to contact me at 416-642-6341.

Yours truly,

Susan Oakes
Vice President
Innovative Research Group Inc.
56 The Esplanade, Suite 310
Toronto, Ontario M5E 1A7

E-mail: soakes@innovativeresearch.ca

Phase Three is the validation phase is where we obtain results that can be generalized across the various customer segments. As with Phase Two, Enbridge Gas will provide draft workbook-style surveys for this phase. INNOVATIVE will provide suggested edits to these surveys based on our previous experience as well as what we learned in the first two phases of the engagement.

Greg Lyle and Susan Oakes will work with Enbridge Gas to finalize the workbook. Time spent on workbook design and development will be charged at an hourly rate of $350 for Greg and $300 for Susan.

Methodology Options in RFQ vs Final Planned Engagement

The original RFQ specified engagement options for each customer segment for Phase Three. The final planned engagement activities differ and the length of the survey is more likely to be in the range of 25 minutes than 15 minutes, so the budget has been adjusted to accurately reflect the final planned approach. Based on our experience, we are basing all budget estimates on a survey that includes 50 closed and 10 open-ended questions. The final budget will be adjusted to reflect the actual number and type of questions.

In addition to the change in the length of the survey, it will be necessary to use a workbook format in order to effectively engage customers and allow them to give more informed opinions. Programming these workbooks is significantly more time-consuming than programming a standard survey. We are also adding workbook testing, with a broad enough scope to give us some directional notion of where the numbers are heading in advance of a full launch.

Customer Segments	Options in RFQ	Final Planned Engagement
Residential	Telephone – 1,800 interviews Online – 1,800 interviews; OR Consider an open link survey invitation shared via bill insert / myaccount	• Representative online workbook-style survey – n=7,200 • Openlink survey • No telephone survey
General Service / Small Commercial	Online – 400 Telephone – 400 (depending on online response)	• Online survey with invitations sent to all available sample • No telephone survey
Medium – Large Commercial / Industrial (Billed)	Online – invitation to participate sent to all (assume n=100) Telephone – 200 (depending on online response)	• Online survey with invitations sent to all available sample • No telephone survey
Commercial / Industrial (Contract)	Online – invitation to participate sent to all (assume n=100)	Online survey with invitations sent to all available sample
Strategic (Large Volume Commercial)	Online – invitation to participate sent to all (assume n=30)	Online survey with invitations sent to all available sample
Transportation	N/A – contact with these customers will most likely be an internal effort Consider set of validation interviews (5-10 min in length); OR Online – invitation to participate sent to all (assume n=30)	• Telephone validation interviews • No online survey

Workbook Testing

The final report will focus on this phase, so it is critical to ensure we are asking the right questions and providing the right information to customers in a manner that is easy to understand. To that end, we strongly recommend that senior INNOVATIVE consultants test the workbook with the target customer segments prior to the start of any data collection.

The workbook will be tested with various customer segments in a series of one-on-one interviews using Zoom. During each session, the facilitator will give control of his/her computer to the customer and ask them to work their way through the workbook, responding to the survey questions as they go. The facilitator will ask the customer if there are any issues with clarity as they progress through the workbook, and at the end of the session there will be an opportunity for the customer to comment on the amount and type of information provided, and whether they felt anything was missing.

For this type of testing, the workbook will need to be programmed to make it as realistic an experience as possible. The actual cost for programming will depend on the length and complexity of the workbooks, as well as the degree to which the Contract workbook is similar to the General Service workbook. To give a sense of what the programming may cost, we have developed the following budget estimates based on our experience with large electrical utilities, and we have assumed that the Contract workbook is about 75% the same as the GS version.

WORKBOOK VERSION	ESTIMATED # OF HOURS	HOURLY RATE	TOTAL
Residential	60	[redacted]	[redacted]
Small/med-large business*	15	[redacted]	[redacted]
Commercial/industrial (contract)	15	[redacted]	[redacted]
		TOTAL:	[redacted]

** Assumes minor changes, such as changes to rate impacts and "home" vs "business"*

As long as no major programming changes are required, adjustments can be made as the testing progresses to incorporate customer feedback, with the goal of optimizing the workbook prior to rolling it out to all customers.

The final amount charged for programming will be based on the actual number of hours required to program and make adjustments to all versions of the workbook.

CUSTOMER SEGMENT	NUMBER OF INTERVIEWS	COST PER INTERVIEW	INCENTIVE*	TOTAL
Residential	20	[redacted]	$100	[redacted]
Small business	15	[redacted]	$150	[redacted]
Commercial/industrial (contract)	5	[redacted]	$150	[redacted]
			TOTAL:	[redacted]

** In recognition of the fact that some organizations have policies against accepting gifts or cash, incentives for business customers will be offered as either a direct incentive to the individual, or in the form of a donation to a charity of their choosing.*

General Service Workbook

For residential customers, there will be an invitation-based online survey for which the sample will be stratified based on region/legacy and consumption in order to arrive at a final sample that is representative of that customer group. Based on the incidence of LEAP qualified customers in Phase Two, it is estimated that a total sample of 7,200 will garner about n=400 completes from residential customers who qualify for the LEAP program.

Invitations will also be sent to all small and medium-large business customers who did not participate in either Phase One or Phase Two of the customer engagement. The goal will to be obtain as many completes as possible from these customers, so there will be no sample stratification. However, we will include region/legacy and consumption as sample variables and use that information to weight the final data to be representative. It should be noted that we may have to weight the sample size down significantly to arrive at a representative sample because we want to avoid using weights any higher than 2.

A voluntary, openlink survey will also be publicized by Enbridge Gas to residential customers to ensure that all residential customers have a chance to take part in the customer engagement. The reporting on the representative vs openlink data can be done separately (costs are broken out below), or we may be able to create a hybrid report to keep costs down.

The budget below is based on a survey that is comprised of 50 closed and 10 open-ended questions. The final number of open-ended questions will impact the budget due to the time needed to code verbatim responses.

In order to keep the budget down, we would suggest coding all of the residential representative survey verbatims, and a random selection of no more than 2,500 verbatims from the openlink version of the survey at a cost o[redacted] per question.

Please note that we are not including incentives for residential customers. For business customers, we recommend two prize draws of $500 for small business and two prize draws of $500 for med/lg business.

COST BREAKDOWN	COST
Set-up/platform	[redacted]
Data collection	[redacted]
Incentives & facilitation	[redacted]
Analysis and reporting:	
Residential representative	[redacted]
Residential openlink	[redacted]
GS business	[redacted]
TOTAL:	[redacted]

Contract Customers

All Enbridge Gas Contract customers (as well as about 30 Strategic customers) will be sent an invitation with a unique link to an online workbook survey. Where possible, the workbook will be similar to the General Service version, but there will be differences due to the specific nature of this customer segment. We have provided a cost for creating a separate report for this customer segment.

The budget below is based on a survey that is comprised of 50 closed and 10 open-ended questions. The final number of open-ended questions will impact the budget due to the time needed to code verbatim responses.

For contract customers, we recommend two prize draws of $500.

COST BREAKDOWN	COST
Set-up/platform	[redacted]
Data collection	[redacted]
Incentives & fulfillment	[redacted]
Analysis and reporting	[redacted]
TOTAL:	[redacted]

Transportation Customers

Enbridge Gas will engage with Transportation customers directly. INNOVATIVE will follow-up with a brief, 5-minute telephone survey. The goal of the survey will be to confirm that the customer spoke with Enbridge Gas, that key topics were covered, and that they understood the information that was provided to them.

There are about 30 customers in this rate class, and INNOVATIVE will make all reasonable attempts to follow-up with each customer once Enbridge Gas has spoken with them. The total budget for this aspect of the consultation, including reporting, is set out below.

COST BREAKDOWN	COST
Data collection	[redacted]
Analysis and reporting	[redacted]
TOTAL:	[redacted]

Total Phase Three Project Costs

The total costs for Phase Three are set out below.

The two variable costs are the professional fees for workbook development and programming.

- Time spent on workbook design and development will be charged at an hourly rate of [redacted] for Greg and [redacted] for Susan. ***These hours are not included in the budget summary below.***
- The final amount charged for workbook programming will be based on the actual number of hours, at an hourly rate of [redacted]

ENGAGEMENT COMPONENT	COST
Programming	[redacted]
Workbook testing	[redacted]
General service workbook	[redacted]
Contract workbook	[redacted]
Transport validation interviews	[redacted]
TOTAL:	[redacted]

- Invoice 1 of 2 upon project commencement
- Invoice 2 of 2 upon receipt of final report

RE: Rate Rebasing – Qualitative Customer Engagement

Dear Karen,

On behalf of Innovative Research Group Inc. (INNOVATIVE), I would like to thank you for the opportunity to work once again with Enbridge Gas Inc. (Enbridge) to conduct an additional round of qualitative research as part of the 2024 Rate Rebasing Customer Engagement.

As per our discussions, INNOVATIVE is being engaged to conduct a study as per the Terms of Project on the following page.

Once you have signed and returned this **Statement of Work**, INNOVATIVE will commence the work on this project.

We are looking forward to working with you. Once you have reviewed this letter, please sign and return to my attention. If you have any questions, please feel free to contact me at 416-642-6341.

Yours truly,

Susan Oakes
Vice President
Innovative Research Group Inc.
56 The Esplanade, Suite 310
Toronto, Ontario M5E 1A7

E-mail: soakes@innovativeresearch.ca

Qualitative Research

This follow-up round of qualitative research will build on what we learned in all three phases of the comprehensive 2024 Rate Rebasing Customer Engagement. The objectives of this round of qualitative research will be to:

- Understand how customer distinguish between fixed and variable costs (incurred by Enbridge Gas) of providing service.
- Further explore how customers think about rate design:
  - What do customers consider as their usage – consider annual vs. daily
  - How to do customers understand the differing costs of being connected to the system and cost of system capacity
  - How do customers view the cost of gas – and how do they relate it to the usage in their home or business
- Participants will also be presented with various bill presentment options, including a mock-up of a new sample bill.

Online Focus Groups with Residential Customers

Project Scope:

- Semi-structured discussions based on a written discussion guide
- 6-8 participants per session
- One evening (two groups) which will serve as a testing phase and will not be included in the final report, but will serve instead to finalize stimuli and the moderator's guide
- Following the testing and any resulting revisions, a total of 10 online focus groups to provide regional coverage (see list below)
- All participants receive a monetary incentive of $100 for participating

Group Descriptions

Group	Region	Number
Enbridge Gas	GTA	*2*
Enbridge Gas	Non-GTA	*2*
Union Gas	South/West	*2*
Union Gas	Central	*2*
Union Gas	North/East	*2*

When designing the recruitment screeners, additional factors will be taken into consideration both to ensure representation across a range of customers, as well as potentially recruiting such that certain types of customers are not in the same group. This may included things such as:

- Screening for Hydro One (primarily non-GTA) or Toronto Hydro (GTA) customers
- Paper vs ebill customers
- Level of attention paid to bills
- Consumption level

Focus group costs include project management, the finalization of the recruitment screener and moderator's guide, a combination of online and telephone recruitment of all participants, incentives, moderating, research consultant support and a report based on the research.

We will conduct two groups per evening, over a total of five evenings. The cost per evening is [redacted] bringing the total budget for the focus groups to [redacted]

IDIs with Small and Medium-Large Commercial Customers

Project Scope:

- Semi-structured discussions based on a written discussion guide
- A total of 20 interviews, divided evenly between small and med-lg customers
- The interviews will also be evenly divided between EGI and former Union Gas customers
- A charitable donation in the amount of $100 will be made on behalf of each participant

Costs include project management, the finalization of the recruitment screener and interview guide, a combination of online and telephone recruitment of all participants, incentives (charitable donations), interviews by senior consultants, and a report based on the research.

The total cost for the in-depth interviews is [redacted]

Total Project Costs

Fixed Cost: [redacted] **HST**

- Invoice 1 of 2 (50%) upon project commencement
- Invoice 2 of 2 (50%) upon receipt of final report

Variable Design and Development Cost: The extent to which INNOVATIVE will be involved in designing and developing stimulus and other materials to be used during the groups/interviews is not known at this point. As such, time spent on such activities will be billed at a rate of [redacted] per hour.

POSTERITY GROUP CONSULTING INC.
43 Eccles Street, Unit 2 – Second Floor
Ottawa Ontario K1R 6S3

Dear Sir / Madam,

RE: Consulting Agreement with Enbridge Gas Inc.

Attached please find for signature our Consulting Agreement. Kindly arrange to have the Agreement and the attached Schedule signed. Please ensure you read and understand all of the terms and conditions of the Agreement, as well as the enclosed Statement on Business Conduct and Lifesaving Rules.

We will also require the following:

- A current clearance certificate or letter of exemption from the Ontario Workplace Safety and Insurance Board ("WSIB"). If your employees are in a jurisdiction other than Ontario, please provide equivalent proof of coverage, and new proof of coverage must be filed with us upon expiry/renewal of such proof of coverage.

Please return the applicable WSIB document noted above, together with a signed copy of the Consulting Agreement and a signed copy of the Schedule, promptly following receipt of this letter. Upon receipt of all the documents in our office, we will execute the Agreement and a PDF copy of the Agreement will be returned to you for your records.

If you have any questions, please contact me at the above-noted telephone number.

Sincerely,

Sophear Net
Specialist BD

Encls.

CONSULTING AGREEMENT

THIS AGREEMENT made effective July 20, 2020.

B E T W E E N:

ENBRIDGE GAS INC.
("Enbridge")

- and -

POSTERITY GROUP CONSULTING INC.
(the "Consultant")

WITNESSES THAT in consideration of the mutual covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. **Scope of Services**

(a) During the term hereof (as hereinafter defined), the Consultant shall provide consulting services (the "Services") to Enbridge, on the terms and conditions set forth below.

(b) The scope of work for specific projects to be undertaken by the Consultant at the request of Enbridge will be described in separate schedules referencing this Agreement, each of which shall become effective, be incorporated by reference and form an integral part of this Agreement upon the execution of each such schedule by Enbridge and the Consultant. The schedule for each project will specify the names of key individuals, scope of Services, deliverables, commencement and completion dates, rate of compensation and payment terms applicable to such project. Each schedule described above shall be prepared using a form similar to the attached Schedule "A".

2. **Compensation**

In consideration of the Services and deliverables to be provided by the Consultant hereunder, and provided that the Consultant is not in default of its obligations hereunder, Enbridge shall remit to the Consultant all amounts required to be paid in accordance with the applicable schedule.

Consultant shall be responsible for charging, collecting and remitting all applicable federal and provincial sales, use and value-added taxes in respect of the fees paid or payable to Consultant and, in particular, the goods and services tax ("GST") and harmonized sales tax ("HST") imposed under Part IX of the Excise Tax Act (the "ETA"), the Quebec sales tax ("QST") imposed under an Act respecting the Quebec Sales Tax (the "QSTA") and any provincial sales taxes ("PST"); and such taxes, if applicable, shall be shown separately on all invoices. Where Consultant is required to collect any GST/HST, QST or similar tax, Consultant shall provide Enbridge with the documentary evidence as prescribed pursuant to the ETA or QSTA, any successor provision thereto or any similar provision of any other taxing statute as is required to entitle Enbridge to claim an input tax credit, input tax refund, rebate, refund or any other form of relief in respect of such taxes.

Where the Consultant is a non-resident of Canada for purposes of the Income Tax Act (Canada) (the "ITA"), with respect to the invoice or statement of Fees issued pursuant to any Schedule, the Consultant will identify the location where the Services are provided, separate Services performed in Canada from Services performed outside of Canada, identify the number of days Services were performed in Canada (including travel days to/from Canada) and, for Services performed in Canada, identify the physical location, indicating city and province, where such Services were performed. Where the non-resident Consultant has not obtained and provided to Enbridge a non-resident withholding tax waiver at such time as Enbridge makes any payment to the Consultant for Services, Enbridge shall withhold such percentage

of any payment as mandated under the ITA with respect to the Services provided in Canada or on the full invoice or statement amount where the Consultant has not clearly separated the Services performed in Canada from Services performed outside of Canada. Enbridge shall remit the withheld amount to Canada Revenue Agency, or its successor, in the manner and at the time required by the ITA. For further clarification, it is the Consultant's responsibility to obtain the tax waiver, if available. In the event that Enbridge is assessed for any non-resident withholding taxes payable, the Consultant agrees to forthwith reimburse Enbridge for such amount together with applicable interest and penalties, if any.

3. **Term**

Subject to earlier termination as provided for herein, the term of this Agreement shall commence on the day set forth above and expire on July 19, 2023 (hereinafter the "Term").

4. **Termination**

(a) Enbridge may terminate this Agreement or any schedule to this Agreement for convenience upon giving two (2) weeks written notice to the Consultant.

(b) Either party may terminate this Agreement in case of a breach by the other party of its obligations hereunder, provided that the breach is not cured within five (5) days of written notification by the non-defaulting party to the defaulting party setting out the particulars of the breach.

(c) Either party may terminate this Agreement upon written notice to the other party, if: (i) the other party is subject to proceedings in bankruptcy, or insolvency, whether voluntary or involuntary, (ii) a receiver is appointed in respect of all or a substantial portion of the other party's assets; or (iii) the other party assigns its property to its creditors or generally becomes unable to pay its debts as they become due.

Upon any termination of this Agreement, the Consultant shall deliver to Enbridge the results of all Services provided as of the date of termination, including completed or uncompleted deliverables for which payment has been received in accordance with the terms of this Agreement.

5. **Facilities**

Enbridge shall provide to the Consultant use of such office facilities as may be required by the Consultant, acting reasonably, to perform the Services during the Term.

6. **Reimbursement for Expenses**

In addition to the payments to be made pursuant to Section 2 hereof, Enbridge shall reimburse the Consultant for all reasonable expenses properly incurred by the Consultant in connection with the Services provided to Enbridge hereunder and that have been pre-approved by Enbridge in writing, including, without limitation, reasonable travel and other costs and expenses in connection therewith. Such pre-approved reasonable expenses incurred by the Consultant in rendering Services shall be reimbursed by Enbridge net of GST/HST. GST/HST shall be charged, where applicable, by the Consultant on the expenses incurred, net of the input tax credits/reimbursements for GST/HST claimed by the Consultant. Concurrently with its delivery of invoices to Enbridge as contemplated by Section 2 hereof, the Consultant shall submit to Enbridge invoices and statements setting out in reasonable detail the nature and amount of the expenses or costs incurred by the Consultant for which the Consultant claims reimbursement, and Enbridge shall within thirty (30) days of the receipt of such invoices and statements reimburse the Consultant for all approved invoiced expenses and costs. The Consultant shall provide to Enbridge copies of all documentation in support of invoiced expenses as Enbridge may request from time to time during the Term hereof.

7. **Independent Contractor**

Notwithstanding anything to the contrary herein contained, the Consultant shall not, for any purpose, be or be deemed to be an employee of Enbridge during the Term or at any time during which the Services described in Section 1 hereof are provided to Enbridge nor shall anything in this Agreement create or be

construed for any purpose as creating any relationship between Enbridge and the Consultant of employer and employee. Except as expressly provided herein, Enbridge shall not be liable to contribute to any employee benefit or pension plan or pay premiums for any policy or form of insurance whatsoever on behalf of the Consultant nor to pay any amounts or premiums on its behalf in respect of the Canada Pension Plan, Ontario Health Insurance Plan, Workplace Safety and Insurance Board or Employment Insurance, nor to deduct or withhold from source any amount from amounts payable by Enbridge to the Consultant hereunder in respect of any income tax obligation or liability payable by the Consultant to the Canada Revenue Agency. The Consultant agrees to indemnify and hold Enbridge harmless from and against any order, penalty, interest or tax that may be assessed or levied against Enbridge as a result of the failure or delay of the Consultant to file any return or information required to be filed by the Consultant by any law, ordinance or regulation relating to the Services performed by the Consultant herein.

8. **Confidential Information and Personal Information**

(a) For the purposes of this Section 8, the following definitions will apply:

(i) "Confidential Information", means all information pertaining to the business and affairs of Enbridge, its affiliates and subsidiaries, whether oral or written, furnished by Enbridge to the Consultant, its employees and representatives, whether furnished or prepared before or after the date of this Agreement, and includes all analysis, compilations, data, studies, reports or other documents prepared by the Consultant based upon or including any of the information furnished by Enbridge, but does not include information which:

A. is at the time of disclosure or thereafter becomes generally available to the public other than as a result of disclosure by the Consultant or anyone to whom the Consultant transmits the information;

B. is at the time of disclosure or thereafter becomes known or available to the Consultant on a non-confidential basis and not in contravention of applicable law from a source other than Enbridge that is entitled to disclose the information; or

C. is already in the possession of the Consultant or is lawfully acquired, provided that such information is not subject to another confidentiality agreement with, or obligations of secrecy to Enbridge.

(ii) "Person" includes individuals, partnerships, firms and corporations.

(b) Enbridge is furnishing the Confidential Information to the Consultant solely for the purpose of assisting the Consultant in the performance of Services which the Consultant provides to Enbridge. The Consultant shall not use the Confidential Information for any purpose other than the performance of Services provided to Enbridge.

(c) The Consultant acknowledges that the Confidential Information is the property of Enbridge, which is confidential and material to the interests, business and affairs of Enbridge and that disclosure thereof would be detrimental to the interests, business and affairs of Enbridge. Accordingly, the Consultant agrees that it shall maintain the confidentiality of the Confidential Information and that it shall not disclose the Confidential Information to any Person for any reason whatsoever except as expressly provided herein.

(d) The Consultant may disclose Confidential Information to the extent required by a court of competent jurisdiction or other governmental or regulatory authority or otherwise as required by applicable law, provided that the Consultant first give Enbridge prompt written notice (except where the governmental or regulatory authority has expressly ordered that no notice be given) and co-operate with and assist Enbridge in responding to the request or demand for disclosure.

(e) The Consultant acknowledges and agrees that Enbridge would be irreparably harmed if any provision of this Agreement is not performed by the Consultant in accordance with its terms. Accordingly, Enbridge shall be entitled to an injunction or injunctions to prevent breaches of any of the provisions of this Agreement and may specifically enforce such provisions by an action

instituted in a court having jurisdiction. These specific remedies are in addition to any other remedy to which Enbridge may be entitled at law or equity.

(f) If in the course of performing Services hereunder, the Consultant obtains or accesses personal information about an individual, including without limitation, a customer, potential customer or employee or contractor of Enbridge ("Personal Information") the Consultant agrees to treat such Personal Information in compliance with all applicable federal or provincial privacy or protection of personal information laws and to use such Personal Information only for purposes of providing the Services hereunder. Furthermore, the Consultant acknowledges and agrees that it will:

(i) not otherwise copy, retain, use, modify, manipulate, disclose or make available any Personal Information, except as required by applicable law;

(ii) establish or maintain in place appropriate policies and procedures to protect Personal Information from unauthorized collection, use or disclosure;

(iii) implement such policies and procedures thoroughly and effectively;

(iv) except as required for purposes of providing the Services hereunder, will not develop or derive, for any purpose whatsoever, any products in machine-readable form or otherwise, that incorporates, modifies, or uses in any manner whatsoever, any Personal Information; and

(v) upon completion of its Services for or on behalf of Enbridge, will at Enbridge's direction: A. return; or B. destroy all Personal Information and all copies and records thereof in its possession.

9. Indemnification

The Consultant hereby agrees to and shall:

(a) be liable to Enbridge and its directors, officers and employees, for all claims, liabilities, damages, costs, losses and expenses whatsoever which Enbridge or any of its directors, officers and employees may suffer, sustain or incur; and

(b) indemnify and save harmless Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives from and against any and all liabilities, claims, demands, damages, loss, costs and expenses (including without limitation all applicable solicitors' fees, court costs and disbursements, investigation expenses, adjusters' fees and disbursements) to or which any third party may suffer, sustain or incur,

in respect of all matters or anything which may arise out of any act or omission directly or indirectly related to any breach of this Agreement by the Consultant, its employees or representatives.

10. Work Product

(a) For the purposes of this Section 10, "Work Product" shall include any of the following, which are developed in the course of or arise from the Services provided by the Consultant to Enbridge hereunder throughout the Term: (i) any deliverables produced under any schedule to this Agreement together with any and all notes, reports, research information, compilations, data specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(b) For the purposes of this Section 10, "Consultant Materials" comprises any of the following, which were developed by the Consultant, at its own cost and expense in advance of and independent of this Agreement and as proven by the Consultant to be the case in the event of a dispute concerning the same: (i) any and all notes, research, information, data, specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(c) All right, title and interest in and to the Work Product shall be the property of Enbridge. The Consultant shall ensure that any agent or employee of the Consultant shall have waived in writing all of his or her moral rights over any such Intellectual Property. During and after the Term of this Agreement, the Consultant shall from time to time as and when requested by Enbridge execute all papers and documents and perform other acts as necessary or appropriate to evidence or further document Enbridge's ownership of the Work Product and the intellectual property rights therein.

(d) The Consultant retains all right, title and interest in and to the Consultant Materials. The Consultant hereby grants to Enbridge a non-exclusive, perpetual, irrevocable, non-terminable, transferable, assignable and royalty-free license to copy, disclose, use, operate, maintain, repair, modify, enhance, make derivative works, license, sub-license and otherwise commercially exploit without limitation or restriction those Consultant Materials used in connection with the delivery of the Services or to the extent contained within any Work Product.

(e) The Consultant agrees to fully indemnify and hold harmless Enbridge from and against any and all: (i) claims, demands and actions; (ii) liabilities, damages or losses awarded by a court of competent jurisdiction or as agreed to as part of a settlement; and (iii) litigation costs and/or expenses (including reasonable legal fees and disbursements) reasonably incurred by Enbridge in connection with any claim that the Services or Work Product provided hereunder infringe any patent, copyright, trade secret or other right of any third party.

11. **Representations and Warranties**

(a) The Consultant represents, warrants and covenants with Enbridge that: (i) it will perform all Services in a good and workmanlike manner using reasonable care (at a level that is at least consistent with industry standards for the provision of similar services) and in accordance with the terms of this Agreement; (ii) it possesses the knowledge, skill and experience necessary for the provision and completion of the Services in accordance with the terms of this Agreement; and (iii) any deliverables provided hereunder shall conform to their relevant specifications as described in the applicable schedule.

(b) The Consultant agrees that under no circumstances will it interface a non-Enbridge computing device (including without limitation desktops, laptops, handheld device) with the Enbridge intranet or internet without obtaining the prior written approval of Enbridge. To the extent the deliverables produced hereunder involve the provision or development of any software application, interface or electronic data, the Consultant shall use commercially reasonable efforts to prevent the introduction of any virus to the hardware and computer systems upon which the application, interface or electronic data are to be installed. During the Term of this Agreement, the Consultant shall implement and run virus prevention and detection control procedures in accordance with industry standards.

(c) In addition to the policies described in Section 25, the Consultant shall ensure that it is familiar with and understands all of Enbridge's current policies, procedures and standards that are pertinent to the activities associated with the Services and which have been provided to the Consultant in advance of the execution of this Agreement.

12. **Subcontractors**

The Consultant shall not enter into any agreement with any other party to assist in the provision of the Services described in Section 1 hereof (hereinafter described as a "Subcontract") nor shall the Consultant allow any other party to perform such Services or any part thereof without first obtaining the consent in writing of Enbridge, which consent may be withheld by Enbridge, acting reasonably. Notwithstanding any approval or consent that may be provided by Enbridge in connection with any Subcontract, the Consultant shall not be relieved of any of its liabilities and responsibilities hereunder. Any party which enters into a Subcontract with the Consultant shall be required by the terms of such Subcontract to comply with and be bound by the obligations and responsibilities of the Consultant described hereunder and without restricting the generality of the foregoing, any Subcontract which has been entered into without the prior written consent of Enbridge shall be null and void and without force and effect.

13. **Insurance**

Save and except where Enbridge specifies otherwise in writing, the Consultant shall at its own expense maintain and keep in full force and effect during the Term hereof and for a period of two (2) years following the expiry of the Term or other termination of this Agreement:

(a) Commercial General Liability insurance having a minimum inclusive coverage limit, including personal injury and property damage, of at least Two Million Dollars ($2,000,000) per occurrence. Enbridge Gas Inc. must be listed as the certificate holder and be added as an additional insured in the insurance policy, which should be extended to cover contractual liability, products/completed operations liability, owners'/ contractors' protective liability and must also contain a cross liability clause;

(b) Automobile Liability insurance on all vehicles used in connection with this Agreement and such insurance shall have a limit of at least Two Million Dollars ($2,000,000) in respect of bodily injury (including passenger hazard) and property damage inclusive of any one accident;

(c) Non-Owned Automobile Liability insurance and such insurance shall have a limit of at least Two Million Dollars ($2,000,000) in respect of bodily injury (including passenger hazard) and property damage, inclusive in any one accident; and

(d) such other insurance as Enbridge may in its discretion determine to be necessary, including, but not limited to, Professional Liability or Errors and Omissions insurance.

The Consultant shall forthwith after entering into this Agreement, and from time to time thereafter at the request of Enbridge, furnish to Enbridge a memorandum of insurance or an insurance certificate setting out the terms and conditions of each policy of insurance (all such policies of insurance being hereinafter described as the "Insurance Policies") maintained by the Consultant in order to satisfy the requirements of this section. At any time and from time to time at the request of Enbridge, the Consultant shall furnish Enbridge with one or more duly completed insurance certificates in the form requested by Enbridge to evidence the details of all the Insurance Policies. The Insurance Policies shall be arranged with insurers acceptable to Enbridge, acting reasonably, and shall contain such terms and conditions as are reasonably acceptable to Enbridge. The Consultant shall not cancel, terminate or materially alter the terms of any of the Insurance Policies without giving prior notice in writing to Enbridge. The Consultant shall cause or arrange for any of its insurers under any one or more of the Insurance Policies to oblige itself contractually in writing to Enbridge to provide fifteen (15) days prior notice in writing before cancelling, terminating or materially altering the Insurance Policies under which it is an insurer.

14. **Compliance with Laws**

The Consultant agrees to comply with the Occupational Health and Safety Act (Ontario) and the Workplace Safety and Insurance Act (Ontario) and with all other prevailing federal, provincial and municipal laws and regulations or any other laws or regulations in force in any jurisdiction where the Services are performed (the "Laws") and which are applicable to the Consultant, its subcontractors and the Services provided hereunder, and the Consultant shall familiarize itself and procure all required permits and licenses and pay all charges and fees necessary or incidental to the due and lawful prosecution of this Agreement, and maintain all documentation as may be required by the Laws, and shall indemnify and save harmless Enbridge, its directors, officers, agents and employees thereof against any claim or liability from or based on the violation of any Laws, whether by the Consultant, its officers, employees, subcontractors, representatives or agents. The Consultant shall, from time to time, if requested by Enbridge, furnish Enbridge with evidence of such compliance, and in particular: (i) evidence from the Workplace Safety and Insurance Board, or the equivalent thereof in any jurisdiction where the Services provided hereunder are carried out, that the Consultant and any party with which it has entered into a Subcontract are in compliance with and have paid all assessments and other amounts owing pursuant to the workers' compensation legislation of such jurisdiction; and (ii) evidence of the Consultant's compliance with any training requirements under the Laws including, without limitation, the provision of such statements or certificates pertaining to the Consultant's compliance in the form(s) prescribed by Enbridge from time to time.

Enbridge is committed to compliance with the Accessibility for Ontarians with Disabilities Act, 2005, O.Reg. 429/07 and O.Reg. 191/11, the Enbridge Customer Service Policy for Providing Goods and Services to People with Disabilities and the Enbridge Integrated Accessibility Standards Policy (collectively the "AODA"). The Consultant shall ensure that it is in full compliance with all of its obligations under AODA. Without limiting the generality of the foregoing the Consultant shall ensure that all of its employees, agents, volunteers, or others engaged by the Consultant in the delivery of services under this Agreement receive training in connection with the requirements of the AODA. If requested to do so, the Consultant shall provide Enbridge with copies of its policies, practices, procedures, training materials and training records including the dates on when the training is provided, and the names of the individuals trained, and confirmation the Consultant has reported its compliance to the Ministry of Community and Social Services or such other governmental authority as provided in the AODA.

The Consultant will ensure that any personnel it assigns to work in Canada, where they are not a Canadian citizen or Canadian permanent resident of Canada, will obtain and maintain the lawful ability to engage in commercial activities in Canada through the issuance of the appropriate documentation from Canada Border Services Agency and Citizenship and Immigration Canada. The Consultant's personnel where necessary will obtain lawful work permits to engage in business-related activities as temporary foreign workers and will notify Enbridge if any applications for work permits and work permit renewals are refused. The Consultant will not send personnel to any Enbridge-related work site if they do not possess the necessary lawful permission to work in Canada. The Consultant will take full responsibility to secure the necessary documentation and produce such documentation when entering a Canadian work site of Enbridge.

15. **Waiver**

Either the Consultant or Enbridge may, in writing, extend the time for performance by the other and waive non-compliance or non-performance by the other of any of the other's obligations, covenants and agreements under this Agreement and any compliance therewith or performance thereof. However, no such extension or waiver shall operate so as to waive, diminish or reduce the scope of or otherwise affect any obligation, covenant or agreement of such other which is not the subject matter of such extension or waiver or, except to the extent of such extension or waiver, of the obligation, covenant and agreement which is the subject matter of such waiver. No act or failure to act of either the Consultant or Enbridge shall be or be deemed to be an extension or waiver of timely or strict performance by the other of the other's obligations, covenants and agreements under this Agreement except to the extent notice thereof is given to the other.

16. **Notice**

Any notice or other communication to be given under or pursuant to the provisions hereof or in any way concerning this Agreement shall be sufficiently given if reduced to writing and delivered to the person to whom such communication is to be given or sent by facsimile or electronic internet communication, addressed to such person at the address set forth below:

If to Enbridge:

ENBRIDGE GAS INC.

50 Keil Drive North, Box 2001
Chatham ON N7M 5M1
Attention: Sophear Net, Specialist BD
Phone: 519-436-4600 ext. 5002394
Email: sophear.net@enbridge.com

With a copy to: Law Department
Facsimile: 416-495-5994

If to the Consultant:

POSTERITY GROUP CONSULTING INC.
43 Eccles Street, Unit 2 – Second Floor
Ottawa Ontario K1R 6S3
Attention: Alex Tiessen, Principal
Phone: (613) 219-5312 Ext.
Email: tiessen@posteritygroup.ca

or at such other address as may be specified therefor by proper notice hereunder. A notice or communication shall be deemed to have been sent and received on the day it is delivered personally or by courier or by facsimile or by electronic internet communication. If such day is not a business day or if the notice or communication is received after 5:00 PM (at the place of receipt) on any business day, the notice or communication shall be deemed to have been sent and received on the immediately following business day.

17. **Interpretation**

This Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein. Headings used herein are for the convenience of reference only and shall not be considered in construing or interpreting this Agreement. The words "herein", "hereunder", "hereof" and other similar words refer to this Agreement as a whole and not to any particular paragraph. Any provision herein prohibited by law shall to the extent prohibited be ineffective without invalidating any other provisions hereof. All references to amounts of money in this Agreement and any schedule shall mean lawful currency of Canada.

18. **Assignment**

The Consultant may not assign this Agreement in whole or in part without the express prior consent in writing of Enbridge. This Agreement shall be binding upon and enure to the benefit of the successors and assigns of Enbridge.

19. **Use of Enbridge Name and Logo**

The Consultant shall not use or display Enbridge's name or any symbols, signs, trademarks and other marks denoting and identifying Enbridge in any manner whatsoever without the prior written authorization of Enbridge.

20. **Time of Essence**

Time shall be of the essence in the performance of the Services.

[remainder of page intentionally left blank]

21. **Survival**

All warranties and indemnities contained in this Agreement, and the obligations contained in Section 8, shall survive the termination of this Agreement irrespective of the time of or party responsible for such termination, and such warranties, indemnities and obligations shall remain in full force and effect and be binding on the Contractor notwithstanding such termination.

22. **Further Assurances**

Each of the parties shall, from the time of the written request of the other party, do all such further acts and execute and deliver or cause to be done, executed or delivered all such further acts, deeds, documents, assurances and things as may be required, acting reasonably, in order to fully perform and to more effectively implement and carry out the terms of this Agreement.

23. **Entire Agreement**

This Agreement, including any schedules attached hereto, constitutes the entire agreement between the parties with respect to the subject matter set out herein and replaces any prior understandings or agreements, whether written or oral, regarding such subject matter. No change or modification of this Agreement is valid unless it is in writing and signed by both parties. No disclaimers, purchase order documents, invoices or other documents of the Consultant shall be binding upon Enbridge.

24. **Audit**

The Consultant shall, following no less than seven (7) business days advance notice in writing, provide to such auditors (including external auditors and Enbridge's internal audit staff or agents) as Enbridge may designate in writing, supervised access to the data, records and supporting documentation maintained by the Consultant with respect to the Services solely for the purpose of: (i) performing audits and inspections to enable Enbridge to satisfy applicable regulatory requirements or certify compliance with applicable laws; and (ii) to confirm that the Services are being provided in accordance with the terms of this Agreement. Enbridge and its auditors shall use commercially reasonable efforts to conduct such audits in a manner that will result in a minimum of inconvenience and disruption to the Consultant's business operations. In the event that if any such audit reveals any: (a) errors or deficiencies in the completion of the Services or invoicing of the Services; or (b) overpayments to the Consultant by Enbridge, then the Consultant shall forthwith correct such errors or deficiencies, including if applicable refunding any overpayment to Enbridge. The Consultant shall retain all records for ten (10) years from the date of expiration or earlier termination of this Agreement, or such longer period as Enbridge may require having regard to the nature of the Services.

25. **Enbridge Policies**

The Consultant acknowledges receipt of a copy of each of Enbridge Inc.'s Statement on Business Conduct for Enbridge Inc. and its Subsidiaries and Lifesaving Rules, each as amended from time to time (the "Policies"). The Consultant agrees to comply with the Policies in connection with its delivery of the Services described in this Agreement, and agrees that, if requested by Enbridge, it will ensure all personnel delivering the Services herein attend training on the Lifesaving Rules.

26. **ISNetworld Requirement**

If required by Enbridge, the Consultant shall subscribe with ISN Software Corporation as a registrant of ISNetworld ("ISN") or any successor service mandated by Enbridge from time to time, and maintain a performance grading within ISN that is acceptable to Enbridge (the "ISNetworld Requirement") and shall: (a) provide all records and information as required by ISN or Enbridge, including, but not limited to, training and qualification data of the Consultant personnel, including subcontractors and employees, relating to the Services; and (b) maintain compliance with the ISNetworld Requirement during the currency of this Agreement.

[remainder of page intentionally left blank]

27. **Counterparts and Execution**

This Agreement may be executed by the parties in separate counterparts, each of which when so executed and delivered will be deemed to be an original, and all such counterparts will together constitute one and the same instrument. Delivery of a signature by electronic transmission or by facsimile transmission, including by email delivery of a "portable document format" ("pdf") document, shall create a valid and binding obligation. This Agreement may be executed using electronic signatures.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first written above.

SCHEDULE A

TO THE CONSULTING AGREEMENT BETWEEN ENBRIDGE GAS INC. AND POSTERITY GROUP CONSULTING INC. Dated July 20, 2020

This Schedule is made under the above referenced consulting agreement (the "Agreement") between ENBRIDGE GAS INC. ("Enbridge") and POSTERITY GROUP CONSULTING INC. (the "Consultant").

1. **SCOPE OF SERVICES**

The Consultant will undertake the following Services:

Support the Energy Transition Scenario Analysis ("ETSA") by modeling future load at the granular level of energy end uses, different building types, rate classes, and regions, and undertaking scenario analysis to explore several possible economic and policy scenarios under which Enbridge may operate in the future.

A description of Services and key personnel to be provided by the Consultant is set forth in the proposal dated July 15, 2020 prepared by the Consultant, which is attached as Attachment 1 to this Schedule (the "Proposal") and incorporated by reference herein. In the event of a conflict between the terms and conditions set out in the Proposal and those set out in this Agreement, the terms and conditions in this Agreement (including this Schedule) will govern and take precedence.

2. **DELIVERABLES**

The Consultant will provide the following deliverables:

Complete activities under four work packages:

Work Package 1: Characterize Critical Drivers and Finish Developing Reference Case

Work Package 2: Parametric Analysis and Boundary Scenario Definitions

Work Package 3: Planning Scenario Definitions

Work Package 4: Scenario Analysis and Modelling

As detailed further in the attached proposal.

3. **TERM AND COMMENCEMENT AND COMPLETION DATES**

This Schedule shall be effective as of July 20, 2020 and expire March 1, 2021, or such other date as the parties may mutually agree in writing.

4. **KEY PERSONNEL**

The Consultant will provide the following personnel to deliver the services set out above under Scope of Services:

Alex Tiessen, Principal

5. **FEES AND PAYMENT TERMS**

Fees: [redacted]

Expenses: N/A

The above fees and expenses cannot be exceeded without prior written approval from Enbridge.

Fees are payable by Enbridge within forty-five (45) days of receipt from the Consultant of an appropriate invoice setting out in reasonable detail the nature of the services provided.

[Remainder of page intentionally left blank; signature page to follow]

Dated as of July 20, 2020.

1 Introduction

Posterity Group Consulting Inc. (Posterity Group) is pleased to submit this draft proposal to Enbridge Gas Inc. (Enbridge). We understand senior staff at Enbridge need to consider the financial and operational impacts of the range of climate policy related impacts Enbridge could face over the next 30 years. Enbridge's Energy Transition Planning (ETP) project team is working across departments (Load Forecasting, Network planning/system planning, Asset Management, Gas Supply, Rate and Regulations) to facilitate discussions, collect information, and provide senior decision makers with a quantified range of potential planning scenarios.

This document outlines how Posterity Group will support the Energy Transition Scenario Analysis (ETSA) by modeling future load at the granular level of energy end uses, different building types, rate classes, and regions, and undertaking scenario analysis to explore several possible economic and policy scenarios under which Enbridge may operate in the future.

We propose a methodology which has successfully been used with FortisBC to undertake scenario analyses in support of its Long-Term Gas Resource Plan (LTGRP) filings to the BCUC. Posterity Group successfully supported FortisBC using this methodology for its 2017 LTGRP filing and is currently engaged in support of their 2022 LTGRP submission.

In this engagement, Enbridge will be able leverage internal modelling, forecasting and research the company is already undertaking (e.g., Enbridge's load forecast, Enbridge's hydraulic model 'Synergi Gas'). Enbridge will also be able to build on previous investments in its:

- Jurisdictional end-use level dataset developed in support of ongoing DSM planning and IRP analysis, and the
- Power BI user-interface tool currently being developed to support energy efficiency planning for both DSM and IRP.

The approach presented in the following section will involve:

- Defining critical drivers, characterizing their relational effects, and establishing possible ranges and likely probability distribution of these ranges;
- Building out a more comprehensive end-use level reference case, including adding electric end-uses and gas rate classes;
- Undertaking parametric analysis to understand the effects of each critical driver over its range in the forecast period;
- Undertaking analysis to bound the possible futures, i.e., defining upper and lower boundaries to establish a cone of uncertainty;
- Using visualization via the Power BI user-interface tool to facilitate development of 'what if' planning scenario narratives; and
- Assessing directional change of critical drivers for each planning scenario, quantifying impacts to critical drivers, and undertaking scenario modelling.

At the end of this engagement Enbridge will have a comprehensive end-use level dataset that reflects several possible futures and a user-interface tool that allows decision makers to explore this dataset and distill quantitative impacts (e.g., how gas use and GHG emissions will change) under different forecast scenarios.

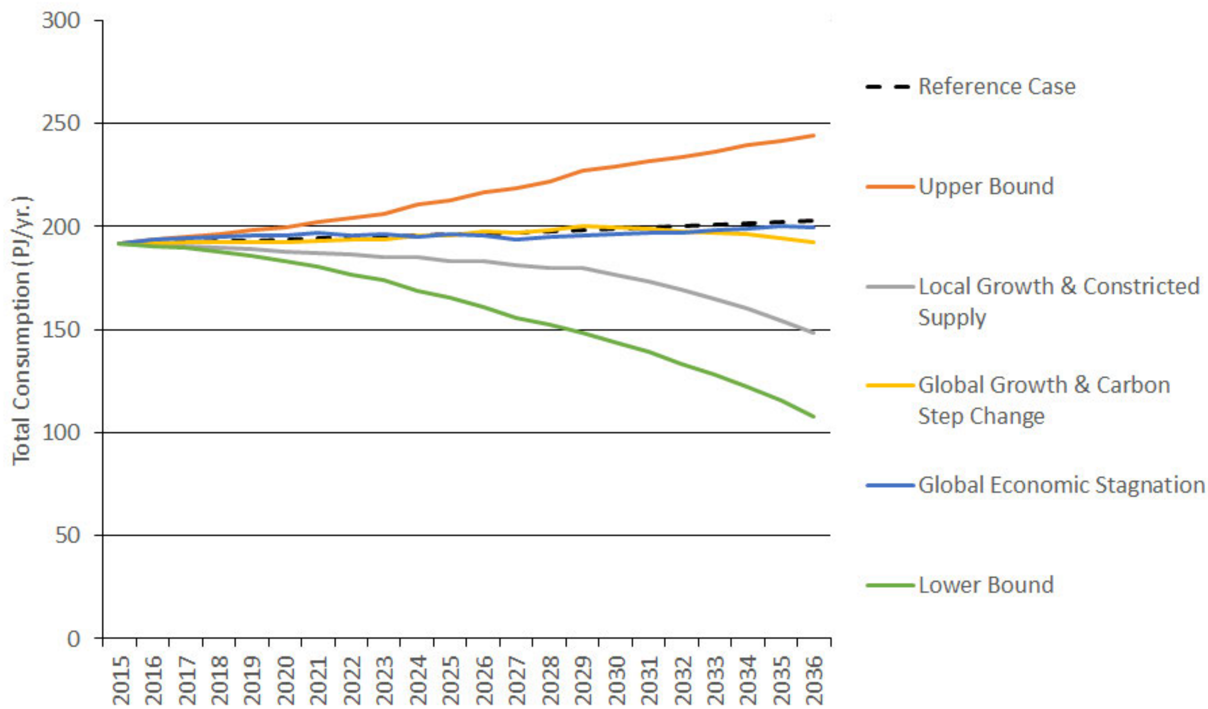
2 Approach

Our proposed approach involves defining the range of possible future operating environments from two perspectives:

1) An 'if, then' bottom up method that identifies critical drivers which could have a meaningful influence on gas use in Ontario (e.g., carbon price), defines the relational effects between each driver and how gas use is influenced (e.g., carbon price will influence fuel switching via price elasticity at the customer level), and the possible range (e.g., $50/tonne - $200/tonne). We can then examine the impacts of these drivers varying over their possible ranges and use this analysis to define an upper and lower bound. *[Work Packages 1 and 2]*

2) A 'what if' scenario development method that leverages the 'if, then' analysis to explore and define plausible future narratives (e.g., 80% GHG reduction by 2050) and quantifies what critical drivers look like under these scenarios; allowing each scenario to be modelled at an end-use level. *[Work Packages 3 and 4]*

Exhibit 1 – Example Output after Completing Both 'If, Then' and 'What If' Methods



We recommend completing activities under four work packages:

- Work Package 1: Characterize Critical Drivers and Finish Developing Reference Case
- Work Package 2: Parametric Analysis and Boundary Scenario Definitions
- Work Package 3: Planning Scenario Definitions
- Work Package 4: Scenario Analysis and Modelling

Work Package 1 – Characterize Critical Drivers and Finish Developing Reference Case

Activity 1.1 – Initiation Meeting

***Objective**: Define key critical drivers; Solicit input and direction from Enbridge Energy Transition Scenario Analysis (ETSA) team*

***Deliverables**: Meeting minutes*

The initiation meeting will identify logistical, scheduling and communications issues and protocols and will be an opportunity for the consulting team to request specific data and research products.

The second part of the meeting will involve a working session which will focus on prioritizing critical drivers "CDs" and collecting input and context from the Enbridge ETSA team [See Appendix A for a list of potential CDs]. We will also identify relevant internal Enbridge stakeholders and define agenda items ahead of the discovery sessions described in Activity 1.2.

Activity 1.2 – Discovery Sessions

***Objective**: Meet with Enbridge staff to identify relevant internal data and research, discuss relational effects and solicit input on reasonable ranges (and likely probability distribution of these ranges) for each of the key critical drivers.*

***Deliverables**: Meeting minutes*

Under this activity, a series of discovery meetings (1-2 hours each) will be held with Enbridge staff across different departments to solicit input and identify relevant internal data sources (e.g., information on RNG, Hydrogen research and forecasts).These may include:

- Network Planning/IRP
- Load Forecast (and load forecast inputs),
- Gas Supply Planning
- Renewable Gases forecasting (staff familiar with RNG and Hydrogen),
- Carbon Capture & Storage,
- Transportation or other load growth
- Codes/Standards/Government Relations
- Carbon Pricing
- Revenue Requirements/Rate Impacts

**If Enbridge can do most of this work, PG effort can be scaled back, but not completely. At a minimum, effort needed to provide direction on what input is required and to review and process outputs (~ 16 hours).*

Activity 1.3 – Identify & Collect Additional Data Sources, Finalize Critical Driver Assumption Tables

***Objective**: Compile a complete characterization of key critical drivers, with details on relational effects, possible ranges, and the likely probability distribution of these ranges (e.g., are they normally distributed?).*

***Deliverables**: Critical Driver Assumption Tables*

We will work with the Enbridge ETSA team to follow up and collect information discussed during the discovery sessions. If forecasts for certain drivers do not exist (e.g., RNG potential and cost points), Posterity Group can help advise on reasonable ranges.

We will also work with Enbridge to facilitate access to relevant external data sources. For example:

- Permission to use data from Posterity Group's 2017 MOECC study; and
- Permission to use IESO APS data, so that end-use fuel share components can be built out and be aligned with APS.

Activity 1.4 – Finish Developing Reference Case

Objective: *Build out a more comprehensive end-use level reference case, including adding electric end-uses and gas rate classes*

Deliverables: *More comprehensive reference case dataset (to be provided under Work Packages 2 and 4)*

During this activity we will build-out additional elements of the reference case in Enbridge's existing end-use model. For example, the current model does not include electricity or other fuel use (or gas fuel shares) so effort will be required to determine the scale of potential for switching from electricity (or other fuels) to/from gas.

We also plan to add gas rate classes at this point to enhance future functionality of the model (e.g., introducing rate classes will be important for assessing rate impacts of forecasted gas use changes).

Work Package 2 – Parametric Analysis and Boundary Scenario Definitions

Activity 2.1 – Parametric Analyses

Objective: *Understand the effects of each critical driver over its range in the forecast period*

Deliverable: *Inputs to Activity 2.2 deliverable*

A parametric analysis will be undertaken for each critical driver of interest to understand the effects of each critical driver over its range in the forecast period. This activity will include analysis against the reference case.

The output of this parametric analysis will be represented as a set of functions describing how volume and peak is affected by each critical driver over its range.

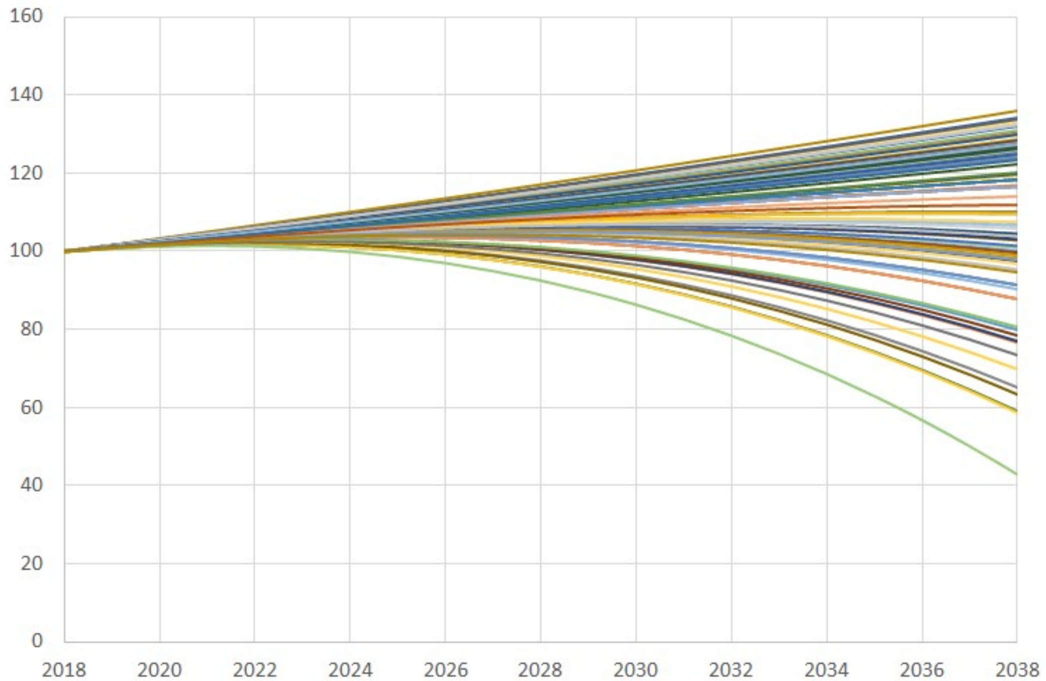
Activity 2.2 – Boundary Scenario Definitions

Objective: *Bound the possible futures, i.e., defining upper and lower boundaries to establish a cone of uncertainty.*

Deliverable: *Planning dataset (including reference case outputs, upper and lower boundary scenarios, and critical driver sensitivity outputs)*

Subject to discussion with Enbridge, this activity could involve conducting stochastic (i.e., probabilistic) simulation using the probability distributions assigned to the critical drivers. We plan to vary the 5 most impactful critical drivers, while holding all others constant. The outcome of this simulation will allow us to define upper and lower bounds to the forecast.

Exhibit 2 – Stochastic Simulation Example



Activity 2.3 – Update User-Interface Tool

***Objective**: Provide intuitive access to the planning dataset and present information in an actionable format*

***Deliverable**: Updated Power BI user-interface to support Work Package 3 planning session*

This activity involves updating the Power BI user-interface tool currently being developed to support DSM and IRP planning. This tool will allow Enbridge users to interact with the detailed modelled planning data set and quickly explore the impact of changing one or several critical drivers over a planning period. Users will be able to adjust 'sliders' to see the effects of varying different critical drivers and see how outcomes compare to the reference case, and where they are positioned relative to the upper and lower boundaries.

Work Package 3 – Planning Scenario Definitions

Activity 3.1 – Planning Session to Develop Scenario Narratives

***Objective**: Define planning scenario narratives*

***Deliverable**: Scenario narratives and instructions on directional change of critical drivers*

Under this activity, the consulting team will facilitate a workshop with Enbridge stakeholders to define a set of 'what if' planning scenarios; first via narrative, then in relation to the directional change in each of the critical drivers. This activity will have three parts:

<u>Part 1 - Pre-planning session preparation</u>

The objective of part one is to develop strawman planning scenario descriptions

Ahead of the planning session, we will solicit input from the Enbridge ETSA team and additional company stakeholders to draft strawman scenario descriptions. We have budgeted for 3 planning scenarios, which could potentially include:

- A consensus scenario that describes what Enbridge "thinks will happen",
- An aggressive decarbonization scenario (e.g., 80% GHG reduction by 2050), and
- A utility decentralization scenario with rapid technological disruption, lower electric prices, the advent of smart cities and clean tech.

We imagine some of the thinking that went into the MaRs scenario work may be useful inputs to consider when developing these scenarios along with many other key thinking and work products for recent filings, etc.

<u>Part 2 - Planning session</u>

The objective of Part 2 is to finalize planning scenario narratives.

The planning session will be aided by the strawman scenario descriptions and by the user-interface tool developed in Work Package 2.

We will structure the planning session to provide attendees an overview of the critical drivers and their impacts, introduce the reference case and upper and lower boundaries, and then table the 'what if' planning scenarios for discussion.

We will discuss critical drivers relative to each planning scenario and session stakeholders will be able to adjust critical drivers across their range to see the impacts on the planning forecast.

<u>Part 3 - Post-planning session investigation and input</u>

The objective of Part 3 is to collect input on directional change and magnitude of change for each critical driver under each planning scenario.

As a following up to the session, we will provide instructions for users to navigate the user-interface tool to explore each planning scenario narrative and record their input on critical driver changes. We hope to solicit input from planning session attendees, as well as additional key stakeholder at Enbridge who were not able to attend the session. The goal is to have input from a large enough group of Enbridge stakeholders to leverage the benefits of 'crowd forecasting' to establish consensus on the direction of change (and the magnitude of this change) for each critical driver for each planning scenario.

Activity 3.1a – External Stakeholders - Develop Scenario Narratives

***Objective**: OPTIONAL ACTIVITY - Define external stakeholder-driven scenario narratives*

Deliverable*: Scenario narratives and instructions on directional change of critical drivers*

Under this activity, the consulting team will facilitate a workshop with Enbridge's external stakeholders to define 'what if' planning scenarios that incorporate external stakeholder views and input. This process can provide value in two ways:

- A more robust analysis can be developed by drawing on external knowledge and expertise, and
- Enbridge is given the opportunity to discuss ETP issues constructively with external stakeholders in an informal forum rather than as part of a regulatory proceeding. In Posterity Group's experience, this approach has often led to fewer, and more focused intervenor requests in subsequent regulatory filings.

This activity will be structured similarly to Activity 3.1, step 2. We anticipate using much of the same material and process to deliver an external-facing workshop to define scenarios, first via narrative; then in relation to the directional change in each of the CDs.

For the purposes of this proposal, we assume outputs from this session will inform 'Part 3' of the internal process outlined above (i.e., external input will ultimately inform the three internal planning scenarios).

Activity 3.2 – Develop Input Assumptions for Planning Scenarios

Objective*: Define input assumptions for each planning scenario based on outputs of Activity 3.1*

Deliverable*: Scenario input assumption tables*

We will review and collate findings from Activity 3.1 and draft a set of input assumptions for each planning scenario. The draft assumption tables will be circulated to the Enbridge ETSA team for review and input before finalizing.

Work Package 4 – Scenario Analysis and Modelling

Activity 4.1 – Scenario Modelling

Objective*: Provide a comprehensive end-use level dataset that reflects several possible futures and a user-interface tool that allows decision makers to explore this dataset and distill quantitative impacts (e.g., how gas use and GHG emissions will change) under different forecast scenarios*

Deliverable*: Complete planning dataset (including reference case outputs, upper and lower boundary scenarios, critical driver sensitivity outputs, and planning scenarios); Updated Power BI user-interface*

We will undertake detailed modelling of the defined planning scenarios, each representing a potential "future world" under which Enbridge would deliver services. The parametric analyses outputs developed under Work Package 2 and the input assumption developed under Work Package 3 will be used as inputs to model analyses for each of the planning scenarios.

The user interface tool will be updated as part of this activity to enable exploration of the future planning scenarios.

Activity 4.2 – Review Scenario Results with Enbridge and Revise

Objective: *Assess the degree of variation of results, and ground truth modelled impacts*

Deliverable: *Revised planning dataset and User-interface*

This activity is proposed because we understand producing scenario results can sometimes necessitate iteration. During this step we will review modelled results with the Enbridge ETSA team with two objectives:

- To assess whether the degree of variation in the results is sufficient to explore the desired range of outcomes, and
- To 'ground truth' the modelled impacts with respect to required actions in the physical world (e.g., rate of efficient new construction).

This activity is included as an explicit step for review and iteration.

3 Schedule

We propose the following milestone schedule:

Exhibit 3 – Milestone Schedule

Work Package	Work Package Timelines	Activity Completion Dates
1 – Characterize Critical Drivers and Finish Developing Reference Case	Mid July – Early September	A1.1 Late Jul A1.2 Early Aug A1.3 Mid Aug A1.4 Early Sep
2 – Parametric Analysis and Boundary Scenario Definitions	Mid September – Late October	A2.1 Early Oct A2.2 Mid Oct A2.3 Late Oct
3 – Planning Scenario Definitions	Early November – Early December	A3.1 Late Nov A3.2 Early Dec
4 – Scenario Analysis and Modelling	Mid December – Early Feb	A4.1 Mid Jan A4.2 Early Feb

4 Budget and Level of Effort

Exhibit 4 presents an estimated level of effort for each project activity; actual time required could vary across activities and work packages.

Exhibit 5 includes notes on each budget line item and indicates which activities are optional and where there is additional flexibility in the budget estimate.

Similar to previous engagements with Enbridge, we propose undertaking work on an hourly basis against an overall budget ceiling, with a monthly billing cycle for fees incurred in the preceding month.

POSTERITY GROUP

Exhibit 5 – Budget Notes

Work Package	Activity	Flexibility Category	Notes
WP1	1.1 Initiation Meeting	Core	Required to define key critical drivers, and solicit input and direction
WP1	1.2 Discovery Sessions	**Flexible**	If Enbridge can do most of this work, PG effort can be scaled back, but not completely. At a minimum, approximately [redacted] needed to provide direction on what input is required and to review and process outputs.
WP1	1.3 Additional Data Sources, Finalize CD Tables	Core	Scales based on final list of CDs. Relationship is not linear – some CDs require more effort to characterize and model.
WP1	1.4 Finish Developing Reference Case	Core	Required to build out a more comprehensive end-use level reference case, including adding electric end-uses and gas rate classes.
WP1	1.3a, 1.4a Provide Documentation	Core	Required to document assumptions.
WP1	PM Allowance	Core	Scales based on total WP effort.
WP2	2.1 Parametric Analysis	Core	Scales based on final list of CDs. Relationship is not linear – some CDs require more effort to characterize and model.
WP2	2.2 Boundary Definitions	Core	Required to define upper and lower boundaries.
WP2	2.3 Update User-Interface Tool	Core	Required to update and customize User-Interface to support WP3.
WP2	PM Allowance	Core	Scales based on total WP effort.
WP3	3.1 Internal Planning Session	Core	Scales based on final list of CDs, and # of planning scenarios.
WP3	3.1a External Planning Session	**Optional**	External stakeholder input.

Work Package	Activity	Flexibility Category	Notes
WP3	3.2 Develop Input Assumptions	Core	Scales based on final list of CDs, and # of planning scenarios.
WP3	3.2a Incorporate External Input	**Optional**	External stakeholder input.
WP3	PM Allowance	Core	Scales based on total WP effort.
WP4	4.1 Scenario Modelling	Core	Scales based on final list of CDs, and # of planning scenarios.
WP4	4.2 Review Scenario Results w/ EGI & Revise	Core	Scales based on depth of review and # of iterations required to finalize analysis.
WP4	4.1a, 4.2a Provide Documentation	Core	Required to document assumptions.
WP4	PM Allowance	Core	Scales based on total WP effort.

Appendix A Possible Critical Drivers

Exhibit 5 identifies 16 possible critical drivers (CDs).

Exhibit 6 – Potential Critical Drivers for Analysis & Inclusion in Scenario Analyses

#	Critical Driver	Source	Comments	Mode of Operation
1	Carbon price	Range defined by Enbridge/PG	Potential for multiple discrete trajectories. Note that current model does not include electricity or other fuel use (or gas fuel shares) so significant effort would be required to determine the scale of potential for switching from electricity (or other fuels) to/from gas based on additional carbon price.	Price driver – fuel switching via elasticity at the customer level
2	Natural gas price	Range defined by Enbridge	Note that current model does not include electricity or other fuel use (or gas fuel shares) so significant effort would be required to determine the scale of potential for switching from electricity (or other fuels) to/from gas based on commodity price.	Price driver – fuel switching via elasticity at the customer level
3	Renewable Natural Gas supply	Enbridge, based on internal (and perhaps external) stakeholder input	Potential for multiple discrete trajectories	Fuel switching: defined level of displacement of natural gas at the system level, possibly policy-driven via clean fuel standards.
4	RNG cost	Enbridge, based on internal (and perhaps external) stakeholder input	Potential for multiple discrete trajectories	Exogenous – assume RNG cost based on external Enbridge forecasts.

#	Critical Driver	Source	Comments	Mode of Operation
5	Hydrogen supply	Enbridge, based on internal (and perhaps external) stakeholder input	Potential for multiple discrete trajectories	Fuel switching: defined level of displacement of natural gas at the system level, possibly policy-driven via clean fuel standards.
6	Hydrogen cost	Enbridge, based on internal (and perhaps external) stakeholder input	Potential for multiple discrete trajectories	Exogenous – assume H2 cost based on external Enbridge forecast.
7	Customer growth	Enbridge	Potential for regional variation at the municipal level. (May require ability to hold customer numbers constant after specific years in specific regions)	Account growth
8	Natural Gas Transportation demand	Enbridge, based on internal (and perhaps external) stakeholder input	Customer segment definition would be required.	Defined level of fuel switching (from traditional transportation fuels). Addition of natural gas load in specific regions
9	Fuel switching	Enbridge or Enbridge/PG, based on internal (and perhaps external) stakeholder input	Potential for multiple discrete trajectories. Note that current model does not include Electricity use, so some effort would be required to determine scale of potential for switching from Electricity to Gas.	Policy Driver – Defined level of fuel switching: displacement of natural gas in specific regions, with the ability to vary input by sector. Price driver – fuel switching via elasticity at the customer level
10	Climate change impacts	PG to provide HDD/CDD estimates over study period	Potential for multiple discrete trajectories.	Treat as an exogenous driver: Examine effect of alternate HDD regimes on key scenarios.

#	Critical Driver	Source	Comments	Mode of Operation
11	Carbon capture impacts	Enbridge or Enbridge/PG, based on internal (and perhaps external) stakeholder input	Multiple discrete trajectories	Fuel switching: defined level of displacement of natural gas by "carbon captured natural gas" at the system or equipment level
12	Carbon capture costs	Enbridge, based on internal (and perhaps external) stakeholder input	Multiple discrete trajectories	Price driver – fuel switching via elasticity at the customer level
13	Price elasticity	Reference long-run price elasticity values developed by Posterity	Investigate at effects within a price elasticity range.	Treat as an exogenous driver: Examine effect of moving elasticity over its range on key scenarios.
14	New construction codes	Enbridge internal expertise & PG input to translate government statements into model inputs	Model how code impacts annual demand and the potential for running DSM programs.	Develop as a DSM scenario, or as an alternate baseline.
15	Retrofit codes	Enbridge internal expertise & PG input to translate government statements into model inputs	Model how code impacts annual demand and the potential for running DSM programs.	Develop as a DSM scenario, or as an alternate baseline.
16	Appliance standards	Enbridge/ PG	Model how standard impacts annual demand and the potential for running DSM programs.	Develop as a DSM scenario, or as an alternate baseline.

POSTERITY GROUP

ETSA – Additional Hours Proposal

Project: Energy Transition Scenario Analysis (ETSA)
Re: Additional hours required to help assemble data and fill data gaps
Submitted to: Enbridge
Submitted by: Posterity Group
Date Submitted: 16 November 2020

1 Introduction & Background

Posterity Group (PG) and Enbridge (EGI) recently conducted Discovery Sessions for the ETSA project and are now preparing to undertake parametric analysis for each of the Critical Drivers (CDs). Although the EGI project team is working hard to collect and prepare data related to the CDs, we have realized we underestimated the amount of time and effort required to finalize the CD data. We apologize that the effort to assemble data was underestimated in the original proposal.

Value and outcomes for Enbridge

An investment of additional time now will:

- Allow the PG team to provide the support required at this important phase of the project to help establish internal frameworks for thinking about long term planning and processes to collect and aggregate data. This investment will be valuable to EGI in future planning cycles.
- Reduce the risk of data and important information being missed or incorrectly used, resulting in a better planning dataset and possibly less re-work required later.
- Ensure we do not run out of hours later in the project. We want to make sure budgeted hours for future tasks are available so that we can successfully complete the project.

Request for additional hours

We are requesting additional hours to allow our team to:

1) Support EGI in its internal process of collecting CD input data. Guided by our recent work with FortisBC (who is going through their 3rd end-use based long-term resource planning cycle), we underestimated the support EGI requires.
2) Undertake research to fill data gaps. We did not budget specific effort to undertake independent research to fill CD data gaps (e.g., long-term price elasticity literature review research). The effort to undertake this research is less than we have incurred for similar work with other clients thanks to the expertise we have already established.
3) Adapt CD data provided by EGI and facilitate iterative consultations with EGI to finalize. We did not account for differences in data and approaches between legacy UG and EGD. We also overlooked the extent to which we need to extrapolate, fill data gaps, and propose assumptions regarding potential upper and lower scenario planning bounds (in our work with FortisBC, they have typically undertaken this effort internally).

2 Additional Support Activities

We are requesting additional level of effort for three activities.

Activity 1.5.1 - Support EGI in its internal process of collecting CD input data

- Additional hours to support EGI in identifying what information is relevant to a CD and thinking through modelling impacts. This includes additional working meetings, phone calls, and email communication.
- Providing additional templates and guidance to facilitate data assembly

Outcome: An easier experience for EGI staff to assemble CD-related data.

Activity 1.5.2 - Undertake research to fill data gaps

- There are gaps in data that EGI would like to address through additional research. For example, we have already identified EGI's short-term price elasticity assumptions are not applicable to the long-term planning exercise and there is a need for our team to propose long-term price elasticity assumptions based on a literature review. We anticipate there may be similar additional requirements to fill data gaps once the initial data from Enbridge has been assembled.

Outcome: The project has all the necessary input data to inform parametric analysis and scenario development activities; reduced burden on EGI staff to provide data.

Activity 1.5.3 - Adapt CD data provided by EGI and facilitate iterative consultations with EGI to finalize

- Extrapolate, consolidate, and adapt data
- Propose assumptions regarding potential upper and lower scenario planning bounds
- Consult with EGI to ensure any augmentations to the data (e.g., extrapolating or consolidating) are reasonable, and iterate if necessary

Outcome: CD data is structured properly to support parametric analysis and scenario development, minimizing the risk of data being misinterpreted or improperly treated in the modelling tasks; consensus on data augmentation.

3 Estimated Level of Effort

The table below presents a level of effort estimate for this work, but actual time required could vary for each activity. We recommend EGI consider approving a slightly higher budget ceiling; this would allow for greater flexibility in a situation where we (PG and EGI) jointly decide that more hours are required.

Activity	Activity Name	[redacted]		[redacted]
		[redacted]		[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]	[redacted]

[redacted]		[redacted]	[redacted]	[redacted]

ETSA – Reference Case Calibration Proposal

Project: Energy Transition Scenario Analysis (ETSA)
Re: Additional effort required to calibrate reference case to updated data
Submitted to: Sophear Net, Enbridge
Submitted by: Posterity Group
Date Submitted: 20 November 2020

1 Introduction & Background

The reference case being used for the ETSA project is based on the one developed for the recently completed APS (but includes some modifications made through our work supporting DSM planning and IRP activities). We understand Enbridge (EGI) has more recent base year and forecast data available. If EGI wants the ETSA project to reflect this updated information we could calibrate the APS reference case to align with EGI's recent data more closely; however, effort for this has not been scoped.

We would need direction very shortly if EGI wanted to make this update to avoid costly re-work (the reference case ideally needs to be updated before we can finalize parametric analysis and start scenario development activities).

Value for Enbridge

We understand EGI has an updated forecast that is using 2019 as the base year and includes an updated 10-year reference case trajectory.

Aligning the ETSA reference case with this updated information will allow ETSA scenarios to be compared to the most recent complete year of data and forecast. This means that changes to critical drivers will be more intuitive to EGI team members because alternate scenarios will be anchored around current base year data and an updated forecast trajectory.

It also improves the credibility of the outputs. For example, using the APS reference case assumptions entails a certain degree of risk; not all APS reference case assumptions make sense anymore, and some base year assumptions are unclear and difficult to trace.

Considerations for Enbridge

If moving to a 2019 base year and updated forecast trajectory, EGI needs to consider a couple elements:

- The ETSA project will be using base year and reference case numbers that differ from the DSM planning group (which is using the APS reference case); EGI needs to decide internally whether this is something that is acceptable.
- Whether EGI still wants to maintain a fully granular APS reference case for the ETSA project (2017 Base Year and forecast, with rate class and account information).

2 Proposed approach

We do not recommend undertaking a full, comprehensive update to the reference case; this is an extensive undertaking which we do not think is a good investment for EGI right now. Instead, a full update to the reference case should ideally be timed to support the next ETSA and APS planning cycles.

The simplified approach we recommend involves:

- Calibrating the APS 2019 consumption numbers so that they align with 2019 normalized actuals; essentially a step function change in the model, moving from a 2017 to a 2019 base year.
- Updating the APS reference case growth assumptions (2020-2038) to align with the EGI's updated 10-year forecast. In other words, adjusting the trajectory of the reference case to match EGI's current outlook.

What APS assumptions and structure would need to be maintained?

- Assumption about end use share. I.e., the % of gas that goes to each end use within each segment (except for industrial and large volume HVAC assumptions, which we are fixing).
- Sector segmentation structure. For example, to avoid significant additional effort, we need to maintain APS segment categories so that APS analysis outputs are still applicable.
- Similarly, assumptions about equipment/measure saturation will not be adjusted (nothing beyond what we have already adjusted for DSM planning purposes).
- Electricity end-use assumptions.

What are the impacts to the CD parametric analysis?

- We will need a full list of assumption that went into the updated 10-year forecast so that it is clear what CD assumption have changed between 2018 and 2020.
- This will be important because CD parametric analysis will be modelling the delta between a future CD assumption and the assumption embedded in the reference case.

3 Reference Case Calibration Activities

To calibrate the reference case to 2019 data, we would undertake two activities.

Activity 1.6.1 – Calibrate to 2019 actual data

- Calibrate 2019 APS data using 2019 normalized actuals for each sector, by segment and by rate zone
- Discuss data inconsistencies with EGI, if required, and iterate calibration.

Outcome: ETSA scenarios can be compared to the most recent complete year of data; More credible outputs.

Activity 1.6.2 – Update reference case growth assumptions

- Update the APS reference case growth assumptions (2020-2038) to align with the EGI's updated 10-year forecast. This includes updating the account growth and consumption growth for each sector, by segment and rate zone and extrapolating trend out to 2038.
- Discuss data inconsistencies with EGI, if required, and iterate calibration.
- We will require from EGI a full list of assumptions embedded in 10-year forecast, including but not limited to assumptions on codes and standards, gas price, carbon price, price driven fuel switching, and DSM.
- We will also need to understand if growth assumption should flatline (rather than continuing on the same trajectory) beyond the 10 year forecast for any of the segments-rate zone combinations.

Outcome: More intuitive critical drive modelling outputs because alternate scenarios will be anchored around current base year data and an updated forecast trajectory; More credible outputs.

4 Estimated Level of Effort & Schedule Impact

The table below presents a level of effort estimate for this work, but actual time required could vary for each activity.

Activity	Activity Name	[redacted]	[redacted]
		[redacted]	[redacted]
[redacted]	[redacted]	[redacted]	[redacted]
[redacted]		[redacted]	[redacted]

The project schedule would be impacted by approximately 2-3 weeks. We would need to complete this work prior to finalizing parametric analysis and undertaking scenario analysis.

Energy Transition Scenario Analysis project Workplan & Schedule Revision

Project: Energy Transition Scenario Analysis
Re: Request to end the project by May 31, 2021
Submitted to: Jennifer Murphy and Cora Carriveau, Enbridge
Date Submitted: Revised 19 February 2021

1 Introduction & Background

We understand EGI would like to complete the project early because the current project completion date of June 30 is out of sync with internal needs. We believe we can complete the project a month earlier (May 31) by making workplan adjustments and revising the project budget.

Value for Enbridge

Finalizing the project sooner will allow EGI to incorporate project outputs in their internal planning processes. It should also reduce the risk of additional budget overruns.

Areas of Opportunity

We reviewed each active and upcoming project work package for opportunities to accelerate the project schedule without compromising the deliverables. We identified five areas of opportunity:

1) ETSA team (PG, EGI) to commit to timelines for providing feedback and information **[Additional Budget Required? No]**
   - Moving forward, we should be screening issues, questions, and items flagged for input to assess whether they have a material impact on the project outcomes, including whether input/feedback is on the critical path. Priority issues require deadlines for feedback and turn-around.
2) Support to address unbudgeted effort **[Additional Budget Required? Ideally]**
   - The project is currently tracking over budget, largely due to additional time required in work package (WP) #1 for the initiation meetings, discovery sessions, and defining and developing critical driver (CD) inputs.
   - This unbudgeted effort was important to help the EGI ETSA team build awareness about the scenario planning process and invest in its internal capacity to understand critical drivers and identify key input assumptions across the company

- In hindsight, we underestimated the time required to work with EGI to accomplish these activities largely because our budget estimate was guided by recent projects with FortisBC, who has already gone through several planning cycles
- The budget overrun is larger than we would like, but we acknowledge Posterity Group should share part of this risk
- We would like to request EGI consider adding budget to cover a portion of this overrun; any additional budget will be applied to the remaining project activities and will allow Posterity Group to complete the project with an improved budget outcome.

3) Remove external stakeholder activities from WP3 **[Additional Budget Required? No, budget reduction]**

- After discussion with Enbridge, we should decide whether external stakeholder tasks are required and if effort can be redeployed. Omitting activities 3.1a and 3.2a from the schedule will shorten the timeline for WP3 and reduce the risk of further schedule slip.
- Budget for these external stakeholder activities can be redeployed. The additional budget can support the scenario planning exercise, which we hope will ensure the subsequent tasks of scenario analysis and modelling can be conducted very efficiently.

4) Start WP3 now to complete WP3 sooner **[Additional Budget Required? Yes]**

- Initiate WP3 now so that we start working on the scenario narratives in parallel to WP2. We suggest having a draft of the scenario narratives and qualitative input assumptions in mid-March and finalize them using the results of WP2 in late March.
- We propose adding budget to cover additional effort in February and beginning of March. This effort will focus on facilitating a constructive planning session and streamlining post-planning input.

5) Reduce need for revisions in WP4 **[Additional Budget Required? No]**

- To meet a May 31 deadline, we are assuming revisions to the scenarios will be minimal, or perhaps not even required, due to time invested in the preceding work packages.

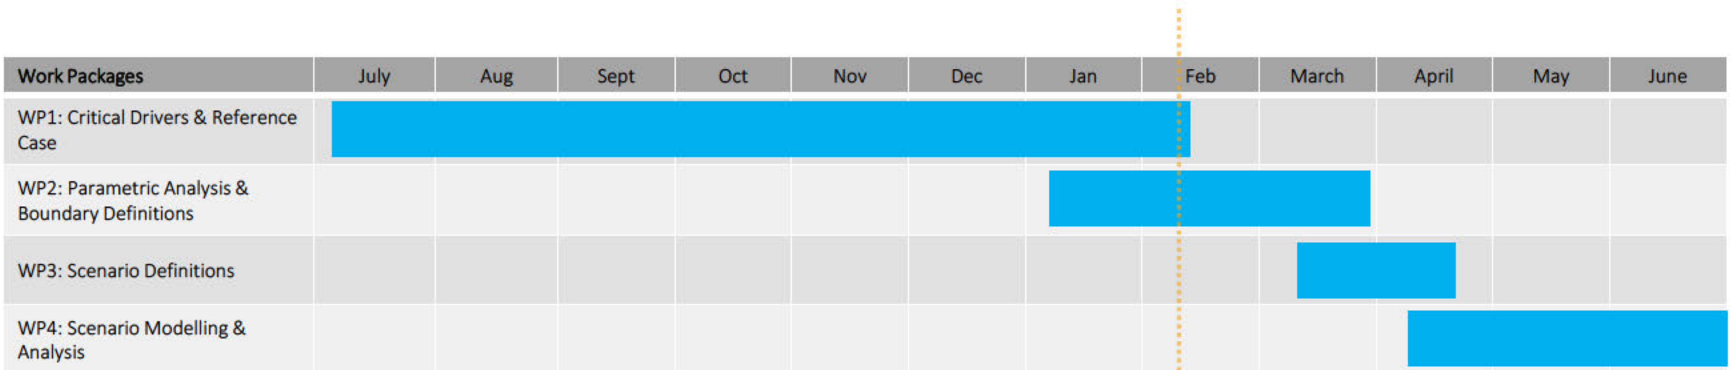
The following sections provide a summary of the current workplan, our proposed adjustments to accelerate the project timeline, and the estimated additional level of effort.

2 Current Workplan & Schedule

Figure 1 below provides a Gantt view of the schedule. This information is current as of February 12th, 2021 and shows that:

- The work packages (WP) are sequential, and currently have the following status:
  - WP1 is nearly complete
  - WP2 is underway
  - WP3 and WP4 have not started
- Project end date of June 30th, 2021

Figure 1 – Current Schedule, Gantt view



3 Revised Workplan & Schedule

We have reviewed each active and upcoming project work package for opportunities to accelerate the project schedule without compromising the deliverables:

All Work Packages

- Screen issues, questions, and items flagged for input to assess whether they have a material impact on the project outcomes, including whether input/feedback is on the critical path.
    - For priority issues, ETSA team to commit to timelines for providing feedback and information.
- Ensure sufficient budget is available to complete remaining activities.
    - WP1 is currently over budget, largely due to additional time required for the initiation meetings, discovery sessions, and defining and developing CD inputs.
    - We propose adding budget to ensure sufficient effort is available for the remaining project activities.

Work Package 2 – Parametric Analysis & Boundary Definitions

- We do not think it is feasible to accelerate WP2. The tasks in this work package are time intensive and are very difficult to accelerate without jeopardizing project outcomes.

Work Package 3 – Scenario Definitions

- We believe we can accelerate WP3 so that is starts mid-February and ends in late March:
    - Initiate WP3 now so that we start working on the scenario narratives in parallel to WP2. We suggest having a draft of the scenario narratives and qualitative input assumptions in early March and finalize them using the results of WP2 in late March.
        - We'd like to discuss how to we can update our approach for WP3. The objectives are:
            - Capitalize on the time window between mid-February and completion of WP2 to facilitate scenario narrative discussions and strategies with Enbridge *[Activity 3.1.1]*
            - Hold a constructive planning session as soon as WP2 is complete (i.e., as soon as the parametric analysis and slider tool are ready) *[Activity 3.1.2]*

        - Streamline post-planning session feedback and input to arrive at a final set of scenario definitions and qualitative input assumptions. *[Activity 3.1.3]*
    - After discussion with Enbridge, we should decide whether external stakeholder tasks are required and if effort can be redeployed. Omitting tasks 3.1a and 3.2a from the schedule will shorten the timeline for WP3 and reduce the risk of further schedule slip.
- Posterity Group to work with EGI to agree on a revised approach for WP3; the goal is to initiate work package activities as soon as possible, streamline stakeholder input, and minimize rework in WP4.

Work Package 4 – Scenario Analysis and Modelling

- We think we can slightly reduce length of WP4 so that the project can be completed by May 31st.
    - The main opportunity for reducing the timeline is in Activity 4.2 (reviewing and revising scenario modelling outputs). We expect the comprehensive feedback and input provided in the preceding work packages (WP1, WP2, and WP3) will ensure the scenario results are robust and will facilitate a shortened review and revision timeline.
    - We also propose redeploying effort from Activity 4.2 to Activity 4.1, to ensure draft results align with the intentions documented in WP3.
    - To meet a May 31 deadline, we are assuming revisions to the scenarios will be minimal, or not necessary.
- Rerunning the scenarios is time intensive and is difficult to accelerate due to the complexity of the model and size of the datasets. There is a minimum level of effort to make one adjustment because revisions to one aspect of a scenario typically have cascading effects in the model. If revisions are required, we will need to carefully discuss and agree on a complete list of revisions required prior to re-running the scenario models.

Revised Schedule

These suggested revisions result in the revised schedule presented in Figure 2 and Table 2 below.

Figure 2 – Revised Schedule, Gantt view

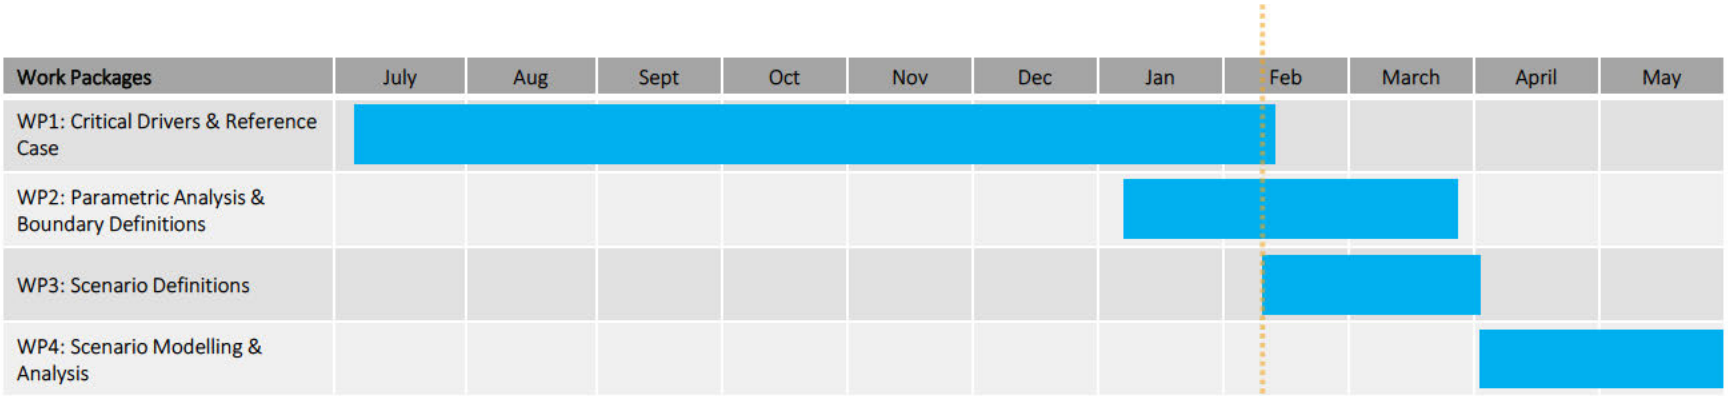


Table 1 – Revised Workplan

Task Name	Start	Finish	Status
WP1 - Critical Drivers & Reference Case	**07-20-20**	**01-12-21**	
WP1 PM	07-20-20	10-23-20	Complete
1.1 Initiation	08-25-20	08-25-20	Complete
1.2 Discovery Sessions	10-05-20	10-16-20	Complete
1.3 Additional Data Sources, Finalize CD Tables	08-31-20	10-09-20	Complete
1.4 Finish Developing Reference Case	09-28-20	12-04-20	Complete
1.4.1 Calibrate to 2019 actual data	12-07-20	01-04-21	Complete
1.4.2 Update reference case growth assumptions	12-14-20	01-11-21	Complete
1.5.1 - Support EGI in its internal process of collecting CD input data	10-19-20	12-31-20	Complete
1.5.2 - Undertake research to fill data gaps	10-19-20	12-31-20	Complete
1.5.3 - Adapt CD data and consult with EGI	10-26-20	12-31-20	In Progress
1.5.4 - Contingency	11-02-20	12-31-20	Complete
WP1 Documentation	12-23-20	01-12-21	Complete
WP 2 - Parametric Analysis & Boundary Definitions	**01-12-21**	**03-22-21**	
WP2 PM	01-19-21	03-22-21	In Progress

Task Name	Start	Finish	Status
2.1 Parametric Analysis	01-12-21	03-01-21	In Progress

POSTERITY GROUP

Level of Effort Estimate: Rebasing Support

Project: Energy Transition Scenario Analysis (ETSA)
Re: Estimated level of effort to facilitate using ETSA outputs for the rebasing application
Submitted to: Jennifer Murphy and Cora Carriveau, Enbridge
Submitted by: Alex Tiessen & Erika Aruja, Posterity Group
Version: 1
Date Submitted: 30 July 2021

The memo provides details on the additional effort and budget associated with supporting EGI with its rebasing application.

1 Scope of Work: Supporting EGI's Rebasing Application

As of July 15th, the ETSA project has gone over budget by 140 hours ($28,000):

- A component of this budget overrun is attributed to support Posterity provided to facilitate the use of ETSA scenario outputs by EGI's load forecasting group in their preparation for the upcoming rebasing application
- The project charter had not originally anticipated direct use of ETSA scenario outputs in EGI's rebasing application
- Additional effort was required to:
    - respond to inquiries,
    - participate in meetings,
    - enhance reporting outputs, and
    - revisit previous decisions made on critical drivers, scenario inputs, and base year and reference case calibration

2 Level of Effort & Budget: Supporting EGI's Rebasing Application

Exhibit 2 presents an estimate of the hours spent by the Posterity team between June 14 and July 15 in support of the rebasing application.

POSTERITY GROUP

Scoping Document: Adjusting ETSA Scenarios

Project: Energy Transition Scenario Analysis (ETSA)
Re: Estimated level of effort to adjust the Diversified and Steady Progress scenarios
Submitted to: Jennifer Murphy and Cora Carriveau, Enbridge
Submitted by: Alex Tiessen & Erika Aruja, Posterity Group
Version: 2
Date Submitted: 30 July 2021

This memo provides an estimate of the level of effort, budget and schedule required to adjust the Steady Progress and Diversified Portfolio ETSA scenarios based on EGI's direction. We estimate [redacted] and an elapsed project schedule of 6 weeks.

1 Scope of Work: Scenario Adjustments

1.1 Adjustments Required

After reviewing outputs for the Steady Progress and Diversified Portfolio scenarios, EGI determined the scenario analysis should be revised to incorporate different input assumptions:

1. Apply the reference case account forecast to the Steady Progress and Diversified scenarios.

Scenario Title:	"Steady Progress"	"Diversified Portfolio"
ORIGINAL DRIVER ASSUMPTIONS *Customer Accounts (growth due to population/economic growth)*	Detached/Attached Residential: High (due to community expansion) Commercial and Multifamily Residential: High (due to community expansion) Industrial: Reference	Detached/Attached Residential: High (due to community expansion) Commercial and Multifamily Residential: High (due to community expansion) Industrial: Reference
ADJUSTED DRIVER ASSUMPTIONS *Customer Accounts (growth due to population/economic growth)*	Reference Case for all sectors.	Reference Case for all sectors.

2. Incorporate a customer defection assumption into non-price driven fuel switching for existing buildings in the Diversified scenario:

Scenario Title:	"Diversified Portfolio"
ORIGINAL DRIVER ASSUMPTIONS *Non-price driven fuel switching*	New Construction (**Res, Com sectors**) • Starting in 2030, 10% of new Res and Com buildings across the province won't connect to the gas grid because select communities ban gas; by 2038, 20% of new construction won't connect.

Scenario Title:	"Diversified Portfolio"
	Existing Buildings (**Res, Com sectors**) • Starting in 2026, province wide, 10% of gas-fired space & water heating equipment that is being replaced annually (due to equipment reaching end-of-life) will be replaced with electric equipment (due to incentives).
ADJUSTED DRIVER ASSUMPTIONS *Non-price driven fuel switching*	New Construction (**Res, Com sectors**) • Starting in 2030, 10% of new Res and Com buildings across the province won't connect to the gas grid because select communities ban gas; by 2038, 20% of new construction won't connect. Existing Buildings (**Res, Com sectors**) • Starting in 2026, province wide, 10% of gas-fired space & water heating equipment that is being replaced annually (due to equipment reaching end-of-life) will be replaced with electric equipment (due to incentives). • 10% of the customers installing new electric space heating equipment will disconnect from the gas system (the assumption is these customers only have 1 gas appliance)

1.2 Assumptions

- All remaining Critical Driver settings will be maintained.
- The output and results from these 'adjusted' scenarios will replace the 'original' output/results (i.e., these adjustments do not create new scenarios).

1.3 Activities Involved

As discussed, adjustments to critical drivers typically require cascading updates to other critical driver inputs and elements of the scenario analysis. For each scenario, we will need to:

- Adjust the model input assumptions for the 'customer accounts' driver [both scenarios] and 'non-price fuel switching' driver [Diversified Portfolio scenario only]
- Re-run the model:
  - Account growth modelling instructions will need to be updated [both scenarios]
  - Existing account modelling instructions will need to be updated [Diversified Portfolio scenario only]
  - Fuel share modelling instructions for existing accounts will need to be updated [Diversified Portfolio scenario only]
  - Target PJ/Blend % modelling instructions for RNG and Hydrogen will need to be recalibrated [both scenarios]
  - DSM savings potential modelling instructions will need re-solved and re-applied at the rate class level [both scenarios]
- Quality Control review the adjusted scenario outputs
- Update the study report and PowerBI dashboard
- Review with EGI and respond to questions
- Edit and submit final deliverables.

2 Schedule: Scenario Adjustments

The proposed schedule incorporates the following:

- Time to rerun the DSM budget solver model which takes several days of elapsed time.
- Time to incorporate final comments on the ETSA study report and PowerBI dashboard
- Summer vacation schedules (which may cause our team to take a bit longer to finish some activities).

Exhibit 1 – Proposed Schedule

Activity	Completion Timeline
Adjust model input assumptions	1 weeks after project initiation
Re-run the two scenarios	4 weeks after project initiation
QC output	5 weeks after project initiation
Update the study report and PowerBI dashboard	5 weeks after project initiation
Review with EGI and answer questions	6 weeks after project initiation
Submit final deliverables	6 weeks after project initiation

3 Level of Effort & Budget: Scenario Adjustments

Exhibit 2 presents a level of effort estimate and associated budget to complete the proposed scenario adjustments.

Enbridge Gas Inc. (EGI)

Subject: Decarbonization Pathways Study

Dear Heidi & Jennifer,

With Enbridge Gas Inc. (EGI) currently preparing for a key rate rebasing period (2024-2028) and the continued policy narrative challenging the economy to address climate change, Ontario's integrated energy system is reaching a critical juncture. Energy systems are currently undergoing massive transformation in the ways that energy is generated, delivered, and consumed. The transformation is driven by a need to decarbonize systems and maintain resilient operations. Many advocacy groups and jurisdictional governments are promoting aggressive electrification of the energy system as an ideal solution to meet climate change targets. However, this position is largely unsupported by data on the feasibility and cost effectiveness.

Guidehouse is pleased to provide this proposal to EGI to provide a Decarbonization Pathways Study. We recognize that delivery of a decarbonized energy system requires a change to the commercial and regulatory structures governing the distribution sector. Policy and regulatory structure should provide a fair return for assets that serve the public's interest while supporting Canadian and Ontario government goals. These structures should also embrace mechanisms to mitigate risks associated with decarbonization. Specific and measurable guidelines are needed for utilities to demonstrate their assets complement the future energy system. This study will utilize our Low Carbon Pathways tools and analysis process to provide insights to inform internal planning efforts and educate external stakeholders, as necessary.

Our proposal highlights the extensive experience we have gained supporting the energy sector, including: utility companies, NGOs, and governments, with low carbon pathways analysis and GHG mitigation strategies. This proposal summarizes our tested approach that will support EGI with this very important work for the province of Ontario. The study will inform internal energy transition planning efforts related to, but not limited to, rebasing regulatory proceedings, scope 3 emission reduction targets, the Energy Transition Scenario Analysis (ETSA) project, and Integrated Resource Planning (IRP) work (i.e. the consideration of non-pipe solutions as alternatives instead of traditional infrastructure). The Study will also provide EGI with supporting material, including robust and defensible quantification of costs and benefits, to educate government, regulators and external stakeholders who are making energy transition decisions.

The key objectives of the project are to:

- **Develop** a robust comparative analysis of two decarbonization scenarios for the Ontario economy, including one focused on electrification-based mitigation strategies and one adopting a diversified, optimized low carbon fuels approach.
- **Analyse** the societal cost impacts of each decarbonization scenario.

- **Examine** the feasibility of decarbonization pathways and uncover a defendable and balanced policy narrative that supports provincial GHG reduction goals, manages costs for ratepayers and consumers and builds a narrative for EGI to communicate the role for clean fuels in a decarbonized future.

Guidehouse is uniquely positioned to support EGI with this assignment. The value of our approach includes:

1. **Extensive experience with the energy sector and climate change mitigation** strategy activities of Ontario and jurisdictions across North America, as well as expertise gained from our pioneering role in reframing the decarbonization narrative in Europe and British Columbia in the context of clean fuels.
2. **A tested database of GHG mitigation technologies and decarbonization initiatives**, inclusive of feasibility, potential, performance, and cost. For example, Guidehouse has led the DSM potentials examination for five provinces over the last several years and manages an industry-leading research practice tracking cost and performance data of electrification-focused clean tech and hydrogen production and storage technology
3. **Recent energy supply and demand modelling projects**, providing deep experience with provincial data and pre-established projections offering start up and level-setting efficiencies
4. **Deep understanding of the Ontario and Canadian climate policy experience**, the challenges, the opportunities, and lessons learned from narrowly focused, or siloed approaches to low carbon policy
5. **Access to core data, models, and cost information** to support a rigorous analysis at high value for money for EGI.

As a result of these capabilities and traits, our team is poised and excited to begin the next phase of Ontario's low carbon journey with you. We will deliver impactful and innovative thinking, tailored to the unique circumstances of the province and of EGI's customers.

Guidehouse is a leading global provider of consulting services to the public and commercial markets with broad capabilities in management, technology, and risk consulting. We help clients address their toughest challenges with a focus on markets and clients facing transformational change, technology-driven innovation and significant regulatory pressure. Across a range of advisory, consulting, outsourcing, and technology/analytics services, we help clients create scalable, innovative solutions that prepare them for future growth and success. Headquartered in Washington DC, the company has more than 10,000 professionals in more than 50 locations. Guidehouse is led by seasoned professionals with proven and diverse expertise in traditional and emerging technologies, markets and agenda-setting issues driving national and global economies. For more information, please visit: www.guidehouse.com.

Should you have any questions or concerns with this proposal, please contact me at 647.212.7187, or craig.sabine@guidehouse.com at your convenience.

Sincerely,

Craig Sabine,
Director, Energy Lead Canada

Table of Contents

Executive Summary

The Guidehouse team is ready and immediately available to support EGI with an examination of practical decarbonization pathways for the province of Ontario and determine the benefits and impacts of a diversified, low carbon fuels strategy to achieve GHG reduction commitments.

Guidehouse is uniquely positioned to provide EGI with industry-leading analytic capabilities, decarbonization thought leadership and utility strategy, as well as access to economy-wide models and tools that are necessary to generate robust quantitative analysis of the energy system in Ontario. We have a deep understanding of the future role of gas in a decarbonized world which informs the appropriate framing for scenarios and guides the analysis, as demonstrated in our industry leading Gas for Climate, low carbon 2050 strategic work[1].

We are confident the Guidehouse solution will further empower EGI with innovative and practical insights about jurisdictional decarbonization. Our goal is to work with you and provide a policy platform from which to build a practical decarbonization roadmap for the province and a long-term strategy that cements the sustainability and resiliency of the gas infrastructure business.

Our core team is based in Canada and has delivered multiple provincial and national-level analyses of low carbon futures in this country and in Ontario. Our proposed low carbon pathways SME (Craig Sabine) has experience in low carbon scenario analysis going back to 2005; developing one of the first national level assessments of GHG abatement curves and the impacts on energy use and process emissions across economic sectors for the National Roundtable on the Environment and Economy (NRTEE). Our leadership team are senior, highly experienced and have recently conducted extensive analyses in Canada and globally, offering insights on the low carbon opportunities for jurisdictions from British Columbia, to Sweden and New York, as well as the associated societal cost impacts of decarbonization strategies.

Our solution leverages our in-house and proprietary ***Low Carbon Pathways*** (LCP) model (see Figure 1 below), combined with our deep industry knowledge and expertise with electricity and natural gas utility systems and related commodity markets. We have developed a powerful model to determine key energy flows, regional abatement opportunities and GHG impacts of clean energy supply, as well as demand-side GHG mitigation initiatives at the sectoral, sub-sectoral and end-use levels. Our analytic platforms also enable hourly and coincident energy peak capabilities, to ensure that the key energy system impacts are viewed holistically, and real costs are captured to better uncover more optimal low carbon and net-zero futures. Our LCP model produces a forecast of the costs and benefits of each scenario that can be shared and understood by stakeholders including government, the regulator and customers.

We recently completed a first of its kind analysis to determine the societal costs of low carbon pathways, inclusive of peak energy system investment requirements, utility rate impacts and stranded asset costs in the province of British Columbia, for FortisBC.[2]

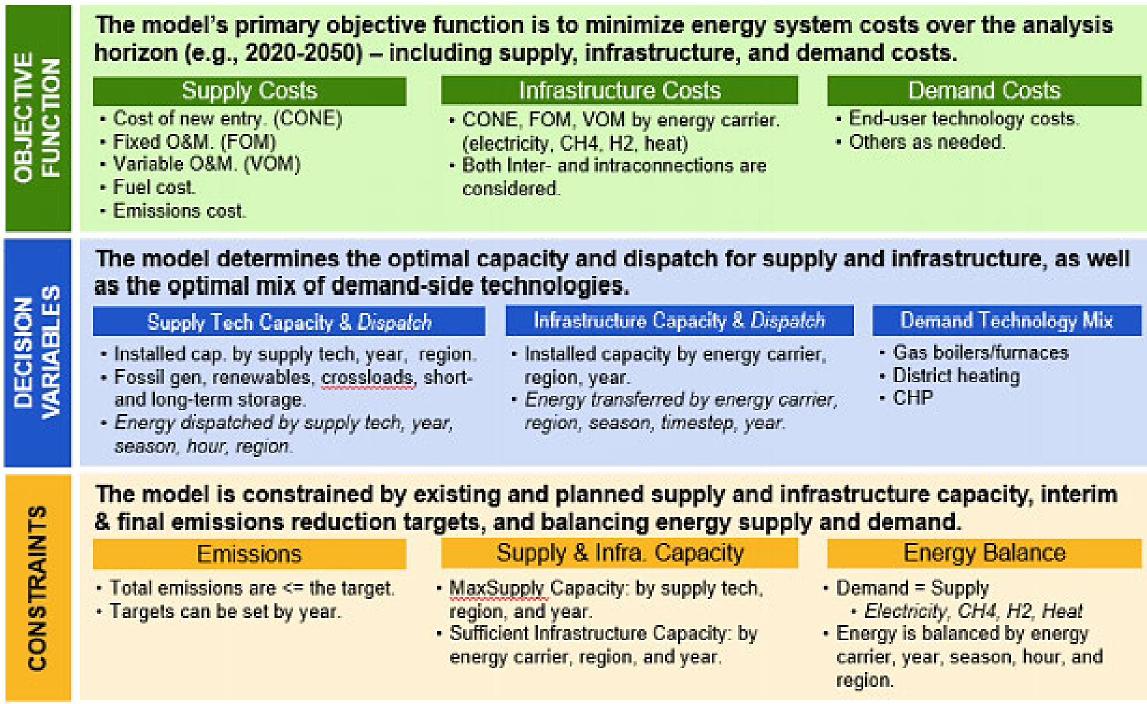
[2] Pathways for British Columbia. Link

Figure 1. Low Carbon Pathways (LCP) Model Conceptual Design



Addressing Your Needs

For EGI, we will deliver an augmented decarbonization analysis of the Ontario energy sector that leverages learnings and data from our prior work. Guidehouse offers a tested approach to support EGI with this very important work for the province.

In alignment with many of our past analyses, decarbonization pathway scenarios will be developed to determine the GHG and cost impacts and test feasibility of differing approaches that are supportive of provincial decarbonization goals. The study will provide EGI with key support for internal energy transition planning efforts, including EGI's critical and current rebasing proceeding that will thrust EGI toward the short term 2030 GHG target. Robust decarbonization analysis can also support establishment of scope 3 GHG emission reduction targets, and Integrated Resource Planning (IRP) work (i.e. the consideration of non-pipe solutions as alternatives instead of our traditional infrastructure).

Our analysis will also offer insight for new regulatory structures and policy mechanisms needed to mitigate the risks associated with decarbonization. Specific and measurable guidelines are needed now so that utilities can demonstrate their assets complement the future energy system.

The Guidehouse solution is based on deep collaboration between Guidehouse and EGI, using workshops to determine the best data sources and discuss the key factors to consider in bounding the clean energy resources (CERs) and initiatives that will be modelled. We will build up a profile of CER initiatives and apply them against cross-sectoral energy demand scenarios to identify key opportunities to deliver GHG reductions in the economy.

Transformative CER potentials will be established, as only fully transformative pathways will support the achievement of 2050 targets. These transformative potentials will be bounded by reasonableness, guided by our experience conducting dozens of similar analyses and having a strong feel for the challenges and costs.

Why Guidehouse

Guidehouse is uniquely positioned to provide support to EGI on low carbon pathways and offer an analytic study that will provide deep insight and practical next steps. Our team is extensively experienced in Canada's energy sector, with low carbon pathways modelling and highly familiar with the Ontario context, based on our prior fuels sector technical study as part of the 2016 LTEP process, our widely known Achievable Potentials Study work with IESO and OEB, as well as extensive analysis of the provincial electricity sector policy, costs and programs.

Globally, Guidehouse pioneered a new direction toward energy sector decarbonization — transforming the net zero conversation from one where gas utilities were seen as an impediment, to one where they are part of the solution. We orchaestrated a revolutionary concept together with the *Gas for Climate* coalition resulting in a broadly accepted vision, by stakeholders, for a low carbon gas sector.

We have current models ready to be deployed that will allow for the greatest possible efficiency for EGI over the limited number of months available.

Figure 2. Key Guidehouse Benefits to EGI

WHY GUIDEHOUSE	VALUE TO EGI	WHY GUIDEHOUSE	VALUE TO EGI
Proven experience in developing quantitative low carbon scenario models	Pre-established modelling platform and data sources, as well as practical implementation experience to delivery visionary ideas	Extensive clean energy supply use case development, including RNG and hydrogen supply initiatives	Incorporates leading industry thinking, knowledge of multi-jurisdictional policy and technical approaches
Successful, ongoing working relationships in Ontario	Guidehouse is known and trusted to major stakeholders such as the OEB, the MOE and the IESO, improving our ability to engage and facilitate the discussion	Specific familiarity with your energy systems and industrial growth sector	Provides increased context to desired outcomes, deliverables, and regulatory needs
Independent and neutral position in the market	Our analysis is vendor and technology-agnostic, which supports external engagement and offers the Province genuine and pragmatic advise	Real world successful planning, engineering, and system operations	We have the energy industry experience, deepening our analysis for you and where policy sets the landscape for success

1. Approach to Scope of Work

EGI requires an objective analysis of key pathways to Ontario's carbon neutrality. These pathways include both electrification-focused scenarios and scenarios underpinned by the use case of clean gas fuels and the associated resilient, flexible, and affordable infrastructure.

A scenario-based, *Pathways Assessment* is a critical element to build an understanding of the potential roles for gas and the ways that the gas infrastructure can be leveraged to cost-effectively meet the decarbonization objectives of Ontario.

The analysis will identify cost-optimized decarbonization pathways for the broader energy system (both gas and electric) within the constraints defined by the future scenarios, e.g., full electrification of the system or balanced electrification and gas use. ***The pathways will articulate the potential timeframes to achieve desired reductions, identify key elements of societal and system costs of implementation, assess the impacts on electric grid demand/capacity and determine the peak demand cost impacts. Our analysis will also describe the risks of stranded assets using quantified modeling of decarbonization measures.***

We envision a study and tool that can help EGI plot a cost-optimized future energy system in Ontario and ensure key insight into how decarbonization goals can be delivered, considering:

- Affordability
- Peak energy demand impacts
- Clear pathways for *hard to electrify* sectors to participate in the future system
- Maintenance of resilience and reliability in the face of changing customer demands and increasing frequency of extreme weather conditions

Our collaborative approach will ensure that EGI receives objective analysis with outcomes linked to your overarching company strategy and addresses a triple bottom line, sustainable approach inclusive of people, planet, and profit.

We understand that the speed and accuracy of the deliverables will be critically important to the success of this project. To address this need, Guidehouse has built a team of dedicated staff with deep skills delivering gas decarbonization strategies across North America and deep expertise of the energy system in Ontario. We have an existing tool, our **Low Carbon Pathways (LCP) model**, that is ideally suited for assessing gas decarbonization pathways and exploring the role of gas supply and transport infrastructure. Our LCP model has proven its value to gas utility clients through recent project work in North America and Europe and can be deployed and adapted to the Ontario energy system very quickly.

1.1 Task 1. Project Initiation

Directly following contract execution, the Guidehouse team will launch the project through the project initiation phase with a kickoff meeting. The project initiation task will encompass the first week of delivery, including a kickoff workshop with the EGI team to ensure that an appropriate future vision for the assignment is established to guide the project through the entirety of the delivery schedule.

Task 1. Summary & Highlights	
Key Questions to be Answered:	• How will two (2) analytic scenarios be defined to capture the range of possible decarbonization pathways for Ontario? • What are the end goals/expected outcomes and critical objectives of this study? How is success defined? • What input data and assumptions are required by the LCP model? What data will be requested from EGI in order to begin pathway modelling?
Key Deliverables	**A PowerPoint deck** including the following: • Finalized description of the two (2) scenarios and sensitivities to be included in modeling analysis. • Summary methodology, modelling approach and LCP modelling configuration for Ontario • Detailed list of all input data required, proposed data sources, data gaps (if any), and data request to EGI
Expected EGI Involvement	Participation in a project kickoff workshop to establish the project goals, scenario definitions, key sensitivities, and appropriate communication strategies.

The two key activities in Task 1 include a kickoff meeting with the EGI team and agreement on Guidehouse's proposed modeling configuration of our Low Carbon Pathways (LCP) model for Ontario's energy system.

Kickoff Meeting: The objectives of the meeting will be to review the scope of work, to agree on the process for data collection, to finalize the scenario definitions to be included in the modeling analysis, and to agree on the final timeline for key meetings and submission of deliverables.

Topics to be discussed / decisions to be made at the kickoff meeting:

- Report table of contents (for purpose of Task 5)
- Final agreement around scenario definitions and sensitivities
- Confirmation of Task 2 data collection approach and Task 3 modeling approach
- Expected trends in the Ontario energy system that will be fundamental to the analysis
- Final agreement to timeline of key meetings and deliverable submission

Guidehouse will prepare notes documenting all decisions made in the kickoff meeting and which will be delivered to the Enbridge team within two (2) days following the kickoff meeting.

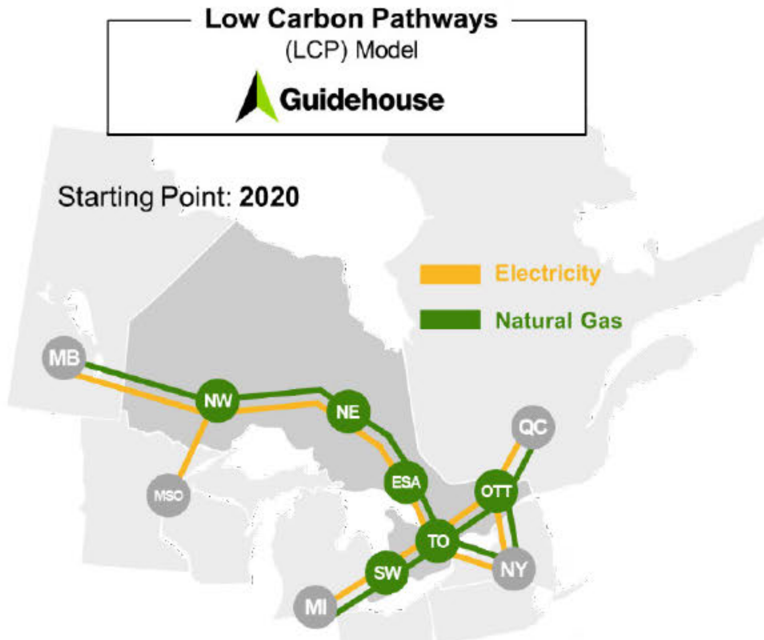
Pathways Modelling Configuration: Our proposed modelling approach will leverage our in-house, energy systems **Low Carbon Pathways (LCP)** model to simulate the decarbonization of the energy system in Ontario through 2050. Our LCP model is ideally suited for this project and for developing decarbonization pathways for energy utilities. The LCP model is an integrated capacity expansion and dispatch optimisation model used to identify cost-effective pathways to a decarbonized electricity and gas system. A key feature of our modelling approach is that our LCP model enables zonal optimization of electricity and gas supply & transport infrastructure; by doing this it captures supply and demand dynamics across sub-regions.

Our LCP model will be configured to the unique characteristics of Ontario's gas and electricity networks, interconnections with neighboring jurisdictions, and supply-demand conditions. We have developed a conceptual configuration of the LCP model to the Ontario energy system, as illustrated below. This configuration is based on approximately 5-6 Ontario zones and 4-5 neighboring regions –to reflect current-day and future energy imports and exports. As part of a very integrated continental system of natural gas pipelines and markets, the characterization of Ontario's gas sector will need to be carefully considered to provide details and analytic insight, without boiling the ocean.

The final number of zones will be determined based on discussion with EGI and will reflect an agreed aggregation of the IESO's 10 electrical zones. The analysis will model an integrated energy system made up of the existing electricity and methane (natural gas) systems, along with an emerging hydrogen system in the future. The analysis timeframe stretches from 2020 to 2050, with 10-year intervals – e.g., 2020, 2030, 2040, and 2050.

Proposed Low Carbon Pathways (LCP) Model Configuration for the Ontario Energy System

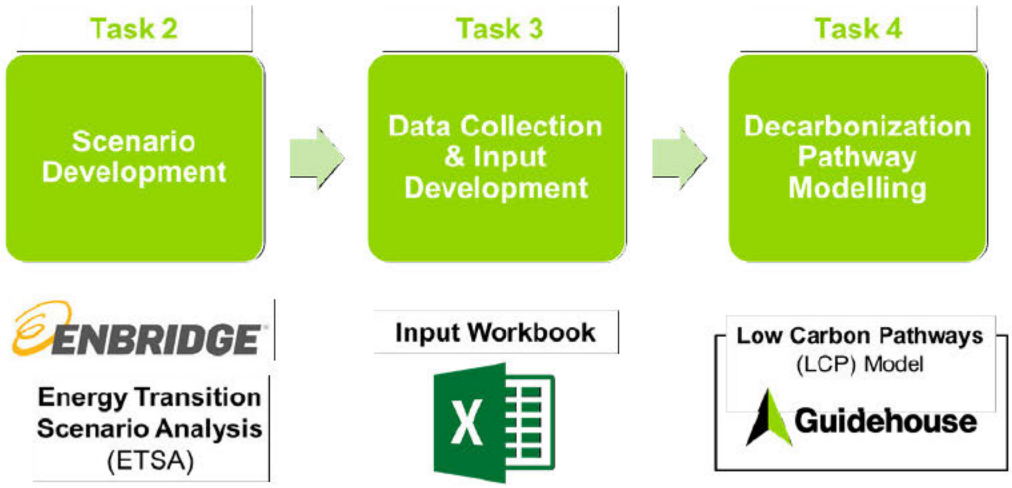
- **Geographic Scope**: 5-6 Ontario zones + 4-5 neighboring regions
- **Energy Systems**: Electricity, Natural Gas, RNG and Hydrogen
- **Interconnections**:
  - Existing electricity and natural gas interconnections within ON and with neighboring regions.
  - Hydrogen: Option to repurpose methane interconnections or build new hydrogen interconnection.
- **Modelled Years**: 2020, 2030, 2040 and 2050
- **Intra-Annual Temporal Resolution**: 5 representative days (4 seasons and a winter peak-day)



The kickoff meeting will include a detailed presentation of our modelling approach, our proposed process for leveraging EGI's existing ETSA scenarios, data needs and the sources of data we propose to use, key modelling boundaries and considerations we believe to be essential for successful calibration of the LCP model. We will provide an initial view on high-profile / high-impact sensitivities. These individual elements are discussed in detail in the following sections:

- **Task 2** (Scenario Development)
- **Task 3** (Data Collection & Input Development)
- **Task 4** (Decarbonization Pathway Modelling)

Figure 3: Overall Modelling Methodology



1.2 Task 2. Scenario Development

During Task 2, Guidehouse will work with EGI to define and characterize the scenarios to be analysed. The main objectives of this task include:

1. Review of existing scenarios emerging from EGI's Energy Transition Scenario Analysis (ETSA) and development of a plan to consider and align with the LCP analysis.
2. Determining the suitability and alignment of the ETSA's Electric Pathway and Diversified Pathway as the basis and foundation for the scenarios used in this study; and
3. Proposing modifications and adjustments to the ETSA scenarios (if needed) to develop this study's Electric and Diversified scenarios and their associated 2025-2050 forecasts of gas (and electricity) demand.

Task 2. Summary & Highlights	
Key Questions to be Answered:	• What input data and assumptions are available to understand prior characterisation of ETSA pathways? • How can the ETSA pathways be leveraged to define the two (2) analytical scenarios for this study and what modifications will be required? • What is the high-level definition of each of the two (2) pathways to be modeled in this study?

Key Deliverables	**A PowerPoint deck** including the following: • Finalized description of the two (2) scenarios and sensitivities to be included in modeling analysis. • Summary of modifications / differences between ETSA scenarios and the two (2) scenarios for this study
Expected EGI Involvement	Participation in a scenario characterization workshop to develop a common understanding of how to leverage the ETSAs. This will include providing Guidehouse with relevant identified data from EGI.

Based on our current understanding of EGI's ETSA, we expect the existing *Electric* and *Diversified Pathways* scenarios to align with leading practice in decarbonization pathway thinking. In general, we assume the ETSA scenarios to align relatively well with common trends found in traditional 'high electrification' and 'balanced' scenarios. Some of these common elements are described below:

- **Electric Pathway:** High electrification scenarios are generally characterized by continued decarbonization of electric generation and high levels of electrification across buildings, industry, and (particularly) transportation. Natural gas, blended with RNG and combusted with carbon capture and storage (CCS), is limited to high temperature industrial end-uses. RNG and hydrogen are used as industrial feedstocks while biofuels play a major role meeting non-electrified heavy transportation demand, with minimal role for RNG and hydrogen.

- **Diversified Pathway:** Balanced or Diversified scenarios are generally characterized by complete decarbonization of electric generation, along with more moderate levels of electrification, focusing primarily in cost-effective building and industrial heating, and light- and medium- transportation applications. Low carbon fuels, including RNG and hydrogen, play a more prominent role in buildings, transport, and industry, leveraging existing or upgraded gas infrastructure investments. Biofuels play a more limited role in meeting demand for medium- and heavy-duty transportation.

GAS FOR CLIMATE
A path to 2050

European Hydrogen Backbone

The scenarios outlined in the RFP, and in this proposal, are generally congruent with our standard approach to define scenarios for LCP analysis.

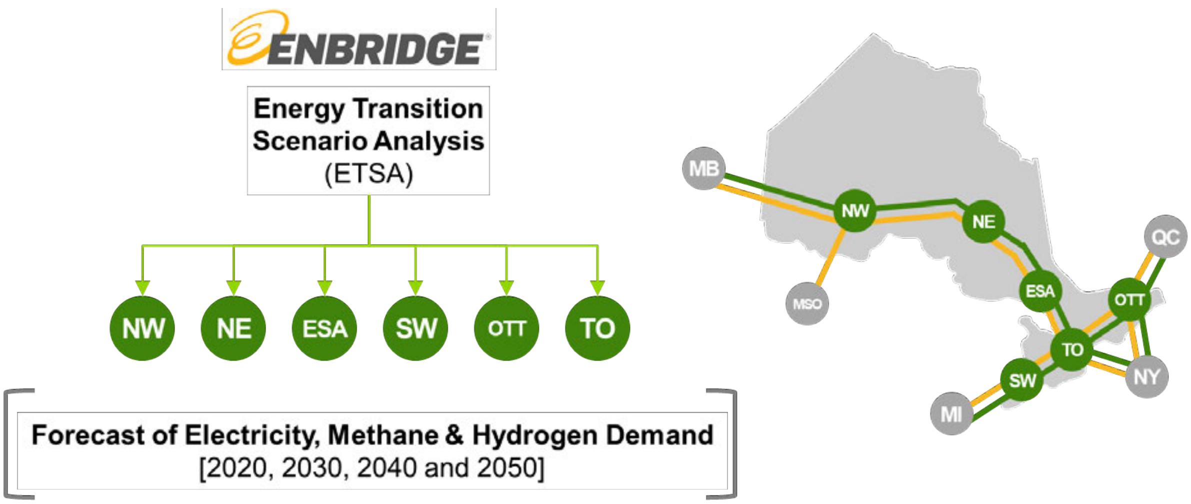
You will see similar scenarios with regional tailoring in our ***Gas for Climate*** (follow link), inclusive of the **European Hydrogen Backbone** work in the EU, as well as a soon to be released public report examining pathways to achieve the **New York Climate Act**.

Alignment between this study and the ETSA project will be critical for a highly impactful and strategic study. Our understanding is that the ETSA scenarios are – at the provincial level – inherently consistent with Ontario's economy-wide 2050 GHG reduction targets, Ontario's interim target of 28% reduction by 2025, and EGI's own clean energy and emissions reductions targets.

Regionalization: Based on our proposed modelling approach – adopting 5-6 Ontario zones – and our understanding of how important the regional / zonal dimensionality is to EGI, we will map the regions used in the ETSA scenarios to the 5-6 Ontario regions we have proposed (or agree to during project initiation). If ETSA scenarios already incorporate some regionalization, we will work with EGI to align our analysis to these definitions where possible. We will work with EGI to agree on the number of Ontario regions used in this study and the geographic scope of each of those regions. A proposed approach for regionalization is presented in Figure 4.

If the ETSA scenarios are not regionalized but rather only defined at the Ontario-level, we will propose a regionalization approach to define electricity and gas demand for individual economic sectors across regions. If this is needed, we will propose to use proxies for each demand sector (e.g., population for the buildings sector, transit hubs for the transport sector, etc.) as well as leverage previous analyses (such as the IESO conservation Achievable Potential study, which Guidehouse also conducted).

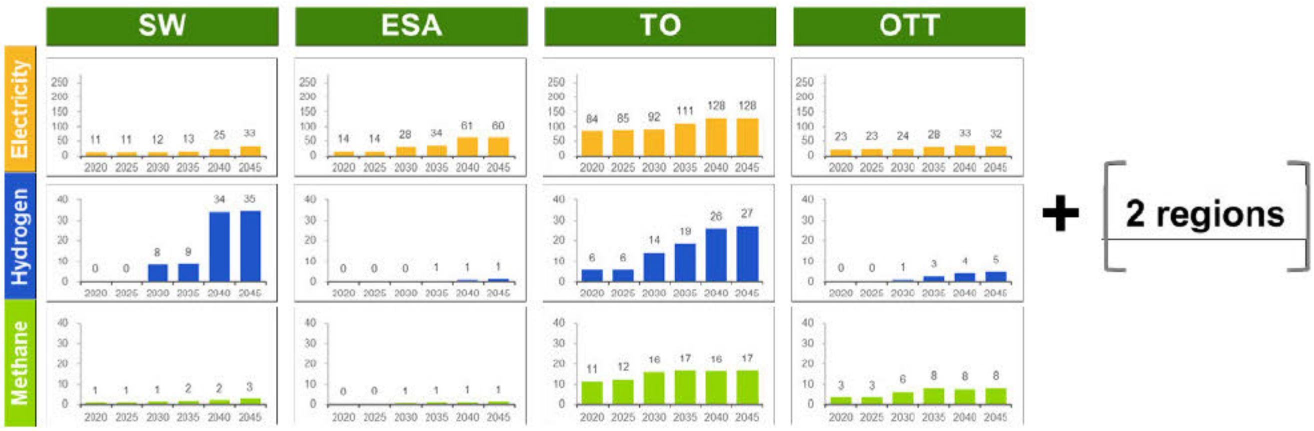
Figure 4: Possible Breakdown of EGI's ETSA Scenarios into Individual Ontario Zones



The final product of the regionalization exercise will be a transformation of the ETSA demand forecasts of electricity, methane, and hydrogen demand (2020-2050) into regional forecast of demand for each individual zone based on the economic and customer characteristics of each zone. Figure 5 shows what this will ultimately look like: a 2020-2050 forecast of electricity, hydrogen and methane demand for each region.

The importance of "regionalizing" demand is that this will serve as the basis for determining whether electricity and gas transmission infrastructure will have to be expanded in the future, or in the case of hydrogen, where gas transmission pipelines will have to be repurposed to accommodate hydrogen.

Figure 5: Illustrative 2020-2050 Forecast of Electricity, Hydrogen and Methane Demand



A workshop will be facilitated with the objective of generating a rich discussion of the decarbonization technologies incorporated in the ETSA scenarios and the role of RNG and hydrogen in buildings, transport, and industry.

Scenario Characterization Workshop: During the model characterization workshop, the Guidehouse team will lead the EGI team through an exercise to “deep dive” into each of the relevant ETSA scenarios, challenge underlying drivers and building a common understanding of how each scenario was developed and considerations as part of this Decarbonization Pathways study. This detail on the scenarios will be important to the Guidehouse team’s ability to replicate the ETSA scenarios as closely as appropriate in this work.

1.3 Task 3. Data Collection & Input Development

Immediately following initiation and aligning on the scenario definitions, Guidehouse’s team will begin the process of data collection to inform the LCP modeling. This process will be led in close collaboration with the EGI team to discuss and vet all of the model inputs and ensure common understanding of the impacts to final modeling results.

Task 3. Summary & Highlights	
Key Questions to be Answered:	• What does the Ontario energy system look like today? What is the existing electricity supply mix? What are the energy export/import dynamics in Ontario? • What electricity and gas transmission capacity is available today within Ontario regions? And with neighboring regions? • What investments in electricity / gas supply and transport infrastructure are expected in the future in Ontario? And in neighboring regions? • How much RNG supply potential is available in Ontario? What are the future potential sources of hydrogen in Ontario and neighboring regions?

Key Deliverables	• A **PowerPoint deck** presenting all major data inputs and assumption including:
	  • Techno-economic parameters for electricity/gas supply technologies and transport infrastructure costs.
	  • Existing and forecast electricity supply capacity, transmission capacity, interconnection capacity between Ontario regions and with neighboring regions.

Task 3. Summary & Highlights	
Expected EGI Involvement	Participation in a scenario data and design workshop to agree on data sources. This will include providing Guidehouse with relevant identified data from EGI.

Given on our past experience performing decarbonization pathway analyses, we have established a structured and streamlined process for data collection. We have a standardized Excel-based "input workbook" that gathers all inputs and assumptions required for the pathway's analysis.

The Guidehouse team that will support EGI in this engagement has extensive experience in decarbonization pathway projects, as well as with the Ontario energy sector and the critical data required to deliver this project. Key system and demand data will be drawn from EGI, as well as other publicly available sources such as:

- IESO Annual Planning Outlook
- Ontario's Integrated Achievable Potentials Study (completed by Guidehouse)
- Planning Outlooks & Historical Electricity Demand (Hydro Quebec, NYISO and MISO)
- Natural Gas Transmission & Distribution Expansion Projects (EGI and Union)
- Historical Gas Demand (ON and neighboring regions)
- Statistic Canada Data Sets

We will be able to get a head-start in data collection by leveraging an extensive dataset of techno-economic assumptions for electricity / gas supply and transport infrastructure from past projects (e.g., costs for electrolysers, SMR+CCS, RNG via anaerobic digestion, biomass gasification, new and repurposed hydrogen transmission pipelines).

In addition to techno-economic parameters for energy technologies, the input workbook also collects inputs to characterize the current state of the Ontario electricity and gas system, as well as planned / expected developments in the energy technology mix up to 2050.

The structure of the input workbook and the scope of data required is summarized by Table 1.

Table 1: Data Needs from LCP Input Workbook

Category	Tab #	Input Data	Energy Carrier
Demand	1.1	**2030, 2040, 2050 forecast of demand** [by region] • Electricity demand [2020, 2030, 2040, 2050] • Methane demand [2020, 2030, 2040, 2050] • Hydrogen demand [2020, 2030, 2040, 2050]	Elec., CH_4, H_2
Demand	1.2	**Hourly demand profiles by sector & network load profiles** • Hourly profiles for each season [x4] and a winter/summer-peak day.	Elec., CH_4, H_2
Supply	2.1	**Existing supply capacity** • 2020 Electricity Supply Mix • 2020 Gas Supply Mix [e.g., imports, domestic biogas production via anaerobic digestion, etc.)	Elec., CH_4
Supply	2.2	**Planned new capacity** {2030, 2040, and 2050] • IESO Planned Capacity Additions	Elec., CH_4
Supply	2.3.	**Planned capacity retirements** [2030, 2040, and 2050] • IESO Planned Capacity Retirements	Elec., CH_4
Supply	2.4	**RNG & Hydrogen Supply Potential** [2030, 2040, and 2050] • Define max limit on RNG supply via anaerobic digestion • Define max limit on RNG supply via biomass gasification • Define max limit on blue and green hydrogen supply • Define max limit on hydrogen storage capacity (salt caverns, aquafers, etc.)	CH_4, H_2
Supply	2.5	**Techno-economic parameters for supply technologies** [CAPEX, OPEX, FOM, VOM; 2030, 2040 and 2050] • <u>Electricity</u>: Onshore wind, hydrogen-fired CCGT / OCGT, RNG-fired CCGT / OCGT, battery storage, etc. • <u>Hydrogen</u>: Blue H2 (SMR + CCS) and green H2 (dedicated vs. curtailed renewables), H2 storage (salt caverns, aquafers, etc.) • <u>Methane:</u> Anaerobic digestion, biomass gasification	Elec., CH_4, H_2
Infrastructure	3.1	**Existing Interconnection capacities** [2020] • In-between Ontario zones [GW] • In-between Ontario and neighboring regions [GW]	Elec., CH_4
Infrastructure	3.2	**Planned interconnection capacities** [2030, 2040, and 2050] • In-between Ontario zones [GW] • In-between Ontario and neighboring regions [GW]	Elec., CH_4
Infrastructure	3.3	**Techno-economic parameters** new transmission lines • Overhead AC, Underground/Overhead HVDC	Elec.
Infrastructure	3.4	**Techno-economic parameters** new / retrofit pipelines [20, 36 and 48-inch pipelines] • Underground / above-ground new methane pipelines • Underground / above-ground new hydrogen pipelines • Repurposed hydrogen pipelines • Hydrogen compression stations	CH_4, H_2
General	4.1	**Economic parameters** (WACC, carbon prices)	n/a

With our previous experience developing decarbonization pathways for gas utilities, we have developed an extensive dataset of techno-economic parameters for hydrogen and RNG production technologies. We plan to get a kickstart the data collection process by leveraging techno-economic parameters developed in previous projects. For example, Table 2 shows cost assumptions (from 2025 to 2045) for green and blue hydrogen (via electrolysers and SMR+CCS) and for RNG (via AD and biomass gasification).

Table 2: Example of Techno-Economic Parameters for Supply Technologies

Kick-Starting Data Collection: Hydrogen & RNG Supply Technologies

Hydrogen:
- Electrolysers
- SMR+CCS

Year	Cost Component	Unit	Electrolysers	SMR + CCS
2025	CAPEX	[kEUR/MW]	600	1530
	Fixed O&M	[kEUR/MW/y]	12	45.9
	Variable O&M	[kEUR/MWh]	0	5.5
	Lifetime	[year]	25	25
	Efficiency (LHV)	[%]	67	69
2035	CAPEX	[kEUR/MW]	400	1340
	Fixed O&M	[kEUR/MW/y]	8	40.2
	Variable O&M	[kEUR/MWh]	0	5.5
	Lifetime	[year]	25	25
	Net Efficiency	[%]	70	69
2045	CAPEX	[kEUR/MW]	300	1300
	Fixed O&M	[kEUR/MW/y]	6	39
	Variable O&M	[kEUR/MWh]	0	5.5
	Lifetime	[year]	25	25
	Net Efficiency	[%]	73	69

RNG:
- Anaerobic Digestion
- Biomass Gasification (BioSNG)

Year	Cost Component	Unit	Anaerobic Digestion	Biomass Gasification
2025	CAPEX	[kEUR/MW]	2165	2595
	Fixed O&M	[kEUR/MW/y]	216	265
	Variable O&M	[kEUR/MWh]	43	52
	Lifetime	[year]	25	20
2035	CAPEX	[kEUR/MW]	2049	2119
	Fixed O&M	[kEUR/MW/y]	178	227
	Variable O&M	[kEUR/MWh]	38	47
	Lifetime	[year]	25	20
2045	CAPEX	[kEUR/MW]	1934	1642
	Fixed O&M	[kEUR/MW/y]	141	190
	Variable O&M	[kEUR/MWh]	33	42
	Lifetime	[year]	25	20

Based on the LCP input workbook needs presented above, we have already identified the specific gaps in data that must be bridged before we can begin pathway modelling. Table 3 below lists out the subset of input data that Enbridge can help us with to fill those gaps; this includes five specific areas of EGI input.

For all other data needs required for the LCP input workbook, we have already identified publicly available data resources from the IESO, OEB, the Government and past studies to be used. As described above, we also bring an extensive dataset of techno-economic parameters for electricity, hydrogen and methane supply and transport infrastructure investments.

Table 3: Preliminary Data Request for Enbridge

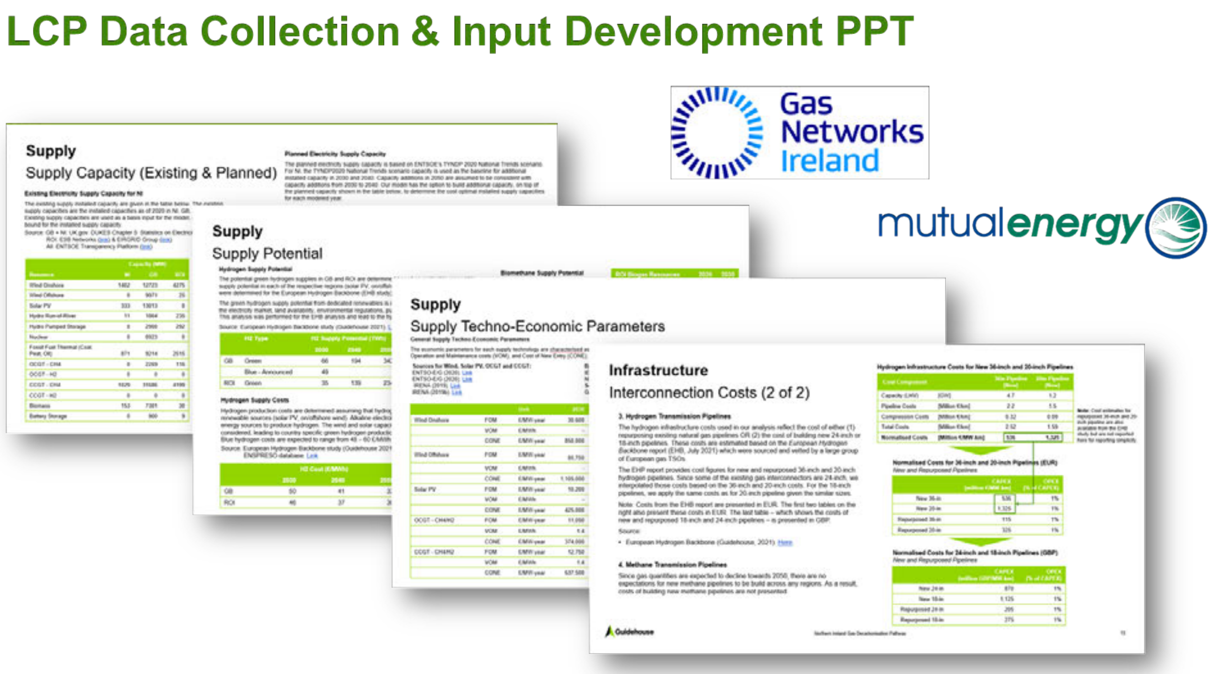
ENBRIDGE

Category	Tab #	Input Data	EGI Source / Data Need
Demand	1.1	**2030, 2040, 2050 forecast of electricity, CH4 and H2 demand**	EGI ETSA Scenarios
Demand	1.2	**2019/2020 hourly gas demand profiles by sector & total network**	Ontario 2019/20 Hourly Gas Demand
Supply	2.1	**Existing gas supply capacity (imports, RNG, etc.)**	Ontario 2019/20 RNG supply capacity
Infrastructure	3.1	**Existing gas interconnection capacities**	2020 Gas Regional interconnection Capacities
Infrastructure	3.2	**Planned gas interconnection capacities**	Planned Regional Interconnection Expansion

Guidehouse's well-vetted process for collaborative data collection and analysis will ensure that the model outcomes are credible and provide meaningful insights. Our data collection process is both iterative and collaborative, relying on a series of client workshops, to ensure that our LCP model incorporates the most appropriate inputs for Ontario and neighboring regions and those are reviewed / approved by EGI.

The deliverable from Task 3 will be a PPT deck presenting all major data inputs and assumption listed above. Figure 6 shows a recent LCP data collection PPT deck produced for a consortium of gas utility clients.

Figure 6: Illustrative LCP Data Collection & Input Development PPT Deliverable



1.4 Task 4. Decarbonization Pathways Modelling

In Task 4, we will use Guidehouse's LCP model to develop cost optimized decarbonization pathways for Ontario's energy system between 2020 and 2050 based on two scenarios: Electric Pathway and Diversified Pathway. We also propose to analyze decarbonization pathways based on 2-3 high-impact sensitivities.

We will quantitatively and qualitatively describe the two resulting pathway scenarios deriving insights by comparing the pathways and focusing on the contributions that can be made by an integrated electricity and gas energy system to meet Ontario's GHG reduction goals

Task 4. Summary & Highlights	
Key Questions to be Answered:	• What is the cost optimized decarbonization pathway for each of the two scenarios? • What are the key societal cost considerations of each of the two pathways by 2050 and test the cost competitiveness of each scenario for key milestone years? • What are the opportunities and feasibility of RNG, hydrogen, and other low carbon fuels to support Ontario's energy needs while achieving GHG emission reduction targets?

Key Deliverables	• Quantitative and qualitative summary of the cost optimized pathways, preliminary results prepared for preliminary results workshop and final results for final results workshop; for main scenarios and sensitivity scenarios.
	    • Gas & Electricity Supply Mix [2030, 2040, 2050] – *e.g., RNG, hydrogen, wind, solar, etc.*
	    • Gas & Electricity Transmission Infrastructure [2030, 2040, 2050] – *e.g., repurposed new / pipelines, transmission line, etc.*
	    • Total Gas & Electricity Network Investment Costs [2030, 2040, 2050]
	    • Hourly Energy Demand & Peak Demand [2030, 2040, 2050]
	    • Pathway risks, challenges, opportunities, low-regret investments & actions
	• Databook of all modeling results

Expected Enbridge Involvement	Day-to-day review and discussion of modeling interim modeling results. Participation in a half-day workshop to review preliminary results and half-day workshop to review final modeling results

Guidehouse proposes to use our LCP model to develop cost optimized decarbonization pathways for each scenario and sensitivity. The LCP model will enable us to provide unparalleled insight into the role of low carbon gas and gas system infrastructure in Ontario.

The configuration of the LCP model to the Ontario energy system will be defined based a selection of 5-6 Ontario regions and 4-5 neighboring regions. The model will capture changing supply and demand over time from 2020 to 2050 in each region. This regional configuration will enable us to model the optimized buildout of interconnection infrastructure between regions – whether electricity transmission lines or methane / hydrogen transmission pipelines. The hourly balancing of supply and demand is optimized on an hour-to-hour basis by using 4 representative seasonal days (x4) and summer and winter peak days (x2).

Guidehouse will configure the LCP model and complete an initial modeling run, providing preliminary results. These preliminary results will be reviewed in a half-day workshop with the Enbridge team. As is always the case with these types of modeling challenges, questions will arise following the preliminary data results review. Guidehouse will adjust and rerun the models to provide final pathways results.

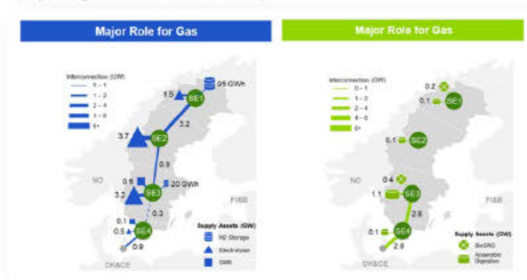
Table 4: LCP Key Model Outputs

LCP Key Model Outputs

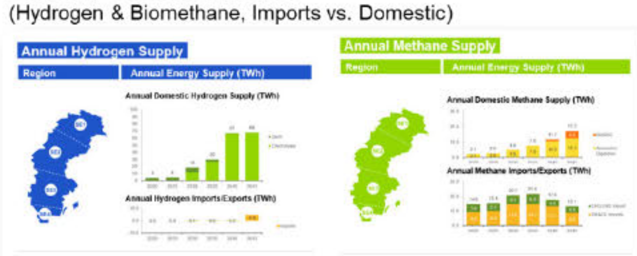
Our LCP model produces all major pathway outputs required by EGI:

- **Low-carbon and renewable gas quantities** over time (e.g., green hydrogen, blue hydrogen, AD biomethane, biomass gasification, etc.)
- **Energy system costs** including **gas and electricity network investments**:
  - **Supply capacity** (e.g., onshore/offshore wind, electrolysers, SMR, etc.)
  - **Transmission interconnections** (e.g., transmission lines, new/retrofit pipelines, etc.)
  - **Storage assets** (e.g., hydrogen storage, battery storage, etc.).
- **Timeline of investments** (2020, 2030, 2040, and 2050)

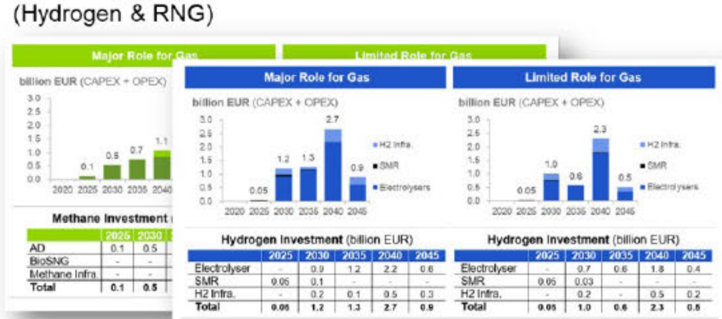
Gas Transmission Infrastructure
(Hydrogen & Biomethane)



Annual Gas Quantities
(Hydrogen & Biomethane, Imports vs. Domestic)



Gas Supply & Infrastructure Cost
(Hydrogen & RNG)



Sensitivity Scenarios: In addition to the main demand scenarios, we will also determine pathways for a set of three (3) sensitivity scenarios. We will define the set of sensitivities analysed after discussion with EGI, however, the following are potential candidate sensitivities to consider:

- **Electricity infrastructure and supply Capital Cost Risk:** Assess the impacts of varying degrees of capital cost escalation for new electric capacity and related system assets.
- **Low Electrolyser and H_2 Infrastructure Costs:** Assess the impact of low electrolyser cost and low transmission pipeline costs on the development gas infrastructure.
- **Ontario as a H_2 Exporter:** Assess the impact of Ontario acting as a hydrogen exporting regions to neighboring regions on the development of gas infrastructure.
- **Low Cost of H_2 Imports into Ontario:** Assess the impact of low-cost hydrogen supply from neighboring regions (e.g., Quebec utilising its hydro fleet for hydrogen production) on the development of gas infrastructure.

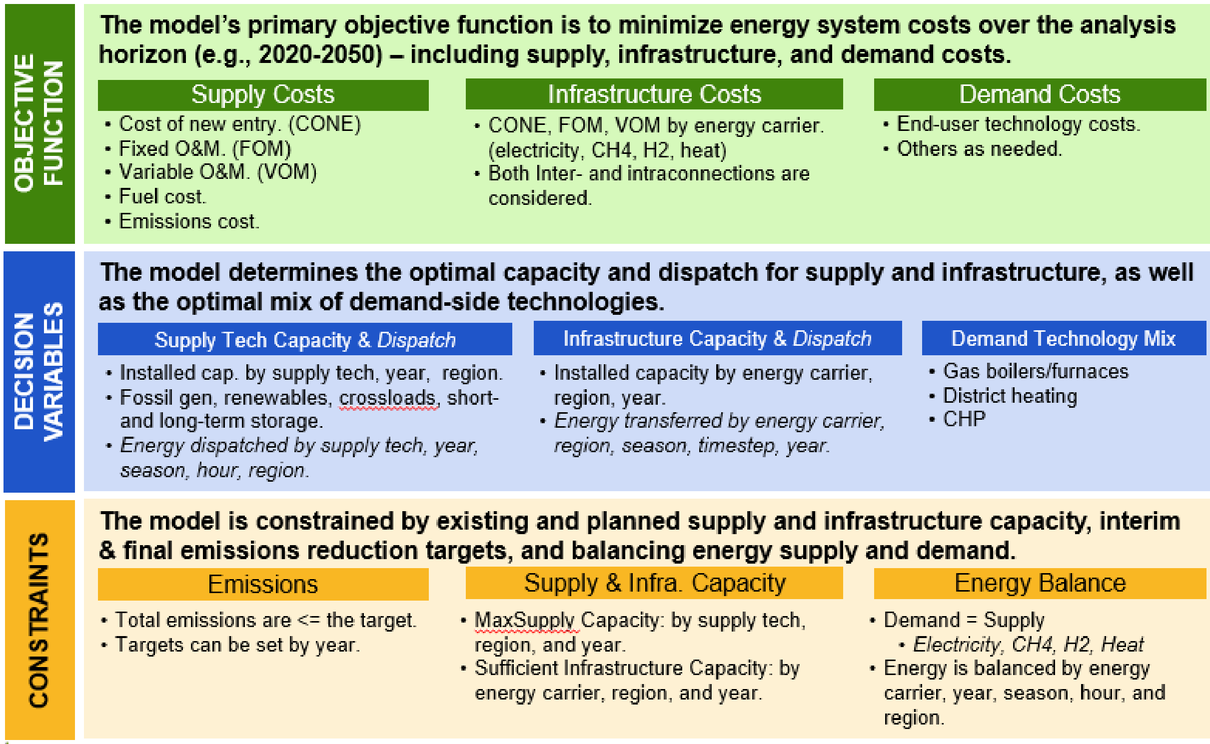
Overview of Guidehouse's LCP Model: Guidehouse's LCP model is a pathways analysis tool built to analyze how a future state develops. The model uses linear optimization to calculate the cost optimal pathway to decarbonize Ontario's energy system. Cost optimization in this case refers to the lowest likely societal cost, i.e., focusing on the total costs and benefits for society to achieve full energy system decarbonization and the critical system, equipment and stranded costs that will have the greatest impact on cost to Ontarians. Figure 7 provides an overview of the LCP model design.

The LCP model includes:

- The possibility to assess various scenarios to deliver a fully decarbonized energy system. The model enables comparison between different decarbonized end state scenarios across a region's entire energy system based on system-wide production costs. This enables us to identify the societal value of achieving a carbon neutral energy system with a (growing) role for low carbon gases in combination with electricity.

- A multi-year cost optimized pathway analysis to deliver intermediate (2030, 2040) and end state (2050) objectives. The LCP model also enables testing of sensitivities and alternative pathway options.

Figure 7: High-Level LCP Model Design



The LCP model's primary objective function is to minimize energy system costs over the analysis horizon (e.g., 2025-2050) – including supply, infrastructure, and demand costs. The cost-objective function optimizes overall system costs but can be configured to optimize for any subset of costs including network/grid costs, or cost to end users for equipment with known cost curves.

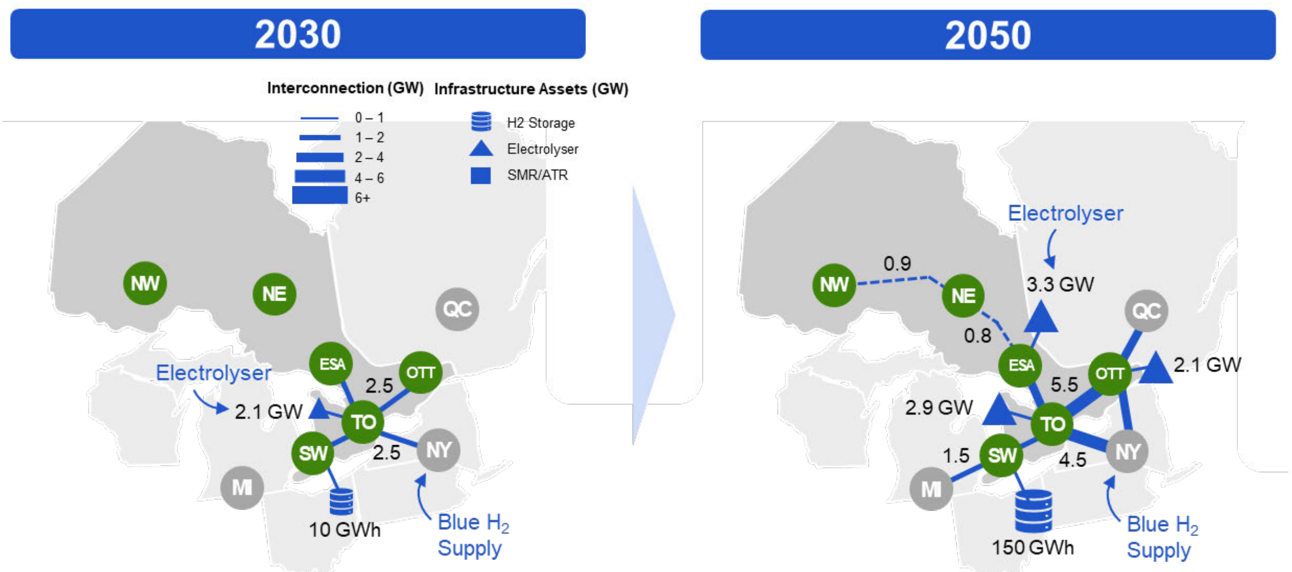
The cost analysis is based on societal cost considerations of the pathways, representative of the total cost of achieving pathway outcomes (GHG abatement) to Ontarians as a whole assuming reasonable market development and market access. The LCP model considers cost in three broad categories on an annual basis:

- **Supply costs** including upfront costs, generation costs, ongoing fixed costs, ongoing variable costs, fuel costs, and emissions costs
- **Infrastructure costs** capture the cost of transmission and distribution (T&D) infrastructure across the power and gas sectors. Guidehouse's team has also developed an approach to estimate the system cost of *stranding infrastructure* and supply investments that can result from non-integrated policy and investment decision making.
- **Demand costs** can capture the cost of end-user equipment including heating systems in buildings, insulation, and industrial equipment. These components of incremental societal cost will be captured based on materiality and in alignment with our past approaches to cost analyses.

The model determines the optimal capacity and dispatch for supply and infrastructure to meet electricity, methane and hydrogen demand. Individual supply technologies or transmission infrastructure options can be 'turned' up or down and 'switched' on or off depending on scenario parameters. The model is constrained by existing and planned supply and infrastructure capacity, interim and final GHG emissions reduction targets, and balancing energy supply and demand.

To illustrate some of the key outputs from the LCP pathways modelling, Figure 8 shows a hypothetical hydrogen infrastructure pathway for Ontario from 2030 to 2050. Our analysis will produce 2030, 2040 and 2050 snapshots of the development of hydrogen infrastructure across Ontario – including GW of installed electrolyser and SMR capacity, GWh of hydrogen storage required, repurposed and/or new hydrogen transmission pipelines, etc. All of these results will be produced for each individual Ontario region.

Figure 8: Illustrative Hydrogen Infrastructure Pathway (2030, 2050) for Ontario



Our understanding is that one of EGI's main interests is in the development of supply and infrastructure costs for each of the pathways analysed (whether scenarios or sensitivities). Our analysis will produce pathway costs figures, like the ones presented below by **Figure** 9 and **Figure 10**.

This figure shows the hydrogen infrastructure pathway costs developed for a group of gas transmission and distribution companies in a recent engagement.

Figure 9: Example Hydrogen Infrastructure Investments

Investment Costs for Hydrogen Infrastructure Development (2025-2045)

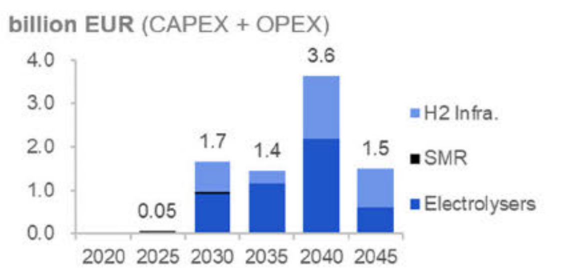
The figures show the hydrogen infrastructure investment determined in a **recent project for group of gas transmission and distribution companies**. Two decarbonization scenarios were assessed; both in the same context as EGI's Diversified and Electric pathway scenarios.

The tables below show the investment required to scale up hydrogen infrastructure from 2025 to 2045. Investments include CAPEX and OPEX of electrolysers, SMR+CCS and hydrogen transmission pipelines.

- Our analysis determined the **Diversified** scenario required the buildout of 36-inch hydrogen pipelines across c.1,400km; for a total investment of **EUR 3.3. billion**.
- In comparison, the **Electric** scenario required 20-inch pipelines over 1,000km and 36-inch pipelines over 400km; a total investment of **EUR 2.6 billion.**

Hydrogen Infrastructure Investment (Billion €)

Diversified Pathway



Hydrogen Investment (billion EUR)

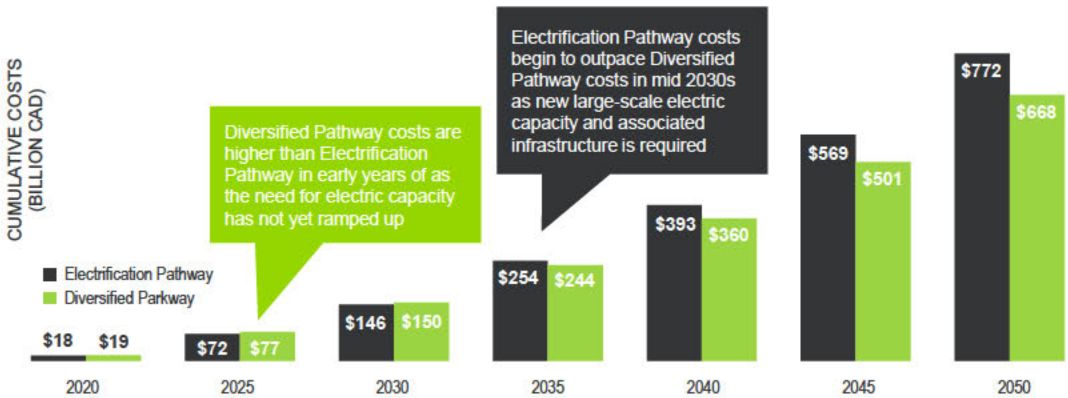
Figure 10: Example Pathway Cumulative Costs



An additional set of illustrative outputs of the LCP model are presented below in **Figure 11** and **Figure 12.**

Figure 11: Illustrative Example Model Outputs

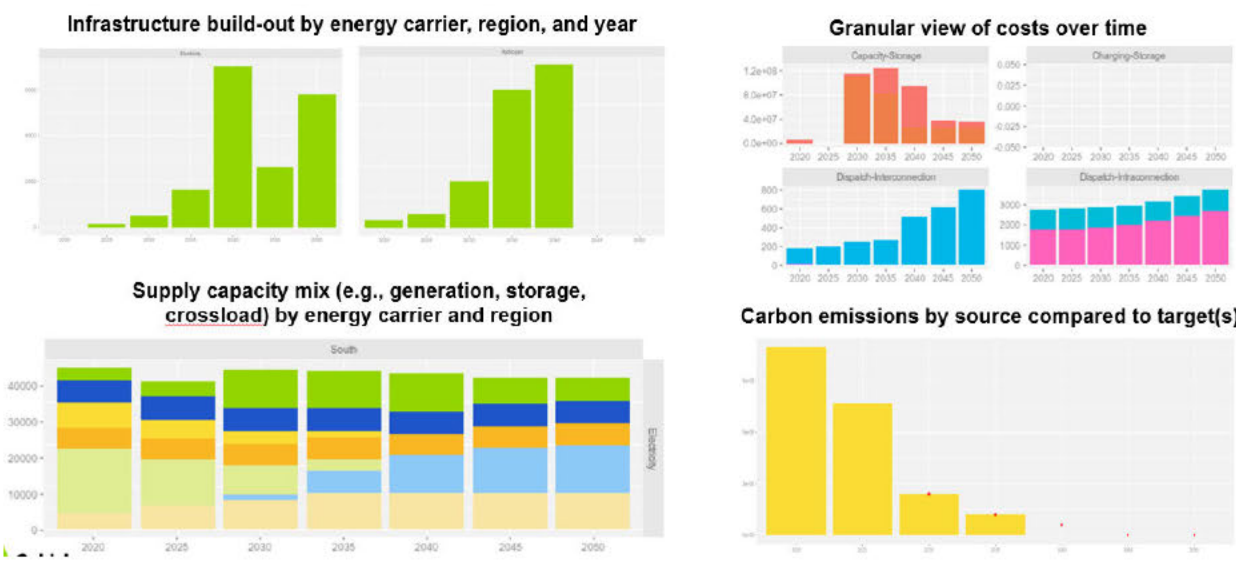


Figure 12: Illustrative Scenario Insights

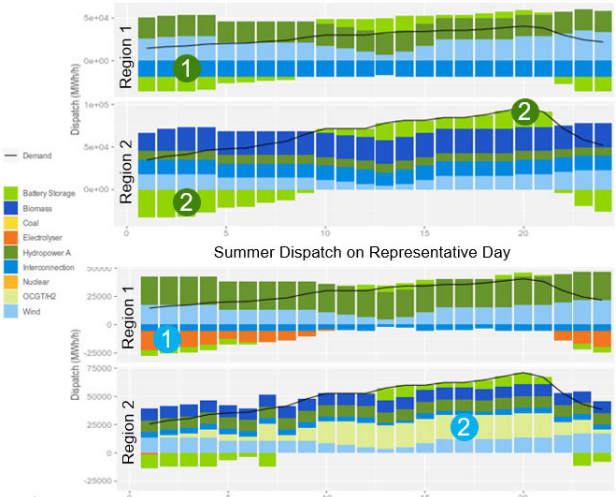


High Electrification Scenario

1. Excess wind and hydro generated in Region 1 is sent via electric transmission to Region 2.
2. Region 2 uses the excess electricity to charge batteries in the morning, which then discharge in the evening to meet demand.

Scenario costs total $X billion, driven largely by electricity generation and transmission infrastructure, and battery costs.

Balanced Gas System Scenario

1. Excess wind and hydro are converted to hydrogen using an electrolyser in Region 1, then transported via pipeline to Region 2.
2. Region 2 stores the hydrogen in a reservoir, then dispatches it to gas/hydrogen turbines to meet electricity demand.

Scenario costs total $Y billion, driven largely by electrolyser, hydrogen transmission, and hydrogen reservoir costs.

1.5 Task 5. Reporting

Guidehouse is providing two reporting options for EGI's consideration.

Option 1: Draft Report in PPT format and Final Report in Word format.

Guidehouse will prepare a PPT report to the November 1st deadline. The report will be structured to facilitate internal and external feedback sessions which will be completed by EGI. Guidehouse's experience is that PPT format is more conducive to focusing feedback on important conceptual elements of the project methodology, inputs, scenarios, risks, and conclusions. A Word formatted report tends to elicit significant editorial and formatting comments/feedback. Guidehouse followed the PPT report format during its project with FortisBC. The executive of FortisBC appreciated the short time commitment required to review the report and the ability to have a focused discussion on key concepts and conclusions when the PPT report was presented to them.

Guidehouse will prepare a draft final report in Word format within 10 days of receiving EGI's comments from the stakeholdering process that EGI will conduct in November and early December. EGI will need to provide a concise and organized set of stakeholder comments to Guidehouse.

EGI will provide its comments to the draft final report by December 20th. Guidehouse will create a next-to-final report for EGI's review, for editorial and formatting purposes only, before the end of December. Guidehouse will incorporate EGI's editorial and formatting comments in the final report for delivery on January 4th. Guidehouse would typically encourage multiple drafts and comments stages but limited time between when the stakeholdering process is completed and when the final report is due dictates a well-structured process and somewhat rigid timeline.

In order to meet for EGI and Guidehouse to meet final deadline of January 4th, each partner will need to commit to prompt review and turnarounds.

Option 2: Draft and Final Reports in Word format.

Guidehouse will prepare a Word formatted draft report for November 1st.

Guidehouse will prepare a draft final report in Word format within 10 days of receiving EGI's comments from the stakeholdering process that EGI will conduct in November and early December. EGI will need to provide a concise and organized set of stakeholder comments to Guidehouse.

EGI will provide its comments to the draft final report by December 20th. Guidehouse will create a next-to-final report for EGI's review, for editorial and formatting purposes only, before the end of December. Guidehouse will incorporate EGI's editorial and formatting comments in the final report for delivery on January 4th.

In order to meet for EGI and Guidehouse to meet final deadline of January 4th, each partner will need to commit to prompt review and turnarounds.

Option 1 vs. Option 2

The price and schedule for each of the two options is the same. EGI can choose either of the two options at any time up until early October or EGI and Guidehouse can agree to a hybrid option based on how the project unfolds.

Proposed Final Report Outline (estimated to be 60-80 pages total)

In the remainder of this section, we present a proposed outline for the final deliverable report which will be updated based on input from Enbridge during the project initiation phase. Should EGI choose Option 1 from above, the PPT format draft report will include summary slides for all aspects of the proposed outline except perhaps for Appendix B – Detailed Model Inputs.

- Executive Summary (2-3 pages)
  - Recommendation of the least cost option to reach net-zero emissions
  - Summary of the most critical implications to Enbridge business and questions that remain to be explored
- Introduction (1-2 pages)
  - What critical questions did this work address?
  - Considerations for how the data should be used
  - Scenario definitions
- Outcomes of the Pathways Assessment (6-9 pages)
  - Electrification
  - Diversified
    - For each scenario a graphic description will be provided that describes the optimal pathway modeled through the Pathways Assessment and the following details will be provided:

        - Total CAPEX costs for the owner and total societal costs, for achieving target by 2050 (short-term 2030 and long-term 2050)
        - Impacts on electric grid demand / capacity
        - Risks of stranded assets (loss of gas demand and changing customer segments served)
        - Abatement potential from baseline year
        - Pathway opportunities and risks
        - System Reliability opportunities, challenges and limitations
- Implications of the Pathways Assessment to Enbridge' Gas Business and Ontario's broader Energy System (10-12 pages)
    - Review of current energy system and policy framework in Ontario
    - Policy framework that would be needed to implement optimal pathway
        - Identification and characterization of critical drivers that will be required to drive either pathway
    - Opportunities and feasibility of H2, RNG and other low carbon fuels
    - Review of energy imports/exports and expected changes or implications of pathways
    - Pathways ability to adjust to sudden or extreme weather conditions
    - Evidence to support the role of both the electricity and gas systems in achieving low cost decarbonization in Ontario
    - High level commentary on the possible environmental impacts/benefits, including to land, water, waste management (including nuclear waste), associated with each scenario.
- Conclusions (3-4 pages)
    - Recommendation of the least cost option to reach net-zero emissions
    - Summary of the implications in Ontario
    - Key questions that remain unanswered or were identified for further investigation through the course of the analysis
    - How Enbridge should use the information from this study
- Appendix A: Methodology (8-12 pages)
    - Detailed description of the methodology used to provide the documented results, including a description of the LCP model
- Appendix B: Detailed Model Inputs (8-12 Pages)
    - Documentation of all analysis inputs and links to data sources

1.6 Task 6. Stakeholder Engagement (if necessary)

We have a specifically designed team of senior thought leaders and experienced facilitation and strategy consultants to support any stakeholder engagement which occurs following the study. Andrea Roszell (Director-in-Charge) has recently supported stakeholdering of the FortisBC Pathways study with multiple organizations across BC and North America including the BCUC, BC Hydro and the NWGA.

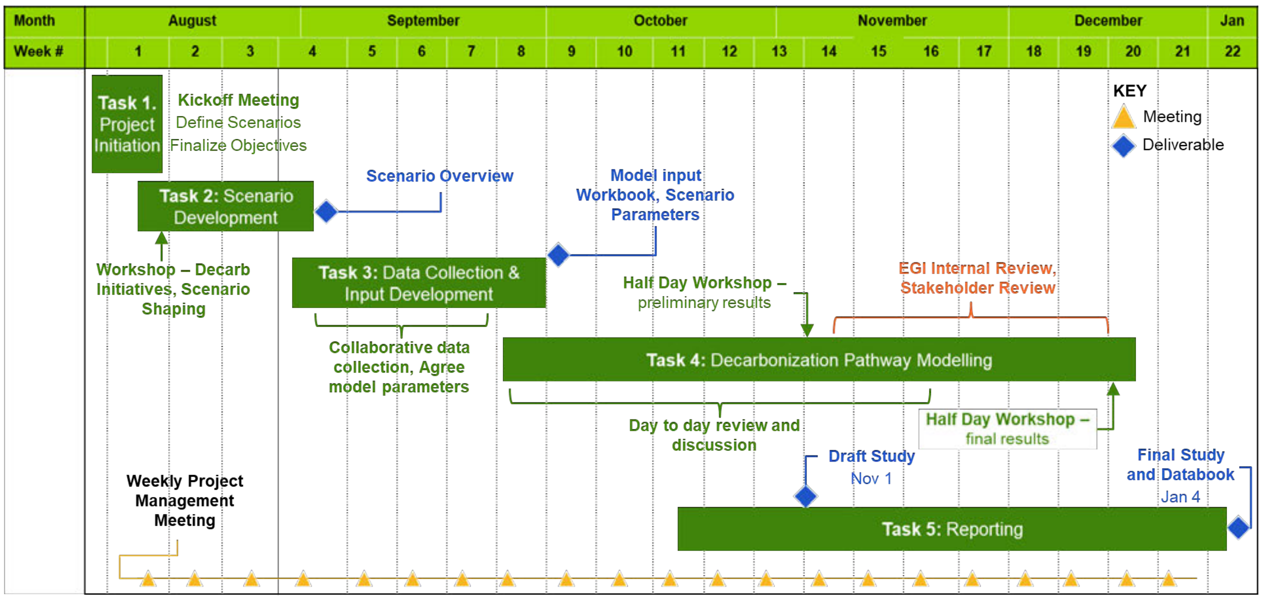
Guidehouse proposes to leverage the Transformation Readiness and Strategic Vision (TSV) Model™ to develop internal and external alignment on the study results and key outcomes. The model leverages facilitated discussion across and around the organization to determine the critical areas of strategic focus that are required for decarbonization. TSV is based on three core principles:

1. **Multiple and comprehensive points of view** – includes opportunity for senior leadership, management and staff layers of the organization to contribute ideas
2. **Focused Discussion** – through interview and workshop instruments, we focus discussion on key trends and conversations that matter
3. **Strategic Alignment** – aligns outcomes with provincial policy, corporate strategic direction and integrated energy system views

2. Project Schedule and Deliverables

The proposed schedule ensures that the defined scope of work is delivered on time and within budget. Our project management approach combines detailed project planning, scheduled client communications, and detailed reviews.

Table 5. Proposed Project Schedule



2.1 Assumptions

The key assumptions made in the proposed project schedule are listed below.

- Guidehouse's project schedule is based on EGI's start date indicated in the RFP. A delay in project start could affect the schedule as shown. We will work with you to amend the schedule and extend delivery dates as appropriate.
- This proposal's project schedule assumes EGI's timely review and approval of any project materials provided by Guidehouse. For this defined scope of work, timely review is defined as no more than 3 business days.
- All data used in the development of scenarios for analysis will either be publicly verifiable or agreed to for use as part of the analysis by both parties, should any public report be required.

3. Our Team

Guidehouse has assembled a team of highly qualified and experienced professionals who can complete a decarbonization pathways study that EGI can be confident will support EGI's business planning activities and external stakeholder discussions. To effectively manage this assignment and establish a project governance, control and quality assurance mechanism, Guidehouse will implement the following team and approach.

The Guidehouse team will be overseen by Craig Sabine, who leads Guidehouse's Canadian energy practice and who has extensive low carbon economy modeling and pathways experience, going back to 2003 during development of Canada's initial climate change policy and emissions pricing policy platforms. Craig will work closely with the Director-In-Charge and the team as a SME, offering guidance, project facilitation and QA/QC.

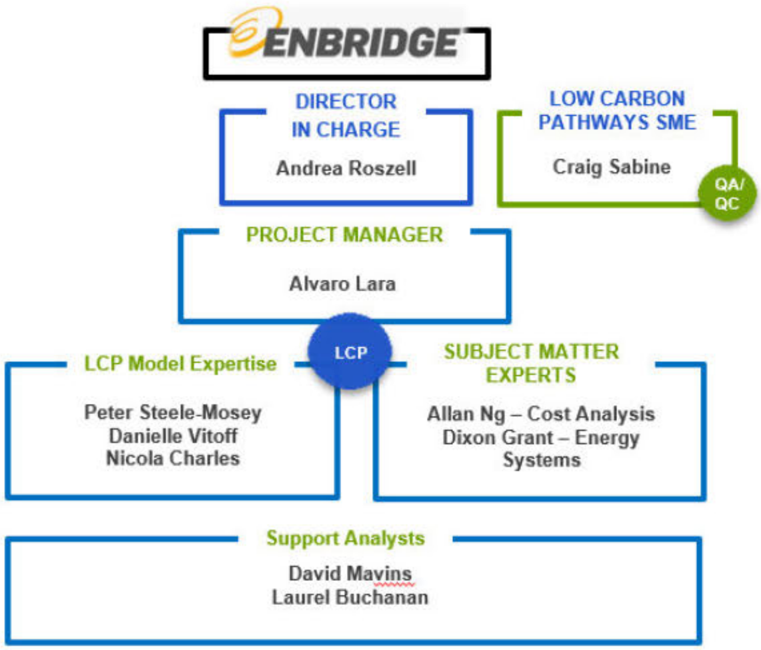
Andrea Roszell, a Director in Guidehouse's Canadian practice, will serve as engagement manager and Director in Charge for this effort. Andrea will be available to EGI at any time to address strategic direction of the project, quality, performance and concerns and issues as they arise. Andrea led Guidehouse's low carbon pathways engagement with FortisBC.

Alvaro Lara will serve as the project manager. He will be the key point of contact for the EGI team. Alvaro will establish communications and schedule regular and strategic meetings, as required, working closely with the EGI program manager to ensure the project stays on schedule, within the proposed budget and achieves critical deliverables. Alvaro's decarbonization pathway experience includes engagements with gas transmission and distribution companies in the UK and mainland Europe. Alvaro is very familiar with the context of the Ontario energy system as he has supported engagements with most major Ontario energy stakeholders.

Our team organization in Figure 13 ensures that the right level of resources is deployed to meet the completion deadline. This structure leverages highly skilled experts to span the capability sets required for this scope of work. Biographical sketches for key team members follow in Craig Sabine and Dixon Grant, who have both been involved in five other engagements, summarized in Appendix A, with EGI over the last twelve months, will provide continuity with those projects and an understanding of EGI's strategy and operations.

Table 6. Professional resumes for the senior team members are attached with our submission as a separate document.

Figure 13: Project Team Organization



Craig Sabine and Dixon Grant, who have both been involved in five other engagements, summarized in Appendix A, with EGI over the last twelve months, will provide continuity with those projects and an understanding of EGI's strategy and operations.

Table 6. Expertise and Experience of Key Team Members

Consultant | Title | Project Role	Education	Qualifications and Experience
Craig Sabine Director Toronto Project Role: Director in Charge	• MBA, Queens, Smith School of Business • BES, Environment and Resource, University of Waterloo	**19 years of experience that includes:** Low carbon economy modelling, pathways analysis and GHG mitigation abatement curves Policy analysis of market-based emission reduction mechanisms, energy efficiency programs and clean supply standards Regulatory support and utility corporate strategy Transactions support and M&A for over $40 billion in power and natural gas assets Integrated resources planning initiatives for nearly every major provincial utility in Canada Economic analysis and BCA

Consultant | Title | Project Role	Education	Qualifications and Experience
Andrea Roszell Director Toronto Project Role: Director in Charge	• Master of Science, Chemical Engineering (Queen's University) • B.S., Honours, Chemical Engineering (University of Waterloo)	**15 years of experience that includes:** Low carbon economy modelling and pathways analysis Transportation Electrification EE and DSM program planning and evaluation Microgrid and renewable energy project assessments Business case development and market assessment of emerging energy technologies Financial analysis and asset valuation
Danielle Vitoff Associate Director Project Role: Decarbonization Pathways Strategy	• BA, Environmental Design, Architectural Program, Montana State University • BA, Liberal Studies, Environmental Studies Option, Montana State University	**10+ years of experience that includes:** Sustainability, decarbonization, and strategic planning for utilities, corporations and governments. Led the delivery of the recently completed AGF Resilience Study. Led teams, as the project manager, to support decarbonization plans for multiple natural gas utilities including, GHG assessments, decarbonization roadmaps, and evaluating business impacts to support rate case filings. Led teams in delivering climate risk and sustainability strategies for utilities, Fortune 100 companies, and top 10 U.S. cities.
Alvaro Lara Managing Consultant Utrecht Project Role: Project Manager	• MSc. Climate Change, Management and Finance (Imperial College Business School, UK) • BEng. Mechanical Engineering (University of Toronto)	**7+ years of experience that includes:** Electricity and gas network decarbonization and energy system analyses Grid modernization strategy, long-term investment plans, cost-benefit analyses Demand-side management (energy efficiency) planning, strategy, and long-term forecasting Electric mobility adoption, strategy, data analysis
Allan Ng Managing Consultant Toronto Project Role: SME – Cost Analysis	• MBA, Smith School of Business, Queens • CPA, Canada • B.Comm COOP in Accounting, University of Calgary	**12 years of experience that includes:** Asset life-cycle modelling for energy transition Financial and utility revenue requirement modelling to determine customer rate impact under low carbon scenarios Developed stranded asset methodology and modelling for FortisBC low carbon pathway Lead development of electric transportation business cases and economic analysis Leads North America transaction advisory in supporting investors and large corporate in acquisitions focused in energy transition

Consultant | Title | Project Role	Education	Qualifications and Experience
Dixon Grant Managing Consultant Toronto Project Role: SME – Energy Systems	• BComm, Queen's University • BSc., Biology, Queen's University	**5 years of experience that includes:** Development of clean growth pathways for natural gas utilities, including the assessment of GHG reduction potential and costs of low carbon technologies (RNG, transportation, heat pumps, energy efficiency, etc.) Canadian market lead for wholesale energy market modelling and price forecasts Financial due diligence and valuation for large infrastructure projects and M&A Electricity load forecasting GHG accounting and assessment for industrials
Peter Steele-Mosey Associate Director Toronto Project Role: LCP Model SME	• BA (H), Queen's University • MA, Economics – Applied Econometrics, University of Guelph	**14 years of experience that includes:** • Development of the Ontario Fuels Technical report for the Ontario Ministry of Energy., a scenario analysis of potential approaches for decarbonizing Ontario's combustible fuel sector. • Development of two consecutive (in 2016 and 2019) scenario analyses for FortisBC to explore the consequences of significant structural changes in load drivers on the existing reference forecast of load. • Load forecasting and load forecast support for Canadian, US, and Middle Eastern utilities. • Econometric impact evaluation of price pilots, time-differentiated tariffs, demand response and energy efficiency programs.
Nicola Charles Senior Consultant Toronto Project Role: Support	• Bachelor of Engineering, Applied Mathematics and Mechanical Engineering, Queen's University	**3 years of experience that includes:** • Econometric evaluation of energy efficiency and demand response programs across North America • Measure characterization and modeling for EE and DSM potential studies • Program design and BCA for EE programs • Adoption, traffic and charging station site modelling using advanced optimization and GIS to support electric transportation business cases and economic analysis for utilities
David Mavins Consultant Toronto Project Role: Support	• BASc, Queen's University	**2 years of experience that includes:** • EU Hydrogen Backbone decarbonization scenarios analysis • BC Hydro electric vehicle fast charger rate design • Industry decarbonization pathways • Forecasting hydrogen system development • Strategy with respect to distributed energy resources

Consultant | Title | Project Role	Education	Qualifications and Experience
Laurel Buchanan Consultant Toronto Project Role: Support	• BASc, Queen's University	**2 years of experience that includes:** • Regulatory filing support on a variety of topics including EVSE ownership and natural gas demand forecasting • GHG accounting and target setting for corporates • Power asset valuations and clean energy due diligence • Energy market research and analysis • Survey development and analysis and stakeholder interviews

4. Pricing

Guidehouse will complete the scope of work detailed in this proposal for a fixed fee of [redacted]

Guidehouse will complete any additional work at rates and/or fixed fees to be agreed between Guidehouse and EGI.

Assumptions:

- In order to meet the January 4, 2022 deadline for a final report, EGI will have two opportunities to provide input to the draft report. Once after EGI completes its stakeholdering process and once after Guidehouse provides an updated report based on EGI's stakeholder-based comments.
- This proposal is valid for 90 days from date of submittal.
- This project will be executed under the Consulting Agreement between Enbridge Gas Inc and Guidehouse signed January 28, 2021.
- EGI will be responsible to schedule their employees to attend all meetings, workshops, and interviews.
- When Guidehouse personnel are working onsite, EGI will provide workspace (e.g., conference rooms, individual spaces) and internet access as needed.
- It is assumed currently that stakeholder engagement will be performed by EGI. Should Guidehouse be required for stakeholder engagement and public facing report necessary, incremental fees may apply.

Appendix A. Qualifications

Our relevant experience, which is highlighted below, allows us to start fast and become productive immediately. In addition to quick startup, the lessons we have learned through a series of recent decarbonization strategy engagements will allow our team to offer deeper insights and more comprehensive results.

A.1 EGI Experience

We understand the Ontario energy context, policy environment and both the electricity and natural gas systems in the province. We have extensive decarbonization analysis experience across major jurisdictions and gas utility service territories, and we will proceed with this important work with a keen understanding of the EGI context having current and recent project work experience supporting the organization's planned 2022 rebasing application. Our work with EGI has included the following projects and we encourage your team to gauge our rigorous and collaborative consulting approach and team-based delivery style with your colleagues, who *include Jason Gillet, Steve Dantzer, John Gillis, Safi Junaid, Hulya Sayyan, Elena Chang* and *Briana Hamilton.*

Project	Gas Storage Blind RFP	Gas Supply Planning Approach Benchmarking	Avoided Costs Calculation	Load Forecast Approach Benchmarking	Corporate Share Service Cost Allocation Review
Brief Summary	Developed a process to independently procure gas storage at Dawn via RFP	Comparative analysis of industry practices related to weather and risk assumptions for gas supply planning, incl. utility best practices for design day demand modeling.	Reviewed current DSM avoided cost assumptions, methodologies, and input and provided best practice/jurisdictional review.	Examined leading practices applied by gas utilities in approaches and procedures for load forecasting	Independent review of reasonableness and appropriateness of corporate shared services cost allocation methodology

These projects have been conducted, or are in the process of being completed, by various Guidehouse teams, demonstrating our breadth of experience, knowledge of key aspects of EGI's operations and our deep capacity to deliver. Strong continuity exists with our proposed approach, with Craig Sabine and Dixon Grant having been involved in nearly all EGI work over the past 12 months.

A.2 Low Carbon Pathways Modelling

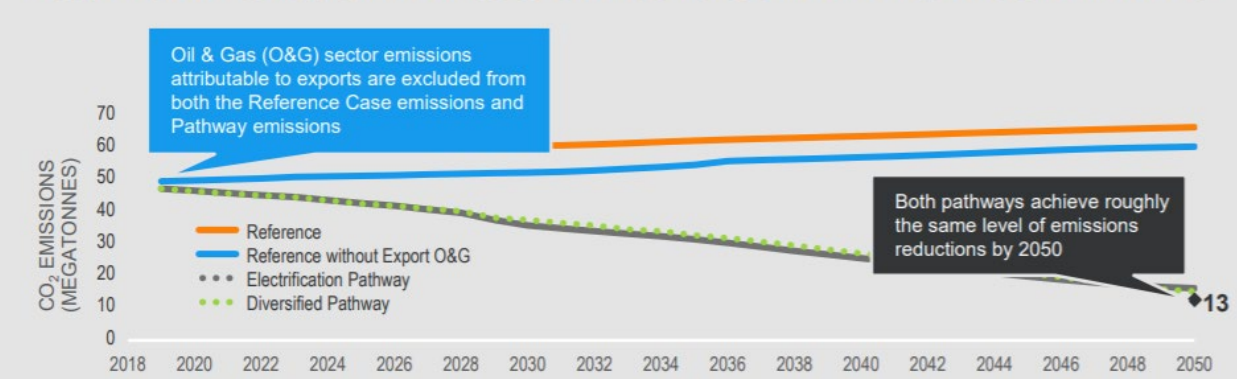
FortisBC Energy Vision 2050 Low Carbon Pathway. (2019-2020). Challenged by a highly progressive policy landscape focused on meeting Paris-aligned GHG targets for the province, FortisBC has been lobbying for natural gas to be considered as part of the solution to climate change. Guidehouse supported the utility to analyse deep carbon reduction scenarios and identify unique pathways to achieve 80% reduction targets by 2050. Pathways include a role for the reliable and low-cost natural gas system. Guidehouse partnered with whatIf?, an economy and energy modelling team, to develop and analyse comprehensive low carbon scenarios.

First, a pathway that aligns with current government policy initiatives designed to incent high electrification was examined. Secondly, a series of renewable and alternative fuels and built environment initiatives were defined and modelled to provide an optimized gas scenario. Key conclusions from the study include:

- The Electrification and Diversified Pathways both achieve significant domestic GHG reductions in-line with the provincial government's 2050 targets.
- The Diversified Pathway uses gas infrastructure and saves in excess of $100 billion by 2050

A public copy of Guidehouse's report can be found at this link.

FIGURE 10. BRITISH COLUMBIA EMISSIONS REDUCTIONS UNDER ENERGY VISION PATHWAYS



National Fuel Gas Company (NFGDC) – Guidehouse completed a scenario analysis for New York's Climate Leadership and Community Protection Act (CLCPA).

In 2019, New York State adopted the Climate Leadership and Community Protection Act (CLCPA), with the ambitious target of 85% reduction in GHG emissions by 2050 (relative to 1990). NFGDC, a natural gas utility, wanted to understand how this policy will affect different sectors' demand for natural gas and customers' annual energy costs. In particular, NFGDC was curious whether the displacement of natural gas by low-carbon alternatives fuels would improve customer energy costs

Guidehouse used our low carbon pathways model to conduct a scenario-based analysis, comparing the potential outcomes of an electrification-focused scenario to a scenario that facilitates alternative fuel development. We assessed the various GHG reduction technologies that would need to be deployed and the associated CAPEX that would be required to meet the overall goal of the CLCPA and the various requirements that the law sets out for the power sector. We also constructed representative rate models to estimate how decarbonization policies will impact customers' energy bills in Upstate and Downstate New York.

The Result: We provided an objective analysis that highlights the value of considering gas within the decarbonization portfolio to meet the CLCPA targets. Continuing to use the gas system and transitioning to low-carbon gas substitutes will reduce the cost of decarbonization for NY customers.

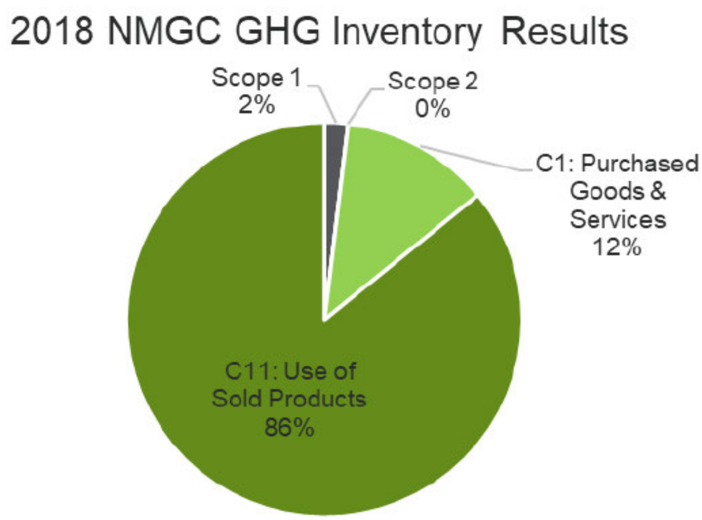
NFGDC Scenarios

	Business as Usual	Selective Electrification	Electrification Only
Achievement of GHG Reduction Target (CLCPA)	CLCPA 2050 target is not met	Yes, CLCPA target and potentially more aggressive targets are met.	Yes, CLCPA target and potentially more aggressive targets are met.
Customer Choice / Benefit	Customers continue to maintain fuel and system choice	Customers will continue to maintain some choice	Customer choice will be restricted to all-electric systems
Leveraging Existing Infrastructure	Existing infrastructure is used to the fullest extent	Much of existing infrastructure can continue to be used	Most natural gas infrastructure will be retired and extensive build out of electric infrastructure will be required.
Inherent System Resiliency / Reliability	Resiliency and reliability of current operations is maintained and potentially increased	System resiliency / reliability will be similar to the business as usual case	More costly to maintain system resiliency and reliability given the intermittent production of renewables
System Cost	Lowest system cost of the scenarios considered.	More costly than business as usual scenario, but less costly that full electrification	Significant cost for the build out of infrastructure including systems and conversion of existing systems

New Mexico Gas Company Low Carbon Pathways Roadmap – In early 2019, the Governor of New Mexico committed the State to meeting the goals of the Paris Agreement and reducing the state's GHG emissions 45% by 2030, relative to 2005. New Mexico Gas Company (NMGC) needed to understand the associated challenges and opportunities for their business and develop a new paradigm for low-carbon operation and investments.

Guidehouse led the NMGC team through three phases of work, including:

1. Development of a GHG inventory by evaluating NMGC's total emissions in 2018, the trend since 2010, and portion of the State's emissions that is related to NMGC.
2. Review of decarbonization goals and pathways, including best practices being pursued by peer utilities and clarification of the pathway to achieve the Paris Climate Agreement.
3. Development of a low-carbon roadmap, which assesses NMGC's opportunities to reduce emissions across all emissions categories identified in the GHG inventory.



The decarbonization roadmap will be included as an appendix document in NMGC's upcoming rate case, where NMGC will present the preliminary framework for their transition to low-carbon operation and the necessary investments to get there.

Nordion Energi (TSO) & Gas Distribution Companies – Gas Infrastructure Pathways for a Net-Zero Swedish Energy System –

Sweden has set ambitious net-zero target to decarbonize its economy by 2045, along with interim 2030 and 2040 targets. SwedeGas was looking to understand the role and value of gas supply and gas infrastructure in meeting these climate targets, as well how energy networks in individual regions will transition from today to 2045

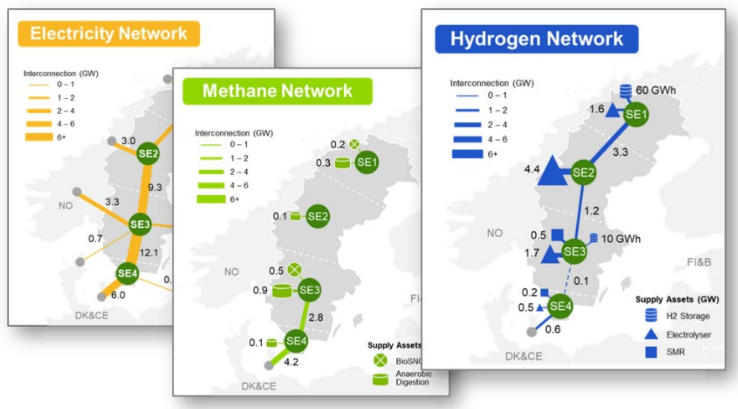
Guidehouse used its Low Carbon Pathways (LCP) model to optimize 2020-2045 decarbonization pathways for the Swedish energy system to understand the buildout of electricity, hydrogen and methane supply capacity, and associated transmission infrastructure within Swedish regions and with neighbouring regions.

Major modelling considerations included:

- Integrated capacity expansion and dispatch optimization
- Optimisation of generation, storage, and interconnections (electricity, CH4 and H2) with emissions targets
- Intra-annual temporal resolution: representative days by season
- Geographical resolution: 4 regional nodes with interconnections

REGIONAL FOCUS

- Our modelling approach was configured to **4 Swedish regions** corresponding to the existing electricity bidding zones (SE1, SE2, SE3 and SE4), and 3 neighboring regions: **Denmark and Central** Europe (**DK&CE**), **Finland & the Baltics** (FI&B), and **Norway** (NO)
- For each region, we determined a **regional cost-optimal buildout of supply capacity and interconnection infrastructure** for the electricity, hydrogen and methane networks from 2020 to 2045.



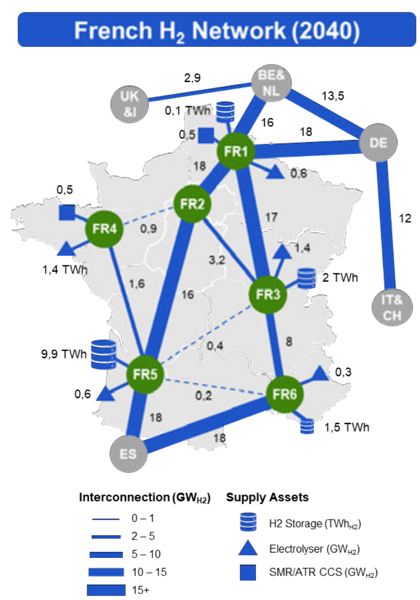
Guidehouse's report was endorsed and publicised by Nordion Energi (TSO) and the 5 Swedish Gas DNOs and distributed to Swedish policymakers and politicians.

GRT Gaz & Consortium – Hydrogen Transport and Storage Infrastructure in France – Our client needed an analysis-based assessment of the role of hydrogen transportation and storage infrastructure in the context of France's hydrogen strategy and the broader European context.

Guidehouse completed a data gathering and scenario development exercise across 4 scenarios: On-site H2 production, Ecosystèmes territoriaux, Ecosystèmes européens, and hybrid.

Guidehouse used its Low Carbon Pathways (LCP) model to calculate the costs and benefits of each scenario including investment requirements, costs of H2 delivered, cost of green H2 delivered, quantification of security of supply and annual Co2 saved.

Guidehouse developed a narrative through objective and fact-based approach to bring coherence to the complex subject.



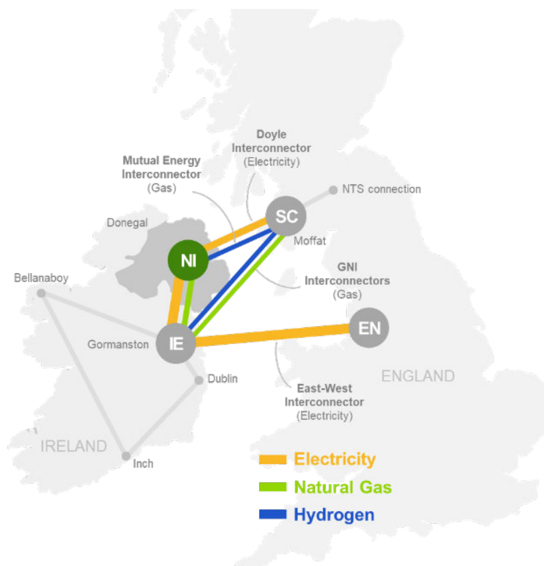
The Result:

- An analysis-based assessment of four hydrogen demand, supply, transportation, and storage scenarios to meet France's goal of 6.5GW of production by 2030
- A clear rationale on the role of hydrogen transportation and storage infrastructure and the benefits for France (investment, security, avoided CO2, societal cost saving)
- An analysis-based report with clear conclusions and assumptions presented to the CSF.

Gas Networks Ireland & Mutual Energy – Gas Networks Pathways to a Net-Zero 2050 – The Northern Ireland (NI) Government is developing an energy strategy to facilitate NI's contribution to the UK Net Zero 2050 strategy. As part of this the gas network operators of Northern Ireland (TSOs and DNOs) have been asked to develop a credible pathway to net zero for their sector.

Guidehouse used its Low Carbon Pathways (LCP) model to optimize 2020-2050 decarbonization pathways for the NI energy system.

- Geographic Scope: 3 zones; NI and neighbouring regions (ROI and GB)
- Energy carriers: Electricity, hydrogen, and methane
- Interconnections: Existing electricity and methane interconnections, and option to repurpose / build new hydrogen interconnections
- Modelled years: 2020, 2030, 2040 and 2050



Pathway outputs from the LCP model were used to develop a high-level implementation plan of near-term (2030) and long-term (2040-2050) supply and infrastructure investments by the NI gas networks

The Result: The project is underway and is expected to be completed by Q3-2021. Our report will serve as a foundation for the NI gas networks' decarbonization plans and investments over their next regulatory period (2022-2026).

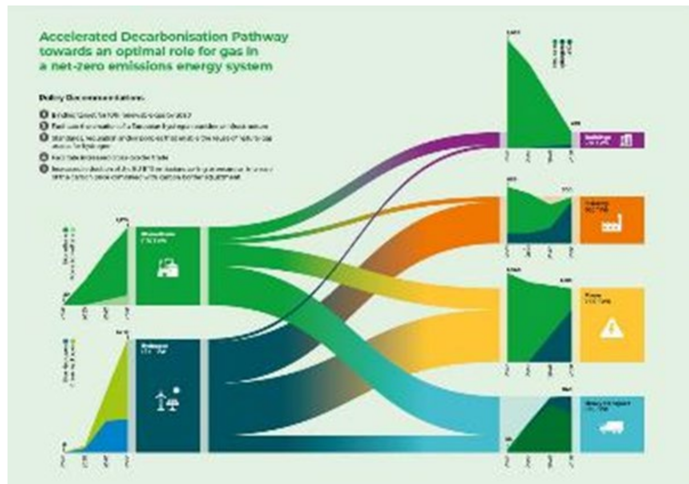
Gas for Climate 2050 – Pathway to a Net-Zero Emission Energy System – Policy strategies to decarbonize the energy system to meet climate change targets often focus on electricity and the value of gas and gas infrastructure is not equally appreciated. The (renewable) gas sector needs a consistent and credible vision on the future of gas and get policy endorsement to ensure a license to operate. Guidehouse supported the Gas for Climate consortium with scenario-analysis and vision development on the future role of gas alongside electricity.

Guidehouse estimated the potential for renewable gas using innovative approaches such as Biogasdoneright to avoid competition with food crops and to guarantee a GHG-emission reduction by 95% compared to 1990.

The system costs of two scenarios were compared: an electrification scenario and an electrification scenario with renewable gas. The renewable gas was distributed to sectors based on the largest marginal value of the gas.

Guidehouse provided recommendations regarding the design of the future energy system which is both sustainable and cost-efficient.

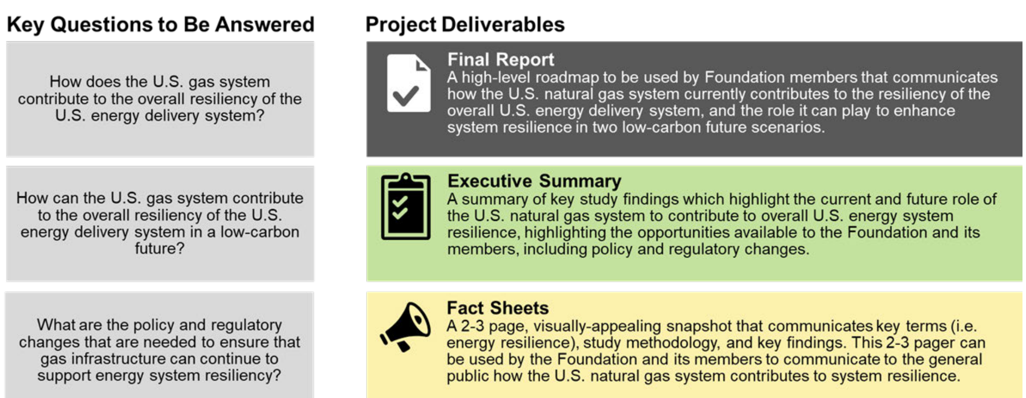
The Result: CEO statement supporting a target to achieve net zero greenhouse gas emissions by 2050. Two scenario modelling studies published in 2018 and 2019, compared optimized gas with a minimal gas 2050 scenarios. A pathway study 2020-2050 was published in 2020 and outlined several roads to achieve 2050 targets. 2030 Action Plan: A to-do list that was presented by the CEOs of Gas for Climate members to European Energy and Climate Commissioner Arias Cañete



European Pipeline Consortium: European Hydrogen Backbone. Guidehouse supported a consortium of 23 gas infrastructure companies across 21 countries to create a vision of a European Hydrogen Backbone – a dedicated hydrogen pipeline transport network spanning ten European countries. The Report "Extending the European Hydrogen Backbone" was released in April of 2021 and is an update to a report Guidehouse published in 2020. Guidehouse developed hydrogen infrastructure maps for 2030, 2035 and 2040. A copy of the report, which has successfully spurred the conversation around the role of hydrogen in the future European energy system, can be found at this link.

American Gas Foundation (AGF) – Energy System Resilience Whitepaper – Driven by the increasing frequency and severity of disruption events (i.e., extreme weather, cybersecurity), energy system resilience has arisen as a key priority in policy making discussions, particularly in discussions that aim to achieve decarbonization goals. The AGF wanted to understand the role that the U.S. natural gas system plays in contributing to overall energy system resilience today, and in a near-term decarbonized future.

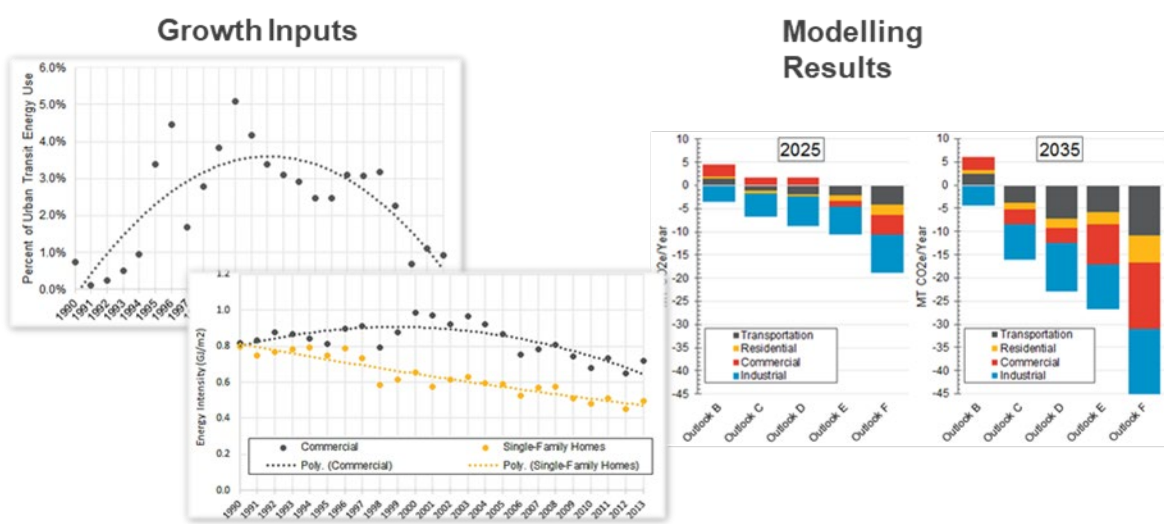
Guidehouse is working to define the current and near-term energy system states, including defining resilience and the characteristics on which it can be evaluated. Guidehouse is evaluating the state of the regulatory and policy landscape to provide recommendations of issues and policies that must be addressed to ensure resiliency in the energy system transformation.



Guidehouse will provide clarity that gas infrastructure not only supports current energy system resilience, but also future energy system resilience. Guidehouse will also provide the Foundation with recommendations of issues/policies to be addressed to support the natural gas industry's role in a resilient future ES, along with a roadmap to be used by Foundation Members with external stakeholders to communicate how gas provides resiliency support today and in a decarbonized future.

A.3 Related Low Carbon, Scenario Analysis and Pathways Projects

Ontario MOE Fuels Technical Report & Decarbonization Analysis (2017) – Guidehouse supported the development of a technical report providing a comprehensive overview of the combustible fuels sector in Ontario since 2005, along with an examination of a set of outlooks to 2035 that capture opportunities for electrification of the economy and decarbonization of fuel supplies. Key input assumptions were developed in consultation with the IESO, and members of the Fuels Sector Working Group. These were applied to the CanESS integrated energy systems model to develop a set of possible future levels of fuels demand and combustion related GHG emissions. Under the most aggressive assumptions regarding electrification, incremental natural gas conservation and the adoption of alternative fuels (biofuels and less carbon intensive fossil fuels), the modelling predicted a 40% decrease in GHGs in 2035 compared to the Business As Usual (BAU). Following publication of the report, Guidehouse took part in a cross-province consultation process in support of the Ontario Long-Term Energy Plan, presenting a summary of the technical report's findings in 17 communities across Ontario.



Fortis BC Long Term Load Forecast Scenario Analysis (2016) - Guidehouse was engaged by FortisBC to develop a set of five future load scenarios to allow FortisBC to explore the implications for its long-term electric resource planning of significant structural shifts in load drivers. The study examined eight load drivers of interest: integrated photovoltaic storage systems (IPSS), electric vehicles (EVs), fuel switching (gas to electric and vice versa), climate change provoked weather shifts, large load sector transformation, the internet of things, and combined heat and power. Working closely with a large group of internal FortisBC stakeholders, Guidehouse built five projected scenarios designed to test the impact of possibilities that were "reasonable extremes", i.e., scenarios of combined uptake across load drivers that a qualitative risk assessment would indicate are in the long tails of the probability distribution, but still within the realm of the possible.

- 
Confidential Client Heat Pump Deep Dive (2020-2021). Given the impact of Heat Pumps on electric peak demand, Guidehouse supported a deeper dive analysis focused on refining results from an earlier analysis with real world performance data and greater variety in Heat Pump types. This analysis incorporated more robust and detailed information regarding electric, gas and dual fuel heat pump performance and how a deeper understanding of implementation in different parts of the clients' service territory would impact the scenarios' results. The team analyzed the thermal loads applied to and efficiency of heat pumps in different climate zones within the service territory and analyze differences in thermal loads by various housing structures. To characterize the heat pumps, Guidehouse developed the following:

- Summary of climate zones and customer segmentation and resultant use types detailing the number of customers in each segment and climate zone
- Heat Pump Performance Characteristics for each applicable combination of customer segments and climate zones and heat pumps (COP, annual and peak energy demand, capacity delivered at different temperatures)
- Daily load profiles for each combination of segment, climate zone and heat pump type that reflects a 1 in 2, a 1 in 10 and a 1 in 20-year cold day
- Total installed costs for each Heat Pump and customer type at different equipment sizing levels

The Heat Pump characterization was then incorporated into a broader GHG reduction modelling exercise to determine the impact on energy, peak and total costs.

Ontario Teachers' Pension Plan Low Carbon Economy Investment Framework – Guidehouse led one of the world's largest funds through a series of workshops to develop three principle analytic underpinnings, including carbon futures scenarios, economic performance indicators and a change management model. We developed a new strategic framework to transform the Fund's approach to identify opportunities in the shift to a low carbon economy and the catalysts and tipping points likely to result in positive carbon mitigation. Three core future scenarios highlighting the likely actions, economic and policy activity, technology innovation levels, consumer behaviour and capital flows in futures with differing carbon emission levels and climate change impacts. The assignment prioritized a large set of possible economic indicators of a shift towards a lower carbon economy, Navigant and the fund defined a short list of key KPIs offering insight on the scale, intensity, and pace of the shift.

Wien Energie City of Vienna Decarbonization Study (2017) – Guidehouse presented a decarbonization study for the City of Vienna (Austria) which was completed for Wien Energie, the local utility of Vienna. The concluding full-day program included multiple presentations to the Energie CEO, to Wien Energie employees, and a panel discussion in the evening with 120 participants and journalists. In the evening, the study was formally presented to Wien Energie's CEO. The study developed a decarbonization scenario for the city of Wien. It identified necessary measures in the sectors of power, heat, and transportation to reach these significant emission reductions, and provided a detailed view on the future composition of end-use energy in those sectors. It also estimated necessary investments and defined required regulatory framework conditions. Based on this study, we derived key business model options for Wien Energie to succeed in the transformation.

EHI, EU Pathways to a Decarbonized Building Sector (2016) - A scenario evaluation of the European residential heating sector by considering developments of low carbon technologies as well as current sales numbers in order to consider all relevant heating systems that will be available in the market by 2030. The scenario results are set in relation to the carbon dioxide emission targets of the EU "Roadmap for moving to a competitive low carbon economy in 2050.

BC Electric and Gas Conservation Potential (2017) - The group of electric and gas utilities in the province of British Columbia (BC Hydro, FortisBC Electric, FortisBC Gas, and Pacific Natural Gas [PNG]) engaged Guidehouse to prepare a dual-fuel (electric and gas) conservation potential review (CPR) and to quantify the technical, economic, and achievable energy efficiency potential for the entire province. For this province-wide assessment, Guidehouse used its proprietary and state-of-the-art DSMSim™ potential model. DSMSim is a bottom-up technology diffusion and stock-tracking model implemented using a System Dynamics framework and built on the Analytica software. Guidehouse customized its DSMSim model in order to model fuel-switching potential from multiple fuel types to electric and gas, and the adoption of alternative transportation fuels including electric vehicles. Guidehouse DRSim™ was also used to assess the Demand Response (DR) potential across the entire province.

Portfolio of the Future SoCalGas SDG&E (2016) - Faced with increasingly stringent goals for reducing future natural gas consumption, as well as the maturity of many traditional energy efficiency measures, SoCalGas needed assistance in accelerating the commercial acceptance of emerging energy efficient technologies. Guidehouse conducted an exhaustive search of emerging energy efficient natural gas technologies in the residential, commercial, and industrial sectors. We identified the most promising technologies and designed & implemented demonstrations, market tests, and market development efforts to accelerate the readiness of these technologies for inclusion in future utility energy efficiency programs. We conducted market development activities for 14 different technologies, many of which will now be included in SoCalGas' future programs. Based on the results of this effort, SoCalGas' sister company SDG&E asked Guidehouse conducted an exhaustive search of emerging energy efficient natural gas technologies in the residential, commercial, and industrial sectors. We identified the most promising technologies and designed & implemented demonstrations, market tests, and market development efforts to accelerate the readiness of these technologies for inclusion in future utility energy efficiency programs. We conducted market development activities for 14 different technologies, many of which will now be included in SoCalGas' future programs. Based on the results of this effort, SoCalGas' sister company SDG&E asked Guidehouse to complete a similar effort for their electric efficiency technologies.

City of Hamburg, Germany: Low Carbon Building Strategy (2017) - Guidehouse consulted for the City of Hamburg (Germany) in various projects related to the development a low carbon building stock (heating demand and heat supply). The following projects were implemented by Guidehouse:

- Support to foster networking and accelerate transformation process by showing how to achieve sustainable development
- GIS based inventory of the complete building stock of Hamburg providing information on relevant energy parameters
- Development of urban heat concepts for two districts in Hamburg
- Development of a detailed energy concept and scenario for a typical brick district in Hamburg

The following results were achieved as part of this project:

- GIS based tool to present the energy information of Hamburg's building stock
- Study in the context of the EU project "Transform" including social data to the technical information of buildings and heat supply
- Development of an energy and urban retrofitting concept on district level

Electric Vehicle Analysis and Modelling, Large Investor-Owned Utility (2017) - The client tasked Guidehouse with analysing the market penetration and impacts of the growth of electric vehicles in its service territory. The company requested that Guidehouse find the expected growth of electric vehicles across and within the service territory, when and where charging will occur, and the impacts of the expected charging. To complete the requested analysis, Guidehouse modelled projected electric vehicle penetration across the service territory at a zip code level and developed two penetration scenarios (base and alternative), analysed the charging locations and charging levels of existing infrastructure, and analysed the load profiles to determine system impacts (energy capacity) based on the charging location, time, and level. Guidehouse presented the results, via a dynamic web visualisation tool, to the client in the first quarter of 2018.

Enbridge Natural Gas Energy Efficiency Potential Study - Enbridge Gas Distribution retained Guidehouse to assess the technical, economic, and achievable potential for natural gas energy efficiency in its Ontario service territory. Guidehouse developed a base case forecast for natural gas sales and cost, savings, density, and other characterization data for approximately 90 efficiency measures. Guidehouse estimated the avoided downstream costs applicable to Enbridge's distribution territory to be used in conjunction with upstream avoided costs (commodity, storage, and transportation) for cost-effectiveness testing. Guidehouse developed forecasts of both technical and economic potential, by measure, disaggregated by sector, sub sector and end use by franchise strata. Guidehouse generated the overall benefit/cost ratio (TRC) for the forecasts and an economic potential forecast for six (6) achievable potential scenarios. To ensure stakeholder acceptance of the study results, workshops for each of the residential, commercial, and industrial sectors were held at various stages of the project.

Orange & Rockland, RNG Potential Analysis (2019-2020) - Orange & Rockland Utilities (O&R) was approached by large food processor who planned to connect an anaerobic digestor to O&R's gas network. O&R wanted to understand whether there was significant opportunity for RNG development in the region to support NYS' environmental goals. Guidehouse conducted a forecasting analysis to evaluate the RNG potential in O&R's service territory and surrounding region. Activities included:

- Collecting county-level data on feedstock availability for agricultural products, food/animal wastes, and other resources.
- Estimating RNG production potentials by feedstock, county, and region.
- Developing RNG production cost estimates and comparing these to forecasted gas prices
- Evaluating GHG emissions impacts by feedstock.
- Assessing current and future policies that support RNG development

The analysis provided O&R with a realistic projection for regional RNG potential considering local constraints and will support future planning activities and discussions with RNG developers. O&R submitted project findings as part of their rate case filing under PSC Proceeding 18-G-0068 (Link). RNG report can be downloaded here: Link

Electric Vehicle Analysis and Modelling, Large Investor-Owned Utility (2017) - The client tasked Guidehouse with analysing the market penetration and impacts of the growth of electric vehicles in its service territory. The company requested that Guidehouse find the expected growth of electric vehicles across and within the service territory, when and where charging will occur, and the impacts of the expected charging. To complete the requested analysis, Guidehouse modelled projected electric vehicle penetration across the service territory at a zip code level and developed two penetration scenarios (base and alternative), analysed the charging locations and charging levels of existing infrastructure, and analysed the load profiles to determine system impacts (energy capacity) based on the charging location, time, and level. Guidehouse presented the results, via a dynamic web visualisation tool, to the client in the first quarter of 2018.

Natural Resources Canada: Market Transformation Roadmap for Space Heating, Water Heating, and Window Products – Guidehouse was the technical advisor to Natural Resources Canada as it undertook a series of regular workshops with stakeholders of specific products in the space heating, water heating and windows markets to discuss R&D ad technology deployment barriers that must be overcome to move these markets towards greater energy performance. For each product category, NRCan invited stakeholders along the product supply chain, utility companies, other levels of government, etc., to participate in a series of workshops aimed at developing a roadmap for that product to guide government and industry energy efficiency activities over the next decade. Participants were organized into several working groups, each tasked with a specific product/technology. Working group discussions occurred in a series of workshops and covered topics including: setting R&D priorities, addressing barriers to market deployment, laying out the road map, and identifying key performance indicators to track progress.

European Heat Pump Association, Heat Pump Implementation Scenarios (2013) - We set up scenario calculations for different implementation paths of heat pumps until 2030, based on an analysis of current policies and possible future policy implementation supporting the use of heat pumps. The focus was on the key markets Germany, Sweden, Spain, France, Italy, The United Kingdom, Switzerland, and Austria. We investigated the application of heat pumps for space heating and domestic hot water purposes in residential buildings (differentiated by single- and multi-family buildings) and commercial buildings (such as offices, retail, and administration buildings) both for new buildings and retrofit situations.

Low Carbon Economy Strategic Framework for Confidential Pension Fund Client (2017) - Guidehouse supported a client in developing a new strategic framework for one of the world's largest pension plans to transform its approach identifying opportunities in the shift to a low carbon economy and the catalysts and tipping points likely to result in positive carbon mitigation. Guidehouse led the fund through a series of workshops to develop three principle analytic underpinnings, including carbon futures scenarios, economic performance indicators and a change management framework. Prioritizing a large set of possible economic indicators of a shift towards a lower carbon economy, Guidehouse and the fund defined a short list of key KPIs offering insight on the ***scale, intensity,*** and ***pace*** of the shift. Three core future scenarios highlighting the likely actions, economic and policy activity, technology innovation levels, consumer behaviour and capital flows in worlds with differing carbon emission levels and climate change impacts. Performance indicators frameworks monitoring detailed level activities in the economy across a range of catalyst areas. A new way of thinking about macro drivers of a shifting world economy and set of signals to explore for new investment opportunities and current portfolio risk.

Climate Change – Scenario Analysis Air Emissions Under the Canadian Regulatory Framework (2011) – A member of the Guidehouse team led a team employed by the CEA and its members, including all major generating utilities across Canada, to aggregate and analyze electricity sector futures outlooks. While managing the project and facilitating sessions aimed at developing an analysis and approach to lobby the federal government, the team was challenged to address a broad range of sensitivities affecting different power companies across the country. The project was taken on to develop a comprehensive database of current and forecasted electric generating fleet operations and inform the development of alternative approaches to regulating the sector in terms of GHGs and air pollutants. The analysis assessed the changes in compliance flexibility, fuel switching, new and emerging technology development and credit purchasing across a broad range of regulatory scenarios. The analysis investigated the opportunities and barriers for capital stock turnover, culminating in a lower emitting national power sector and the relevant and realistic timeframes in which this may be feasible.

Ontario Ministry of Energy Independent Review of Long-Term Demand Forecast - Guidehouse was retained by the Ministry to conduct a review of the Ontario Power Authority's long-term demand and energy forecast used as the basis for updating the Long-term Energy Plan. The objectives of the review was to assess the reasonableness of the forecast of Ontario gross (i.e. before conservation and demand management initiatives) and net (i.e. after conservation and demand management initiative) peak demand and energy consumption, identify critical assumptions, and establish whether critical assumptions are reasonable and consistent with broader trends.

City of Madison, Wisconsin: 100% Renewable Energy and Net Zero Strategy (2016) - The City of Madison, WI retained Guidehouse and local engineering partner Sustainable Engineering Group LLC to develop strategies and analysis to achieve their goal of 100% renewable energy and net-zero carbon for city operations and to continue their leadership role for the larger community. The approach included identifying demand and supply-side options for facilities, operations and fleet/transit, stakeholder engagement, development of model timelines and financial/environmental analysis for cost comparisons.

Appendix B. Guidehouse Overview

Guiding with Confidence. Navigating Futures Forward. Guidehouse is a leading global provider of consulting services to the public and commercial markets with broad capabilities in management, technology, and risk consulting. We help clients address their toughest challenges and navigate significant regulatory pressures with a focus on transformational change, business resiliency, and technology-driven innovation. Across a range of advisory, consulting, outsourcing, and digital services, we create scalable, innovative solutions that prepare our clients for future growth and success. Headquartered in McLean, VA., the company has more than 8,000 professionals in over 50 locations globally. Guidehouse is a Veritas Capital portfolio company, led by seasoned professionals with proven and diverse expertise in traditional and emerging technologies, markets, and agenda-setting issues driving national and global economies. For more information, please visit: www.guidehouse.com.

Guidehouse-at-a-Glance

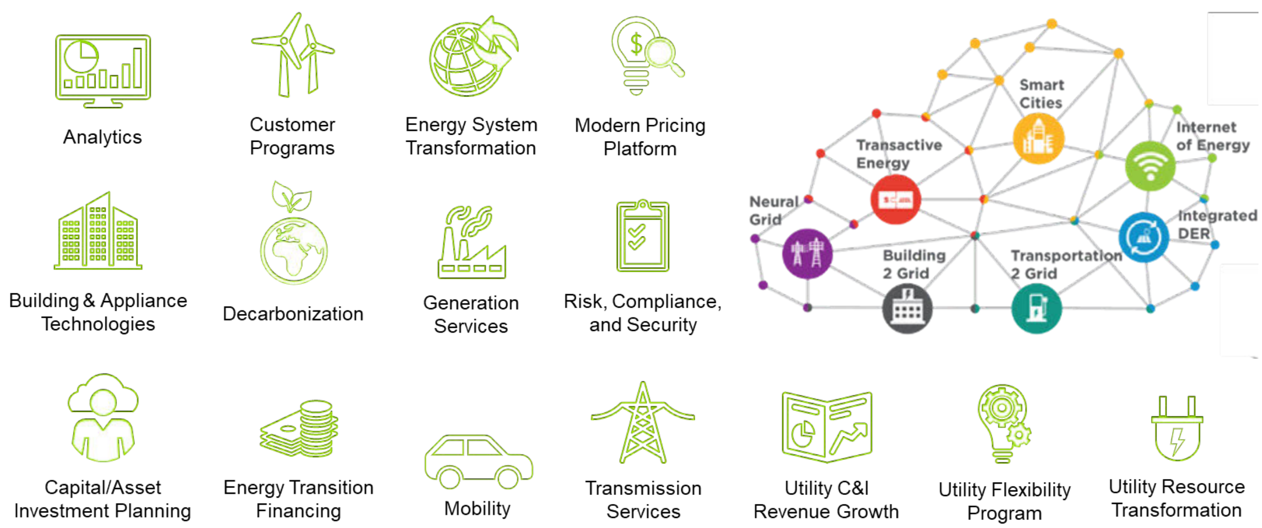
Energy, Sustainability, and Infrastructure. With over 700 consultants, our global Energy, Sustainability, and Infrastructure segment is the strongest in the industry. We are:

- A diverse, inclusive team of 700+ globally
- Go-to partner for leaders creating sustainable, resilient communities and infrastructure
- Trusted advisors to utilities and energy companies, large corporations, investors, NGOs, and the public sector

- Combining our passion, expertise, and industry relationships to forge a resilient path toward sustainability for our clients
- Enabling clients to reach their ambitions through transformation

- Turning vision into action by leading and de-risking the execution of big ideas and driving outcomes

Our Solutions Evolve Around the Energy Cloud. These solutions focus your most pressing needs to help you thrive in the rapidly changing environment.



Core Capabilities. Our core capabilities support our solution offerings and organized through Communities of Practice.

Subject: [External] Enbridge-Guidehouse Scope of Work Extension

Importance: High

Hello Cara, Cody, and Jennifer,

Below is the description of an extension to our scope of work that Cara requested on our call today. Please let me know if you have any questions.

Enbridge requested that Guidehouse adjust the decarbonization scenarios and sensitivity cases under study in the Enbridge Decarbonization Study. The Enbridge team would like our report to include sufficient information to draw conclusions about the impacts of hybrid heating systems. Specifically, Enbridge wants to know how the adoption of hybrid heating systems would impact gas & electricity consumption, peak demand, and total costs. In an older version of results (Nov 15 version), Guidehouse modeled a demand forecast assuming very low adoptions of hybrid heating systems. For our most recent draft results (Nov 30 version), Guidehouse used a demand forecast that includes hybrid heating in 20% of homes in the Diversified scenario and 0% of homes in the Electric scenario. We understand the Pan-Canadian Framework's goal is for all heating equipment installed post-2035 to have heating efficiency greater than 100%. So, for the Electric and Diversified scenarios, Guidehouse will reallocate any homes with "low-carbon gas furnace" heating equipment post-2035 to gas HPs or to hybrid heating systems. Guidehouse will consider product lifetimes and natural replace-on-failure turnover when modeling the hybrid heating adoption curve.

We expect that Enbridge will want the report to investigate and report on the value of hybrid systems in terms of their peak reduction and cost benefits. Our team recommends that we pursue this by comparing a case with low/minimal HH adoption to a case with high adoption of hybrid heating.

Our team proposes the following steps to update the Enbridge Decarbonization Pathways analysis:

1. Revert the Diversified pathway back to a no-hybrid-heating assumption to match the ETSA demand forecast. This provides an apples-to-apples comparison with the Electric pathway, since the Electric pathway does not include HH. To comply with Pan-Canadian goals, any gas-powered heating systems installed post-2035 will be changed to gas heat pumps.
2. Model a fourth sensitivity case to examine the impacts of adopting hybrid heating, where ***X*** percent of homes are equipped with hybrid heating. For a standard single-family residence, a hybrid heating system comprises a high efficiency gas furnace and a moderate-capacity (e.g., 3 tons) moderate efficiency (e.g., 16 SEER) electric heat pump. This will help Enbridge to understand the impact of the "first X percent of hybrid heating," which could be useful for justifying hybrid heating investments.
3. Revise the near-final draft report (work in progress) to revert the Diversified demand forecast and to revert sensitivity cases 1 to 3 back to a no-hybrid-heating baseline.
4. Add the new sensitivity case #4 for hybrid heating to the report, and update the report's discussion and results accordingly.

Following this approach, the revised final report would have the following outputs:

- Demand, consumption, emissions, and cost forecast for Electric pathway (unchanged)
- Demand, consumption, emissions, and cost forecast for Diversified pathway (reverted to an assumption of no hybrid heating)
- 4 sensitivities for each of these two pathways. For the first 3 sensitivities, the only change is that base-case Diversified pathway is reverted to no hybrid heating. The fourth sensitivity is new.
    - Sens 1: End use costs for distributed generation equipment (e.g., rooftop solar and home batteries) decrease faster than forecast. (Expected outcome: Cost of Electric scenario decreases, but Electric scenario is still much more expensive than Diversified scenario)
    - Sens 2: Limit investment in gas projects so that total energy system spending is less than the total Energy System Costs projected for the Diversified scenario. (Expected outcome: Net-zero target is not met)
    - Sens 3: Costs of hydrogen infrastructure costs less than forecast. (Expected outcome: The total Energy System Cost decreases for both scenarios, maybe the cost gap between scenarios gets a bit smaller.)
    - Sens 4: Hybrid heating deployed in Ontario along a projected adoption curve suggested by Enbridge. (Expected outcome: end user costs and electric system costs are lower for hybrid heating case.)

Deliverables:
Guidehouse will deliver a revised draft final report that incorporates these changes by January 31, 2022. Guidehouse will invite an additional round of revisions from Enbridge, with comments requested by February 11, 2022. Guidehouse will deliver a revised final report on February 18, 2022.

Budget:
The work described above involves effort beyond the original scope of our Guidehouse's contract with Enbridge. The cost of this additional scope is [redacted]

Subject:	[External] Enbridge-Guidehouse Scope of Work Extension #2
Importance:	High

Hello Cody and Jennifer,

Below is the description of an extension to our scope of work that you requested on our call Monday. Please let me know if you have any questions.

Enbridge requested that Guidehouse adjust the decarbonization scenarios and sensitivity cases under study in the Enbridge Decarbonization Study. The Enbridge team would like our analysis and report to include assumptions regarding significant uptake of geothermal heating systems. Specifically, Enbridge wants include the adoption of geothermal heating systems in the Diversified and Electrified scenarios, and include assumptions about geothermal systems in projections of gas & electricity consumption, peak demand, and total costs. Prior versions of the pathways analysis used energy demand forecasts based on Enbridge's ETSA study, which assumed minimal adoption of geothermal heat pumps. We understand that Enbridge is considering new opportunities in the geothermal space and would like to model a low-carbon future that assumes a significant role for geothermal energy systems.

Our team proposes the following steps to update the Enbridge Decarbonization Pathways analysis to include geothermal technologies.

1. With EGI input, define the types of geothermal systems to be included in the revised analysis (e.g., single-building scale, neighborhood-scale, and/or utility scale geothermal)
2. With EGI input develop reasonable assumptions regarding the potential uptake of geothermal heating over time through 2050.
3. Adjust the ETSA demand forecast used as the starting point for this analysis to include assumptions regarding geothermal uptake.
4. Locate and input a load shape profile for geothermal heating systems in northern climates, reflecting that due to their efficiency, individual geothermal systems will typically result in lower peak load growth compared to conventional air-source heat pumps.
5. Locate and input assumptions regarding end user costs for geothermal heating equipment installation.
6. Re-run Low Carbon Pathways model to model two scenarios and four sensitivities (as defined previously in 17 Feb 2022 draft report version)
7. Re-populate figures and tables in the draft report. Revise report language to reflect updated results.
8. Add discussion of geothermal technologies and assumptions to the report.

Following this approach, the revised final report would have charts and formats similar to the 17 Feb 2022 draft report version, but would include enhanced assumptions and discussion regarding geothermal technologies.

Guidehouse also sees this model update as an opportunity to incorporate supply-side assumptions around nuclear small modular reactors (SMRs), a topic on which Enbridge recently expressed interest. If requested by Enbridge, Guidehouse will update supply-side modeling assumptions to add nuclear SMR as an available technology for the capacity expansion modeling, and add discussion of SMRs to the revised report.

Deliverables:
Guidehouse will deliver a **revised draft final report** that incorporates these changes by **April 6, 2022.** Guidehouse will invite an additional round of revisions from Enbridge, with **comments requested by April 15, 2022**. Guidehouse then will deliver a revised final report on **April 22, 2022**.

Budget:
The work described above involves effort beyond the original scope of our Guidehouse's contract with Enbridge. [redacted]

POSTERITY GROUP

High-Level Cost Estimate for Creating a New Scenario based on the Diversified Portfolio Scenario

Project: Energy Transition Scenario Analysis (ETSA)
Re: Estimated cost range to create a new scenario by adjusting some Critical Drivers in the Diversified Portfolio scenario
Submitted to: Jennifer Murphy, Enbridge
Submitted by: Alex Tiessen & Erika Aruja, Posterity Group
Version: 1
Date Submitted: 10 June 2021

This memo provides a rough estimate of the cost to develop a new scenario for EGI based on revising some settings for select Critical Drivers currently used in the Diversified Portfolio scenario to achieve deeper GHG reductions. Depending on the Critical Drivers adjusted and the number of rounds of revisions, we expect the cost to range between [redacted] The cost estimate reflects a lower and upper range and can be revised to be more precise when more details of the scope of work become available.

The Task

- Create a new scenario that achieves further GHG reductions beyond what the Diversified Portfolio scenario is currenting forecasting by adjusting some Critical Driver settings.
- This will likely be by adjusting Critical Drivers that EGI can control: RNG, hydrogen, CCS and DSM budget.

Assumptions:

- The new scenario will be created using the Critical Drivers established for the ETSA project; no new Critical Drivers will be developed.
- The current models will be used (i.e., model structure is maintained)

Table 1 – Additional Scenario Scoping Assumptions

Activity	Narrower Scope/Lower Level of Effort Description	Broader Scope/High Level of Effort Description
Identify which Critical Drivers should be adjusted	• EGI defines which Drivers should be adjusted and discusses with PG. • Drivers adjusted do not require additional research and analysis from PG to develop inputs such as RNG, H2, NGT, CCS and DSM budget.	• EGI and PG work collaboratively to define which Drivers should be adjusted. • Drivers adjusted require additional research and analysis from PG to develop inputs such as C&S, non-price driven fuel switching, and climate change.
Develop & define settings for the Critical Drivers that deviate from the current settings	• EGI provides setting values for Drivers and they are in the same format as previous inputs. • PG reviews and intakes new data.	• PG conducts research and analysis to develop inputs/settings for Drivers. Or, • EGI provides settings for Drivers in a different format than previous inputs. PG reviews and processes data to use in the model.
Model the new scenario	• PG constructs a new scenario and runs the model. • A DSM budget-solver model run is not required.	• PG constructs a new scenario and runs the model. • A DSM budget-solver model run is required.
Review the results and revise if necessary	• PG and EGI review results • Minimal or no revisions are required.	• PG and EGI review results • Major revisions are required.
Documentation of the scenario inputs and results	• PG writes concise memo to document inputs and results	• PG writes small report explaining the scenario, the process to develop inputs, details the inputs and discusses the results in comparison to the other scenarios.
Update the PowerBI data visualization dashboard.	• Update the PowerBI data visualization dashboard with the new scenario using the existing format.	• Update the PowerBI data visualization platform with the new scenario.

Activity	Narrower Scope/Lower Level of Effort Description	Broader Scope/High Level of Effort Description
		• Add additional exhibits not previously included in the dashboard.
Project Management	• On-going communication, budget updates, meetings, etc.	• On-going communication, budget updates, meetings, etc.
Cost Estimate	[redacted]	[redacted]

Alternative Approaches:

- GHG target goal seeking: If EGI wants to reach a GHG reduction target in a specific year, PG can see what volumes of RNG and H2 would be required to meet that target. This would likely be an iterative process where multiple model runs are conducted until the GHG target is reached.
  - We could also explore various combinations of RNG and H2 required to meet the target.

POSTERITY GROUP

ETSA Planning Scenario Updates Proposal

Project: Energy Transition Scenario Analysis
Re: Updating the RNG forecast used in the Planning scenario
Submitted to: Enbridge Gas
Date Submitted: June 29, 2022
Version: 1

This proposal provides an estimated level of effort and elapsed time required to update the RNG forecast and name for the Planning scenario, and reflect the updates in the data visualization platform and report.

1 Scope of Work

Posterity Group (PG) understand the following tasks are required:

- Revise the RNG forecast in the Planning scenario model using the newest RNG forecast provided by Enbridge Gas. This task will require PG to rerun the sector-models to achieve the new RNG targets and then rerun the DSM module as the new RNG volume will affect DSM savings.
- Revise the name of the Planning scenario
- Update the data visualization platform with the new model output and scenario name
- Update the scenario report

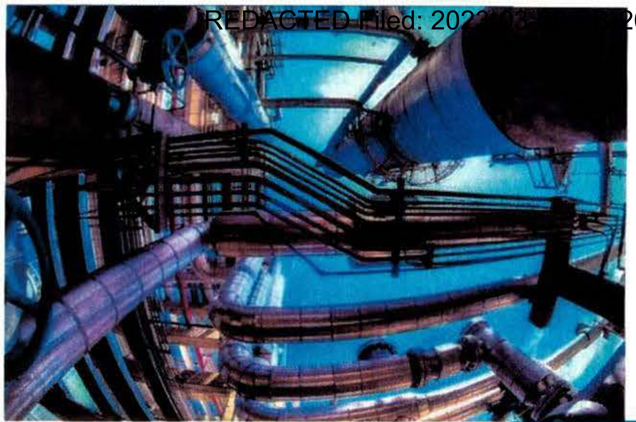
2 Level of Effort, Budget & Invoicing

The table below shows the estimated number of hours per task. W[redacted] We propose to employ a "time and expense to a cap" structure with invoicing monthly. Enbridge Gas can contract through the PO previously established for the ETSA project if that is most convenient.

[redacted]

3 Timeline

PG expects it will take four to six weeks to complete the work upon receiving the new RNG forecast and revised scenario name from Enbridge Gas.



Proposal to Assess the Future Utilization for the Dawn Parkway System

October 26, 2021

Submitted to: Max Hagerman
Enbridge Gas Inc.

Submitted by:
ICF Resources, LLC
9300 Lee Hwy
Fairfax, VA 22031

ICF

Mr. Max Hagerman
Enbridge Gas Inc.

RE: Assessment of Future Utilization for Dawn Parkway System

Dear Max:

ICF is pleased to offer to Enbridge Gas, Inc. this proposal to provide an assessment of future utilization for Dawn Parkway System.

Enbridge currently has contracts on Dawn Parkway System and wants to assess the market to understand the risk of de-contracting on the Dawn Parkway system in the future. ICF understands that the assessment will be used by Enbridge to evaluate the future utilization of Dawn Parkway system for the next rebasing term (2024-2028) and slightly beyond (until 2034). This study will be used to understand the risk of turnback on the system over that timeframe. The study will focus on examining the current contracts and looking at the supply and demand balance to forecast the utilization of Dawn Parkway system until 2034. The study will be based on the most recent ICF gas market base case outlook. The results of the study will be documented in a short memo/report suitable for filing with the OEB. ICF will provide this study for the [redacted].

ICF will also provide oral testimony on behalf of Enbridge as an independent consultant before the OEB, as well as other regulatory support as requested. The oral testimony and other regulatory support will be provided on a Time & Materials (T&M) basis. As Subject Matter Experts, [redacted]

ICF proposes to complete the work based on the terms and conditions specified in the existing contract between ICF and Enbridge dated June 15, 2020. To authorize this work, please sign the authorization and e-mail a PDF of the signed authorization to Michael.sloan@icf.com.

If you have any questions, please call me at 703-403-7569.

We look forward to the opportunity to work with you on this assignment.

Sincerely,

Michael Sloan

Managing Director, Natural Gas and Liquids Advisory Services

Authorization to Proceed

I hereby authorize ICF to proceed according to the scope of work described in this proposal under the terms and conditions in the contract between ICF and Enbridge dated June 15, 2020.

Service Provider	**Ernst and Young**, a company incorporated in Toronto having its registered office at One London Place, Suite 1800, 255 Queens Ave., P.O. Box 5332, London ON N6A 5S7 (the "**Service Provider**").
Commencement Date	February 1, 2019
Completion Date	January 31, 2020

THIS STATEMENT OF WORK ("SOW") IS ENTERED INTO BETWEEN ENBRIDGE AND SERVICE PROVIDER AS OF THE COMMENCEMENT DATE, AND IS SUBJECT TO THE PROFESSIONAL SERVICES AGREEMENT BETWEEN ENBRIDGE AND THE SERVICE PROVIDER DATED 1 NOVEMBER 2018 (THE "PSA"). ANY CAPITALIZED TERM USED IN THIS SOW BUT NOT DEFINED SHALL THE MEANING ASCRIBED TO SUCH CAPITALIZED TERM IN THE PSA

The Service Provider will provide Services to Enbridge on the terms set out below:

1) Description of Work

The Service Provider shall provide to Enbridge the following:

In support of the amalgamation between Enbridge Gas Distribution (EGD) and Union Gas (UG) to create Enbridge Gas Inc. (EGI), we understand you would like assistance as finance alignment activities continue to progress. Some examples of activities that can be provided include, but are not limited to:

- Process Improvement
  - Identifying business requirements and efficiencies as it relates to processes, systems, reports etc.
  - Identifying risks and mitigation strategies
- Documentation
  - Conduct or facilitate discussions (as required) to document aligned EGI processes
  - Creation/update and management of process related documentation for the EGI Finance department as required.

  - o Project management over finance initiatives as required.
- Third Party Studies
  - o Prepare and conduct third party studies for the purpose of gathering benchmarking information to support Enbridge's OEB driven processes.
  - o Pull together external and internal data sources to obtain required study results.
  - o Respond to interrogatories and undertakings. Appear as a witness in proceedings as required.
- Provide assistance with day to day responsibilities to facilitate the participation of EGI Finance team members in amalgamation activities
- Provide subject matter resources to support project(s) as required
- Other work as identified by Enbridge Finance management

2) SOW Representatives

Each Party shall appoint a Representative in this SOW who shall be available on a dedicated basis and act as the single point of contact for the other Party, and who will be responsible for co-coordinating, overseeing and ensuring the timely performance by such Party's obligations under this PSA.

	Enbridge	Service Provider
Name	Tanya Ferguson	Andrew Grainger
Address	500 Consumers Rd.	One London Place, Suite 1800, 255 Queens Ave, PO Box 5332
City	Toronto	London
State / Province	Ontario	Ontario
Phone	416 495 5754	519 646 5567
Email	tanya.ferguson@enbridge.com	Andrew.Grainger@ca.ey.com
Fax		

3) Location of Work

The Work shall be provided by the Service Provider at the following location(s):

- Enbridge Gas Distribution, 500 Consumers Rd., North York, Ontario
- Union Gas, 50 Keil Dr N., Chatham, Ontario

4) SOW Project Schedule

Building a better
working world

Contract Number	[Enter as (A)-(B)-(C)-(D)]

The Service Provider shall ensure that Service Provider's Key Personnel adhere to the following Project schedule and Project Milestone Dates

This scope of work will span a 12-month period and will consistent of multiple smaller projects. Prior to the onset of a new project covered by this SOW, a detailed project schedule and estimate of fees will be created and agreed upon between Enbridge and the Service Provider.

5) Key Personnel

The Service Provider agrees that the following Key Personnel of Service Provider shall be dedicated to the performance of the Services under this SOW:

Key Personnel	Title
Andrew Grainger	Partner

Andrew will work with Enbridge Finance management for each individual assignment to determine the additional resources to be used, dependent on the specific scope of work agreed upon.

6) Permitted Subcontractor

This section is not applicable as no subcontractor will be utilized.

7) Currency

Payments for this SOW will be in CAD.

8) Staffing Model and Rates

Based on the agreed upon scope of work, the services outlined in this SOW will cover the period beginning on February 1, 2019 and ending on January 31, 2020. The fees are estimated to be approximately [redacted] Though a range of fees for the services has been provided, the amount for the services may be less if the projected level of effort is not as high as expected or if EGI decides to decrease the scope of the project. If, during the term of this Agreement, the Service Provider determines that the fee estimate will be significantly exceeded they will promptly contact Enbridge to discuss any adjustments to the scope of our work or our fees.

- A line item breakdown of total expenses for each of the Finance initiatives being managed for the invoicing period under this SOW.

All supporting documentation associated with the invoice including, but not limited to:

- Alignment of resource hours for work streams within each Finance initiative that shows up as a line item on the invoice.
- Detailed back-up provided for all cost reimbursable expenses in accordance with the Agreement; and
- Other required documents as may be specific to the SOW or an Enbridge Representative.

All invoices must be billed to:

Enbridge Gas Inc.

Attention: Accounts Payable

50 Keil Drive North, Chatham ON N7M 5M1

Alternatively, the Contractor may submit its invoices relating to this Work Order via e-mail to apcaeastinvoices@uniongas.com.

11) Special Conditions to this SOW

The Parties have agreed to the following Special Conditions, which are permitted modifications and/or supplements to the terms of the Statement of Work:

a) Limitations on Scope

EY will not identify, address or correct any errors or defects in Enbridge's computer systems, other devices or components thereof ("Systems"), whether or not due to imprecise or ambiguous entry, storage, interpretation, processing or reporting of data. EY will not be

Contract Number	[Enter as (A)-(B)-(C)-(D)]		

responsible for any defect or problem arising out of or related to data processing in any Systems.

b) Enbridge's Specific Obligations

Enbridge will not, and will not permit others to, quote or refer to the Reports, any portion, summary or abstract thereof, or to EY or any other EY Firm, in any document filed or distributed in connection with (i) a purchase or sale of securities to which the United States or state securities laws ("Securities Laws") are applicable, or (ii) periodic reporting obligations under Securities Laws. You will not contend that any provisions of Securities Laws could invalidate any provision of this Agreement.

Enbridge shall assign a qualified person to oversee the Services. Enbridge is responsible for all management decisions relating to the Services, the use or implementation of the output of the Services and for determining whether the Services are appropriate for your purposes.

c) Special Additional Terms and Conditions

The Services are advisory in nature. EY will not render an assurance report or opinion under the Agreement, nor will the Services constitute an audit, review, examination, or other form of attestation as those terms are defined by the American Institute of Certified Public Accountants. None of the Services or any Reports will constitute any legal opinion or advice. EY will not conduct a review to detect fraud or illegal acts.

Notwithstanding anything to the contrary in the Agreement or this SOW, EY does not assume any responsibility for any third-party products, programs or services, their performance or compliance with your specifications or otherwise.

EY will base any comments or recommendations as to the functional or technical capabilities of any products in use or being considered by Enbridge solely on information provided by Enbridge's vendors, directly or through Enbridge. EY is not responsible for the completeness or accuracy of any such information or for confirming any of it.

Building a better working world

Ms. Wendie Brodie Lumley
Enbridge Gas Inc.
500 Consumers Rd
North York, Ontario
M2J 1P8

30 May 2019

Dear Wendie:

Re: Scope Expansion – Finance Advisory Services Statement of Work

As you know, Enbridge Gas Inc. ("you" or the "Client") engaged the Canadian firm of Ernst & Young LLP ("EY" or "we") to provide certain Finance Advisory Services pursuant to the Finance Advisory Services Statement of Work (the "SOW") commencing February 1, 2019.

This letter is to confirm our agreement to expand the scope of EY's engagement to include additional services. Specifically, the following services are being added to the scope of the SOW:

> Under this Scope Expansion, we will provide accounting and financial reporting assistance in connection with Enbridge Gas Inc.'s review of overhead capitalization rates and provide observations and recommendations to management as a result of our procedures performed (these services are referred to as the "Accounting Services").
>
> At your direction, we will:
>
> - Interview Enbridge Gas Distribution Inc. and Union Gas Inc. employees to better understand the nature of costs incurred and their respective drivers
> - Discuss historical costs incurred and existing capitalization approaches
> - Evaluate the nature of costs incurred, cost drivers and existing overhead rates against benchmark data to provide our observations and recommendations regarding the overhead rate and capitalization approach; and
> - Based on information gathered, recommend amendments, as necessary:
>   - To your existing regulatory and accounting policies;
>   - To your existing overhead capitalization approach; and
>   - To your existing business processes related to the capitalization of overhead.
> - Assist Regulatory in identifying changes which may impact the OEB mandated deferral account
> - Assist you in the design of internal controls in response to changes in the new approach
>
> We will provide you with the following written Report:

Building a better working world

- A report detailing the procedures performed, the results of the benchmarking analysis, observations related to your existing overhead capitalization approach and capitalization rates and comments on your accounting and regulatory policy for overhead capitalization.

Our Report is meant to assist management in its conclusion regarding a reasonable overhead capitalization rate for the purposes of Enbridge Gas Inc.'s future regulatory filings.

Upon request, EY may act as an expert witness in a regulatory hearing regarding Enbridge Gas Inc.'s capitalization of overhead as it pertains to the results of the procedures performed under this SOW. We understand that as a witness, we may be asked to participate in the stakeholder engagement and hearing process, which may include:

- Presentation of the results of the review to stakeholders
- Preparation of a written report to be filed with the Ontario Energy Board ("OEB")
- Responding to interrogatories and undertakings
- Appearing as a witness in future regulatory proceedings

We may engage in discussions with your personnel, including officers and employees, and outside consultants, as determined by you. We may also read documentation, including contracts and memoranda, as specified by you. Further, we may identify factors or considerations that are relevant to your analysis of identified accounting and financial reporting matters.

We may assist you in interpreting the relevant accounting and reporting literature based on your general circumstances, and provide our views on those factors (including your characteristics and structure) which may influence the choice of your accounting policy. We will not conclude on the appropriate accounting treatment based on specific facts or recommend which accounting policy/treatment you should select/adopt. Any observations we provide are intended to assist you as you reach, document and implement your own conclusions and will not constitute our concurrence with, or support of, your proposed accounting or reporting.

We may provide certain observations as to our understanding of the views of your independent auditor or the staff of the Ontario Securities Commission, Securities and Exchange Commission, or the Ontario Energy Board. We may provide such observations without having any prior discussion with your independent auditor or the staff of the Ontario Securities Commission, Securities and Exchange Commission, or the Ontario Energy Board and accordingly, their actual views on a particular topic or issue may differ.

We may, upon your written request, assist you in documenting the conclusions you have reached or positions you have taken on accounting and reporting matters, including the accounting policies you select.

You will be responsible for implementing and further customizing these Reports, and for your use thereof and their effectiveness. We will have no obligation with respect thereto.

Building a better working world

We will not test, verify or otherwise confirm the accuracy and completeness of any information, statements or data that is provided to us by you or on your behalf, including information provided by your advisors, customers or vendors.

You alone are responsible for any decisions to implement actions identified in the Services, including as necessary to apply US Generally Accepted Accounting Principles ("US GAAP") appropriately and for compliance with applicable regulatory requirements, including the determination of your accounting policies. You are solely responsible for the preparation of your financial statements, including making all of the judgments inherent in preparing them.

You are responsible for notifying your independent auditor of the performance of the Accounting Services and consulting with them on the application of accounting principles and your related accounting policies. You agree that we may make inquiries of your independent auditor in connection with the performance of the Accounting Services.

EY will not render an assurance report or opinion under the Agreement, nor will the Services constitute an audit, review, examination, or other form of attestation, as those terms are defined by Chartered Professional Accountants of Canada ("CPA Canada"), the American Institute of Certified Public Accountants ("AICPA") or the Public Company Accounting Oversight Board. Accordingly, we will not express any form of assurance on accounting matters, financial statements, any financial or other information or internal controls as part of the Services.

We will not provide a professional opinion on the application of accounting principles pursuant to CPA Canada's standards for Reports on the Application of Accounting Principles (as set out in section 7600 of the CPA Canada Handbook) (as amended and interpreted) or pursuant to analogous AICPA standards. None of the Services or any Reports will constitute any legal opinion or legal advice. We will not conduct a review to detect fraud or illegal acts.

Any observations or comments with respect to your internal control matters will provide no assurance with respect to their effectiveness or their compliance with applicable laws and regulations. You alone are responsible for establishing and maintaining adequate internal control over financial reporting and the Services do not replace your responsibility for establishing the effectiveness of internal controls. In addition, you may not rely on us to draw to your attention matters that may be relevant as to whether or not your system of internal control is effective.

These changes are effective as of May 30, 2019. With the exception of these changes, the SOW remains in full force and effect and governs all services provided pursuant to the SOW. This letter shall be governed by and construed in accordance with the laws of the Province of Ontario.

Toronto Ontario M5X 1B1

Dear Sir / Madam,

RE: Consulting Agreement with Enbridge Gas Inc.

Attached please find for signature our Consulting Agreement. Kindly arrange to have the Agreement and the attached Schedule signed. Please ensure you read and understand all of the terms and conditions of the Agreement, as well as the enclosed Statement on Business Conduct and Lifesaving Rules.

We will also require the following:

- A current clearance certificate or letter of exemption from the Ontario Workplace Safety and Insurance Board ("WSIB"). If your employees are in a jurisdiction other than Ontario, please provide equivalent proof of coverage, and new proof of coverage must be filed with us upon expiry/renewal of such proof of coverage.

Please return the applicable WSIB document noted above, together with a signed copy of the Consulting Agreement and a signed copy of the Schedule, promptly following receipt of this letter. Upon receipt of all the documents in our office, we will execute the Agreement and a PDF copy of the Agreement will be returned to you for your records.

If you have any questions, please contact me at the above-noted telephone number.

Sincerely,

Hulya Sayyan
Senior Advisor Demand Forecasting & Analysis

CONSULTING AGREEMENT

THIS AGREEMENT made effective January 18, 2021.

B E T W E E N:

ENBRIDGE GAS INC.
("Enbridge")

- and -

GUIDEHOUSE CANADA LTD.
(the "Consultant")

WITNESSES THAT in consideration of the mutual covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. **Scope of Services**

   (a) During the term hereof (as hereinafter defined), the Consultant shall provide consulting services (the "Services") to Enbridge, on the terms and conditions set forth below.

   (b) The scope of work for specific projects to be undertaken by the Consultant at the request of Enbridge will be described in separate schedules referencing this Agreement, each of which shall become effective, be incorporated by reference and form an integral part of this Agreement upon the execution of each such schedule by Enbridge and the Consultant. The schedule for each project will specify the names of key individuals, scope of Services, deliverables, commencement and completion dates, rate of compensation and payment terms applicable to such project. Each schedule described above shall be prepared using a form similar to the attached Schedule "A".

2. **Compensation**

   In consideration of the Services and deliverables to be provided by the Consultant hereunder, and provided that the Consultant is not in default of its obligations hereunder, Enbridge shall remit to the Consultant all amounts required to be paid in accordance with the applicable schedule.

   Consultant shall be responsible for charging, collecting and remitting all applicable federal and provincial sales, use and value-added taxes in respect of the fees paid or payable to Consultant and, in particular, the goods and services tax ("GST") and harmonized sales tax ("HST") imposed under Part IX of the Excise Tax Act (the "ETA"), the Quebec sales tax ("QST") imposed under an Act respecting the Quebec Sales Tax (the "QSTA") and any provincial sales taxes ("PST"); and such taxes, if applicable, shall be shown separately on all invoices. Where Consultant is required to collect any GST/HST, QST or similar tax, Consultant shall provide Enbridge with the documentary evidence as prescribed pursuant to the ETA or QSTA, any successor provision thereto or any similar provision of any other taxing statute as is required to entitle Enbridge to claim an input tax credit, input tax refund, rebate, refund or any other form of relief in respect of such taxes.

   Where the Consultant is a non-resident of Canada for purposes of the Income Tax Act (Canada) (the "ITA"), with respect to the invoice or statement of Fees issued pursuant to any Schedule, the Consultant will identify the location where the Services are provided, separate Services performed in Canada from Services performed outside of Canada, identify the number of days Services were performed in Canada (including travel days to/from Canada) and, for Services performed in Canada, identify the physical location, indicating city and province, where such Services were performed. Where the non-resident Consultant has not obtained and provided to Enbridge a non-resident withholding tax waiver at such time as Enbridge makes any payment to the Consultant for Services, Enbridge shall withhold such percentage

of any payment as mandated under the ITA with respect to the Services provided in Canada or on the full invoice or statement amount where the Consultant has not clearly separated the Services performed in Canada from Services performed outside of Canada. Enbridge shall remit the withheld amount to Canada Revenue Agency, or its successor, in the manner and at the time required by the ITA. For further clarification, it is the Consultant's responsibility to obtain the tax waiver, if available. In the event that Enbridge is assessed for any non-resident withholding taxes payable, the Consultant agrees to forthwith reimburse Enbridge for such amount together with applicable interest and penalties, if any.

3. **Term**

Subject to earlier termination as provided for herein, the term of this Agreement shall commence on the day set forth above and expire on December 23, 2023 (hereinafter the "Term").

4. **Termination**

(a) Enbridge may terminate this Agreement or any schedule to this Agreement for convenience upon giving four (4) weeks written notice to the Consultant.

(b) Either party may terminate this Agreement in case of a breach by the other party of its obligations hereunder, provided that the breach is not cured within five (5) days of written notification by the non-defaulting party to the defaulting party setting out the particulars of the breach.

(c) Either party may terminate this Agreement upon written notice to the other party, if: (i) the other party is subject to proceedings in bankruptcy, or insolvency, whether voluntary or involuntary, (ii) a receiver is appointed in respect of all or a substantial portion of the other party's assets; or (iii) the other party assigns its property to its creditors or generally becomes unable to pay its debts as they become due.

Upon any termination of this Agreement, the Consultant shall deliver to Enbridge the results of all Services provided as of the date of termination, including completed or uncompleted deliverables for which payment has been received in accordance with the terms of this Agreement.

5. **Facilities**

Enbridge shall provide to the Consultant use of such office facilities as may be required by the Consultant, acting reasonably, to perform the Services during the Term.

6. **Reimbursement for Expenses**

In addition to the payments to be made pursuant to Section 2 hereof, Enbridge shall reimburse the Consultant for all reasonable expenses properly incurred by the Consultant in connection with the Services provided to Enbridge hereunder and that have been pre-approved by Enbridge in writing, including, without limitation, reasonable travel and other costs and expenses in connection therewith. Such pre-approved reasonable expenses incurred by the Consultant in rendering Services shall be reimbursed by Enbridge net of GST/HST. GST/HST shall be charged, where applicable, by the Consultant on the expenses incurred, net of the input tax credits/reimbursements for GST/HST claimed by the Consultant. Concurrently with its delivery of invoices to Enbridge as contemplated by Section 2 hereof, the Consultant shall submit to Enbridge invoices and statements setting out in reasonable detail the nature and amount of the expenses or costs incurred by the Consultant for which the Consultant claims reimbursement, and Enbridge shall within thirty (30) days of the receipt of such invoices and statements reimburse the Consultant for all approved invoiced expenses and costs. The Consultant shall provide to Enbridge copies of all documentation in support of invoiced expenses as Enbridge may request from time to time during the Term hereof.

7. **Independent Contractor**

Notwithstanding anything to the contrary herein contained, the Consultant shall not, for any purpose, be or be deemed to be an employee of Enbridge during the Term or at any time during which the Services described in Section 1 hereof are provided to Enbridge nor shall anything in this Agreement create or be

construed for any purpose as creating any relationship between Enbridge and the Consultant of employer and employee. Except as expressly provided herein, Enbridge shall not be liable to contribute to any employee benefit or pension plan or pay premiums for any policy or form of insurance whatsoever on behalf of the Consultant nor to pay any amounts or premiums on its behalf in respect of the Canada Pension Plan, Ontario Health Insurance Plan, Workplace Safety and Insurance Board or Employment Insurance, nor to deduct or withhold from source any amount from amounts payable by Enbridge to the Consultant hereunder in respect of any income tax obligation or liability payable by the Consultant to the Canada Revenue Agency. The Consultant agrees to indemnify and hold Enbridge harmless from and against any order, penalty, interest or tax that may be assessed or levied against Enbridge as a result of the failure or delay of the Consultant to file any return or information required to be filed by the Consultant by any law, ordinance or regulation relating to the Services performed by the Consultant herein.

8. **Confidential Information and Personal Information**

(a) For the purposes of this Section 8, the following definitions will apply:

(i) "Confidential Information", means all information pertaining to the business and affairs of Enbridge, its affiliates and subsidiaries, whether oral or written, furnished by Enbridge to the Consultant, its employees and representatives, whether furnished or prepared before or after the date of this Agreement, and includes all analysis, compilations, data, studies, reports or other documents prepared by the Consultant based upon or including any of the information furnished by Enbridge, but does not include information which:

A. is at the time of disclosure or thereafter becomes generally available to the public other than as a result of disclosure by the Consultant or anyone to whom the Consultant transmits the information;

B. is at the time of disclosure or thereafter becomes known or available to the Consultant on a non-confidential basis and not in contravention of applicable law from a source other than Enbridge that is entitled to disclose the information; or

C. is already in the possession of the Consultant or is lawfully acquired, provided that such information is not subject to another confidentiality agreement with, or obligations of secrecy to Enbridge.

(ii) "Person" includes individuals, partnerships, firms and corporations.

(b) Enbridge is furnishing the Confidential Information to the Consultant solely for the purpose of assisting the Consultant in the performance of Services which the Consultant provides to Enbridge. The Consultant shall not use the Confidential Information for any purpose other than the performance of Services provided to Enbridge.

(c) The Consultant acknowledges that the Confidential Information is the property of Enbridge, which is confidential and material to the interests, business and affairs of Enbridge and that disclosure thereof would be detrimental to the interests, business and affairs of Enbridge. Accordingly, the Consultant agrees that it shall maintain the confidentiality of the Confidential Information and that it shall not disclose the Confidential Information to any Person for any reason whatsoever except as expressly provided herein.

(d) The Consultant may disclose Confidential Information to the extent required by a court of competent jurisdiction or other governmental or regulatory authority or otherwise as required by applicable law, provided that the Consultant first give Enbridge prompt written notice (except where the governmental or regulatory authority has expressly ordered that no notice be given) and co-operate with and assist Enbridge in responding to the request or demand for disclosure.

(e) The Consultant acknowledges and agrees that Enbridge would be irreparably harmed if any provision of this Agreement is not performed by the Consultant in accordance with its terms. Accordingly, Enbridge shall be entitled to an injunction or injunctions to prevent breaches of any of the provisions of this Agreement and may specifically enforce such provisions by an action

instituted in a court having jurisdiction. These specific remedies are in addition to any other remedy to which Enbridge may be entitled at law or equity.

(f) If in the course of performing Services hereunder, the Consultant obtains or accesses personal information about an individual, including without limitation, a customer, potential customer or employee or contractor of Enbridge ("Personal Information") the Consultant agrees to treat such Personal Information in compliance with all applicable federal or provincial privacy or protection of personal information laws and to use such Personal Information only for purposes of providing the Services hereunder. Furthermore, the Consultant acknowledges and agrees that it will:

(i) not otherwise copy, retain, use, modify, manipulate, disclose or make available any Personal Information, except as required by applicable law;

(ii) establish or maintain in place appropriate policies and procedures to protect Personal Information from unauthorized collection, use or disclosure;

(iii) implement such policies and procedures thoroughly and effectively;

(iv) except as required for purposes of providing the Services hereunder, will not develop or derive, for any purpose whatsoever, any products in machine-readable form or otherwise, that incorporates, modifies, or uses in any manner whatsoever, any Personal Information; and

(v) upon completion of its Services for or on behalf of Enbridge, will at Enbridge's direction: A. return; or B. destroy all Personal Information and all copies and records thereof in its possession.

9. **Indemnification**

The Consultant hereby agrees to and shall:

(a) be liable to Enbridge and its directors, officers and employees, for all claims, liabilities, damages, costs, losses and expenses whatsoever which Enbridge or any of its directors, officers and employees may suffer, sustain or incur;

(b) indemnify and save harmless Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives from and against any and all liabilities, claims, demands, damages, loss, costs and expenses (including without limitation all applicable solicitors' fees, court costs and disbursements, investigation expenses, adjusters' fees and disbursements) to or which any third party may suffer, sustain or incur, and

(c) However Consultant will only indemnify Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives for direct damages connected with the liability and indemnity under 9.a. and 9.b. up to a maximum of two times the total Compensation due to Enbridge pursuant to this Agreement, unless caused by the gross negligence or willful misconduct of the Consultant. Notwithstanding any other provision in this clause Consultant shall not in any event be liable for any indirect, consequential, special, lost productivity or punitive damages, even if he has been advised of the possibility of such damages.

in respect of all matters or anything which may arise out of any act or omission directly or indirectly related to any breach of this Agreement by the Consultant, its employees or representatives.

10. **Work Product**

(a) For the purposes of this Section 10, "Work Product" shall include any of the following, which are developed in the course of or arise from the Services provided by the Consultant to Enbridge hereunder throughout the Term: (i) any deliverables produced under any schedule to this Agreement together with any and all notes, reports, research information, compilations, data specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(b) For the purposes of this Section 10, "Consultant Materials" comprises any of the following, which were developed by the Consultant, at its own cost and expense in advance of and independent of this Agreement and as proven by the Consultant to be the case in the event of a dispute concerning the same: (i) any and all notes, research, information, data, specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(c) All right, title and interest in and to the Work Product shall be the property of Enbridge. The Consultant shall ensure that any agent or employee of the Consultant shall have waived in writing all of his or her moral rights over any such Intellectual Property. During and after the Term of this Agreement, the Consultant shall from time to time as and when requested by Enbridge execute all papers and documents and perform other acts as necessary or appropriate to evidence or further document Enbridge's ownership of the Work Product and the intellectual property rights therein.

(d) The Consultant retains all right, title and interest in and to the Consultant Materials. The Consultant hereby grants to Enbridge a non-exclusive, perpetual, irrevocable, non-terminable, non-transferable, non-assignable and royalty-free license to copy, disclose, use, operate, maintain, repair, modify, enhance, make derivative works, license, sub-license and otherwise commercially exploit without limitation or restriction those Consultant Materials used in connection with the delivery of the Services or to the extent contained within any Work Product.

(e) The Consultant agrees to fully indemnify and hold harmless Enbridge from and against any and all: (i) claims, demands and actions; (ii) liabilities, damages or losses awarded by a court of competent jurisdiction or as agreed to as part of a settlement; and (iii) litigation costs and/or expenses (including reasonable legal fees and disbursements) reasonably incurred by Enbridge in connection with any claim that the Services or Work Product provided hereunder infringe any patent, copyright, trade secret or other right of any third party.

11. **Representations and Warranties**

(a) The Consultant represents, warrants and covenants with Enbridge that: (i) it will perform all Services in a good and workmanlike manner using reasonable care (at a level that is at least consistent with industry standards for the provision of similar services) and in accordance with the terms of this Agreement; (ii) it possesses the knowledge, skill and experience necessary for the provision and completion of the Services in accordance with the terms of this Agreement; and (iii) any deliverables provided hereunder shall conform to their relevant specifications as described in the applicable schedule.

(b) The Consultant agrees that under no circumstances will it interface a non-Enbridge computing device (including without limitation desktops, laptops, handheld device) with the Enbridge intranet or internet without obtaining the prior written approval of Enbridge. To the extent the deliverables produced hereunder involve the provision or development of any software application, interface or electronic data, the Consultant shall use commercially reasonable efforts to prevent the introduction of any virus to the hardware and computer systems upon which the application, interface or electronic data are to be installed. During the Term of this Agreement, the Consultant shall implement and run virus prevention and detection control procedures in accordance with industry standards.

(c) In addition to the policies described in Section 25, the Consultant shall ensure that it is familiar with and understands all of Enbridge's current policies, procedures and standards that are pertinent to the activities associated with the Services and which have been provided to the Consultant in advance of the execution of this Agreement.

12. **Subcontractors**

The Consultant shall not enter into any agreement with any other party to assist in the provision of the Services described in Section 1 hereof (hereinafter described as a "Subcontract") nor shall the Consultant allow any other party to perform such Services or any part thereof without first obtaining the consent in writing of Enbridge, which consent may be withheld by Enbridge, acting reasonably. Notwithstanding any approval or consent that may be provided by Enbridge in connection with any Subcontract, the Consultant shall not be relieved of any of its liabilities and responsibilities hereunder. Any party which enters into a Subcontract with the Consultant shall be required by the terms of such Subcontract to comply with and be bound by the obligations and responsibilities of the Consultant described hereunder and without restricting the generality of the foregoing, any Subcontract which has been entered into without the prior written consent of Enbridge shall be null and void and without force and effect.

13. **Insurance**

Save and except where Enbridge specifies otherwise in writing, the Consultant shall at its own expense maintain and keep in full force and effect during the Term hereof and for a period of two (2) years following the expiry of the Term or other termination of this Agreement:

(a) Commercial General Liability insurance having a minimum inclusive coverage limit, including personal injury and property damage, of at least Two Million Dollars ($2,000,000) per occurrence and in the aggregate. Enbridge Gas Inc. must be listed as the certificate holder and be added as an additional insured in the insurance policy, which should be extended to cover contractual liability, products/completed operations liability, owners'/ contractors' protective liability and must also contain a cross liability clause;

(b) Automobile Liability insurance on all vehicles used in connection with this Agreement and such insurance shall have a limit of at least Two Million Dollars ($2,000,000) in respect of bodily injury (including passenger hazard) and property damage inclusive of any one accident;

(c) Non-Owned Automobile Liability insurance and such insurance shall have a limit of at least Two Million Dollars ($2,000,000) in respect of bodily injury (including passenger hazard) and property damage, inclusive in any one accident; and

(d) such other insurance as Enbridge may in its discretion determine to be necessary, including, but not limited to, Professional Liability or Errors and Omissions insurance.

The Consultant shall forthwith after entering into this Agreement, and from time to time thereafter at the request of Enbridge, furnish to Enbridge a memorandum of insurance or an insurance certificate setting out the terms and conditions of each policy of insurance (all such policies of insurance being hereinafter described as the "Insurance Policies") maintained by the Consultant in order to satisfy the requirements of this section. At any time and from time to time at the request of Enbridge, the Consultant shall furnish Enbridge with one or more duly completed insurance certificates in the form requested by Enbridge to evidence the details of all the Insurance Policies. The Insurance Policies shall be arranged with insurers acceptable to Enbridge, acting reasonably, and shall contain such terms and conditions as are reasonably acceptable to Enbridge. The Consultant shall not cancel, terminate or materially alter the terms of any of the Insurance Policies without giving prior notice in writing to Enbridge. The Consultant shall provide Enbridge with 30 days written notice prior to cancellation or other material modification in the policy affecting the requirements of this Agreement. No such cancellation or modification shall affect Consultant's obligation to maintain the insurance coverage required by this Agreement.

14. **Compliance with Laws**

The Consultant agrees to comply with the Occupational Health and Safety Act (Ontario) and the Workplace Safety and Insurance Act (Ontario) and with all other prevailing federal, provincial and municipal laws and regulations or any other laws or regulations in force in any jurisdiction where the Services are performed (the "Laws") and which are applicable to the Consultant, its subcontractors and the Services provided hereunder, and the Consultant shall familiarize itself and procure all required permits and licenses and pay all charges and fees necessary or incidental to the due and lawful prosecution of this Agreement, and maintain all documentation as may be required by the Laws, and shall indemnify and save harmless Enbridge, its directors, officers, agents and employees thereof against any claim or liability from or based on the violation of any Laws, whether by the Consultant, its officers, employees, subcontractors, representatives or agents. The Consultant shall, from time to time, if requested by Enbridge, furnish Enbridge with evidence of such compliance, and in particular: (i) evidence from the Workplace Safety and Insurance Board, or the equivalent thereof in any jurisdiction where the Services provided hereunder are carried out, that the Consultant and any party with which it has entered into a Subcontract are in compliance with and have paid all assessments and other amounts owing pursuant to the workers' compensation legislation of such jurisdiction; and (ii) evidence of the Consultant's compliance with any training requirements under the Laws including, without limitation, the provision of such statements or certificates pertaining to the Consultant's compliance in the form(s) prescribed by Enbridge from time to time.

Enbridge is committed to compliance with the Accessibility for Ontarians with Disabilities Act, 2005, O.Reg. 429/07 and O.Reg. 191/11, the Enbridge Customer Service Policy for Providing Goods and Services to People with Disabilities and the Enbridge Integrated Accessibility Standards Policy (collectively the "AODA"). The Consultant shall ensure that it is in full compliance with all of its obligations under AODA. Without limiting the generality of the foregoing the Consultant shall ensure that all of its employees, agents, volunteers, or others engaged by the Consultant in the delivery of services under this Agreement receive training in connection with the requirements of the AODA. If requested to do so, the Consultant shall provide Enbridge with copies of its policies, practices, procedures, training materials and training records including the dates on when the training is provided, and the names of the individuals trained, and confirmation the Consultant has reported its compliance to the Ministry of Community and Social Services or such other governmental authority as provided in the AODA.

The Consultant will ensure that any personnel it assigns to work in Canada, where they are not a Canadian citizen or Canadian permanent resident of Canada, will obtain and maintain the lawful ability to engage in commercial activities in Canada through the issuance of the appropriate documentation from Canada Border Services Agency and Citizenship and Immigration Canada. The Consultant's personnel where necessary will obtain lawful work permits to engage in business-related activities as temporary foreign workers and will notify Enbridge if any applications for work permits and work permit renewals are refused. The Consultant will not send personnel to any Enbridge-related work site if they do not possess the necessary lawful permission to work in Canada. The Consultant will take full responsibility to secure the necessary documentation and produce such documentation when entering a Canadian work site of Enbridge.

15. **Waiver**

Either the Consultant or Enbridge may, in writing, extend the time for performance by the other and waive non-compliance or non-performance by the other of any of the other's obligations, covenants and agreements under this Agreement and any compliance therewith or performance thereof. However, no such extension or waiver shall operate so as to waive, diminish or reduce the scope of or otherwise affect any obligation, covenant or agreement of such other which is not the subject matter of such extension or waiver or, except to the extent of such extension or waiver, of the obligation, covenant and agreement which is the subject matter of such waiver. No act or failure to act of either the Consultant or Enbridge shall be or be deemed to be an extension or waiver of timely or strict performance by the other of the other's obligations, covenants and agreements under this Agreement except to the extent notice thereof is given to the other.

16. **Notice**

Any notice or other communication to be given under or pursuant to the provisions hereof or in any way concerning this Agreement shall be sufficiently given if reduced to writing and delivered to the person to whom such communication is to be given or sent by facsimile or electronic internet communication, addressed to such person at the address set forth below:

If to Enbridge:

ENBRIDGE GAS INC.
500 Consumers Rd
North York ON M2J 1P8
Attention: Hulya Sayyan, Senior Advisor Demand Forecasting & Analysis
Phone: 416-495-6332
Email: hulya.sayyan@enbridge.com

With a copy to: Law Department
Facsimile: 416-495-5994

If to the Consultant:

GUIDEHOUSE CANADA LTD.
100 King Street West, Suite 4950
Toronto Ontario M5X 1B1
Attention: Craig Sabine, Director
Phone: 647-288-5227 Ext.
Email: craig.sabine@guidehouse.com

or at such other address as may be specified therefor by proper notice hereunder. A notice or communication shall be deemed to have been sent and received on the day it is delivered personally or by courier or by facsimile or by electronic internet communication. If such day is not a business day or if the notice or communication is received after 5:00 PM (at the place of receipt) on any business day, the notice or communication shall be deemed to have been sent and received on the immediately following business day.

17. **Interpretation**

This Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein. Headings used herein are for the convenience of reference only and shall not be considered in construing or interpreting this Agreement. The words "herein", "hereunder", "hereof" and other similar words refer to this Agreement as a whole and not to any particular paragraph. Any provision herein prohibited by law shall to the extent prohibited be ineffective without invalidating any other provisions hereof. All references to amounts of money in this Agreement and any schedule shall mean lawful currency of Canada.

18. **Assignment**

The Consultant may not assign this Agreement in whole or in part without the express prior consent in writing of Enbridge. This Agreement shall be binding upon and enure to the benefit of the successors and assigns of Enbridge.

19. **Use of Enbridge Name and Logo**

The Consultant shall not use or display Enbridge's name or any symbols, signs, trademarks and other marks denoting and identifying Enbridge in any manner whatsoever without the prior written authorization of Enbridge.

20. **Time of Essence**

Time shall be of the essence in the performance of the Services.

21. **Survival**

All warranties and indemnities contained in this Agreement, and the obligations contained in Section 8, shall survive the termination of this Agreement irrespective of the time of or party responsible for such termination, and such warranties, indemnities and obligations shall remain in full force and effect and be binding on the Contractor notwithstanding such termination.

22. **Further Assurances**

Each of the parties shall, from the time of the written request of the other party, do all such further acts and execute and deliver or cause to be done, executed or delivered all such further acts, deeds, documents, assurances and things as may be required, acting reasonably, in order to fully perform and to more effectively implement and carry out the terms of this Agreement.

23. **Entire Agreement**

This Agreement, including any schedules attached hereto, constitutes the entire agreement between the parties with respect to the subject matter set out herein and replaces any prior understandings or agreements, whether written or oral, regarding such subject matter. No change or modification of this Agreement is valid unless it is in writing and signed by both parties. No disclaimers, purchase order documents, invoices or other documents of the Consultant shall be binding upon Enbridge.

24. **Audit**

The Consultant shall, following no less than seven (7) business days advance notice in writing, provide to such auditors (including external auditors and Enbridge's internal audit staff or agents) as Enbridge may designate in writing, supervised access to the data, records and supporting documentation maintained by the Consultant with respect to the Services solely for the purpose of: (i) performing audits and inspections to enable Enbridge to satisfy applicable regulatory requirements or certify compliance with applicable laws; and (ii) to confirm that the Services are being provided in accordance with the terms of this Agreement. Enbridge and its auditors shall use commercially reasonable efforts to conduct such audits in a manner that will result in a minimum of inconvenience and disruption to the Consultant's business operations. In the event that if any such audit reveals any: (a) errors or deficiencies in the completion of the Services or invoicing of the Services; or (b) overpayments to the Consultant by Enbridge, then the Consultant shall forthwith correct such errors or deficiencies, including if applicable refunding any overpayment to Enbridge. The Consultant shall retain all records for ten (10) years from the date of expiration or earlier termination of this Agreement, or such longer period as Enbridge may require having regard to the nature of the Services.

25. **Enbridge Policies**

The Consultant acknowledges receipt of a copy of each of Enbridge Inc.'s Statement on Business Conduct for Enbridge Inc. and its Subsidiaries and Lifesaving Rules, each as amended from time to time (the "Policies"). The Consultant agrees to comply with the Policies in connection with its delivery of the Services described in this Agreement, and agrees that, if requested by Enbridge, it will ensure all personnel delivering the Services herein attend training on the Lifesaving Rules.

26. **ISNetworld Requirement**

If required by Enbridge, the Consultant shall subscribe with ISN Software Corporation as a registrant of ISNetworld ("ISN") or any successor service mandated by Enbridge from time to time, and maintain a performance grading within ISN that is acceptable to Enbridge (the "ISNetworld Requirement") and shall: (a) provide all records and information as required by ISN or Enbridge, including, but not limited to, training and qualification data of the Consultant personnel, including subcontractors and employees, relating to the Services; and (b) maintain compliance with the ISNetworld Requirement during the currency of this Agreement.

[remainder of page intentionally left blank]

27. **Counterparts and Execution**

This Agreement may be executed by the parties in separate counterparts, each of which when so executed and delivered will be deemed to be an original, and all such counterparts will together constitute one and the same instrument. Delivery of a signature by electronic transmission or by facsimile transmission, including by email delivery of a "portable document format" ("pdf") document, shall create a valid and binding obligation. This Agreement may be executed using electronic signatures.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first written above.

SCHEDULE A

**TO THE CONSULTING AGREEMENT BETWEEN
ENBRIDGE GAS INC. AND GUIDEHOUSE CANADA LTD.
Dated January 18, 2021**

This Schedule is made under the above referenced consulting agreement (the "Agreement") between ENBRIDGE GAS INC. ("Enbridge") and GUIDEHOUSE CANADA LTD. (the "Consultant").

1. **SCOPE OF SERVICES**

The Consultant will undertake the following Services:

Conduct a comparison of how other comparable North American natural gas utilities forecast their natural gas demand/consumption for their budget, and long-term strategic plans (including weather forecast, normalization, number of customers and average consumption per customer forecast); and collection of information about whether they use deferral accounts or other mechanisms to protect their revenues from the volumetric variances related to their demand, and weather forecast.

Consultant's Services shall include the establishment of a peer / focus group consisting of ten (10 utilities), through appropriate criteria (climate, size of utility, etc.). Consultant shall collect detailed information from such peer/focus group regarding each of the following:

- their weather forecast and normalization methodology;

- their number of customers/new customers forecast;

- their average consumption per customer forecast;

- their total consumption/demand forecast; and

- whether they use deferral accounts or other mechanisms to protect their revenues from the volumetric variances related to their demand and weather forecast.

2. **DELIVERABLES**

The Consultant will provide the following deliverables:

- A Written Report on Demand Forecast Benchmarking, provide detailed results of the Study in a table format.

- Write evidence and act as a witness in the Ontario Energy Board proceeding - either written, or in-person at the hearing.

3. **TERM AND COMMENCEMENT AND COMPLETION DATES**

This Schedule shall be effective as of January 18, 2021 and expire December 23, 2023, or such other date as the parties may mutually agree in writing.

4. **KEY PERSONNEL**

The Consultant will provide the following personnel to deliver the services set out above under Scope of Services:

Craig Sabine, Director in Charge
Dixon Grant, Project Manager
Peter Steele-Mosey, QA/QC Management & Forecasting SME
Judy Simon, Ontario Regulatory SME
Laurel Buchanan, Primary Researcher

5. **FEES AND PAYMENT TERMS**

Fees: As per attached Guidehouse Pricing sheet.

Expenses: N/A

The above fees and expenses cannot be exceeded without prior written approval from Enbridge.

Fees are payable by Enbridge within forty (40) days of receipt from the Consultant of an appropriate invoice setting out in reasonable detail the nature of the services provided.

[Remainder of page intentionally left blank; signature page to follow]

Dated as of January 18, 2021.

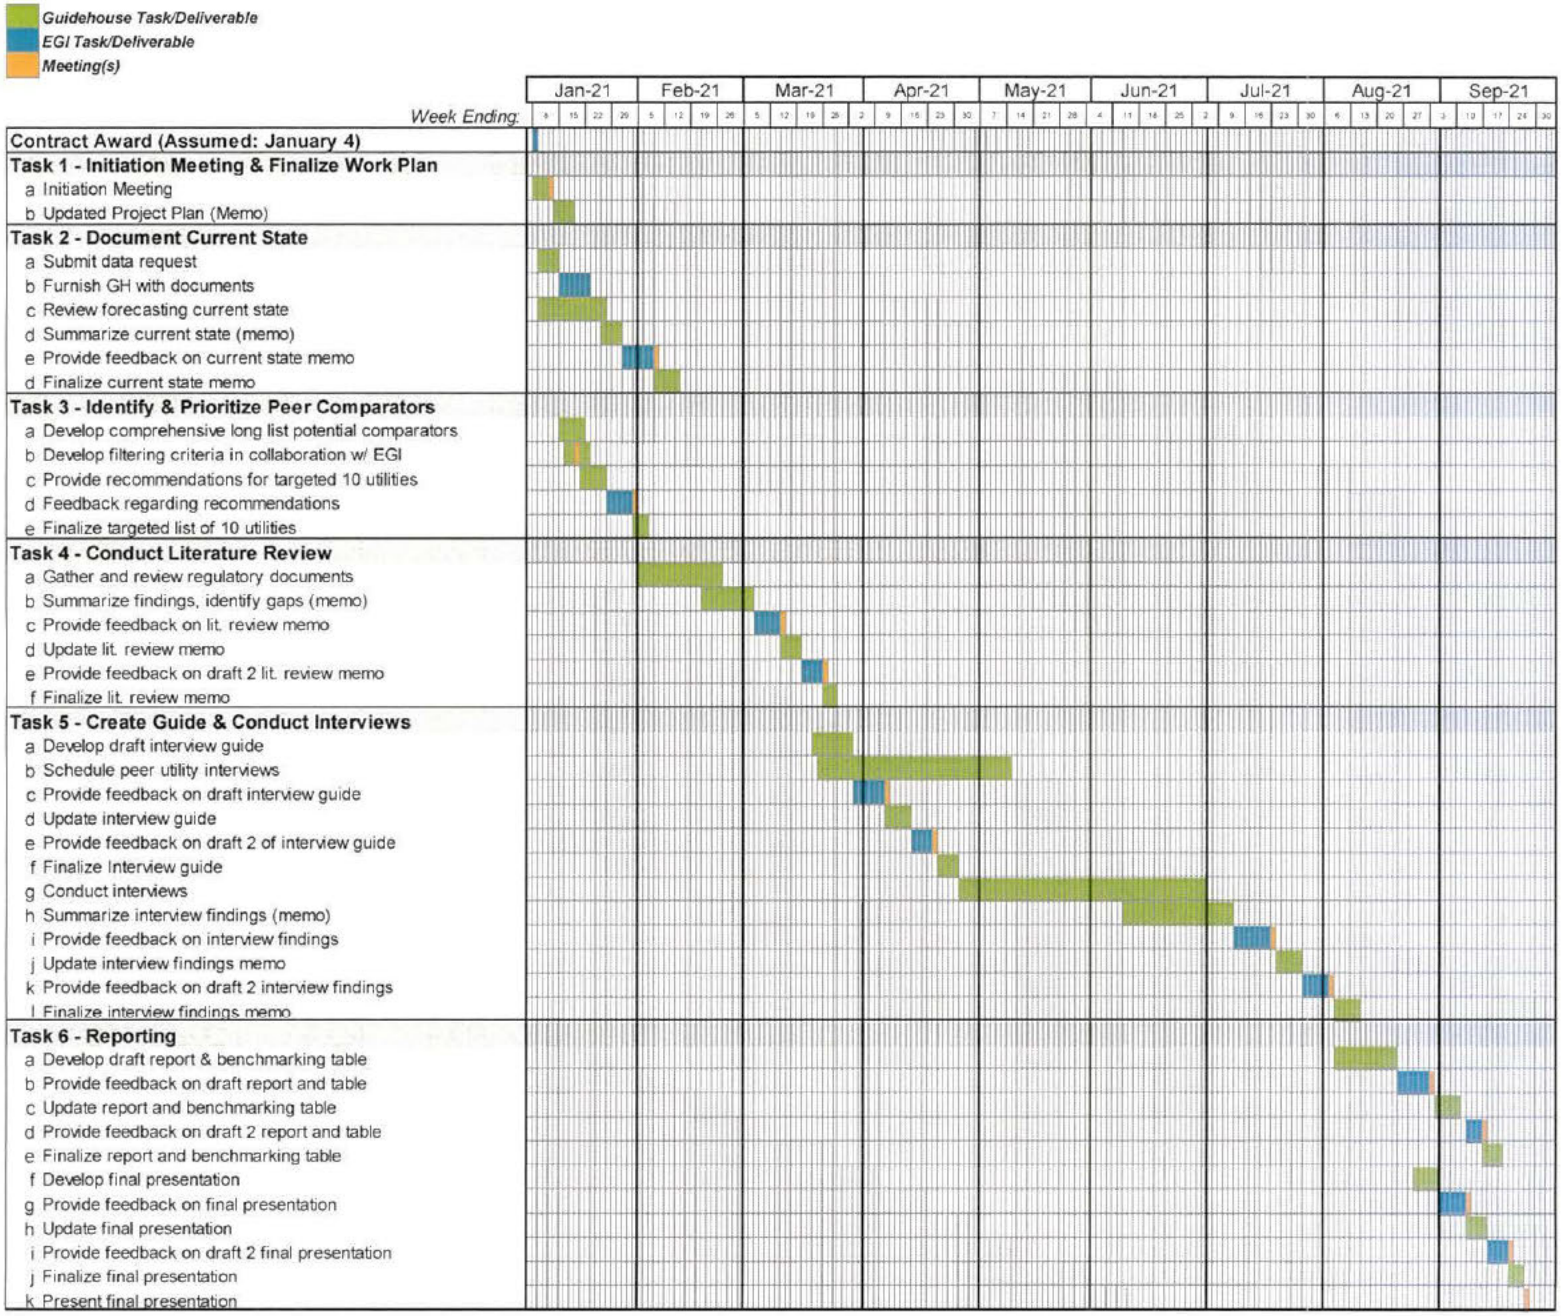
EGI Demand Forecasting Benchmarking Project Schedule

Guidehouse



SCHEDULE B

TO THE CONSULTING AGREEMENT BETWEEN ENBRIDGE GAS INC. AND GUIDEHOUSE CANADA LTD. Dated January 18, 2021

This Schedule is made under the above referenced consulting agreement (the "Agreement") between ENBRIDGE GAS INC. ("Enbridge") and GUIDEHOUSE CANADA LTD. (the "Consultant").
All capitalized terms used in this Schedule have the meaning given to them in the Agreement.

1. **SCOPE OF SERVICES**

The Consultant will undertake the following Services, as further described in the Deliverables Section below:

EGI is seeking a comparative analysis of industry practices of relevant Canadian and U.S. LDCs for:

1. Weather and risk assumptions for Gas Supply planning

2. EGI is further seeking a review of utility best practices for design day demand modeling using the suggested design criteria, used for Gas Supply Planning in upstream contract sizing

3. EGI requires comprehensive written reports.

4. Participate at a half-day kickoff meeting at the outset to discuss existing criteria, methodologies, data and assumptions. This meeting will be held remotely.

5. Ongoing consultation to discuss preliminary results; provision of recommended revisions to design weather methodology and assumptions.

6. Assessment of the final results with accompanying presentation.

2. **DELIVERABLES**

The Consultant will provide the following deliverables:

Half-day kickoff meeting

Assessment of Final Results and Accompanying Presentation

Comprehensive Written Report

3. **COMMENCEMENT AND COMPLETION DATES**

This Schedule shall be effective as of March 8, 2021 and expire May 15, 2021, or such other date as the parties may mutually agree in writing.

4. **KEY PERSONNEL**

Craig Sabine, Director
Paul Moran, Associate Director
Peter Steele-Mosey, Associate Director
Dixon Grant, Senior Consultant
Laurel Buchanan, Consultant

5. **FEES AND PAYMENT TERMS**

Fees: [redacted]

Expenses: N/A

The above fees and expenses cannot be exceeded without the prior written approval of Enbridge.

Mercer

welcome to brighter

Project Initiation Form

The objective of this Project Initiation Form ("PIF") is to confirm the scope of our work and estimated fees for the Enbridge Gas Inc. pension and benefit plans projections for rate recovery application. This PIF is subject to the terms and conditions contained in our existing engagement letter dated March 24, 2014.

Project Details

1. **Client Name**: Enbridge Gas Inc. ("EGI")
2. **Project name**: EGI pension and benefit plans projections for 2022 - 2024
3. **Description of Mercer responsibilities**:

   Refer to the Appendix for a description of the anticipated scope of work.

4. **Description of client responsibilities:**

   Provide all necessary and reasonably requested co-operation to enable Mercer to provide the services.

5. **Estimated period of time over which work will be performed:** April 1, 2022 to July 31, 2022. The report is to be delivered on May 23, 2022.

Fee Structure

Mercer fees will be based on the billable hours and the hourly rates of the professionals doing the work. Every effort is made to delegate work to the level where the work can be competently and most efficiently performed. Each invoice is set by the billing consultant based on their judgment of the efficiency of the work and the value delivered. Where it is possible to deliver assignments in a more efficient way by leveraging work done on a shared basis across a number of clients, professional fees may reflect this shared development cost. In addition to our fees, Mercer also bills for necessary travel and other expenses related to the services requested. The hourly rate bands on which our fees are based are set out below:

[redacted]	
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]
[redacted]	[redacted]

We estimate the total fees for the anticipated scope of work will be within the [redacted] This is an estimate only and fees will ultimately be based on the billable hours and hourly rates of the professionals doing the work.

Conclusion

We appreciate your business and look forward to working with you. Please acknowledge your agreement to the assignment terms by sending a confirmation e-mail. If we do not receive a response from you either accepting the terms or noting any concerns about any of the terms within five business days of your receipt of this PIF, we will assume that you have accepted the PIF and will perform the Services described in this PIF on the basis set out above.

MERCER (CANADA) LIMITED
solely in connection with the Services it provides pursuant to a PIF

Name: Scott Thompson (Please Print) Date: April 22, 2022

Title: Principal

Appendix

Scope of Work

EGI's allocation of the following pension and benefit plans will be included in this work:

- Retirement Plan for Employees of Enbridge Inc. and Affiliates (the "EI RPP")
- Pension Plan for Employees of Enbridge Gas Distribution Inc. and Affiliates (the "EGD RPP")
- Enbridge Supplemental Pension Plan (the "EI SPP")
- Supplementary Executive Retirement Plan of Enbridge Gas Distribution Inc. and Affiliates (the "EGD SERP")
- Supplementary Senior Executive Retirement Plan of Enbridge Gas Distribution Inc. (the "EGD SSERP")
- Pension Choices Plan for Employees of Westcoast Energy Inc. and Affiliated Companies (the "Pension Choices Plan")
- Union Gas Management & Supervisory Pension Plan (the "M&S Plan")
- Union Gas Bargaining Unit Plan (the "Bargaining Unit Plan")
- Union Gas Pension Plan for Salaried Employees Formerly Employed by Centra Gas Inc. (the "Salaried Plan")
- Union Gas Pension Plan - Group One (the "Group One Plan")
- Union Gas Pension Plan - Group Three (the "Group Three Plan")
- Supplemental Executive Retirement Plan (the "LSE SERP")
- Hold harmless for all DB participants (the "SEMPL")
- Enbridge Gas Distribution Inc.'s Non-pension Post Retirement Benefit Plan (the "EGD OPEB Plan")
- Spectra Energy Corp's Non-pension Post Retirement Benefit Plan (the "Spectra OPEB Plan")

The following summary is an overview of the anticipated work required for preparing the projections over the three year period from 2022 to 2024.

Project Phase	Scope
Planning	• Initial exploratory discussions • Internal planning and project management

Project Phase	Scope
Assumptions	Developing applicable assumptions as required based on market conditions at March 31, 2022[1] including: • Going concern discount rates • Provision for Adverse Deviation (Ontario plans only) • Expected return on assets • Annuity proxy rates • Commuted value interest rate *We have assumed that all other assumptions will be consistent with those approved by Enbridge's Pension Committee for filing actuarial funding valuations as at December 31, 2021.*
Data	• Preparing EI RPP DC membership data for use with future valuation projections • Extracting and reconciling assets from March 31, 2022 • Reconciling pending divestiture asset transfers as amount payable as at March 31, 2022 *We will rely on census data as at December 31, 2021/ January 1, 2022 used for Enbridge's funding valuations. Assets will be extracted from CIBC Mellon's Nexus portal.*
Future Valuations *EI RPP only*	• Preparing *future valuation* projections on going concern, solvency, and accounting bases for the years ending December 31, 2022 through December 31, 2023 based on revised assumptions as at March 31, 2022[1] • Adapting EI RPP funding projections for anticipated transition from Federal to Ontario jurisdiction • Extracting projected cash flows at each future valuation increment for use with the full yield curve pension cost calculations • Developing projected going concern, solvency and accounting balance sheets at annual increments to December 31, 2023 • Developing accumulated other comprehensive income (AOCI) balance reconciliations on corporate books and local books bases at annual increments to December 31, 2023 *No new entrants profiles are required since new members must join the defined contribution (DC) component of the EI RPP for first five years.*

[1] Or April 30, 2022 if applicable assumptions are available at the time the work is prepared.

Project Phase	Scope
Valuations *All other plans not relying on future valuations*	• Preparing valuations on going concern and accounting bases as at December 31, 2021 based on revised assumptions as at March 31, 2022[2]. • Extracting projected cash flows for use with the full yield curve pension cost calculations • Performing extrapolations to develop projected going concern, solvency and accounting balance sheets at annual increments to December 31, 2023 • Developing accumulated other comprehensive income (AOCI) balance reconciliations on corporate books and local books bases at annual increments to December 31, 2023 *In 2021, the Enbridge Pension Committee approved to apply to merge the M&S Plan, Bargaining Unit Plan, Salaried Plan, Group One Plan, and Group Three Plan into the EI RPP. As the applications have not yet been filed with the pension regulator, the merger will not be considered for these projections. This should not have a significant impact on the results.* *The actuaries performing this work may elect not to perform some or all of the funding basis extrapolations if it will not have a significant impact on the valuations.*
Projected cash contributions	• Determining estimated DB current service cost and special payment payments for 2023 to 2024 based on minimum funding requirements • Anticipating change in funding regulations for EI RPP due to change in jurisdiction • Calculating projected defined contribution (DC) requirements for 2023 and 2024 based on existing membership and reflecting assumed decrements • Calculating projected DC requirements for 2022 to 2024 based on *expected new entrants* *To the extent a Prior Year Credit Balance or special payment deferral is available, the actuaries performing the work will make a reasonable assumption on whether such a lever may be employed based on Enbridge's existing approach.*

[2] Or April 30, 2022 if applicable assumptions are available at the time the work is prepared.

Project Phase	**Scope**
Projected net periodic benefit costs under US GAAP	• Summarizing the annual net periodic benefit costs under US GAAP for 2022 • Determining estimated annual net periodic benefit costs under US GAAP for 2023 to 2024 using the full yield curve approach • Calculating estimated accumulated unrecognized actuarial loss/gain amortization amounts under corporate books and local books *When there is more than one participating employer in a plan, some components of EGI's net periodic benefit cost are a proportion of the total. As such, projections must be prepared for the total plans as well as for just EGI's share.*
Sensitivities	*No sensitivities or scenario analysis is included in this scope. Mercer and EGI should discuss if such analysis is preferred.*
Results and Report	• Prepare certified actuarial valuation report with all required results including: — Projected 2022 to 2024 net periodic benefit costs (on corporate basis) and expected funding contributions — Projected accounting balance sheet and AOCI (on corporate basis only) as at December 31, 2021, 2022 and 2023 • Include data, assumptions, methods and provisions disclosures so document is standalone • One results meeting with EGI to discuss report and projections • External to the report, a summary of the estimated AOCI balance as at December 31, 2023 on the local books basis, and the difference from corporate books basis. • Provide all results in Excel file format. *Actuaries are permitted to reference other external reports in their work in order to simplify disclosures. References to other external reports were used in the 2017 rate applications which the interveners requested copies of. Our objective is to avoid such requests with the report that will be filed this year. We understand this report will be filed with the OEB.*

The scope outlined in the table above includes the activities where it is anticipated Mercer consultants will be involved. Factors and considerations that may affect the estimated costs for this project include, but are not limited to:

- Any additional assumption changes beyond those anticipated with the data phase could increase costs

- All data is assumed to be reasonable and appropriate for these valuations. Significant additional data cleaning or manipulation beyond that anticipated in the data phase could increase costs.
- Unforeseen changes to standards of practice or applicable legislation
- Preparing sensitivity or alternative scenario analysis
- Preparing results on a stochastic basis
- Significant changes or additional content required for the report
- Incorporating any unforeseen divestitures or acquisitions
- Incorporating any future plan mergers

Mercer

Project Initiation Form (PIF)

August 25, 2021

The objective of this Project Initiation Form (PIF) is to confirm the scope of our work and the compensation agreement for this project.

The terms and conditions of our existing agreement apply. However, with respect to the services described, should there be any difference between existing terms and conditions and those outlined here, the terms and conditions outlined in this PIF will apply.

Details

1. **Client Name:** Enbridge Inc. ("Enbridge")
2. **Project name or services:** Compensation Benchmarking for Regulatory Application
3. **Description of Mercer responsibilities:** Mercer will work with Enbridge to complete the following:

    1. **Project Planning**
        a. Project kick-off meeting with Enbridge and Mercer project teams to align on expectations, deliverables and timelines
        b. Collect and validate necessary data and information related to:
            i. Overall business, people and compensation strategy
            ii. Enbridge employee compensation data
            iii. Additional survey sources that Enbridge has access to (e.g., Willis Towers Watson "WTW" survey with relevant refinements)
        c. Bi-weekly project team updates (assumes 10)
        d. On-going project management (including updating detailed project plan and timeline)
    2. **Comparator Groups and Target Positioning**
        a. Draft comparator groups for non-union and union employees using available surveys
        b. 90-minute consultation with Enbridge project team to discuss preliminary comparator markets and target positioning
        c. Revise as necessary (assumes 1 round of revisions) and confirm
    3. **Benchmark Matching**
        a. Select ~300 non-union and ~30 union benchmark positions from Enbridge's Ontario, non-executive jobs
            i. 300 non-union jobs will cover almost all employees
            ii. 30 union jobs is expected to cover the majority of union employees
            iii. Fee estimate will be adjusted based on actual number of jobs included
        b. 60-minute meeting with project team to go over list (focusing on union job selection)
            i. 1 round of revisions

   c. Match all positions to survey sources
      i. Mercer expects to use 2 survey sources for non-union jobs: Mercer survey and WTW (may vary depending on comparator markets) in order to be able to capture a robust sample of relevant comparators and industries
      ii. Mercer expects to use 1 survey source for union jobs: Mercer survey
      iii. In addition, Mercer will leverage where applicable June 2021 custom survey sponsored by Hydro One, in which Enbridge participated and received summary results
   d. Up to 2 hours of meetings to review and revise matches with Enbridge project team

4. **Benchmarking Analysis and Report Delivery**
   a. Compile and analyze market data from relevant survey sources including:
      i. Base Salary
      ii. Short-Term Incentives
      iii. Total Cash Compensation
      iv. Long-Term Incentives
      v. Total Direct Compensation
   b. Research and compile collective bargaining rates for 30 union positions using Ontario collective agreements
   c. Prepare detailed findings report and excel data workbook with all market findings
   d. Review market data and findings in up to 3 hours of meetings
      i. Assumes 1 round of revisions
   e. Compile an executive summary report
      i. Assumes 1 round of revisions

4. **Description of client responsibilities:** Provide Mercer access to necessary data and information as required.
5. **Estimated period of time over which work will be performed:** The work will commence immediately upon acceptance of this PIF and will be completed by 31 December 2021. For accounting purposes only, we expect that this project will not extend beyond 30 June 2022.

Fee Structures

Mercer's estimated compensation for the services will be professional fees in the amount of [redacted] In addition to such compensation, Mercer also bills for necessary travel and other expenses related to the services requested and applicable taxes.

We appreciate your business and look forward to working with you on this project. Please acknowledge your agreement to the project terms by signing below.

SCHEDULE "A-5"

FORM OF STATEMENT OF WORK

THIS STATEMENT OF WORK ("SOW") IS ENTERED INTO BETWEEN ENBRIDGE INC. ("SERVICE RECIPIENT") AND TOWERS WATSON CANADA INC. ("CONSULTANT") AS OF MARCH 1, 2017, AND IS SUBJECT TO THE CONSULTING SERVICES AGREEMENT BETWEEN ENBRIDGE INC. AND THE CONSULTANT DATED JANUARY 22, 2016 (THE "CSA"). ANY CAPITALIZED TERM USED IN THIS SOW BUT NOT DEFINED SHALL HAVE THE MEANING ASCRIBED TO SUCH CAPITALIZED TERM IN THE CSA.

The consultant will provide consulting services ("Services") to the Service Recipient on the terms set out below:

Term

The Term of this SOW is for the period commencing on March 1, 2017 and concluding December 31, 2020.

Renewal

The Service Recipient may, at its sole discretion, and upon notice given to the Consultant no later than thirty (30) days prior to the expiry of the Term of this SOW, extend the Term of this SOW for such further period as the parties agree.

Scope of Services

The Consultant shall provide the Services outlined in the Attachment(s).

Service Fees

The Services outlined in this SOW shall be performed primarily on a "fixed fee and expense" basis with general consulting on a "time and expense" basis as noted in the attachment, along with invoicing and payment terms, as described in the CSA. The fixed fees will be payable in monthly installments.

Key Personnel

The Consultant agrees that the Services shall be performed by Consultant's Health & Benefits Canadian and U.S. teams. Members of the U.S. team are employed by Consultant's affiliate Towers Watson Delaware Inc. Service Recipient must approve any additional personnel.

Additional Terms

In accordance with Section 2.2 or 2.3, as applicable, of the Agreement, this SOW shall be deemed to incorporate by reference and shall be subject to all the terms and conditions of the CSA, mutatis mutandis, with the same force and effect as if the terms and conditions of the CSA were fully set out in this SOW, subject to any express amendments, modifications or inclusion of additional terms set forth in this SOW.

We estimate that this engagement will be completed during 2017-2020, and the annual activities for each year will be completed in that calendar year. We will work closely with you on scheduling and use reasonable efforts to adhere to this schedule, but we cannot guarantee that this schedule will be met.

Each Party acknowledges that it has read this SOW, understands it and agrees to be bound by its terms and conditions.

Counterpart

This SOW may be executed in any number of counterparts and all such counterparts shall, for all purposes, constitute one agreement binding on all parties hereto notwithstanding that parties are not signatories to the same counterpart, provided that each party has signed at least one counterpart. This SOW may be executed and delivered by facsimile transmission or electronic transmission in .pdf or similar universally readable format and the parties hereto may rely on all such facsimile or electronically provided signature pages as though the signatures on such facsimile or electronically provided signature pages were original signatures.

IN WITNESS WHEREOF the parties hereto have executed this SOW on the day and year first above written.

ONGOING HEALTH AND BENEFITS CONSULTING – Canadian Benefits

Description of Services:

The assignment will encompass the services outlined below:

Annual Strategic Planning Meeting **No charge**

- Half day annual strategic planning meeting for Canada and U.S. combined
  - Review plan objectives and performance against goals
  - Discuss key market trends, vendor developments and initiatives
  - Agree on project plan for all activities during the upcoming year

Benefit Plan Pricing

Integrated Flex Plan and Retiree Plan – Initial (for 2018) [redacted]

- Analyze actual health and dental claims experience for 2016 and project claims costs for 2017 under proposed flex plan
- Update overall program costs for 2017 for Enbridge and Spectra Energy separately and combined, incorporating:
  - Spectra Energy and Enbridge enrolment statistics for 2017
  - Current premium rates for 2017 for insured benefits
  - Estimate 2017 claims experience for health and dental benefits
- Project overall program costs for 2018 on a combined basis, taking into consideration proposed premium rates for 2018 for insured benefits and estimated 2018 claims experience for health and dental benefits
- Determine appropriate flex credits and price-tags for proposed flex plan for 2018 plan year
- Review current retiree health plan experience and project for upcoming plan year in order to determine appropriate price-tag for retirees
- Prepare presentation and meet with Enbridge to discuss results

Integrated Flex Plan and Retiree Plan – Ongoing [redacted]

- Gather and analyze individual enrolment statistics for the current plan year for employees under the integrated flex plan
- Analyze actual health and dental claims experience for prior plan year and project for claims cost upcoming plan year
- Update overall program costs for current and upcoming plan year to reflect updated enrolment statistics (Enbridge and Spectra Energy employees under integrated flex plan) as well as premium rates for insured benefits, updated claims experience for health and dental benefits and any required changes to credits and price-tags
- Review current retiree health plan experience and project for upcoming plan year in order to determine appropriate price-tag for retirees
- Prepare presentation and meet with Enbridge to discuss results

Legacy Spectra Energy Flex Plan [redacted]

- Gather and analyze individual enrolment statistics for the current plan year for employees remaining under the legacy Spectra Energy flex plan
- Analyze actual health and dental claims experience for prior plan year and project for upcoming plan year
- Update overall program costs for the prior plan year based on actual health and dental claims experience to determine if refund to employees is required
- Update overall cost projections for current and upcoming plan year to reflect updated enrolment statistics as well as proposed premium rates for insured benefits, updated claims experience for health and dental benefits and any required changes to credits and price-tag
- Prepare presentation and meet with Enbridge to discuss results

Annual Financials

Legacy Enbridge Plans [redacted]

- Audit annual financial statements provided by the vendor, for East and West separately, for the refund accounted plans (basic life insurance and LTD), with respect to accuracy and reasonableness of the following:
  - Premium and claims
  - Waiver of premium, disabled life and IBNR reserves
  - Retention and pooling charges and pooling charges
- Check reasonableness of premiums and claims for fully pooled benefits (optional life insurance)
- Audit annual ASO statements provided by vendor for health and dental benefits for accuracy and reasonableness of ASO and pooling charges
- Determine final account balances for refund accounted plans in termination/run-off accounting and outline responsibility of existing disabled claimants (assuming life insurance and LTD moved to another insurer)
- Prepare presentation and meet with Enbridge to review results

Legacy Spectra Plans [redacted]

- Audit annual financial statements provided by Manulife for basic life insurance (7 plans), LTD (5 plans), health (8 plans), dental (7 plans) and HCSA (4 plans), with respect to accuracy and reasonableness of the following:
  - Premium and claims
  - Waiver of premium, disabled life and IBNR reserves
  - Retention/ASO charges and pooling charges
  - Tax and interest calculations
- Review in-line transfers between operating companies (Westcoast, Union Gas and St. Clair Pipelines) and benefits, CFR and deposit account balances to confirm Manulife has transferred funds appropriately
- Check reasonableness of premiums and claims for fully pooled benefits (optional life and AD&D)
- Determine actual HCSA "forfeitures" for the plan year
- Determine final account balances for refund accounted and ASO plans in termination/run-off accounting and outline responsibility of existing disabled claimants
- Prepare presentation and meet with Enbridge to review results

New Integrated Plans [redacted]

- Audit annual financial statements provided by the vendor, for East and West separately, for the refund accounted plans (basic life and LTD), with respect to accuracy and reasonableness of the following:
  - Premium and claims
  - Waiver of premium, disabled life and IBNR reserves
  - Retention and pooling charges and pooling charges
- Check reasonableness of premiums and claims for fully pooled benefits (optional life insurance)
- Audit annual ASO statements provided by vendor for health and dental benefits for accuracy and reasonableness of ASO and pooling charges
- Prepare presentation and meet with Enbridge to review results

Renewal Analysis (Illustrative renewal during guarantee period) [redacted]

- Review "illustrative renewal analysis prepared by vendor for the life insurance and LTD benefits to determine potential impact on premium rates after expiration of rate guarantees
- Prepare high level presentation and meet with Enbridge

Quebec Taxable Benefit Calculations [redacted]

- Calculate annual taxable benefits for Quebec employees and retirees for health and dental

General Health and Benefits Consulting **Time & Expense**

- Provide additional consulting to Enbridge with respect to Health & Benefit programs, as needed throughout the year
- Assist Enbridge with policy standardization and compliance efforts, as needed
- Respond to ad hoc questions as required

* Will be completed under Spectra Energy scope of work for 2017.
** May decrease or be eliminated depending on success of union negotiations.
*** May increase if rate guarantees are only three years and full renewal is required.

ONGOING HEALTH AND BENEFITS CONSULTING – U.S. Benefits

Description of Services

The assignment will encompass the services outlined below:

Annual Strategic Planning Meeting **No charge**

- Half day annual strategic planning meeting for Canada and U.S. combined
  - Review plan objectives and performance against goals
  - Discuss key market trends, vendor developments and initiatives
  - Agree on project plan for all activities during the upcoming year

Benefit Plan Strategy and Plan Management – Initial

Abbreviated Process – Initial (for 2018) [redacted]

- Brief strategic planning update
  - Review senior leadership changes to harmonization strategy
  - Review benchmarking information against key peer group, including annual Oil and Gas BenVal, Financial Benchmark Survey as well as other surveys
- Provide monthly Experience Monitoring Reports to track actual against budget for the current plan year (either March – December 2017 or January – December 2017 if preferred)
- Provide peer technical review of open enrollment communications, including description of benefits provided, employee premium rates and required legal notices

Regular Process – Ongoing [redacted]

- Benchmarking review meeting
  - Review benchmarking information against key peer group, including annual Oil and Gas BenVal, Financial Benchmark Survey as well as other surveys
  - Discuss key market trends in the oil and gas industry
- Develop and review wellness program strategy
- Provide monthly Experience Monitoring Reports to track actual against budget
- Provide peer technical review of open enrollment communications, including description of benefits provided, employee premium rates and required legal notices

Benefit Plan Pricing

Integrated Benefit Plans – Initial (for 2018) [redacted]

- Gather and analyze enrollment statistics for the current plan year
- Analyze actual health and dental claims experience for prior plan year and project for upcoming plan year
- Annual plan pricing and cost projections for the harmonized active program for Enbridge combined with Spectra and legacy Spectra retirees
  - Develop benefit plan projected cost (fully insured equivalent) for each calendar year, using actual claim experience, national trend and underwriting data
  - Provide annual cost information for internal budgets
  - Set 1-2 pricing scenarios and estimate effect on total costs and employee contributions
- Prepare drafts of materials for leadership team approval and attend leadership meetings as requested
- Complete Morneau Shepell rate template for legacy Spectra retirees
- Provide prescription drug creditable coverage testing for the active health insurance plan
- Provide quarterly IBNR estimates for active medical, retiree medical, and dental plans
- Assist with information gathering for plan audit

Integrated Benefit Plans – Ongoing [redacted]

- Gather and analyze enrollment statistics for the current plan year
- Analyze actual health and dental claims experience for prior plan year and project for upcoming plan year
- Annual plan pricing and cost projections for Enbridge actives and legacy Spectra retirees (note that it is anticipated that legacy Spectra retirees will remain in the self-funded plan until January 1, 2020)
  - Develop benefit plan projected cost (fully insured equivalent) for each calendar year, using actual claim experience, national trend and underwriting data
  - Provide annual cost information for internal budgets
  - Set 3-4 pricing scenarios and estimate effect on total costs and employee contributions
- Prepare drafts of materials for leadership team approval and attend leadership meetings as requested
- Complete Morneau Shepell rate template for legacy Spectra retirees

- Provide prescription drug creditable coverage testing for the active health insurance plan
- Provide quarterly IBNR estimates for active medical, retiree medical, and dental plans
- Assist with information gathering for plan audit

Vendor Management

Legacy Enbridge and Spectra Programs Separately – Initial (for 2018) [redacted]

- Assist Enbridge with managing and resolving escalated employee issues and systemic problem resolution with vendors
- Facilitate annual vendor performance meetings including work with vendors to create annual vendor presentations that are technically accurate and provide meaningful, customized information, attend annual vendor performance meeting and manage meeting follow ups for:
  - BCBSTX for both Spectra and Enbridge
  - UMR for Spectra post-65 retirees
  - CVS Heath
  - Hartford
  - ActiveHealth
  - Preventure

Integrated Benefit Plans – Ongoing [redacted]

- Review annual vendor performance
  - Review and evaluate service provider contractual arrangements (e.g., performance guarantees, rebates) and provide recommendations
  - Assist Enbridge in managing and resolving escalated employee issues and systemic problem resolution assistance with vendors
  - Monitor vendor's quality of service and institute quality standards including financial penalties
  - Provide Enbridge with updated vendor contact list
  - Maintain an log of open vendor issues with Blue Cross/Blue Shield of Texas (BCBSTX)
- Facilitate annual vendor performance meetings including work with vendors to create annual vendor presentations that are technically accurate and provide meaningful, customized information, attend annual vendor performance meeting and manage meeting follow ups for:
  - BCBSTX
    - Participate on quarterly/semi-annual calls and meetings to review open issues

  - UMR (until post-65 retiree program modified, assumed January 1, 2020)
  - Hartford or other life insurance/disability carrier
  - Preventure or other wellness plan provider
- Request and analyze vendor renewals (as required)
- Note that all pharmacy management activities will occur through the RxCollaborative

Compliance [redacted]

- Ongoing compliance consulting
  - Provide consulting relative to health and insurance plans, including compliance, due diligence and support, e.g., contracts, trusts, 5500 Schedule As, daily administrative issues
  - Complete annual Form 5500
  - Assist Enbridge in complying with existing state or federal and state legislation that may impact your health and welfare programs
  - Review existing SPDs for legal/regulatory required changes
- Provide Enbridge with annual compliance calendar and timely updates regarding due dates for any filings
- Provide legislative/legal/industry updates
  - Provide data on current and proposed state and federal legislation and provide interpretation guidance
  - Provide research materials on various topics, as necessary

Medicare Part D Attestation [redacted]

- Medicare Part D attestation for legacy Spectra Energy retiree populations
  - Includes Attestation Report and testing for all legacy Spectra plans
- Acting as Account Manager for RDS filing
- Coordinating data submission and quarterly reimbursement requests

General Health and Benefits Consulting **Time and Expense**

- Provide additional consulting Enbridge with respect to Health and Benefit programs
- Assist Enbridge with policy standardization and compliance efforts
- Ad hoc questions and other consulting activities as requested

RE: Renewal of March 1, 2017 Statement of Work

Dear Charlie:

Further to the:

- Statement of Work dated March 1, 2017 (the "SOW"); and
- the Consulting Services Agreement dated January 22, 2016 (the "CSA"),

entered into by our two firms, please accept this letter as Enbridge Inc.'s exercise of the renewal option set out in the SOW. In particular, the SOW states:

> "The Service Recipient may, at its sole discretion, and upon notice given to the Consultant no later than thirty (30) days prior to the expiry of the Term of this SOW, extend the Term of this SOW for such further period as the parties agree",

Enbridge Inc. wishes to extend the term of the SOW to December 31, 2023 including the following modifications:

Summary of Projects for Canada (CAD)			
Project	**2021**	**2022**	**2023**

Non-discrimination testing			
TOTAL			

The project descriptions are the same as noted in the SOW except for the Non-discrimination Testing project which is described below.

Non-Discrimination Testing

Enbridge has requested Willis Towers Watson perform nondiscrimination testing under IRC §125, 105, 129 and 79. The specific nondiscrimination testing Willis Towers Watson will perform on behalf of Enbridge is provided below:

SECTION 125 CAFETERIA PLANS

- Eligibility Test
- Contributions or Benefits Test (including utilization)
- Concentration Test

SECTION 105 AMOUNTS RECEIVED UNDER ACCIDENT AND HEALTH PLANS

- Eligibility Test
- Benefits Test

SECTION 129 DEPENDENT CARE ASSISTANCE PROGRAMS

- Eligibility Test
- Contributions or Benefits Test
- 25% Concentration Test
- Average Benefits Test (i.e., 55% utilization test)

SECTION 79 GROUP TERM LIFE INSURANCE PURCHASED FOR EMPLOYEES

- Eligibility Test
- Benefits Test

The above is subject to the discounting agreement we have in place with Willis Towers Watson in the email to Kendra Hand dated July 28, 2020 from Charlie Allegro (attached) except the H&B consulting services will be discounted by 15% instead of 10% until the end of 2021. Further the invoice process will be revised in accordance with the email to Ryan Stelmaschuk dated October 19, 2020 from Charlie Allegro (attached).

Please provide Willis Towers Watson Inc.'s acknowledgement and agreement to this extension by signing a copy of this letter in the place indicated below and forwarding a copy to my attention via email.

Sincerely,

Ryan Stelmaschuk

Ryan Stelmaschuk
Manager, Pensions & Benefits

Willis Towers Watson Inc. agrees to the extension and other modifications of the SOW as set forth in this letter.

SCHEDULE C

TO THE CONSULTING AGREEMENT BETWEEN ENBRIDGE GAS INC. AND GUIDEHOUSE CANADA LTD. Dated January 18, 2021

This Schedule is made under the above referenced consulting agreement (the "Agreement") between ENBRIDGE GAS INC. ("Enbridge") and GUIDEHOUSE CANADA LTD. (the "Consultant"). All capitalized terms used in this Schedule have the meaning given to them in the Agreement.

1. **SCOPE OF SERVICES**

The Consultant will undertake the following Services, as further described in the Deliverables Section below:

Conduct an independent review of EGI's CSS cost allocations

The required tasks and objectives of the review are to:
1. Obtain an understanding of the CAM implemented by Enbridge Inc. to allocate costs to EGI and other Enbridge business units.

Examples of information that is available to assist in obtaining an understanding include:
a. The Intercorporate Services Agreement between EI and EGI effective January 1, 2019 (ISA)
b. CAM policy and allocation documents
c. Documentation outlining services received

2. Review relevant OEB decisions and directives, including those related to OEB-regulated electric utilities.

3. Review and assess the reasonableness and appropriateness of CSS cost allocations received by EGI under CAM in the context of the OEB's three-pronged test established in EBRO 493/494 and other relevant OEB precedents.
a. When reviewing CAM, consider whether:
i. the service and level of service is specifically required by EGI
ii. the costs are allocated based on cost causality and appropriate cost drivers
iii. the cost to provide the service internally is reasonable relative to the cost to acquire the service externally on a stand-alone basis (benchmarking)
iv. there are scale economies, and
v. the CSS fall within the range of fair market value for an organization of Enbridge's size and complexity

4. Review and assess how the ISA and CAM comply with the OEB's past decisions and the ARC

5. Provide a written report and detailed financial analysis (including benchmarking results) supporting conclusions reached

6. The following related work will be carried out under separate engagement, if and as necessary, after the delivery of the final report:
a. Responses to information requests resulting from the regulatory process
b. Defend findings before the OEB, as an expert witness

Quality of Work
The quality of all documentation must be suitable for the purposes of regulatory filings, as noted above. Access to the data, records and supporting documentation related to work performed must also be provided to auditors (including external and our internal audit staff or agents) if requested.

2. **DELIVERABLES**

The Consultant will provide the following deliverables:

A written report that provides descriptions and outcomes of the CAM study. The proponent may need to participate in OEB proceedings as an expert witness – either through written submissions or in person.

3. **COMMENCEMENT AND COMPLETION DATES**

This Schedule shall be effective as of June 21, 2021 and expire December 23, 2023, or such other date as the parties may mutually agree in writing.

4. **KEY PERSONNEL**

Craig Sabine, Director
Dixon Grant, Managing Consultant
David Cohen, Associate Director
Matt Croft, Managing Consultant
Allan Ng, Managing Consultant
Navodi Athapaththu, Consultant

5. **FEES AND PAYMENT TERMS**

[redacted]

If additional work is required, unrelated to OEB proceedings, or if the Consultant is required to participate in OEB proceedings as an expert witness, either through written submissions or in person, such additional work shall be in accordance with the applicable rate table as in the attached Hourly Rates.

Expenses: N/A

The above fees and expenses cannot be exceeded without the prior written approval of Enbridge.

Fees are payable by Enbridge within sixty (60) days of receipt from the Consultant of an appropriate invoice setting out in reasonable detail the nature of the services provided.

Dated as of June 21, 2021.

Dear Sir / Madam,

RE: Consulting Agreement with Enbridge Gas Inc.

Attached please find for signature our Consulting Agreement. Kindly arrange to have the Agreement and the attached Schedule signed. Please ensure you read and understand all of the terms and conditions of the Agreement, as well as the enclosed Statement on Business Conduct and Lifesaving Rules.

We will also require the following:

- A current clearance certificate or letter of exemption from the Ontario Workplace Safety and Insurance Board ("WSIB"). If your employees are in a jurisdiction other than Ontario, please provide equivalent proof of coverage, and new proof of coverage must be filed with us upon expiry/renewal of such proof of coverage.

Please return the applicable WSIB document noted above, together with a signed copy of the Consulting Agreement and a signed copy of the Schedule, promptly following receipt of this letter. Upon receipt of all the documents in our office, we will execute the Agreement and a PDF copy of the Agreement will be returned to you for your records.

If you have any questions, please contact me at the above-noted telephone number.

Sincerely,

Danielle Dreveny
Manager Capital FP&A

Encls.

CONSULTING AGREEMENT

THIS AGREEMENT made effective April 9, 2021.

BETWEEN:

ENBRIDGE GAS INC.
("Enbridge")

- and -

CONCENTRIC ADVISORS ULC
(the "Consultant")

WITNESSES THAT in consideration of the mutual covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. **Scope of Services**

   (a) During the term hereof (as hereinafter defined), the Consultant shall provide consulting services (the "Services") to Enbridge, on the terms and conditions set forth below.

   (b) The scope of work for specific projects to be undertaken by the Consultant at the request of Enbridge will be described in separate schedules referencing this Agreement, each of which shall become effective, be incorporated by reference and form an integral part of this Agreement upon the execution of each such schedule by Enbridge and the Consultant. The schedule for each project will specify the names of key individuals, scope of Services, deliverables, commencement and completion dates, rate of compensation and payment terms applicable to such project. Each schedule described above shall be prepared using a form similar to the attached Schedule "A".

2. **Compensation**

   In consideration of the Services and deliverables to be provided by the Consultant hereunder, and provided that the Consultant is not in default of its obligations hereunder, Enbridge shall remit to the Consultant all amounts required to be paid in accordance with the applicable schedule.

   Consultant shall be responsible for charging, collecting and remitting all applicable federal and provincial sales, use and value-added taxes in respect of the fees paid or payable to Consultant and, in particular, the goods and services tax ("GST") and harmonized sales tax ("HST") imposed under Part IX of the Excise Tax Act (the "ETA"), the Quebec sales tax ("QST") imposed under an Act respecting the Quebec Sales Tax (the "QSTA") and any provincial sales taxes ("PST"); and such taxes, if applicable, shall be shown separately on all invoices. Where Consultant is required to collect any GST/HST, QST or similar tax, Consultant shall provide Enbridge with the documentary evidence as prescribed pursuant to the ETA or QSTA, any successor provision thereto or any similar provision of any other taxing statute as is required to entitle Enbridge to claim an input tax credit, input tax refund, rebate, refund or any other form of relief in respect of such taxes.

   Where the Consultant is a non-resident of Canada for purposes of the Income Tax Act (Canada) (the "ITA"), with respect to the invoice or statement of Fees issued pursuant to any Schedule, the Consultant will identify the location where the Services are provided, separate Services performed in Canada from Services performed outside of Canada, identify the number of days Services were performed in Canada (including travel days to/from Canada) and, for Services performed in Canada, identify the physical location, indicating city and province, where such Services were performed. Where the non-resident Consultant has not obtained and provided to Enbridge a non-resident withholding tax waiver at such time as Enbridge makes any payment to the Consultant for Services, Enbridge shall withhold such percentage

of any payment as mandated under the ITA with respect to the Services provided in Canada or on the full invoice or statement amount where the Consultant has not clearly separated the Services performed in Canada from Services performed outside of Canada. Enbridge shall remit the withheld amount to Canada Revenue Agency, or its successor, in the manner and at the time required by the ITA. For further clarification, it is the Consultant's responsibility to obtain the tax waiver, if available. In the event that Enbridge is assessed for any non-resident withholding taxes payable, the Consultant agrees to forthwith reimburse Enbridge for such amount together with applicable interest and penalties, if any.

3. **Term**

Subject to earlier termination as provided for herein, the term of this Agreement shall commence on the day set forth above and expire on December 31, 2023 (hereinafter the "Term").

4. **Termination**

(a) Enbridge may terminate this Agreement or any schedule to this Agreement for convenience upon giving two (2) weeks written notice to the Consultant.

(b) Either party may terminate this Agreement in case of a breach by the other party of its obligations hereunder, provided that the breach is not cured within five (5) days of written notification by the non-defaulting party to the defaulting party setting out the particulars of the breach.

(c) Either party may terminate this Agreement upon written notice to the other party, if: (i) the other party is subject to proceedings in bankruptcy, or insolvency, whether voluntary or involuntary, (ii) a receiver is appointed in respect of all or a substantial portion of the other party's assets; or (iii) the other party assigns its property to its creditors or generally becomes unable to pay its debts as they become due.

Upon any termination of this Agreement, the Consultant shall deliver to Enbridge the results of all Services provided as of the date of termination, including completed or uncompleted deliverables for which payment has been received in accordance with the terms of this Agreement.

5. **Facilities**

Enbridge shall provide to the Consultant use of such office facilities as may be required by the Consultant, acting reasonably, to perform the Services during the Term.

6. **Reimbursement for Expenses**

In addition to the payments to be made pursuant to Section 2 hereof, Enbridge shall reimburse the Consultant for all reasonable expenses properly incurred by the Consultant in connection with the Services provided to Enbridge hereunder and that have been pre-approved by Enbridge in writing, including, without limitation, reasonable travel and other costs and expenses in connection therewith. Such pre-approved reasonable expenses incurred by the Consultant in rendering Services shall be reimbursed by Enbridge net of GST/HST. GST/HST shall be charged, where applicable, by the Consultant on the expenses incurred, net of the input tax credits/reimbursements for GST/HST claimed by the Consultant. Concurrently with its delivery of invoices to Enbridge as contemplated by Section 2 hereof, the Consultant shall submit to Enbridge invoices and statements setting out in reasonable detail the nature and amount of the expenses or costs incurred by the Consultant for which the Consultant claims reimbursement, and Enbridge shall within sixty (60) days of the receipt of such invoices and statements reimburse the Consultant for all approved invoiced expenses and costs. The Consultant shall provide to Enbridge copies of all documentation in support of invoiced expenses as Enbridge may request from time to time during the Term hereof.

7. **Independent Contractor**

Notwithstanding anything to the contrary herein contained, the Consultant shall not, for any purpose, be or be deemed to be an employee of Enbridge during the Term or at any time during which the Services described in Section 1 hereof are provided to Enbridge nor shall anything in this Agreement create or be

construed for any purpose as creating any relationship between Enbridge and the Consultant of employer and employee. Except as expressly provided herein, Enbridge shall not be liable to contribute to any employee benefit or pension plan or pay premiums for any policy or form of insurance whatsoever on behalf of the Consultant nor to pay any amounts or premiums on its behalf in respect of the Canada Pension Plan, Ontario Health Insurance Plan, Workplace Safety and Insurance Board or Employment Insurance, nor to deduct or withhold from source any amount from amounts payable by Enbridge to the Consultant hereunder in respect of any income tax obligation or liability payable by the Consultant to the Canada Revenue Agency. The Consultant agrees to indemnify and hold Enbridge harmless from and against any order, penalty, interest or tax that may be assessed or levied against Enbridge as a result of the failure or delay of the Consultant to file any return or information required to be filed by the Consultant by any law, ordinance or regulation relating to the Services performed by the Consultant herein.

8. **Confidential Information and Personal Information**

(a) For the purposes of this Section 8, the following definitions will apply:

(i) "Confidential Information", means all information pertaining to the business and affairs of Enbridge, its affiliates and subsidiaries, whether oral or written, furnished by Enbridge to the Consultant, its employees and representatives, whether furnished or prepared before or after the date of this Agreement, and includes all analysis, compilations, data, studies, reports or other documents prepared by the Consultant based upon or including any of the information furnished by Enbridge, but does not include information which:

A. is at the time of disclosure or thereafter becomes generally available to the public other than as a result of disclosure by the Consultant or anyone to whom the Consultant transmits the information;

B. is at the time of disclosure or thereafter becomes known or available to the Consultant on a non-confidential basis and not in contravention of applicable law from a source other than Enbridge that is entitled to disclose the information; or

C. is already in the possession of the Consultant or is lawfully acquired, provided that such information is not subject to another confidentiality agreement with, or obligations of secrecy to Enbridge.

(ii) "Person" includes individuals, partnerships, firms and corporations.

(b) Enbridge is furnishing the Confidential Information to the Consultant solely for the purpose of assisting the Consultant in the performance of Services which the Consultant provides to Enbridge. The Consultant shall not use the Confidential Information for any purpose other than the performance of Services provided to Enbridge.

(c) The Consultant acknowledges that the Confidential Information is the property of Enbridge, which is confidential and material to the interests, business and affairs of Enbridge and that disclosure thereof would be detrimental to the interests, business and affairs of Enbridge. Accordingly, the Consultant agrees that it shall maintain the confidentiality of the Confidential Information and that it shall not disclose the Confidential Information to any Person for any reason whatsoever except as expressly provided herein.

(d) The Consultant may disclose Confidential Information to the extent required by a court of competent jurisdiction or other governmental or regulatory authority or otherwise as required by applicable law, provided that the Consultant first give Enbridge prompt written notice (except where the governmental or regulatory authority has expressly ordered that no notice be given) and co-operate with and assist Enbridge in responding to the request or demand for disclosure.

(e) The Consultant acknowledges and agrees that Enbridge would be irreparably harmed if any provision of this Agreement is not performed by the Consultant in accordance with its terms. Accordingly, Enbridge shall be entitled to an injunction or injunctions to prevent breaches of any of the provisions of this Agreement and may specifically enforce such provisions by an action

instituted in a court having jurisdiction. These specific remedies are in addition to any other remedy to which Enbridge may be entitled at law or equity.

(f) If in the course of performing Services hereunder, the Consultant obtains or accesses personal information about an individual, including without limitation, a customer, potential customer or employee or contractor of Enbridge ("Personal Information") the Consultant agrees to treat such Personal Information in compliance with all applicable federal or provincial privacy or protection of personal information laws and to use such Personal Information only for purposes of providing the Services hereunder. Furthermore, the Consultant acknowledges and agrees that it will:

(i) not otherwise copy, retain, use, modify, manipulate, disclose or make available any Personal Information, except as required by applicable law;

(ii) establish or maintain in place appropriate policies and procedures to protect Personal Information from unauthorized collection, use or disclosure;

(iii) implement such policies and procedures thoroughly and effectively;

(iv) except as required for purposes of providing the Services hereunder, will not develop or derive, for any purpose whatsoever, any products in machine-readable form or otherwise, that incorporates, modifies, or uses in any manner whatsoever, any Personal Information; and

(v) upon completion of its Services for or on behalf of Enbridge, will at Enbridge's direction: A. return; or B. destroy all Personal Information and all copies and records thereof in its possession.

9. **Indemnification**

The Consultant hereby agrees to and shall:

(a) be liable to Enbridge and its directors, officers and employees, for all claims, liabilities, damages, costs, losses and expenses whatsoever which Enbridge or any of its directors, officers and employees may suffer, sustain or incur; and

(b) indemnify and save harmless Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives from and against any and all liabilities, claims, demands, damages, loss, costs and expenses (including without limitation all applicable solicitors' fees, court costs and disbursements, investigation expenses, adjusters' fees and disbursements) to or which any third party may suffer, sustain or incur,

in respect of all matters or anything which may arise out of any act or omission directly related to any breach of this Agreement by the Consultant, its employees or representatives save to the extent that such breach was caused or contributed to by Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives. Consultant's assumed liabilities under this Agreement, including its obligation to indemnify the counterparty, are limited to: (i) the amount Consultant has been paid as compensation for services performed under this Agreement, and/or (ii) Consultant's insurance coverage.

10. **Work Product**

(a) For the purposes of this Section 10, "Work Product" shall include any of the following, which are developed in the course of or arise from the Services provided by the Consultant to Enbridge hereunder throughout the Term: (i) any deliverables produced under any schedule to this Agreement together with any and all notes, reports, research information, compilations, data specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(b) For the purposes of this Section 10, "Consultant Materials" comprises any of the following, which were developed by the Consultant, at its own cost and expense in advance of and independent of this Agreement and as proven by the Consultant to be the case in the event of a dispute concerning the same: (i) any and all notes, research, information, data, specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(c) All right, title and interest in and to the Work Product shall be the property of Enbridge. The Consultant shall ensure that any agent or employee of the Consultant shall have waived in writing all of his or her moral rights over any such Intellectual Property. During and after the Term of this Agreement, the Consultant shall from time to time as and when requested by Enbridge execute all papers and documents and perform other acts as necessary or appropriate to evidence or further document Enbridge's ownership of the Work Product and the intellectual property rights therein.

(d) The Consultant retains all right, title and interest in and to the Consultant Materials. The Consultant hereby grants to Enbridge a non-exclusive, perpetual, irrevocable, non-terminable, transferable, assignable and royalty-free license to copy, disclose, use, operate, maintain, repair, modify, enhance, make derivative works, license, sub-license and otherwise commercially exploit without limitation or restriction those Consultant Materials used in connection with the delivery of the Services or to the extent contained within any Work Product.

(e) The Consultant agrees to fully indemnify and hold harmless Enbridge from and against any and all: (i) claims, demands and actions; (ii) liabilities, damages or losses awarded by a court of competent jurisdiction or as agreed to as part of a settlement; and (iii) litigation costs and/or expenses (including reasonable legal fees and disbursements) reasonably incurred by Enbridge in connection with any claim that the Services or Work Product provided hereunder infringe any patent, copyright, trade secret or other right of any third party.

11. **Representations and Warranties**

(a) The Consultant represents, warrants and covenants with Enbridge that: (i) it will perform all Services in a good and workmanlike manner using reasonable care (at a level that is at least consistent with industry standards for the provision of similar services) and in accordance with the terms of this Agreement; (ii) it possesses the knowledge, skill and experience necessary for the provision and completion of the Services in accordance with the terms of this Agreement; and (iii) any deliverables provided hereunder shall conform to their relevant specifications as described in the applicable schedule.

(b) The Consultant agrees that under no circumstances will it interface a non-Enbridge computing device (including without limitation desktops, laptops, handheld device) with the Enbridge intranet or internet without obtaining the prior written approval of Enbridge. To the extent the deliverables produced hereunder involve the provision or development of any software application, interface or electronic data, the Consultant shall use commercially reasonable efforts to prevent the introduction of any virus to the hardware and computer systems upon which the application, interface or electronic data are to be installed. During the Term of this Agreement, the Consultant shall implement and run virus prevention and detection control procedures in accordance with industry standards.

(c) In addition to the policies described in Section 25, the Consultant shall ensure that it is familiar with and understands all of Enbridge's current policies, procedures and standards that are pertinent to the activities associated with the Services and which have been provided to the Consultant in advance of the execution of this Agreement.

(d) If, during the performance of these services or within six months following completion of the assignment, such services shall prove to be faulty or defective by reason of a failure to meet such standards, Consultant agrees that upon prompt written notification from Enbridge prior to the expiration of the six month period following the completion of the assignment containing any such fault or defect, such faulty portion of the services shall be redone at no cost to Enbridge up to a maximum amount equivalent to the cost of the services rendered under this assignment. The foregoing shall constitute Consultant's sole liability with respect to the accuracy or completeness of the work and the activities involved in its preparation.

12. **Subcontractors**

The Consultant shall not enter into any agreement with any other party to assist in the provision of the Services described in Section 1 hereof (hereinafter described as a "Subcontract") nor shall the Consultant allow any other party to perform such Services or any part thereof without first obtaining the consent in writing of Enbridge, which consent may be withheld by Enbridge, acting reasonably. Notwithstanding any approval or consent that may be provided by Enbridge in connection with any Subcontract, the Consultant shall not be relieved of any of its liabilities and responsibilities hereunder. Any party which enters into a Subcontract with the Consultant shall be required by the terms of such Subcontract to comply with and be bound by the obligations and responsibilities of the Consultant described hereunder and without restricting the generality of the foregoing, any Subcontract which has been entered into without the prior written consent of Enbridge shall be null and void and without force and effect.

13. **Insurance**

Save and except where Enbridge specifies otherwise in writing, the Consultant shall at its own expense maintain and keep in full force and effect during the Term hereof and for a period of two (2) years following the expiry of the Term or other termination of this Agreement:

(a) Commercial General Liability insurance having a minimum inclusive coverage limit, including personal injury and property damage, of at least Two Million Dollars ($2,000,000) per occurrence. Enbridge Gas Inc. must be listed as the certificate holder and be added as an additional insured in the insurance policy, which should be extended to cover contractual liability, products/completed operations liability, owners'/ contractors' protective liability and must also contain a cross liability clause;

(b) Automobile Liability insurance on all vehicles used in connection with this Agreement and such insurance shall have a limit of at least One Million Dollars ($1,000,000) in respect of bodily injury (including passenger hazard) and property damage inclusive of any one accident;

(c) Non-Owned Automobile Liability insurance and such insurance shall have a limit of at least One Million Dollars ($1,000,000) in respect of bodily injury (including passenger hazard) and property damage, inclusive in any one accident; and

(d) such other insurance as Enbridge may in its discretion determine to be necessary, including, but not limited to, Professional Liability or Errors and Omissions insurance.

The Consultant shall forthwith after entering into this Agreement, and from time to time thereafter at the request of Enbridge, furnish to Enbridge a memorandum of insurance or an insurance certificate setting out the terms and conditions of each policy of insurance (all such policies of insurance being hereinafter described as the "Insurance Policies") maintained by the Consultant in order to satisfy the requirements of this section. At any time and from time to time at the request of Enbridge, the Consultant shall furnish Enbridge with one or more duly completed insurance certificates in the form requested by Enbridge to evidence the details of all the Insurance Policies. The Insurance Policies shall be arranged with insurers acceptable to Enbridge, acting reasonably, and shall contain such terms and conditions as are reasonably acceptable to Enbridge. The Consultant shall not cancel, terminate or materially alter the terms of any of the Insurance Policies without giving thirty (30) days prior notice in writing to Enbridge. The Consultant shall cause or arrange for any of its insurers under any one or more of the Insurance Policies to oblige itself contractually in writing to Enbridge to provide thirty (30) days prior notice in writing before cancelling, terminating or materially altering the Insurance Policies under which it is an insurer.

14. **Compliance with Laws**

The Consultant agrees to comply with the Occupational Health and Safety Act (Ontario) and the Workplace Safety and Insurance Act (Ontario) and with all other prevailing federal, provincial and municipal laws and regulations or any other laws or regulations in force in any jurisdiction where the Services are performed (the "Laws") and which are applicable to the Consultant, its subcontractors and the Services provided hereunder, and the Consultant shall familiarize itself and procure all required permits and licenses and pay all charges and fees necessary or incidental to the due and lawful prosecution of this Agreement, and maintain all documentation as may be required by the Laws, and shall indemnify and save harmless Enbridge, its directors, officers, agents and employees thereof against any claim or liability from or based on the violation of any Laws, whether by the Consultant, its officers, employees, subcontractors, representatives or agents. The Consultant shall, from time to time, if requested by Enbridge, furnish Enbridge with evidence of such compliance, and in particular: (i) evidence from the Workplace Safety and Insurance Board, or the equivalent thereof in any jurisdiction where the Services provided hereunder are carried out, that the Consultant and any party with which it has entered into a Subcontract are in compliance with and have paid all assessments and other amounts owing pursuant to the workers' compensation legislation of such jurisdiction; and (ii) evidence of the Consultant's compliance with any training requirements under the Laws including, without limitation, the provision of such statements or certificates pertaining to the Consultant's compliance in the form(s) prescribed by Enbridge from time to time.

Enbridge is committed to compliance with the Accessibility for Ontarians with Disabilities Act, 2005, O.Reg. 429/07 and O.Reg. 191/11, the Enbridge Customer Service Policy for Providing Goods and Services to People with Disabilities and the Enbridge Integrated Accessibility Standards Policy (collectively the "AODA"). The Consultant shall ensure that it is in full compliance with all of its obligations under AODA. Without limiting the generality of the foregoing the Consultant shall ensure that all of its employees, agents, volunteers, or others engaged by the Consultant in the delivery of services under this Agreement receive training in connection with the requirements of the AODA. If requested to do so, the Consultant shall provide Enbridge with copies of its policies, practices, procedures, training materials and training records including the dates on when the training is provided, and the names of the individuals trained, and confirmation the Consultant has reported its compliance to the Ministry of Community and Social Services or such other governmental authority as provided in the AODA.

The Consultant will ensure that any personnel it assigns to work in Canada, where they are not a Canadian citizen or Canadian permanent resident of Canada, will obtain and maintain the lawful ability to engage in commercial activities in Canada through the issuance of the appropriate documentation from Canada Border Services Agency and Citizenship and Immigration Canada. The Consultant's personnel where necessary will obtain lawful work permits to engage in business-related activities as temporary foreign workers and will notify Enbridge if any applications for work permits and work permit renewals are refused. The Consultant will not send personnel to any Enbridge-related work site if they do not possess the necessary lawful permission to work in Canada. The Consultant will take full responsibility to secure the necessary documentation and produce such documentation when entering a Canadian work site of Enbridge.

15. **Waiver**

Either the Consultant or Enbridge may, in writing, extend the time for performance by the other and waive non-compliance or non-performance by the other of any of the other's obligations, covenants and agreements under this Agreement and any compliance therewith or performance thereof. However, no such extension or waiver shall operate so as to waive, diminish or reduce the scope of or otherwise affect any obligation, covenant or agreement of such other which is not the subject matter of such extension or waiver or, except to the extent of such extension or waiver, of the obligation, covenant and agreement which is the subject matter of such waiver. No act or failure to act of either the Consultant or Enbridge shall be or be deemed to be an extension or waiver of timely or strict performance by the other of the other's obligations, covenants and agreements under this Agreement except to the extent notice thereof is given to the other.

16. **Notice**

Any notice or other communication to be given under or pursuant to the provisions hereof or in any way concerning this Agreement shall be sufficiently given if reduced to writing and delivered to the person to whom such communication is to be given or sent by facsimile or electronic internet communication, addressed to such person at the address set forth below:

If to Enbridge:

ENBRIDGE GAS INC.
50 Keil Drive North, Box 2001
Chatham ON N7M 5M1
Attention: Danielle Dreveny, Manager Capital FP&A
Phone: 519-436-4600 ext. 5002330
Email: Danielle.Dreveny@enbridge.com

With a copy to: Law Department
Email: EGILawContracts@enbridge.com

If to the Consultant:

CONCENTRIC ADVISORS ULC
200 Rivercrest Drive S. E.
Calgary Alberta T2C 2X5
Attention: Larry Kennedy, Senior Vice President
Phone: 587-997-6489 Ext.
Email: lkennedy@ceadvisors.com

or at such other address as may be specified therefor by proper notice hereunder. A notice or communication shall be deemed to have been sent and received on the day it is delivered personally or by courier or by facsimile or by electronic internet communication. If such day is not a business day or if the notice or communication is received after 5:00 PM (at the place of receipt) on any business day, the notice or communication shall be deemed to have been sent and received on the immediately following business day.

17. **Interpretation**

This Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein. Headings used herein are for the convenience of reference only and shall not be considered in construing or interpreting this Agreement. The words "herein", "hereunder", "hereof" and other similar words refer to this Agreement as a whole and not to any particular paragraph. Any provision herein prohibited by law shall to the extent prohibited be ineffective without invalidating any other provisions hereof. All references to amounts of money in this Agreement and any schedule shall mean lawful currency of Canada.

18. **Assignment**

The Consultant may not assign this Agreement in whole or in part without the express prior consent in writing of Enbridge. This Agreement shall be binding upon and enure to the benefit of the successors and assigns of Enbridge.

19. **Use of Enbridge Name and Logo**

The Consultant shall not use or display Enbridge's name or any symbols, signs, trademarks and other marks denoting and identifying Enbridge in any manner whatsoever without the prior written authorization of Enbridge. Consultant may refer to the following information in materials used to promote its services: (i) a general description of the nature and scope of the services performed, and (ii) the time period of the engagement.

20. **Time of Essence**

Time shall be of the essence in the performance of the Services.

21. **Survival**

All warranties and indemnities contained in this Agreement, and the obligations contained in Section 8, shall survive the termination of this Agreement irrespective of the time of or party responsible for such termination, and such warranties, indemnities and obligations shall remain in full force and effect and be binding on the Contractor notwithstanding such termination.

22. **Further Assurances**

Each of the parties shall, from the time of the written request of the other party, do all such further acts and execute and deliver or cause to be done, executed or delivered all such further acts, deeds, documents, assurances and things as may be required, acting reasonably, in order to fully perform and to more effectively implement and carry out the terms of this Agreement.

23. **Entire Agreement**

This Agreement, including any schedules attached hereto, constitutes the entire agreement between the parties with respect to the subject matter set out herein and replaces any prior understandings or agreements, whether written or oral, regarding such subject matter. No change or modification of this Agreement is valid unless it is in writing and signed by both parties. No disclaimers, purchase order documents, invoices or other documents of the Consultant shall be binding upon Enbridge.

24. **Audit**

The Consultant shall, following no less than seven (7) business days advance notice in writing, provide to such auditors (including external auditors and Enbridge's internal audit staff or agents) as Enbridge may designate in writing, supervised access to the data, records and supporting documentation maintained by the Consultant with respect to the Services solely for the purpose of: (i) performing audits and inspections to enable Enbridge to satisfy applicable regulatory requirements or certify compliance with applicable laws; and (ii) to confirm that the Services are being provided in accordance with the terms of this Agreement. Enbridge and its auditors shall use commercially reasonable efforts to conduct such audits in a manner that will result in a minimum of inconvenience and disruption to the Consultant's business operations. In the event that if any such audit reveals any: (a) errors or deficiencies in the completion of the Services or invoicing of the Services; or (b) overpayments to the Consultant by Enbridge, then the Consultant shall forthwith correct such errors or deficiencies, including if applicable refunding any overpayment to Enbridge. The Consultant shall retain all records for three (3) years from the date of expiration or earlier termination of this Agreement, or such longer period as Enbridge may require having regard to the nature of the Services. Enbridge and its auditors may not have access to information deem proprietary, trade secret, and/or confidential by the Consultant.

25. **Enbridge Policies**

The Consultant acknowledges receipt of a copy of each of Enbridge Inc.'s Statement on Business Conduct for Enbridge Inc. and its Subsidiaries and Lifesaving Rules, each as amended from time to time (the "Policies"). The Consultant agrees to comply with the Policies in connection with its delivery of the Services described in this Agreement, and agrees that, if requested by Enbridge, it will ensure all personnel delivering the Services herein attend training on the Lifesaving Rules.

26. **ISNetworld Requirement**

If required by Enbridge, the Consultant shall subscribe with ISN Software Corporation as a registrant of ISNetworld ("ISN") or any successor service mandated by Enbridge from time to time, and maintain a performance grading within ISN that is acceptable to Enbridge (the "ISNetworld Requirement") and shall: (a) provide all records and information as required by ISN or Enbridge, including, but not limited to, training and qualification data of the Consultant personnel, including subcontractors and employees, relating to the Services; and (b) maintain compliance with the ISNetworld Requirement during the currency of this Agreement.

[remainder of page intentionally left blank]

27. **Counterparts and Execution**

This Agreement may be executed by the parties in separate counterparts, each of which when so executed and delivered will be deemed to be an original, and all such counterparts will together constitute one and the same instrument. Delivery of a signature by electronic transmission or by facsimile transmission, including by email delivery of a "portable document format" ("pdf") document, shall create a valid and binding obligation. This Agreement may be executed using electronic signatures.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first written above.

SCHEDULE A

TO THE CONSULTING AGREEMENT BETWEEN ENBRIDGE GAS INC. AND CONCENTRIC ADVISORS ULC Dated April 9, 2021

This Schedule is made under the above referenced consulting agreement (the "Agreement") between ENBRIDGE GAS INC. ("Enbridge") and CONCENTRIC ADVISORS ULC (the "Consultant").

1. **SCOPE OF SERVICES**

The Consultant will undertake the following Services:

1. Determine methodologies for depreciation and the estimation of net salvage, including:
a. Performing research to identify applicable methodologies
b. Assessing the methodologies identified with consideration to a base case and alternative scenarios including energy transition
c. Recommending appropriate methodologies
2. Perform a service life study which will include the following tasks:
a. A full review of plant accounting data and plant balances as of EGI's 2020 fiscal year-end
b. Inclusion of the forecast 2022-2023 capital program related to capital additions and retirements into the databases used for the review of average service life and depreciation rate calculations
c. A physical field review of facilities (if necessary)
d. Interviews with EGI management and internal subject matter experts
e. Development of a detailed peer comparison analysis
3. Determine the adequacy of the current accumulated depreciation accounts to reflect the consumption of the consumed service value of the EGI plant in service
4. Determine the appropriate net salvage percentages and assess the adequacy of the current balance of net salvage recoveries
5. Determine appropriate discount rates to be used in analyses and perform sensitivity analysis as required
6. Deliver a full and comprehensive draft report by November 30th, 2021; management meetings to discuss the depreciation policies and results of the depreciation study
7. Review the actual 2021 plant accounting activity immediately following the close of the 2021 financial ledgers to determine if any changes are required to the draft depreciation study report
8. Deliver a final report, in format suitable to be presented as evidence before the OEB by February 11, 2022

2. **DELIVERABLES**

The Consultant will provide the following deliverables:

A written report that provides descriptions and outcomes of the analyses of depreciation and net salvage estimation methods under various scenarios, service lives, net salvage values, and summaries and detailed tabulations of annual and accrued depreciation. The consultant may need to participate in the OEB proceeding as an expert witness – either through written submissions or in person.

3. **TERM AND COMMENCEMENT AND COMPLETION DATES**

This Schedule shall be effective as of April 9, 2021 and expire December 31, 2023, or such other date as the parties may mutually agree in writing.

4. **KEY PERSONNEL**

The Consultant will provide the following personnel to deliver the services set out above under Scope of Services:

Larry Kennedy, Senior Vice President
Amanda Nori, Project Manager

Colin Burns, Consultant
Javier Sola, Consultant

5. **FEES AND PAYMENT TERMS**

Fees: Consultant to conduct the study for a lump sum price of [redacted] Consultant shall conduct any post filing work at their standard rates which are attached to this Contract. These rates will increase annually at a rate to be determined, but not exceeding 2% per year. Consultant will communicate any rate increases to Enbridge as soon as they are approved.

Expenses: N/A

The above fees and expenses cannot be exceeded without prior written approval from Enbridge.

Fees are payable by Enbridge within sixty (60) days of receipt from the Consultant of an appropriate invoice setting out in reasonable detail the nature of the services provided.

Dear Sir / Madam,

RE: Consulting Agreement with Enbridge Gas Inc.

Attached please find for signature our Consulting Agreement. Kindly arrange to have the Agreement and the attached Schedule signed. Please ensure you read and understand all of the terms and conditions of the Agreement, as well as the enclosed Statement on Business Conduct and Lifesaving Rules.

We will also require the following:

- A current clearance certificate or letter of exemption from the Ontario Workplace Safety and Insurance Board ("WSIB"). If your employees are in a jurisdiction other than Ontario, please provide equivalent proof of coverage, and new proof of coverage must be filed with us upon expiry/renewal of such proof of coverage.

Please return the applicable WSIB document noted above, together with a signed copy of the Consulting Agreement and a signed copy of the Schedule, promptly following receipt of this letter. Upon receipt of all the documents in our office, we will execute the Agreement and a PDF copy of the Agreement will be returned to you for your records.

If you have any questions, please contact me at the above-noted telephone number.

Sincerely,

Lesley Austin

Encls.

CONSULTING AGREEMENT

THIS AGREEMENT made effective June 14, 2021.

B E T W E E N:

ENBRIDGE GAS INC.
("Enbridge")

- and -

CONCENTRIC ENERGY ADVISORS, INC.
(the "Consultant")

WITNESSES THAT in consideration of the mutual covenants and agreements herein contained, the parties hereto covenant and agree as follows:

1. **Scope of Services**

   (a) During the term hereof (as hereinafter defined), the Consultant shall provide consulting services (the "Services") to Enbridge, on the terms and conditions set forth below.

   (b) The scope of work for specific projects to be undertaken by the Consultant at the request of Enbridge will be described in separate schedules and/or service/purchase orders (each a "schedule") referencing this Agreement, each of which shall become effective, be incorporated by reference and form an integral part of this Agreement upon the execution or acknowledgement of each such schedule by Enbridge and the Consultant. The schedule for each project may specify the names of key individuals, scope of Services, deliverables, commencement and completion dates, rate of compensation and payment terms applicable to such project. Each schedule described above shall be prepared using a form similar to the attached Schedule "A" or other forms as provided by Enbridge from time to time.

2. **Compensation**

In consideration of the Services and deliverables to be provided by the Consultant hereunder, and provided that the Consultant is not in default of its obligations hereunder, Enbridge shall remit to the Consultant all amounts required to be paid in accordance with the applicable schedule.

Consultant shall be responsible for charging, collecting and remitting all applicable federal and provincial sales, use and value-added taxes in respect of the fees paid or payable to Consultant and, in particular, the goods and services tax ("GST") and harmonized sales tax ("HST") imposed under Part IX of the Excise Tax Act (the "ETA"), the Quebec sales tax ("QST") imposed under an Act respecting the Quebec Sales Tax (the "QSTA") and any provincial sales taxes ("PST"); and such taxes, if applicable, shall be shown separately on all invoices. Where Consultant is required to collect any GST/HST, QST or similar tax, Consultant shall provide Enbridge with the documentary evidence as prescribed pursuant to the ETA or QSTA, any successor provision thereto or any similar provision of any other taxing statute as is required to entitle Enbridge to claim an input tax credit, input tax refund, rebate, refund or any other form of relief in respect of such taxes.

Where the Consultant is a non-resident of Canada for purposes of the Income Tax Act (Canada) (the "ITA"), with respect to the invoice or statement of Fees issued pursuant to any schedule, the Consultant will identify the location where the Services are provided, separate Services performed in Canada from Services performed outside of Canada, identify the number of days Services were performed in Canada (including travel days to/from Canada) and, for Services performed in Canada, identify the physical location, indicating city and province, where such Services were performed. Where the non-resident

Consultant has not obtained and provided to Enbridge a non-resident withholding tax waiver at such time as Enbridge makes any payment to the Consultant for Services, Enbridge shall withhold such percentage of any payment as mandated under the ITA with respect to the Services provided in Canada or on the full invoice or statement amount where the Consultant has not clearly separated the Services performed in Canada from Services performed outside of Canada. Enbridge shall remit the withheld amount to Canada Revenue Agency, or its successor, in the manner and at the time required by the ITA. For further clarification, it is the Consultant's responsibility to obtain the tax waiver, if available. In the event that Enbridge is assessed for any non-resident withholding taxes payable, the Consultant agrees to forthwith reimburse Enbridge for such amount together with applicable interest and penalties, if any.

3. **Term**

Subject to earlier termination as provided for herein, the term of this Agreement shall commence on the day set forth above and expire on December 31, 2023 (hereinafter the "Term").

4. **Termination**

(a) Enbridge may terminate this Agreement or any schedule to this Agreement for convenience upon giving two (2) weeks written notice to the Consultant.

(b) Either party may terminate this Agreement in case of a breach by the other party of its obligations hereunder, provided that the breach is not cured within five (5) days of written notification by the non-defaulting party to the defaulting party setting out the particulars of the breach.

(c) Either party may terminate this Agreement upon written notice to the other party, if: (i) the other party is subject to proceedings in bankruptcy, or insolvency, whether voluntary or involuntary, (ii) a receiver is appointed in respect of all or a substantial portion of the other party's assets; or (iii) the other party assigns its property to its creditors or generally becomes unable to pay its debts as they become due.

Upon any termination of this Agreement, the Consultant shall deliver to Enbridge the results of all Services provided as of the date of termination, including completed or uncompleted deliverables for which payment has been received in accordance with the terms of this Agreement.

5. **Facilities**

Enbridge shall provide to the Consultant use of such office facilities as may be required by the Consultant, acting reasonably, to perform the Services during the Term.

6. **Reimbursement for Expenses**

In addition to the payments to be made pursuant to Section 2 hereof, Enbridge shall reimburse the Consultant for all reasonable expenses properly incurred by the Consultant in connection with the Services provided to Enbridge hereunder and that have been pre-approved by Enbridge in writing, including, without limitation, reasonable travel and other costs and expenses in connection therewith. Such pre-approved reasonable expenses incurred by the Consultant in rendering Services shall be reimbursed by Enbridge net of GST/HST. GST/HST shall be charged, where applicable, by the Consultant on the expenses incurred, net of the input tax credits/reimbursements for GST/HST claimed by the Consultant. Concurrently with its delivery of invoices to Enbridge as contemplated by Section 2 hereof, the Consultant shall submit to Enbridge invoices and statements setting out in reasonable detail the nature and amount of the expenses or costs incurred by the Consultant for which the Consultant claims reimbursement, and Enbridge shall within sixty (60) days of the receipt of such invoices and statements reimburse the Consultant for all approved invoiced expenses and costs. The Consultant shall provide to Enbridge copies of all documentation in support of invoiced expenses as Enbridge may request from time to time during the Term hereof.

7. **Independent Contractor**

Notwithstanding anything to the contrary herein contained, the Consultant shall not, for any purpose, be or be deemed to be an employee of Enbridge during the Term or at any time during which the Services described in Section 1 hereof are provided to Enbridge nor shall anything in this Agreement create or be construed for any purpose as creating any relationship between Enbridge and the Consultant of employer and employee. Except as expressly provided herein, Enbridge shall not be liable to contribute to any employee benefit or pension plan or pay premiums for any policy or form of insurance whatsoever on behalf of the Consultant nor to pay any amounts or premiums on its behalf in respect of the Canada Pension Plan, Ontario Health Insurance Plan, Workplace Safety and Insurance Board or Employment Insurance, nor to deduct or withhold from source any amount from amounts payable by Enbridge to the Consultant hereunder in respect of any income tax obligation or liability payable by the Consultant to the Canada Revenue Agency. The Consultant agrees to indemnify and hold Enbridge harmless from and against any order, penalty, interest or tax that may be assessed or levied against Enbridge as a result of the failure or delay of the Consultant to file any return or information required to be filed by the Consultant by any law, ordinance or regulation relating to the Services performed by the Consultant herein.

8. **Confidential Information and Personal Information**

(a) For the purposes of this Section 8, the following definitions will apply:

(i) "Confidential Information", means all information pertaining to the business and affairs of Enbridge, its affiliates and subsidiaries, whether oral or written, furnished by Enbridge to the Consultant, its employees and representatives, whether furnished or prepared before or after the date of this Agreement, and includes all analysis, compilations, data, studies, reports or other documents prepared by the Consultant based upon or including any of the information furnished by Enbridge, but does not include information which:

A. is at the time of disclosure or thereafter becomes generally available to the public other than as a result of disclosure by the Consultant or anyone to whom the Consultant transmits the information;

B. is at the time of disclosure or thereafter becomes known or available to the Consultant on a non-confidential basis and not in contravention of applicable law from a source other than Enbridge that is entitled to disclose the information; or

C. is already in the possession of the Consultant or is lawfully acquired, provided that such information is not subject to another confidentiality agreement with, or obligations of secrecy to Enbridge.

(ii) "Person" includes individuals, partnerships, firms and corporations.

(b) Enbridge is furnishing the Confidential Information to the Consultant solely for the purpose of assisting the Consultant in the performance of Services which the Consultant provides to Enbridge. The Consultant shall not use the Confidential Information for any purpose other than the performance of Services provided to Enbridge.

(c) The Consultant acknowledges that the Confidential Information is the property of Enbridge, which is confidential and material to the interests, business and affairs of Enbridge and that disclosure thereof would be detrimental to the interests, business and affairs of Enbridge. Accordingly, the Consultant agrees that it shall maintain the confidentiality of the Confidential Information and that it shall not disclose the Confidential Information to any Person for any reason whatsoever except as expressly provided herein.

(d) The Consultant may disclose Confidential Information to the extent required by a court of competent jurisdiction or other governmental or regulatory authority or otherwise as required by applicable law, provided that the Consultant first give Enbridge prompt written notice (except where the governmental or regulatory authority has expressly ordered that no notice be given) and co-operate with and assist Enbridge in responding to the request or demand for disclosure.

(e) The Consultant acknowledges and agrees that Enbridge would be irreparably harmed if any provision of this Agreement is not performed by the Consultant in accordance with its terms. Accordingly, Enbridge shall be entitled to an injunction or injunctions to prevent breaches of any of the provisions of this Agreement and may specifically enforce such provisions by an action instituted in a court having jurisdiction. These specific remedies are in addition to any other remedy to which Enbridge may be entitled at law or equity.

(f) If in the course of performing Services hereunder, the Consultant obtains or accesses personal information about an individual, including without limitation, a customer, potential customer or employee or contractor of Enbridge ("Personal Information") the Consultant agrees to treat such Personal Information in compliance with all applicable federal or provincial privacy or protection of personal information laws and to use such Personal Information only for purposes of providing the Services hereunder. Furthermore, the Consultant acknowledges and agrees that it will:

(i) not otherwise copy, retain, use, modify, manipulate, disclose or make available any Personal Information, except as required by applicable law;

(ii) establish or maintain in place appropriate policies and procedures to protect Personal Information from unauthorized collection, use or disclosure;

(iii) implement such policies and procedures thoroughly and effectively;

(iv) except as required for purposes of providing the Services hereunder, will not develop or derive, for any purpose whatsoever, any products in machine-readable form or otherwise, that incorporates, modifies, or uses in any manner whatsoever, any Personal Information; and

(v) upon completion of its Services for or on behalf of Enbridge, will at Enbridge's direction: A. return; or B. destroy all Personal Information and all copies and records thereof in its possession.

9. **Indemnification**

The Consultant hereby agrees to and shall:

(a) be liable to Enbridge and its directors, officers and employees, for all claims, liabilities, damages, costs, losses and expenses whatsoever which Enbridge or any of its directors, officers and employees may suffer, sustain or incur; and

(b) indemnify and save harmless Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives from and against any and all liabilities, claims, demands, damages, loss, costs and expenses (including without limitation all applicable solicitors' fees, court costs and disbursements, investigation expenses, adjusters' fees and disbursements) to or which any third party may suffer, sustain or incur,

in respect of all matters or anything which may arise out of any act or omission directly related to any breach of this Agreement by the Consultant, its employees or representatives save to the extent that such breach was caused or contributed to by Enbridge, Enbridge's affiliated and subsidiary companies, and their directors, officers, agents, employees and representatives. Consultant's assumed liabilities under this Agreement, including its obligation to indemnify the counterparty, are limited to: (i) the amount Consultant has been paid as compensation for services performed under this Agreement, and/or (ii) Consultant's insurance coverage.

10. **Work Product**

(a) For the purposes of this Section 10, "Work Product" shall include any of the following, which are developed in the course of or arise from the Services provided by the Consultant to Enbridge hereunder throughout the Term: (i) any deliverables produced under any schedule to this Agreement together with any and all notes, reports, research information, compilations, data specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(b) For the purposes of this Section 10, "Consultant Materials" comprises any of the following, which were developed by the Consultant, at its own cost and expense in advance of and independent of this Agreement and as proven by the Consultant to be the case in the event of a dispute concerning the same: (i) any and all notes, research, information, data, specifications, designs, programs, documentation, software (including object code and source materials), development tools, products and other materials or things; (ii) any and all knowledge, know-how, techniques, inventions, processes, trade secrets, methodologies, approaches and other intangible intellectual property rights; and (iii) all designs, patent applications, issued patents, industrial design registrations, design patents, trade-mark applications, registered trade-marks and copyright which may relate thereto.

(c) All right, title and interest in and to the Work Product shall be the property of Enbridge. The Consultant shall ensure that any agent or employee of the Consultant shall have waived in writing all of his or her moral rights over any such Intellectual Property. During and after the Term of this Agreement, the Consultant shall from time to time as and when requested by Enbridge execute all papers and documents and perform other acts as necessary or appropriate to evidence or further document Enbridge's ownership of the Work Product and the intellectual property rights therein.

(d) The Consultant retains all right, title and interest in and to the Consultant Materials. The Consultant hereby grants to Enbridge a non-exclusive, perpetual, irrevocable, non-terminable, transferable, assignable and royalty-free license to copy, disclose, use, operate, maintain, repair, modify, enhance, make derivative works, license, sub-license and otherwise commercially exploit without limitation or restriction those Consultant Materials used in connection with the delivery of the Services or to the extent contained within any Work Product.

(e) The Consultant agrees to fully indemnify and hold harmless Enbridge from and against any and all: (i) claims, demands and actions; (ii) liabilities, damages or losses awarded by a court of competent jurisdiction or as agreed to as part of a settlement; and (iii) litigation costs and/or expenses (including reasonable legal fees and disbursements) reasonably incurred by Enbridge in connection with any claim that the Services or Work Product provided hereunder infringe any patent, copyright, trade secret or other right of any third party.

11. **Representations and Warranties**

(a) The Consultant represents, warrants and covenants with Enbridge that: (i) it will perform all Services in a good and workmanlike manner using reasonable care (at a level that is at least consistent with industry standards for the provision of similar services) and in accordance with the terms of this Agreement; (ii) it possesses the knowledge, skill and experience necessary for the provision and completion of the Services in accordance with the terms of this Agreement; and (iii) any deliverables provided hereunder shall conform to their relevant specifications as described in the applicable schedule.

(b) The Consultant agrees that under no circumstances will it interface a non-Enbridge computing device (including without limitation desktops, laptops, handheld device) with the Enbridge intranet or internet without obtaining the prior written approval of Enbridge. To the extent the deliverables produced hereunder involve the provision or development of any software application, interface or electronic data, the Consultant shall use commercially reasonable efforts to prevent the introduction of any virus to the hardware and computer systems upon which the application, interface or electronic data are to be installed. During the Term of this Agreement, the Consultant shall implement and run virus prevention and detection control procedures in accordance with industry standards.

(c) In addition to the policies described in Section 25, the Consultant shall ensure that it is familiar with and understands all of Enbridge's current policies, procedures and standards that are pertinent to the activities associated with the Services and which have been provided to the Consultant in advance of the execution of this Agreement.

(d) If, during the performance of these services or within six months following completion of the assignment, such services shall prove to be faulty or defective by reason of a failure to meet such standards, Consultant agrees that upon prompt written notification from Enbridge prior to the expiration of the six month period following the completion of the assignment containing any such fault or defect, such faulty portion of the services shall be redone at no cost to Enbridge up to a maximum amount equivalent to the cost of the services rendered under this assignment. The foregoing shall constitute Consultant's sole liability with respect to the accuracy or completeness of the work and the activities involved in its preparation.

12. **Subcontractors**

The Consultant shall not enter into any agreement with any other party to assist in the provision of the Services described in Section 1 hereof (hereinafter described as a "Subcontract") nor shall the Consultant allow any other party to perform such Services or any part thereof without first obtaining the consent in writing of Enbridge, which consent may be withheld by Enbridge, acting reasonably. Notwithstanding any approval or consent that may be provided by Enbridge in connection with any Subcontract, the Consultant shall not be relieved of any of its liabilities and responsibilities hereunder. Any party which enters into a Subcontract with the Consultant shall be required by the terms of such Subcontract to comply with and be bound by the obligations and responsibilities of the Consultant described hereunder and without restricting the generality of the foregoing, any Subcontract which has been entered into without the prior written consent of Enbridge shall be null and void and without force and effect.

13. **Insurance**

Save and except where Enbridge specifies otherwise in writing, the Consultant shall at its own expense maintain and keep in full force and effect during the Term hereof and for a period of two (2) years following the expiry of the Term or other termination of this Agreement:

(a) Commercial General Liability insurance having a minimum inclusive coverage limit, including personal injury and property damage, of at least Two Million Dollars ($2,000,000) per occurrence. Enbridge Gas Inc. must be listed as the certificate holder and be added as an additional insured in the insurance policy, which should be extended to cover contractual liability, products/completed operations liability, owners'/ contractors' protective liability and must also contain a cross liability clause;

(b) Automobile Liability insurance on all vehicles used in connection with this Agreement and such insurance shall have a limit of at least One Million Dollars ($1,000,000) in respect of bodily injury (including passenger hazard) and property damage inclusive of any one accident;

(c) Non-Owned Automobile Liability insurance and such insurance shall have a limit of at least One Million Dollars ($1,000,000) in respect of bodily injury (including passenger hazard) and property damage, inclusive in any one accident; and

(d) such other insurance as Enbridge may in its discretion determine to be necessary, including, but not limited to, Professional Liability or Errors and Omissions insurance.

The Consultant shall forthwith after entering into this Agreement, and from time to time thereafter at the request of Enbridge, furnish to Enbridge a memorandum of insurance or an insurance certificate setting out the terms and conditions of each policy of insurance (all such policies of insurance being hereinafter described as the "Insurance Policies") maintained by the Consultant in order to satisfy the requirements of this section. At any time and from time to time at the request of Enbridge, the Consultant shall furnish Enbridge with one or more duly completed insurance certificates in the form requested by Enbridge to evidence the details of all the Insurance Policies. The Insurance Policies shall be arranged with insurers acceptable to Enbridge, acting reasonably, and shall contain such terms and conditions as are reasonably acceptable to Enbridge. The Consultant shall not cancel, terminate or materially alter the terms of any of the Insurance Policies without giving thirty (30) days prior notice in writing to Enbridge. The Consultant shall cause or arrange for any of its insurers under any one or more of the Insurance Policies to oblige itself contractually in writing to Enbridge to provide thirty (30) days prior notice in writing before cancelling, terminating or materially altering the Insurance Policies under which it is an insurer.

14. **Compliance with Laws**

The Consultant agrees to comply with the Occupational Health and Safety Act (Ontario) and the Workplace Safety and Insurance Act (Ontario) and with all other prevailing federal, provincial and municipal laws and regulations or any other laws or regulations in force in any jurisdiction where the Services are performed (the "Laws") and which are applicable to the Consultant, its subcontractors and the Services provided hereunder, and the Consultant shall familiarize itself and procure all required permits and licenses and pay all charges and fees necessary or incidental to the due and lawful prosecution of this Agreement, and maintain all documentation as may be required by the Laws, and shall indemnify and save harmless Enbridge, its directors, officers, agents and employees thereof against any claim or liability from or based on the violation of any Laws, whether by the Consultant, its officers, employees, subcontractors, representatives or agents. The Consultant shall, from time to time, if requested by Enbridge, furnish Enbridge with evidence of such compliance, and in particular: (i) evidence from the Workplace Safety and Insurance Board, or the equivalent thereof in any jurisdiction where the Services provided hereunder are carried out, that the Consultant and any party with which it has entered into a Subcontract are in compliance with and have paid all assessments and other amounts owing pursuant to the workers' compensation legislation of such jurisdiction; and (ii) evidence of the Consultant's compliance with any training requirements under the Laws including, without limitation, the provision of such statements or certificates pertaining to the Consultant's compliance in the form(s) prescribed by Enbridge from time to time.

Enbridge is committed to compliance with the Accessibility for Ontarians with Disabilities Act, 2005, O.Reg. 429/07 and O.Reg. 191/11, the Enbridge Customer Service Policy for Providing Goods and Services to People with Disabilities and the Enbridge Integrated Accessibility Standards Policy (collectively the "AODA"). The Consultant shall ensure that it is in full compliance with all of its obligations under AODA. Without limiting the generality of the foregoing the Consultant shall ensure that all of its employees, agents, volunteers, or others engaged by the Consultant in the delivery of services under this Agreement receive training in connection with the requirements of the AODA. If requested to do so, the Consultant shall provide Enbridge with copies of its policies, practices, procedures, training materials and training records including the dates on when the training is provided, and the names of the individuals trained, and confirmation the Consultant has reported its compliance to the Ministry of Community and Social Services or such other governmental authority as provided in the AODA.

The Consultant will ensure that any personnel it assigns to work in Canada, where they are not a Canadian citizen or Canadian permanent resident of Canada, will obtain and maintain the lawful ability to engage in commercial activities in Canada through the issuance of the appropriate documentation from Canada Border Services Agency and Citizenship and Immigration Canada. The Consultant's personnel where necessary will obtain lawful work permits to engage in business-related activities as temporary foreign workers and will notify Enbridge if any applications for work permits and work permit renewals are refused. The Consultant will not send personnel to any Enbridge-related work site if they do not possess the necessary lawful permission to work in Canada. The Consultant will take full responsibility to secure the necessary documentation and produce such documentation when entering a Canadian work site of Enbridge.

15. **Waiver**

Either the Consultant or Enbridge may, in writing, extend the time for performance by the other and waive non-compliance or non-performance by the other of any of the other's obligations, covenants and agreements under this Agreement and any compliance therewith or performance thereof. However, no such extension or waiver shall operate so as to waive, diminish or reduce the scope of or otherwise affect any obligation, covenant or agreement of such other which is not the subject matter of such extension or waiver or, except to the extent of such extension or waiver, of the obligation, covenant and agreement which is the subject matter of such waiver. No act or failure to act of either the Consultant or Enbridge shall be or be deemed to be an extension or waiver of timely or strict performance by the other of the other's obligations, covenants and agreements under this Agreement except to the extent notice thereof is given to the other.

16. **Notice**

Any notice or other communication to be given under or pursuant to the provisions hereof or in any way concerning this Agreement shall be sufficiently given if reduced to writing and delivered to the person to whom such communication is to be given or sent by electronic internet communication, addressed to such person at the address set forth below:

If to Enbridge:

ENBRIDGE GAS INC.
500 Consumers Rd
North York ON M2J 1P8
Attention: Lesley Austin, Advisor Regulatory
Phone: 416-495-6505
Email: lesley.austin@enbridge.com

With a copy to: Law Department
Email: egilawcontracts@enbridge.com

If to the Consultant:

CONCENTRIC ENERGY ADVISORS, INC.
293 Boston Post Road West, Ste 500
Malborough Massachusetts 01752
Attention: Jill Barrile, Project Assistant
Phone: 508-263-6218 Ext.
Email: jbarrile@ceadvisors.com

or at such other address as may be specified therefor by proper notice hereunder. A notice or communication shall be deemed to have been sent and received on the day it is delivered personally or by courier or by electronic internet communication. If such day is not a business day or if the notice or communication is received after 5:00 PM (at the place of receipt) on any business day, the notice or communication shall be deemed to have been sent and received on the immediately following business day.

17. **Interpretation**

This Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein. Headings used herein are for the convenience of reference only and shall not be considered in construing or interpreting this Agreement. The words "herein", "hereunder", "hereof" and other similar words refer to this Agreement as a whole and not to any particular paragraph. Any provision herein prohibited by law shall to the extent prohibited be ineffective without invalidating any other provisions hereof. All references to amounts of money in this Agreement and any schedule shall mean lawful currency of Canada.

18. **Assignment**

The Consultant may not assign this Agreement in whole or in part without the express prior consent in writing of Enbridge. This Agreement shall be binding upon and enure to the benefit of the successors and assigns of Enbridge.

19. **Use of Enbridge Name and Logo**

The Consultant shall not use or display Enbridge's name or any symbols, signs, trademarks and other marks denoting and identifying Enbridge in any manner whatsoever without the prior written authorization of Enbridge. Consultant may refer to the following information in materials used to promote its services: (i) a general description of the nature and scope of the services performed, and (ii) the time period of the engagement.

20. **Time of Essence**

Time shall be of the essence in the performance of the Services.

21. **Survival**

All warranties and indemnities contained in this Agreement, and the obligations contained in Section 8, shall survive the termination of this Agreement irrespective of the time of or party responsible for such termination, and such warranties, indemnities and obligations shall remain in full force and effect and be binding on the Contractor notwithstanding such termination.

22. **Further Assurances**

Each of the parties shall, from the time of the written request of the other party, do all such further acts and execute and deliver or cause to be done, executed or delivered all such further acts, deeds, documents, assurances and things as may be required, acting reasonably, in order to fully perform and to more effectively implement and carry out the terms of this Agreement.

23. **Entire Agreement**

This Agreement, including any schedules attached hereto, constitutes the entire agreement between the parties with respect to the subject matter set out herein and replaces any prior understandings or agreements, whether written or oral, regarding such subject matter. No change or modification of this Agreement is valid unless it is in writing and signed by both parties. No disclaimers, purchase order documents, invoices or other documents of the Consultant shall be binding upon Enbridge.

24. **Audit**

The Consultant shall, following no less than seven (7) business days advance notice in writing, provide to such auditors (including external auditors and Enbridge's internal audit staff or agents) as Enbridge may designate in writing, supervised access to the data, records and supporting documentation maintained by the Consultant with respect to the Services solely for the purpose of: (i) performing audits and inspections to enable Enbridge to satisfy applicable regulatory requirements or certify compliance with applicable laws; and (ii) to confirm that the Services are being provided in accordance with the terms of this Agreement. Enbridge and its auditors shall use commercially reasonable efforts to conduct such audits in a manner that will result in a minimum of inconvenience and disruption to the Consultant's business operations. In the event that if any such audit reveals any: (a) errors or deficiencies in the completion of the Services or invoicing of the Services; or (b) overpayments to the Consultant by Enbridge, then the Consultant shall forthwith correct such errors or deficiencies, including if applicable refunding any overpayment to Enbridge. The Consultant shall retain all records for three (3) years from the date of expiration or earlier termination of this Agreement, or such longer period as Enbridge may require having regard to the nature of the Services. Enbridge and its auditors may not have access to information deemed proprietary, trade secret, and/or confidential by the Consultant.

25. **Enbridge Policies**

The Consultant acknowledges receipt of a copy of each of Enbridge Inc.'s Statement on Business Conduct for Enbridge Inc. and its Subsidiaries and Lifesaving Rules, each as amended from time to time (the "Policies"). The Consultant agrees to comply with the Policies in connection with its delivery of the Services described in this Agreement, and agrees that, if requested by Enbridge, it will ensure all personnel delivering the Services herein attend training on the Lifesaving Rules.

26. **ISNetworld Requirement**

If required by Enbridge, the Consultant shall subscribe with ISN Software Corporation as a registrant of ISNetworld ("ISN") or any successor service mandated by Enbridge from time to time, and maintain a performance grading within ISN that is acceptable to Enbridge (the "ISNetworld Requirement") and shall: (a) provide all records and information as required by ISN or Enbridge, including, but not limited to, training and qualification data of the Consultant personnel, including subcontractors and employees, relating to the Services; and (b) maintain compliance with the ISNetworld Requirement during the currency of this Agreement.

[remainder of page intentionally left blank]

27. **Counterparts and Execution**

This Agreement may be executed by the parties in separate counterparts, each of which when so executed and delivered will be deemed to be an original, and all such counterparts will together constitute one and the same instrument. Delivery of a signature by electronic transmission, including by email delivery of a "portable document format" ("pdf") document, shall create a valid and binding obligation. This Agreement may be executed using electronic signatures.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first written above.

SCHEDULE A

TO THE CONSULTING AGREEMENT BETWEEN ENBRIDGE GAS INC. AND CONCENTRIC ENERGY ADVISORS, INC. Dated June 14, 2021

This Schedule is made under the above referenced consulting agreement (the "Agreement") between ENBRIDGE GAS INC. ("Enbridge") and CONCENTRIC ENERGY ADVISORS, INC. (the "Consultant").

1. **SCOPE OF SERVICES**

The Consultant will undertake the following Services:

Consultant will conduct an independent capital structure review to access the reasonableness of Enbridge's current capital structure.

As further defined in the attached letter detailing scope of work.

2. **DELIVERABLES**

The Consultant will provide the following deliverables:

• An assessment of Enbridge's business risk and financial risk compared to the last assessment that was reviewed by the OEB;
• An assessment of Enbridge's prospective business risk and financial risk;
• An examination of information on utility actual and approved capital structures;
• A comparison of other North America utility capital structures to Enbridge's current and proposed capital structure;
• Provision of a recommendation on the appropriate common equity level for Enbridge; and
• A written report detailing all of the above.

3. **TERM AND COMMENCEMENT AND COMPLETION DATES**

This Schedule shall be effective as of June 14, 2021 and expire December 31, 2023, or such other date as the parties may mutually agree in writing.

4. **KEY PERSONNEL**

The Consultant will provide the following personnel to deliver the services set out above under Scope of Services:

Jim Coyne, SVP
Robert C. Yardley, Jr., SVP
Dan Dane, SVP
Jacob Hurwitz, Project Manager

5. **FEES AND PAYMENT TERMS**

[redacted]

[redacted]

Expenses: N/A

The above fees and expenses cannot be exceeded without prior written approval from Enbridge.

Fees are payable by Enbridge within sixty (60) days of receipt from the Consultant of an appropriate invoice setting out in reasonable detail the nature of the services provided.

Senior Vice President
Concentric Energy Advisors
jcoyne@ceadvisors.com

Dear Mr. Coyne,

Re: Capital Structure – Scope of Work

Enbridge Gas Inc. (Enbridge Gas) is a Canadian natural gas utility regulated by the Ontario Energy Board (OEB). Enbridge Gas provides safe, reliable and cost-effective natural gas distribution, transmission, storage and related services to approximately 3.8 million customers throughout the province of Ontario. Enbridge Gas also provides natural gas storage and transmission services to other utilities and customers located outside of Ontario. Enbridge Gas is North America's largest natural gas utility by volume, and third largest by customer count. Enbridge Gas was formed on January 1, 2019 with the amalgamation of Enbridge Gas Distribution and Union Gas.

Enbridge Gas is currently in the third year of a five-year deferred rebasing period following the aforementioned amalgamation. The deferred rebasing period term runs from 2019 to 2023. Rates during the deferred rebasing period are set using an incentive rate setting mechanism (IRM) whereby rates are adjusted annually using a price cap model.

Enbridge Gas is currently preparing to file a rebasing application (the 2024 rebasing application) with the OEB for rates commencing January 1, 2024. This application will include a cost of service (or rebasing) component in addition to a proposal for an IRM[1] to set rates through to 2028.

Enbridge Gas' rate base is financed by a combination of common equity and long-term and short-term debt, the ratios for which are approved by the OEB. The current OEB approved capital structure for Enbridge Gas is comprised of 36% common equity and 64% long-term and short-term debt.

The cost included in rates associated with these financing instruments is determined in different ways. An OEB approved formula is used to determine the return on equity (ROE) applied to common equity. The yield on long-term debt when issued plus the

[1] The OEB provides two options that a utility can propose as an IRM: a price cap model or a custom incentive regulation model.

forecast cost of any new issuances is used to determine the cost of long-term debt. The cost of short-term debt is determined by a forecast of the cost of short-term debt. As part of the 2024 rebasing application Enbridge Gas would like to investigate the suitability of its current capital structure, specifically if 36% common equity is appropriate. For this investigation it should be assumed that the OEB approved ROE formula will apply.

This investigation is intended to address three main concerns: 1) Enbridge Gas' capital structure relative to other regulated utilities, 2) Enbridge Gas' ability to finance capital expenditures in 2024 and during the IRM term; and 3) The appropriateness of Enbridge Gas' capital structure in terms of i) business risk relative to the last time capital structure was assessed and approved by the OEB and ii) prospective business risks.

To support Enbridge Gas' investigation and a possible request of the OEB to approve a different capital structure in the 2024 rebasing application, Concentric Energy Advisors (Concentric) has agreed to conduct an independent capital structure review to assess the reasonableness of Enbridge Gas' current capital structure.
Concentric's deliverables are as follows:

- An assessment of Enbridge Gas' business risk and financial risk compared to the last assessment that was reviewed by the OEB;
- An assessment of Enbridge Gas' prospective business risk and financial risk;
- An examination of information on utility actual and approved capital structures;
- A comparison of other North America utility capital structures to Enbridge Gas' current and proposed capital structure;
- Provision of a recommendation on the appropriate common equity level for Enbridge Gas; and
- A written report detailing all of the above

The written report detailing Concentric's findings and recommendations resulting from the independent assessment will be subject to a stakeholder engagement process and may be filed with the OEB as part of the 2024 rebasing application. It is likely that the OEB will hold an oral hearing for the 2024 rebasing application. Concentric may be required to participate in the stakeholder engagement process and the OEB proceeding process (including any and all processes set out by the OEB related to the 2024 rebasing application). In addition, Enbridge Gas may seek, from time to time, input from Concentric on other regulatory matters that are related to capital structure and cost of capital.

Concentric's participation in the stakeholder engagement and proceeding process may include but not be limited to:

- Presentation of the results of the independent assessment to stakeholders;
- Preparation of the written report which may be filed with the OEB;
- Responding to interrogatories and undertakings; and
- Appearing as a witness on behalf of Enbridge Gas in the 2024 rebasing application, as required

Concentric should recognize that during the course of performing the aforementioned activities for Enbridge Gas it could receive, deliver, prepare, review, analyze, reproduce, summarize or otherwise work with confidential and propriety information. Concentric agrees to treat all such information as confidential and privileged.

Enbridge Gas is requesting that Concentric provide a draft assessment report to Enbridge Gas by August 2021. Timing of a final report will be dependent on timing of the 2024 rebasing application filing.

In terms of remuneration for this work Enbridge Gas requests that Concentric provide a cost estimate based on the deliverables outlined above. It is expected that the cost estimate includes a fixed price for preparation of the report.

Any questions or correspondence regarding the scope of the independent investigation and/or the deliverables should be submitted to:

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/p. 2 and January 27 update

Question(s):

The forecast total revenue deficiency is now $294.1 million. Please provide one schedule setting out how the $294.1 million was calculated itemizing all of the impacts including depreciation, adjustments to the capital structure, the increasing cost of providing service to customers and the offsetting savings.

Response:

Please see Exhibit 6, Tab 1, Schedule 2, Attachment 1, page 1, updated March 8, 2023, for the split of $294.1 million of deficiency between delivery and gas supply.

For further details on drivers, please see the following:

- For delivery revenue deficiency of $270.9 million - Exhibit 6, Tab 1, Schedule 2, Attachment 2, page 2, updated March 8, 2023 and response at Exhibit I.6.1-SEC-206, and

- For gas supply deficiency of $23.2 million - Exhibit 6, Tab 1, Schedule 2, Attachment 3, Page 2.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2

Question(s):

On January 27, 2023 EGI filed an update to its evidence. Does EGI intend to file any more updates or additional evidence in support of its Application? If so, please indicate what that evidence will consist of and the expected timing.

Response:

As stated in its January 27, 2023 letter, concurrent with its interrogatory responses, Enbridge Gas is filing evidence corrections and updates for the impacted Exhibits.

With respect to additional evidence related to Phase 1 of the proceeding, Enbridge Gas notes the following:

- The Company received the OEB's Decision on the Rate Order for its multi-year DSM Plan[1] and is considering how to address the direction given by the OEB.
- In responding to Exhibit I.1.10-ED-66 Guidehouse discovered an error in its modeling for the P2NZ, which has potential impacts to its report. Once confirmed, Guidehouse will update the P2NZ Report.
- In responding to Exhibit I.4.5-STAFF-178 Concentric noted that at the time of its study it did not have certain historical data, which it has now received from Enbridge Gas. An amended depreciation study may be filed based upon the additional data.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/p. 4

Question(s):

Overall, Enbridge Gas is requesting a 4% increase in revenues in 2024. The rates would result in annual bill increases for 2024 of up to 3% for customers in the EGD rate zone, an increase of up to 8% for customers in the Union South rate zone and a decrease of 3-13% for customers in the Union North rate zone:

a) Please explain how EGI determined what would be acceptable rate levels for each of its rate zones;

b) Do these include impacts of deferral and variance account dispositions? If not, please provide these impacts;

c) Please indicate when the rate impacts were finalized by the Board of Directors;

d) Please explain the extent to which EGI presented annual bill impacts to its customers as part of its customer engagement;

e) Please explain if EGI, in its customer consultations, referred to increasing gas costs in order to give its customers s complete picture of the potential bill impacts that customers will face?

f) In calculating these bill impacts what has EGI assumed regarding gas costs?

g) Has EGI completed a forecast of bill impacts assuming continued increases in natural gas pricing? If not, why not? If so, please provide that analysis.

h) Has EGI prepared a five-year gas cost forecast? If not, why not?

Response:

a) The OEB required Enbridge Gas to file a proposal for rate harmonization with the current Application. In preparing the rate harmonization proposal and assessing alternatives, Enbridge Gas tried to balance rate impacts across all rate classes and performed a detailed and comprehensive review of bill impacts by customer. To assess whether the proposal to harmonize rates could be proposed for implementation, Enbridge Gas recognized the OEB policy requiring a rate mitigation measures when the effects of harmonization result in bill increases for any customer class that are material.[1]

   The OEB has a policy requiring the filing of a mitigation plan when the total bill impact is 10% or more for any customer class.[2] While the OEB notes that this policy is applicable to electricity distributors, the OEB expects all other utilities to propose mitigation plans, or explain why a plan is not required, when the proposal results in material impacts to customers.[3] The OEB most recently confirmed the applicability of the 10% bill impact threshold to Enbridge Gas's business in its decision on the Company's July 2022 QRAM which states:

   > The OEB uses a 10% total bill impact extensively for the electricity sector and considers that a reasonable target for the natural gas sector as well. This threshold is referenced in the OEB's Handbook for Utility Rate Applications applicable to all rate-regulated utilities.[4]

   Enbridge Gas calculated total bill impacts, including gas supply commodity charges, to evaluate the bill impacts for all rate classes against the 10% bill impact threshold referenced above. Details regarding the bill impact results and proposed rate mitigation plan is provided at Exhibit 8, Tab 2, Schedule 6.

b) The bill impacts listed at Exhibit 1, Tab 2, page 4 include the impact of deferral and variance account dispositions. The typical bill impacts for each rate class including and excluding rate riders is also provided at Exhibit 8, Tab 2, Schedule 6, Table 4.

c) Rate impacts were presented to the Enbridge's Board of Directors on October 25, 2022. Please see response at Exhibit I.1.2-CCC-1, Attachment 1.

d) Annual bill impacts, which were based on the draft plan, were shown within the Phase Three workbooks for general service and contract customers. Please see Exhibit 1, Tab 6, Schedule 1, Attachment 1, pages 247, 272, 330, 359, 432, and 448

---

[1] Filing Requirements for Natural Gas Rate Applications, February 16, 2017, p.36.
[2] Handbook for Utility Rate Applications, October 13, 2016, Appendix 3, p.v.
[3] Ibid.
[4] EB-2022-0150, Decision and Rate Order, June 16, 2022, p.3.

for annual forecasted bill impacts before and after choices in the workbook were made.

e) Enbridge Gas did not refer to a potential increase in gas commodity costs in its customer consultations. It did, however, refer to the increase in the Federal Carbon Charge.

f) The bill impacts in this Application have been prepared based on the forecast of gas costs provided at Exhibit 4, Tab 2, Schedule 1 and include the weighted average reference price based on the 12-month commodity price forecast approved in the April 1, 2022 QRAM. The reference price will be updated for the most recent OEB-approved QRAM as part of the draft rate order process, in accordance with the filing requirements[5].

g) Enbridge Gas has not prepared bill impacts assuming continued increases in natural gas pricing, as this is not part of the filing requirements[6]. The Application is for approval of rates for the sale, distribution, transmission, and storage of gas commencing January 1, 2024, not for commodity-related rate changes.

h) Enbridge Gas has prepared a four-year gas cost forecast for the years from 2023 to 2026 in alignment with the corporate long-range plan process as described at Exhibit 2, Tab 6, Schedule 1. The four-year gas cost forecast is based on the 12-month commodity price forecast approved in the April 1, 2022 QRAM.

Question(s):

Please provide a detailed breakdown of the $121.2 million in annual integration and productivity savings realised during the 2019-2023 rebasing term. Are these all OM&A savings or a combination of OM&A and Capital.

Response:

The $121.2 million in annual integration and productivity savings for the deferred rebasing term and for the 2024 Test Year is broken down in Table 2. All are O&M savings. For detail on the integration initiatives please see response at Exhibit I.1.9-CCC-25. For productivity definitions please see response at Exhibit I.1.9-SEC-90.

Table 1

			Savings in $millions					
Line No.	Savings	Type	2019	2020	2021	2022	2023	2024

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/p. 15

Question(s):

The evidence states that the Energy Transition Plan has been informed by Enbridge Gas's understanding of current energy transition and climate policies, stakeholder input and a review of research and studies, both external and commissioned by the Company. Energy transition has been incorporated into Enbridge Gas's forecasting and planning processes by including energy transition assumptions in forecasting, in the efforts to include Integrated Resource Planning (IRP) in the AMP and by accounting for energy transition in the Company's finance and regulatory approaches and stakeholder engagement.

a) Please provide a list of all studies EGI has relied on in this context regarding energy transition;

b) Please explain in detail how energy transition has been specifically incorporated in EGI's forecasting for the rate plan term. What energy transition assumptions have been included in this forecasting?

c) How has energy transition been accounted for in the Company's finance and regulatory approaches?

Response:

a) The following studies helped inform Enbridge Gas's Energy Transition Plan:

   i. The Energy Transition Scenario Analysis Study, provided at Exhibit 1, Tab 10, Schedule 5, Attachment 1;

   ii. The Pathways to Net-Zero Emissions for Ontario Study, provided at Exhibit 1, Tab 10, Schedule 5, Attachment 2; and

   iii. The Rebasing Scenario Report, provided at Exhibit 1, Tab 10, Schedule 6, Attachment 1.

b) Please see Exhibit 1, Tab 10, Schedule 4, pages 1 to 12.

c) Please see Exhibit 1, Tab 10, Schedule 4, pages 16 to 20.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/p. 16

Question(s):

The evidence states that energy transition planning is not only reflected in the Company's "safe bet" actions, but also in the way Enbridge Gas is forecasting growth, managing risk and allocating capital. Please explain specifically how energy transition planning is impacting the way in which EGI manages risk and allocates capital. How is this different from what EGI has done in the past?

Response:

Please see Exhibit 1, Tab 10, Schedule 4, pages 12 to 20 for a description of how Enbridge Gas is proposing to manage energy transition-related risk in the Company's capital planning and finance approaches, as compared to traditional approaches.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/p. 17

Question(s):

The Concentric study concluded that the combination of the lowest deemed equity ratio and the low authorized ROEs in recent years places Enbridge Gas at a competitive disadvantage in terms of attracting capital and compensating existing shareholders. Please provide evidence (other than the conclusions reached by Concentric) to support the claim that Enbridge Gas has experienced a competitive disadvantage in terms of attracting capital or will face a competitive disadvantage.

Response:

The OEB-approved debt to equity ratio impacts the financial metrics credit rating agencies use to assess Enbridge Gas's financial risk. The ability to maintain a strong, investment-grade credit rating is an important factor in Enbridge's ability to continue to secure debt funding at cost effective rates. As business risk increases, having the lowest deemed equity ratio amongst peers does not help maintain a strong, investment grade credit rating. Please see response at Exhibit I.5.3-VECC-58 parts c-d) for more information on rating agencies' views towards the energy transition and increased risks to utilities.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/S1/p. 21

Question(s):

The evidence states that EGI is expecting it will add 40,000 new customers in 2024, in line with growth in recent years. The long-range forecast that underpins EGI's customer connection forecast does reflect a gradual decline in the number of new customers that are connected over the AMP's 10-year planning period, as a wider variety of energy solutions become available:

a) Please provide a table setting out the total customer additions for each year 2013-2022 for the previous EGD and Union Gas Limited and the merged EGI;

b) Please provide the customer additions assumed for 2023;

c) Please provide the customer additions assumed for each year of the 10-year planning period.

Response:

a-b) Please see response at Exhibit I.3.2-LPMA-22, Attachment 1.

c) Please see response at Exhibit I.1.10-STAFF-31, Tables 16 and 17 for Customer Additions Forecast before and after energy transition assumptions, respectively.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/S1/p. 22

Question(s):

The evidence states that Enbridge Gas is also connecting communities that have not had access to natural gas in the past. Through phase 1 and phase 2 of the Natural Gas Expansion Program the Company has helped residents nine community expansion areas switch from higher emitting fuels to natural gas since 2019. An additional 22 community expansion projects are slated to start construction by the end of 2025:

a) Please provide a complete description of the Natural Gas Expansion Program.

b) Please indicate what phase 1 and phase 2 has consisted of.

c) Please list each of the nine communities and describe each project - providing the cost of the project, any surcharges paid by customers, the number of customers connected and expected to be connected. Also, please indicate whether grants were provided for each project and the level of the grant;

d) Please list each of the additional 22 communities and describe each project – providing the cost of the project, any surcharges paid by customers, and the number of customers expected to be connected. Also, please indicate whether grants are to be provided for each project and the level of each grant;

e) How are the grants from the Province treated from an accounting perspective?

f) What is the current status of the program? Does EGI expect additional communities will be connected beyond the 22 that are slated for construction by the end of 2025?

Response:

a) The Natural Gas Expansion Program (NGEP) was created under the Access to Natural Gas Act, 2018, to help expand access to natural gas to areas of Ontario that currently do not have access to the natural gas distribution system. This program encourages communities to partner with gas distributors on potential expansion projects that would not be built without additional financial support and submit information on these proposals to the OEB.

Phase one of the NGEP was announced in March 2019 with approximately $56 million allocated funding. Phase one of the program supported seven community expansion projects and two economic development projects.

In Phase two of the NGEP, the OEB accepted information submissions on potential projects from utilities for natural gas expansion projects.

The OEB compiled a report on all submissions they received for the ministry's review and released it to the public on December 10, 2020. In June 2021, the Ontario Government announced funding for 26 community expansions and two economic development projects under Phase Two of the NGEP.

b) For the full list of awarded projects under the NGEP phase one and phase two, please refer to the Ontario Regulation 24/19: Expansion of Natural Gas Distribution Systems consolidated from June 8, 2021, under the Ontario Energy Board Act, 1998, S.O. 1998, c. 15, Sched. B. Schedule 1 and Schedule 2[1].

c) The following consists of the four community expansion projects under NGEP phase one and the five community expansion projects under NGEP phase two, which are in execution.

Table 1

Project Name	Cost of the Project	Number of customers expected to connect
Scugog Island	$16,550,837	810
Chippewa of the Thames First Nation	$1,863,000	44
Saugeen First Nation	$3.314.000	89

[1] O. Reg. 24/19: EXPANSION OF NATURAL GAS DISTRIBUTION SYSTEMS (ontario.ca)

Project Name	Cost of the Project	Number of customers expected to connect
Northshore and Peninsula Rd	$10.095.000	134
Brunner	$ 1,293,836	44
Kenora District (Hwy 594)	$1,551,582	30
Stanley's Old Maple Lane Farm	$820,779	11
Burks Falls	$1,663,917	41
Haldimand Shores	$4,048,709	112

Please see response at Exhibit I.1.12-FRPO-21 for the other information requested.

The NGEP grant for the above nine community expansion projects were released by the IESO in full amount in accordance with the Ontario Regulation 24/19: Expansion of Natural Gas Distribution Systems consolidated from June 8, 2021 under the Ontario Energy Board Act, 1998, S.O. 1998, c. 15, Sched. B. Schedule 1 and Schedule 2[2].

d) The following consists of the 2 community expansion projects under NGEP phase one and the 20 community expansion projects under NGEP phase two that are in development. /u

Project Name	Cost of the Project	Number of customers expected to connect
Hiawatha First Nation	$5,286,857	213
Cornwall Island	$8,418,045	354
Bobcaygeon	$116,714,815	3,978

[2] O. Reg. 24/19: EXPANSION OF NATURAL GAS DISTRIBUTION SYSTEMS (ontario.ca)

Project Name	Cost of the Project	Number of customers expected to connect
Hidden Valley	$3,463,661	110
Mohawks of the Bay of Quinte	$10,715,495	179
Selwyn	$4,502,425	87
Neustadt	$7,769,155	219
Prince Edward County (Cherry Valley)	$7,883,379	152
Sandford	$6,631,637	140
Eganville	$36,757,345	674
East Gwillimbury (North and East)	$15,563,359	422
Boblo Island	$2,776,579	92
Merrickville-Wolford	$4,024,120	67
St Charles	$8,602,563	162
Glendale Subdivision	$3,753,588	77

Project Name	Cost of the Project	Number of customers expected to connect
Chute-a-Blondeau	$9,038,505	318
Tweed	$5,091,557	62
Lanark and Balderson	$19,199,846	334
Red Rock First Nation (Lake Helen Reserve)	$4,081,700	77
Caledon (Humber Station)	$7,010,026	100
Severn (Washago)	$28,859,544	723
Cedar Springs	$3,479,788	103

The above 22 projects are in the development stages, and no customers have been connected.

The NGEP grants for the above twenty-two community expansion projects will be awarded in accordance with the Ontario Regulation 24/19: Expansion of Natural Gas Distribution Systems consolidated from June 8, 2021, under the Ontario Energy Board Act, 1998, S.O. 1998, c. 15, Sched. B. Schedule 1 and Schedule 2[3].

e) Enbridge Gas recognizes the IESO grants as a Contribution In Aid to Construct (CIAC) and accounts for the grants as a reduction to Property Plant and Equipment (PPE). The CIAC is applied to each approved project based on the funding distribution in the quarterly NGEP reports.

[3] O. Reg. 24/19: EXPANSION OF NATURAL GAS DISTRIBUTION SYSTEMS (ontario.ca)

f) Enbridge Gas is currently underway, with nine community expansion projects being in execution and actively servicing customers. The remaining 22 communities are in the development phases and Enbridge Gas intends to file LTC applications for all the projects. Enbridge Gas are not aware of any additional community expansion projects beyond the current phase of the NGEP Program.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/S1/p. 22

Question(s):

Please provide a detailed comparison of the annual savings achieved during the 5-year rebasing period ($86 million) and the estimated first 5 years included in the 10-year submission in the MA[A]DS Application. Please also provide a detailed comparison of the integration costs.

Response:

The MAADs Application included ranges for integration capital costs and O&M savings over the requested 10-year term. The range of potential capital investment as filed was $50 - $250 million and the range of potential O&M savings was $350 - $750 million over the requested 10-year term. As noted in the filing, these ranges were estimates, and detailed planning would be undertaken once an OEB decision was rendered. It was also noted that the integration could not proceed as outlined with a term of 5 years.

After receiving the approval for a shortened 5-year deferred rebasing term, Enbridge Gas embarked on developing and executing integration plans and delivered $86 million in annual sustainable synergies, totaling $328 million over that period. This achievement exceeded the $81 million provided in the first five years noted in EB-2017-0306/EB-2017-0307 Exhibit C.BOMA.16 Attachment 1, page 10.

The comparison to the estimates as filed in the MAADs Application is as follows:

Table 1

Integration Costs/ Savings as Filed ($millions)

Item	Integration Savings Over 5 yr. Term 2019	2020	2021	2022	2023	Total	CapEx Investments Over 5 yr. Term 2019	2020	2021	2022	2023	Total
Customer Care		15	15	16	16	62		2	22	32	8	65
Distribution Work Management			11	11	11	33	7	21	21			50
Utility Shared Services		2	2	3	3	10	4	5	5			14
Storage & Transmission		1	3	3	3	10		8				8
Management		20	20	20	20	80						0
Other Functions									5	5	5	13
Additional Unidentified Efficiencies	3		12	17	28	60						
Total	3	38	63	70	81	255	11	36	53	37	13	150

Notes:

1) Filing contemplated a 10-year term; reference: EB-2017-0306/EB-2017-0307, Exhibit C.BOMA.16, page 10, truncated at 5 years

Ex. 1/T2/S1/p. 23

Question(s):

Please provide a copy of the documents defining the Voluntary Workforce Options (VWO) program. Please indicate how many employees participated in the VWO program in each year and the overall cost of the program.

Response:

Please find a copy of the VWO Program documents in Attachment 1.

As provided at Exhibit 1, Tab 9, Schedule 1, paragraph 9, 244 full-time equivalent employees participated in the VWO Program in 2020 at Enbridge Gas. In addition, 83 full-time equivalent employees participated in the VWO Program in central functions for a total of 327 full-time equivalents. The severance cost related to the VWO Program was $77.7M for 2020.

ENBRIDGE®

Overview

- Participation in the VWO program is optional for eligible employees. Eligible employees can choose to apply for the program, if interested, or choose not to participate at all.
- The information in this document is intended to provide employees with a detailed overview of the Leaves of Absence options under the VWO program.
- Detailed FAQs can be found on Elink.
- Questions about the program should be directed to **a dedicated VWO team** in HR:
  - Call MyHR at 1-877-613-6247 or *6947 and press 5 to speak with a VWO Advisor directly
  - Send an email to VWOProgram@enbridge.com

Voluntary Workforce Options

Educational Leave of Absence - Canada

Voluntary Workforce Options Program

Educational Leave of Absence Details - Canada

Program Name	Leaves of Absence
Program Option	Educational Leave
Eligibility	• All non-union regular employees • Leader review and approval required
Parameters	• Opportunity to upgrade education or reskill while remaining employed; education must be relevant to Enbridge • Up to two years; minimum 6 months; leave must commence by January 2021 at the latest; duration of leave must be decided upfront • A two-year return service agreement covering the value of both the education reimbursement and base pay incentive is required • If there is no job to return to at the end of the leave, severance will be based on pre-leave status
Education Reimbursement	• Up to $20,000 tuition reimbursement (grossed up for taxes after maximum allowable reimbursement) • You must provide receipts for your education program costs and will be reimbursed up-front. You must also provide proof of successful completion; otherwise, the full tuition reimbursement amount you received will be payable to the Company.

Base Pay Incentive	• 20% of base pay in effect on May 31 (pre-reduction) while on leave; paid in lump sum payments as follows:
	    • 20% of base pay for period: 1st day of leave to December 31, 2020 paid on the first pay period after the start of the leave
	    • 20% of base pay for period of leave in 2021 paid on the second pay of January 2021
	    • 20% of base pay for period of leave in 2022 paid on the second pay of January 2022

Voluntary Workforce Options Program

Educational Leave of Absence Details - Canada

Program Name	Leaves of Absence
Program Option	Educational Leave
STIP	• You are eligible for a STIP award that will be pro-rated based on the time you were actively employed and working in your job during the calendar year
LTIP	• If you are eligible for LTIP, you will continue to be eligible for annual grants while on leave of absence. Awards will be prorated at the time of payout for active service during the applicable term.
Enbridge Employee Savings Plan	• Matched and non-matched contributions stop during unpaid leaves. Contributions can be restarted upon return to work.
Pension	• Pension accrual stops after 31 days of unpaid leave
Time off	• You will not accrue vacation after the first 31 days of the leave. • If you have unused, accrued vacation it should be used prior to the start of your leave.
Benefits	• Benefits are employer-paid for up to 2 years • All benefits (Life, AD&D, LTD, Critical Illness, EHC, Dental, HSA) cease on the date the employee starts to work in another job more than 20 hours per week.

Voluntary Workforce Options Program

Educational Leave of Absence Details - Canada

Program Name	Leaves of Absence
Program Option	Educational Leave
Extended Health Care and Dental	• These benefits continue
EFAP	
Emergency Medical and Travel Assistance (Out-of-Country Coverage)	
Health Spending Account (HSA)	• You can continue to use your remaining 2020 HSA balance for the remainder of 2020. The Company will cover the cost of your contributions from the time your Leave starts to the end of the year. • You are not eligible to make an HSA election for 2021 unless and until you return to active service in 2021. • If your leave starts in January, 2021 (the latest you can start your leave), you will not be eligible to make an HSA election for the 2021 calendar year during the annual re-enrolment period in November, 2020.
Short Term Disability (STD)	• If you become disabled during the unpaid leave, the 26-week STD benefit period commences on your date of disability. If you are approved for STD, and you are scheduled to return to work before the end of the benefit period, STD benefits will start on your scheduled return date. Example: if you are scheduled to return to work 10 weeks after your date of disability, you may receive STD benefits for up to 16 weeks.
Long Term Disability (LTD)	• Benefit continues. If you become disabled during the unpaid leave, the qualifying period for LTD benefits commences on your date of disability. If you are approved for LTD claim, benefit payments start on the later of: a) the date you satisfy the elimination period; or b) the date you were scheduled to return to work.

Educational Leave of Absence Details - Canada

Program Name	Leaves of Absence
Program Option	Educational Leave
Critical Illness Insurance (Employee & Spouse) Life Insurance (Essential Employee, Optional Employee and Spouse) Optional Accidental Death & Dismemberment Insurance (Employee and Dependent(s))	• These benefits continue. You will not be required to pay for missed contributions upon your return to work. • These benefits continue and Enbridge pays for these benefits while you are on an approved leave.
Business Travel Accident Insurance	• Coverage for Business Travel Accident **ceases** while on leave
Wellness Program	• This program is not available while on leave. You should load all Wellness and Stellar dollars onto your Stellar card prior to leave.
Higher Education Awards Program	• All approved awards will be paid. Employees are eligible to participate in the program while on leave.

Personal Leave of Absence - Canada

Voluntary Workforce Options Program

Personal Leave of Absence Details - Canada

Program Name	Leaves of Absence
Program Option	Personal Leave
Eligibility	• All non-union regular employees • Leader review and approval required
Parameters	• Opportunity for employees to pursue personal interests while remaining employed • Up to two years; minimum 6 months; leave should commence by June 28; exceptions require EVP and CHRO approval • Duration of leave must be decided upfront • If there is no job to return to at the end of the leave, severance will be based on pre-leave status

Base pay Incentive	• 10% base pay in effect on May 31 (pre-reduction) while on leave; paid in lump sum payments as follows:
	  • 10% of base pay for period: 1st day of leave to December 31, 2020 paid on the first pay period after the start of the leave
	  • 10% of base pay for period of leave in 2021 paid on the second pay of January 2021
	  • 10% of base pay for period of leave in 2022 paid on the second pay of January 2022

STIP	• You are eligible for a STIP award that will be pro-rated based on the time you were actively employed and working in your job during the calendar year
LTIP	• If you are eligible for LTIP, you will continue to be eligible for annual grants while on leave of absence. Awards will be prorated at the time of payout for active service during the applicable term.
Enbridge Employee Savings Plan	• Matched and non-matched contributions stop during unpaid leaves. Contributions can be restarted upon return to work

Voluntary Workforce Options

Part-time Option - Canada

ENBRIDGE

Voluntary Workforce Options Program

Part-time Details - Canada

Program Name	**Reduced Work Hours**
Program Option	**Part-time**
Eligibility	• All non-union regular employees • Leader review and approval required
Parameters	• Opportunity for employees to work reduced hours and balance other interests • A part-time employee either works fewer hours per day, or fewer days per week on an ongoing basis. Hours per week options: 16, 20, 24, 28, 30 & 32 • Must transition to part-time by mid-July • The duration is indefinite as long as business need is met

Base pay	• Base pay is pro-rated based on percentage time worked relative to a regular full-time position
	  • Where the reduction to the percentage time worked is 20% or greater, your new pay rate is calculated using your base pay in effect on May 31 (i.e. pre-reduction)
	  • Where the reductions to percentage time worked is less than 20%, your new pay rate is calculated using your base pay in effect on June 1 (i.e. including reduction)

STIP	• STIP is pro-rated based on % time worked and your new pro-rated base pay
LTIP	• If you are eligible for LTIP – normal rules apply; no impact on outstanding grants, future grants pro-rated based on new pro-rated base pay

Voluntary Workforce Options Program

Part-time Details - Canada

Program Name	Reduced Work Hours
Program Option	Part-time
Enbridge Employee Savings Plan	• Matched and non-matched savings contributions continue. Contributions can be changed at any time.
Pension	• Participants in Defined Contribution plan: you receive employer contributions based on pro-rated base pay. • Participants in Defined Benefit plan: you continue to participate and earn Credited Service pro-rated in accordance with the percentage of a regular full-time position and the plan will continue to recognize your full time equivalent base pay.
Time off	• Your vacation accrual will be prorated to your new work schedule effective the date of your schedule change. The time you accrued prior to the change in schedule does not change.
Extended Health Care and Dental Coverage	• You are eligible for benefits if your work schedule is 16 hours per week or 40% time worked and above • Your flex credit calculation will change according to your new base pay. If your new schedule is less than 24 hours per week, your single/couple/family flex credits will be reduced. • You can request to change benefit elections when switching from full-time to part-time
Health Spending Account (HSA)	• Benefit continues and contribution continues unchanged. You will have an opportunity to change your contribution at next open enrollment.
Short Term Disability (STD)	• No change in eligibility but any disability benefits received will be based on your new pro-rated base pay
Long Term Disability (LTD)	• No change in eligibility but coverage is based on your new pro-rated base pay

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/S1/p. 23

Question(s):

EGI has consolidated its Customer Information System aligning billing process and migrating 1.6 million Union Gas customers to the one system. Please set out the overall cost of the CIS migration and provide year by year expenditures. When were those cost added to rate base?

Response:

Please see Table 1 for a summary of costs for the Customer Information System and SAP Hana Upgrade Project. The project went into service in July 2021, however only the residual net book value as of December 31, 2023 is being requested for approval as part of rate base in 2024. Please see Exhibit 1, Tab 9, Schedule 1 pages 20-25 for a summary of Enridge Gas's proposed treatment of integration capital projects.

Table 1

Line No.	Particulars ($ millions)	2019 Actual	2020 Actual	2021 Actual	Total
		(a)	(b)	(c)	(d)
1	Customer Information System	5.0	29.2	28.8	63.0

Notes:

ENBRIDGE GAS INC.

Answer to Interrogatory from Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/S1/p. 24

Question(s):

EGI undertook a multi- year, phased project to bring the asset and work management system onto a common platform, creating a common system and processes for planning work, and harmonized policies, processes and procedures for distribution maintenance operations. Please set out the overall cost of this project and provide year by year expenditures. When were those costs added to rate base?

Response:

Please see Table 1 for a summary of costs. The Asset and Work Management System (AWS) Project is comprised of 3 phases: Phase 1 went into service in July 2021, Phase 2 in July of 2022 and Phase 3 is expected in 2023. However, only the residual net book value as of December 31, 2023 is being requested for approval as part of rate base in 2024. Please see Exhibit 1, Tab 9, Schedule 1 pages 20-25 and Exhibit 1, Tab 9, Schedule 1, Attachment 1 for a summary of Enbridge Gas's proposed treatment of integration capital projects.

Table 1

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T2/S1/p. 30

Question(s):

The evidence states, “While Enbridge Gas has been collecting amounts for future abandonment within the net salvage component of depreciation rates for some time, the Company has concluded establishing a segregated fund is not in the best interests of customers at this time, as it would unnecessarily increase rates.” Please provide all analysis and studies produced to support this position.

Response:

Please see response at Exhibit I.4.5-SEC-193.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T3/S1/Attachment 1

Question(s):

Please describe the nature of the business activities undertaken by Enbridge Sustainable Energy Solutions Inc. When was this entity created? Please describe any interactions between this entity and EGI. Please explain how the activities undertaken by this entity relate to EGI's Demand Side Management programs.

Response:

Enbridge Sustainable Energy Solutions Inc. (ESESI) was incorporated in June of 2022. This entity was created as a holding company for non-regulated investments and has no direct interaction with Enbridge Gas. ESESI currently holds Enbridge's investment in Oakville Enterprises Corporation. ESESI does not undertake any activities related to Enbridge Gas's Demand Side Management programs.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Canadian Manufacturers & Exporters (CME)

Interrogatory

Reference:

Exhibit 1, Tab 2, Schedule 1, p. 3 of 34.

Question(s):

At page 3, EGI stated that "a distinct majority of customers who were engaged during the planning process supported Enbridge Gas's 2024 to 2028 business plan objectives, including those that would introduce higher costs." However, in a number of places within Innovative's reports, it's indicated that price/the cost of EGI's service was an important outcome to participants. For instance, at page 6 of 550 in Innovative's customer engagement report, Innovative noted that "lower rates was the most common comment among those that had a suggestion", and "providing affordable pricing" topped the ranked list of outcomes.

a) Please describe how EGI understands customer needs and preferences in the context of these results. For instance, does EGI understand customers to support business plan objectives that introduce higher costs despite their stated preference for lower rates, or only those specific investments proposed through the engagement, with other investments being less important than keeping rates low. Please explain fully.

b) Please provide EGI's position on how the proposed application responds to customer's indication that 'price' was the highest priority area where EGI has "room for improvement" (see page 8 of 550 of Innovative's customer engagement report)

Response:

a) The customer engagement process gauged customer needs and preferences in several ways: allowing customers to bring forward outcomes of importance for Enbridge Gas to consider (Phase One), rating outcomes individually (Phase Two), ranking outcomes relative to each other (Phase Two), and identifying support for specific investment options with concrete trade-offs between outcomes/priorities provided (Phase Three). Exhibit 1, Tab 6, Schedule 1, page 17, summarizes the rating and ranking exercises produced different lists of "top" outcomes, with reliability, safety, providing affordable pricing, and minimizing impacts on the environment at the top of these lists. Enbridge Gas understands these results to mean customers highly value several general outcomes. Enbridge Gas also understands that when it comes to specific investment decisions, there are trade-offs between these outcomes. Phase Three explored this, with customers being shown specific outcome trade-offs, including estimated bill impacts wherever possible, for specific investment choices. The Phase Three results – that reflect customer choices when presented with specific trade-offs and other contextual information – are the most relevant results for assessing customer preferences for the specific investments tested. In the case of investment decisions not tested through the customer engagement process, not being included does not mean these investments are less important than keeping rates low. Reasons for not including investments in the customer engagement process vary. Please see Exhibit 1, Tab 6, Schedule 1, page 12 for an overview of these reasons.

b) In Phase One, pricing was identified as both an area with room for improvement and something Enbridge Gas was doing well, Exhibit 1, Tab 6, Schedule 1, Attachment 1, page 8. Phase One was exploratory in nature, with general results used to guide Enbridge Gas business planners before specific investment choices were developed.

c) As described in part a), providing affordable pricing was identified as an important outcome in Phase Two. The Application responds to this in several ways, including by passing $86 million in annual integration savings on to customers beginning in 2024. As seen in Phase Three results, customers are willing to accept rate increases to support specific investments and at least two thirds of customers (general service and contract) supported the draft rate increase included in the workbook as a result of the draft plan. Generally, customers also chose to spend more now to improve Enbridge Gas assets rather than delay, as reflected in the decision-making framework for the Asset Management Plan provided at Exhibit 2, Tab 6, Schedule 2, page 26.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Environmental Defence (ED)

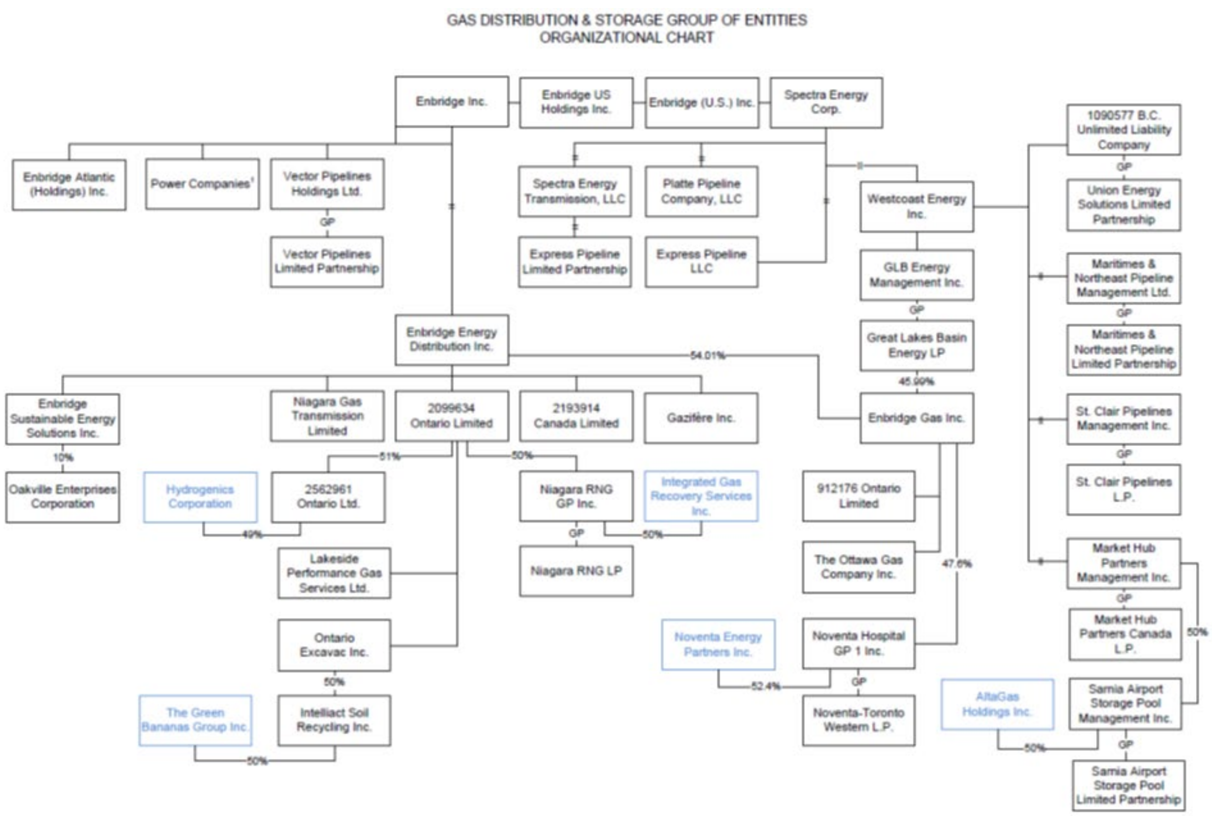
Interrogatory

Reference:

Exhibit 1, Tab 3, Schedule 1, Attachment 1, Page 1

Preamble:

The following org chart is found at the above reference



Question(s):

a) Please indicate how much profit Enbridge has earned from its regulated gas business in the past 5 years and how much it forecasts earning each year 2024 to 2028.

b) Please indicate how much profit Enbridge's parent and sister companies have earned from with respect to the gas pipelines that feed into Ontario. This is meant in part to explore the incentive facing the Enbridge families of companies to maintain gas volumes flowing into Ontario, and whether that may impact the relief sought by Enbridge

Response:

a) Regulated profit is defined by Enbridge Gas as net income applicable to common equity, which equals utility income less long and short term and preferred debt costs less income taxes. The regulated profit of Enbridge Gas in the past 5 years, for the years 2017 to 2021 is provided in Table 1 :

Table 1

Year/Utility	Reference	Net Income Applicable to Common Equity[1] ($ millions)
2017 – EGD	EB-2018-0131 - Ex B, Tab 1, Sch 2, line 37	239.0
2017 – Union	EB-2018-0105 - Ex A, Tab 2, App B, Sch 1, line 26	180.4
2018 – EGD	EB-2019-0105 - Ex B, Tab 2, App A, Sch 1, line 37	259.7
2018 – Union	EB-2019-0105 - Ex C, Tab 2, App B, Sch 1, line 26	208.8
2019	EB-2020-0134 - Ex B, Tab 1, Sch 1, line 20	495.5
2020	EB-2021-0149 - Ex B, Tab 1, Sch 1, line 20	425.6
2021	EB-2022-0110 - Ex B, Tab 1, Sch 1, line 20	469.5

Enbridge Gas forecasts regulated profit for 2022 through 2024 as provided in Table 2:

Table 2

Year/Utility	Reference	Net Income Applicable to Common Equity ($ millions)
2022	Exhibit 5, Tab 2, Schedule 1, Attachment 4, Pg 2[2]	490.8
2023	Exhibit 5, Tab 2, Schedule 1, Attachment 5, Pg 2[3]	496.5
2024	Exhibit 5, Tab 2, Schedule 1, Attachment 6, Pg 2[4]	535.8

[1] 2017 & 2018 EGD amounts are shown on a normalized basis and pre-earnings sharing.
[2] 2022 Net income applicable to common equity = forecast achieved earnings on common equity (9.028%) multiplied by common equity ($5,436.5M)
[3] 2023 Net income applicable to common equity = forecast achieved earnings on common equity (8.818%) multiplied by common equity ($5,630.4M)
[4] 2024 Net income applicable to common equity = allowed earnings on common equity (8.660%) multiplied by common equity ($6,186.8M)

As Enbridge Gas is setting cost of service rates for 2024 based on 2024 forecast information, Enbridge Gas declines to provide the requested forecast information beyond 2024. Any forecast of post-2024 profits will depend on the determinations in this proceeding.

b) The profits of Enbridge Gas's affiliates are not relevant to the approvals sought as part of the 2024 Rebasing Application. Further, Enbridge Gas's affiliates are not regulated by the OEB. Accordingly, Enbridge Gas declines to provide the requested information.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 1, Tab 2, Schedule 1, pg. 11

Preamble:

We would like to understand the rigour of EGI's customer engagement program.

Question(s):

Please provide the number of apartment owners that participate in each of the three distinct forms of engagement.

Response:

Enbridge Gas cannot confirm if specific respondents that completed the customer engagement were apartment owners or other representatives. To the best of its knowledge, at a minimum, 2 customers classified as "Apartment" were included in Phase 1, 18 in Phase 2, and 53 in Phase 3. Additional customers classified as Multiresidential also participated in each phase of customer engagement as shown in Table 1.

Table 1: Number of Apartments

#		Classified as Multiresidential	Classified as Apartment (Account Class)
1	Phase 1	0	2
2	Phase 2	89	18
3	Phase 3	207	53

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 1, Tab 2, Schedule 1, pg. 21

Question(s):

Has EGI recognized the value of investing in distribution system stations to reduce the pressure drop to serve load as opposed to increasing the pipe size?

a) Please describe EGI's views on that assessment as part of IRP.

b) Beyond an IRP pilot, where else has EGI considered this alternative?

Response:

Yes, Enbridge Gas does recognize the value of investing in distribution system stations as an IRP alternative.

a-b) During the detailed design process of a need that is identified on the system, alternatives are assessed including distribution system station impacts, and evaluated for feasibility.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 1, Tab 2, Schedule 1, pg. 21

Preamble:

EGI evidence states: *Other savings were achieved in areas where services were scaled back or no longer needed, processes and procedures were streamlined, and where modes of operational interaction were modified. For example, pandemic-related travel restrictions led Enbridge Gas teams to rely more on virtual interactions in 2020 and 2021, and even with the lifting of restrictions, travel budgets have been reduced.*

Question(s):

Please provide a description what was learned from this evolution.

a) How much does EGI expect to save in office costs in 2024 vs 2019?

b) How much does EGI expect to save in travel costs in 2024 vs 2019?

c) Where would one find these specific savings identified in the evidence?

Response:

Enbridge Gas operates in multiple locations and the use of technology to facilitate meetings was used prior to COVID-19. The pandemic sped up the evolution of the use of technology, including upgrading capability to work from home. With the improvement in technology, Enbridge Gas can now further assess the need to travel for in person meetings, training, conferences, etc. which gives the ability to manage within the Company's travel budget.

a) There were no office cost savings as a result of the pandemic.

b) Travel costs in the 2024 Test Year Forecast are $0.2 million higher compared to the 2019. If EGI factored in inflationary assumptions each year the 2024 Test Year Forecast would have been much higher.

c) These savings have been embedded in the 2024 Test Year O&M Forecast provided at Exhibit 4, Tab 4, Schedule 2, Table 2.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ginoogaming First Nation (GFN)

Interrogatory

Reference:

Exhibit 1, Tab 2, Schedule 1, p. 3

Preamble:

EGI states that integrity, safety, respect and inclusion, along with its strategic priorities, are values that have guided its decision-making. In addition, EGI noted that the evidence provided in the Application is its business plan and demonstrates how it intends to support customers through continued safe, reliable, cost-effective operations while prudently incorporating new energy solutions.

In its Decision and Order on Enbridge Gas Distribution Inc.'s application for the RNG Enabling Program in EB-2017-0319 dated October 18, 2018, the Ontario Energy Board confirmed that "strategic, higher level decisions can trigger the duty to consult" First Nation communities (p. 25)

Question(s):

a) Please describe and provide evidence for whether — and, if so, how — EGI determined, interpreted, and applied:

   i. its values especially in regard to respect and inclusion;

   ii. the Crown's requirements in respect of reconciliation and honour in engaging with First Nations; and

   iii. the Ontario Energy Board's procedural requirements and decision making considerations; in assisting the Crown in fulfilling its duty to act honourably with the intent to effect reconciliation including through consultation and accommodation impacted First Nation communities in relation to the Application.

Response:

a) For clarity, the complete quote from the Decision and Order on Enbridge Gas Distribution Inc.'s application for the RNG Enabling Program in EB-2017-0319 dated October 18, 2018, is

> "*The OEB accepts that strategic, higher level decisions can trigger the duty to consult. However, in the current case it is not clear that the matters before the OEB have any impact on any identified Aboriginal or treaty right. This Decision approves a rate-setting methodology for an RNG Injection Service and a deferral account under Section 36 of the OEB Act. It does not authorize anyone to build anything. The OEB does not see any direct material impact that this Decision will have on Aboriginal or treaty rights.*"

The current Application before the OEB requests an approval of new base rates and an incentive rate mechanism for the period of 2024 to 2028 and does not authorize Enbridge Gas to build anything. Enbridge Gas is of the view that the Rebasing Application does not trigger the duty to consult. Regardless of whether the duty to consult has been triggered by this proceeding or whether Indigenous consultation is required, Enbridge Gas believes it is appropriate to continue consultation through the OEB-led regulatory consultation process. Enbridge Gas notes that GFN is an active participant in this proceeding before the OEB. Enbridge Gas will address any questions raised by members of Indigenous groups as they arise.

ENBRIDGE GAS INC.

Answer to Interrogatory from
London Property Management Association (LPMA)

Interrogatory

Reference:

Exhibit 1, Tab 2, Sch. 1, para. 24

Question(s):

Please define the term “reasonable rate increases” as used by EGI.

Response:

The Company views the Application as requesting “reasonable rate increases” given that the average rate increase is below inflation and is in the range of what most customers said they would accept.

ENBRIDGE GAS INC.

Answer to Interrogatory from
London Property Management Association (LPMA)

Interrogatory

Reference:

Exhibit 1, Tab 2, Sch. 1, para. 74

Question(s):

Please define the term “a more effective utility” as used by EGI.

Response:

A more effective utility is one that can deliver safe, reliable and efficient business operations and respond to customer needs and future market evolution. Enbridge Gas builds on the success of its predecessor organizations, delivering extensive integration benefits as provided at Exhibit 1, Tab 9, Schedule 1. Please also see response at Exhibit I.1.9-CCC-25.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Otter Creek Co-operative Homes Inc. (Otter Creek)

Interrogatory

Question(s):

Programs and services for low-income households

a) Please set out what EGI's services for low-income households will be.

b) Please provide any Canadian evidence, studies or surveys that EGI has with respect to its current services and programs for low-income households, specifically with respect to maintaining services.

Response:

a) There is no reference to evidence provided in this interrogatory, it is therefore unclear what specific services are being referenced. To be responsive the Company provides the following:

   i. With regard to DSM programming, the Company received approval in the 2022-27 Multi-year DSM Plan Decision[1] for over $70 million in funding over the three-year 2023-2025 period which includes DSM programs tailored to support lower income consumers across the Enbridge Gas franchise. The Low-Income Program includes a set of program offerings designed for low-income residents of single and multi-residential housing, both social housing and privately owned, aimed at improving the energy efficiency of targeted buildings and helping these residents manage their natural gas bills.

   ii. Enbridge Gas offers the Low-Income Energy Assistance Program (LEAP) to customers who are in arrears and at risk of being disconnected. United Way Simcoe Muskoka administers the LEAP program across the Enbridge Gas franchise. United Way Simcoe Muskoka reviews low-income eligibility with customers who apply and under the current LEAP rules, may approve emergency financial assistance of up to $1,000 to a customer's arrears balance.

[1] EB-2021-0002, Decision and Order, November 15, 2022.

b) Enbridge Gas periodically conducts studies and surveys specifically in support of the Low-Income DSM Program, including a survey to collect feedback from recent participants. These surveys and studies were in scope in the recent Application for Multi-Year Natural Gas Demand Side Management Plan[2] (2022 to 2027) proceeding. Issues around DSM programming are not part of this proceeding.

[2] EB-2021-0002

ENBRIDGE GAS INC.

Answer to Interrogatory from
Otter Creek Co-operative Homes Inc. (Otter Creek)

Interrogatory

Question(s):

EGI is tasked by the Federal Government of Canada to help Canadians lower their energy bills and make their homes more energy efficient. Has EGI factored into this application the impact this program will have on the demand for natural gas services?

Response:

Enbridge Gas interprets the question to be asking about the impact of the recently introduced Home Energy Rebate Plus ("HER+") Program that is being jointly funded by Enbridge Gas and Natural Resources Canada ("NRCan"). HER+ was introduced in January 2023. Any potential impacts on the Ontario market will not be reasonably determined until sufficient time in the market has been reached, estimated to be at minimum a full year.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Otter Creek Co-operative Homes Inc. (Otter Creek)

Interrogatory

Question(s):

If the demand for nature gas is reduced due to natural gas consumption, this will reduce EGI's profits. At what rate will this loss of profits determine increases to end users.

Response:

Enbridge Gas does not agree with the statements made as part of this question, specifically, that a reduction in natural gas demand and consumption will always result in a reduction in profits, or that a loss in profits will result in or determine rate increases to end users. For instance, where rates are designed to reflect a decline in consumption, or where there are volumetric protection mechanisms (for ratepayers and or Enbridge Gas) in place (i.e. deferral account mechanisms), a decline in consumption does not translate into a loss in profits. In addition, a loss in Enbridge Gas profits does not necessarily or immediately translate into an increase in rates to consumers. Approved rates simply provide Enbridge Gas with the opportunity to earn a regulated rate of return (profit). Statements such as those made in this question would need to be made in the context of specific circumstances or assumptions.

In this proceeding, Enbridge Gas is requesting approval for 2024 rates established using a cost of service methodology, as well as approval of an incentive rate setting mechanism for 2025 – 2028. Under cost of service, Enbridge Gas is looking to establish 2024 rates that will allow it to recover its forecast of costs (inclusive of an allowed return on equity, or profit) to provide regulated distribution, transmission and storage services. In order to design rates to recover those costs, Enbridge Gas has also provided its latest forecast of demand (or consumption), inclusive of any forecast demand changes (decreases and or increases). Using a current forecast of volumes should reduce the risk of profit variability due to demand decreases or increases (because any anticipated demand changes would have been reflected in rates). In addition, Enbridge Gas is also proposing a Volume Variance Account to capture the revenue, net of gas cost, impacts attributable to actual versus forecast general service volumetric variances resulting from weather and average use differences. These mechanisms combined will largely protect ratepayers (from Enbridge Gas earning higher profits) and the Company (from lower profits) from impacts attributable to volumetric variability.

Enbridge Gas also notes that as part of this Application it is also requesting approval to implement Straight Fixed Variable with Demand (SFVD) rate design to harmonized general service rates classes, effective April 1, 2025. If approved, the use of SFVD rate design would see fixed costs recovered through fixed charges and variable costs recovered through volumetric charges, as compared to the traditional volumetric rate design currently employed for general service rate classes, where costs are recovered through the combination of a monthly customer charge and volumetric delivery charges. The current recovery of fixed charges (inclusive of the return on equity) through both fixed and volumetric charges can result in variability in profits (lower and higher) when demand is lower or higher than forecast. As such, one of the benefits of SFVD rate design is that it largely eliminates variability in the recovery of fixed charges and eliminates the need for associated deferral accounts.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T2/S1/p.2

Question(s):

Enbridge states in the Executive Summary for the Application that its customers "…are an integral part of Enbridge Gas's business planning and decision-making processes, and their feedback, gathered through extensive engagement, directly informs this rate rebasing application…". Please confirm that customer engagement activity covers/includes customers in all rate classes across the entire Enbridge service territory in Ontario.

Response:

Customer engagement covers customers across the entire franchise area. The customer engagement focused on customers in rate classes with proposed changes to services and as such, included most rate classes with the exception of those rate classes with limited proposed changes.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1 p.9, 21

Question(s):

Enbridge states: "[R]egardless of the direction of Ontario's energy transition, the natural gas system will be critical to providing Ontarians with resilient, reliable, cost-effective energy solutions, including by working in a more integrated way with the electricity system." Please confirm that the Application is premised on the Enbridge's statement being true, and on the assumption that no significant reduction in the total demand for natural gas in Ontario is likely during the next ten years. If this is not confirmed, please explain.

Response:

Enbridge Gas's Application is based on the premise that, over the course of the 2024 to 2028 rebasing term, regardless of the direction of Ontario's energy transition, the natural gas system will be critical in providing Ontarians with resilient, reliable, cost-effective energy solutions, including by working in a more integrated way with the electricity system. In addition, Enbridge Gas notes that its Application is based on the premise that, over the course of the 2024 to 2028 rebasing term, the design hour and design day demand will not have a significant reduction.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1, p.10

Question(s):

Please provide Enbridge's best estimate of the amount, by which 2022 natural gas throughput was lower, as a result of the cumulative impact of the Enbridge's DSM programs over time.

Response:

The Company notes that this response is provided on a best-efforts basis to be responsive to the question as posed.

Measures that were implemented as a result of DSM programs and have persisting savings in 2022 are estimated to have reduced gas consumption in 2022 by 2.72 billion m^3. This figure is based on totaling the net annual natural gas savings for the span of the average effective useful life across all measures, based on the measure mix in the 2021 program year.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1, p.12

Question(s):

Please confirm that at no time during the stakeholdering of this Application did Enbridge, or its consultants, tell customers that they would be responsible for paying the cost of any new or existing assets stranded due to the energy transition.

Response:

Confirmed.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1, p.15

Question(s):

Please provide any studies, documents, presentations or other evidence showing that hybrid heating systems will continue to be cost-effective for customers throughout the expected life of the assets.

Response:

Please see response at Exhibit I.10h.EGI.STAFF.77 from the 2022-2027 DSM Plan proceeding[1], which provides lifecycle cost comparisons of hybrid heating systems with smart controls to those of all-electric solutions for two archetype homes in Toronto, Ontario.

In addition, please see the case studies below from the Sustainable Technologies Evaluation Program by the Toronto and Region Conservation Authority, where even without smart controls, hybrid heating is demonstrated as being cost-effective in the long run, as the cost of carbon is projected to increase over time:

i. Residential Heat Pump Case Study 1: Hybrid Heating in a Semi-Detached House[2]

ii. Residential Heat Pump Case Study 2: Low-Cost Hybrid Heating in a Toronto Home[3]

iii. Residential Heat Pump Case Study 3: Hybrid Heating in a Toronto Century Home[4]

---

[1] EB-2021-0002.
[2] https://sustainabletechnologies.ca/app/uploads/2021/12/HP_Case_Study_1.pdf
[3] https://sustainabletechnologies.ca/app/uploads/2021/12/HP_Case_Study_2.pdf
[4] https://sustainabletechnologies.ca/app/uploads/2021/12/HP_Case_Study_3.pdf

One of the benefits of a hybrid heating system is that the smart controller can be programmed to use the least cost energy for heating at any point in a year. The utility costs may change over the lifetime of the equipment, and this information can be programmed into the controller to maintain the energy affordability of the system. These controllers use many variables in the control algorithm such as: outdoor temperature, COP curve of heat pump, efficiency of furnace, TOU electric price, and natural gas cost.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1, p.15

Question(s):

Please confirm that the $200 million advantage between now and 2050, of the Applicant's preferred transition, can only be achieved if the natural gas distribution infrastructure currently in service, or brought into service during the current planning period, remains used and useful throughout its expected life.

Response:

Confirmed. The referenced $50 billion (not million as referenced in the question) cost /u
advantage is the approximate difference in costs between the lower cost Diversified /u
pathway sensitivities and the Electrification pathway presented in the Pathways to Net- /u
Zero Emissions for Ontario (P2NZ) Report, provided at Exhibit 1, Tab 10, Schedule 5, Attachment 2. The P2NZ Report concluded that "a diversified approach that includes a targeted approach to electrification tied with deployment of low- or zero-carbon gases, including renewable natural gas (RNG), hydrogen, and natural gas with carbon capture, is the most cost-effective and resilient method to achieve net zero emissions in
Ontario."[1] The $50 billion cost advantage is based on the assumption that the gas /u
distribution infrastructure in the province remains used or useful; transitioning over time to provide resiliency and to support the province's GHG emissions reductions targets by delivering low- or zero-carbon gases, as well as natural gas to end-users where carbon capture is used.

[1] Exhibit 1, Tab 10, Schedule 5, Attachment 2, Page 3.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1, p.16

Question(s):

Enbridge states: “Energy transition planning is not only reflected in the Company’s “safe bet” actions, but also in the way Enbridge Gas is forecasting growth, managing risk and allocating capital.” Please provide an estimate of Enbridge’s total rate base each year until 2033, and provide details explaining how this estimate has been altered from what it would have been, absent the claim made in the above quote.

Response:

Total rate base forecasted for years 2024 to 2026 are provided in Table 1.

Table 1
2024-2026 Rate Base

($ millions)	2024	2025	2026
Rate base	16,281 (as filed in Exhibit 2, Tab 1, Schedule 1, Page 5, Updated March 8, 2023)	16,739	17,236

Enbridge Gas does not have a forecast of rate base for 2027 to 2033 as the Company’s latest long-range plan extends to 2026.

Enbridge Gas does not currently have a forecast of asset plans without energy transition planning (with the exception of customer connections capital expenditure – please see response at Exhibit I.2.6-STAFF-72) and therefore, forecasted rate base absent impacts from energy transition planning is not available. Energy Transition is inherent in Enbridge Gas’s planning as described in Exhibit 1, Tab 10, Schedule 4 and based on its embedded and pervasive nature, Enbridge Gas would be unable to completely remove the impact of energy transition, especially given the complexity within the capital budget process (please see Exhibit 2, Tab 6, Schedule 1, Section 3.4). Unwinding energy transition impacts would mean that the 10-year AMP would need to be rebuilt; for instance, network hydraulic models would have to be updated for each of the 10 years to understand the need for growth projects or IRP projects. Cost estimates would then have to be produced for each alternative. Based on the level of effort required to undertake this exercise with energy transition assumptions considered, it would take several months of additional work to produce.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-2-1

Question(s):

Please provide a copy of all material provided to Enbridge Inc. for approval of the application and the underlying budgets.

Response:

Please see the following documents that were provided to Enbridge Inc. for approval of the Application and underlying Budget:

Attachment 1 – 2023 Budget and LRP Review presentation
Attachment 2 – 2024 Rebasing Proposal Approval presentation

GDS DRAFT
2023 Budget & LRP Review

October 28th 2022

ENBRIDGE

Key Assumptions / Executive Summary

ENBRIDGE

Executive Summary

- GDS EBITDA average growth of 7.03%, achieving EBITDA in all years mainly due to Price Cap Index and recovery of deficiency in 2024
- GDS achieving DCF target in all years due to strong EBITDA overcoming Maintenance Capital pressures

Assumptions

- 2023 Budget Assumptions include:
  - PCI 3.6% (PCI = 2021 Actual GDP IPI FDD (3.9%) – Productivity (0%) - Stretch (0.3%))
  - Achieved ROE of 9.7%, Board Approved ROE 8.66%. ESM Gap at $35M.
- 2024 is a rebasing year and assumed to be Cost of Service, with all CTA recovered and earning Board Approved ROE
- 2025 and 2026 assumes earning Board Approved ROE

GDS Plan Review

ENBRIDGE

(CAD millions[1], except for percentages)	2021A	2022F (2+10F)	2023B	2024 LRP	2025 LRP	3 Year CAGR (2022-2025)	Comments
Revenue	**2,943**	**3,024**	**3,112**	**3,395**	**3,546**	**5.44%**	Growth due to PCI, Customer Growth, rebasing rate increase in 2024 carrying through LRP as we earn Board Approved ROE with increased equity thickness and depreciation proposal
YoY%		3%	3%	9%	4%		
Operating Expenses *	**1,089**	**1,154**	**1,178**	**1,224**	**1,252**	**2.77%**	Central function decrease in 2023 due to insurance premium reduction, pension & benefits. CF increasing throughout rest of plan. Merit & inflation and DSM (offset by increasing revenue) increasing throughout rest of plan
YoY%		6%	2%	4%	2%		
EBITDA	**1,853**	**1,870**	**1,934**	**2,171**	**2,293**	**7.03%**	Increasing EBITDA due to drivers above
YoY%		1%	3%	12%	6%		
BU DCF	**1,580**	**1,491**	**1,602**	**1,724**	**1,868**	**7.80%**	DCF growth driven by increasing EBITDA at faster rate than Maintenance Capital throughout plan
YoY%		-6%	7%	8%	8%		
Growth Capital	**963**	**1,143**	**1,425**	**1,183**	**1,181**	**1.11%**	System reinforcement, Dawn C compression, Dawn to Parkway Expansion throughout plan adding to strong rate base growth
YoY%		19%	25%	-17%	0%		
Maint. Capital	**273**	**380**	**333**	**448**	**425**	**3.81%**	Higher REWS, Compression stations, meter purchases throughout plan adding to strong rate base growth
YoY%		39%	-12%	35%	-5%		
CTA Capital	**88**	**42**	**44**	**-**	**-**		Integration projects leading to high CTA capital during deferred rebasing term, ending in 2023
YoY%		-52%	5%	-	-		
Free Cash Flow (EBITDA less all Capital)	**530**	**306**	**133**	**540**	**687**	**30.91%**	Strong EBITDA growth due to rebasing rate increase in 2024 carrying through LRP, relative to Growth Capital and no CTA in 2024 and 2025 leading to strong free cash flow in 2025
YoY%		-42%	-57%	307%	27%		

Note: Operating Expenses includes Central Functions

EBITDA/DCF Bridge (2023 Budget vs 2022 2+10F)

ENBRIDGE

Segment	2023 Budget	2022 2+10F	Total Variance *(A)*	Variance due to CF *(B)*	Business Drivers *(A-B)*	Variance Explanation (Quantified if possible)

Depreciation	985	851	**(134)**	**-**	**(134)**	Impacts of new depreciation study for rebasing, higher overall capital plan; partially offset by GDS Oracle Cloud included in PY LRP but removed in CY
GDS EBIT	**1,186**	**1,171**	**15**	**(52)**	**67**	

Proposed Deficiency Drivers

ENBRIDGE

In $ millions

Net sustainable synergies and productivity	(67)
Changes in accounting policy and methodologies	(26)
Impact related to ICM and Capital Pass Through projects	42
Deferred Rebasing Impact	**(51)**
Cost pressures	69
Depreciation	198
Equity thickness	26
Cost of Service Impacts	**293**
Total Delivery Revenue Deficiency	**242**
Gas Supply Deficiency	**23**
Total Deficiency	**265**
Total Revenue Requirement	6,279
Deficiency as a % of Revenue Requirement	4%

Capital Bridge (2024 CY LRP vs 2024 PY LRP)

ENBRIDGE

2024 PY Capital LRP	Category	1,520	Variance Explanations (+ increase, - decrease)
Maintenance Capital	MC	95	+21M higher TIS, +22M higher REWS,+21M higher Meter purchases and Regulator Refit replacements, +23M higher Transmission Pipe and Storage, +24M higher OH Allocation, +9M higher Fleet & Equipment, +7M Rockcliffe Project Increase; -29M lower Compression Stations -3M Other.
Growth	Growth	15	+38M higher Transmission Pipe & Underground Storage due to Panhandle expansion project and Dawn parkway Expansion project, +16M higher Customer Connections, +5M higher System Reinforcement; -31M lower Distribution Pipe, -7M lower Distribution Station, -6M lower Meter purchases
Integration Capital (CTA)	MC	-	No integration capital starting in 2024
2024 CY Capital LRP		**1,630**	

Key Message: MC DCF pressures due to higher TIS, higher REWS, higher overheads, and higher meter purchases. Growth consistent with PY LRP.

EBITDA/DCF Bridge (2025 CY LRP vs 2025 PY LRP)

Segment	2025 CY LRP	2025 PY LRP	Total Variance (A)	Var. due to CF (B)	Business Drivers (A-B)	Variance Explanation (Quantified if possible)
Distribution Margin	3,024	2,555	469	-	469	Gas Supply Margin/Fuels primarily due to removal of LEGD LT Transport contract leading to cost savings (offset in reduction to S&T rev) +145M, PCI +131M*, deficiency rate adj. +182M**, return on carrying costs of gas inventory +10M, CM +5M, PDO/CPT rate var. +3M, storage allocation rate var.+3M, Comm. Exp. +2M, higher fuels due to reduction of CSF from LEGD contracts -11M, PDCI costs -4M
S&T Revenue	311	440	(129)	-	(129)	Lower LT Transport primarily due to LEGD Contracts going away -142M, Storage optimization -4M; RNG injection station (PY budget in Other Revenue) +5M, PCI +4M, ST transport +3M, Storage price +1M
O&M	1,242	1,132	(110)	(82)	(28)	Integrity -11M, inflation -10M, Ops – Locates/Lakeside/Crossbore -10M and Self Insurance Reserve -10M, Bad Debt -7M, addit. Merit -6M, higher Property Tax due to higher inflation assumption. -4M, Travel -1M; higher Capitalization +31M (BU+8M, CF +23M)
Other	137	132	5	21	(16)	Discontinue Open bill program -23M (partially offset by 12M O&M savings), Construction Heat Meter Activation -1M; increase in LPP +7M, increase from various services revenues +3M
EGI EBITDA	**2,230**	**1,995**	**235**	**(61)**	**296**	
Other GD EBITDA	63	57	6	1	5	
GDS EBITDA	**2,293**	**2,052**	**241**	**(60)**	**301**	
Maintenance Capital	425	332	**(93)**	**-**	(93)	Higher OH Allocation -44M, higher Meter purchases -27M, higher REWS -21M, higher TIS-17M, higher Fleet and Equipment -9M; lower Unregulated Storage Enhancement projects +13M, lower Compression Stations +8M
Equity Dividends in excess of Equity Earnings	-	1	**(1)**	**-**	(1)	
Total DCF	**1,868**	**1,721**	**147**	**(60)**	**207**	
EBITDA (from above)	2,293	2,052	241	(60)	301	
Depreciation	1,028	849	**(179)**	**-**	**(179)**	Impacts of new depreciation study for rebasing, increase in TIS assets PvP
GDS EBIT	**1,265**	**1,203**	**62**	**(60)**	**122**	

*PCI +131M due to higher PCI from 2023 and PCI of 3.04% in 2025 vs none in PY LRP
**Deficiency rate adjustment = (242M 2024 Distribution deficiency – 7M DSM) * 3.04% PCI + 14M Equity Thickness – 6M Productivity Update =249M – 67M deficiency in PY LRP = +182M

Capital Bridge (2025 CY LRP vs 2025 PY LRP)

ENBRIDGE

2025 PY Capital LRP	Category	1,831	Variance Explanations (+ increase, - decrease)
Maintenance Capital	MC	94	+44M higher OH Allocation, +27M higher Meter purchases and Regulators refit, +21M higher REWS, +17M higher TIS, +9M higher Fleet and Equipment; -13M lower Unregulated Storage Enhancement projects, -8M lower Compression Stations, -3M Other.
Growth	Growth	(317)	-93M lower Distribution Pipe, -64M lower System Reinforcement, -131M lower Transmission Pipe & Underground Storage, -53M lower Compression Stations, -8M lower Meter purchases; partially offset by +17M higher Customer Connections, +8M higher Distribution Station, +4M Gazifere, and +3M Other.
Integration Capital (CTA)	MC	-	
2025 CY Capital LRP		**1,607**	

Key Message: MC pressures due to higher OH's, TIS, REWS, and higher meter purchases. Growth Capital decrease due to removal of Vintage Steel Replacement, reduction to Owen Sound Transmission, Marten River Compression, and Rideau Reinforcement, reduced D-P expansion and lower Dawn C spend

Key Sensitivities

Assumptions

Assumptions	Proposal			
Year	**2023**	**2024**	**2025**	**2026**
Board Approved ROE	8.66%	8.66%	8.66%	8.66%
FX Rate	1.25	1.25	1.25	1.25
Debt/Equity	64/36	62/38	61/39	60/40
Merit	4%	5%	3%	3%
Inflation *	2.4%	2.2%	2%	2%
GDP IPI FDD	3.9%	N/A	2%	2%
Productivity	0%	N/A	-1.04%	-1.04%
Stretch	0.30%	N/A	0%	0%
PCI (GDP IPI FDD less Productivity less Stretch)	3.6%	N/A	3.04%	3.04%
Customer Growth	39,377	37,624	37,624	37,624

* Only applicable to small portion of O&M. Majority is based off bottoms up approach where known costs are used and not an assumption. Effective inflation rate inherent in O&M budget 5.4% for 2023, 2.4% for 2024

Enbridge Gas
2024 Rebasing Proposal

ENBRIDGE
Life Takes Energy

September 15, 2022

Purpose

Today:

- Review and Approve Rebasing Proposal with President and CEO, Enbridge Inc. and SVP and President, Gas Distribution and Storage
- Rebasing Filing timeline

Agenda

- What will success look like?
- Energy context and affordability
- Meeting the Filing Guidelines
  - O&M
  - Capital invested since last rebasing and 2024 capital additions
  - Capital structure
  - Depreciation
  - Productivity and stretch factors
- Energy Transition context
- Rate and Service Harmonization and Implications for Regulatory Timelines

Rebasing and Incentive Rate Mechanism

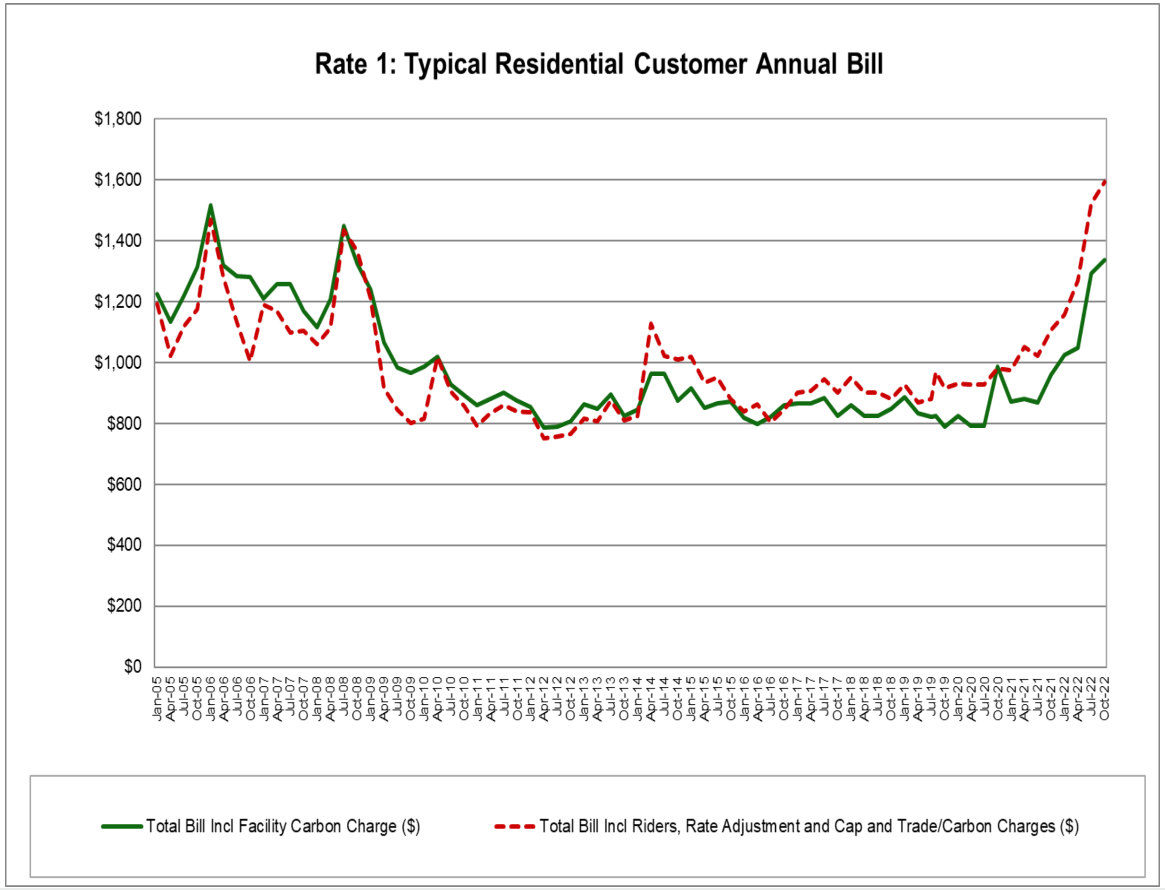
Success measures:

- 2024 rates in place Jan 1, 2024
- 2024 base rates and 2024-2028 incentive mechanism balance customer and shareholder needs
- Energy Transition impacts on business risk mitigated
- Harmonized rates and services across province deliver the “Enbridge” experience to customers

Enbridge is the first major utility to file a post amalgamation rebasing application under the OEB MAADs framework

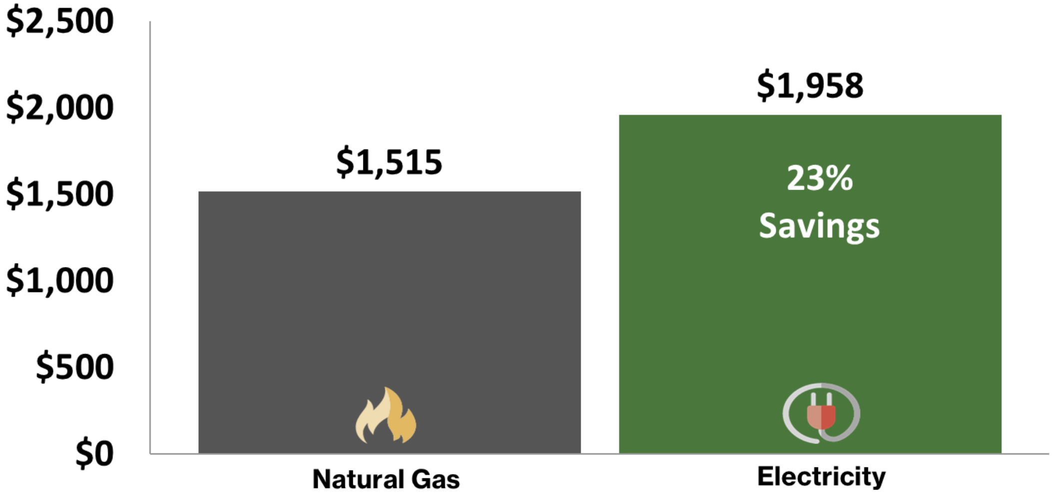
Current Energy Environment

Gas bills at all time highs



Natural gas price advantage declining

Average Residential Annual Heating Bills

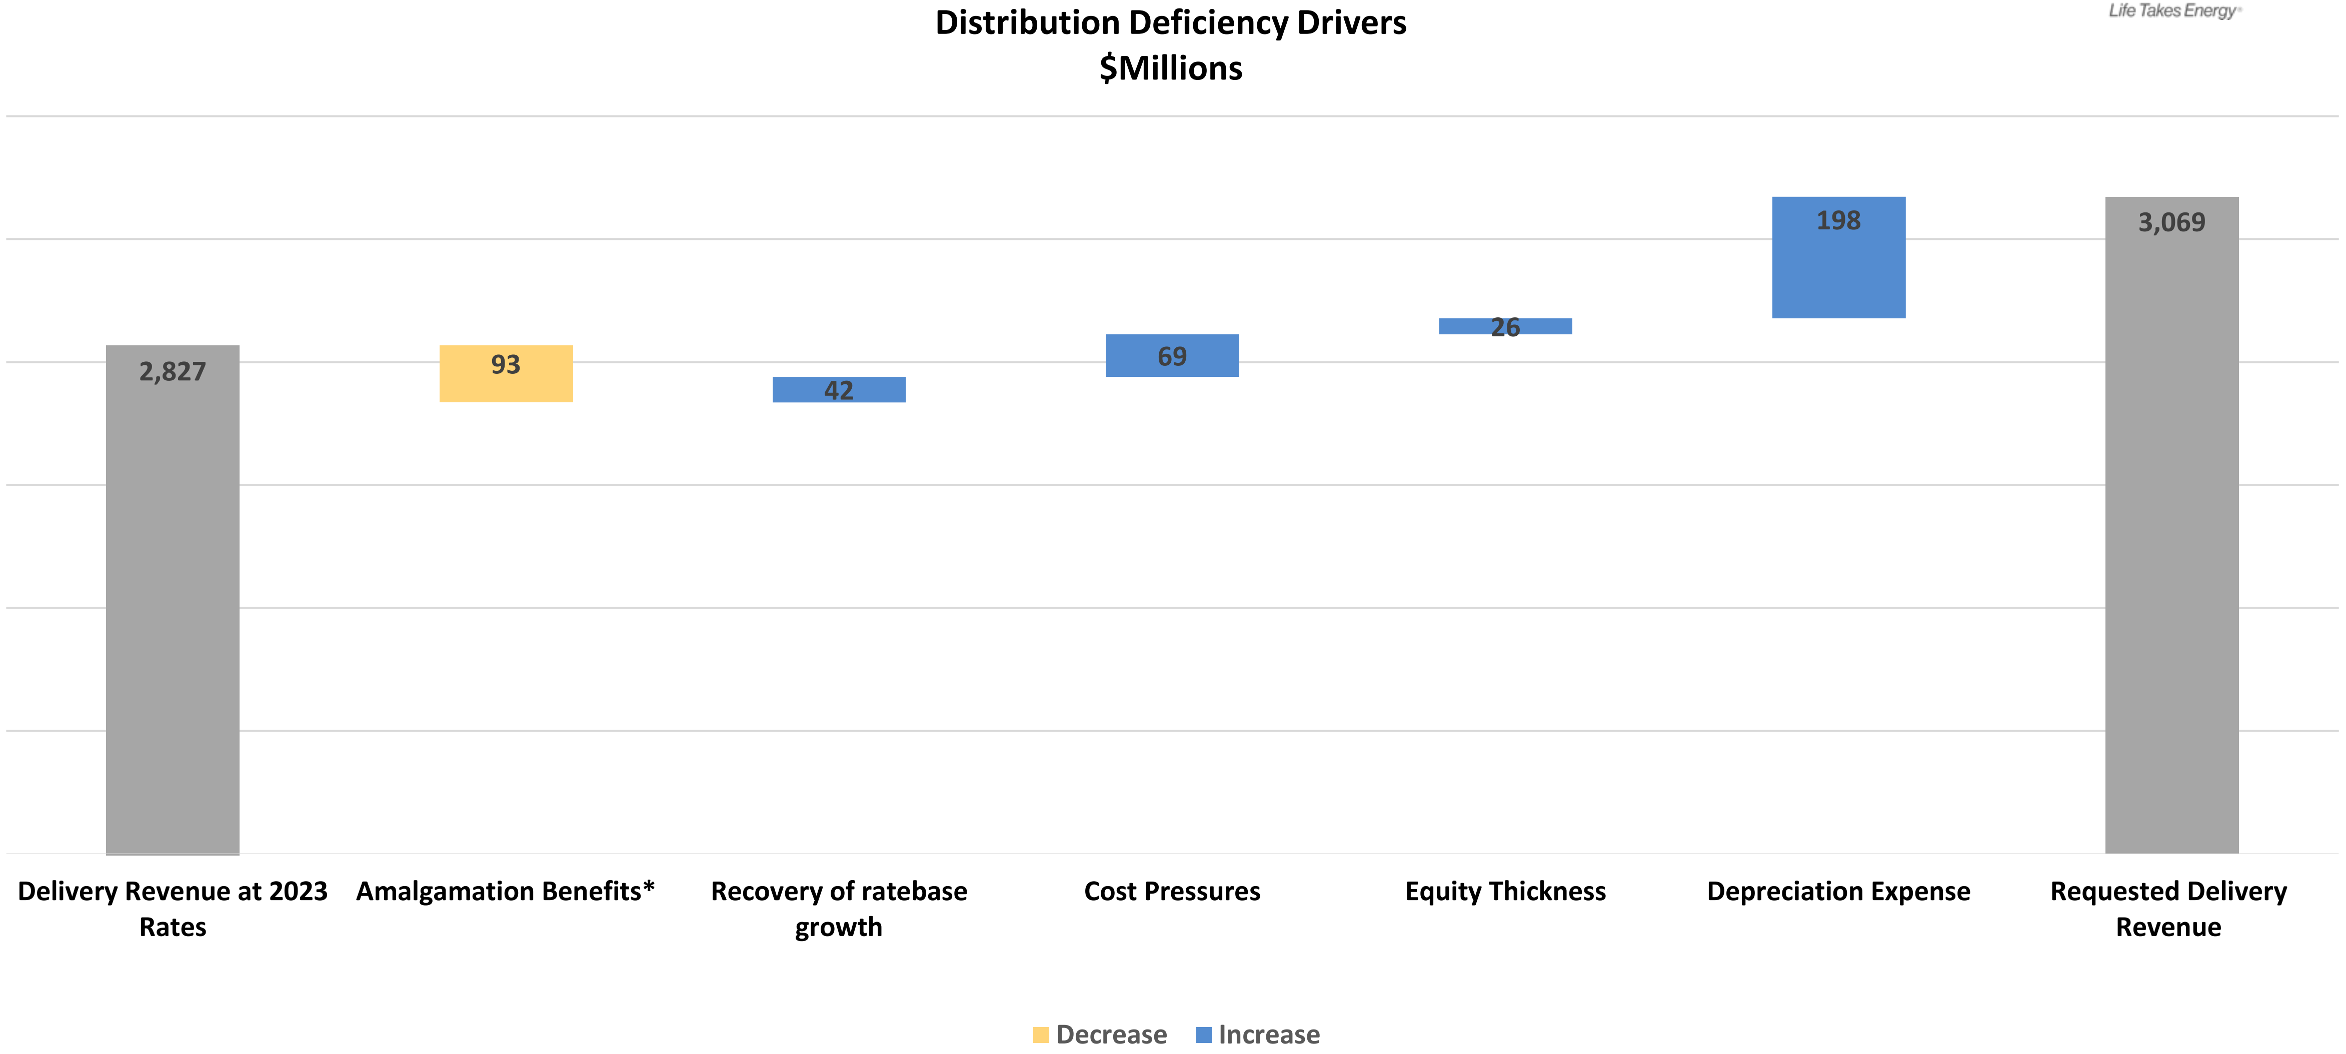


*Average of Rate 1 & Rate M1

Notes: Natural gas prices are based on rates in effect as of **October 1, 2022.** Electricity rate based on Toronto Hydro and London Hydro rates as of **May 1, 2022** and RPP customers that are on TOU pricing. It includes the new Ontario Electricity Rebate (OER). Costs have been calculated for the equivalent energy consumed and include all service, delivery and energy charges. Carbon price is included for all energy types as reported. HST is not included.

Energy affordability, all time high gas bills and escalating carbon prices limit increases in delivery prices

2024 Draft Revenue Deficiency

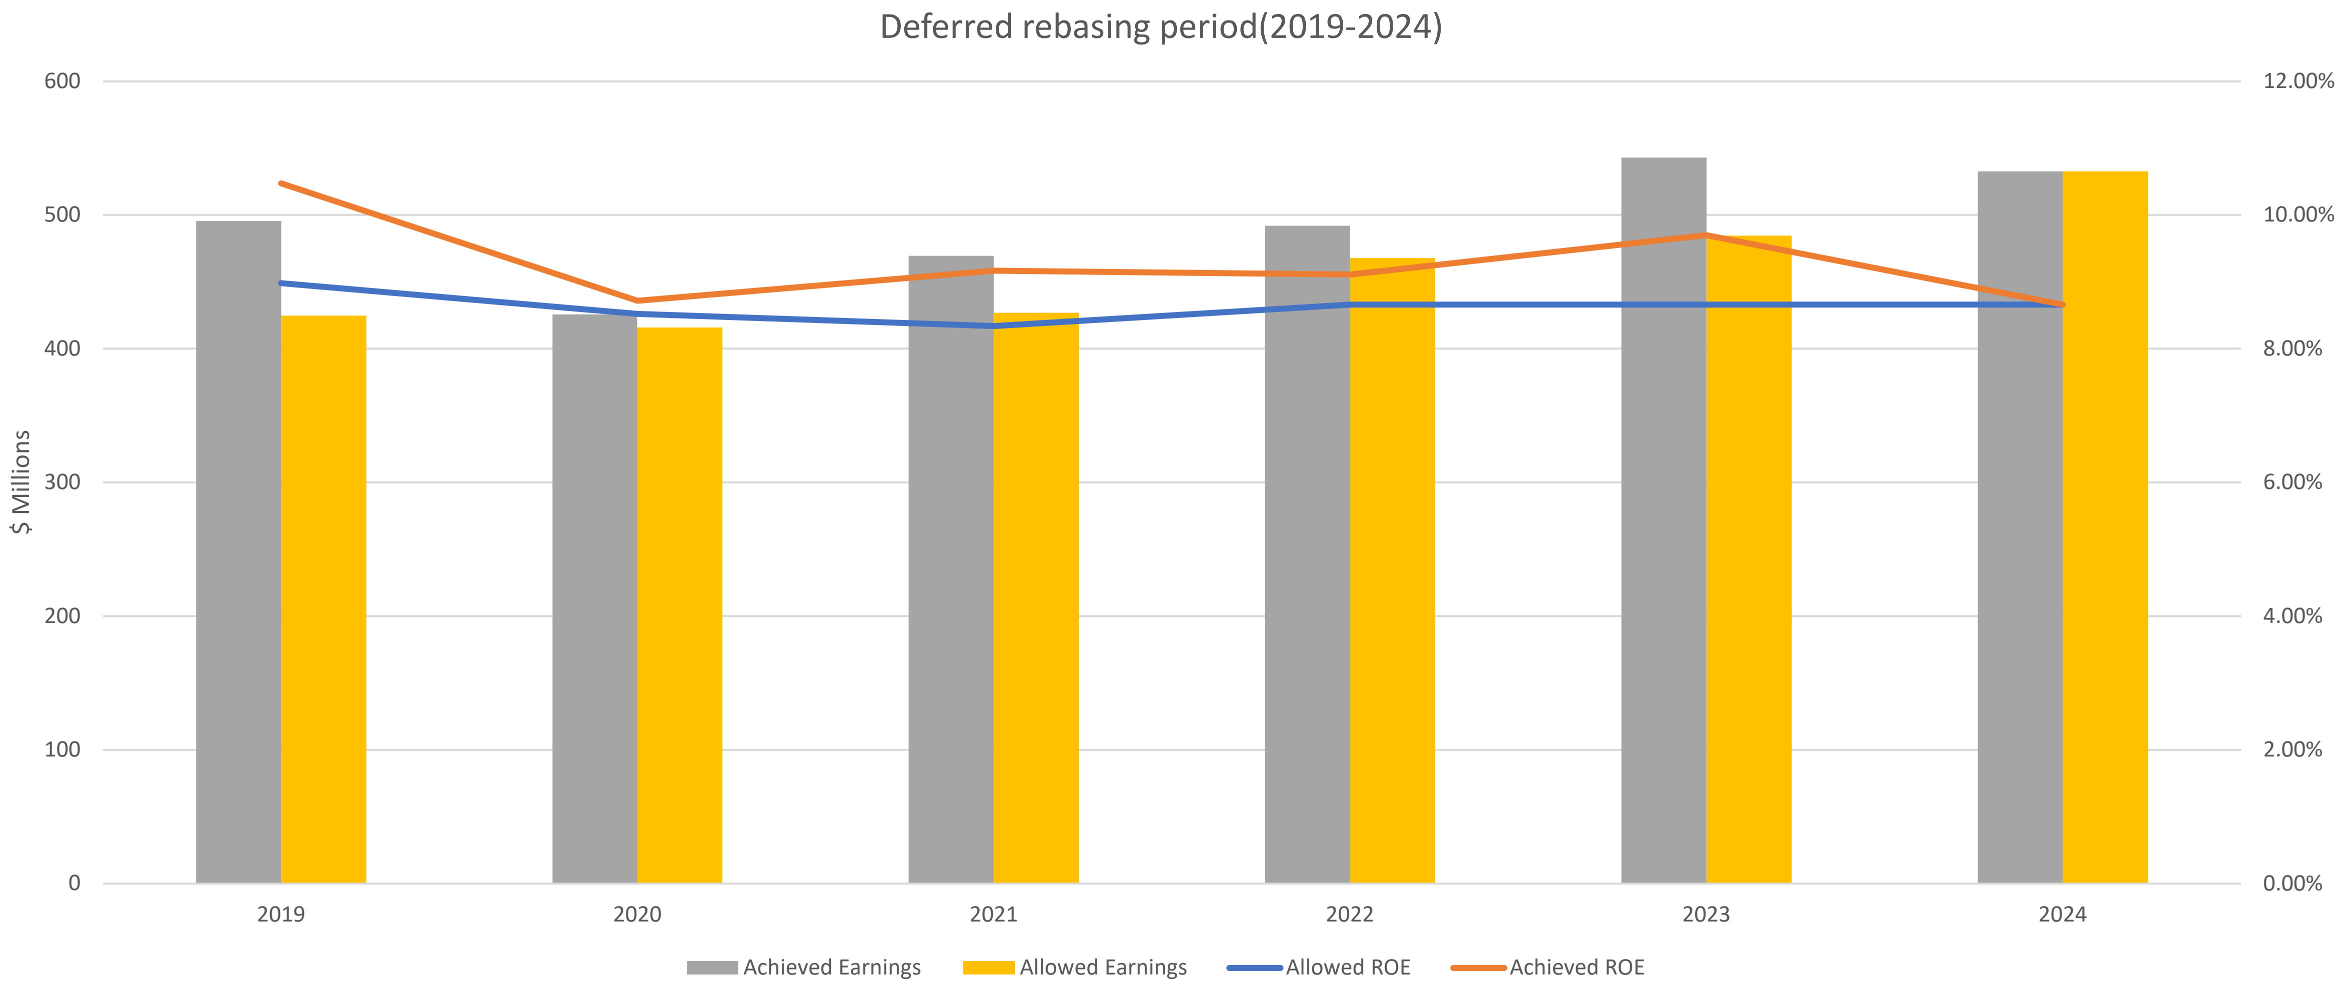


8.6% increase in distribution revenue reflects a 4% average customer bill impact

Notes:
*Amalgamation Benefits includes synergies, productivity, accounting policy harmonization and recovery of Net Book Value of integration costs

Earnings 2019-2024

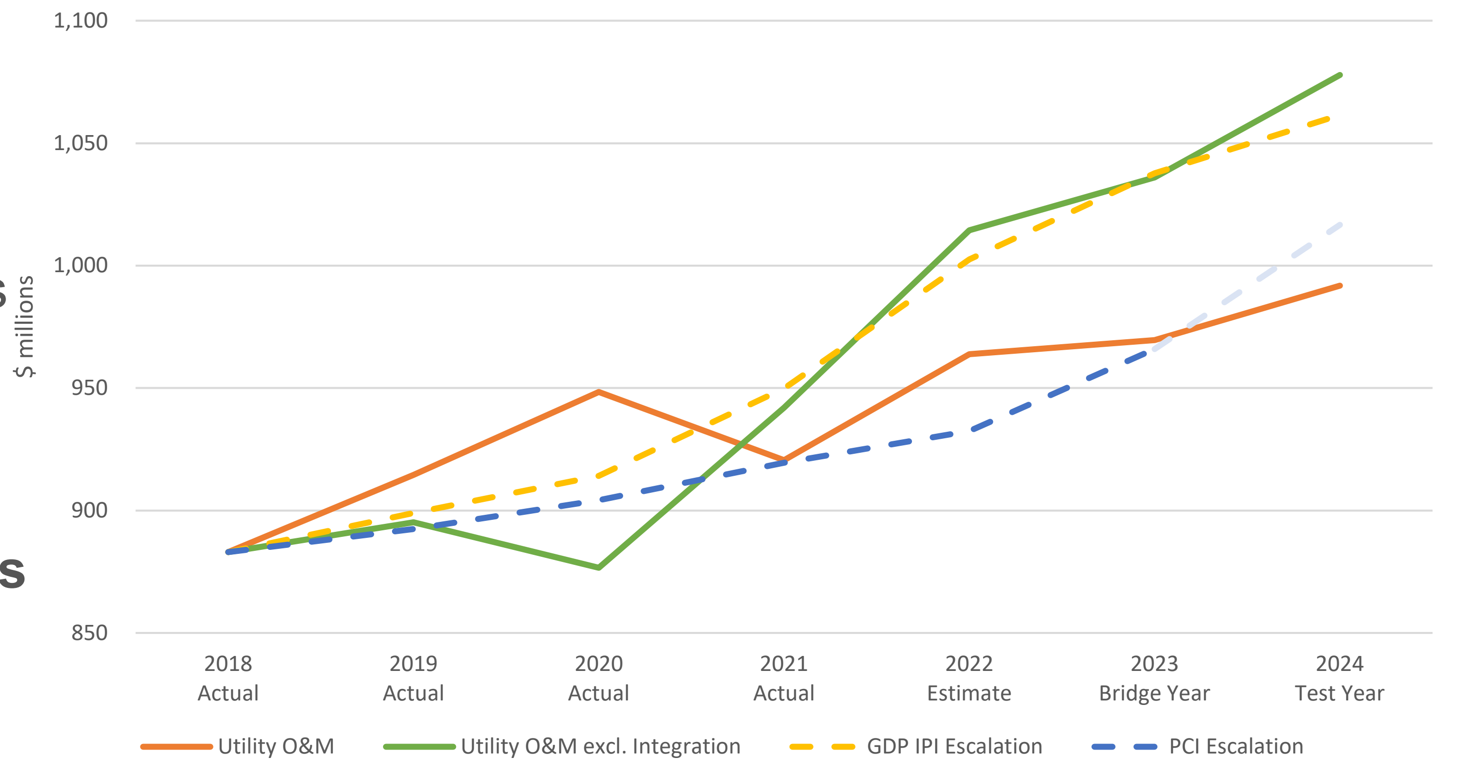
ENBRIDGE
Life Takes Energy



2024 earnings reflects return of amalgamation synergies offset by equity thickness and rate base growth

O&M Proposal – Synergies and Productivity

- Significant Synergies and productivity delivered in O&M through deferred rebasing term
  - $36M already delivered to customers through stretch factor
  - $121M Synergies and Productivity to be delivered by **alignment of organization structure** and **systems**
- Synergies and productivity have mitigated the impact of cost pressures above inflation

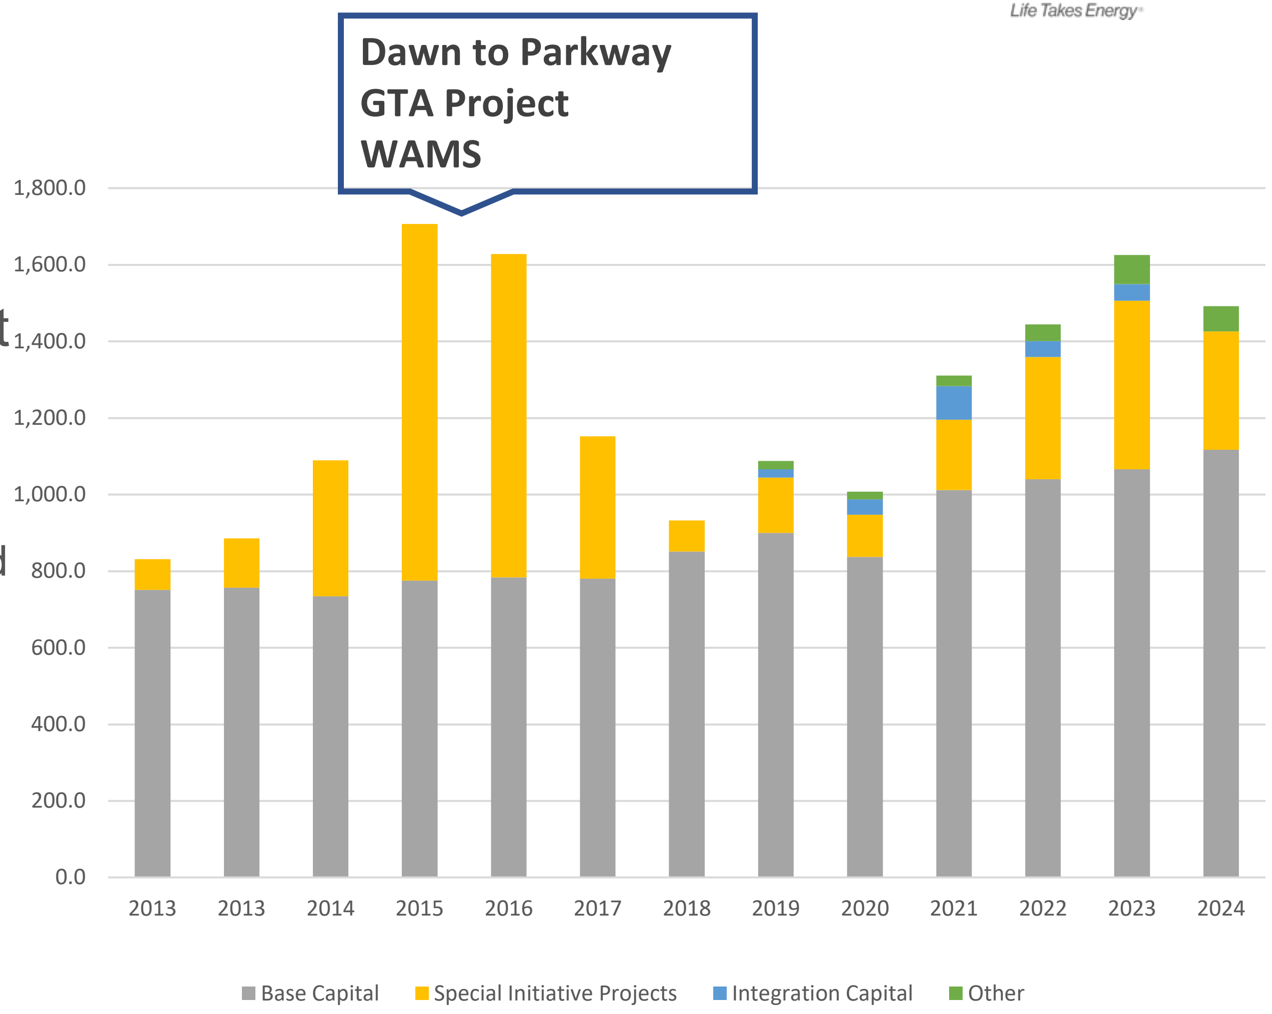


Ratepayers benefit as synergies and productivity have mitigated the impact of cost pressures above inflation

Notes:
OEB Price Cap Index (PCI) escalation reflects a two-year lag relative to actual inflation measured by GDP IPI measure

The Rate Base Proposal

- Annual base capital increases since 2020
  - Growth, integrity, COVID and inflationary cost pressures
- 2024 rates will include 2022 and 2023 forecast rate base additions
- Rate Base deficiency drivers include:
  - Net book value of cost overruns in GTA* project and WAMS* (2015-16)
  - Net book value of Integration capital
  - Shortfall in Rate Base recovery during deferred rebasing (10% stretch on base capital per OEB Policy)
- Rate impact mitigated by lower cost of capital than existing rates

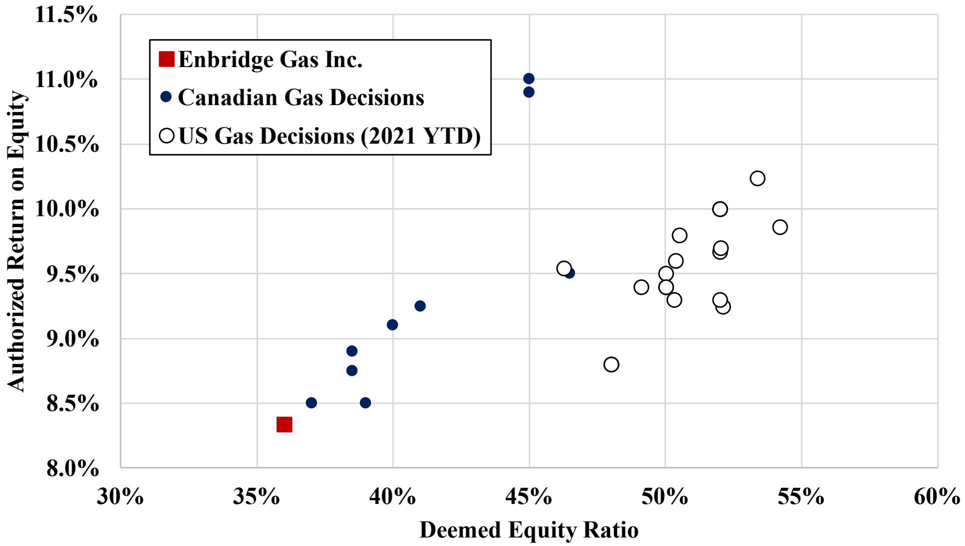


Rate Base additions since 2013 create pressure on 2024 rebased rates, partially mitigated by lower cost of capital

Notes:
GTA Pipeline project and the Work and Asset Management Projects delivered significant benefits through lower delivered natural gas costs, reliability and technology

The Equity Thickness Proposal

- The OEB test for changes in equity thickness is increase in business risk.
- Independent study shows material increase in business risk since 2013 and lowest equity ratio among comparables
- Study encompassed five primary aspects of the Company's risk profile
    1. Energy Transition risk – Significant increase
    2. Volumetric risk – Modest increase
    3. Financial risk – Modest increase
    4. Operational risk - Modest increase to Neutral
    5. Regulatory risk - Modest decline due to fixed rate proposal
- Recommended range of 40%-45%, with point estimate of 42%



- EGI proposal is equity thickness of 38% in 2024 and 1% annual increases to 42% in 2028 strictly for the purposes of smoothing customer rate impacts.

Recommending 5 year phase-in of equity thickness to manage customer rate impacts

The Depreciation Proposal

- EGI's practice is to conduct a Depreciation Study to support depreciation expense at Rebasing Application
  - Routine Methodology and Service Life assessment result in higher depreciation expense
    - "Equal Life" grouping method reduces inter-generational equity, supports Energy Transition
    - Amortization Accounting appropriate for units of property that are not practical to depreciate on an individual basis
    - Constant Dollar Net Salvage used for Site Restoration costs is more equitable for customers and is adjusted for return on capital and inflation
    - Date specific Economic Planning Horizon (EPH) was not proposed at this time, however, would be revisited if significant move to electrification is implemented through provincial legislation and policy
  - Harmonization proposal aligns useful lives of like assets to the shorter life used by the two legacy utilities
  - Depreciation Study will increase depreciation expense by ~$150M and the revenue deficiency by ~$200M

Depreciation asks are well supported by independent studies and/or regulatory precedents

Incentive Rate Mechanism Proposal (2025-28)

ENBRIDGE
Life Takes Energy

- Rates will be set by using an Price Cap Formula calculated as (I - X) ± Y ± Z + ICM, where:
  - I = Weighted inflation factor (75:25 non labor inflation (GDP IPI to labor (average hourly earnings)
  - X = productivity factor and stretch factor (1.35% “adder” to inflation to reflect negative productivity)
  - Y = Costs not subject to Price Cap escalation (pass-through items such as gas costs, energy efficiency programs and specific costs afforded the pass through treatment)
  - Z = costs associated with unforeseen events outside of management control ($5.5M threshold)
  - ICM = Incremental Capital Module to seek funding for incremental capital projects that meet criteria of need, prudence and materiality and exceed the level supported by the formula
  - Earnings Sharing Mechanism, applicable if earnings exceed 150 basis points above allowed ROE, with 50/50 sharing between ratepayers and shareholders (same as current)

Independent consultant recommends rate increases exceeding inflation to reflect NA gas utility cost trends

1. To be finalized

Energy Transition

Divergent emissions targets create uncertainty

Feds focus on net zero

↓40%
Targeted reduction over 2005 levels by 2030[1]

↓40%
Federal GHG reduction left to achieve2030 target[1,2]

Prov. Gov focus on affordability

↓30%
Targeted reduction over 2005 levels by 2030[1]

↓~10%
ON GHG reduction left to achieve 2030 target[1,3]

Larger munis focus on net zero

70%
Have plans to meet net zero targets

2
Toronto & Ottawa plan aggressive move off gas by 2040

Energy Transition and Rebasing Implications

- Enbridge Gas will continue to deliver 2X electric energy and > 4X electric peak capacity over plan period
- However, climate policy creates divergent views on what constitutes sufficient funding to run business during plan period and invest long lived capital

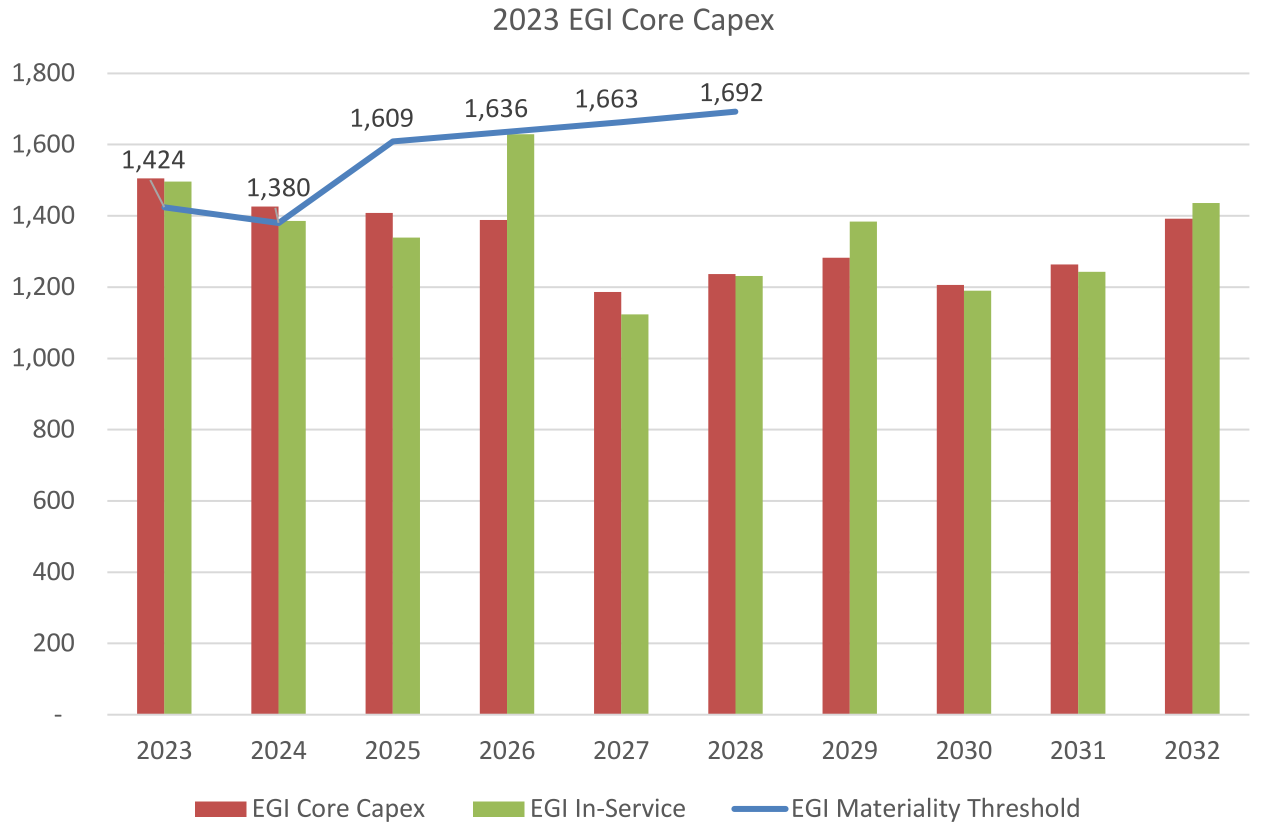
1. Absolute emissions reduction target
2. Federal GHG emissions have grown in other jurisdictions: therefore, full 40% reduction required
3. ~20% achieved via coal plant closures.

Demand Uncertainty due to Energy Transition

Demand Horizon	Risk Mitigant
Uncertainty in demand over plan period	Reflect declining customer additions and plan for lower increments in peak hour and peak day Eliminate revenue volatility by implementing fixed charge recovery of fixed costs (2025/26 implementation) and deferral account treatment for volume variances starting in 2024. Implement Integrated Resource Planning to optimize investments in gas carrying assets, demonstrate prudence (see slide 14)
Uncertainty in demand over life of assets	Commissioned third party study on net zero pathways to inform future policy direction. Diversified pathway including low carbon fuels is $200B and 27% less expensive than electrification pathway. Study presumes the displacement of natural gas with hydrogen over time, with larger volume flow from blended gas File depreciation expense estimates based on 2050 Economic Planning Horizon

The Asset Management and Integrated Resource Plan Proposal (IRP)

- Capex levels demonstrate base capital requirement over the longer term.
- IRP contemplates displacement of pipe with non pipe solutions
- Credible IRP implementation plan critical to recovery of capex in rates
- Strong justification for growth capex within the context of enhanced co-ordination with municipalities and electric LDCs/IESO.
- Strong justification for replacement capex with enhanced integrity approach for distribution pipes



Actively seek opportunities to optimize capex

Enabling Energy Transition through regulation

"Safe Bet" Initiatives	Proposal
Renewable Natural Gas (RNG)	Voluntary RNG backed by system supply, blend percentage rising annually with a 4% blend by 2028
Hydrogen Readiness	Expanding Markham pilot to 16,000 customers, system wide blending study and demonstrate path to increased system wide blending
Energy Transition Technology Fund	$25M rate rider over 5 years to enable low carbon technologies for RNG, hydrogen and end use technology

Modest rate increases to pursue "safe bet" energy transition initiatives

Harmonization proposals add complexity to case

OEB requires harmonization proposals	Impacts on Rates and timelines
Peak design criteria for gas supply procurement and distribution planning replacing legacy criteria	Rates Impact – Neutral When - 2024
Gas supply cost harmonized across province replacing geographically differentiated prices	Rates Impact – range of decreases and increases When - 2024
Depreciation expense methodology replacing legacy approaches	Rates Impact – Significant to some customer groups When - 2024
Customer Service and Rate Harmonization across province	Rates Impact – Significant to some customer groups When - implemented in 2025 and 2026 Capex for systems changes included in asset plan Ability to defer to meet Jan 1, 2024 timelines

Investigate options to contain scope or move to other process to manage Jan 1, 2024 timeline

Next Steps to Filing

- Complete legal reviews and premortem exercise
  - "Prospective hindsight" to inform strengths and weaknesses of plan
  - Facilitated by external counsel and Paula Conboy, ex OEB Commissioner
  - Focus on key revenue requirement components and potential for procedural delays due to complexity
- Oct 31- File revenue requirement and incentive framework evidence
- Nov 30 – File cost allocation and rate design evidence including rate harmonization proposal

Incorporate outcomes of legal review and premortem analysis into final evidence

Rebasing Application Timeline

Process Step	Estimated Timing
Notice	November, 2022
Interventions received	December, 2022
Procedural Order 1	January, 2023
Community meeting	January, 2023
Final issues list	early February, 2023
Interrogatories	mid-February to mid-March, 2023
Technical conference	late March to early April, 2023
OEB staff/Intervenor evidence	early April, 2023
IRs on intervenor evidence	late April, 2023
Settlement conference	early to mid-May, 2023
Oral Hearing	June, 2023
Argument (3 steps)	July to early August, 2023
Decision	October, 2023
Rate Order process	November, 2023
Implement new rates	January 1, 2024

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Question(s):

Please provide a copy of all third-party benchmarking analyses, studies, reports, and/or similar documents, undertaken for, or include Enbridge, since 2017, that are not already included in this application, regarding any aspect that directly or indirectly relates to a material aspect of Enbridge's business.

Response:

Enbridge Gas describes its continuous improvement philosophy and benchmarking in Section 6 of its Utility System Plan, provided at Exhibit 2, Tab 6, Schedule 1.

Enbridge Gas participates in annual benchmarking studies through its membership in the Canadian Gas Association (CGA) and American Gas Association (AGA). The AGA also addresses special topic areas, which have included: Contractor Oversight, Transmission Integrity, ROW Encroachment and Permitting, System Collection and Maintenance of As-Builts, QC and Training, DIMP, Emergency Response and Preparedness, Main and Service Construction, System Regulation and OPP, Carbon Emission Reduction, Leak Repair, Damage Prevention, Gas Control and Gas Compliance.

Both the CGA and AGA have confidentiality agreements in place which require signatories to request permission to distribute their work. CGA and AGA did not grant Enbridge Gas this permission and as such, Enbridge Gas cannot provide the reports.

Additionally, Enbridge Gas participated in customer satisfaction benchmarking studies: Mastio 2022 Transportation Customer Value/Loyalty Benchmarking Study and JD Power 2019 Gas Utility Residential Customer Satisfaction Study.

The Mastio Study is a customer satisfaction and loyalty benchmarking study covering North American pipelines (transportation market). Mastio did not give Enbridge Gas permission to share the study, however a press release for the 2022 study is available online[1]

The JD Power Study is focused on residential customer satisfaction with natural gas, electric and hybrid utilities in the United States, however EGD opted to participate. The results of this study do not include Union or Enbridge Gas, and relate only to 2018. The report was provided on a confidential basis.

Finally, Enbridge Gas subscribes to ESource, which is a subscription-based consulting, data and advisory service provided to North American utilities. The main topics it covers are: electric vehicles, AMI implementation, electrification, batteries, energy equity, customer experience, grid and asset optimization, demand response, and program design. Enbridge Gas was included in the following benchmarking studies:

- 2019 Website Benchmark Study
- 2021 Website Benchmark Study
- 2021 Digital Metrics Service Requests Study
- 2021 Digital Metrics Bill Pay Study
- 2022 Customer Experience Study
- 2021 Utility Social Media Study
- 2018 Utility Social Media Study (Union Gas)
- 2021 Account Management Assessment

ESource granted permission to list the benchmarking studies, but did not grant permission to share the reports.

Question(s):

Please provide a copy of all budget guidance documents that were issued regarding the budgets that underlie the application.

Response:

Please see the Approach and Guidelines for GDS 2023 Financial Planning Process memo in Attachment 1 and the Enbridge Budget and 5+7 memo plus interest rate assumptions in Attachment 2.

At the time of distributing the Process memo, certain assumptions were not yet available. The following updates were made later in the process:

- FX Rates: set at 1.25 USD/CAD for 2023 to 2026 as per Attachment 2

- Long-term & Short-term Interest Rates: as per Attachment 2

    - Short Term: 2.9% for 2023 to 2024, 2.4% for 2025, and 2.1% for 2026
    - Long Term 10 Year: 3.1% for 2023, 2.9% for 2024, 2.8% for 2025, and 2.7% for 2026
    - Long Term 30 Year: 3.1% for 2023, 3.0% for 2024, 2.9% for 2025, and 2.9% for 2026

- PCI: PCI was updated to 3.6% for 2023 based on revision of 2021 quarterly inflation index by Statistics Canada in June 2022. For 2025 and 2026, the PCI assumption was updated to 3.04% based on an estimated productivity factor of -1.04% at the time of budget finalization.

- Merit: was updated to 4% for 2023, 5% for 2024, and 3% for 2025 to 2026.

Re: **Approach and Guidelines for GDS 2023 Financial Planning Process**

The purpose of this document is to provide an awareness of the guidelines and timelines for the preparation of the GDS Budget and Long-Range Plan (LRP) for years 2023-2026. The preliminary budget & LRP will also form the basis of the rebasing application for 2024, while 2025 and 2026 will form the last two years of the LRP.

The 2023 Financial Planning Process timeline is as follows:

Budget Deliverable	Due Date	Accountability
EGI Capital Budget and LRP	23-May-22	Finance, Asset Management
EGI O&M Budget and LRP	29-Apr-22	Finance, Business
Other GD/Affiliates	Mid-June	Finance, Business
EGI Revenue Budget and LRP	22-Jun-22	Finance, Business
EGI Cost of Gas Budget and LRP	30-Jun-22	Finance, Business
Budget & LRP Approval	Late July	Finance, Michele Harradence
Budget & LRP Presented to Corporate	6-Sep-22	Finance
Budget and LRP submission	16-Sep-22	Finance

General 2023 Budget Planning Approach

- The EGI Budget will be based on a **price cap** rate setting mechanism for year 2023; 2024 will be based on **cost of service** as part of rebasing; 2025 and 2026 will be based on a price cap rate setting mechanism.

- EGI's 2022 2+10 Forecast will form the basis of evidence for the year 2022 in the rebasing application, and it should be used in calculating ending balances and rolling forward schedules as required for 2023. The preliminary 2023 Budget and 2024 LRP will form the basis of the 2023 and 2024 years of the Rebasing filing, respectively.

- EGI's 10-year Asset Management Plan (AMP) will be used to derive the capital expenditure outlook for each year of the Budget and LRP, including a list of projects and spend that meet the Incremental Capital Module (ICM) criteria for years 2023, 2025 and 2026.

High level guidelines for the development of the Budget and LRP are provided below:

Revenue Guidelines	• The General Service (GS) Budget will be based on forecasted volumes and rates. Volumes are determined by forecasted customer count and average use. Forecasted customer count is based on forecasted housing starts, conversions, community expansion and attrition assumptions. Forecasted average use is based on historical trend analysis that includes a normal weather assumption, efficiency gains (including Demand Side Management (DSM)), and prices. • The Contract Market (CM) budget is based on a forecast of fixed Contract Demand (CD) charges as well as variable charges based on forecasted consumption. The forecasts of both of these components are developed primarily through a bottom-up approach, based on direct engagement with existing customers. The forecast will also include volumes and revenues associated with capital projects, in alignment with the AMP. • The S&T budget is prepared in two phases – the volume forecast and the revenue forecast. The volume forecast is based on contracted volumes from existing customers and any additional volumes from potential future growth and expansion projects, in alignment with the AMP. Transportation revenue is determined by applying rates provided by Rates to fixed contracted demand volumes and a variable charge based on forecasted consumption. Storage revenue is a combination of revenue from existing contracts and a forecasted competitive market rate applied to available storage capacity. • Regulatory items such as deferral accounts that impact revenue (APCDA, TVDA, ICM, etc) are layered on as required. • 2023 Filed Rates will be based on PCI escalation and will be applied to the volumetric budget to generate revenues for 2023. • Revenues for 2024 will be based on revenue requirement determined based on a Cost of Service application. Revenues for 2025 and 2026 will be escalated from 2024, based on a forecast of PCI. • Volume budgets will be reviewed and approved by Directors and VPs in April, and Revenue budgets will be reviewed and approved by Directors and respective VPs throughout May and June before being consolidated into EGI's Budget.

Capital Guidelines	• Finance will provide the ICM Threshold for years 2023, 2025 and 2026. • The EGI AMP will be used to determine core capital spend and proposed ICM project spend based on prioritization and optimization. The budget will be optimized by rate zone for 2023. Upon rebasing, it will be assumed that EGI will operate under one rate zone. • The Budget and LRP will include both Core and Non-Core Projects.
O&M Guidelines	• The 2023 Budget and 2024 LRP will be developed following a grassroots approach to support a fully defendable cost of service for the Rebasing application. Inflation assumptions are to be applied to current cost estimates, unless there are known and identifiable adjustments (increases/decreases) to cost estimates that are required to reflect current market conditions, for example, where different inflation assumptions should be applied. • All one time program costs (increases/decreases) should be reflected in your budget and LRP submission. • The O&M budget process commenced on February 7th with the Overhead Capitalization Study and will wrap up by April 29th to fulfill regulatory timelines. • The Workforce Budget (WFB) process will be managed separately in light of the compressed timelines. O&M analysts started working with Directors and VPs in early March and will complete entry and consolidation in the WFB tool on their behalf. VP approvals need to be completed by April 22nd. • The WFB is based on FTEs as of February 28th inclusive of any approved vacant positions. The goal is to keep FTEs flat. Any adjustments will be subject to senior leadership approval. • The Cost to Achieve (CTA) program ends as of December 31, 2023. Any new CTA spend in 2023 will be subject to business case approval, where project savings are required to offset project costs in 2023. • A budget package with additional information, instructions and templates was sent the week of March 7th. O&M analysts will be working with their business clients in advance of this date.

Key Assumptions for 2023 Budget and LRP years

2023 Budget and LRP Input	Assumptions
PCI*	3.8% for 2023, N/A for 2024, 2% for 2025-2026
Inflation (CPI)	2.4% for 2023, 2.2% for 2024, and 2% for 2025-2026
FX Rates	TBD

Long term & Short-term Interest Rates	TBD
Salary Escalation – non-Union employees	3%
Salary Escalation – Union employees	Per Collective Agreement

**Stats Can may be providing update June 1st with revised inflation benchmark – update may be required

Subject: INFORM: BUDGET & 5+7
Date: Friday, May 20, 2022 9:04:01 PM

Hi all,

Below and attached are the key dates and information for the 5+7 and the Budget.

Summary

- Please see attached assumptions for the Forecast / Budget and LRP. Updated assumptions for Budget/LRP will be circulated for consideration in August.
- EPBCS is open for inputs for both Forecast and Budget/LRP
- USD/CAD FX Rate set at **1.25** for Forecast and Budget/LRP
- Presentation decks: Please continue to customize as necessary but include, at a minimum, the information in the attached Templates.

5+7 Forecast:

- Presentations are booked for the week of **June 14**
- EPBCS Load Deadline **June 16**
- Allocations True-Up for forecast months **June 16**
- BU SEGTYD Signoff **June 17**
- BU STIP Scorecards due to Corporate FP&A **June 23**
- Interest Signoff **June 24**
- Tax Signoff **June 30**

Budget/LRP:

- The BU review meetings (including the CFO and ELT members) are scheduled for the week of **September 6th**
- Hyperion load deadline **September 16**
- Risked capital listing **September 16**
  - Updated risked capital listing (for projects not included in the plan) including: Project Name, Description (if available), Organic vs Acquisition, Capex ($) by year of the plan, Estimated ISD Target, Risk Weighting (%), EBITDA by year of the plan or EBITDA Multiplier (if available), any other relevant information.
- Sign off on BU EBITDA/DCF **September 19** (including Equity Earnings/Dividends, AFUDC, Core Maintenance, Other DCF Adjustments, Depreciation, NCI (if relevant))
- Treasury sign off **September 27**

Tax sign off **October 3**
- ROCE sign off **October 14 (Tentative)**

We are aiming to distribute Budget/LRP Targets in Mid-June.

System Updates:
The LRP process for Non-O&A accounts (Revenue, Equity Earnings, COS etc) has been changed in EPBCS in order to provide more control over accounts that aren't typically escalated.

Legacy Process: Budget data is entered into the budget year and pushed into LRP periods and;
- Can then be escalated by x% in the LRP years
- Can further be adjusted using 'LRP input'

Revised Process:
- Remove escalation functionality for non O&A: Revenue, Cost of Sales, Equity Income etc.
    - This means the LRP input form will be restricted to O&A accounts only
    - Existing Plan forms for Revenue, Cost of Sales, Other Income/Expense etc that used to only have budget year data, will now have LRP years and can be entered into directly (Dec only)

Please let me know if you have any questions or concerns.

Thanks,
Thomas Pang

Question(s):

For each year since 2018, please provide a copy of any corporate scorecards, and any other similar annual documents, that Enbridge or Enbridge Inc. uses to set internal targets and track the performance of Enbridge's business.

Response:

Enbridge Gas's OEB scorecard was established in the MAADs proceeding[1]. The OEB scorecard results for 2017 to 2021 are provided at Exhibit 1, Tab 7, Schedule 1, Attachment 1, page 1.

Internal scorecards outline goals and measure performance during the year. Targets are set using a methodology that considers past performance and stretch goals for continuous improvement.

The internal Gas Distribution and Storage (GDS) business unit[2] scorecards for the years 2019 through 2022 are provided at Attachment 1. Scorecards are used to measure internal performance and achievement of scorecard objectives and are directly linked to the Short-term Incentive Plan (STIP). Of note, some results have been impacted by the alignment of systems and processes through amalgamation.

GDS 2022 scorecard

		Year-end target		
Key performance indicator	**Weight**	**Doesn't meet**	**Meets**	**Exceeds**
Ensure safe, reliable operations	**35%**	**0x**	**1x**	**2x**
People not getting hurt Total recordable injury frequency (TRIF) per 200,000 employee and contractor hours worked	15%	1.00	0.76	0.68
Environmental incident frequency (EIF) Number of environmental incidents (non-compliances) per 200,000 employee and contractor exposure hours	5%	0.26	0.18	0.15
Pipeline system safety (PSS) Leak and release frequency (LRF) defined as: (Tier 1 Count x 10 + Tier 2 Count) x 1,000 kms/kms of pipelines	5%	0.21	0.10	0.08
Total damages per 1,000 locates First, second and third party line breaks per 1,000 locate requests	5%	2.28	2.07	1.86
Cybersecurity: predictive susceptibility to a real phishing attack Percent clicked on compliance phishing test	5%	6.9%	4.9%	2.9%
Maintain financial strength and flexibility	**35%**			
Adjusted earnings before interest, taxes, depreciation, and amortization (EBITDA)	35%	1,784	1,839	1,894
Progress toward our ESG goals	**10%**			
D&I	5%			
Composite Net increase on overall diverse representation as a percentage of our workforce	3%	1.2%	1.5%	2.5%
Composite Employee/leader training completion percentage of completion of Indigenous awareness training	2%	90%	95%	100%
Emissions	5%			
GHG emissions reduction	5%	-8%	-4%	2%
Execute and extend growth	**20%**			
EBITDA generated by growth capital (millions) Includes organic growth projects and M&A	20%	$17	$30	$58
Total	100%			

ENBRIDGE®
Life Takes Energy®

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1

Question(s):

Please provide summaries of all internal audit reports conducted since 2013, related to any aspect that directly or indirectly relates to Enbridge's business, their findings, recommendations, and the status of any actions that have or are to be taken.

Response:

Please see Attachment 1 for summaries of internal audits relating to Enbridge Gas since 2019. Certain information has been redacted for security reasons and a confidential version will be filed separately with the OEB. Compiling information on internal audits for EGD and Union prior to 2019 would require a considerable amount of time due to changes in tracking systems and would also be of limited value as the findings relate to the predecessor organizations.

Engagement Name	Finding	Management Action Plan	Finding Status
Utilities - Purchase Gas Variance Account Assess the design of the legacy utilities' accounting policies, procedures, controls and processes associated with the PGVA and related commodity costs, including clearance of the account.	Widespread use of spreadsheets and manual input files which are prone to input error, lack protection and are not stored centrally	1. Access restrictions and version control for key spreadsheets prepared for gast cost, PGVA and QRAM by Cost of Gas team 2. Access Database for interim solution to reduce manual inputs into legacy EGD spreadsheets prepared by Cost of Gas team 3. Cost of Gas Replacement Project to be implemented to reduce reliance on manually-prepared data 4. Protections for key inputs and calculation cells as well as central storage of key files for QRAM by Regulatory	Closed
	Accountabilities within the Cost of Gas team are in transition	1. Monthly mock QRAM process to be implemented 2. Process documentation will be completed for QRAM and PGVA reconciliation processes	Closed
	Lack of documented operating procedures within Cost of Gas processes	Detailed operating procedures will be documented for key legacy EGD Cost of Gas tasks	Closed
SCADA Field Device Audit Assess the information technology controls related to management of SCADA field devices to determine if key controls exist and are effective, and that policies, processes, and procedures are in place to help ensure the security and availability of this class of assets.	GDS - An untrusted telephone network is directly connected to Remote Terminal Unit (RTU) modems without adequate protection.	Dial-up connections will be phased out and disconnected from all affected RTU Modem Ports at communication centers by January 24, 2020.	Closed
	GDS – Test procedures and results associated with configuration changes need to be formally documented.	Engineering will develop EGI standard for testing and recording of RTU changes	Closed
	GDS - Firewalls are not deployed where cellular modem has a direct serial connection to a RTU and the built-in cellular modem firewall is not enabled.	Stations with the 3330 RTU will be phased out and upgraded to Control Wave Mircro RTU architecture. The upgrade plan to be developed by Engineering and Telemetry team.	Closed
	STO - Multi factor authentication should be required for all connections initiated between the business and the control network.	Multi factor authentication solution will be implemented.	Closed
	STO – Passive vulnerability scanning capability should be available to monitor the OT control network environment.	ICS Segregation Program: Detection and Monitoring Phase 2 Track 1- Deployment of Silent Defense Sensors to 2020 Important site list (target of 150 sites), including the 140 that were deployed in 2019. Vulnerability Management – Phase 2 Phase II will extend the scope of the vulnerability management and patch management program to the OT environment. Build OT asset inventory, expand existing patching workflow to applicable assets in the OT environment, continue to support implementation of the IT environment patching process.	Closed
	[redacted]	[redacted]	[redacted]
	STO – Annual RTU configuration back up was not performed for 2019.	New work orders (site documentation) were created and rolled out to capture the requirements for documentation and backups. The SAP system was reviewed to ensure the work orders were created for all sites at Parkway for 2020, that they were consistent and called out the need to perform program backups. Complete review of the process as part of 2020 maintenance planning.	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
SCADA Field Device Audit Assess the information technology controls related to management of SCADA field devices to determine if key controls exist and are effective, and that policies, processes, and procedures are in place to help ensure the security and availability of this class of assets.	STO - Test procedures and results associated with configuration changes need to be formally documented.	Currently MOC process development is underway including the updates to Form #8827 to document the information being changed for historical reference, approvals, reviewers as well as completion of bench test. Implementation of this MOC to be completed by year end. New MAP from Umair Khan (Sr Engineer Electrical Controls): 2 procedures are scheduled to be published - Engineering Approvals for Electrical and Control Assets (May 2021) and RTU program testing and recording procedure (Q3, 2022). The reason for the long cycle is that the engineering procedures are refreshed and approved on an established schedule. IA has updated the implementation date to Q3 2022.	Closed
Physical Location - GDS STO Assess the execution, awareness and existence of Life Saving Rules (LSR's) in the Gas Distribution and Storage (GDS) Storage and Transmission Operations (STO) Region that support safe and reliable operations.	Procedures for completion and review of hazard management activities and required documentation is lacking for Legacy Union Gas sites.	Response to this audit finding will be built into the safety program integration work. The legacy company site specific hazard assessment processes will be harmonized, and the new process will include an assurance component to monitor adherence to the process. The updated procedure will be rolled out to the Region through typical Management of Change process, and targeted training will be provided to Operations team members as required.	Closed - Management Accepted the Risk
	Lock-out-tag-out (LOTO) locks are being used for non-LOTO activities resulting in confusion of the locks purpose.	As part of integration activities lead by the Health and Safety team and supported in part by STO, a revised procedure outlining the use of operational locks will be implemented. The procedure will be communicated to the Region through the normal Management of Change process. To mitigate any short-term risk of confusion, the interim plan will be to clearly identify the operational locks currently used in the process and document the local process with a copy kept in the control room until the new procedures are finalized and implemented	Closed
S&R – Underground Storage Integrity Management Assess alignment with Enbridge's current operational processes and procedures applicable to the Underground Storage Integrity Program (Program). The Program considers the Management System Framework (MSF), and applicable Canadian and U.S. Underground Storage (UGS) Regulations, Codes and Standards including State and Provincial; Review and assess the maturity of the Program as it relates to operational risk management; Review and assess progress made in implementing management action plans from the prior Operational Risk Management Verifications	Criteria and training for operations have not been established for UGS activities.	Leverage the competency matrix developed for Distribution Integrity Management Program to develop the competency framework for SDIMP which includes a process for tracking progress. (Note: will leverage the Technical Competency Learning Path within Technical Training)	Closed
S&R - GDS Pipeline Integrity Management Assess alignment with Enbridge's current operational processes and procedures applicable to the Gas Distribution & Storage (GDS) Integrity Management Program (Program). The Program considers the Management System Framework (MSF) and applicable Canadian or Provincial Regulations, Codes and Standards	Hazard & Risk Register does not address all hazards and risks	Tranmission Integrity Management Program (TIMP) - Re-evaluate geotechnical hazards and associated risk and where appropriate, incorporate into hazard and risk register Distribution Integrity Management Program (DIMP) - Update the hazard register to ensure all hazards associated with water and bridge crossings are adequately identified.	Closed
	Collection and reporting of "leading indicators" needs improvement to support early indications of a potential issue	Identify appropriate leading indicators	Closed
	Assessments of life expectancy or time to failure has not been established	Work with other Enbridge Business Units to re-evaluate Engineering Assessments (EA) and Fitness for Service (FfS) methodology	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
S&R - GDS Pipeline Integrity Management Assess alignment with Enbridge's current operational processes and procedures applicable to the Gas Distribution & Storage (GDS) Integrity Management Program (Program). The Program considers the Management System Framework (MSF) and applicable Canadian or Provincial Regulations, Codes and Standards	The process for technically qualifying contractors is not fully developed	TIMP - Work with Supply Chain to ensure their process for technically qualifying contractors adequately reflects the criteria DIMP - Assess if any improvements need to be made	Closed
	Over-reliance on contractor inspections and results	Develop processes to conduct vendor quality checks for In-line inspections (ILI) and Non-Destructive Examination vendors.	Closed
	The program does not account for a review of effectiveness of integrity controls	Develop Safety & Reliability (S&R) targets and KPI	Closed
	Assessments of non-inspected pipelines and mains are not addressed in risk model	Expand risk model to include non-piggable pipelines.	Closed
	There is no documented process for deferral of integrity activity	Include in the new Condition Monitoring Standard	Closed
	Subject Matter Expertise (SME) and programmatic oversight for pipeline threat needs improvement	Document the SME approach	Closed
	Key integrity position competencies are not identified	Leverage the DIMP competency matrix	Closed
	Inspection redundancies are not established for high-risk asset classes	Review and document the level of redundancies	Closed
Gas Purchasing Assess whether gas purchase controls and related processes allow for:i. Reliable, cost-effective gas purchases in accordance with gas purchasing plan;ii. Compliance with the Gas Supply and S&T Risk Management Procedures; and iii. Compliance with the Information Sharing and Access Policy for purchases of storage and transportation capacity between the legacy utilities.	Front, Mid and Back Office reporting structures and responsibilities are not appropriately segregated, which can increase the risk for improper recording of transactions and increase the opportunity for fraudulent activity not being detected.	1. Revise responsibilities and update Gas Supply Procedures 2. Review and update of organizational structure	Closed
	Risk Control compliance monitoring and reporting process excludes gas purchase transactions recorded in SAP, related to legacy Union, as they do not have access to this data.	Risk Control will implement compliance monitoring of SAP transaction level data for EGI commodity forward transactions	Closed
	Deals can be modified in SAP without prompting secondary review	Review of SAP transactions modified after release/approval	Closed
Damage Prevention Program Assess, based on risk, the design and operating effectiveness of key operational processes and controls within the Damage Prevention Program.	Risk Register is missing information on risk owners, associated hazards and internal controls	As the GDS risk register (RR) was recently combined, there was a direct transfer of some line items with terminology used in both legacy companies that may not perfectly align with the Framework Standard and many risks on the risk register are still in draft form. •The integration of the combined risk register is being done in a prioritized manner with High (H) and Very High (VH) risks being addressed first.To ensure that there is clear line of sight to H and VH risks, as well as some Medium (M), these are reported through the quarterly management review programs. •The GDS Risk Team will commit to reviewing the list of hazards used in the Risk Register (RR) to ensure they align with the Risk Management Framework Standard and/or Controlled Vocabulary.	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
Damage Prevention Program Assess, based on risk, the design and operating effectiveness of key operational processes and controls within the Damage Prevention Program.	A defined process to enable the existence of 2nd party training records has not been fully developed	Damage Prevention's participation in the Locate Alliance Consortium (LAC) has an existing review process related to 2nd party training. In addition to the existing measures listed below, this MAP will enhance training records and assessments. •All Locate Service Provider (LSPs) complete LAC training –full training for new, refresher for existing •Training is reviewed at LAC monthly geographic and provincial meetings Through the MAP, Damage Prevention will complete the following: •Cross reference all Datapak/FRA users on an annual basis with received validated training records for all 2nd party locators •Where there is no Datapak/FRA access required by 2nd party locators, a quarterly assessment/random sample audit of completed locates will be conducted to ensure the appropriate training has been completed and up to date with company standards (minimum of 10% of locators annually) •Ensure the above is documented as a systematic & repeatable process for receiving all 2nd party locator training records, along with validation and cross referencing across EGI (GDS, Storage, Gazifere).	Closed
	4 of 5 Damage Prevention (DP) processes are undocumented or are partially documented	Formally document DP processes Formally document Common Element processes	Closed
	Controls are not linked to legal and regulatory requirements within the legal registry	As part of the ongoing Content Management Project, work is underway to map controls to requirements for integrated documents and the requirement to do so is included in the draft Content Management Governance document. As part of the continued implementation of the Ethics & Compliance Framework Standard on Requirements Management, the GDS Requirements Management Implementation Plan document also includes the requirement to map controls to requirements.	Closed
	Evidence to support that all IMS elements are assessed as part of management review needs enhancement	Ensure management oversight and assessment of the Integrated Management System Elements through the IMS Governance Framework and process: o Define roles and responsibilities for Element reporting and oversight in IMS Governance Standard o Provide quarterly element update to Top Management through the IMS Effectiveness Dashboard o IMS to facilitate quarterly Element touchpoint and provide update to relevant Stakeholders	Closed
GDS Control Room Management Assess whether the Gas Distribution & Storage (GDS) Control Room Management Plan (CRMP) and other Control Room Management (CRM) related processes are compliant with applicable regulatory requirements, including the Onshore Pipeline Regulations (OPR) and Pipeline and Hazardous Material Safety Administration (PHMSA). This included a review of the adequacy and effectiveness of the CRMP.	Verification of safety-related alarm points and descriptions has not been fully completed within timelines required by PHMSA.	• Establish process to verify PHMSA asset safety related alarms sets points and descriptions on an annual basis, not to exceed 15 months with Sr. Advisor. • Update CRM plan with new process and review new process with Sr. Advisor. • Complete the safety set point verification activity for PHMSA assets.	Closed
	The September 2020 monthly alarm review, that reviews alarms taken off scan for maintenance or operating activities in the field, did not identify changes from the prior month.	Expand off-scan monthly alarm review process documentation to outline what is included in the review, process for tracking/follow-up, and accountability. • Technical Specialist to document work process for future training purposes.	Closed
	Key reports used to complete the GDS monthly alarm review are not validated on a periodic basis to assess for completeness and accuracy.	• Control Room team will incorporate this finding into the development of the Quality Assurance Program.	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
GDS Control Room Management Assess whether the Gas Distribution & Storage (GDS) Control Room Management Plan (CRMP) and other Control Room Management (CRM) related processes are compliant with applicable regulatory requirements, including the Onshore Pipeline Regulations (OPR) and Pipeline and Hazardous Material Safety Administration (PHMSA). This included a review of the adequacy and effectiveness of the CRMP.	Training related tools, including the training matrix and manual, require a more defined and repeatable review process to capture accurate and up to date information.	1. Update CRM Plan documentation to include review of training matrix in annual training program review. 2. The training manual (requirements overview) will not be included in this process and will be updated on a best efforts basis as it is considered supplemental training information.	Closed
	There is no documented Quality Assurance Program or second line of defense activities occurring for the GDS Control Room.	• Gas Control and QA will develop a Gas Control Quality Assurance Program (QAP) to facilitate second line assurance activities on the Control Room Management Program. This documented QAP will: • Review and incorporate existing assurance activities taking place within the CRM • Incorporate assessments, inspections and audits • Evaluate the effectiveness of the Management Program • Formally record corrective and preventative actions (CAPA) to facilitate action on these CAPAs and to assist with reporting • Requirements related to finding #3 - Key Reports used to complete monthly GDS Monthly Alarms not validated – will be covered off through the development of the QAP.	Closed
	Operator Interface Design manual has not been updated since 2014 to reflect changes to software and hardware.	SCADA team to update document and establish an annual review cycle. Any documentation changes should follow the SCADA MOC process.	Closed
	Resource planning activities do not take into consideration all resources required to support GDS Gas Control.	• Based on general objectives for Control Room Management purposes, identify functional areas required to support. • Communicate relevant resource requirements, as known, to the identified stakeholders, requesting that they confirm that required resources are available for 2021. • If sufficient resources are confirmed by relevant stakeholders, report on confirmation at Q2 2021 Management Review and TMR. • IMS will develop an evaluation of needs common process in 2021. • If insufficient resources are available, liaise with stakeholder group to identify a suitable 2021 plan and communicate at the Q2 2021 TMR.	Closed
Emergency Management Program Assess whether the Gas Distribution & Storage (GDS) Emergency Management (EM) Program is compliant with the Canada Energy Regulator (CER) and other Canadian federal and provincial regulatory requirements.	Emergency Planning Zones (EPZ) have not been consistently developed across all GDS Regions and those that have, are not being reviewed for ongoing completeness and accuracy	Incorporate the EPZ process in the EM Program.	Closed
	High and very high Emergency Management Program related risks have not been communicated to Senior Management	Integration of the Risk Register	Closed
	Emergency Management Program related assurance activities are occurring. These activities are not integrated through a systematic and coordinated Quality Assurance Program	Incorporate the Quality Assurance program process in the EM Program	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
Emergency Management Program Assess whether the Gas Distribution & Storage (GDS) Emergency Management (EM) Program is compliant with the Canada Energy Regulator (CER) and other Canadian federal and provincial regulatory requirements.	Results of emergency management related inventory inspections at the regional level are not integrated into the GDS Emergency Management Program in order to provide a complete view of assurance of the Program	Incorporate the warehouse inventory inspection process in the EM Program.	Closed
Facilities Integrity - GDS Regional Assess Gas Distribution and Storage's (GDS) Facilities Integrity (FI), consisting of Facilities Integrity Management Program (FIMP) and Distribution Integrity Management Program (DIMP) related to Facilities, are properly designed and operating effectively to adequately govern operational risk at the Business Unit (BU) level in the Southeast Region and associated selected sites	Worksite hazard checklists are not consistently being documented and maintained in the Region, which can result in unmitigated hazards while performing job tasks and increased risk for injury.	• Communicate via email existing Hazard Assessment requirements and training until new integrated procedure comes into effect in 2022. • Communicate with Operations leadership to review the email details at monthly safety meetings. • Obtain supervisors confirmation they have reviewed the email communication and have executed all required actions. • Include standing agenda item to Monthly Leadership Team meetings to monitor and address follow-up from Hazard Assessment process.	Closed
	Following the lone worker processes at Legacy Union Gas is discretionary and does not require technicians to issue notification when working alone which can result in management not being aware of personnel-related incidents	• Communicate via email and confirm staff are aware of existing Lone Worker program until new integrated procedure comes into effect. • Communicate with Operations leadership to review the email details at monthly safety meetings. • Obtain supervisors confirmation they have reviewed the email communication and have executed all required actions. • Include standing agenda item to Monthly Leadership Team meetings to monitor and address follow-up from Lone Worker program.	Closed
	The most recently completed Annual Station Site Inspection completed at Cambridge East Station did not identify integrity of regulator building roof at Cambridge East Station is compromised, permitting water to accumulate within the building creating a safety hazard to personnel.	• The Cambridge East Station has been regraded and pooling of water was corrected during the audit. Southeast Region to conduct a follow-up assessment to determine additional roof improvements. The outcome of the assessment will be provided to the Asset Management group who will dictate timelines of repairs. • Communication to be issued to staff to ensure Annual Station Site Inspections are completed properly and follow up work orders are created when repairs are identified. • Include standing item to Station Supervisor monthly meetings to review work orders for follow-up work required.	Closed
	[redacted]	[redacted]	[redacted]
	A procedure for management of physical keys within the Region does not exist, which can result in unauthorized access to Regional facilities.	Southeast Region to work with GDS Security and Operations Governance team to leverage existing processes and implement a roll-out plan for regional key management.	Closed
	FIMP's purpose is to ensure pipeline facility systems are suitable for continued, safe, and reliable service and to comply with applicable regulations.	Implement the Integrity Change Request process, and any guidance document, that will be used as the inspection deferral procedure by FIMP. Implement QA activities related to Non-Destructive Examination (NDE) contractors for FIMP.	In Remediation

Engagement Name	Finding	Management Action Plan	Finding Status
Facilities Integrity - GDS Regional Assess Gas Distribution and Storage's (GDS) Facilities Integrity (FI), consisting of Facilities Integrity Management Program (FIMP) and Distribution Integrity Management Program (DIMP) related to Facilities, are properly designed and operating effectively to adequately govern operational risk at the Business Unit (BU) level in the Southeast Region and associated selected sites	Integrity inspections for pressure vessels and tanks have not been completed as required which may result in unmitigated integrity risks impacting safe and reliable operations and non-compliance with external requirements.	Refine the multi-year inspection plan, including units per year and budget, to complete the baseline inspection of pressure vessels and tanks.	Closed
	Integrity inspection procedures for assets relevant to FIMP have not been developed or implemented which may result in inspection activities performed inconsistently and unidentified integrity risks to assets.	• Complete the development of the Integrity Inspection procedures as part of the Integrity Documentation Project. • Communicate expectations to key stakeholders through email correspondence, communication meetings and training provided as requested.	Closed
	Inventory records for relevant Integrity assets at GDS are incomplete. This could result in FIMP's limited ability to locate similar asset types should an event occur requiring action or missed inspections.	• Develop and document the inventory of relief devices on pressure vessels as pressure vessel inspections are completed; this will result in a complete inventory for assets requiring inspection by FIMP on the same timeline in which all integrity inspections are completed, as outlined in the Management Action for Finding #2.	Closed
	Integrity inspection data available is limited or not available for all GDS stations which limits ability for FI to maintain compliance with relevant integrity inspection intervals and make quantitative decisions on risk across GDS	Refine the multi-year plan to complete integrity asset plans for FIMP stations, DIMP station categories, and regulatory required inspections.	Closed
Safety Management GDS Assessed Safety Management activities that govern operational risk at the Business Unit (BU) level, by region, and site. Assessed compliance with applicable regulations and guidelines, including but not limited to, Canada Energy Regulator (CER), Canada Labour Code (CLC), and Ontario Occupational Health and Safety Act (OOHSA).	A documented decision record supporting regulatory management of change (RMOC) to exclude these regulations from the Master Compliance Registry was not prepared.	Ethics & Compliance to create an RMOC in Maximo specific to applicability of the CLC and COHSRs to GDS and have a legal applicability decision documented within it.	Closed
	Powered Mobile Equipment (PME) procedures, which support safe operation of equipment, do not address all hazards which may result in a safety incident.	Define scope of PME for GDS in alignment with the Ontario Guideline for Safety Operations of Power Lift Trucks and evaluate existing documentation and control Document and implement a GDS PME program (considering accountabilities, design, hazard identification and control, maintenance, purchasing as applicable).	Closed
	GDS Safety Management Program does not include requirements for journey management planning which may increase hazards and driving incidents.	Review Enterprise Journey Management Plan (JMP) and develop guidance for GDS employees. As part of the implementation, develop documentation for requirements, roles and accountabilities, tools and training. Implement full GDS JMP Program.	Closed
	Requirements to verify evidence of variance action plans, or corrective actions, are not implemented.	Develop a process for tracking and verifying medium and high-risk contractor variance plans, including completion and closure of action plans. Review and document the approval process for variance plans, in alignment with the Enterprise CSM specification. Implement, train, and establish a plan to monitor.	Closed
	Oversight requirements to monitor contractor workers' compliance with standards are not defined which may result in inconsistent contractor oversight and potential non-compliance	Align GDS CSM Standard to Enterprise CSM Specification Implementation of CSM Standard changes	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
Safety Management GDS Assessed Safety Management activities that govern operational risk at the Business Unit (BU) level, by region, and site. Assessed compliance with applicable regulations and guidelines, including but not limited to, Canada Energy Regulator (CER), Canada Labour Code (CLC), and Ontario Occupational Health and Safety Act (OOHSA).	Human Resources Training and Development self-identified: The Workday transformation reduced five employee learning systems across the organization into Workday and Veriforce. Workday training records are reporting incomplete or overdue training for employees that is not required. This may result in employees completing training that is not required.	Engage business and safety training teams to identify data issues Including: – Set review requirements, provide BUs and Corporate and Central Functions training teams with an issue template; define an approach for each group to work with data analysts from TIS. – Review the process and recommend priorities for data correction – With support from TIS, HR Solutions will analyze data and consult with Workday Inc. to determine strategies to correct data – Develop the scope, design and resource strategies for the remediation plan – Implement data correction actions including prioritization	Closed
	Working Alone Procedures are incomplete	As part of the GDS safety program integration develop a GDS lone worker program. Document and Implement the requirement for a documented hazard assessment when working alone in the field as part of the hazard assessment program integration Develop and implement an integrated Working Alone program for GDS which includes all applicable roles and associated controls.	In Remediation
	A re-assessment of workplace violence hazards has not been performed since 2018, which may lead to an increased risk of violence and potential non-compliance with health and safety regulations.	Document and implement the Workplace Violence Hazard Re-Assessment process with associated roles and responsibilities	Closed
	Hazardous Waste Storage Guide provides guidance on the required design of designated storage areas and how to store hazardous waste. Waste storage at three sites did not meet requirements, which may result in an environmental or safety incident	Resolve all the observations documented in the Finding. Appoint a minimum of one “Hazardous Waste Supervisor” at each Designated Hazardous Waste Site, Provide Safety and Reliability Environmental course.	Closed
	GDS Operations Services requires the completion of a deferral procedure when assets are not inspected or maintained according to schedule. An equipment inspection deferral and mitigation plan was not completed as required by Operations Services which may result in safety, reliability, and operational risk.	Northern Region Station Operations Manager will provide a process review for the Station Operations Supervisors for the submission of “Request for Variance” when Operating Standard work will not be completed within the compliance timeframe.	Closed
	Supervisors assign employee training based on risk or role in the GDS Environmental Health and Safety (EHS) Training Selection Tool. Employees in the same role were assigned different environment related training courses	EHS Training Selection Tool and Mandatory training requirements will be reviewed at the monthly Safety Round Table in February 2022 with all people leaders in the region. All supervisors in the region will review.	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
Safety Management GDS Assessed Safety Management activities that govern operational risk at the Business Unit (BU) level, by region, and site. Assessed compliance with applicable regulations and guidelines, including but not limited to, Canada Energy Regulator (CER), Canada Labour Code (CLC), and Ontario Occupational Health and Safety Act (OOHSA).	Quality Assurance Program (QAP) requires a work order to be submitted when unable to immediately repair a damaged valve box. A maintenance work order was not submitted for a corroded valve box, which prevents damage to valve gears, at the Barnett Road Metering Station. Damaged equipment may result in an increased risk of a safety or operational incident occurring.	• Provide documented refresher for front line Station Techs, at a monthly team meeting, on the use of PM10 workorders in SAP to capture required Maintenance.	Closed
	[redacted]	[redacted]	[redacted]
	GDS does not have sufficient resources to implement and maintain the SMP across the business unit which has resulted in the Program not meeting internal and external requirements.	The finding will be remediated as follows: • Perform budget assessment – currently pending approval • Conduct manpower evaluation – currently pending approval to obtain additional resources that will be distributed across the BUs • Undergo recruitment and hiring process • Onboard successful candidate(s) • Implement Security Training Program	Closed
Security Management Program Assess the Security Management Program (SMP) activities that manage operational risk at the enterprise and business unit (BU) level, by region and site. Assess compliance with applicable regulations, including, but not limited to, Canada Energy Regulator (CER), US Pipeline and Transportation Security Administration (TSA) from the US Department of Homeland Security.	GDS Roles and responsibilities for all stakeholders implementing and executing security activities have not been defined and documented in the SMP or supporting documentation.	The finding will be remediated as follows: • A new Enterprise Security SMP is being developed that will document roles and responsibilities across all the business units, for both Enterprise Security and other stakeholders involved in Security activities. The updated SMP will also address the continual improvement process with operations by ensuring assurance quality checks, maintenance requirements and tracking, SVA recommendation closures as well as GAP closure plans from Audits, as well as integrating current and the development of additional assurance activities. • The target date for approval and publication is June 1, 2022, with an implementation date of June 1, 2023. • Roles and responsibilities will be communicated to the BUs via kick-off and planning meetings.	Closed
	GDS A Security Management training program, as required by CSA Z246.1, has not been developed and implemented, including identification and evaluation of competencies for stakeholders responsible for implementing security activities.	The Enterprise Security SMP has been developed for the enterprise. It documents procedures and standards, including a training program, and competencies for roles tasked with executing security activities, as required by CSA Z246.1.	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
Security Management Program Assess the Security Management Program (SMP) activities that manage operational risk at the enterprise and business unit (BU) level, by region and site. Assess compliance with applicable regulations, including, but not limited to, Canada Energy Regulator (CER), US Pipeline and Transportation Security Administration (TSA) from the US Department of Homeland Security.	[redacted]	[redacted]	[redacted]
	[redacted]	[redacted]	[redacted]
	The GDS Management of Change process has not been implemented for Corporate Security, as required by Onshore Pipeline Regulations, which can result in changes related to Security not being understood	• Review MOC requirements and update change triggers list to reflect any identified gaps.	Closed
	GDS All security incidents are not being reported to program owners, as required by CSA Z246.1. The Security Incident Management Process is not executed as developed which has resulted in incidents not communicated to key internal	• The Enterprise Security SMP has been developed for the enterprise. It documents procedures and standards, including a training program, and competencies for roles tasked with executing security activities, as required by CSA Z246.1. • It has a target publish date of 1 June 2022 and an implementation date of 1 June 2023. The current processes will be updated to reflect the process that the BU is following to manage security incidents. • The Enterprise Security SMP will include provisions to address the roles and responsibilities for all stakeholders implementing and executing security activities, tools used for reporting requirements, and document retention procedures. SOPs will be updated to address BU specific activities performed. A reconciliation should be completed to confirm that all incidents reported have been captured. (Documented in Enterprise Security SMP Annual Review). • The target date for approval and publication is 1 June 2022, with an implementation date of 1 June 2023.	Closed
	GDS Security countermeasures to respond to temporary security threats are not identified and tested, which can result in impractical or inappropriate countermeasures established for identified temporary threat escalation levels.	• Schedule and test updated threat levels through drills and exercises. • Update the Management Program (MP-06) and Enterprise Security Management Governance documents to address countermeasures and reference new TSA guidelines more thoroughly on criticality.	Closed
	[redacted]	[redacted]	[redacted]

Engagement Name	Finding	Management Action Plan	Finding Status
Security Management Program Assess the Security Management Program (SMP) activities that manage operational risk at the enterprise and business unit (BU) level, by region and site. Assess compliance with applicable regulations, including, but not limited to, Canada Energy Regulator (CER), US Pipeline and Transportation Security Administration (TSA) from the US Department of Homeland Security.	GDS A lesson learned process from incidents has not been documented and implemented as required by CSA Z246.1 for the Security Management Program which leads to an inability to identify opportunities for continual improvement.	• Incorporate a lessons learned section into the new Enterprise Security SMP • Document and Track Drills and Exercises Enterprise Wide. • Incorporate Security Drills into existing Emergency response exercises.	Closed
	GDS Document classification and retention activities have not been executed as designed in the Security Management Program. This can result in unauthorized access to security sensitive information.	• Update the Security Management Program document classification naming convention at the next document review. • Review key security activity templates (e.g. SVA report template) to confirm it includes accurate document classifications per the procedure. • Establish periodic review cycle to spot-check that required document classifications have been applied to security sensitive information.	Closed
	GDS Security Management Program related assurance activities are not integrated through a systematic and coordinated Quality Assurance Program which leads to an inability to identify opportunities for continual improvement.	Within the new Security Governance Document, establish and implement a Quality Assurance Program to provide, support and coordinate assurance activities on behalf of the Security Management Program. This would include integrating existing and developing additional assurance activities.	Closed
	GDS The current Regulatory Management of Change process is not triggered until a new or updated regulatory requirement is issued, which may result in the Security Management Program being out of compliance with regulatory requirements	Regulatory Affairs to establish a process to coordinate engagement with existing and future internal Enbridge representatives on applicable CSA committees where the standards have regulatory compliance implications. Process to include accountability for requesting the initiation of a RMOC by Ethics & Compliance where compliance is required on standard issuance date.	Closed
	GDS Minimum physical security requirements, which is the baseline physical security standard for all facilities as identified in the Security Management Program, does not include security measures required by CSA Z246.1 and TSA guidelines	• Enterprise Security will periodically participate in inspections. • Enterprise Security will review inspection checklists.	Closed
	[redacted]	[redacted]	[redacted]

Engagement Name	Finding	Management Action Plan	Finding Status
Security Management Program Assess the Security Management Program (SMP) activities that manage operational risk at the enterprise and business unit (BU) level, by region and site. Assess compliance with applicable regulations, including, but not limited to, Canada Energy Regulator (CER), US Pipeline and Transportation Security Administration (TSA) from the US Department of Homeland Security.	[redacted]	[redacted]	[redacted]
	GDS Management of Change process was not implemented for a temporary change in Environmental Hazardous Waste manifests	Review existing tools and programs for opportunities to address temporary accommodations (ex: MOC Change Triggers List, Content Management Program, Environmental procedures).	Closed
	Regional Hazardous Waste manifests were unsigned or signed by a third-party carrier on behalf of Enbridge in deviation of the requirements which could result in potential non-compliance.	Communicate the requirements to complete hazardous waste manifests using the OPS_STO Communication Package	Closed
	Safety forms, designed to enable workers to identify and mitigate hazards, are not fully documented, which may lead to associated hazards materializing increasing the risk for injury.	Share audit findings with Operations Managers and cascade to respective teams. • Provide a reminder/refresher in monthly team/safety meetings to employees of proper form and relevant paperwork completion. • In addition to MAP activities, the business unit will also endeavour to identify opportunities for paperless project documentation retention and implementation within new GDS/Enterprise work-management systems - i.e., Maximo or other (AWS Phase 2 – 2021 and AWS Phase 3 – 2023/2024).	Closed
	Training did not occur for two workers using equipment and instances of expired training were observed, which decreases worker awareness and could result in a potential incident.	1.During future internal audits, Storage & Transmission Operations (STO) will ensure that supervisors and employees participating in audits have met current training requirements relevant to the tours being led. To do this, we will obtain detailed scope of what needs to be observed in order to coordinate resources based on skill set, training, and job function. 2. Safety will complete the following Management Action Plan to address this finding: • Recommunicate the use of PowerBI until its retirement date and then transition to Workday learning to monitor training and the status of courses. • Communicate the requirements to complete training before they expire and re-enforce that previous legacy training completion practices (end of calendar year expirations) are no longer in place.	Closed
GDS Environmental Protection Program Assess Environmental Protection Program (EPP) activities that govern operational risk at the Business Unit (BU) level, by region and site.	Corrective actions for recommendations from 2020 and 2021 regulatory third-party waste audits were not developed in accordance with Assurance standards.	Confirmation that the action plan has been implemented as prescribed and that the finding has been remediated.	Closed
	GDS EPP roles and responsibilities have not been developed for all environmental activities (including, but not limited to, abandonment activities and water) which may result in potential environmental incidents and non-compliance.	Updated Environmental Protection Program	Closed

Engagement Name	Finding	Management Action Plan	Finding Status
GDS Environmental Protection Program Assess Environmental Protection Program (EPP) activities that govern operational risk at the Business Unit (BU) level, by region and site.	Ontario Water Resources Act applies to water taking permitting, reporting, and exemptions requirements for domestic and industrial use.	Review regulation and applicability to well water use at GDS owned buildings and based on review, assess if actions are required.	Closed
	Multi-Sector Air Pollutants (MSAPR) and Methane Emission regulations were published in 2016 and 2018, respectively. Processes and procedures to enable compliance with these regulations have not been implemented and/or approved.	Confirmation that the action plan has been implemented as prescribed and that the finding has been remediated.	Closed
	GDS risk register contains 17 environmental hazards, we identified potential hazards that have not been mapped to the risk register. An inventory without identified and potential hazards could lead to potential non-compliance.	Confirmation of review of the risk evaluation document	In Remediation
GDS Regional Audit - [redacted] All Protection Programs are included in our engagement, with a focus on higher risk areas as determined through input from the Business Unit, internal and external information.	Physical security measures at six of eight sites are not in accordance with requirements. This could result in unauthorized entry to GDS facilities and potential non-compliance with regulatory standards.	[redacted] Region to work with GDS Security and Operations Governance team to leverage the new Guidance - Key and Access Code Management (to be published by Security Program on Nov 1, 2022) and implement a roll-out plan for regional key management [redacted] Operations Manager to assign responsibility and develop process to ensure PIN code is changed on regular basis Engage GDS Security and REWS to create a plan to develop a process to review the accuracy of GDS access logs and identification of accountable parties. [redacted] Stations Operations Manager will coordinate refresher training on monthly site inspections with Station Technicians.	In Remediation
	Storage and labeling of hazardous substances at five of eight sites are not in accordance with requirements. This may pose safety and fire hazards and potential regulatory non-compliance.	Revised monthly site inspection checklist with additional emphasis on hazardous material storage and provide training.	Closed
	Pre-use and annual inspections are not complete on three power mobilized equipment as required by the Construction & Maintenance Manual.	[redacted] Operations Manager will coordinate refresher training on equipment and vehicle pre-use inspection requirements with all [redacted] field workers and supervisors in consultation with Fleet.	Closed
	Monthly station site inspection checklist was not documented or completed at two of eight sites as required by major station visual inspection procedures.	[redacted] Station Manager will have a meeting with Stations Team to reinforce monthly site inspection procedures.	Closed
GDS Pipeline Integrity Program Assess Transmission Integrity Management Program (TIMP) and Distribution Integrity Management Program (DIMP) activities that govern operational risk at the BU level, by region and site	GDS was unable to demonstrate inspections have been conducted on piping exposed to atmosphere for TIMP and DIMP.	The following three actions will be completed by Engineering: - Update Corrosion Standard to include a Visual Inspection Table that defines and includes risers and references other applicable visual inspections. - Develop a method to demonstrate the ability to extrapolate a riser inventory based on associated meter sets as defined in Maximo. - Develop procedure to maintain and communicate current inventory of known Arial Crossings.	In Remediation

Engagement Name	Finding	Management Action Plan	Finding Status
GDS Pipeline Integrity Program Assess Transmission Integrity Management Program (TIMP) and Distribution Integrity Management Program (DIMP) activities that govern operational risk at the BU level, by region and site	Deferral process, used to delay or defer an integrity verification or damage mitigation activities, has not been documented per IMFS.	Included deferral as a requirement in other Integrity documentation. Develop a separate swim-lane process for integrity deferrals that documents specific stakeholders and accountabilities and approval levels.	In Remediation
	Unused coated pipe was observed to be stored without cover or protective end caps at 2 of 4 Depots (50%).	Operations-Storage-Engineering (OPS-STO-ENG) communications package slide outlining the storage requirements and reminding these need to be followed Eastern Region will transition emergency stock to Niagara, which adheres to C&M 35.8.5 Pre-Tested Emergency Pipe Stock - Update Emergency Program Office Manual to reflect the emergency stock locations.	In Remediation
	GDS Quality Manual (QM) references Audit to describe activities carried out by QM Core Audit, however activities do not meet expectations outlined in the Enbridge Framework Standard – Audit	Risk Acceptance in the interim until next review cycle of the QM Core process. Gap was known to GDS and already planned to be closed out as part of the IMS Assurance Optimization Project and QM Integration Work.	In Remediation
	Safety Case Review procedures does not provide guidance on barrier effective assessment and does not capture input summary from other assessments.	GDS Integrity Safety Case will review outputs to ensure safety case assessment guide and safety case review template have been implemented and followed.	In Remediation
	From 2019 to 2021, the annual Cathodic Protection survey for 352 of 66,057 (0.5%) instances test points were not completed.	Continue to review any test points that have not been surveyed or not remediated and document reasons utilizing the Request for Variance (RFV), to include exceptions noted as a result of this audit.	In Remediation
	Cathodic Protection for 35 out of 684 (5%) TIMP and DIMP rectifiers were not inspected once every two months, as required by GDS' corrosion control standard.	New Lantern application is scheduled for go live Q2 2023 and will provide a consolidated view of corrosion dataset for GDS, which support work required and improve data quality.	In Remediation
	Four of 25 (16%) sampled cathodic protection test points not meeting protection criteria, were not remediated or have a follow-up work order within six months of inspection.	Corrosion Operations will review RFV reasons and update process based on justification.	In Remediation
GDS Regional Audit - [redacted] We performed risk-based Specified Procedures to assess operating effectiveness of key operational processes of Enbridge's other Protection Programs.	Construction & Maintenance utility trailer dispatched out of [redacted] did not have adequate ventilation for storage and transport of gasoline, nitrogen, and propane.	1. The trailer will be modified in the short term to provide ventilation and allow continued use. This work will be completed by Jan. 31, 2023. 2. The trailer will be on the list for replacement as part of the procurement process. It will be prioritized against other needs through the asset management process. This will be completed by Mar. 31, 2023.	In Remediation
	Combustible and flammable products at five of twelve sites were not stored in accordance with internal standards, which may pose safety and fire hazards.	1.Remediate non-conformance and hold safety meeting at each identified location to communicate labelling and storage requirements for combustible and flammable materials. Employees to sign off attendance at meeting. 2. Documentation related to this finding (storage requirements for combustible and flammable materials) will be updated as part of ongoing integration work within GDS. A previously identified integration project is currently being planned to address this.	In Remediation

Engagement Name	Finding	Management Action Plan	Finding Status
GDS Regional Audit - [redacted] We performed risk-based Specified Procedures to assess operating effectiveness of key operational processes of Enbridge's other Protection Programs.	Pipeline marker emergency numbers at one point on the ROW were not labeled and identified on NPS 12 CER NGTL-[redacted] per internal standards.	Replace, add, or update line markers and signage along the route will be completed by the South Valley crews. The upgrades will be completed as per PT-17-9C07-11C4 "Pipeline Markers Procedure".	In Remediation
	All emergency pipe at [redacted] was not fit for use as there was evidence of external corrosion.	1. [redacted] transitioned emergency stock to Niagara. This adheres to C&M 35.8.5 Pre-Tested Emergency Pipe Stock. – Emergency stock for CER lines is already stored in Niagara and is correctly referenced in relevant documentation. 2 [redacted] will follow documentation review and publication cycle to update relevant documentation in 2023 with publication in Q1 2024.	In Remediation
	ROW vegetation control requirements on NPS 12 CER NGTL-[redacted] were not met in accordance with external regulatory requirements.	Contractor will perform the work on the 6-7 kilometers of ROW to be cleared.	In Remediation
	Hazardous waste at three of twelve sites was not stored, labeled, or disposed according to internal standards.	Refresher training for Operations Supervisors completed by Regional Safety Advisor when they are in the role.	In Remediation
	Solid and recyclable waste at three of twelve sites included mixed waste streams and improper labeling per internal standards. Improper separation and labeling of waste may result in potential environmental damage.	Safety meeting with all relevant staff to emphasize the importance of not mixing waste streams.	In Remediation
	Physical security measures at four of twelve sites were not in accordance with internal standards. This could result in unauthorized entry to facilities.	[redacted] Management to remediate the following: – Security Fencing issues at [redacted] Depots and Gate Stations. – Replace security signage at [redacted] Depot. – Remediate Vegetation concerns at [redacted] Station, [redacted] Depot, [redacted] Gate Station, and [redacted] Depot.	In Remediation
	Security plans have not been developed to mitigate current and evolving biological hazards at the job site due to transient population in the area.	The new Sharps Management Program for GDS will be released (PT-2B-1108-0017 Sharps Safe Handling and Disposal Procedure) and communicated in Q1 2023.	In Remediation
	Load ratings were not posted on storage racks at two of twelve sites as required by internal standards. This could result in stocking items above load capacity, leading to potential structural failure and workplace injuries.	1.Engage Real Estate and Workplace Services (REWS) to validate load sticker requirements and communicate them to all relevant stakeholders, including those involved in new construction. 2. Engage REWS to apply load rating labels across all racking in the [redacted] Monthly JHSC inspections will monitor progression of this item until close out.	In Remediation
	General workplace housekeeping safety hazards were observed at nine of twelve sites which did not confirm to internal standards. Poor housekeeping may result in safety hazards that can lead to injuries to workers.	Region to remediate specific items noted in finding, followed by JHSC workplace inspection to monitor conformance post-remediation. Log Safety Leadership in Action by [redacted] Management to confirm remediation.	In Remediation

Engagement Name	Finding	Management Action Plan	Finding Status
GDS Regional Audit - [redacted] We performed risk-based Specified Procedures to assess operating effectiveness of key operational processes of Enbridge's other Protection Programs.	Recent JHSC inspections did not identify hazards and at-risk conditions present onsite per internal standards.	1. Deliver JHSC Workplace Inspection training for JHSC members. Training will include hazards that may be found during workplace inspections, inspection requirements, and documentation expectations. 2. Review JHSC monthly inspection requirements highlighting the importance and significance of the purpose of inspections, timely identification of non-conformances and actioning non-conformances identified.	In Remediation
GDS Regional Audit - GTA East Region We performed risk-based Specified Procedures to assess operating effectiveness of key operational processes of Enbridge's other Protection Programs.	Monthly JHSC inspections at TOC and Peterborough Depot are not identifying all hazards present onsite. Additionally, no evidence to support September 2022 inspections were performed for these Depots. This can lead to non-conformances at site	Review JHSC monthly inspection requirements with all members Deliver JHSC Workplace Inspection training for JHSC members.	In Remediation
	Combustible and flammable materials at the Technology and Operational Centre (TOC), Peterborough Depot and Pickering Gate Station are not labelled or stored safely and may increase potential fire hazards and risk of workplace injuries.	Remediate items noted and hold tailgate about labelling and storage requirements for combustible and flammable materials. Documentation related to this finding (storage requirements for combustible and flammable materials) will be updated as part of ongoing integration work within GDS	In Remediation
	Internal safe work practices related to personal protective equipment and pressurized equipment were not being followed at one of three construction and maintenance sites visited. This could result in potential workplace injuries.	Hold tailgate for safe work practices, develop tool guide for Kravitch tool, and share corrective actions of audit.	In Remediation
	Chemical and hazardous waste at TOC, Peterborough Depot and Campbellford Gate Station was not stored and labeled in accordance with internal requirements. This may result in potential workplace injuries and / or environmental contamination.	Remediate hazardous waste and chemical storage areas and hold tailgate to review hazardous waste and chemical storage requirements	In Remediation
	Load ratings were not posted on all storage racks at both TOC and Peterborough Depot. This could result in stocking items above load capacity of the shelving, leading to potential structural failure which could result in workplace injuries.	Real Estate and Workplace Services (REWS) to validate and communicate load sticker requirements Engage REWS to apply load rating labels across all racking in the GTA East Depots	In Remediation
	Site housekeeping matters were noted with respect to safety and security at the TOC and Peterborough Depots, including materials and equipment at the Peterborough Depot warehouse blocking access to spill kit and fire extinguishers and multiple unsecured ladders at both locations. Poor housekeeping may result in workplace injuries or unauthorized entry.	Remediate specific items noted in finding. Monthly JHSC inspections will monitor compliance post remediation. Log Safety Leadership in Action (SLiA) by GTA East Management to confirm remediation	In Remediation

Engagement Name	Finding	Management Action Plan	Finding Status
GDS Regional Audit - GTA East Region We performed risk-based Specified Procedures to assess operating effectiveness of key operational processes of Enbridge's other Protection Programs.	No evidence was provided to support that quarterly spill kit inspections have been conducted at TOC and Peterborough Depot. This may result in inadequate supplies being on hand to contain a leak which could lead to a potential spill not being contained in a timely manner.	Create spill kit inventory and engage with REWS to complete depot spill kit inspections	In Remediation
	Scrap metal waste area at Peterborough Depot included mixed waste streams and was stored outside of a storage bin. This does not allow for easy offsite removal and increases risk of workplace injuries and potential environmental hazards.	Remediate scrap metal area and hold tailgate meeting for not mixing waste streams	In Remediation
	Two emergency exit gates at Markham Gate Station and one at Bowmanville Gate Station did not allow for free egress due to unlevel ground and / or uncontrolled vegetation outside the facility.	Clear vegetation outside emergency exits at Bowmanville and Markham Gate and provide training on the monthly visual inspections	In Remediation
	Periodic inspections of emergency response equipment, including fire extinguishers, eye wash stations, first aid kits and automated external defibrillator (AEDs), have not been performed in accordance with internal requirements.	Engage REWS to work with a new facilities management company to deliver monthly inspections for emergency response equipment. Documentation related to this finding (inspection frequency for emergency response equipment) will be updated as part of ongoing integration work within GDS.	In Remediation
GDS Construct Asset Lifecycle Phase Assess whether Projects construction processes and controls are adequately designed in alignment with relevant GDS IMS and Protection Program requirements and have been appropriately implemented. Review the Sarnia Industrial Line Reinforcement (SILR) project to assess the operating effectiveness of Projects construction processes and controls.	There was no Management of Change (MOC) documentation for the changes impacting the SILR project.	Issue a Design Basis Memorandum (DBM) User Guide and a DBM Template. Projects agrees with the finding and will determine a suitable MOC process by July 22, 2022.	Closed
	The required Excavation Checklist was not completed or not signed off for seven of nine days sampled.	Review the Ground Disturbance Permit (Excavation Checklist) requirements with relevant Projects personnel. Perform monthly audit checks to ensure requirements are met making necessary process improvements. Create a filing system at each project site to retain both hard and digital copies of completed Excavation Checklists.	Closed
	Two minor Level 1 property damage incidents on the SILR project were not recorded in EnCompass.	SILR Project Manager will record the two minor property damage incidents in EnCompass. Projects will work with Safety to determine and implement a training plan.	Closed - Management Accepted the Risk
	A quality incident occurred where a NPS 20" ball valve installed at the Dow Valve Site did not seal. Neither a QIN nor QER was issued which resulted in non-conformance and inaccurate and incomplete quality incidents data.	Quality Management to issue QER. The Quality Management Office (QMO) team will clarify requirements in the Quality Incident Response Procedure.	Closed

Forward Looking Information

This presentation includes certain forward-looking statements and information (FLI) to provide potential investors and shareholders of Enbridge Inc. (Enbridge or the Company) with information about Enbridge and its subsidiaries and affiliates, including management's assessment of their future plans and operations, which FLI may not be appropriate for other purposes. FLI is typically identified by words such as "anticipate", "expect", "project", "estimate", "forecast", "plan", "intend", "target", "believe", "likely" and similar words suggesting future outcomes or statements regarding an outlook. All statements other than statements of historical fact may be FLI. In particular, this presentation contains FLI pertaining to, but not limited to, information with respect to the following: Enbridge's strategic plan, priorities and outlook; 2023 financial guidance and near and medium term outlooks, including average annual growth, and projected EPS, DCF per share and adjusted EBITDA, and expected growth thereof; expected dividends, dividend growth and dividend payout policy; expected supply of, demand for, exports of and prices of crude oil, natural gas, natural gas liquids (NGL) , liquified natural gas (LNG) and renewable energy; energy transition and our approach thereto; environmental, social and governance (ESG) priorities, practices and performance, including greenhouse gas (GHG) emission reduction goals and approach and diversity and inclusion goals; industry and market conditions; anticipated utilization of our assets; expected EBITDA; expected DCF and DCF per share; expected future cash flows; expected shareholder returns and returns on equity; expected performance of the Company's businesses, including customer growth and organic growth opportunities; financial strength, capacity and flexibility; financial priorities and outlook; expectations on sources of liquidity and sufficiency of financial resources and funding plan; expected debt to EBITDA outlook and target range; expected costs and in-service dates for announced projects, projects under construction and system expansion, optimization and modernization; capital allocation priorities; investment capacity; expected future growth, including secured growth program, development opportunities and low carbon and new energies opportunities and strategy; expected future actions of regulators and courts and the timing and anticipated impact thereof; and toll and rate case proceedings and frameworks, including with respect to the Mainline and Gas Distribution and Storage, and anticipated timing and impact therefrom.

Although we believe that the FLI is reasonable based on the information available and processes used to prepare it, such statements are not guarantees of future performance and you are cautioned against placing undue reliance on FLI. By its nature, FLI involves a variety of assumptions, known and unknown risks and uncertainties and other factors which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by the FLI, including, but not limited to, the following: the expected supply of, demand for and prices of crude oil, natural gas, NGL, LNG and renewable energy; energy transition, including the drivers and pace thereof; global economic growth and trade; anticipated utilization of our assets; exchange rates; inflation; interest rates; the COVID-19 pandemic and the duration and impact thereof; availability and price of labour and construction materials; the stability of our supply chain; operational reliability and performance; customer, regulatory and stakeholder support and approvals; anticipated in-service dates; weather; announced and potential acquisition, disposition and other corporate transactions and projects, and the timing and benefits thereof; approval of the Company's board of directors of announced transactions and projects; governmental legislation; litigation; credit ratings; hedging program; expected EBITDA and adjusted EBITDA; expected earnings/(loss) and adjusted earnings/(loss); expected future cash flows; expected future DCF and DCF per share; estimated future dividends; financial strength and flexibility; debt and equity market conditions; general economic and competitive conditions; the ability of management to execute key priorities; and the effectiveness of various actions resulting from the Company's strategic priorities.

We caution that the foregoing list of factors is not exhaustive. Additional information about these and other assumptions, risks and uncertainties can be found in applicable filings with Canadian and U.S. securities regulators. Due to the interdependencies and correlation of these factors, as well as other factors, the impact of any one assumption, risk or uncertainty on FLI cannot be determined with certainty. Except to the extent required by applicable law, we assume no obligation to publicly update or revise any FLI made in this presentation or otherwise, whether as a result of new information, future events or otherwise. All FLI in this presentation and all subsequent FLI, whether written or oral, attributable to Enbridge, or any of its subsidiaries or affiliates, or persons acting on our behalf, are expressly qualified in their entirety by these cautionary statements.

Non-GAAP Measures

This presentation makes reference to non-GAAP and other financial measures, including earnings before interest, income taxes, depreciation and amortization (EBITDA), adjusted EBITDA, adjusted earnings and adjusted earnings per share (EPS), distributable cash flow (DCF) and DCF per share and debt to EBITDA. Management believes the presentation of these metrics gives useful information to investors and shareholders as they provide increased transparency and insight into the performance of the Company. Adjusted EBITDA represents EBITDA adjusted for unusual, infrequent or other non-operating factors on both a consolidated and segmented basis. Management uses EBITDA and adjusted EBITDA to set targets and to assess the performance of the Company and its business units. Adjusted earnings represent earnings attributable to common shareholders adjusted for unusual, infrequent or other non-operating factors included in adjusted EBITDA, as well as adjustments for unusual, infrequent or other non-operating factors in respect of depreciation and amortization expense, interest expense, income taxes and non-controlling interests on a consolidated basis. Management uses adjusted earnings as another measure of the Company's ability to generate earnings and uses EPS to assess the performance of the Company. DCF is defined as cash flow provided by operating activities before the impact of changes in operating assets and liabilities (including changes in environmental liabilities) less distributions to non-controlling interests, preference share dividends and maintenance capital expenditures, and further adjusted for unusual, infrequent or other non-operating factors. Management also uses DCF to assess the performance of the Company and to set its dividend payout target. Debt to EBITDA is used as a liquidity measure to indicate the amount of adjusted earnings available to pay debt (as calculated on a GAAP basis) before covering interest, tax, depreciation and amortization.

Reconciliations of forward-looking non-GAAP and other financial measures to comparable GAAP measures are not available due to the challenges and impracticability of estimating certain items, particularly certain contingent liabilities and non-cash unrealized derivative fair value losses and gains which are subject to market variability. Because of those challenges, reconciliations of forward-looking non-GAAP and other financial measures are not available without unreasonable effort.

The non-GAAP measures described above are not measures that have standardized meaning prescribed by generally accepted accounting principles in the United States of America (U.S. GAAP) and are not U.S. GAAP measures. Therefore, these measures may not be comparable with similar measures presented by other issuers. A reconciliation of historical non-GAAP and other financial measures to the most directly comparable GAAP measures is available on the Company's website. Additional information on non-GAAP and other financial measures may be found in the Company's earnings news releases or in additional information on the Company's website, www.sedar.com or www.sec.gov.

Unless otherwise specified, all dollar amounts in this presentation are expressed in Canadian dollars, all references to "dollars" or "$" are to Canadian dollars and all references to "US$" are to US dollars.

First-choice for Natural Gas Delivery

Critical & Cost Competitive

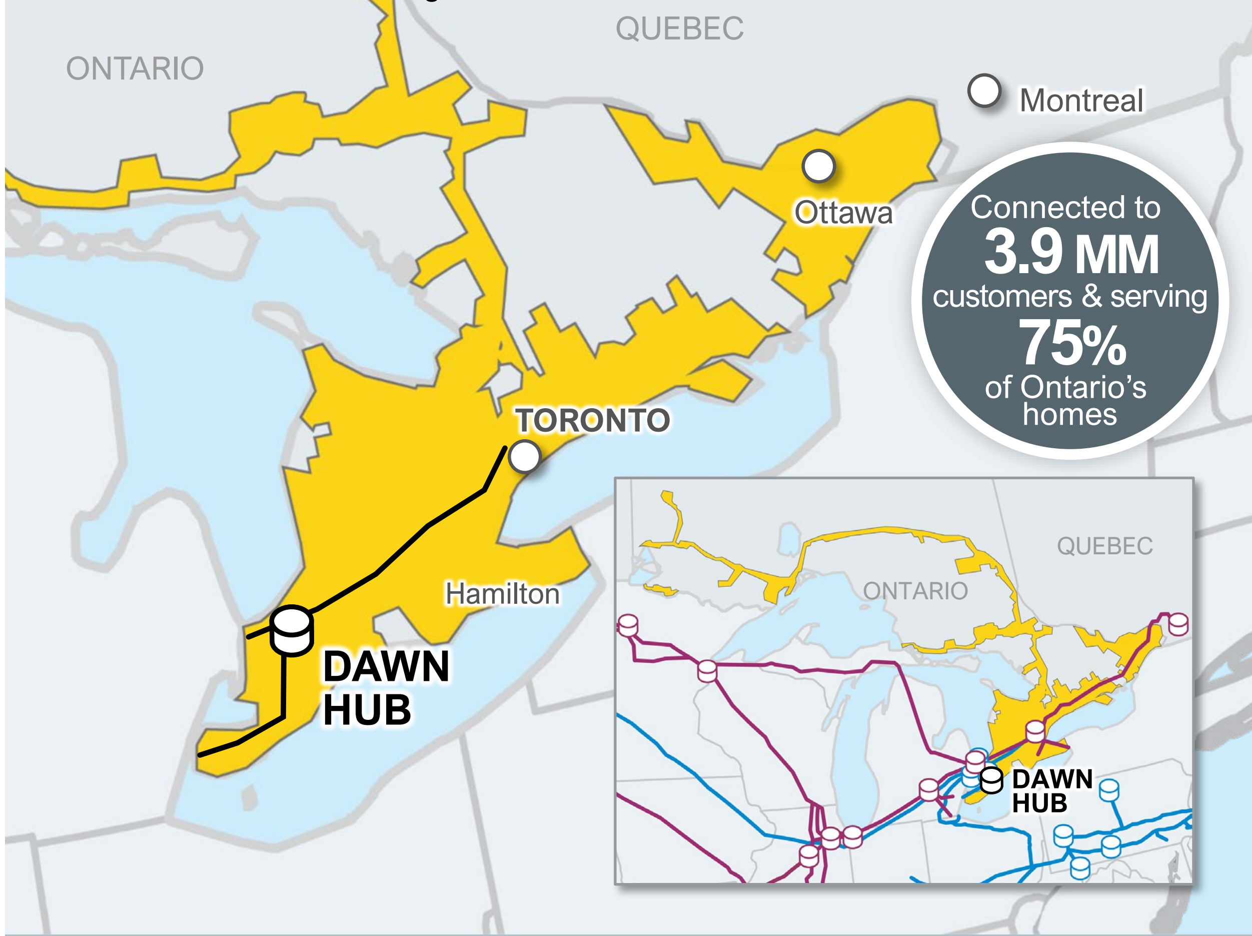
- Largest integrated natural gas utility in N.A.[1]
- One of the largest interconnected storage hubs in N.A.

Stable & Visible Growth

- Generating premium returns and EBITDA growth through incentive rates
- $1B+/yr in utility capital expenditures

Leading the Energy Transition

- Delivering energy efficiency and conservation programs
- Developing innovative lower-carbon solutions
- Investing in RNG[2] & H_2 and exploring CCS[3]

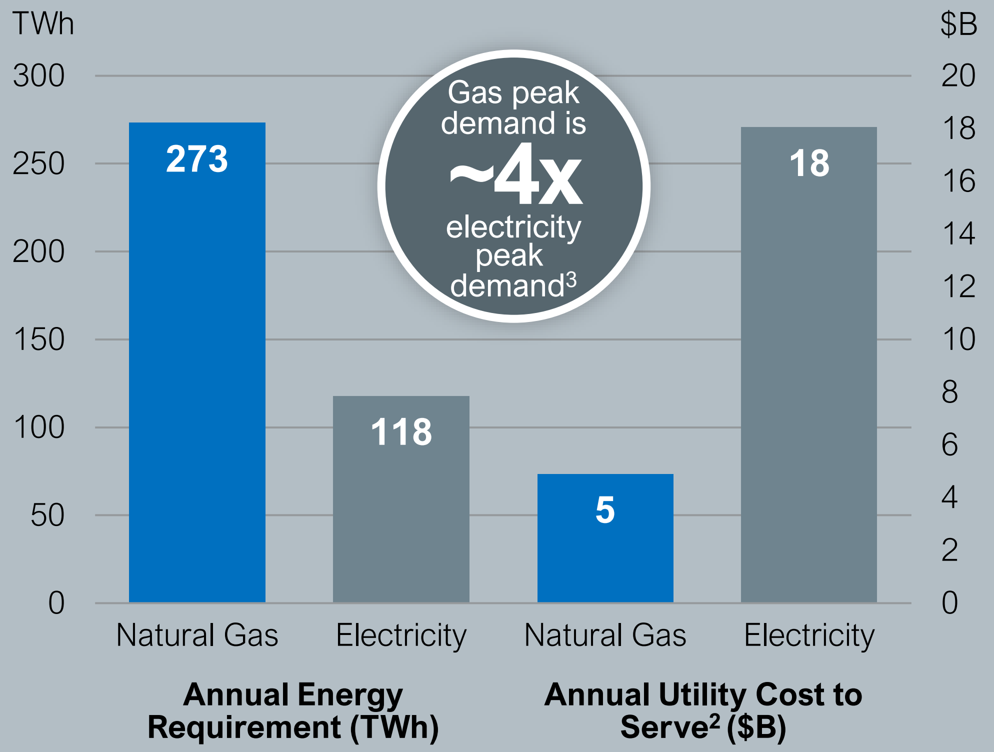


Providing cost-effective, reliable & sustainable energy to Ontario

(1) Based on volumes (2) Renewable Natural Gas (3) Carbon Capture & Storage

Natural Gas is Critical to Enabling Growth

Ontario's Energy Landscape[1]



Population Growth in Ontario

- Anticipated growth of 2.2 million people over the next 10 years
- Natural gas critical to resiliency and meeting heating requirements

Economic Growth

- Industrial demand has few economic alternatives
- Up to 1.5 GW of new natural gas generation needed[4]

Sustainable & Cost-Effective

- Deploying and piloting lower-carbon technologies
- Diversified approach to net-zero is less expensive and more reliable

Strong fundamentals support continued connectivity to natural gas in Ontario for decades

(1) Ontario Energy Board 2021 Yearbooks for Electricity and Natural Gas Distributors (2) The annual electricity cost to serve does not include the $3.1 B Renewable Cost Shift subsidy (3) Winter peak
(4) Executive Council of Ontario, Order in Council 1348/2022

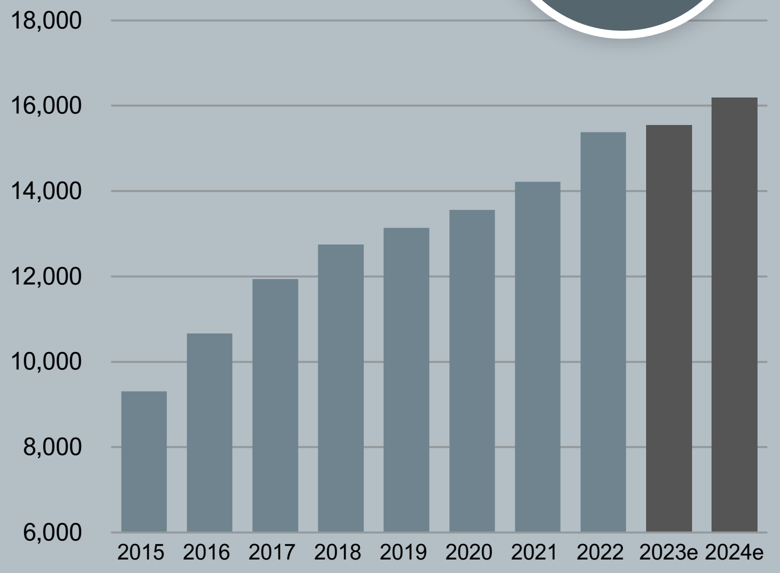
ENBRIDGE

Demonstrated Benefits of Regulatory Framework

Rate Base

(MMs)

Predictable rate base growth



$1B+ of annual capital spend

Investor Benefits

- ✓ Consistent and transparent rate making process
- ✓ Generates traditional and lower-carbon rate base growth
- ✓ Incented to identify and implement cost saving measures

Customer Benefits

- ✓ Delivering $121MM of efficiencies[1]; O&M savings of ~12%
- ✓ Safe, reliable and cost-effective system
- ✓ Maintaining affordability

- Identify and implement efficiencies
- Growing earnings driving attractive ROEs
- Demonstrates the case for rate base growth
- Supports investment in the energy transition
- Incorporates RNG into gas supply plan

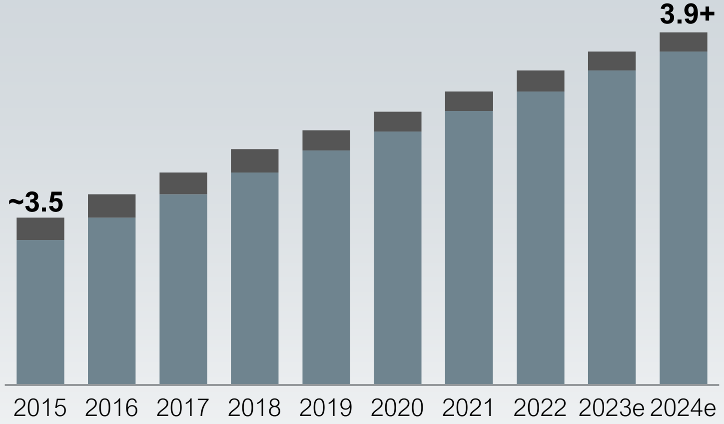
Summary of OEB Application

Term	5 years: 2024 cost of service & 2025 – 2028 incentive period
Inflation Protection	Inflation + 1.35% productivity factor
Earnings Sharing	50:50 sharing of earnings above 150 bps over OEB allowed ROE
Capital Plan	$1B+ per year
Equity Thickness	Proposed increase up to 42% by 2028
Amalgamation Benefits	Streamlining rates, services and processes

Incentive rate structure extends framework to grow earnings

Multiple Platforms for Predictable Utility Growth

Customer Connections

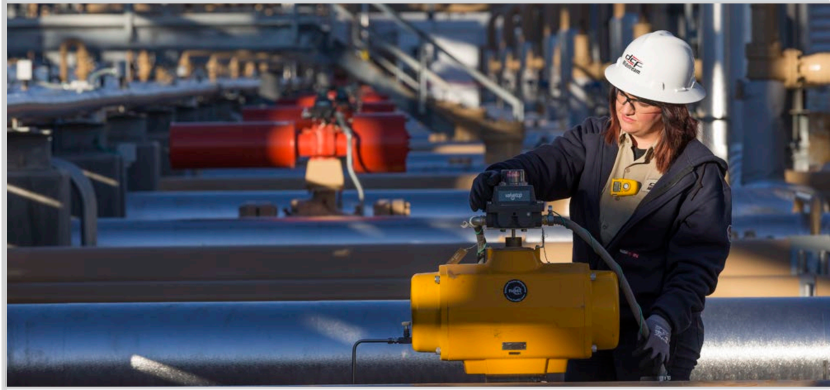


- Customer adds of >45k in 2022
- Remains first-choice for heating[1]
- 4 new community expansion projects planned for 2023

Power Generation

- Natural gas is critical to Ontario's power sector
- Natural gas enhances electricity system reliability
- Up to 1.5 GW of new generation[2]

Industrial Growth



- Growing demand from greenhouses & manufacturing
- Supports industrial GHG emission reductions
- Underpinned by Dawn Hub reliability

Increasing access to natural gas enables Ontario's economic growth

ENBRIDGE

Storage, Transmission & Distribution Growth

Hamilton Growth Project

Reduces GHG annual emissions by **3MMtCO$_2$e**

THE HAMILTON SPECTATOR Feb 2, 2023

Dofasco needs 14-kilometre natural gas pipeline built for 'green steel' project

ArcelorMittal Dofasco says its plan to transition to "green steel" by 2028 hinges on the construction of a 14-kilometre natural gas pipeline in Hamilton.

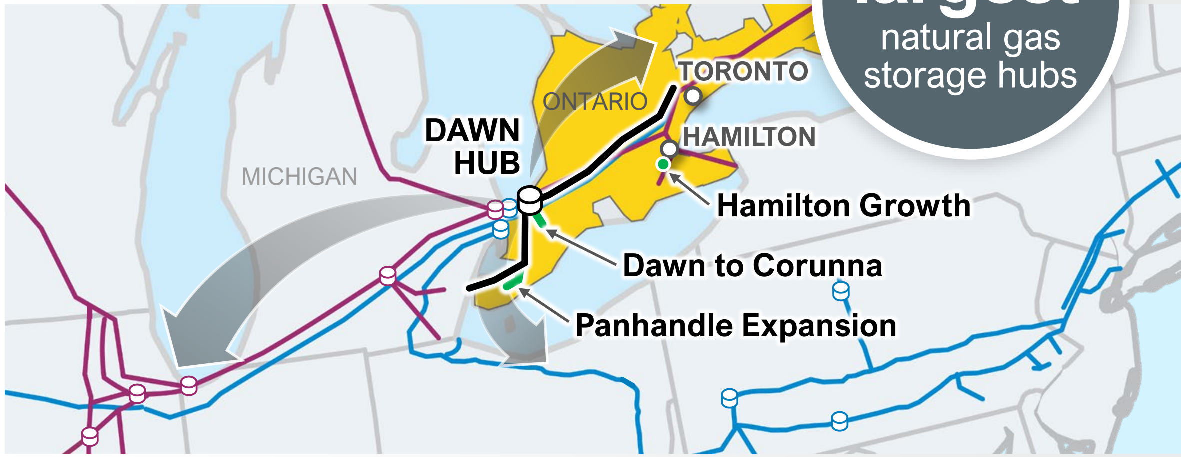
The phasing out of coke ovens and blast furnaces in favour of electric arc furnaces will eliminate three million tonnes of carbon dioxide, says Tony Valeri, vice-president of corporate affairs.

The $1.8-billion project is expected to double demand for natural gas from roughly 500 million cubic metres to more than a billion, Valeri told council Wednesday.

- Supporting Dofasco's transition to a lower carbon footprint
- Modifying steel making process to shift from coal to gas
- Largest GHG reduction project underway in Ontario
- Project achieves a 60% reduction in GHG emissions

Dawn Hub Supports Growth

One of N.A.'s **largest** natural gas storage hubs



- Connects supply basins with strategic N.A. markets
- Liquid trading hub; 100+ energy marketers active at Dawn
- 288 Bcf storage capacity with reliable & proven takeaway
- $700MM on storage, transmission & distribution projects

Supporting our customer's energy needs while lowering emissions

ENBRIDGE

Growing Lower-Carbon Opportunities

Energy Efficiency

- Conservation is a cornerstone
- Selected to deliver NRCan's[1] Greener Homes program
- Annual funding of $330MM for energy efficiency and conservation programming

Integrated Gas System

- Published first of its kind study: "Pathways to Net-Zero" for Ontario
- Electric and gas system integration
- Lowest-cost option to achieve net-zero includes hybrid heating
- Gas system longevity & growth under any scenario

"Green" Gas & CCS

- N.A.'s 1st H_2 blending facility
- Transporting 1.3 MMcf/d of RNG[2]
- 4 RNG projects in construction
- 20+ RNG projects in development
- 700+ $MMtCO_2$ sequestration potential[3]

Enabling the energy transition with More Gas, Less Gas, Integrated Gas & Green Gas

(1) Natural Resources Canada (2) This represents 4 projects in service (3) Geological Sequestration of Carbon Dioxide: A Technology Review and Analysis of Opportunities in Ontario, 2007

Lower-Carbon Project Spotlight

$600MM+ investment opportunities through 2025

Gatineau Hydrogen

- Up to 15% H_2 for ~44,000 customers[1]
- 15 km pipeline & injection facility
- 15,000 tCO_2e of annual emission reductions
- ISD 2026

Incubating lower-carbon technologies

Dufferin RNG

- Partnered with City of Toronto to produce RNG from green bin waste
- Converting 55,000 tonnes of organic waste into RNG eliminating more than 9,000 tCO_2e annually

Lower-carbon growth with utility-like returns

Extending the life of our assets

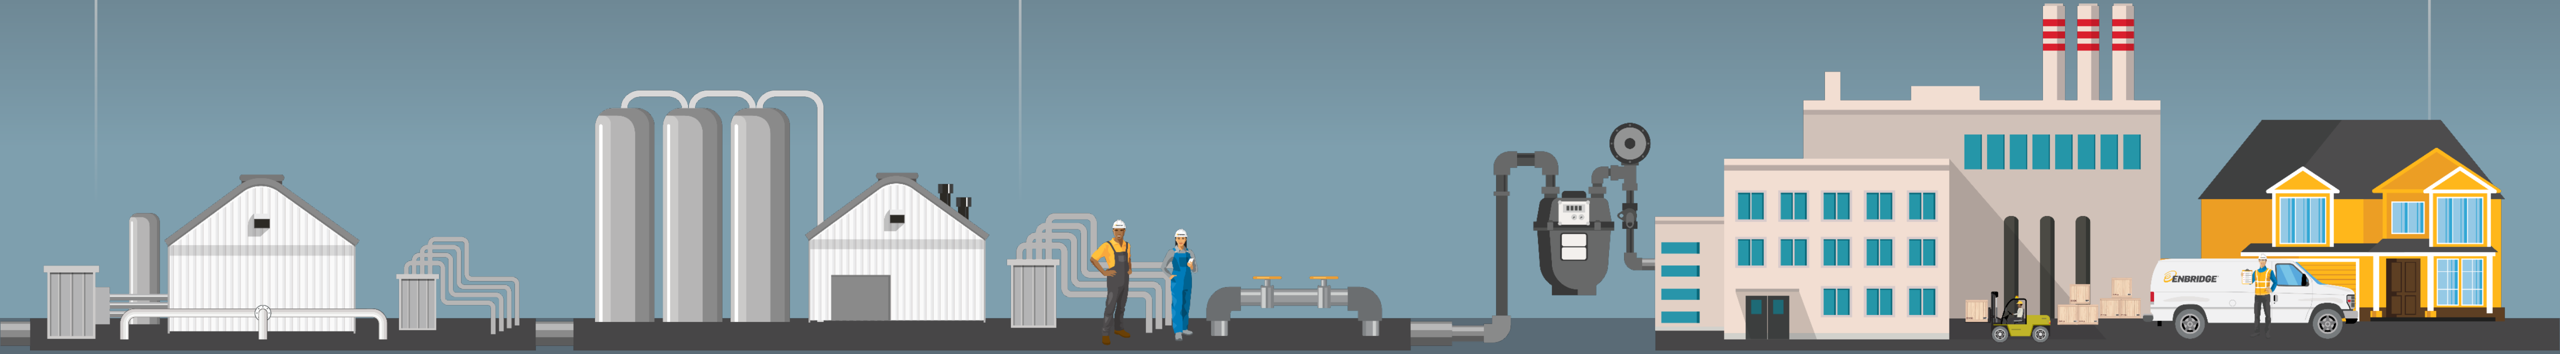
58 $MMtCO_2e$



Compressor Station

Compressor Station with Dehydration

Commercial, Industrial & Residential Customers

Successfully reducing emissions throughout the value chain

(1) Emissions savings represent estimated emission reductions once opportunity is fully implemented (2) These results are based on measures that customers implemented between 1995 and 2021 and their associated lifetime savings. Results for measures implemented in 2021 have been audited by a third-party auditor; however, they remain subject to OEB approval.

First-choice investment opportunity driven by:

Extending successful incentive rate making model providing stable earnings growth

Rate base growth through 2028 and beyond

Ensuring energy security and reliability

Leading the adoption of lower-carbon technology

$1B+

annual capital spend

ENBRIDGE GAS INC.

Answer to Interrogatory from
AnnaMaria Valastro (Valastro)

Interrogatory

Question(s):

The Ontario Energy Board is an oversight agency mandated to oversee energy rates to consumers because Enbridge is not a public utility. It is a for profit business and a monopoly.

Therefore, I am asking the OEB:

- to review whether rate hikes for natural gas are necessary for 2024 and 2025;
- what are the impacts of rate hikes to consumers in this period of inflation 2024 and 2025;
- Is Doug Ford's plan to increase gas fired plants in Ontario to produce electricity and heating – over renewables – costing rate payers more money;
- Would a more diverse energy supply (wind, solar, water) remove or reduce the need for rate hikes by Enbridge.

Response:

As the items in Ms. Valastro's email were submitted at the same time as other interrogatories, Enbridge Gas is providing its high-level comments as an interrogatory response.

Enbridge Gas notes the proposed rates in this Application will support a system that can continue to meet customers' needs safely and reliably in a cost-effective way, while at the same time helping them prudently prepare for the energy transition that is underway in the communities where they live, driven by existing and planned federal and provincial policies.

Natural gas continues to be the most cost-effective energy solution for homes and business, and costs significantly less than heating your home or business with electricity, oil or propane.

Enbridge Gas is excited and confident about the role the Company can play in supporting customers, the province, and municipalities in achieving their greenhouse gas (GHG) emission reduction goals.

Large-scale multi-decade transitions such as this need to be done in a way that is orderly and not disruptive. An orderly transition is one that allows energy consumers to adapt to energy transition such that Ontario's energy systems provide cost-effective choices that are reliable, resilient and secure. The Pathways to Net Zero report provided at Exhibit 1, Tab 10, Schedule 5, Attachment 2 shows that using both the gas and electric systems to achieve GHG reductions is a lower cost than electrification alone.

Enbridge Gas rates pay for natural gas supply and delivery. Electricity supply costs are not recovered by Enbridge Gas. The Independent Electricity System Operator (IESO) is responsible for planning and securing electricity needs for the Province based on reliability, sustainability and affordability.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Ex. 1/T3/S1/Attachment 2

Question(s):

Please provide a copies of the following documents:

a) An organization chart for Enbridge Gas Distribution prior to the merger;

b) An organization chart for Union Gas Limited prior to the merger;

c) A complete list of all roles that were eliminated.

Response:

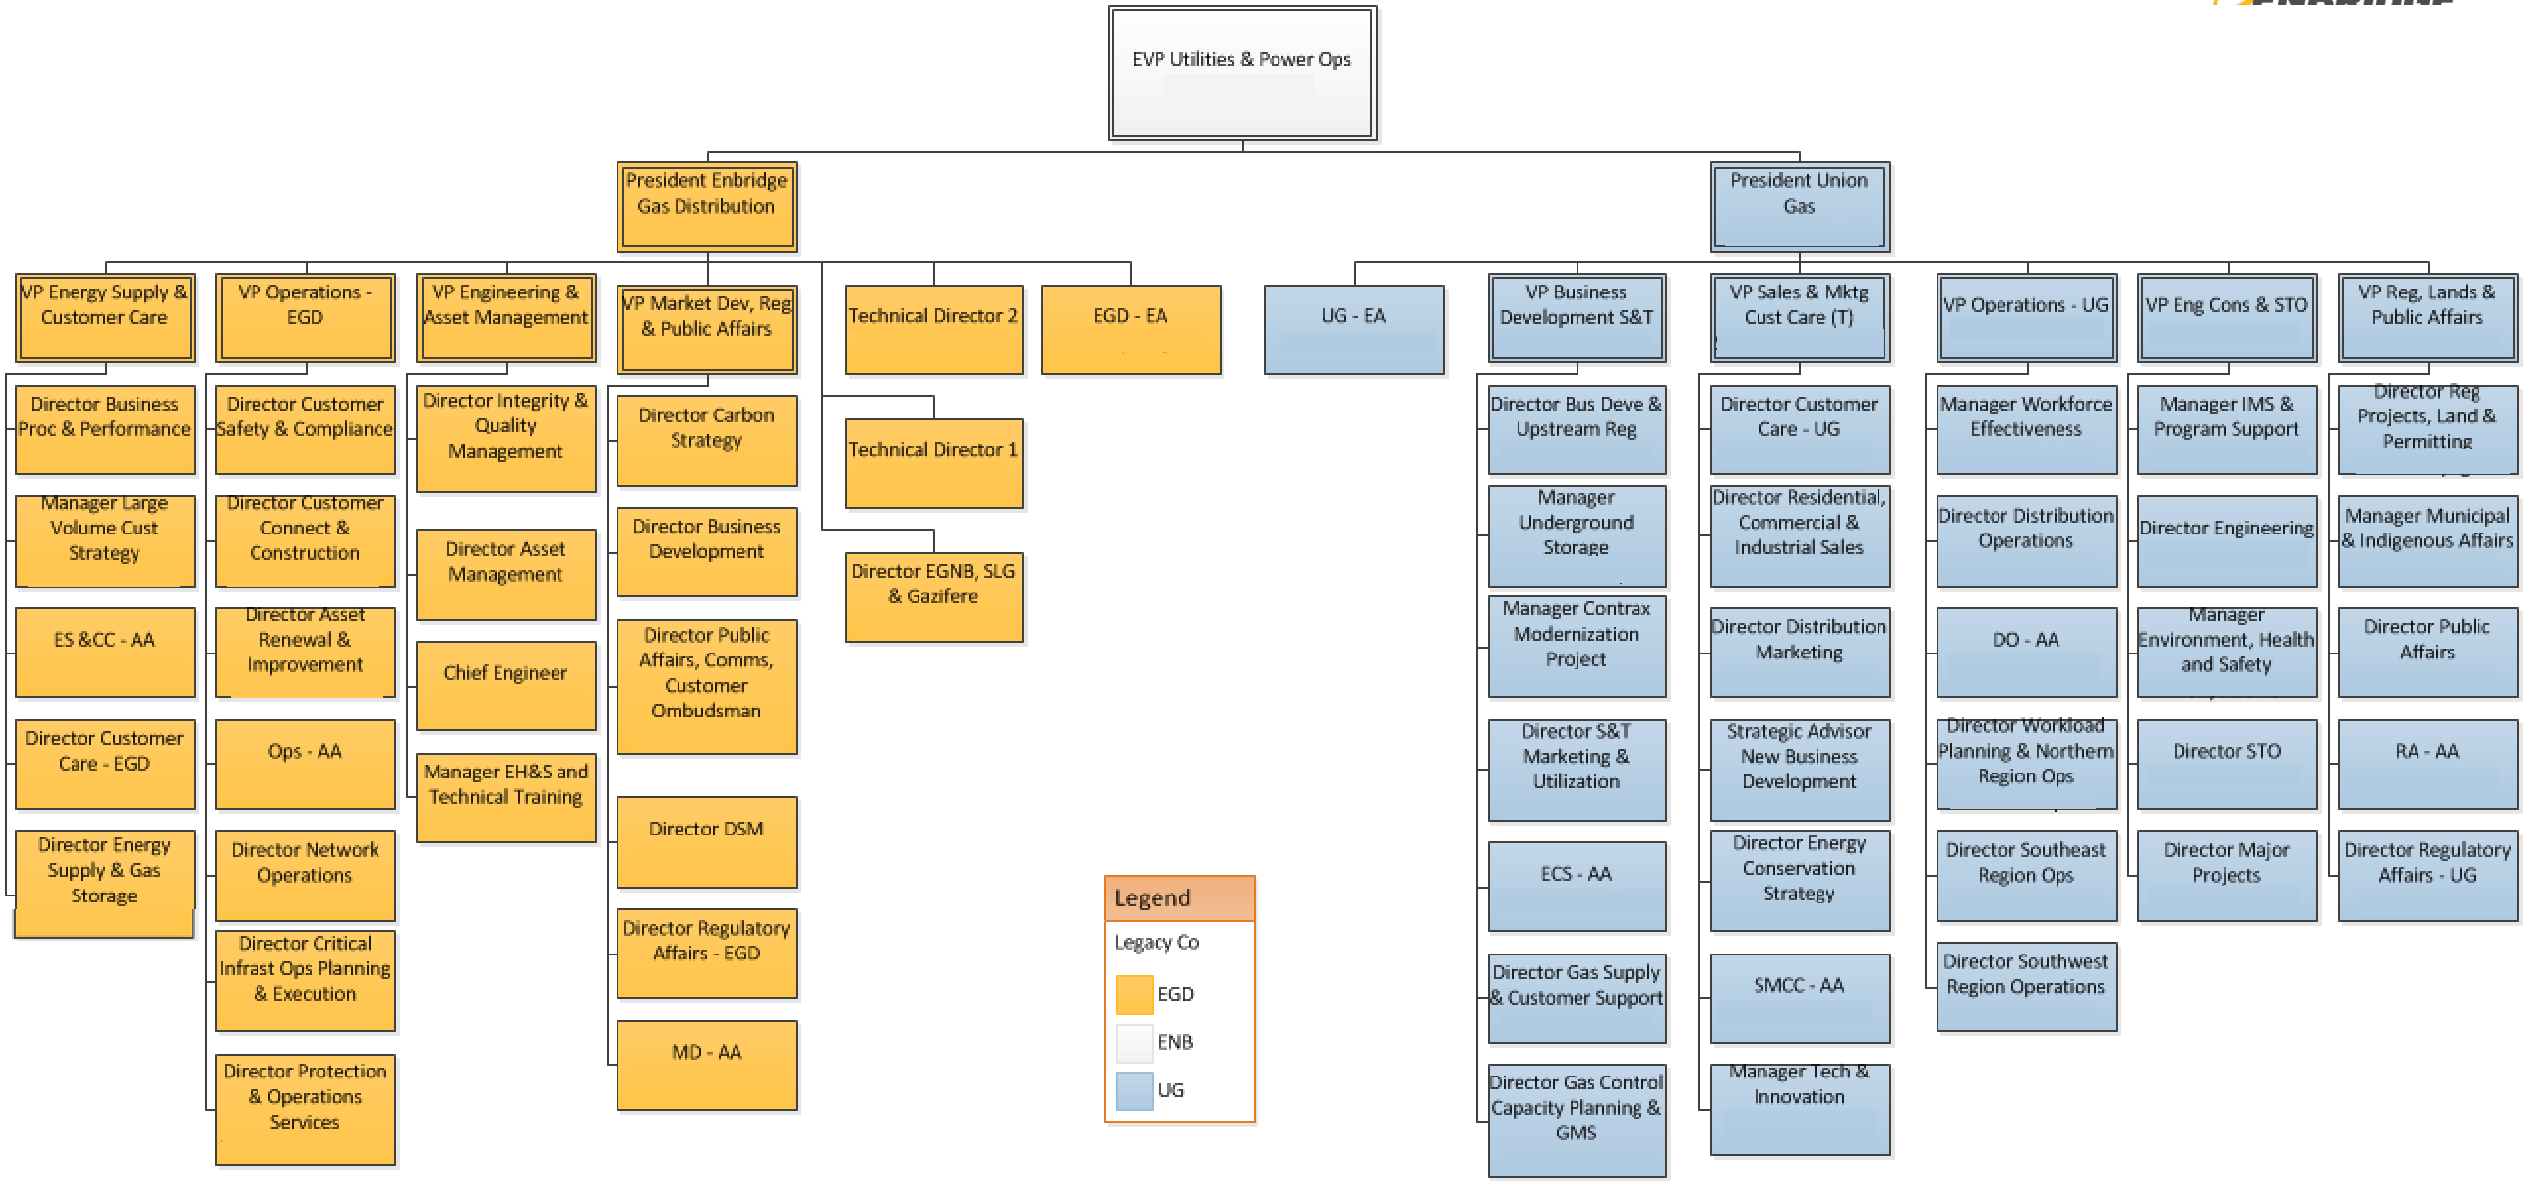
a-b) Please see Attachment 1 – EGD & Union Organization Structures Prior to Amalgamation.

c) Enbridge Gas assumes this request is for all roles that were eliminated as a result of the amalgamation which occurred January 1, 2019. There were 200 roles eliminated as a result of the amalgamation and an additional 241 eliminated via the Voluntary Workforce Options (VWO) program for a total of 441. To protect confidentiality of employees whose roles were eliminated, Enbridge Gas will not provide a detailed list of all roles. However, in Table 1 the Company provides a summary of roles eliminated by area, mapped to the amalgamated organizational structure.

Table 1
Summary of Roles Eliminated by Area

Line No.	Area	# roles
1	Business Development & Regulatory	45
2	Customer Care	60
3	Distribution Operations	73
4	Energy Services	16
5	Engineering & STO	228
6	Central Functions	11
7	Other	8
8	Total	441

EGD and Union Organization Structures Prior to Amalgamation



ENBRIDGE GAS INC.

Answer to Interrogatory from
Pollution Probe (PP)

Interrogatory

Reference:

Section 19.1 [Exhibit 1, Tab 3, Schedule 1] provides a consolidated list of the approvals Enbridge is requesting. The list includes specific documents.

Question(s):

Please confirm that Enbridge is not seeking OEB approval of any other Enbridge documents (e.g. policies, manuals, plans, etc) not on the list in Section 19.1. If incorrect, please provide the full list.

Response:

Confirmed.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-3-1, Attach 3

Question(s):

Please explain in detail how Enbridge plans to change its board of directors and governance practices over the rebasing term to reflect the changing public expectations arising out of the energy transition. Please provide all studies, memoranda, presentations and other documents related to governance and the energy transition

Response:

Enbridge Gas Board of Directors includes Michele Harradence, President, James Sanders, SVP Operations and Bill Yardley who replaced George Unruh in 2023. Energy transition governance is provided both by the Enbridge Gas and the Enbridge Inc. Board of Directors.

Enbridge Inc. and Enbridge Gas are always seeking to ensure that their Board of Directors have the right skills and experience to guide the Company through its energy transition. Board composition is assessed regularly, to ensure Board members are well equipped to understand and oversee ESG matters, including climate change and the energy transition. Enbridge Inc. discloses a skills matrix each year. Currently, most Enbridge Inc. directors indicate that they have experience with policy, regulations, operations, transactions relating to renewable energy sources, new energy technologies, and climate change. All directors indicate that they have an understanding of ESG, corporate social responsibility and sustainability practices and their relevance to corporate success. With respect to directors with operational energy transition experience, Jason Few is the President & CEO of FuelCell Energy, Inc., a global leader in manufacturing stationary fuel cell energy platforms for decarbonizing power and producing hydrogen.

Energy transition governance at the Enbridge Inc. Board of Directors is largely exercised through the Sustainability Committee and the Safety and Reliability Committee. The former oversees Enbridge Gas's GHG emissions goals and targets, Indigenous and stakeholder engagement, human rights and ESG reporting. This includes overseeing progress on our ESG goals. The Safety and Reliability Committee oversees safety and operational risks, including physical and transition climate-related risks, cyber security programs and elements of our safety culture. At each Board meeting, the Board receives updates and provides feedback on progress towards our goals and execution of our strategy. This critical feedback ensures that we are continuously refining and improving our approach.

Management provides quarterly updates to the Enbridge Gas Board of Directors on safety, operations, customer care, regulatory and business development on a quarterly basis. Please see response at Exhibit I.1.2-CCC-1, Attachment 1 (presented to Enbridge Gas Board of Directors and Enbridge's Board of Directors) and Attachment 2 (presented to Enbridge's Board of Directors) for material provided to the Enbridge Gas and Enbridge Inc. Boards of Directors on the Company's rebasing application.

Enbridge Gas management provides governance on energy transition matters though the Energy Transition Steering Committee. Please see attached presentations describing how the management governance of energy transition is structured (Attachments 1 through 4).

Energy Transition Governance Overview

—

Steering Committee

February 16, 2021

Fiona Oliver-Glasford

Manager, Energy Transition Planning

ENBRIDGE®

Energy Transition Governance

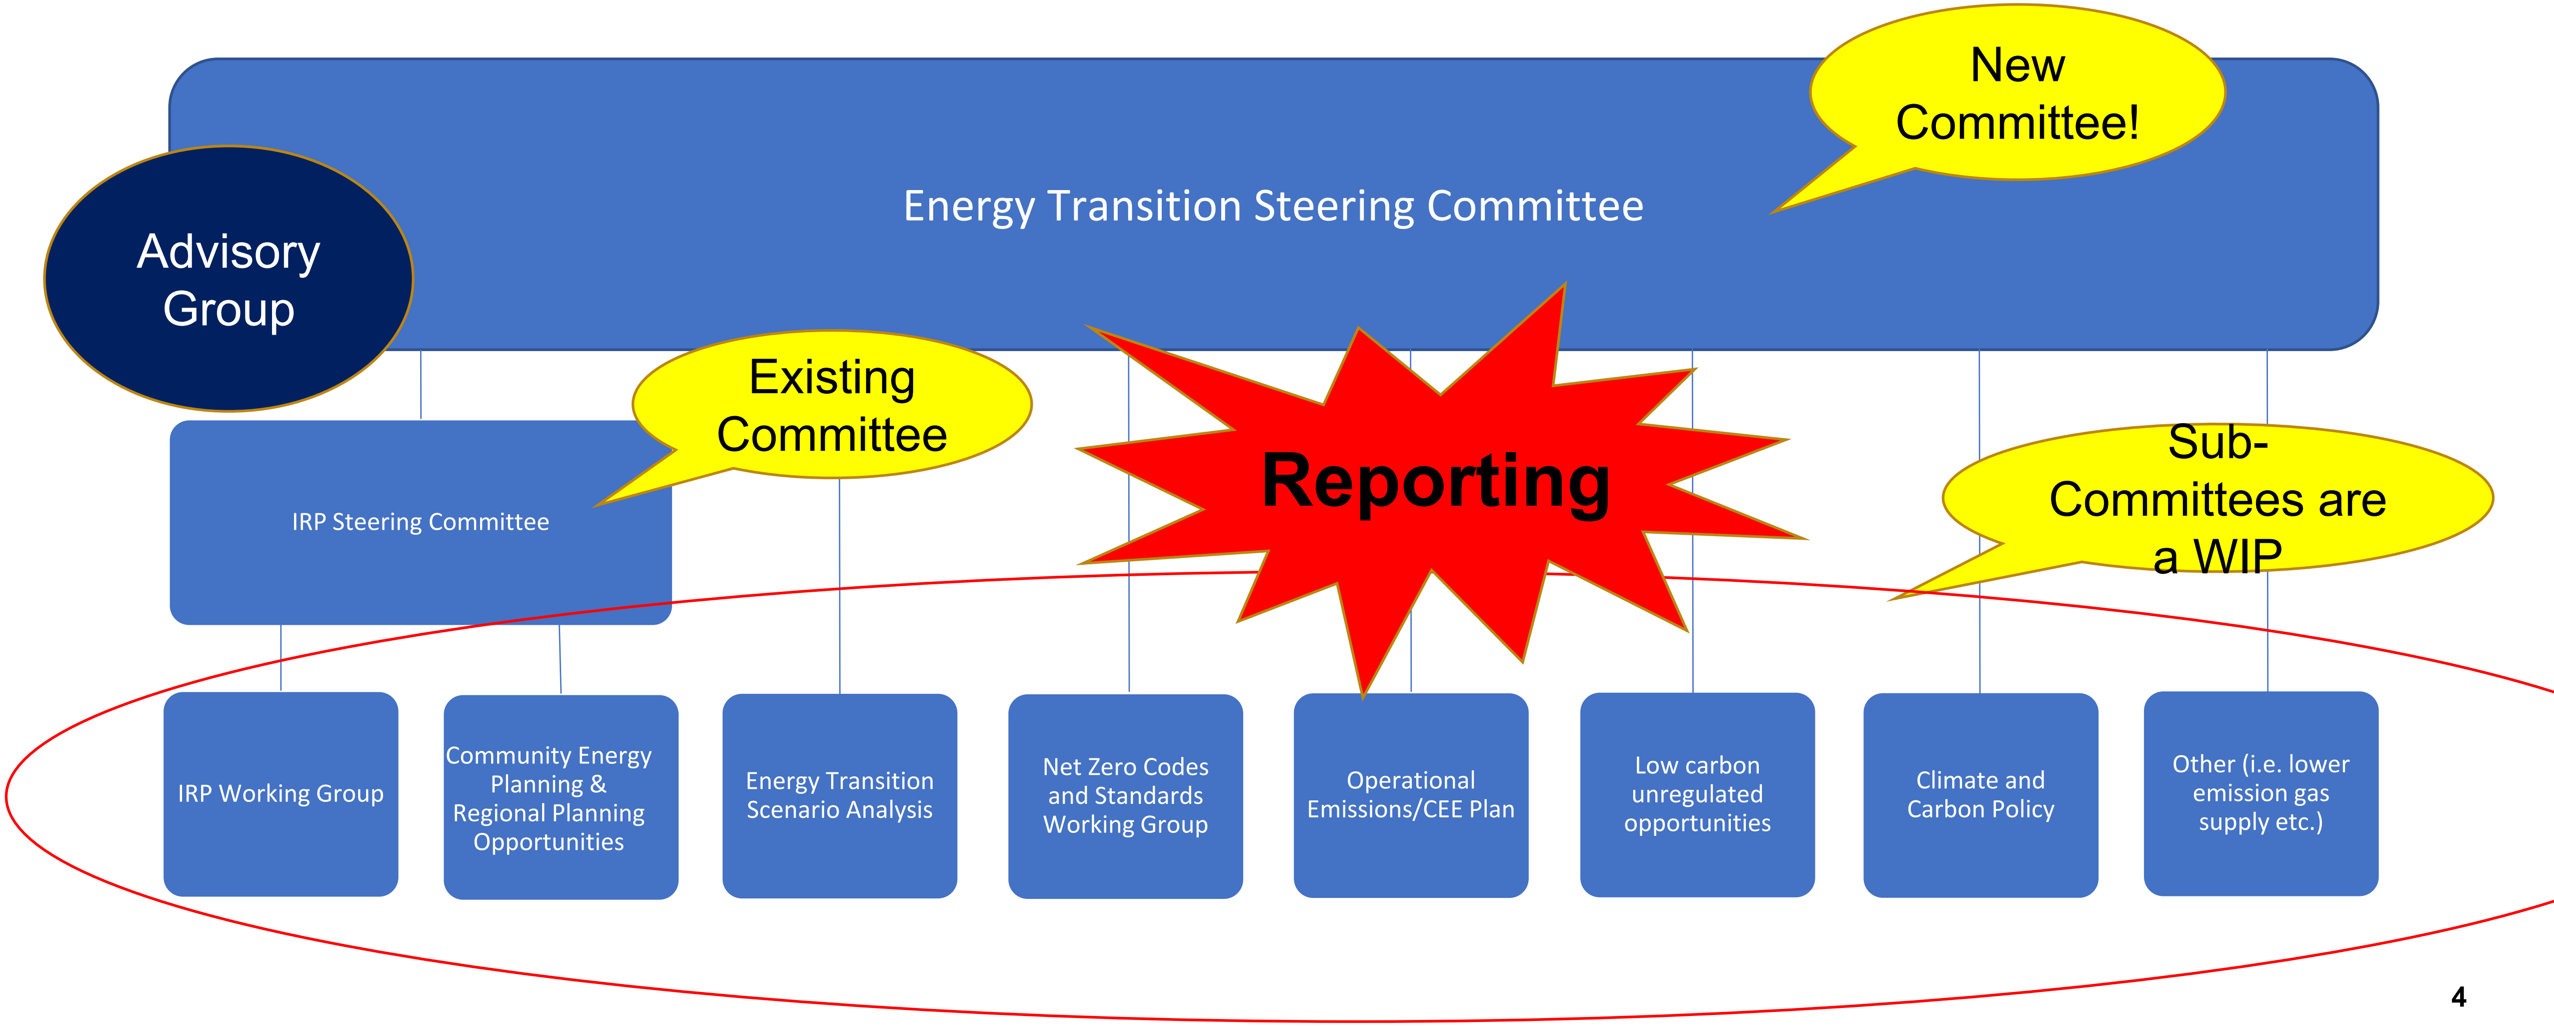
ENBRIDGE
Life Takes Energy

- Growing recognition that investors are interested in our planning related to climate risks, climate risks influencing investment decisions
- Policy makers at all levels of government developing new climate policies
  - Federal: various policies under Pan-Canadian Framework, Net-Zero Carbon by 2050 target
  - Municipal: Community Energy Plans, climate emergencies
- Key part of the long-term strategic planning for our Utility given signals and pressure the OEB and intervenor groups
- Increased focus on climate risk/policies at corporate level (Enbridge Inc.)
  - Setting targets for GHG reductions from each BU linked to performance management
  - Increased external climate disclosures – Climate Report, Corporate Sustainability Report
  - Scenario planning to determine impact on the business of climate policy
  - Set new strategic target “Adapting to our Energy Transition”

Energy Transition Governance

- Clarity of our Energy Transition Strategy so that we are taking direction but also informing EI’s planning.
- Alignment between the various cross functional areas so as to best optimize solutions and opportunities
- Ensure fulsome reporting on activities is being captured and summarized for senior level insight and for communication against the GHG scorecard.
- Will ensure the right organizational structures Numerous people, processes around the Company will feed into this structure
- Create dynamic and aligned vision on Energy Transition that will engage employees!

Energy Transition Governance



Energy Transition Steering Committee

- Proposed standard report with key area updates from Sub-Committees
- Meetings to have Standing Agenda Items (proposed):
  - EGI GHG Scorecard/Target Status
  - Energy Transition Scenario Analysis
  - Other? General Discussion on gaps/wins/challenges.
- Feature Discussions each meeting could include:
  - Offsets
  - Hydrogen or RNG
  - Codes and Standards/Net Zero Buildings
  - Low Carbon Solutions
  - Climate Policy (including CFS for the liquid stream, methane etc.)
  - Provincial Energy Planning
  - Municipal planning and related activities

Information or Capacity Gaps?

- Project Manager/Administrator to support reporting related to all of the Energy Transition elements
- Other?
  - New Sub-committee areas to be formed or formalized?

Thank you

- Brief meetings will be held with the Energy Transition Advisory Group prior to the Energy Transition Steering Committee to discuss the agenda for the Steering Committee and inform direction of the discussion.

ENBRIDGE
Life Takes Energy

Monday, March 29

ENG Project – *Facility GHG Emission Reduction (Cross Functional)*

For the Period April 1 to May 1, 2021 Overall Project Status: Green Author: Luna Ghose Munro

ENBRIDGE
Life Takes Energy

Project Overview: Initiated to support Enbridge's GHG emission reduction targets and to meet the GDS 2021 scorecard objectives. Project will identify and review potential opportunities and strategies to achieve cost-effective GHG reductions driven by the Asset Management Plan, updated operating practices, equipment modernization/innovation, and emerging policy/regulations. Includes 1.a) Develop 3-year GHG reduction plan, b) track and report GHG emission reduction through dashboard, 2. Implement 3 EGI emission reduction initiatives, 3. Enterprise wide GHG intensity reduction target.

Project Approach and Overall Time Horizon: 1. a) Review GHG Opportunities already identified through previous GHG projects + AMP with Functional Leads and SMEs, complete detailed assessments to feed into 3-Year Emission Reduction Strategy. b) PM to provide information to BU Dashboard managed by Corporate Emission Working Team, 2. Initiative Owners to report on progress, environmental support to complete GHG reduction calculations 3. Enterprise wide GHG intensity reduction to be completed by Corporate Sustainability and Strategy and Power, PM to provide updates on projects as required. Overall timeline is end of 2021, with specific targets and incentives to accelerate completion as per scorecard.

Accomplishments this period:

- Project charter approved
- Established Emissions Reduction Working Group (ERWG) (GDS)
- Reviewed governance structure requirements (ENG Integration, GDS Scorecard Metrics)
- Project approved and given cross-functional status
- Established Corporate Emissions Working Team under Emissions SteerCo (Enbridge Inc.)

1.a) 3-Year Plan – Established working group.
2.a) Leak Backlog – Developed 3-year plan, implemented reporting and tracking process.
2.c) High Bleed Pneumatics – Inventory of pneumatic devices complete, 2-year budget developed.

Pending Decisions or Leadership Direction Required:

- Financial Analysis Template for Detailed Assessments TBD with Corporate Emission Steering Committee, Template will also be used for Opportunity Ranking
- BU Dashboard from Corporate Emission Steering Committee

Obstacles (O)/Dependencies (D):

D- Corporate Emission Steering Committee Direction on BU Emissions Dashboard.
D- Corporate approach to meeting Corporate target could alter BU 3-Year GHG reduction plan.
D- Corporate Sustainability/Strategy is responsible for 3. Enterprise wide GHG Intensity Reduction target.
D- AMP Project Decisions.
D- Other Environmental regulatory dependencies (OBPS, MSAPR, Methane Reg, etc.).

Project Risks and Treatment:

- Insufficient Internal Resourcing – Steering Subcommittee Support
- Detailed Assessments not completed or updated – Regular Communication with Function Leads
- Reduction Measures not resulting in estimated reduction – Corporate Offset Strategy
- AMP Project Reevaluation – Regular Communication with AMP Functional Lead

What's Next to Tackle:

1.a) Kick-off meetings, review long term AMP (ID all projects with GHG impacts)
1.a) Finalize Corporate Prioritization Criteria (Internal Carbon Price and Investment Review Criteria)
1.b) BU Dashboard development with Corporate Emission Working Team

Resourcing Update:

- PM assigned to Project
- Functional Leads identified, for 3-Year plan and 3 EGI ER Initiatives
- Additional SMEs to be identified for opportunity review and completion of detailed assessments

Next Planned Communication or other Change Management Event:

- Kick off meetings with Functional Leads, targeted discussions with SMEs.

Key Deliverable / Milestones (happening in < 12 months)	Target Date	Revised Date	Progress / Status
Develop Strategy for 3 EGI Emission Reduction Initiatives	June 15th		50%
Identify and Prioritize Opportunities for Assessment	May 31st		25%
Develop Long Term Modernization Plan	July 31st		25%
Develop BU Dashboard Reporting Process	Aug 31st		0%
Complete Detailed Assessments	Oct 31st		0%
Approve 3-Year Emission Reduction Strategy	Oct 31st		0%

STATUS LEGEND						
	G	Ongoing / On Track	Y	Off Plan and Recoverable / Requires Focus	R	At Risk / For Discussion with Leadership

Energy Transition Scenario Analysis Update

Cora Carriveau

Friday, April 23

Project Status

ENBRIDGE
Life Takes Energy

WP1: Reference Case & Critical Drivers

- **COMPLETED**
- Data discovery with internal stakeholders
- Defined 15 Critical Drivers relevant to model
- Delivered Reference Case Model Outputs

WP2: Parametric Analysis

- **COMPLETED**
- Identified relative impact of Critical Drivers
- Created Data Visualization Platform (Power BI)

- **COMPLETED**
- Internal and Externa stakeholder engagement
- Defined scenarios
- Defined scenario assumptions

WP4: Scenario Modelling

- **IN PROGRESS**
- Modelling of Scenarios
- Output files and Project Report
- End of May delivery

- Hosted two engagement sessions with participation from 15 internal SMEs
  - DSM, Gas Supply, BD, Technology and Innovation, Municipal, Regulatory, Forecasting
  - Presented supply and demand related assumptions for each scenario, and collected feedback via follow-up survey
- Hosted one engagement session with participation from 17 external stakeholders, received feedback via survey from 6 participants
  - Stakeholder group (Toronto District 2030) comprised of IESO, Canadian Green Building Council, housing developers, Enwave, academics, YMCA
  - Comments during session were generally supportive of the ETSA work, but encouraged us to complete decarbonization planning, with goal of absolute zero emissions by 2050, not net-zero
- Based on feedback received, identified specific industrial end-uses where fuel switching to electricity or hydrogen could easily occur.

Energy Transition Scenario Analysis

ENBRIDGE
Life Takes Energy

	Steady Progress	Diversified Pathway	Electric Pathway
Achieves net-zero by 2050	• Not likely	• Targeting	• Targeting
Carbon price by 2038	• \$200/tCO_2 (\$170/tCO_2 by 2030, escalated by inflation)	• \$200/tCO_2 (\$170/tCO_2 by 2030, escalated by inflation)	• \$338/tCO_2
Codes & Standards	• Net-zero energy ready by 2038 • Retrofit code implemented by 2035	• Net-zero energy ready by 2035 • Retrofit code implemented by 2030	• Net-zero energy ready by 2035 • Retrofit code implemented by 2030
Fuel switching policy	• None	• Some communities ban gas for new construction • Incentives encourage existing homes to fuel switch	• Province-wide mandate to switch to electric heating starting in 2025 for new construction and existing homes. • Some industrial electrification
RNG	• Modest, <10% of gas supply	• Maximized,15-25% of gas supply	• Modest, <10% of gas supply
Hydrogen	• Modest, < 5% of gas supply	• 100% H2 networks introduced in 2030 • Blending 10% H2 in natural gas system	• Minimal, < 1% of gas supply
CCS	• Minimal, capture mainly at refineries, H2 generation	• Maximized, capture at most large emitting industries	• Minimal, capture mainly at refineries, H2 generation

Energy Transition Governance Discussion

Cara-Lynne Wade and Jennifer Murphy

ENBRIDGE
Life Takes Energy

Monday, March 29

Energy Transition Planning Committee

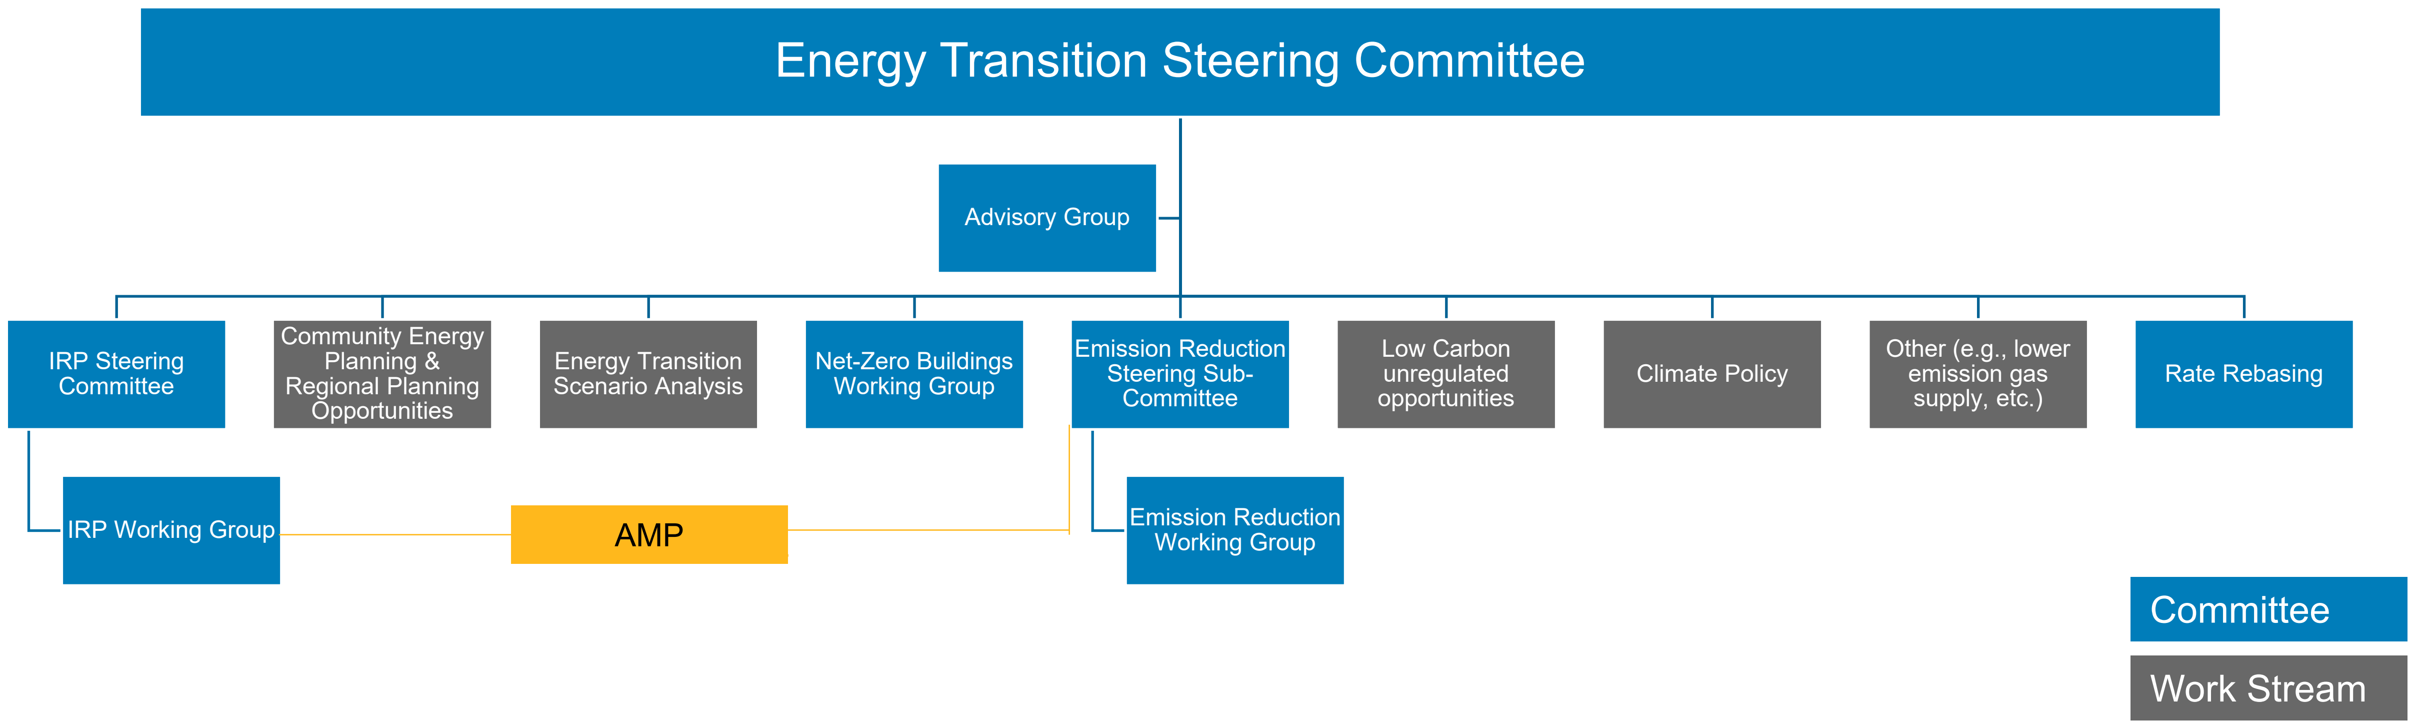
ENBRIDGE
Life Takes Energy

- Oversee and guide long-term energy transition strategies
- Ensure alignment between the various cross functional areas to best optimize solutions and opportunities
- Oversee progress on energy transition activities such as progress against GHG scorecard

Feedback received to-date:

- "What is the scope of the ETSC? Have we adequately captured it?"
- "What decisions are being made by the ETSC?"
- "Is a more macro level view of energy transition at EGI.....needed in order to ensure we are working in a coordinated manner and appropriately prioritizing energy transition?"

Energy Transition Steering Committee



Feedback received to-date:

- “What groups / work streams should flow into the ETSC? Are we missing any?”
- “How does the ETSC ensure alignment between the groups / work streams?”
- “Does the ETSC advisory group have the right membership?”
- Do we need to look at “each group having established objectives….in order to ensure we are working in a coordinated manner and appropriately prioritizing energy transition?”

Energy Transition Governance

- Continue to flush out, based on discussions with key stakeholders, the ETSC purpose and governance structure, to ensure that the ETSC is aligned on what:
  - Considered to be in and out of scope for the ETSC; and use this to confirm that the right teams/individuals are engaged.
  - type of decisions/endorsements are currently happening within the sub-committees and work streams, and which of these need to be raised to the ETSC to ensure alignment and prioritization.
  - What type and frequency of energy transition 'information sharing' is required with the ETSC vs ETSC AG, as well as across sub-committees/work streams.

Note: to manage scope of work, the above activity will be conducted on one focus area at a time.

Energy Transition Steering Committee

Think before taking that Facebook quiz

Tips to avoid social media scams:

- **Be skeptical**: Before answering a quiz, figure out who created it. Is it a brand you trust?
- **Don't give answers to common security questions**: Be cautious if the questions in a quiz ask for things like your mother's maiden name, street you grew up on, previously owned vehicles, favorite foods, or the name of your high school.

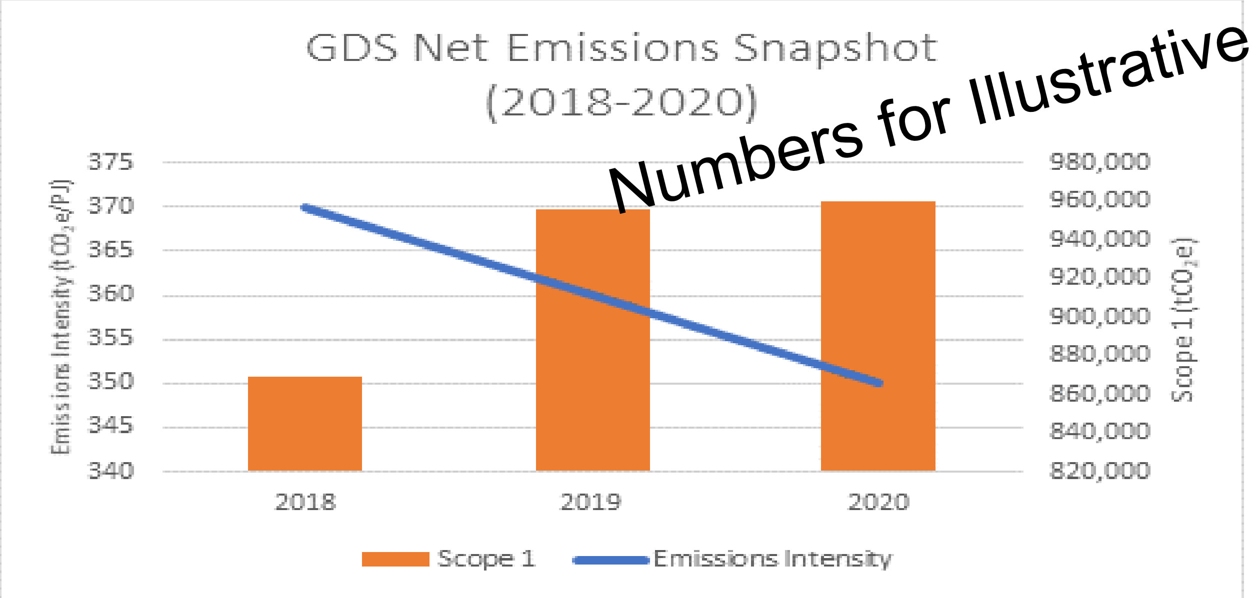
GDS Scorecard Performance Snapshot

Development of 3-Year Strategy*	
Emissions Reduction Initiative Tracker*	
Enterprise-Wide Intensity Relative to 2018 (+/-%) (scorecard target: 0x: 4%; 1x:8%, 2x:12%)	-8%

*Green: >70% on schedule; Yellow: >40% but <70% on schedule; Red: <40% on schedule



Numbers for Illustrative purposes only

GDS 2021 Results Summary**

2021 GDS Emissions Intensity to Date (tCO2e/PJ) (Subset data)	341
Scope 1 Stationary Combustion Emissions (tCO_2e)	**920,000**
Q1:	250,000
Q2:	200,000
Q3	220,000
Q4	250,000
Natural Gas Throughput (PJ)	**2,700**
Q1:	725
Q2:	600
Q3:	650
Q4:	725

**Relative to previous reporting year, Black: no change; Green: reduced; Red: increased

Note: Only report subset data for 2021 due to data availability, plan to incorporate all emissions data when the process is in place.

Proposed: Initiative prioritization framework

ENBRIDGE

Proposed Prioritization Criteria

Emissions reduction impact

Output: Overall and relative emissions reduction from initiatives annually until 2030

Financial impact

Output: NPV[1] of initiative (considers operational cost impact, revenue impact, capital investment, and other cash impacts e.g., carbon tax) and feasibility assessment (CapEx requirement)

Non-financial measures

Output: Key considerations on ability to recover the cost, impact to society, implementation risk, and other enterprise level considerations (as appropriate)

→

Prioritization framework that is consistent across BUs

Output: Holistic consideration across financial, risk, emissions reduction metrics to assess tradeoffs, as well as broader strategic considerations

→

Decision for final set of initiatives to pursue made by ELT through an enterprise lens

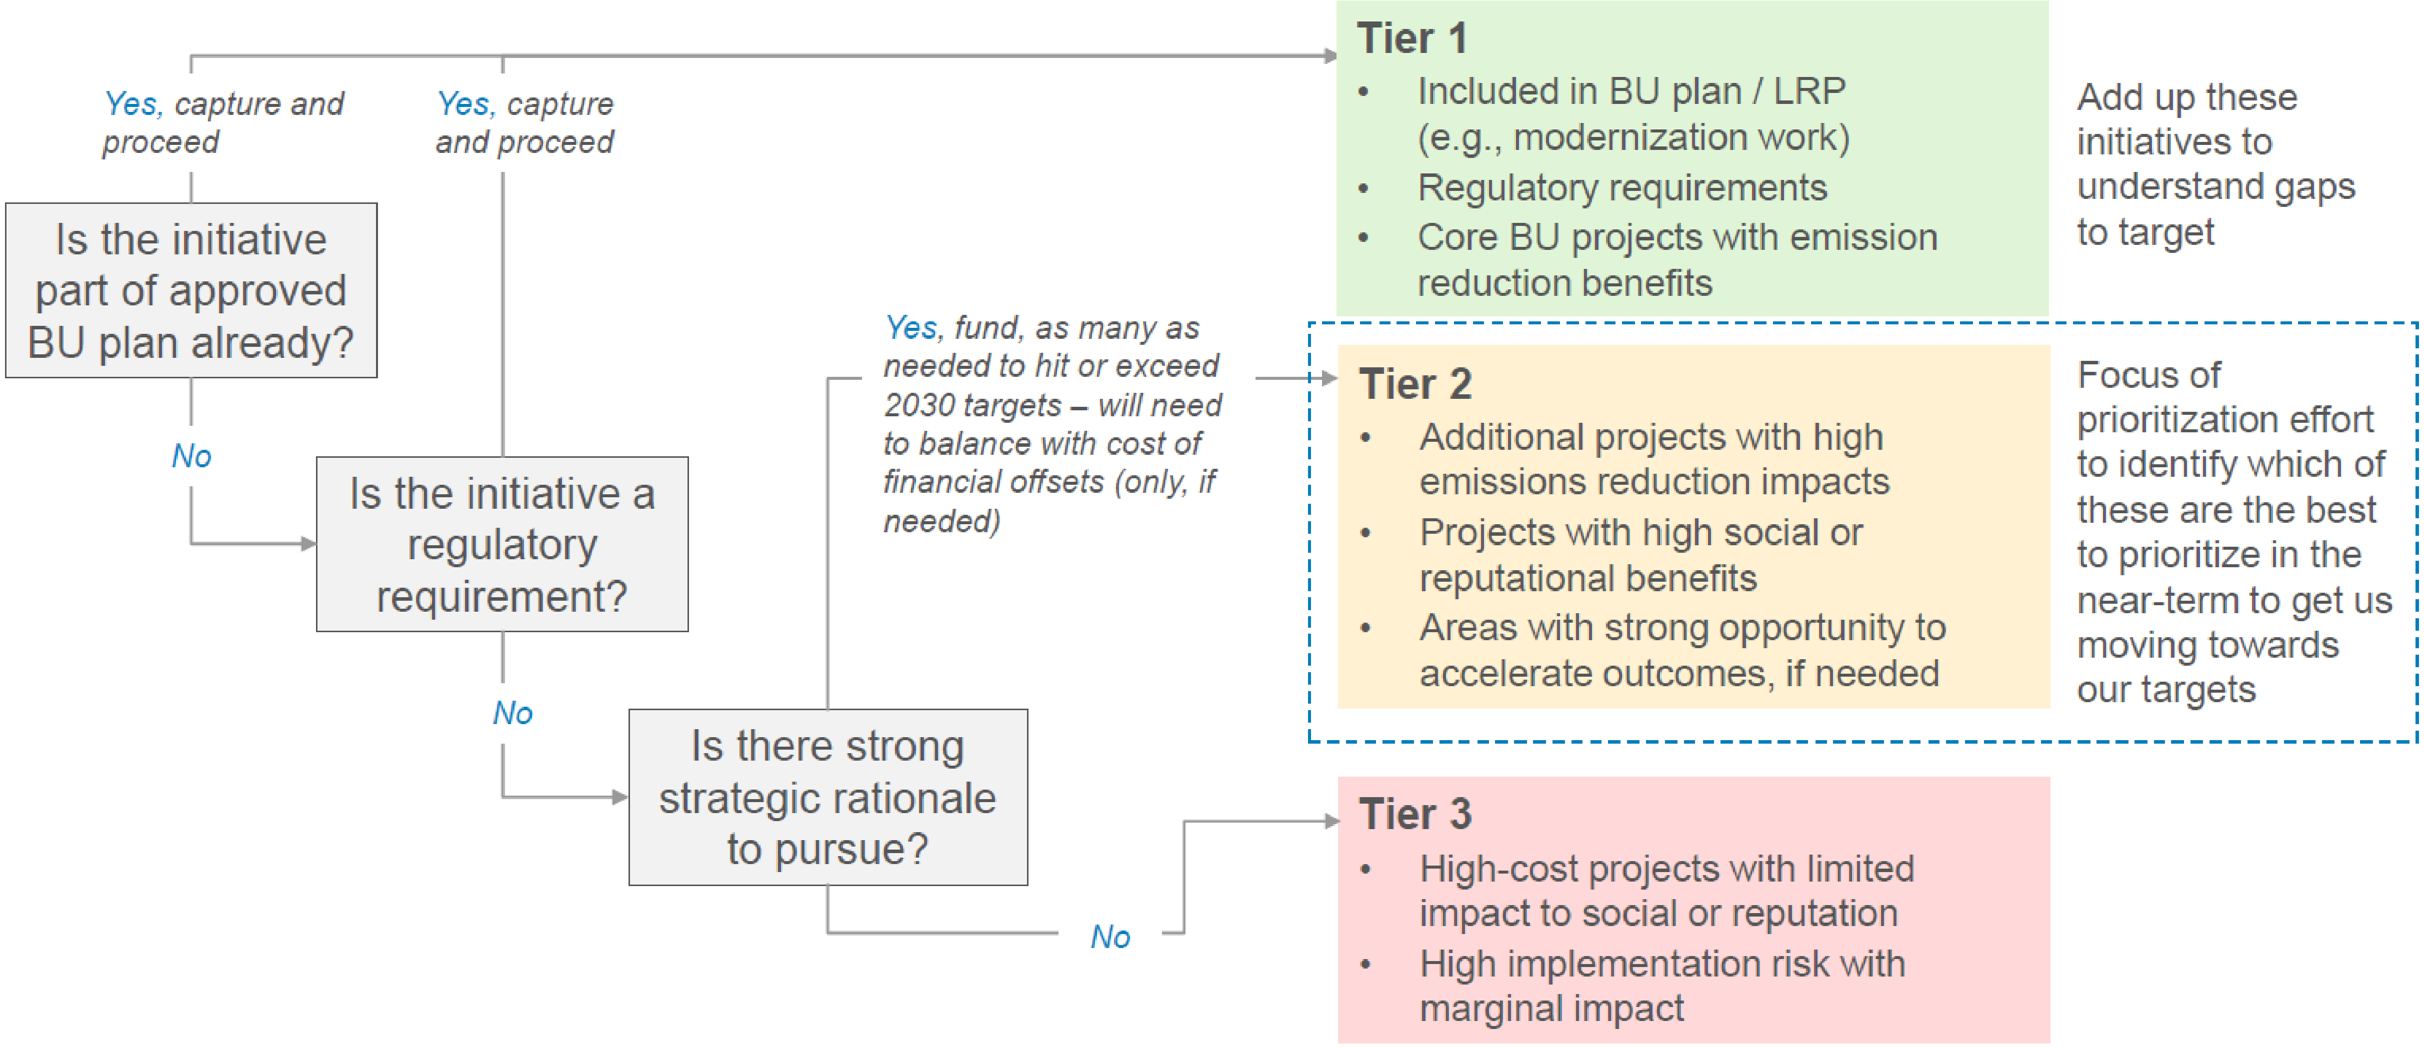
Note: Prioritization will be revisited on an annual basis

A set of criteria will be gathered and used to prioritize initiatives for the next 5 and 10 years

1. Will use Enbridge discount rate for all NPV calculations

3 Draft: 2021 prioritization approach; Intent to align on handful of high impact opportunities

ENBRIDGE



Proposed BU submission template of initiatives

ENBRIDGE Life Takes Energy

GDS 2021 10 year forward Emissions Reduction Plan Template

OVERALL BASELINE ASSUMPTIONS	(relevant metrics by BU)	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030

Modernization & Innovation	NG Replacement - Parkway A Plant	Scope 1	2029	40	(85,475)	(2,137)	120			Yes	No	Moderate	Low
Direct - Other Low-Carbon Solutions	Compressor Fuel Switch to 10% RNG - Dawn/Tecumseh	Scope 1	2023	40	(509,120)	(12,728)				Potentially	No	Moderate	Low
Direct - Other Low-Carbon Solutions	Compressor Fuel Switch to 35% RNG - Dawn/Tecumseh	Scope 1	2023	40	(1,781,840)	(44,546)				Potentially	No	Moderate	Low

Preliminary Working Draft

The templates will be gathered and collated into an Enterprise view for initial prioritization prior to the July SteerCo.

3

Proposed: Elements of the BU template

ENBRIDGE

Working Draft

Categories		Inputs to Template
Baseline BU Assumptions	Relevant metrics by BU	Est. volume
		BAU Baseline Emissions (MM tCO_2e)
		BAU Baseline Emissions Intensity
Overview of initiatives	Facts on the initiative	Pathway (see prior page for 4 categories included)
		Project Name
		Scope
		Start date
		ISD
		Life
Prioritization Criteria	Emissions reduction impact	Total tCO_2
		Annual tCO_2
		tCO_2/PJ
	Financial implication	Nominal Capital (in C$)
	Non-financial considerations	Ability to recover in rate base
		Regulatory requirement
		Social benefit
		Implementation risk

Next Steps/Discussion:

Prioritization Framework / Financial Assessment:

- To be developed by end of June (pending approval of additional corporate resources)
- Will be used to determine Net Present Value (NPV) and $/tonne cost of projects
- Model may not be consistent with previous models used by GDS for OEB applications
  - Previous modelling based on Federal Carbon Pricing Program (FCPP):
    - Carbon Levy only applies to Fuel Use (e.g., Combustion Emissions)
    - Carbon Cost based on FCPP
    - Carbon Levy for STO Fuel discounted based on Output Based Pricing Program (Carbon Levy discounted by ~ 65%)
  - Engaged Finance/Regulatory/Energy Transition to assist with evaluation of Corporate Prioritization Framework/ Financial Model and applicability to OEB projects and Cost Recovery Potential for any projects to be submitted under FCPP application

Next Steps/Discussion:

New Opportunities/Innovation

- STO fuel usage is largest source of GDS GHG Emissions, representing approximately 40% of total 2018 baseline emissions

- Evaluating opportunities for reducing STO fuel usage, including:
  - ***Business Development/RNG:***
    - Working with Business Development to assess RNG opportunities to offset STO Compressor Fuel usage
    - A preliminary assessment indicates that switching the **Dawn and Tecumseh compressor units** to a blend of natural gas containing:
      - **10% RNG** would result in an overall reduction of **13,000 tCO2e/yr* or a 1.5% reduction in emissions** as compared to the GDS 2018 baseline emissions
      - **35% RNG** would result in an overall reduction of **45,000 tCO2e/yr* or a 5.1% emissions reduction** as compared to the GDS 2018 baseline emissions.
  - ***Compressor Modernization***
    - Strategic Electrification of Compressors
      - Parkway/Parkway West (Small block of HP, infrastructure, noise abatement)
      - Dawn J Twinning (Favourable off-peak electricity pricing)

* Using 3-year average compressor fuel consumption

Energy Transition Advisory Group

Summary of Discussion & Proposed Next Steps

ENBRIDGE
Life Takes Energy

ETAG Member Input / Discussion

- EGI does not yet have an energy transition specific goal and associated plan to achieve it, therefore:
  - Existing working groups and steering committees are effective, but they do not always cover the broader energy transition discussion, so it can be difficult to see how the pieces fit together and what the collective actions can/will achieve in the long term.
  - There could be decisions/endorsements currently happening within sub-committees and work streams that could be raised to the ETAG to ensure alignment and prioritization.
  - Different department's in-year, annual goals aren't consistently set with a longer term EGI Energy Transition goal/plan in mind.

Proposed Approach / Next Steps for the ETAG

1. Scope what an EGI energy transition goal could be, ensuring alignment / support of EI's strategic plans and provincial/federal targets:
   - What could a customer emissions reduction goal/target (Scope 3) be?
   - What could an ex-franchise energy transition goal/target be?

2. Propose EGI energy transition goal(s).

3. Draft associated plan to achieve goal(s)
   - Identify and tie existing ET related activities to achievement of the agreed upon goal(s)?
   - Determine which new EGI initiatives/activities need to be evaluated and prioritized based on how they support achievement of the ET goal(s) and how this will occur.

Post ETAG Meeting Discussion – Scope 3

- EI contacted Energy Transition team to discuss potential / feasibility for GDS to set a Scope 3 reduction target – next steps:
  - High-level assessment to be completed by next week
  - Potential for a more detailed assessment to be requested by fall
    - This could expedite the work discussed with the ETAG and tie into the rebasing work / strategy

Rebasing - Incorporating ET into Demand Forecast

- Discussion held with Regulatory, Finance, BD, ET, DOE, Integrity & Asset Mgmt. to align on rebasing demand forecasting approach/strategy.

- Through discussion, the group determined that core demand forecast assumptions must:
  - Include consideration of energy transition, specifically:
    - Annual customer growth numbers.
    - Average consumption per year.
    - Additional items to be evaluated once the ‘Energy Transition Scenario Analysis’ report is completed/assessed.
  - Include consideration of the IESO’s planning document – to align their capacity plans/constraints with our forecast.
  - *Be brought forward to the ETSC for input prior to finalization.*

Note: Rebasing team to discuss/determine how energy transition will be considered when looking at depreciation, equity thickness.

Carbon Strategy Update

1. Government Consultation Submissions – Jennifer Murphy
2. Energy Transition Scenario Analysis Update – Jennifer Murphy
3. Net Zero Buildings – Heidi Steinberg Laxton
4. IEA's Net Zero by 2050 Report – Heidi Steinberg Laxton

Climate Policy Government Consultations

Jennifer Murphy

ENBRIDGE
Life Takes Energy

Friday, May 28

Climate Policy Update

Topic	Consultation Overview	Date Submitted
Review of the Federal OBPS Regulations	The Government of Canada committed to reviewing the OBPS regulations in 2022 and launched a consultation period seeking input on various aspects of the OBPS regulations for post-2022. Next steps: ECCC will engage stakeholders in the review in late 2021	March 29, 2021
Federal GHG Offset System	The Government of Canada consulting on the draft offset regulations. Next steps: final regulation anticipated in late 2021	May 5, 2021
Federal OBPS Programming	Consultation to inform program design related to federal programing for OBPS proceeds return and ways the programming could support registered facilities' climate action. Next steps: call for proposals anticipated in June/July 2021. Once project eligibility criteria is published, need to determine if EGI has any eligible projects.	May 12, 2021

Climate Policy Update

Recent Submissions

Topic	Consultation Overview	Date Submitted
Hydrogen exemption in GGPPA	Meeting with ECCC and federal Dept. of Finance to discuss hydrogen blending, including lack of exemption for hydrogen blended in natural gas from the federal carbon charge. Next steps: Jennifer and Sam meeting with GR next week to discuss next steps on advocacy.	May 21, 2021
The Clean Fuels Fund	NRCan hosted webinar on May 20 describing eligibility and evaluation criteria related to $1.38B funding program for feasibility/FEED studies and facility construction. Enbridge provided feedback on problematic eligibility criteria (size threshold and off-take agreement requirements). Next Steps: BD to identify projects in preparation for June 31 RFP launch.	May 28, 2021
Climate Action and Awareness Fund	ECCC has launched CAAF that will fund up to $6M in carbon capture and storage research and development to not-for-profit NGOs. Next Steps: Energy Services exploring partnership with Oil, Gas, Salt Resource Library to pursue CO2 injection project funding. GR also preparing brief on current restrictions preventing CO2 storage in Oil, Gas, Salt Resources Act.	Upcoming: June 10, 2021

Energy Transition Scenario Analysis Update

Jennifer Murphy

ENBRIDGE
Life Takes Energy

Friday, May 28

Energy Transition Scenario Analysis

- Consultant has completed modeling of “Steady Progress” scenario and is completing QA/QC checks.
- All scenario output files to be released May 31.
- Accompanying report and Power BI data visualization tool will be delivered mid-June.
- Existing documentation on scenario assumptions and modeling approaches have been shared with forecasting, finance and contract teams.
- On-going discussions with regulatory, forecasting, finance and other groups on how ETSA results may support rebasing application.

Net Zero Buildings Update

Heidi Steinberg Laxton

Net Zero Buildings

- There is a need to bring all EGI groups together to share knowledge and harmonize EGI's approach on net-zero building (NZB) matters. The NZB working group (NZB WG) will provide a means to align EGI's efforts, enhance advocacy efforts and maintain records for NZB.
- NZB WG will be coordinated by Energy Transition, with members from BD, Customer Care, Marketing & Energy Conservation, and GR.
- NZB WG members to be selected by Managers of above-mentioned groups.
- First meeting planned for June.
- Developing NZB WG Charter – draft to be reviewed at first meeting.

Net Zero by 2050 Analysis – IEA Report

Heidi Steinberg Laxton

ENBRIDGE
Life Takes Energy

Friday, May 28

IEA - Net Zero by 2050 – A Roadmap for the Global Energy Sector, May 2021

ENBRIDGE
Life Takes Energy

- **Approach to Net Zero by 2050:**
  - Key approach: energy efficiency, behavioural changes, electrification, renewables, hydrogen and hydrogen-based fuels, bioenergy and carbon capture, utilization and storage (CCUS).
  - Energy mix in 2050 is diversified with renewable energy providing two-thirds of energy use, including bioenergy, wind, solar, hydroelectricity, and geothermal, as well as nuclear.
- **Impacts to fossil fuels and natural gas:**
  - Increase in natural gas demand through mid-2020s before its significant decrease by 2050.
  - IEA suggests that no fossil fuel exploration, and no new oil and natural gas fields beyond those already approved for development.
- **Impacts to Buildings Sector:**
  - Electricity becomes dominant energy in buildings in 2050, and two-thirds of residential buildings are fitted with a heat pump. Remainder of building heat from hydrogen, bioenergy, district heat, solar thermal.
  - IEA recommends bans on new fossil fuel boilers (2025) and mandates that new buildings and most old buildings comply with zero-carbon-ready building energy codes (introduced by 2030) with compliance by 2050. By 2025, any gas boilers sold must be capable of burning 100% hydrogen and low-carbon gases (biomethane) in gas distributed to buildings, rises from almost zero to 10% by 2030 to above 75% by 2050.

IEA - Net Zero by 2050 – A Roadmap for the Global Energy Sector, May 2021

ENBRIDGE
Life Takes Energy

- **Impacts to Industrial Sector:**
  - Emissions reductions are initially observed by 2030 through energy and materials efficiency improvements, electrification of heat, and fuel switching to solar thermal, geothermal and bioenergy. Electricity consumption in industry more than doubles between 2020 and 2050.
  - Hydrogen and hydrogen-based fuels, bioenergy and CCUS play an increasing role in reducing $CO2$ emissions from industry, especially in high-temperature heat application that cannot be readily provided by electricity.
- **Electricity Generation:**
  - Electricity demand doubles by 2050, and comprises of 90% of renewables, with wind and solar PV accounting for ~70% and balance from nuclear.
  - Transition requires more flexibility: batteries, demand response and low-carbon power generation.
  - More stringent fuel-economy standards are created and elimination of internal combustion engines (ICEs) by 2035 results in shift to electric vehicles (EVs), which increases electricity system demand.

IEA - Net Zero by 2050 – A Roadmap for the Global Energy Sector, May 2021

- **Role of Alternative Technologies and Fuels:**
  - Supply of low-emissions gases (i.e., hydrogen, synthetic methane, biogas and biomethane) rises significantly from 2020 to 2050.
  - Reductions in CO_2 emissions through 2030 come from technologies readily available today. In 2050, half the reductions come from technologies that are currently at the demonstration or prototype phase - advanced batteries, hydrogen electrolyzers, and direct air capture and storage, which includes new pipelines to transport captured CO_2 emissions and systems to move hydrogen between ports and industrial zones.
  - Roll-out of hydrogen and CCUS after 2030 require significant annual investment in CO_2 pipelines and hydrogen enabling infrastructure.

IEA - Net Zero by 2050 – A Roadmap for the Global Energy Sector, May 2021

ENBRIDGE
Life Takes Energy

- **Biogas and Modern Bioenergy**
  - Direct use of renewables expands in all end-use sectors globally through to 2050. Modern bioenergy accounts for the bulk growth with blending of biomethane into natural gas networks and liquid biofuels in transport, which mainly occurs in regions with net zero mandates.
  - Biomethane demand grows due to blending mandates for gas networks, with average blending rates increasing to above 80% in many regions by 2050. One of the key advantages of bioenergy - use existing natural gas pipelines and end-user equipment.
- **Hydrogen**
  - Used to convert existing fossil energy to low-carbon hydrogen (no new transmission and distribution infrastructure required).
  - Hydrogen use expands from 10% in 2020 to 70% in 2030 and is blended with natural gas in gas networks (global average blend in 2030 includes 15% of hydrogen in volumetric terms, reducing CO2 emissions from gas consumption by around 6%).
  - Stored hydrogen is used to help balance demand and seasonal fluctuations, through retrofitting existing gas-fired capacity to co-fire with hydrogen.

IEA - Net Zero by 2050 – A Roadmap for the Global Energy Sector, May 2021

ENBRIDGE
Life Takes Energy

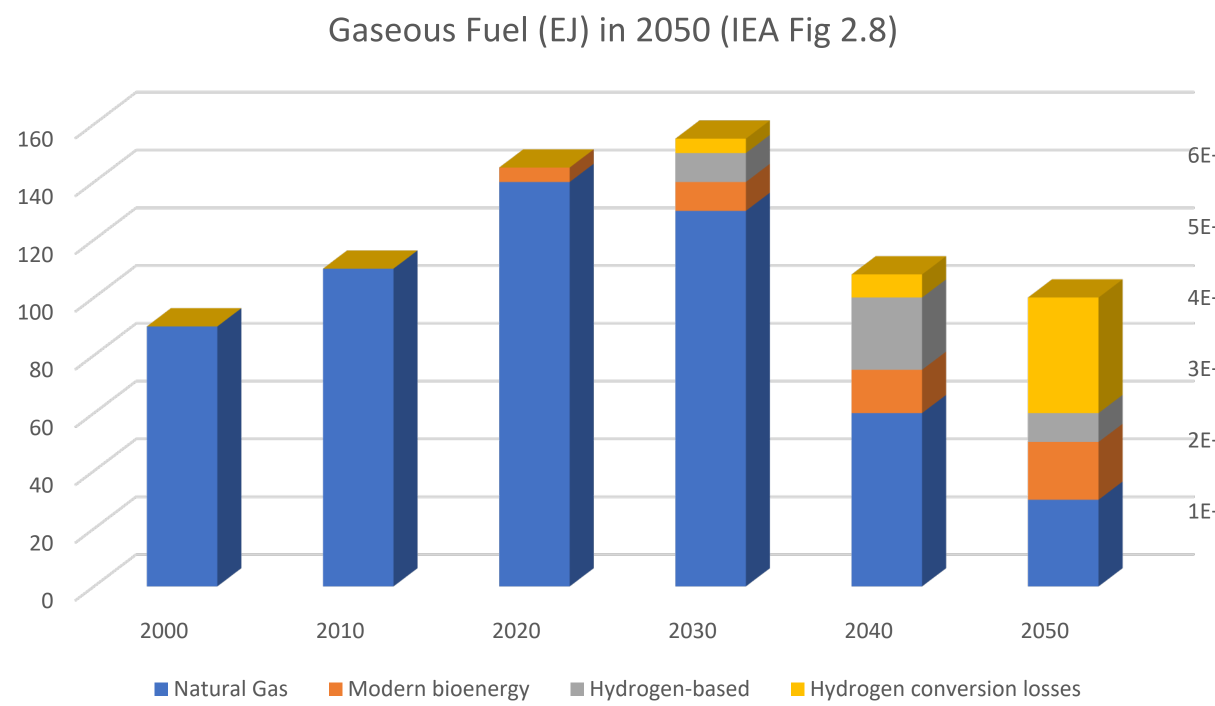
Potential risks:

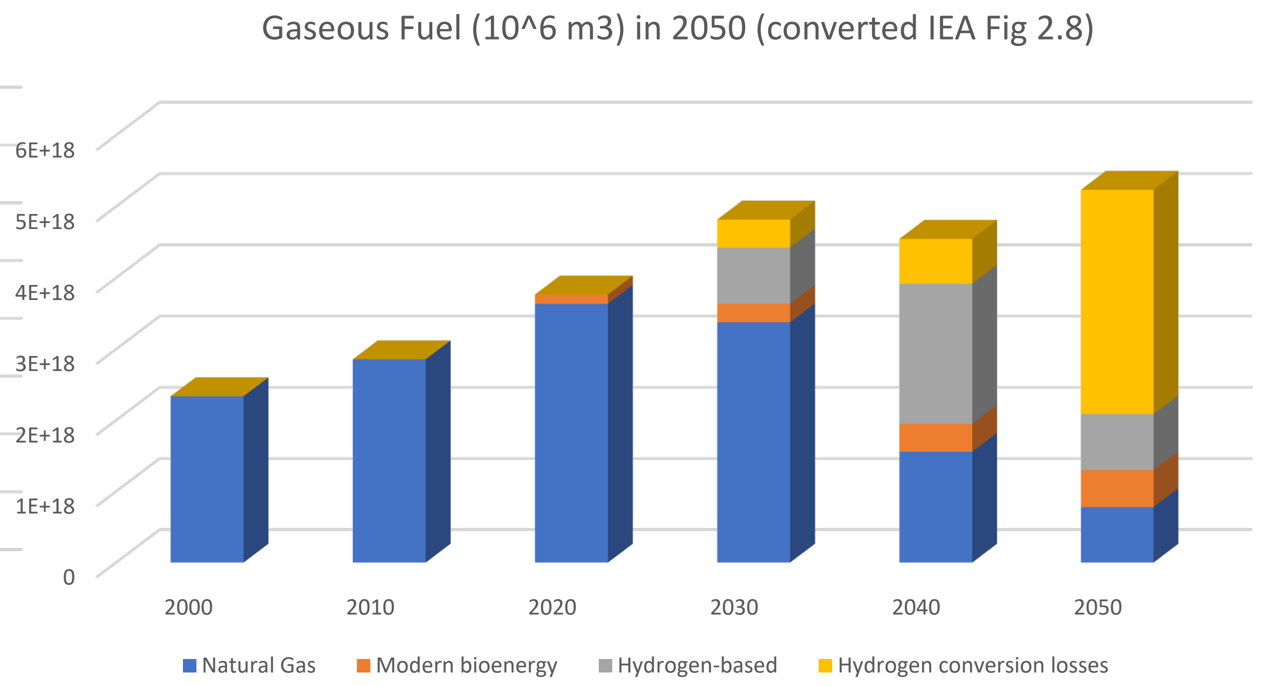
- Low growth of annual gas demand through mid 2020's, with decline on energy basis through 2050 due to behaviour change, energy efficiency and fuel switching.
- Residential/commercial – building heat switches nearly 100% to heat pumps, district thermal, solar thermal, etc. Drop in new builds starting in 2030 with mandate of "zero-carbon ready" buildings.
- Industrial – natural gas remains only where used as a feedstock, or where CCUS can be implemented.
- Stranded assets in natural gas system starting in 2030 and increasing to 2050.

Potential opportunities:

- Growth potential in low emission fuels (RNG, hydrogen), fuel switching technologies (geothermal, heat pumps), CCUS, low emission electricity generation (solar, wind, nuclear), electricity storage (batteries), energy efficiency programing.
  - Greater potential for gaseous solutions if industry can demonstrate role they could play in reaching NZ2050.
- Significant uptake of hydrogen (blending or used on its own) means annual throughput on m^3 basis could be the same/slight increase in 2040-2050.
- Consideration of NZ2050 targets in developing GDS strategy, scope 3 emission targets/plans.

IEA - Net Zero by 2050 – A Roadmap for the Global Energy Sector, May 2021





Natural Gas	Traditional natural gas
Modern bioenergy	Includes biogases, liquid biofuels and modern solid biomass harvested from sustainable sources. It excludes the traditional use of biomass (i.e., cooking)
Hydrogen-based	Includes hydrogen, ammonia and synthetic fuels
Hydrogen conversion losses	Consumption of natural gas when producing low-carbon merchant hydrogen using steam methane reforming

ENBRIDGE GAS INC.

Answer to Interrogatory from
Environmental Defence (ED)

Interrogatory

Reference:

Exhibit 1, Tab 4, Schedule 1

Preamble:

“1. Enbridge Gas has over $14 billion in regulated assets…”

Question(s):

a) Please provide the exact figure quantifying Enbridge’s regulated assets in Ontario.

b) With respect to its current assets, by what year would they be fully depreciated based on the proposed depreciation policies/periods proposed by Enbridge in this application?

c) With respect to its current assets, how much ($) would remain undepreciated in 2050 under the proposed depreciation policies/periods proposed by Enbridge?

Response:

a) Please see Exhibit 2, Tab 2, Schedule 1, pages 3 to 4, updated March 8, 2023. Regulated asset, or utility property, plant & equipment balances are summarized in Table 1:

Table 1

		2021	2022	2023	2024
($ millions)	Reference	Actual	Estimate	Bridge Year	Test Year
Gross Property, Plant & Equipment	Pg 3, line 6	22,221.4	23,535.2	24,831.5	25,791.8
Accumulated Depreciation	Pg 4, line 7	(8,126.9)	(8,626.9)	(9,137.7)	(9,436.7)
Net Property, Plant & Equipment		14,094.5	14,908.3	15,693.8	16,355.1

b) Using the proposed depreciation policies in this application and assuming the current depreciable assets (Plant in service at December 31, 2021) are fully intact without any damages and replacements, the current assets will be fully depreciated in 2067.

c) Using the proposed depreciation policies in this application and assuming the current depreciable assets (Plant in service at December 31, 2021) are fully intact without any damages and replacements, the value of undepreciated assets in 2050 is $569.7 million.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Pollution Probe (PP)

Interrogatory

Reference:

1/4/1 para 1 - Enbridge Gas has over $14 billion in regulated assets and serves over 3.8 million residential, commercial, and industrial customers in Ontario delivering heating to more than 75% of Ontario's homes". [Exhibit 1, Tab 4, Schedule 1, Paragraph 1]

Question(s):

a) Please provide a breakdown by major category of the $14 billion in regulated assets (e.g. pipelines, buildings, IT, etc.)

b) Please confirm that the $14 billion reference refers to regulated assets regulated by the Ontario Energy Board. If not, please clarify what portion is regulated by the Ontario Energy Board and replicate the answer for part "a" with the portion of assets regulated by the Ontario Energy Board.

Response:

a) A breakdown by major category of regulated assets is provided at Exhibit 2, Tab 2, Schedule 1, Attachments 3 through 8 for the historical years 2019 through 2021 and forecast years 2022 through 2024.

b) Confirmed.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Pollution Probe (PP)

Interrogatory

Question(s):

Please provide a table showing all capital projects (e.g. Leave to Constricts, etc.) approved by the OEB since last rebasing (i.e. MAADs proceeding and Decision), where capital recovery is requested in this proceeding (EB-2022-0200). In the table, please provide the following columns of information:

- Project name
- OEB docket number
- Total capital cost (forecasted / actual)
- Capital O/H amount (if included in total project capital cost)
- In-service date (actual or expected)
- Amortization period

Response:

Please see Attachment 1.

Table 1

Project Name	Applicant	Docket Number	Total Capital Cost (Forecasted)	Total Capital Cost (Actual)	Capital Overhead Amount	In-Service Date (Actual or Expected)	Amortization Period
2018 Oxford Reinforcement Project	Union Gas	EB-2018-0003	$ 7,396,000.00	$ 4,662,754.00	$ 872,294.84	October 4, 2018 (Actual)	55 years
Kingsville Transmission Reinforcement Project	Union Gas	EB-2018-0013	$ 105,716,000.00	$ 77,042,559.00	$ 15,440,932.60	October 24, 2019 (Actual)	60 years
Liberty Village Project	Enbridge Gas Distribution	EB-2018-0096	$ 3,623,263.00	$ 4,151,681.00	$ 1,124,045.73	March 28, 2019 (Actual)	55 years
Bathurst Reinforcement Project	Enbridge Gas Distribution	EB-2018-0097	$ 9,147,651.00	$ 9,442,615.00	$ 3,237,782.72	December 11, 2019 (Actual)	55 years
Don River 30" Pipeline Project	Enbridge Gas Distribution	EB-2018-0108	$ 25,318,141.00	$ 23,706,759.00	$ 7,394,061.65	April 21, 2020 (Actual)	55 years

Interrogatory

Reference:

1-5-1, p.11

Question(s):

Please provide all studies, memoranda, presentations and other documents related to the relationship between the proposed straight fixed variable with demand rate design and the availability and economics of demand response programs.

Response:

Please see Exhibit 8, Tab 2, Schedule 3, pages 1 to 37, and Attachments 1 through 10 for the evidence, reports, studies, and presentations supporting Enbridge Gas' proposals. The key benefits of the Straight Fixed Variable with Demand (SFVD) rate design alternative and SFVD characteristics that are complementary to energy transition goals are provided at Exhibit 8, Tab 2, Schedule 3, pages 14 and 15. This evidence will be addressed in Phase 2 of the proceeding as noted in Enbridge Gas's February 1, 2023 letter.

Natural gas demand response programs are not yet well-established in Ontario, and therefore Enbridge Gas is not aware of any studies or other documents specifically related to the relationship between the proposed rate design and the economics of demand response programs.

Enbridge Gas will be proposing an IRP pilot where a demand response program will be developed and implemented to gather information and learnings for program marketing, program development, customer incentives, the calling of a demand response event and customer participation. Enbridge Gas's IRP demand response pilot program will provide a financial incentive to those general service customers participating in the program and who reduce their consumption when a demand response event is called. All participants receiving this incentive will benefit regardless of rate design. Even without an incentive, under a SFVD rate structure, "volumetric charges still make up the largest portion (generally at least 60%) of total customers' bills" (Exhibit 8, Tab 2, Schedule 3, paragraph 39), so there is still a built-in incentive to participate in demand response programs under SFVD.

Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1

Question(s):

Enbridge Gas conducted a customer engagement process through 2021 and early 2022 to understand customer needs and preferences to inform its business planning process. Enbridge Gas explored customer perceptions of key planning trade-offs, overall rate impacts of its draft plan, and rate design issues.

Acknowledging that Enbridge Gas's last customer engagement survey used different survey instruments and methodologies, to the extent possible, please identify any differences or similarities in customer preferences from the last survey.

Response:

Comparing the two engagements (the current customer engagement conducted through 2021 and early 2022, and the EGI 2019 Asset Management Plan Customer Engagement), similar questions related to satisfaction, outcomes and investment priorities were asked. Where a comparison was relevant, any differences and similarities are noted in the paragraphs below.

Customer satisfaction: Customer satisfaction with Enbridge Gas was similar across the two customer engagements, ranging from 74% to 88% among the different customer segments in both engagements. Customer satisfaction provides an indicator of customer preferences as it relates to the services received to date.

Outcomes overall summary: While the list of outcomes varied slightly between the two customer engagements, both engagements included a process of rating the importance of outcomes and ranking the ones that are most important. While the same outcomes rise to the top, their placement varies slightly between the two engagements.

Outcomes – general service residential: Among the outcomes rated as the most important, similar outcomes rose near the top for residential customers, including affordable pricing, safety, reliability and minimizing any impacts on the environment.

The order of these varied slightly, with the current engagement seeing affordable pricing at the top, which was second to safety in the previous engagement. Reliability was mentioned fifth in the previous engagement but rose to third place in the current engagement (though nearly the same as minimizing any impacts on the environment). Being socially responsible was consistently near the bottom of the list.

Outcomes – general service business: Among general service business customers, results in the current engagement were disaggregated by small and medium-large customers. Comparing this entire group to the “non-contract business customer” group in the last engagement, affordable pricing is still at the top of the list, followed by safety and reliability, with predictable pricing and minimizing any impacts on the environment following these top three in varied order.

Outcomes – contract: Among contract customers, reliability consistently topped the list of outcome priorities between the two engagements, followed by affordable pricing, while safety was third in the recent engagement, but followed fourth after stable and predictable in the previous engagement.

Investment priorities: The majority of residential and business customers across engagements would prefer that Enbridge Gas invest in maintaining levels of safety, reliability, and customer service vs improving them. Among these three areas, a greater proportion of residential customers preferred improving levels of safety (more than 1-in-3 in the current engagement), while among business customers, it was customer service (more than 1-in-3 in the current engagement). This is consistent in the two engagements.

In both engagements, customers were presented with a high-level trade-off between a long-term approach to asset health (that spreads out costs over time) versus a more immediate approach (that seeks to keep rates low now), and results were almost identical. Almost 3-in-5 residential customers and just over 1-in-2 business customers (with support being stronger among medium-large business customers in Phase Two in the most recent customer engagement and being stronger among contract customers in the previous customer engagement). Please note this question was not asked among Contract Customers in the most recent customer engagement process.

Among specific investment pacing decisions, across engagements, customers preferred Enbridge Gas to complete the work within the time period indicated rather than delay it as long as possible.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, p. 14

Question(s):

Enbridge Gas noted that customers participating in the customer engagement survey were given the option to receive follow-up information from Enbridge Gas (after the conclusion of Phase Three) about how customer feedback was used and the overall outcomes of the customer engagement.

a) Please provide a copy of the follow-up information provided by Enbridge Gas to participants following the conclusion of Phase Three.

b) Please confirm if participants had an opportunity to provide feedback on the follow-up information provided by Enbridge Gas. If not, please explain why. If feedback was provided, please provide a summary of the feedback received including any issues and concerns raised and how they were addressed by Enbridge Gas in this application. Also, please explain whether and how any feedback has impacted Enbridge Gas's business and capital planning.

Response:

a) Please see Attachment 1.

b) There was no official mechanism for general service customers to provide feedback on the follow-up information. The intention of the follow-up information was to summarize feedback already collected and to inform customers of next steps in the process. For the contract market, customers were directed to talk to their account manager. Feedback received from contract rate customers was with respect to the service harmonization proposals. No feedback was received from contract rate customers with respect to the issues being dealt with in this phase of the proceeding.

General Service Customers Follow-up Email

ENBRIDGE
Life Takes Energy

Valued customer,

Thank you for your interest and participation in the customer engagement that focused on understanding customer needs and preferences as Enbridge Gas develops its business plan for 2024 and beyond. These plans will determine the investments that Enbridge Gas makes and will be submitted to the Ontario Energy Board in the last quarter of the year.

Since you've requested to be kept informed about this consultation, we'd like to share some results.

Visit enbridgegas.com/customerengagement to view the results of our customer engagement.

Thank you again for your time and input into this planning process. Your feedback is invaluable and will help shape our plans and will be used to help develop the products and services we provide to our customers.

Thank you,

Enbridge Gas Inc.

Enbridge Gas' Customer Engagement Survey Feedback

More than 12,000 customers participated in our customer engagement process to ensure that our 2024 planning process reflects customers' needs and preferences. Participants were presented with information on our proposals as part of our 2024 – 2028 rate application process.

All individual responses were held in confidence and feedback was combined with others to protect our customers' privacy.

Level of satisfaction

Overall, customers consistently reported high levels of satisfaction with Enbridge Gas with 4-in-5 residential customers indicating they are "very" or "somewhat" satisfied, and 3-in-4 business customers indicating the same.

Improvements

When asked what Enbridge Gas can do to improve their service, most participants did not offer any comments, but about 1-in-10 say keeping rates low is important.

Approach

Enbridge Gas outlined the plan's high-level objectives in the engagement, and more than 2-in-3 customers indicated that these objectives seemed like the "right approach".

Support for the plan

Enbridge Gas outlined specific plans it is considering alongside some alternatives it could do instead. Anticipated rate impacts were included for each choice. So far, customers have supported the plans Enbridge was considering, or an alternative that would require a bigger investment. However, these plans are still under development and all varied perspectives will be considered.

Topics covered

Customers provided detailed comments covering a large number of topics. These range from questions about rates and expenditures, to some issues with customer service, to considerations related to the future of natural gas and the need for low-carbon options, to many other topics.

Next steps

Enbridge Gas will file our rate planning process along with the customer engagement feedback and a summary report to the OEB. This information will be examined by the OEB, consumer advocates and other independent parties in a public hearing.

Large Volume Newsletter Excerpt

Enbridge Gas' Contract Customer Engagement Survey Feedback

Enbridge Gas undertook a customer engagement process designed to understand customers' needs and preferences as it develops its plans for 2024 and beyond. These plans will determine the investments that Enbridge Gas makes and will be submitted to the Ontario Energy Board.

At the beginning of February, the signing authority for each of our in-franchise contract rate and direct purchase customers and marketers received an email invitation to complete a survey workbook. The survey included questions about Enbridge Gas' business plans and service harmonization proposals.

More than 12,000 customers, including more than 80 contract customers and energy marketers, participated in our overall customer engagement process to ensure that our 2024 planning process reflects customers' needs and preferences. Participants were presented with information on our proposals as part of our 2024 – 2028 rate application process.

All individual responses were held in confidence and feedback was combined with others to protect our customers' privacy. Visit enbridgegas.com/contract-engagement to find more information on the feedback we received.

Thank you to everyone who participated.

If you have any questions about any of the material in this newsletter, please contact your account manager.

Home / About Enbridge Gas

Enbridge Gas' Contract Customer Engagement Survey Feedback

More than 12,000 customers, including more than 80 contract customers and energy marketers, participated in our overall customer engagement process to ensure that our 2024 planning process reflects customers' needs and preferences. Participants were presented with information on our proposals as part of our 2024 – 2028 rate application process.

All individual responses were held in confidence and feedback was combined with others to protect our customers' privacy.

Level of satisfaction

Overall, customers, contract and non-contract alike, consistently reported high levels of satisfaction with Enbridge Gas with 4-in-5 contract customers indicating they are "very" or "somewhat" satisfied with Enbridge Gas.
Customer service and the reliability of its distribution services are also rated very highly among contract customers.
Among priority outcomes, reliability, affordable pricing and safely delivering natural gas are of most importance, followed by minimizing any impacts on the environment.

Improvements

When asked what Enbridge Gas can do to improve its service, participants commented on a number of different things, including more information and improvements in communications and customer service.

Approach

Enbridge Gas outlined the plan's high-level objectives in the engagement, and more than 4-in-5 customers indicated that these objectives seemed like the "right approach".

Support for the plan

Enbridge Gas outlined specific plans it is considering alongside some alternatives it could do instead. Anticipated rate impacts were included for each choice. So far, customers have supported the plans Enbridge Gas was considering, or an alternative that would require a bigger investment. However, these plans are still under development and all varied perspectives will be considered.

Service harmonization

Customers provided feedback and comments on various contract rate distribution services and direct purchase service proposals. These comments help Enbridge Gas refine its draft plans to ensure it meets customer needs and will be considered in the development of its proposals.

Next steps

Enbridge Gas will file its rate planning process along with the customer engagement feedback and a summary report to the OEB. This information will be examined by the OEB, consumer advocates and other independent parties in a public hearing.

Please contact your account manager if you would like to share any further thoughts or comments.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, pp. 137 & 280; Exhibit 8, Tab 3, Schedule 1, p. 12

Question(s):

Enbridge Gas is proposing an extra length charge of $122 per metre in excess of the 20-metre service length threshold.

When engaged on the topic of Enbridge Gas's Infill Policy, the Phase Two results found that 38% of residential participants either did not have an opinion or indicated "don't know".

The Phase Three results found that 32% of participants indicated a preference for 15 metres at no cost and $75 per metre for the remainder, 22% indicated a preference for 20 metres at no cost and $100 per metre for the remainder, 13% indicated a preference 25 metres at no cost and $140 per metre for the remainder, and 32% either did not have an opinion or indicated "don't know".

a) Did Enbridge Gas probe the results further to understand why 38% of participants in Phase Two, and 32% of participants in Phase Three, did not have an opinion or indicated "don't know"?

b) Please explain why the option in Phase Three for 20 metres at no cost and $100 per metre for the remainder did not more accurately reflect Enbridge Gas's request to charge $122 per metre in excess of the 20-metre service length in this application.

c) Please explain why Enbridge Gas did not consider offering 15 metres at no cost with a lower cost per metre for the remainder considering participants generally preferred this option.

Response:

a) Yes. The workbook gave respondents the opportunity to provide additional comments. An overview of the submitted comments are provided at Exhibit 1, Tab 6, Schedule 1, Attachment 1, page 281.

b) When the Phase Three customer engagement workbook was fielded the estimated cost was determined to be $100 per metre with 20-metre service at no cost to the customer. The cost was subsequently updated to $122 per metre after the fieldwork was completed.

c) Enbridge Gas considered 15 metres (approximately 55% of the total number of infill services) at no cost with a lower cost per metre. The proposed service length threshold of 20 metres would result in the Company attaching most infill services (approximately 75% of the total) with no accompanying extra length charge. This anticipated outcome will support continued efficiencies in the infill service attachment process without causing undue cross-subsidization.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, pp. 20 & 25

Question(s):

When engaged on the topic of investing in an Innovation and Technology fund, the Phase Two results found that 37% of residential participants, 48% of small business participants and 52% of medium-large business participants were not willing to pay anything extra towards a technology fund.

When engaged on the same topic in Phase Three, the results found that over half of the participants in all customer segments were willing to pay additional amounts towards a technology fund.

a) Please reconcile the two results and explain the inconsistency.

b) Please confirm if Enbridge Gas undertook further research or analysis to understand the inconsistent results.

c) Please explain how Enbridge Gas considers the above noted results to be valid.

Response:

a) The costs presented in the Phase Two survey (ranging from $12 to $120 per year for residential customers, and 2% to 10% added to the delivery portion of the bill of business customers) were significantly higher than in the Phase Three workbook (ranging from $0.26 to $2.56 per year, and 0.003% to 0.029% added to the delivery portion of the bill of business customers). Please see Exhibit 1, Tab 6, Schedule 1, Attachment 1, pages 150, 214-215, 260, 347. Enbridge Gas believes the results differed because the costs presented in each phase differed.

b) Per the response to part a), Enbridge Gas does not consider the results to be inconsistent.

c) Per the response to parts a) and b), Enbridge Gas believes that the results in Phase Three are valid.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 2, p. 26

Question(s):

Enbridge Gas undertook a customer engagement process with Rate M13 customers using a workbook-style survey. A total of seven M13 customers participated in the survey.

a) How many Ontario conventional natural gas producers are Rate M13 customers of Enbridge Gas?

b) How many of the seven participants were Ontario conventional natural gas producers?

c) How many of the seven participants are Rate M13 customers of Enbridge Gas?

Response:

a) There is currently one Ontario conventional natural gas producer that is a Rate M13 customer of Enbridge Gas.

b) One of the seven participants was an Ontario conventional natural gas producer.

c) Five of the seven participants are Rate M13 customers of Enbridge Gas.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, p. 32

Question(s):

When engaged on the topic of Renewable Natural Gas (RNG), the Phase Three results found that the majority of residential and business customers were willing to pay more to increase the amount of RNG in the system. However, the two most popular choices were to increase the amount of RNG to only 2% (22% of residential participants, 25% of business participants) or not add any at all (25% of residential participants, 23% of business participants).

Did Enbridge Gas probe the results further to understand why 25% of residential participants and 23% of residential participants indicated a preference not to add any RNG to the gas supply?

Response:

Yes. The workbook gave respondents the opportunity to provide additional comments on each substantive question in the workbook, including the RNG question. An overview of the submitted comments is provided at Exhibit 1, Tab 6, Schedule 1, Attachment 1, pages 295 and 385.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T3/S1/Attachment 2/p. 7

Question(s):

Please provide a complete description of the roles and responsibilities of the Director Energy Transition Planning and the group this individual oversees.

Response:

The Director of Energy Transition Planning (ETP) is accountable for leading three teams:

1. Carbon and Energy Transition Planning
2. Carbon Strategy
3. Integrated Resource Planning

The roles within the team and the responsibilities for each team are provided below.

Carbon and Energy Transition Planning

The Carbon and Energy Transition Planning team (formerly called Carbon Strategy) is responsible for implementing and ensuring compliance with carbon pricing policies, which currently includes the Federal Carbon Pricing Program (FCPP) and the Ontario Emission Performance Standards (EPS). These accountabilities include determining compliance costs and remittance amounts, the annual regulatory application, credit procurement and customer communications. The team is also responsible for the implementation of Enbridge Gas's voluntary participation in the federal Clean Fuel Regulation (CFR).

This team is also responsible for reviewing new and changing climate policies and evaluating what the policies could mean for the Company, providing input to government-led consultations, and providing insight on the policies to other internal departments to support initiatives such as RNG and hydrogen blending. This team also uses knowledge on climate policies to develop energy transition assumptions for use in forecasting and planning.

This team works with several other departments within Enbridge Gas to coordinate the development of plans and strategies related to energy transition and reducing Scope 3 greenhouse gas (GHG) emissions. This includes working with Business Development, Gas Supply, Finance, Regulatory, Engineering, Government Relations and others.

The roles and responsibilities of the Carbon and Energy Transition Planning team are provided in Table 1. Currently there are 6.5 FTE roles in the Greenhouse Gas Emissions Administration Deferral Account (including 0.5 of the Director) and 1 FTE role in O&M. In 2024, all roles will be in O&M, plus 1 additional FTE that Enbridge Gas anticipates will be required. Please see response at Exhibit I.9.1-Staff-251.

Table 1: Roles and Responsibilities of the Carbon and Energy Transition Planning Team

Role	Number of FTEs	Responsibilities
Manager	1	Leads Enbridge Gas's carbon pricing compliance activities under the Federal Carbon Pricing Program (FCPP), including reviewing and approving FCPP related compliance reporting and remittance. Leads the work related to Enbridge Gas's energy transition plans, including understanding the impacts of federal and provincial regulations related to greenhouse gas (GHG) requirements for Enbridge Gas.
Specialist	4	Accountable for understanding the potential impacts of federal, provincial and municipal policies and regulations related to GHG emissions, climate change and energy transition for Enbridge Gas. This includes understanding how emerging low-carbon technologies and fuels, such as RNG and hydrogen, can be used to reduce GHG emissions and lower carbon pricing costs. Responsible for developing Enbridge Gas's Clean Fuel Regulation (CFR) strategy and credit creation opportunities. Participate in government consultation for policy development and regulation amendments associated with federal and provincial regulations related to GHG emissions. Lead development of energy transition plans that incorporate the impacts of federal and provincial regulations related to GHG emissions.
Advisor	2	Responsible for FCPP related compliance reporting and remittance, customer registration and communications, annual regulatory requirements, credit procurement process, government consultation submissions for FCPP-related policy development and regulation amendments. Supports the review and evaluation of credit creation opportunities under the CFR. Supports specialists' activities listed above.

Carbon Strategy

The Carbon Strategy team is responsible for development of Enbridge Gas's scope 1 and 2 GHG reduction plan, reporting of GHG emissions to federal and provincial government, tracking and forecasting GHG emissions, performance metrics and emission reductions. This team is responsible for reviewing GHG emissions regulations, evaluating and understanding the impact of the regulations on the Company, and providing input to government-led consultations.

The Carbon Strategy team is also responsible for implementing and ensuring compliance with GHG and methane regulations, which currently includes the Ontario Emissions Performance Standard and the federal Methane Regulation.

The roles and responsibilities of the Carbon Strategy team are provided in Table 2. The 4 FTE roles listed below are currently in Enbridge Gas's O&M budget.

Table 2: Roles and Responsibilities of the Carbon Strategy Team

Role	Number of FTEs	Responsibilities
Manager	1	Leads Enbridge Gas's overarching strategy and plans for reducing Scope 1 and 2 GHG emissions, including overseeing the Enbridge Gas GHG Emissions Reduction Program – Scope 1 and 2. Accountable for Enbridge Gas's GHG emissions reporting and understanding new and changing federal and provincial regulations related to the Company's Scope 1 and 2 greenhouse gas emissions.
Specialist	2	Coordination of GHG Emissions Reduction Program – Scope 1 and 2 across Enbridge Gas. Responsible for greenhouse gas and criteria air contaminant compliance reporting and participating in consultations regarding federal and provincial regulations related to greenhouse gas emissions.
Analyst	1	Responsible for emissions inventory and regulatory requirements related to greenhouse gas and criteria air contaminants.

Integrated Resource Planning (IRP)

The OEB issued an IRP Framework as part of its Decision in EB-2020-0091. The IRP team, within the ETP department, is responsible for implementing the IRP Framework and coordinating the key aspects of the IRP Decision. This activity includes strategic oversight and coordination of IRP binary screening, IRP evaluations, selection of IRP alternatives (IRPAs), IRP pilot projects, IRP non-pilot IRP plans, IRP Stakeholder

Engagement, Enbridge Gas IRP technical working group (TWG) related activities and the IRP Annual Report.

The IRP roles that are within the Energy Transition Planning Department, and their associated responsibilities, are provided in Table 3. Currently there are 2 FTE roles in the IRP deferral account and 3.5 FTE roles in O&M (including 0.5 of the Director). In 2024, all roles will be in O&M. Please refer to Exhibit I.9.1-Staff-249, for additional IRP resourcing details.

Table 3: Roles and Responsibilities of the IRP Team

Role	Number of FTEs	Responsibilities
Manager	1	Leads Enbridge Gas's overarching strategy, integration and planning for IRP, including stakeholder engagement, the technical review and evaluation of IRPA projects. Accountable for Enbridge Gas' participation in the IRP Technical Working Group.
Specialist	2	Lead, support and coordinate stakeholder and Indigenous engagement activities and digital strategy as they relate to IRP activities. Responsible for the development and filing of the annual IRP Report. Supports other departments in the refinement of enhancements to the DCF+ test. Develop evidence for Ontario Energy Board regulatory filings/ proceedings related to IRP and facility projects. Support the implementation of two IRP alternative pilot projects and IRPA Plans (when implemented). Project manage internal activities associated with IRP projects and Leave-to-Construct applications. Participate in the IRP technical working group.
Advisor	2	Supports specialists' activities listed above. Support stakeholder and Indigenous engagement activities as they relate to IRP projects. Support the development and filing of the annual IRP Report. Coordinate the IRP digital strategy. Support the technical review and evaluation of facilities projects and IRP alternatives. Develop evidence for Ontario Energy Board regulatory filings/proceedings related to IRP projects. Support the implementation of two IRP alternative pilot projects. Project manage internal activities associated with IRP projects and Leave-to-Construct applications

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T6/S1/p. 3

Question(s):

The evidence refers to Enbridge Gas's Customer and Market Insights Team (CMI). Who is on the CMI Team? Please explain the nature of the CMI Team's involvement in the Innovative Research work at each stage of that work. Overall, what was EGI's involvement in the Innovative Research work?

Response:

The Customer and Market Insights (CMI) team is composed of the following positions in addition to a recently vacated second Senior Analyst position:

Karen Sweet, Supervisor
Senior Advisor
Advisor
Advisor
Senior Analyst

The nature of the CMI's team overall involvement in the research work undertaken by Innovative Research Group (Innovative) is provided at Exhibit 1, Tab 6, Schedule 1, page 3. Overall, CMI led the customer engagement process and was the primary contact for Innovative at Enbridge Gas. The CMI team designed the engagement and reviewed the design with Innovative. The CMI team worked with Enbridge Gas business planners to identify topics and to develop questions and background information at each phase of the engagement. As specific engagement elements were developed, Innovative provided feedback on the overall approach and specific content as well as testing and providing feedback on the overall surveys and workbooks. Innovative was solely responsible for data collection and reporting the results. Once the results were available, the CMI team distributed them to Enbridge Gas business planners and assisted in the interpretation of the findings. For each specific stage or phase of the process, involvement from the CMI team and Innovative is provided in Table 1.

Table 1: Summary of the CMI Team's involvement in the Innovative Research Work by Stage

#	Customer Engagement Phase	Primary Tasks Completed by CMI Team	Primary Tasks Completed by Innovative
1	Phase One (Development)	• Overall oversight and project management • Overall engagement design • Development of discussion/interview guides with input from Innovative Research • Providing customer lists for sample as needed • Distribution of results to Enbridge Gas business planners • Support to Enbridge Gas business planners in interpreting results	• Reviewing and providing feedback on overall approach and discussion/interview guides • Recruiting customers for focus groups and interviewers • Executing and moderating focus groups and interviews, including test groups • Developing reports
2	Phase Two (Refinement)	• Overall oversight and project management • Overall engagement design • Development of surveys with input from Innovative Research • Providing customer lists for sample as needed • Distribution of results to Enbridge Gas business planners • Support to Enbridge Gas business planners in interpreting results	• Reviewing and providing feedback on overall approach and survey content • Testing surveys • Fielding surveys • Developing reports
3	Phase Three (Validation)	• Overall oversight and project management • Overall engagement design • Development of workbooks in collaboration with Innovative Research • Providing customer lists for sample as needed • Distribution of results to Enbridge Gas business planners • Support to Enbridge Gas business planners in interpreting results	• Reviewing and providing feedback on overall approach and workbook content • Testing workbooks • Fielding workbooks • Developing reports

Overall, Enbridge Gas's involvement includes the work undertaken by the CMI team described above and work done by Enbridge Gas business planners in terms of developing content for the discussion/interview guides, surveys and workbooks.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 1/T6/S1/p. 14

Question(s):

The Phase Three reports prepared by Innovative were shared with all Enbridge Gas teams as soon as they were available. For the Residential Representative Report an interim report was made available to all project stakeholders in mid-December, with final reports being shared in early 2022. Please explain what changed between the interim and final reports. Why were these changes made?

Response:

An additional 1256 respondents completed the survey after data was pulled to generate the interim version of the Residential Representative Report. These additional responses were reflected in the final version of the report but did not significantly alter the findings. This approach gave Enbridge Gas planners the opportunity to consider the interim results while the complete data set was finalized.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Canadian Manufacturers & Exporters (CME)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, p. 6 of 550.

Question(s):

At page 4, Innovative stated that "Most customers are willing to accept the average 1.9% price increase resulting from Enbridge Gas draft plan." See also page 275 of 550, page 247 of 550 and page 330 of 550.

a) Please define all of the cost drivers that were included in the average 1.9% price increase, and which drivers were not included. For instance, the page notes that items such as accounting policies which can drive rate impacts are "too technical" for the workbook.

b) Were participants ever provided with disaggregated or updated data about rate increases? For instance, the workbook includes at page 247 a chart demonstrating a 1.9, 1.3 and 1.4 percent increases. However, as outlined on Exhibit 1, Tab 3, Schedule 1, p. 5 of 26, some rate zones will see a much more significant increase, such as the 8% increase to Rate M1.

c) Were participants ever provided with EGI's proposal for incentive ratemaking for the future years of the term, including its proposal to increase the rates by inflation, a negative productivity factor, no stretch factor, or an ICM mechanism?

d) Were participants ever provided any information regarding EGI's proposal to increase its equity thickness?

e) On page 330 of 550, please explain how the annual forecasted bill impacts for 2025 and onwards were calculated/forecast.

Response:

a) The following cost drivers were included in the average 1.9% price increase: 2024 revenue deficiency from cost of service, preliminary depreciation proposal, equity thickness proposal at 42%, and disposition of deferrals.

b) No. The Fuel Choices (including the proposals for Responsible Sourced Gas and Renewable Natural Gas), and the Rate Harmonization Choices (including the proposal for rate zone harmonization), were shown separately, but not included in the overall bill impact shown to customers in the customer engagement.

c) No.

d) No. However, its impact was included in the bill impacts and referenced as 'proposals through which Enbridge Gas manages business risk and how it calculates the depreciation of its assets'. Please see Exhibit 1, Tab 6, Schedule 1, Attachment 1, pages 247, 330 and 432.

e) The forecasted annual impact of Enbridge Gas's plan for the 2025 to 2028 years were calculated by the impact the price cap rate-setting mechanism would have on revenue and proposed DSM budget changes[1] at the time. The assumptions for the price cap mechanism included a 2% inflation factor and productivity of -1.36% for total escalation of 3.36%. The equity thickness proposal of 42% was included in the 2024 forecasted bill impacts.

Answer to Interrogatory from
Canadian Manufacturers & Exporters (CME)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, pp. 4-5, 13

Question(s):

At pages 4 and 5, EGI describes the complementary stakeholder engagement that it has conducted.

a) To the extent that it is not already part of the pre-filed materials, please provide the results of EGI's monthly surveys with general service customers and the periodic satisfaction studies for contract and transportation customers.

b) To the extent that it is not already part of the pre-filed materials, please provide the information from the Ombuds Office that is made available to relevant departments at EGI.

Response:

a) A link to the press release with the latest results (2022) of the annual Mastio Natural Gas Pipeline Customer Value / Loyalty Benchmarking Study is provided at response to Exhibit I.1.6-SEC-83.

Reports with results for the following monthly and daily surveys conducted with general customers are provided in the response at Exhibit 1.1.6-SEC-83, Attachment 1, page 1, and Voice of the Customer Program, page 27.

The customer engagement process for this Application (2021 to 2022) as well as a commercial end-use survey (2020 to 2021) and the Asset Management Plan customer engagement process (2019), were priority projects for the past several years. For markets with fewer customers, such as the business markets, these priority projects limited the availability of customer lists for other market research initiatives, and where possible already included satisfaction questions. To avoid "survey fatigue", Enbridge Gas limits the number of times a given customer is solicited for feedback.

b) Please see Attachment 1 for a sample of the information distributed internally by the Ombuds Office.

Ombuds 2022 Q3 Review

Public Affairs

The number of monthly and quarterly cases forwarded to the Ombuds are shown below. Cases forwarded to the Ombuds in Q3 mainly concerned Billing (66%) and Operations (18%).

The Ombuds team saw an increase this quarter from customers receiving larger bills than expected. Higher rates increased both Equal Monthly Instalment Plan amounts and non-EMPP customer bill amounts. This is likely to continue as a trend while rates remain higher.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Canadian Manufacturers & Exporters (CME)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, p. 250 of 550

Question(s):

In the section "Making Choices", Innovative puts forward a description of compression stations, their function, and the replacement decision EGI is contemplating with respect to two compressor stations.

a) Did EGI ever attempt to quantify the risk of a compressor station failing if not replaced during this plan term?

b) If the answer to (a) is yes, please explain why that was not provided to respondents.

c) If the answer to (a) is no, please explain why not.

d) Did EGI ever attempt to determine the cost of a failure (with respect to having to purchase gas at market rates rather than draw from storage) in the same fashion as the cost of replacement (for example, as a $/year for the average customer) so as to provide an apples to apples comparison with the cost of replacement?

e) If the answer to (d) is yes, please explain why that was not provided to respondents.

f) If the answer to (d) is no, please explain why not.

g) Why was the question designed so as to only provide two substantive answers (complete it as planned or defer it as long as possible) with no other pacing alternatives available?

Response:

a) No. Please see Exhibit 2, Tab 6, Schedule 2, Appendix A, page 4 for the project justification. A business case for the project has not yet been completed. Enbridge Gas is currently undertaking an Asset Health Review as described at Exhibit 2, Tab 6, Schedule 2, page 183, paragraph 4. Included in that review will be a third-party

Reliability, Availability and Maintainability study to quantify risks associated with asset failures. This study will support detailed alternatives analysis and final scoping for the Dawn C Compression Lifecycle project which will in turn inform the project cost estimate and business case.

b) Please see part c).

c) While Enbridge Gas discussed this at the time of the customer engagement the risk and the potential costs are subject to different variables, including the time of year of failure, availability of alternatives, maintenance requirements, and market prices. This requires an extensive analysis that will be completed as described in part a).

d) Enbridge Gas was unable to determine the cost of failure as the potential costs would vary according to market conditions.

e) As described in the response to part c) the risk of failure and the potential cost is subject to different variables. The potential costs vary according to these factors and could have broader implications for the market price, which means that the potential costs may vary greatly. As a result, Enbridge Gas chose to focus on the risk to reliability and price volatility as described in the question text. As described in the introduction text about Making Choices, trade-offs are made between competing outcomes, and in some cases, these are not easily described as apples-to-apples comparisons.

f) Please see part e).

g) Enbridge Gas focused its question-and-answer choices on options that were feasible at the time of the draft plan, as described in Exhibit 1, Schedule 1, Tab 6, page 12.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Canadian Manufacturers & Exporters (CME)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, p. 253 of 550

Question(s):

In the section “Making Choices” Innovative puts forward a description of vintage steel pipes, the program to replace them, and the possible options for how to approach the program.

a) Did EGI ever attempt to quantify or forecast the future costs or the increases resulting from the “delayed approach”?

b) If the answer to (a) is yes, please explain why that was not provided to respondents.

c) If the answer to (a) is no, please explain why not.

Response:

a) No.

b) Please see part c).

c) The increased risk of leaks of a reactive stance, or the “delayed approach”, will require additional internal as well as external resource overheads and costs, which are subject to the varying cost pressures applicable at the time. While Enbridge Gas looked at these different variables, since these cost drivers are subject to many different scenarios, these were not fully explored to include in its plans or in the customer engagement.

Answer to Interrogatory from
Canadian Manufacturers & Exporters (CME)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1, Attachment 1, p. 268 of 550

Question(s):

At page 268, the engagement report states that once all advanced meters are rolled out, rates will initially increase, then decrease to levels lower than today.

a) Please provide how EGI calculated the rate increases/decreases that it used in making that statement.

b) Please provide whether that calculation includes the cost to replace advanced meters, or whether the replacement will cause costs to escalate again.

Response:

a) Please see Table 1 for the bill impact calculations provided in the table at Exhibit 1, Tab 6, Schedule 1, Attachment 1, page 268.

Table 1
Advanced Meter Infrastructure
Residential Customer Bill Impacts

Line No.	Particulars	Option 1	Option 2	Option 3
1	Capital Investment ($ millions) (1)	1,593	1,720	2,208
2	Years of Implementation	4	8	20
3	Year of Maximum Revenue Requirement	2028	2031	2026
	First Year Cost (2024)			
4	2024 Revenue Requirement ($000s)	12,701	8,458	5,450
5	2024 Number of Customers (2)	3,904,132	3,904,132	3,904,132
6	First Year Cost (2024) (3)	3.25	2.17	1.40
	Maximum Annual Cost			
7	Maximum Annual Revenue Requirement ($000s)	80,568	58,089	7,234
8	2024 Number of Customers (2)	3,904,132	3,904,132	3,904,132
9	Maximum Annual Cost (2024) (4)	20.64	14.88	1.85

Notes:
(1) The capital investment in advanced meters is incremental to the capital investment that would have been made on replacing existing meters.
(2) Forecast number of general service customers in 2024.
(3) Line 4 / Line 5 x 1000.
(4) Line 7 / Line 8 x 1000.

b) The revenue requirement used in the bill impact calculation for the maximum annual cost was prepared on the basis that the advanced meters would be replaced 20 years after initial installation.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 1, Tab 6, Schedule 1, Attachment 1, pg.263

Preamble:

Under the customer engagement segment for Making Choices – Cut off at Main, the evidence provides a response to the choice of ratepayers bearing the cost: *Enbridge Gas should charge the homeowner $750, and the remainder would be shared among all residential customers at an annual cost of $0.25 in 2024 increasing to $1.23 in 2028 for all projected cut-offs.*

Question(s):

What factors contribute to the 5 times increase in costs for this activity in a five year period?

a) What assumptions generate that forecast of cost escalation?

Response:

The cut off at main cost is a capital activity and therefore, the annual bill impact included in the customer engagement workbook was increased consistent with the incremental rate base added each year. For purposes of the customer engagement process, Enbridge Gas prepared the bill impacts of each customer choice based on the specific cost of each proposal and independent of the rate setting mechanism for future years. The actual annual impact to customers from 2025 to 2028 will be determined by the proposed incentive rate-setting mechanism and not the specific cost of each proposal.

a) As noted above, the bill impact is not increasing due to cost escalation but due to the notional incremental rate base added each year for cut offs at main. Note that Enbridge Gas is proposing to eliminate the cut off at main charge as provided at Exhibit 8, Schedule 3, Tab 1.

Question(s):

For each year since 2015, for each of Tidal Energy Marketing Inc & US LLC, please provide the operating revenues and Gas commodity and distribution costs transferred between EGI and those companies.

a) Please provide the forecast for 2023 and 2024.

b) Please provide any transactions that were sole-sourced to Tidal including purchases, assignments or other commercial transactions.

Response:

Please see Attachment 1 which contains the historical and forecast activity between Tidal and Enbridge Gas from 2015 to 2024. This does not include the sale of Enbridge Gas unregulated storage to Tidal. Enbridge Gas believes these transactions are outside the scope of this proceeding.

a) Please see above.

b) "Total EGI Revenue with Tidal" outlined in Attachment 1 contains transactions negotiated directly with Tidal and transactions awarded as a result of competitive bidding processes through Requests for Proposals (RFPs) or open seasons. Transactions included in the revenue total includes short-term storage, long-term transportation, short-term transportation, short-term exchanges and name change fees.

"Total EGI Costs with Tidal" outlined in Attachment 1 include the cost of gas commodity and the cost of market-based storage purchased from Tidal to meet the needs of Enbridge Gas's Gas Supply Plan. All gas purchased from Tidal was completed within a competitive RFP whereby bids were awarded based on lowest price for volumes purchased. All market-based storage services purchased from Tidal was completed within Enbridge Gas's blind storage RFP process.

Question(s):

Please provide each of the actual capital and operating expenditures to Lakeside Performance Gas Services from 2015 to 2022 and the forecasts for 2023 & 2024.

a) Please provide actual capital and operating expenditures to all other companies who provide meters and meter services for those same periods.

b) How does EGI assess prevailing market prices?

Response:

Please see Table 1 for actuals from 2015 to 2022. The costs in Table 1 include emergency response costs as well as meter services costs. Enbridge Gas does not specifically budget by vendor and therefore the estimates for 2023 and 2024 are the 2022 actuals carried forward.

Table 1
Lakeside Performance Gas Services Historicals

Particulars ($millions)	2015 Actual	2016 Actual	2017 Actual	2018 Actual	2019 Actual	2020 Actual	2021 Actual	2022 Actual	2023 Bridge Year	2024 Test Year
O&M	26.1	24.4	17.1	17.8	17.5	19.8	19.4	21.9	21.9	21.9
Capital	15.9	19.9	24.1	25.3	26.3	24.1	31.7	43.9	43.9	43.9

a) Enbridge Gas does not have contracts with other companies that do similar work to Lakeside Performance Gas Services (meter work and emergency response).

b) Enbridge Gas assesses market prices by leveraging the competitive bid process through a Request for Proposal or Request for Quote based on the value and scope of work, contract term and resourcing needs.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ginoogaming First Nation (GFN)

Interrogatory

Reference:

Exhibit 1, Tab 6
Exhibit 1, Tab 6, Attachment 1

Preamble:

EGI states that it conducted “an extensive customer engagement process throughout 2021 and early 2022 in support of” the Application. In addition, EGI notes that the objective of its customer engagement was to “integrate customer feedback into the business planning process” as this would ensure that the Application “adequately reflects and is responsive to customer needs and preferences.”

EGI retained Innovative Research Group (“**Innovative**”) to help design, execute, and document the results of EGI’s customer engagement. Phase of EGI’s customer engagement “focused on identifying customers’ perceptions of the key issues they would like the [EGI] rate application to address.” Customer feedback and key findings were provided to EGI’s planners to provide initial customer input into the development of draft investment plans.

Question(s):

a) Please file any and all reports, presentations, analysis, data, or other materials related to EGI’s engagement with First Nations in support of the Application.

b) Please provide a copy of all written instructions provided by EGI in relation to its customer engagement for the Application and Innovative’s report provided in Exhibit 1, Tab 6, Attachment 1.

c) Please provide a detailed outline of EGI’s First Nations consultation process with respect to the Application. Please include a description of all steps that EGI has taken or will take in order to engage, consult, and accommodate First Nations affected by the Application.

d) Please provide any and all notes from the customer engagement relating to First Nations that are supplementary to the report provided in Exhibit 1, Schedule 6, Attachments 1 and 2.

e) Please provide specific examples of how the Application was informed by the concerns and views of the members of affected First Nations, including GFN's members.

Response:

a) All customer engagement reports and analyses conducted are included within the Application. The customer engagement for this Application was completed with Enbridge Gas ratepayers including First Nations customers as provided in response at Exhibit I.1.6-Three Fires-1 part f). No additional reports, presentation, analysis, data or other materials related to this customer engagement with First Nations are available.

b) Enbridge Gas provided an initial set of written instructions to potential vendors in the Request for Quote bid package, which included the scope of work. The scope of the work was refined over the course of the project and the work executed by Innovative for each phase is provided in response at Exhibit I.1.2-CCC-3. Much of the instructions and decision making took place via meetings, however there were some written instructions (sent from Enbridge Gas to Innovative by email) regarding the scope for the three phases of customer engagement, as well as Innovative's report. These are provided in Attachment 1, and the original draft scope of work is provided in Attachment 2.

c) First Nations were included in the customer engagement conducted described in evidence and all steps related to the different phases are provided at Exhibit 1, Schedule 6, Tab 1, pages 2-14. Enbridge Gas has plans to communicate the decision to customers, the general public, and specific Indigenous communities in the franchise area.

d) Please see response at part a). There are no supplementary notes available.

e) Please see response at part a). The concerns and views of affected First Nations members are combined with the views of all customers who participated in the customer engagement, and examples of how the Application was informed by these concerns and views are provided at Exhibit 1, Schedule 6, Tab 1, p. 24.

Subject: Enbridge Gas Inc. Invitation To RFQ No. 2021-02-26_Rate Rebasing Customer Engagement

Dear Proponents,

Enbridge Gas Inc. invites your company to submit a quote for the 2024 Rate Rebasing Customer Engagement initiative. The RFQ bid package and other pertinent documents are attached.

Please take note of the following;

- Deadline for Intent to Respond Form: March 18, 2021 at 3:00PM Eastern Time
- Question Submission Deadline: March 25, 2021 at 3:00PM Eastern Time
    - Send all questions regarding this RFQ to gdprocurement@enbridge.com
- Quote Submission Deadline: April 16, 2021 at 3:00PM Eastern Time
- Deadline to submit the Third Party Cybersecurity Questionnaire: April 23, 2021 at 3:00PM Eastern Time
- Please review the Consulting Agreement included in the RFQ and return it with your quote with your mark ups if any.
- Please do not contact any other Enbridge team member regarding this RFQ other than the RFQ Contact identified in the document.

Please acknowledge this email upon receipt.

I look forward to receiving and reviewing your submissions.

Regards,

Paul Arevalo

Subject: RE: FOR YOUR REVIEW: Phase 1 Discussion Guide draft

Hi Susan,

We would guide our decisions around this by what is preferred by customers, what will stand up from a methodological perspective, what is efficient, and cost-effective.

So I think that with that in mind …

- We would be open to an online recruit
- To make sure we offer an opportunity for the 40% without email addresses to participate we should still prefer to do some phone recruits – do you typically do that?
- We haven't done this type of recruit, so we'll want to see a bit more about how that works so that we can decide where to send the emails from (we can use our marketresearch@enbridge.com inbox, I'll check to see if we can leverage our Qualtrics system as a way, or have you send them). For more typical online surveys our preference will be for us to send it, but don't know how it will be different or the same for this type of recruit. I'll also need to make sure we can line up resources, so I'll investigate this as well.

In our meeting we talked about 8 groups, but then I think we later talked about 10 groups, and we loosely talked about reducing our IDIs for the business customers to manage costs. The IDIs to perhaps 10 per legacy, but I am not sure if that would be for Small and Med/Large each or altogether. Budget-wise, we can be flexible within the phases, and across the phases, but we will keep close tabs on the whole engagement altogether, so any ballparks around this would be helpful.

For honorariums, particularly for residential, we typically offer $100 for 90 minutes, though those were mostly in-person. Once these are decided on we'll make sure that we share all of this with the contact centre so that any concerns with the legitimacy of the research (which usually increase when there is $ involved) can be addressed easily. For this, please also send us any call display details for your organization, if any.

Thanks!

Cc: Karen Sweet <Karen.Sweet@enbridge.com>
Subject: RE: Change to Residential Focus Groups

Thank you Susan.

We can understand that having two groups in each area would be useful as you indicate below and so we will propose 2 groups in each of the identified region (I am renaming them a little to make them match our data) with good representation from all the various usage and demographic details. We see that this would get us a good mix of customers, a variety of views, and will also make recruitment a little simpler/easier.

If you can put Karen's name on the SOW, it will match the contract. If you could also remove the signature requirement, then we'll give you an okay by email.

Group	Region	Number
LUG North	Northern	2
LUG Central / East	Hamilton/Halton, Eastern	2
LUG South / West	Windsor/Chatham, London/Sarnia, Waterloo/Brantford	2
LEG GTA	Toronto (1), Central West (21) Central East (45 and 35)	2
LEG Other	Eastern (65), Niagara (76) Central West (53), Central East (47)	2

Happy to discuss further if you think it is needed on this piece.

Subject: RE: Customer Engagement - Phase 1 Sample loaded to FTP site

We would tend to include them *[edit: Manitoba area codes]*. Similarly, we would include tenants, even though they may not have the same opportunity to consider fuel switching as a homeowner would, they are still customers. We would be more concerned about home ownership when we do research on our DSM programs, whereas in this case we would be more concerned about justifying any exclusions.

I think the only ones we might exclude are records with US phone numbers, simply because it may be an added challenge for participating and/or residents would have had challenges accessing the property ever since the border restrictions. We don't tend to check phone numbers for this.

Subject: RE: Phase Two

Hi Susan,

Please find attached some specifications for Phase 2 to help in the development of the SOW. I am sure I have missed some details, so just let me know where that's the case. I think for C/I we may need to have some flexibility built-in to how to cost for this, because we would like to combine telephone and online results depending on the success with online. This has been our approach with this market. We do have a survey running concurrently, which offers a $15 incentive, and though I don't think we should necessarily do that, I think it would be good to get the cost associated with that in case we decide to do that (don't think we'll know for sure before the 30th). Our survey will be intended to be shorter than that one, so that could be our reason for not offering it 😊

If the SOW could split out the costs by methodology where it makes sense, and for the report separately from the data collection that would helpful for us.

Not sure how the scheduling for IDIs is going, but if you have a sense of when the Phase 1 report will be available, that will be good to know for us to plan the dissemination of that.

I am might online only sporadically tomorrow but will try to get back to you as fast as I can if you have any questions.

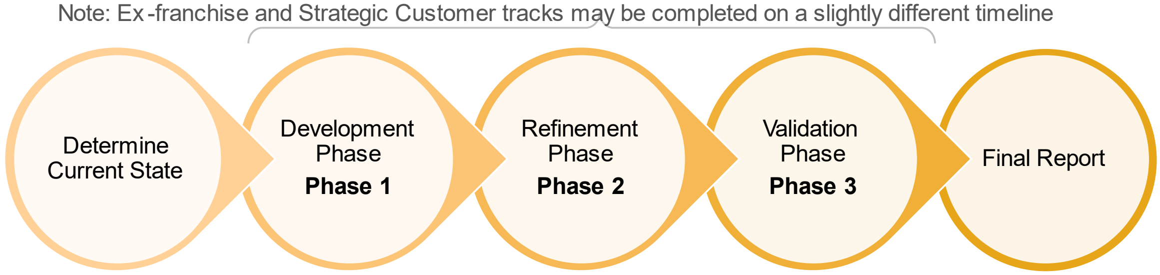
ENBRIDGE GAS

ATTACHMENT 2024 Rate Rebasing - Customer Engagement - Specifications for Phase 2.pptx of 5 slides is shown here:

Customer Engagement Schedule

ENBRIDGE

Timelines to align with Rebasing Process and Customer Meetings
Note: Ex-franchise and Strategic Customer tracks may be completed on a slightly different timeline

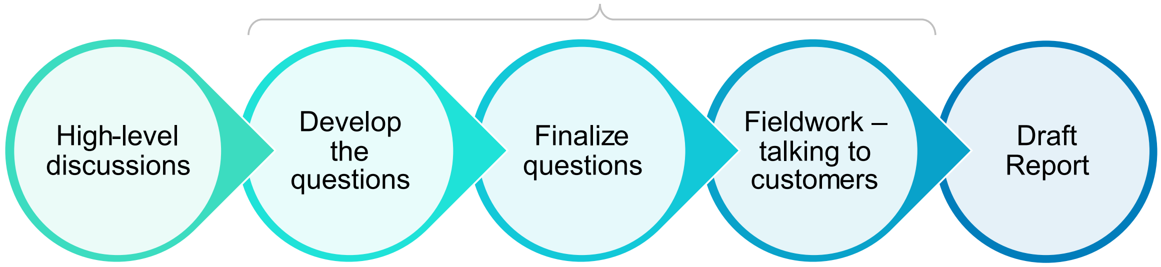


Determine Current State	Development Phase (Phase 1)	Refinement Phase (Phase 2)	Validation Phase (Phase 3)	Final Report
• Issue list review – considering major strategic issues first • Review other topics	• Develop discussion guide • Complete focus groups and in-depth interviews • Review results	• Develop questionnaires (by end of July) • Complete interviews (August) • Review results	• Develop questionnaires / workbook (including some testing) • Complete fieldwork • Review results	• Prepare draft report • Prepare 'Outcomes' Report
By Apr 30	May – Jun	Jul – Aug	Sep – Oct	By Dec 17, 2021

Refinement (Phase 2) –Timelines

ENBRIDGE

Timelines and Approach to be Finalized after Discussions with Stakeholders



High-level discussions	Develop the questions	Finalize questions	Fieldwork – talking to customers	Draft Report
•With various stakeholders •Brainstorm issues to review with customers •Decide whether these issues should be included in this phase or a future phase	•Developed by CM&I and vendor •Will require input from stakeholders	•Approval from various stakeholders (use existing meetings where possible)	•Completed by the vendor	
Ongoing	July 5-15	July 16-28	Aug 2 - 20	End of August

Focus to move up as possible

Residential Customers

Tentative options from Scope

ENBRIDGE

- All residential customers across rate zones – ensure some representation by rate zones and regions, as well as demographic indicators, including low -income customers (defined by survey)
- Telephone survey may have some different questions from the online if necessary
- Target a 15-minute survey, 1 main open-end

Phase	Comments (numbers are approximate):
Development	10 Online Focus Groups by Region (LUG North/East, LUG Central, LUG South/West, LEG GTA, LEG Other)
Refinement	Online – 2400 interviews (may consider some quotas, but only by sample -driven specifications) Telephone – 600 interviews (random sample)
Validation	Approach to be finalized

Commercial / Industrial Billed Customers

Tentative options from Scope

ENBRIDGE

- Not account managed
- Intend to combine results from online and telephone questionnaires to allow for a sufficient base size (i.e. response rate is an issue) – will need to ensure that questionnaires are close to the same
- Target a 15-minute survey, 1 main open-end
- Include optional $15 incentive in the SOW (including any admin cost for that, so it may still be considered)

Phase	By Volume	Need to review numbers and sample availability
Development	Small and Medium-Large	In-depth Interviews by telephone - 20 interviews (10 per legacy)
Refinement	Small	200 interviews, first by email, supplement with telephone Only as sample allows, with frequent check-ins
	Medium-Large	200 interviews, first by email, supplement with telephone Only as sample allows, with frequent check-ins (note: the 8814 records for LUG are all that are available for all phases)
Validation	Small	Approach to be finalized
	Medium-Large	Approach to be finalized

Large Volume and Strategic Customers

Developed in consultation with the Customer Care group

- Account managed customers (and energy marketers)
- Phase 1 work already completed and focused on service and rate harmonization and included meetings with 22 customers
- Webinar to present some service harmonization options with follow -up request for comments (this follow-up request for comments would include other engagement items) will be conducted by Enbridge Gas

Phase	Comments (numbers are approximate):
Refinement	**No refinement phase.**
Validation	Online – invitation to participate sent to all (assume n=100)

Subject: RE: Suggestion for Commercial Customer Incentives

Thanks Susan.

My apologies, between losing power and meetings I haven't had a chance to respond yet.

We're good with the Commercial survey edits that we sent last Friday. Please let us know how the revised survey lengths are.

For the incentive levels, we have mixed experiences with the incentive levels, and appreciate your recommendation below. We're okay with offering a draw of multiple offerings of $500 as indicated below. It could be administered across Small / Medium / Large. Not sure if there is a specific number that draws attention in your experience, but with our limited sample size it would not have to be very many.

Subject: RE: Update on Online Surveys

Thanks for the update Susan.

On the reminders, we can send reminders next week. Please give us a list of those you would like us to send reminders to as close as possible to the time we need to send them. We'll dedupe that against our DNC list and our list of other email responses.

I got a lot of automatic replies of business contacts out of the office until Monday, so we may see some more come in early next week because of that.

I've also uploaded one more link reset. It might be a complete, but if you can check I can respond to this customer.

On the reporting, I couldn't get a meeting set-up to talk about it with our team until Monday morning.

Based on your proposal I do have a question about combining the telephone and online results for Residential. It was my understanding that we would be comparing those results, so I am not sure if that is something you are doing on your side separate from the report, and combining them for the final report, or that we would also need to show the results side-by-side in the report as well.

For the Commercial, we already separated Small and Med/Larg based on consumption, so I don't think that a further split by consumption will be needed. It might be more meaningful to look at the variables

BROAD_CLASSIFICATION **SECTOR_FOR_NEXT_GEN_EVAL**

but I also don't imagine we will have enough completed interviews to report by them.

For the summary report, I agree that we can use Small and Medium-Large combined, but at the same time, if the results vary significantly, and if the base sizes are big enough then would probably want to look at them separately.

EXTERNAL: PLEASE PROCEED WITH CAUTION.
This e-mail has originated from outside of the organization. Do not respond, click on links or open attachments unless you recognize the sender or know the content is safe.

Hi Gesiena,

Now that the surveys are all up and running, we are going to start prepping the reports. I wanted to get your feedback on the segments we will include in each of the reports. Below are my thoughts.

Residential Report:

- Topline results (combined telephone and online where questions were asked via both methodologies) – are we intending on combining the phone and online data? Or would we also compare the results, or could we review that separately?
- Segments:
  - LEAP qualification (per OEB criteria, combining HH size and income)
  - Legacy
  - Legacy Union Gas – North (region LUG North/East) and South (all other LUG) – if sample size permits
  - Consumption (Low, Medium-Low, Medium-High, High)

Commercial Report:

- Topline results (combined telephone and online where questions were asked via both methodologies)
  - Broken down into small vs med-large business

- Where sample size permits, we will include the following segments (still keeping small separate from med/lg):
  - Legacy
  - Legacy Union Gas – North (region LUG North/East) and South (all other LUG)
  - Consider Broad Classification or Sector Next Gen Eval from the sample as sample allows
  - Consumption (below or above average) – since Small and Med/Larg were already based on consumption, we would not need this

We will also include a summary comparing residential and commercial customers. For this part of the analysis, do you want us to combine all commercial data, or do you want to keep small separate from med-large (or maybe we make that decision based on what our final sample sizes are for each group)? I agree that we can use Small and Medium-Large combined, but at the same time, if the results vary significantly, and if the base sizes are big enough then would probably want to look at them separately.

In an earlier conversation/email, you had indicated that region was not of interest to you for reporting purposes, but are there any other segments you would like to include in the residential report?
Happy to have a chat if you'd like!
Susan

Subject: New Phase 3 timeline for your review

Hi Susan,

We're looking at our options for the new Phase 3 timelines. We need to start communicating this as soon as possible (the Regulatory team is in the midst of Evidence Guideline meetings with all the stakeholders groups so the date of the Customer Engagement input is key to them), so I'd like to get your confirmation on some of these dates, especially on top line reporting. If it feels right to you let us know (or if not!), we have a meeting at 1pm where we can communicate that, or otherwise we have meetings tomorrow where we would start communicating it. I think this somewhat reflects the discussion we had yesterday, so hopefully it sounds right, but let us know 😊

- Overall impacts being available on November 15 (we'll have some notional ideas beforehand), but this would likely affect all customer groups in the same way.
- Testing of the questions would take place late October/early November – ahead of having that Nov 15 rate impact (we would adjust to what we have at that time).
- We launch the representative sample as quickly as possible for residential customers and have a fieldwork period of about 2 weeks (from Phase 2 we know that that is possible, we may need some more sample for it since the survey is much longer) and report those results before we report everything else. This would get us some results in early December, rather than waiting until January. This is important because the December 17 timeline was connected to some other input and modeling requirements. **I've put December 10 below. This would be key for us, so I'd like to confirm that we could report fairly quickly after completing the online representative residential sample.**
  - If the verbatim coding needs to be provided separately that is possible for us.
  - We would resolve low response rates with more sample, and adjustments of total quota / weighting, and/or allowing a couple of extra days of fieldwork.
  - We can help develop the reporting template while still in field. We would use Phase 2 as a guide.
  - So far in Phase 2 we have seen that Residential and Small Business customers tend to provide similar feedback (similarly, Med/Large Business customers feedback has not been vastly different from Small Business customers).
  - I think you shared that in your experience the voluntary sample often has similar feedback to the representative sample. This would mean that the representative sample for residential would provide the bulk of the feedback for us, while at the same time we can start reviewing some preliminary results for business and voluntary sample depending on how fieldwork is going.

Does this seem right? Let me know what you think.

Subject: [External] RE: Phase Three Discussion

Hi Gesiena,

I'd like to confirm a couple of details in order to develop the budget for Phase 3. Here are my specific questions:

- Will the openlink version of the workbook be open to all general service customers or just residential? I think we should keep it open to all general service – there may small businesses that we capture through social media
- I have in my notes from some time ago that you have about 30 Transportation customers. Is that accurate? That's right. We may have some that are also Contract customers, in which case they'll do the Contract Workbook, as well as a small group of other customers (producers) that may be included here – there is about 4 or so of them. 30 is probably a good assumption.
- The other customer segment we haven't discussed is Strategic (Large Volume Commercial). What is the planned approach for that group of customers? Will there be an online workbook survey for them, or will you be contacting them internally and we will just do the short validation interviews with them? How many Strategic customers do you have – is it around 30 as well? About 30, we're anticipating including them with the Contract Customers using an Online Workbook.

Thank you!
Susan

Subject: [External] RE: Timing for testing

Hi Gesiena,

I know the original plan was to offer incentives only to commercial customers, but I think there is a strong argument for providing an incentive to residential customers as well.

1. We are trying to capture a lot of data in a short amount of time (Dec 6 and getting you preliminary data by Dec 17). We will likely get a lot more responses if there is an incentive in place
2. We have to be upfront about the length of the survey, and so we say on the first page that it will take 20-30 minutes to complete. This is a pretty big chunk of time, so it would be nice to follow up that statement with an incentive.
3. It doesn't need to have a big budgetary impact. We could offer 4 draws of $250.
4. Given that we changed our approach to the testing, which will reduce the budget for that, we can add the incentive without increasing the overall budget for Phase Three

Have I made a compelling enough case? 😊

Susan

Subject: Phase 3 some next steps

Hi Susan,

For the Wednesday and Thursday testing sessions, would those be sessions with opportunities for us to watch? If so, do you know what time they would be? I am trying to see if any of us might be able to listen in, so I wanted to check. With testing on Wednesday and Thursday, would you anticipate a review call on Thursday and/or Friday? And a launch on the Monday?

I am also thinking through what the next week or so after that look like, as I will be away from work December 2-10 (I am getting married during that time, so to say that everything is really busy right now is an understatement!) but I will be working with Karen to ensure that the rest of the research team can help with any changes to the workbooks and to execute on the fieldwork so that everything moves along. I'll be working on the inputs for that over the next couple of days, I'll list some items:

- Email invitations – see attached, not sure what the best date would be to put into the invitation, so that might need to be adjusted, or if you have other edits let me know.
- Residential representative completes – reduce down to 5400 (from 7200) which with 300 LEAP would still be very good to accommodate the timing. I think this might help for setting quotas, but similar to Phase 2 it may be better to keep the survey open even if a quota is full. If you need more sample for residential I do have some prepared that we could send ahead of time or as needed.
- Getting a link up and running via our website, as well as preparing our social media posts. I am not sure at what point you would know which link we would redirect to. We'll be redirecting to it from www.enbridgegas.com/haveyoursay. You can let me know what the timing for that in the process might be.
- I am also working on getting the business workbook prepared, though know that there may be some changes yet in the residential

I'll probably have some more items to add, and you may have some items to add too 😊

Subject: Business Reporting Cuts

Hi Susan,

(I'm having some email issues just now, so I'll pre-apologize if you get this email as a reply to your email as well)

We would like to propose the following reporting cuts. I added some notes in the attached, but to summarize below:

Business Customers (note: not calling them commercial because we often distinguish between commercial and industrial and our results include industrial)

- Legacy:
    - LEG
    - LUG
- LUG Region:
    - LUG North (show East/ West only for the Rate Zone question)
    - LUG South
- Consumption:
    - Small (50,000 or less) – this is the majority of interviews
        - Four Quartiles
    - Med-Large (50,001 or more) – only 203 interviews so this is not enough as a segment on its own (suggestion to combine with all business customers as a whole segment and to report out by consumption)
- Sector (add a caveat somewhere in the report that this is based on database segments)
    - Agriculture and Greenhouse
    - Manufacturing
    - Multiresidential
    - Food Services
    - Office
    - Retail
    - Transportation and Warehouse
    - Other (combination of remainder, may not be useful, only to get us to a complete group for the remainder of the sample, it might help the interpretation of these results compared to total)
- Strain of impact of bill on overall finances (measure of vulnerability) – if this makes sense based on the numbers
    - Agree
    - Disagree

Let me know if you have any questions or suggestions about these or if there were any data points that end up looking worthwhile considering.

Thanks!

Subject: Fuel Choices Report based on Phase 3 Residential and Business

Hi Susan,

I think we only briefly talked about this a while ago … one thing that we would like to do is to take some of the results from the residential and business reports to make a Fuel Choices report covering the RSG and RNG results from Phase 3 only. This is something we would like to include in our Gas Supply Plan which will be filed ahead of filing our Rate Rebasing application.

We would like to include the results from the Representative Residential and Business reports (I don't think the Voluntary results will be needed for this report). I've suggested through the attached report with comments and highlighting what we think we should include for fairly simple background information and results. We would want to add the Business results to this once available. Presumably in a fairly similar format as the Residential slides 69-75. I've included below some phrasing for the title page which I hadn't included in the attached:

Customer Engagement
Fuel Choices Report
General Service Customers

I am hoping it would be fairly easy to pull this report together from the completed Residential and Business reports. Would it be possible to send those reports also by the end of the week or early next week?

If it would help timing-wise I could also draft the reports from your PPT versions, if it is easier to share those, and have you review the final. Or let me know what you think would be best once you have had a chance to review.

Subject: RE: Report Timing

Hi Susan,

Generally, we would not want to focus on the rate classes or the legacy utilities. Unless it is very applicable, such as with the rate zone question. We're focusing on being one utility, and as well, with the exception of the rate zone question did not distinguish impacts by these rate classes. So we can focus the results on the various customer segments, rather than rate classes (for example the business and contract segment is made up of many rate classes, so even there we'll want to generalize and look at them as segments) or rate zones.

Thanks,

Quick question:

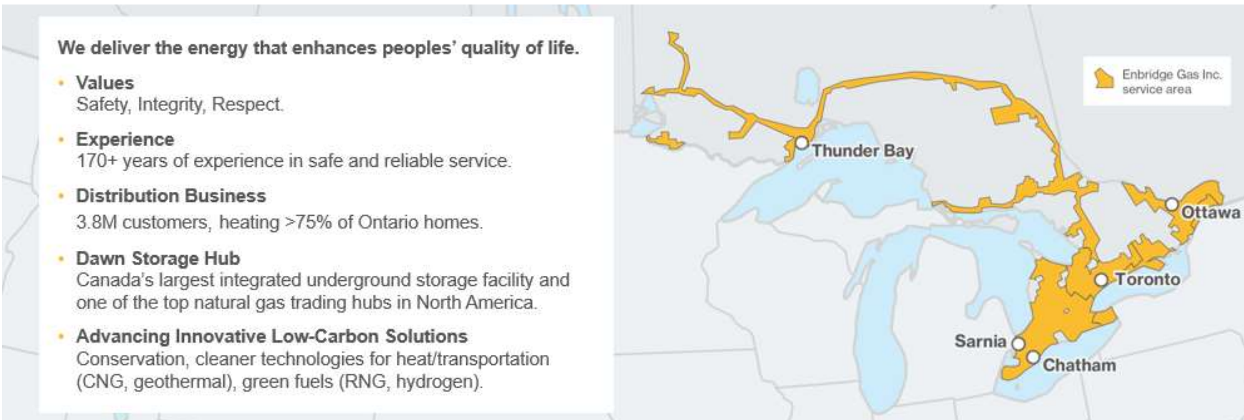
In the overall summary report, do you want us to compare only topline results across all rate classes, or would you like us to break it down into rate zones as well where possible?

Thank you!
Susan

APPENDIX F2
SCOPE OF WORK

Background

Enbridge Gas Inc. (EGI) is North America's largest natural gas storage, transmission and distribution company and serves customers across Ontario.



Enbridge Gas is planning to submit its 2024 Rate Rebasing and Next Generation IRM filing to the Ontario Energy Board (OEB) to establish new base rates and an incentive rate mechanism for the period of 2024-2028. Customer engagement has been identified as a critical activity to assist in supporting this submission. We know that the OEB wants a clear, customer-centric approach to be used to develop this filing, as better engagement of customers results in better planning, better consumer outcomes, as well as better utility performance.

The OEB's "consumer-centric" *Renewed Regulatory Framework for Electricity* (RRFE) shifts the focus from the utility costs to value created for customers. A key requirement of the Cost of Service rate application process includes documenting the active engagement between utilities and their customers. Utilities are required to demonstrate services are provided in a manner that responds to identified customer preferences and needs. Utilities must identify preferences and needs. Utilities must show how they took those needs and preferences into consideration.

The objective of this customer engagement is to build on previous customer engagement efforts that were conducted by Enbridge Gas Inc in 2019 and 2020, as well as by Legacy Union Gas (LUG) and Legacy Enbridge Gas Distribution (LEG) in 2017.

Therefore, Enbridge will need to:

- Identify or confirm customer needs and preferences
- Collect views on possible outcomes of interest to customers
- Identify decisions within the filing that have an impact on customers (on their rates, service levels, or other factors) and tie those decisions to desired customer outcomes

APPENDIX F2
SCOPE OF WORK

In past filings from other utilities regulated by the OEB, some key challenges and concerns expressed by the OEB include:

- Quality of approaches undertaken in previous applications
- Utility needs to ensure customer input is taken into consideration prior to development of application materials - ensure it is timely in formulating survey, conducting fieldwork, getting results and closing feedback loops
- OEB is critical of customer engagement that appears to reinforce utility's proposals rather than shaping it
- OEB is critical of lack of clarity over project specific & bill related information-utility should include asset specific info and the related impact for each item/project, avoiding mass grouping where possible
- Criticism received for vague/unclear relationship descriptions included in survey between capital spending and service quality – utility should be as specific as possible in outlining choices, i.e. what exactly constitutes service degradation as a result of lower incremental capital spending?
- Utility should provide additional information with respect to cost reliability trade-offs in addition to project-specific impacts
- Customer engagement should be timely and meaningful

Examples of Previous Customer Engagement Efforts for EGI

Filing EB-2018-0305: https://www.uniongas.com/-/media/about-us/regulatory/rate-cases/eb-2018-0305/EGDIUNIONEB20180305EXD20181214.pdf?la=en&hash=2C80B6B7180B20B3FA0FFE88A1DE76B4A337E7D5 (separate engagement efforts for LUG and LEG)

Filing EB-2020-0181: https://www.rds.oeb.ca/CMWebDrawer/Record?q=CaseNumber%3DEB-2020-0181&sortBy=recRegisteredOn-&pageSize=400. Please review document EGI_APPL_Phase 2_20201015 listed as Application and Evidence, where pages 609-652 refer to the customer engagement completed to support the filing.

Timeline

All customer engagement work is to be conducted between May 2021 and December 2021. It is expected that the work will require several phases of research across customer groups.

Content of the Customer Engagement

The content and methodology of the Customer Engagement work will be driven by work done to identify issues. Various stakeholder groups will identify the issues that require customer feedback. For each of these issues the process of gathering feedback may vary, and as a result the customer engagement plan will require flexibility to be able to address this.

APPENDIX F2
SCOPE OF WORK

We anticipate that beyond these issues additional requirements for customer engagement include ensuring that customers understand the process and its implications and gathering feedback on general topics including, but not limited to, customer satisfaction, attitudes and preferences more generally.

Customers

Throughout the customer engagement process, it will be important to capture feedback from all of Enbridge Gas' customer groups. A brief summary of customer groups is provided below:

Customer Segments	Legacy Union Gas (LUG) Definition	Legacy Enbridge Gas (LEG) Definition	Comments (numbers are approximate):
Residential	M1 (South), R1 (North)	Rate 1	Customers who use less than 50,000 m3 of natural gas per year ~ estimated 3.3 million
General Service / Small Commercial	M1, R1, M2, R10	Rate 6 (Large Volume: 110, 115, 135, 145, 170, 200)	All Commercial / Industrial: Total Commercial: ~260,000 customers Total Industrial: ~21,000 customers Total Institutional: ~1,100 customers
Medium – Large Commercial / Industrial (Billed)			
Commercial / Industrial (Contract)	M4, M5, M7, T1, R20, R25		Commercial and industrial customers who have signed a contract for firm or interruptible gas delivery LUG: ~450 customers LEG: ~400 customers
Strategic (Large Volume Commercial)	M9, T2, T3, R100	To confirm	Largest users of natural gas in the wholesale (distributors of natural gas), chemical, refinery, steel, and power generation segments.
Transportation	M12, M12-X, Large C1	To confirm	Ex-Franchise Customers who contract for firm services to transport gas between any two interconnects

Potential Phases

1. Development
    - To develop an initial understanding of customer perceptions, opinions or beliefs and attitudes
    - This phase includes review of existing research and customer feedback and may be supplemented with additional customer engagement
2. Refinement
    - An initial evaluation of proposals and concepts to provide an opportunity to enhance and refine them
3. Validation
    - Provides follow-up opportunities to evaluate finalized proposals and concepts
4. Monitoring
    - Provides ongoing monitoring of attitudes and opinions towards proposals and concepts

The list of issues identified will help determine which phases will be necessary.

Methodology

For each phase, the yet-to-be determined list of issues and the unique set of customers that need to be engaged will drive the required methodology.

For the purpose of this quote, and based on previous customer engagement work, the Customer & Market Insights team recommends the methodologies outlined in this section for each of the phases.

Please make the following assumptions:

- All telephone or online interviews will be a maximum of 15 minutes in length, with maximum one open-ended question.
- Where customer lists are provided by Enbridge Gas the number of records will be sufficient to complete the required number of interviews, or fewer interviews will be required.
- All in-depth interviews will be conducted using telephone (or where possible using an online platform) and will be 45-60 minutes in length.
- Given the COVID-19 restrictions we will assume all meetings and interviews will be completed online / via telephone.
- Where possible, Enbridge Gas will provide pre-notifications to customers to help improve response rates. Among some of the Commercial/Industrial customers we may reach out to the same customers more than once across the phases of research.
- Enbridge Gas does not anticipate a need to provide incentives, though recommendations for incentives may be considered. *Please do not include in the cost worksheet.*

APPENDIX F2
SCOPE OF WORK

- Customer engagement will be conducted in English.
- Please assume that there will be no opportunity to use the Enbridge Gas website for the purpose of completing this customer engagement (due to a website integration project that will be ongoing throughout the term of the research).

For each of the phases, please provide a quote for the following options. Note that all will be considered optional and may be revised once the issue list is developed and the project becomes more defined in scope:

1. Development

While this phase is considered optional, please provide a quote in the event that any of these will be required.

Assume that this will take place in May and June 2021.

Customer Segments	Comments (numbers are approximate):
Residential	Online focus groups (bulletin board style – e.g. 3-day covering a variety of questions) – 2 groups with 20 customers per group; OR In-depth Interviews by telephone - 24 interviews (12 per legacy)
General Service / Small Commercial	Online focus groups (bulletin board style – e.g. 3-day covering a variety of questions) – 4 groups with 10 customers per group; OR In-depth Interviews by telephone - 24 interviews (12 per legacy)
Medium – Large Commercial / Industrial (Billed)	In-depth Interviews by telephone - 24 interviews (12 per legacy)
Commercial / Industrial (Contract)	N/A – internal efforts are already under way
Strategic (Large Volume Commercial)	N/A – internal efforts are already under way
Transportation	N/A – contact with these customers will be an internal effort

2. Refinement

During this phase we will focus on the key issues identified and refine the questions that we will intend to ask in the Validation phase.

Assume that this will take place in June to August 2021.

Customer Segments	Comments (numbers are approximate):

APPENDIX F2
SCOPE OF WORK

Residential	Online focus groups (bulletin board style – e.g. 3-day covering a variety of questions) – 2 groups with 20 customers per group; AND/OR Online – 600 interviews Telephone – 400 interviews
General Service / Small Commercial	Online focus groups (bulletin board style – e.g. 3-day covering a variety of questions) – 2 groups with 10 customers per group; AND/OR Online – 100 interviews Telephone – 50 interviews
Medium – Large Commercial / Industrial (Billed)	Online – 100 interviews Telephone – 50 interviews
Commercial / Industrial (Contract)	In-depth Interviews by telephone - 24 interviews (12 per legacy) with optional 1-hour stakeholder meeting to discuss the process and questions ahead of time
Strategic (Large Volume Commercial)	In-depth Interviews by telephone - 24 interviews (12 per legacy) with optional 1-hour stakeholder meeting to discuss the process and questions ahead of time
Transportation	N/A – contact with these customers will most likely be an internal effort

3. Validation

The bulk of the quantitative support will be gathered during this phase.

For each customer segment we may consider offering to host an optional 1-hour stakeholder meeting to discuss the process and questions to ensure.

Assume that this will take place September to November 2021.

Customer Segments	Comments (numbers are approximate):
Residential	Telephone – 1,800 interviews Online – 1,800 interviews; OR Consider an open link survey invitation shared via bill insert / myaccount
General Service / Small Commercial	Online – 400 Telephone – 400 (depending on online response)
Medium – Large Commercial / Industrial (Billed)	Online – invitation to participate sent to all (assume n=100) Telephone – 200 (depending on online response)

APPENDIX F2
SCOPE OF WORK

Commercial / Industrial (Contract)	Online – invitation to participate sent to all (assume n=100)
Strategic (Large Volume Commercial)	Online – invitation to participate sent to all (assume n=30)
Transportation	N/A – contact with these customers will most likely be an internal effort Consider set of validation interviews (5-10 min in length); OR Online – invitation to participate sent to all (assume n=30)

4. **Monitoring**

Not included at this time (may take place over the course of 2022).

Deliverables:

The research supplier will:

- Provide recommendations on the research methodology throughout the customer engagement process.
- Provide feedback and recommendations on the questionnaires developed by EGI's Customer & Market Insights team.
- Program and host all surveys and bulletin boards (if applicable).
- Complete the required interviews.
- Provide fielding data in the form of an SPSS data set, as well as detailed crosstabs in electronic form (coding for open-ended questions required).
- Provide top line and final reporting for each phase, as well as updates throughout the process.
- One final report covering the various phases of customer engagement.
- Support OEB proceedings, as required. Please note that the research supplier is not expected to act as a witness in the proceedings.

APPENDIX F2
SCOPE OF WORK

Quote Content Requirements:

The proposal should address the following:

1. Understanding of goals and objectives of the research.
2. Vendor recommendations on research methodology and targeted number of completed interviews.
3. Explanation of the Project Deliverables.
4. High-level timelines and milestones, including timelines for providing data and reports to EGI.
5. Cost estimates for each of the phases and the described elements of each phase, as described in this request for quote. In the quote, please provide a separate cost for each element of the deliverables.. The numbers used in this quote will be used to compare costs among applicants.
6. Identification of project liaison for day-to-day contact and other key personnel who will be working on the project.
7. Identification of related experience, including any experience working with clients in the utility and/or energy sector.
8. Identification of any potential conflict(s) of interest.
9. Confirmation of agreement with Enbridge Gas Inc.'s general terms and conditions.

Please note that the project award is subject to the successful completion of the TPRA (Third Party Risk Assessment). Please submit the Third Party Cybersecurity Questionnaire Spreadsheet by no later than April 23rd at 3:00 PM ET to gdprocurement@enbridge.com. Proponents that have gone through the TPRA process with Enbridge do not need to complete the Questionnaire.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Preamble:

In Exhibit 1, Tab 6, EGI reviews its customer engagement process undertaken in support of this application. In this evidence EGI describes meetings directly with contract customers. At paragraph 28 EGI discusses "*[p]reviously identified concerns related to customer engagement, such as the ability for customers to review the cumulative impact of their choices on overall rates*" and how those concerns were addressed. EGI also indicates elsewhere in its evidence that it has assessed the impact of its rate harmonization proposals on each of its large volume contract customers.

Question(s):

Please confirm that, as of the date of submission of these interrogatories, large volume industrial customers have not been provided with information on the specific impact of EGI's application proposals on their individual annual EGI bills.

Response:

Confirmed. Although the proposed rates are available at Exhibit 8, Tab 2, Schedule 7, Attachment 1 for customers to estimate their bill impact, specific customer impacts have not been provided.

Question(s):

Concerning customer engagement and ensuring a positive customer experience, reference is made to "…limiting the number of times the same customers were solicited for feedback…" Please identify the general geographic location within the Enbridge service territory where there are legacy Enbridge Gas Distribution Inc. and legacy Union Gas General Service business customers that are regularly surveyed by Enbridge.

Response:

Enbridge Gas surveys customers across its entire franchise area.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T6/S1/p.4-5

Question(s):

Enbridge states that it "…conducts daily and monthly surveys with randomly selected general service customers…". Please explain the survey process and types of surveys Enbridge uses to engage general service ("GS") business customers. How many GS business surveys would normally be conducted on a daily and monthly basis? Please provide a sample of a typical business customer survey.

Response:

General service (GS) business customers currently participate in three ongoing monthly and daily surveys:

a) Residential and Business Customer Experience Tracking was revised in January 2023 to include a random selection of general service residential and business customers. These surveys are completed monthly and include 50 GS business customers each month.
b) The Large Business Accounts Interaction survey is conducted daily and is an online survey with customers who contacted the Large Business Accounts department. The daily number of surveys ranges from 0 to 10, with an average of 40 per month.
c) The Chatbot Interaction survey is conducted daily with customers who connected with the online Chatbot. GS business customers comprise approximately 5-10% of the sample and are represented among a total average of 170 surveys per month.

The survey instrument for the "Large Business Accounts Interaction Survey" is provided as a sample of a post-transactional survey in Attachment 1.

In addition to these three ongoing surveys, Enbridge Gas conducts market research with GS customers on an ad-hoc basis. The customer engagement process for this Rebasing Application (2021 to 2022) as well as a commercial end-use survey (2020 to 2021) and the Asset Management Plan customer engagement process (2019), were priority projects for the past several years. For markets with fewer customers, such as the business markets, these priority projects limited the availability of customer lists for other market research initiatives, and where possible already included satisfaction questions. To avoid “survey fatigue”, Enbridge Gas limits the number of times a given customer is solicited for feedback.

Large Business Accounts Interaction Survey
Instrument as of February 21, 2023

Q1 Overall, how satisfied are you with your recent interaction with the Enbridge Gas Large Business Accounts Department?

- ○ 1 Completely Dissatisfied (1)
- ○ 2 (2)
- ○ 3 (3)

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T6/S1/A1/p.9

Question(s):

During the course of customer engagement exercise undertaken by Innovative Research Group Inc. ("Innovative"), did customers have a good understanding and knowledge of what energy transition means? Was there a common definition of "energy transition" used with survey respondents and focus group participants? Was there a difference in the level of knowledge and understanding of energy transition between GS residential customers and GS business customers and was that difference significant?

Response:

In the customer engagement, the specific term "energy transition" was only used in some of the Phase One focus groups in a discussion exploring different customer outcomes. The phrase "facilitating the energy transition" was used to probe customer views related to the environment (if similar concepts were not already introduced by customers themselves). In a focus group or in-depth interview, the discussion is conversational in nature and participants can clarify their understanding with the facilitator or each other to ensure that there is a common understanding. The term was not used in any customer-facing elements of the subsequent phases, and only appears as a summary title in the reports prepared for report audiences.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T6/S1/A1/p27] and [E1/T6/S1/A1/p.276 (*chart*) and P.277 (*table*)

Question(s):

Please explain what is meant by “Social Permission” within the context of the customer engagement exercise; and the results shown on the chart and table referenced.

Response:

The following response was provided by Innovative Research Group:

As indicated in the first column of the bottom row of the table on pages 27 and 276 of Exhibit 1, Tab 6, Schedule 1, Attachment 1, and by the brackets in the chart on page 276, Social Permission is a label that applies to those who replied increase investments and those who replied maintain the draft increase. For example, on page 27, 71% of residential customers responded with at least maintain the draft increase.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T6/S1/A1/p.256

Question(s):

Regarding hydrogen gas and Enbridge's intent "… to launch a feasibility study that assesses the full system's readiness for more hydrogen to be included in the system." Please provide a table that shows the estimated annual cost for all the planned H2 study work that is expected to be allocated to GS business customers for the rate years 2024; 2025 and 2026; and 2027 and 2028.

Response:

Please see Exhibit 2, Tab 6, Schedule 2, page 75.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T6/S1/A1/p.310

Question(s):

Business customers were asked to agree or disagree with the statement that reads: “Customers are well served by the energy system in Ontario.” [QMA emphasis] where 79% of the surveyed respondents “agreed” with the statement. Was it made clear to the survey respondents what the “energy system” means? In other words, was it defined to mean natural gas only or could it have been interpreted to include electricity, natural gas, propane and oil? Please explain.

Response:

“Energy system” was not defined in the workbook. This question was presented to customers in the last section of the workbook (as part of the Respondent Profile section) for analytical purposes only. Questions in the Respondent Profile were included to provide options for segmenting and grouping similar people together when the survey results were analyzed. For this purpose, the question was designed to gauge high-level reactions, and therefore “energy system” was not defined. Please see response at Exhibit I.1.6-SEC-84, Attachment 1. The workbook page presented to general service business customers that contains this question can be found on page 82.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Quinte Manufacturers Association (QMA)

Interrogatory

Reference:

Ref: E1/T6/S1/A1/p.330 and p.432

Question(s):

The two charts concerning annual forecasted bill impacts (including the carbon charge) compared to current rates that appear on the referenced pages of Attachment 1 are almost identical. However, they are confusing. The statement below each chart reads: “These charges for business customers [QMA emphasis] may vary somewhat by rate class, and in all cases where we’re showing a rate impact, it is the highest potential impact across rate classes.” The asterisk on the page 330 chart for annual bill impacts notes the average customer consuming 2,400m3 NG/yr., which appears to be a reference to residential volumes rather than the average commercial customer discussed in the paragraph above the chart. There are no comparable gas consumption volumes shown for small and medium/large businesses for the chart on page 432. Please explain and clarify.

Response:

The footnote provided at Exhibit 1, Tab 6, Schedule 1, Attachment 1, page 330 that references an average customer consuming 2,400 m^3 of natural gas per year was erroneously included when the General Service Business Customer workbook page was added into the report. The version of the workbook that customers saw did not include this error. The business charts are not based on an annual consumption of 2,400 m^3, but rather on the average percentage impact for business customers of all consumption levels. As stated, the rate impacts shown are based on the highest potential impact across rate classes.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

1-6-1

Question(s):

Excluding those undertaken for the purpose of DSM program design or community expansion customer attachment forecasts, please provide details of all other customer surveys and/or market research that Enbridge has undertaken since the amalgamation. Please provide copies of any such reports and/or analysis.

Response:

Customer surveys and market research studies are managed by the Customer and Market Insights (CMI) team at Enbridge Gas. Table 1 includes a list of studies that Enbridge Gas is attaching to this response, and where applicable, the most recent reports are provided in Attachment 1.

Table 2 includes a list of studies that were completed, for which no report is attached. The studies in Table 2 have been previously filed or were completed to support Enbridge Gas marketing efforts and included user testing. These studies helped to inform the design of specific customer-facing tools or communications, and while some details are shown here, these studies are not relevant to this Application and no reports are provided.

Enbridge Gas also conducts follow-up surveys with customers who attended specific in-person or webinar events to gather feedback and help improve future events. These surveys are not individually listed here.

Table 1
Customer Surveys and Market Research Studies completed since Amalgamation (Reports included)

	Study Name	Last Year Completed	Details
1	Residential Brand and Customer Experience Tracking	2022	Comprised of three surveys, this study measures overall customer satisfaction, satisfaction with the call centre and satisfaction with field work experience. The 2022 report is included in Attachment 1, p. 1.
2	Voice of Customer Program	2022	The Voice of Customer Program consists of nine online surveys that are sent out daily and measure satisfaction with Chatbot, Call Centre, Large Business Account interactions, Moves, Meter Exchange, Emergency, Billing, Communications, and Brand. Results are reported in an online dashboard that is accessible to Enbridge Gas employees responsible for these transactions/experiences. The 2022 summary report includes some high-level results and is included in Attachment 1, p. 27.
3	Mastio Transportation Customer Value/Loyalty Benchmarking Study	2022	Mastio is a benchmarking study of natural gas pipeline companies in North America and gauges pipeline customer satisfaction. It surveys all major interstate, intrastate, and Canadian pipelines across North America. The reports provided by Mastio are confidential, however a high-level summary of results is available as referenced in the response to Exhibit I.1.2-SEC-77.
4	Enbridge Brand Health Study	2022	Measures brand awareness and impression of Enbridge Gas and Enbridge Inc. The 2022 report is included in Attachment 1, p. 30.
5	Enbridge Gas Brand Pulse survey	2019	This study was conducted to measure awareness of the amalgamation among Legacy Union Gas customers. The report is included in Attachment 1, p. 99.
6	Natural Gas Safety Awareness and Compliance Survey	2022	Measures awareness of natural gas safety issues and related precautions/responses. The 2022 report is included in Attachment 1, p. 114. While this study contains some natural gas end use equipment figures, Enbridge Gas relies on the Residential Single Family Natural Gas End Use Study for these measurements.
7	Residential New Housing Natural Gas End Use Study	2022	Residential New Housing End Use Survey measures natural gas appliance penetration in new homes and experiences with the new build process. The 2022 report is included in Attachment 1, p. 161.
8	Residential Single Family Natural Gas End Use Study	2022	This study measures natural gas appliance penetration and preferences, insulation levels, and awareness of DSM. The 2018-2022 reports are provided at Exhibit I.1.10-GEC-7, Attachments 1 to 5.

Table 2
Customer Surveys and Market Research Studies completed since Amalgamation (Reports not included)

	Study Name	Last Year Completed	Details
1	Low Carbon Energy Project Customer Engagement	2019	This survey measures interest in Enbridge Gas' Low Carbon Energy Project, and was filed in EB-2019-0294, Exhibit B, Tab 1, Schedule 1, Attachment 5.
2	2019 EGI Asset Management Plan Customer Engagement	2019	Customer engagement for the 2019 Asset Management Plan was filed in EB-2020-0181, Exhibit C, Tab 3, Schedule 1, p.1 to 44.
3	Paperless Bill Incentive Quantitative Research	2019	This telephone survey was conducted to develop strategies to incentivize paper customers to move to paperless (electronic) billing (including incentives to use in marketing, i.e., donation, cash, bill credit).
4	EGI Paperless Bill Segmentation Research	2021	This telephone survey was conducted to create segments among paper billing customers to better understand them (and their likelihood to convert to paperless).
5	Driving eBill Adoption	2021	The primary objective of this online study was to better understand customer awareness and likelihood of using eBill features, principally the text/email reminder option, among those who have email, but are not signed up for paperless billing.
6	Bill Mitigation Messaging Research	2022	Using focus groups, this study was conducted to test messaging options with customers before launching a campaign about higher bills.
7	OptUp Form Testing	2021	Using in-depth interviews this study tested the OptUp Voluntary RNG program form on the website with customers to check for any concerns or usability issues (to help improve uptake of program).
8	Website Redesign project	2020	This study was done to help build the mainframe of the amalgamated website. It showed various options and allowed customers to share feedback on where they expect to find specific types of information.
9	Website Intercept Survey	2022	This intercept survey on the enbridgegas.com website was conducted to check satisfaction with the website and to identify any problem areas.
10	Canada Energy Regulator Public Awareness Campaign	2022	Multiple waves of online research were completed to confirm receipt of specific pipeline campaign materials for awareness of safety measures for those near a high-pressure pipeline.

Residential Brand & Customer Experience Tracker (R-BCX)

Enbridge Gas

2022 Year-End Report
Customer & Market Insights Team

About R-BCX

Launched in July 2019, the Residential Brand and Customer Experience Tracker (R-BCX) brought together two similar customer satisfaction measurement programs from Legacy Enbridge Gas Distribution (LEGD) and Legacy Union Gas (LUG). R-BCX has three separate sections or tracts, each with a different survey questionnaire and a different group of customers targeted.

Tract	Customers Targeted	Interviews per Month (#)	Margin of Error*		
			Monthly Results	Quarterly Results	Annual Results
Residential Overall	Randomly selected residential customers	200	+/- 6.9	+/- 4.0	+/- 2.0
Call Centre Experience	Customers who contacted the Call Centres in the previous month and connected to a live agent	200	+/- 6.9	+/- 4.0	+/- 2.0
Field Work Experience	Customers who had an at-home appointment for field work in the previous month.	200	+/- 6.9	+/- 4.0	+/- 2.0

*At the 95% confidence level for survey questions asked to all respondents.
Note: The margin of error is higher for questions only asked to a sub-set of respondents, such as customers enrolled in the online account management tools. The margin of error is also higher and for results broken down into smaller groupings such as results for individual legacy utility areas, regions, and call types. Please contact Market Research & Analysis to discuss accuracy prior to using results as an input to significant business decisions.

- 200 interviews are completed each month for each survey tract. 100 interviews are completed with customers in each legacy territory to allow separate analysis and reporting where necessary. Most of the results in this report are for the total Enbridge Gas area, with LUG results weighted at 40% and LEGD results weighted at 60% to reflect the actual split of residential accounts. Sample is provided to the vendor once a month, except for the Call Centre Experience tract, where sample is provided twice a month.
- R-BCX is administered by telephone by Leger, a Canadian market research vendor. All survey analysis and reporting is completed in-house by the Enbridge Customer & Market Insights team (part of the Marketing & Customer Insights group).

Interpreting the Results

ENBRIDGE

- The majority of the results found in this report are "Top 3 Box Scores". A Top 3 Box Score is the percentage of respondents who provided a rating of 8, 9, or 10 on a 10-point scale. Customers providing a Top 3 Box Score are highly satisfied.

Top 3 Box Score = ratings of 8, 9, or 10 on a 10-point scale

1 means "completely dissatisfied" and 10 means "completely satisfied".

1	2	3	4	5	6	7	8	9	10
	Bottom 3 Box Score			**Middle Box**				**Top 3 Box Score**	

- Bottom 3 Box and Middle Box scores can also be of interest, as are mean scores. Please contact the Customer & Market Insights team to see results presented in a different way, or for any further analysis. Customized reports can be created on request.
- This report references a "2019 Baseline". The 2019 baseline reflects results from the July – December 2019 period (starting from the R-BCX launch in July to the end of the year).
- All R-BCX questionnaires currently refer to "Union Gas, currently operating as Enbridge Gas" or your "natural gas utility" instead of "Enbridge Gas" for Legacy Union Gas customers. This was deemed necessary (based on customer testing) to avoid customer confusion. This has an impact on the interpretation of results, particularly around the brand. Please contact the Market Research team for additional context and commentary.

- Overall satisfaction with Enbridge Gas
- Perceptions of the Enbridge brand
- Satisfaction with Enbridge Gas communications
- Satisfaction with the Enbridge Gas bill and the bill inserts
- Satisfaction with the website and the online account management tool

Enbridge Gas Residential Overall

2022 Year-End Spotlight

Overall customer satisfaction with Enbridge Gas, normally very stable, declined significantly in 2022. The decline is very strongly linked to natural gas prices and was most pronounced in Q4 2022 results - when colder weather and changes to Equal Monthly Payment Plan instalments made higher rates more evident on customer bills.

Dissatisfied customers also noted issues with customer service, meter reading (estimation and the accuracy of estimates), and communication (or a perceived lack of communication) related to rate increases.

As seen in the past, higher bills drove lower ratings for most attributes of the Enbridge Gas bill, communications, and the brand. Significant declines in customer ratings are noted throughout this section of the report.

Ipsos' Inflation Tracker has found about one-half of Canadians are concerned about their ability to pay natural gas and electricity bills (June 2022 results)—important context for the interpretation of results.

Majority of Canadians are concerned with rising costs for goods and services, about one-half are concerned about their ability to pay gas and electricity bills

Thinking about your personal financial situation over the next six months, how concerned, if at all, are you about each of the following over the next six months?

(% 'Very'/'fairly concerned')

Overall Satisfaction with Enbridge Gas

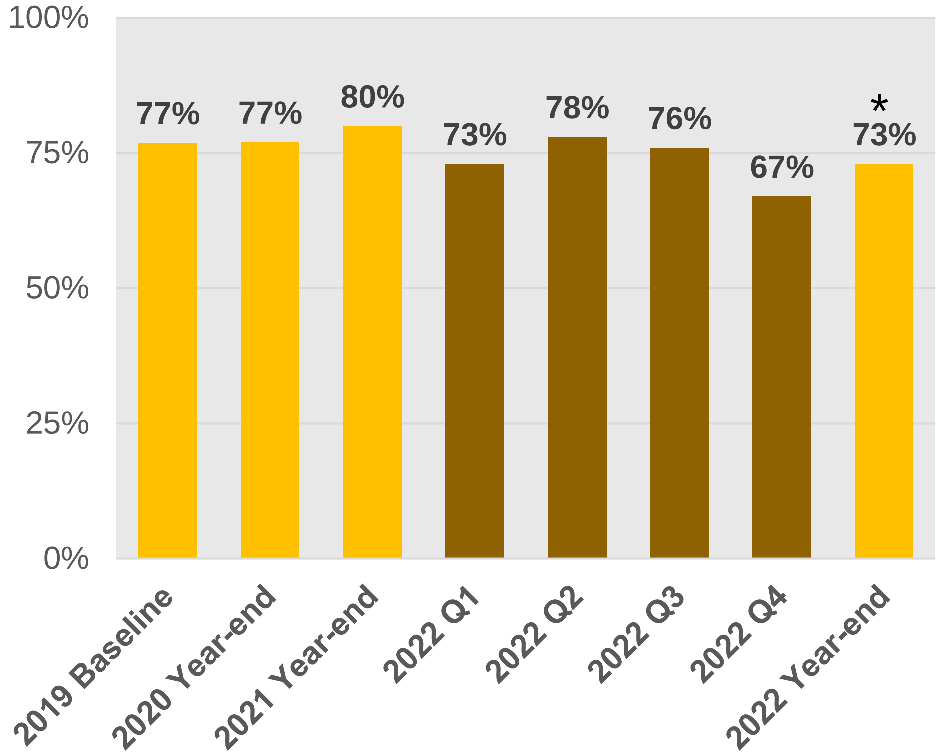
- "Overall Satisfaction with Enbridge Gas" is a summary for how customers feel about the utility. It encapsulates customer satisfaction across all of Enbridge Gas' interactions, transactions and communications.
- This score reflects ratings provided by randomly selected residential customers. Some of the customers surveyed experienced a recent transaction or interaction with Enbridge Gas, while others did not.

Overall Satisfaction with Enbridge Gas Historical Trend



** Significant movement compared to 2021 at the 95% confidence level.*

Enbridge Gas Residential Overall

Natural Gas Prices as a Driver of Satisfaction

Satisfaction with the price of natural gas is a key driver of Overall Customer Satisfaction and Overall Brand Impression.

While customers experience the same rate changes as other customers in their zone, perceptions of natural gas prices vary. Customers satisfied with natural gas prices tend to be satisfied with Enbridge, and the reverse is also true.

The correlation between natural gas prices and customer satisfaction has been strong for many years, (documented by both Legacy utilities prior to 2019), but became more pronounced in 2022, perhaps due to magnitude of the increases and broader inflationary and economic pressures being faced by many customers.

Strength of Associations:

Quantitatively, the relationships between customer satisfaction, prices, and overall impression are:

- Correlation between 'overall satisfaction with Enbridge Gas' and satisfaction with the commodity price = 0.86. ***(High)***
- Correlation between 'overall satisfaction with Enbridge Gas' and the delivery price = 0.94. ***(High)***
- Correlation between "overall satisfaction with Enbridge Gas" and "Overall impression of Enbridge Gas" (overall Enbridge brand perception) = 0.95. ***(High)***

Movements in Overall Satisfaction with Enbridge Gas Strongly Linked to Satisfaction with the Commodity and Delivery Prices

Section 2:

Enbridge Gas Contact Centre Experience

- Overall satisfaction with the call centre experience
- Level of effort & issue resolution
- Customer Service Representative (CSR) soft skills
- Experience with self-service tools prior to speaking to a live representative
- Preferences for future contact with Enbridge Gas

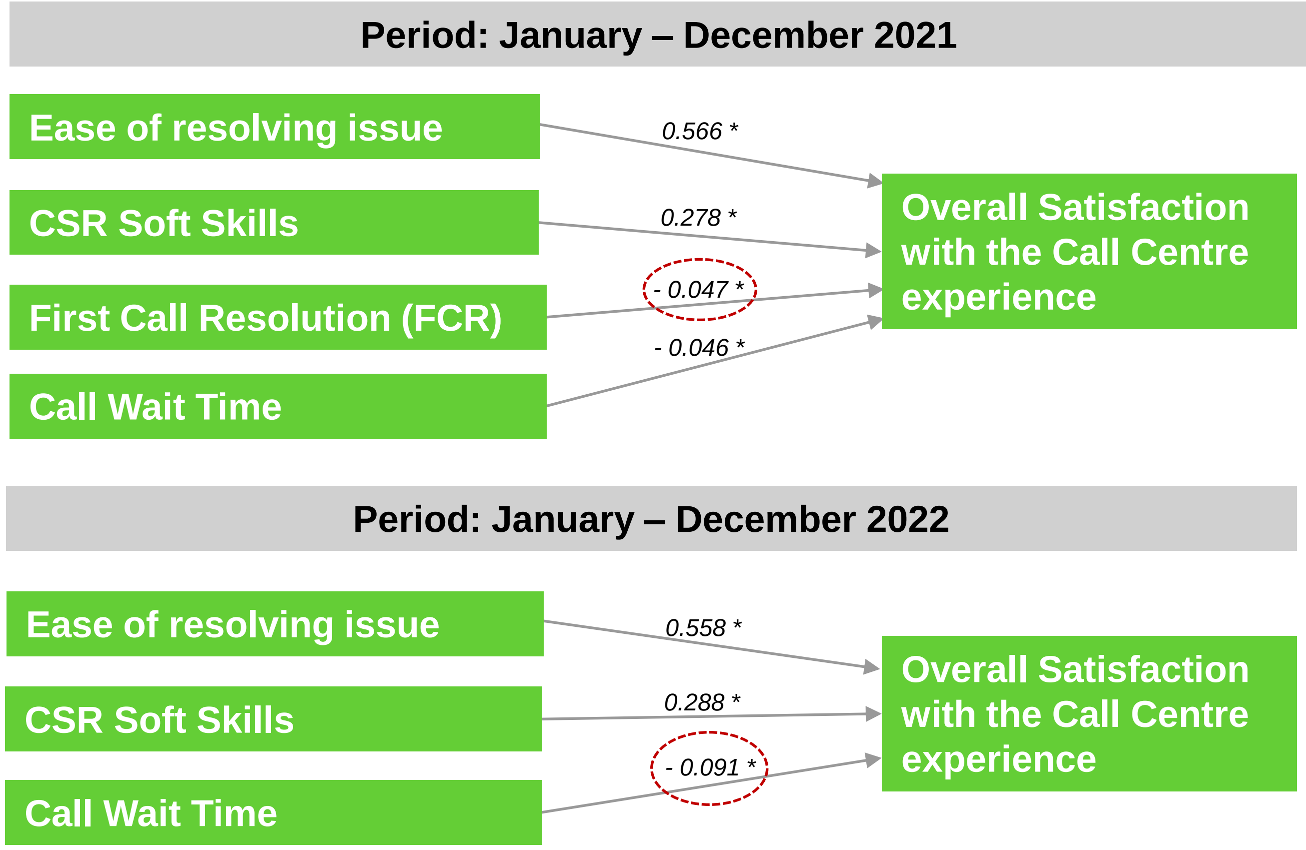
Call Centre Experience

2022 Year-end Spotlight

ENBRIDGE

- 'Overall satisfaction with the Call Centre experience' dropped significantly in 2022 compared to 2021.
- The "overall ease of resolving the issue" experienced a similar statistically significant loss, comparing the 2022 result to 2021.
- A change is noticed in the key drivers of overall satisfaction with the Call Centre experience, with the "ease of resolving the issue" becoming a stronger driver of overall satisfaction in 2022. The "ease of resolving the issue" and CSR soft skills are now the dominant key drivers of overall satisfaction with the Call Centre experience, explaining 90% of variations in customer satisfaction.
- As previously observed, high ratings for overall customer satisfaction can be achieved if perceptions of the CSR's soft skills are positive – even when the issue the customer called about is not resolved, or not resolved quickly. This is particularly true if the CSR is perceived to genuinely want to help the customer.
- Another (but much weaker) key driver is the "call wait time", having a negative relationship with overall satisfaction.

Key Drivers of Overall Satisfaction with the Call Centre Experience (Live Calls)



** Standardized beta coefficient using linear regression model.*

Call Centre Experience

Impressions of the Customer Service Rep. (CSR)

ENBRIDGE

Perceptions of CSR's Commitment to Help

"Now, I'm interested in your impression of the Customer Service Representative's or CSR's commitment to help you with your issue. Please use a scale of 1 to 10 where 1 means that the CSR was "Not At All Genuine" in their commitment to help you and 10 means "Very Genuine" in their commitment to help you."

76%*

Top-3 Box Score

(2022 YTD)

CSR's Genuine Commitment to Help

2019 Baseline: 84%
2020: 85%
2021: 81%

Satisfaction with CSR by "Soft Skill" Attribute

"How satisfied were you with the representative you spoke with on the following aspects of service? Please use a scale of 1 to 10 where 1 is "completely dissatisfied" and 10 is "completely satisfied"."

Service attribute:	*Top 3 Box Scores*							
	2019	**2020**	**2021**	**2022 Q1**	**2022 Q2**	**2022 Q3**	**2022 Q4**	**2022**
Answering your phone call promptly, without a lengthy waiting period	73%	73%	60%	58%	60%	59%	61%	59%
The courtesy of the representative	88%	90%	86%	86%	85%	82%	79%	83% *
Being able to answer your questions	81%	83%	78%	74%	75%	71%	67%	72% *
Timeliness of resolving your problem, question, or request	76%	78%	70%	68%	69%	62%	60%	65% *
Ability to explain things in a way that is easily to understand	82%	84%	79%	76%	77%	72%	69%	73% *

- Customers are asked to rate the Customer Service Representative (CSR) they spoke to on several "soft skill" attributes. These attributes are based on characteristics/behaviours emphasized in CSR training.
- Soft skills are linked to overall customer satisfaction with the call centre experience and can "redeem" customer satisfaction in instances where first call resolution does not occur and/or the level of effort to resolve the issue is considered high.
- The CSR's ability to answer the customer's questions is the most important soft skill in terms of driving overall satisfaction with the call centre experience. This soft skill is also not surprisingly a strong penalty attribute (also known as a "table stakes" attribute), meaning customers will penalize for its absence with lower overall satisfaction, but typically not respond with higher satisfaction when delivered.

* Significant movement compared to 2021 at the 95% confidence level.

Call Centre Experience

Experience with the IVR (prior to call with CSR)

Satisfaction with Ease of Understanding IVR (rated by customers who spoke to a CSR)

"Thinking of the IVR automated "press or say" system, how would you rate the system on the ease of understanding the phone menu instructions, using a 1 to 10 scale where 1 is "completely dissatisfied" and 10 is "completely satisfied"?"

51%*

Top-3 Box Score (2022 Year-end)

Ease of Understanding the IVR Menu

2019 Baseline: 59%
2020: 60%
2021: 56%

- These results are based on respondents who spoke to a CSR and do not reflect the many customers who successfully self-serve in the IVR without reaching a live agent.
- Given this, it is not surprising that many of the customers who find the IVR "less easy to use" simply prefer to speak to a person.

Reasons IVR Was Not Easy to Use (2022)

"What about the IVR wasn't easy to use?"

Enbridge Gas Field Work Experience

- Overall satisfaction with the field work experience
- Satisfaction with the Customer Service Representative (CSR)
- Satisfaction with the Service Technician

Field Work

2022 Year-end Spotlight

- Overall satisfaction with the field work experience is strong and has been above the 75% top-3 box goal for the past three years.
- 2022 year-end overall satisfaction with the field work experience is stable compared to previous years. Looking at the quarterly results, results were stronger in the first half of the year, which is consistent with previous patterns.
- For 2022, the most important drivers of overall satisfaction with the field work experience were identified as:
  - Technician's ability to answer questions
  - Perceptions of the technician as courteous
  - Appearance of the technician
- As in the past, satisfaction with the overall experience is more driven by the technician and the home appointment than by the appointment booking process.

Overall Satisfaction with the Field Work Experience

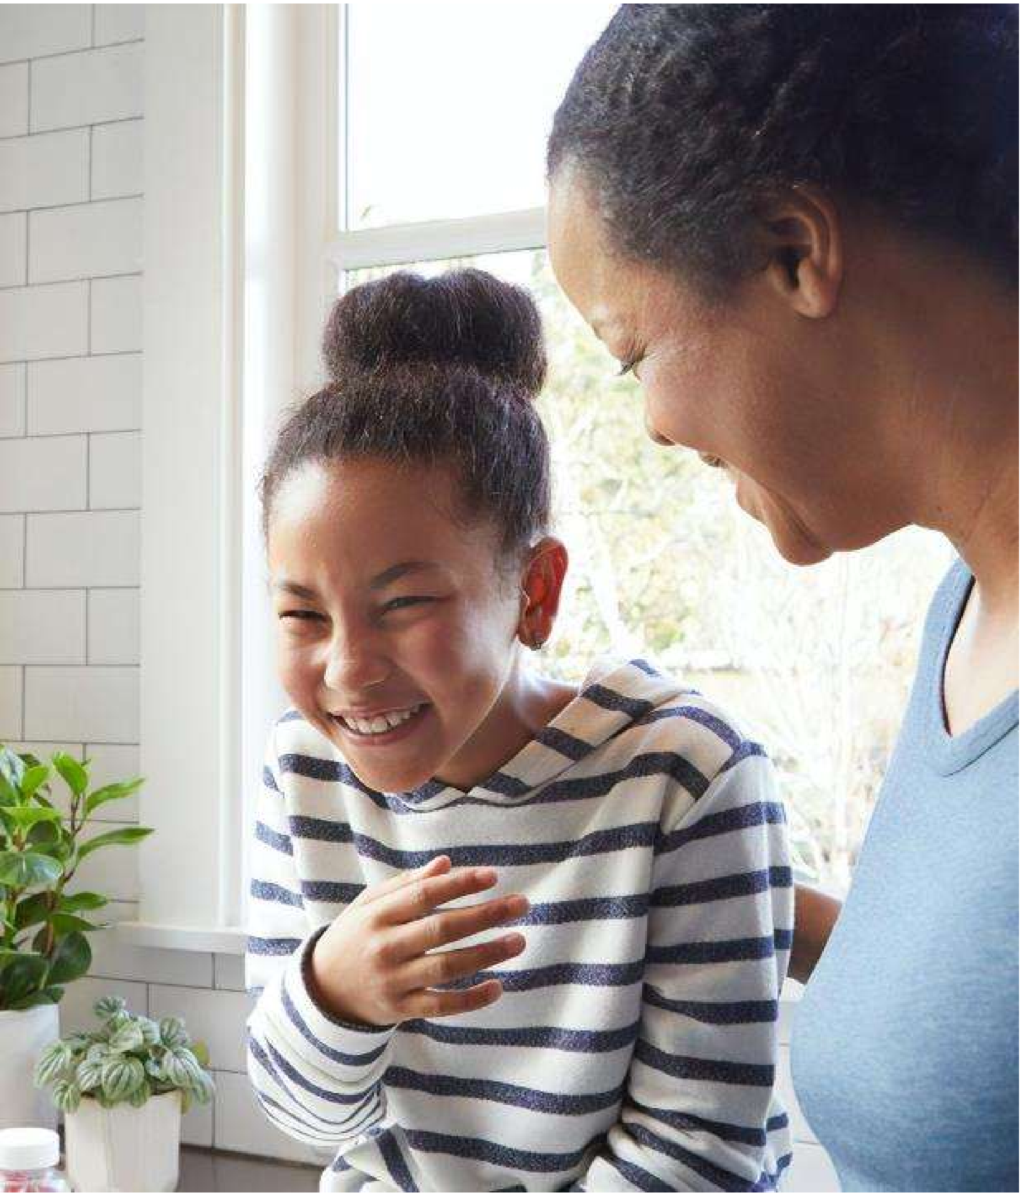
ENBRIDGE brand health 2022

quantitative research report

November 15, 2022

RESEARCH STRATEGY GROUP

ENBRIDGE®



contents

RESEARCH STRATEGY GROUP

background and objectives

- In October 2020, **RESEARCH STRATEGY GROUP** conducted a quantitative research study on behalf of Enbridge Gas Inc (EGI) that included some questions focused on brand health, such as brand awareness, attitudes & perceptions, familiarity, associations, etc.
- A full brand health research study was designed in 2021 with the following objectives:
  - Track if progress has been made on brand awareness and perceptions of Enbridge and Enbridge Gas
  - Measure perceptions of natural gas and energy transition
  - 50% of the survey was new content in 2021, while tracking was available on approx. 50% of the survey
- Another wave of brand health research has now been conducted in 2022, with tracking available for 90% of the questions vs. 2021
- More specifically, the goals of this brand health research are to:
  - Measure awareness of and associations with Enbridge and Enbridge Gas
  - Measure brand perceptions (familiarity, opinions, trust, associations) of and with Enbridge Gas
  - Understand the role of natural gas as a fuel/energy source today and in the future, and measure future usage expectations
  - Measure current concern over how energy is generated, where energy is sourced, and climate change
  - Measure perceptions of the role of Enbridge Gas in energy transition and ensuring a sustainable energy future

method

1613 online interviews were conducted in English using sample from our panel partners, Asking Canadians

- Survey length: 15-minutes

Respondent qualifications

- Ontario residents
- Aged 18+
- Not employed in sensitive industries
- Representative sample by age and gender
    - n=155 interviews among 18 – 25 year olds were conducted to ensure sufficient sample for analysis of findings among this key subgroup

Fieldwork dates

- 2022: October 21 – 31, 2022
- 2021: December 3 – 13, 2021
- 2020: October 19 – 27, 2020

method – interpretation notes

- **Interpretation of data differences:**
  - # = significantly higher versus all other subgroups at 95% confidence level
  - # = significantly lower versus all other subgroups at 95% confidence level
  - ⬆ = significantly higher versus the previous year at 95% confidence level
  - ⬇ = significantly lower versus the previous year at 95% confidence level

- **Understanding NETs**
  - When questions are asked in an open-ended format (i.e. respondents are not provided with a list of answers to select from, rather they write in their responses in their own words), the verbatim answers are then coded to turn qualitative responses into quantitative information
  - NETS are used to organize and summarize codes into similar themes, with the NET indicating the proportion of respondents who selected one or more of the codes that fall within this theme (NET)

- **Interpretation of pre-defined subgroups**
  - Respondents have been categorized into EGI customers and EGI non-customers
    - EGI customers were defined based on answers at Q6 (What is the name of the company that delivers natural gas to your home?) and identifying which are in fact current customers

RESEARCH STRATEGY GROUP

summary of findings

RESEARCH
STRATEGY
GROUP

summary of findings: awareness & perceptions

- Overall, the majority of key metrics are **stable this year**.

- Two-in-five respondents recall Enbridge on an unaided basis (stable since 2020).
  - When asked what **Enbridge** does, two-thirds think of Enbridge as a supplier of natural gas.
    - **Enbridge** is more likely to be associated with an Ontario-based utility that delivers natural gas than a leading North American energy infrastructure company; though one-third think of **Enbridge** as both.
  - When asked about **Enbridge Gas**, over half think of it as a supplier of natural gas.
    - **Enbridge Gas** is also more likely to be associated with an Ontario-based utility that delivers natural gas than a leading North American energy infrastructure company; though one-third think of **Enbridge Gas** as both.

- 79% of respondents are aware of **Enbridge** and 74% are aware of **Enbridge Gas**, on an aided basis.
  - When netted together, awareness of Enbridge Gas and/or Enbridge is 88% (stable since 2020).

- 70% of respondents report using natural gas, with 64% reporting that Enbridge/Enbridge Gas is the company that delivers natural gas to their home.
  - Mentions of Union Gas are on par with last year at 4% - of this group who report that Union Gas is their provider, 57% are aware that Union Gas merged with Enbridge Gas Distribution to become Enbridge Gas (down from 67% last year).
  - Younger respondents (18-25 years old) are less likely to know who their natural gas provider is, confirming the importance of building awareness among this group.

summary of findings: awareness & perceptions

- There continues to be very little differentiation between **Enbridge** and **Enbridge Gas**.
  - Familiarity, experience and perceptions of the two entities continue to be essentially on par and stable over time.
    - About 1-in-5 respondents are very familiar with and have a lot of experience with **Enbridge** and **Enbridge Gas**.
    - Nearly half of respondents aware of **Enbridge** and **Enbridge Gas** have very or somewhat favourable opinions, however a decline in the proportion of respondents who have a 'very favourable' opinion is noted this year for both **Enbridge** and **Enbridge Gas**.
      - Unfavourable opinions for **Enbridge Gas** continue to centre around the perceived high cost of natural gas, with an increase in mentions of rate increases this year – high costs appear to be overshadowing environmental concerns.
    - 85% find both **Enbridge** and **Enbridge Gas** to be very or somewhat trustworthy, however similar to favourability, the proportion of respondents who feel **Enbridge** and **Enbridge Gas** are 'very trustworthy' has declined this year.
    - Three-quarters of respondents aware of **Enbridge Gas** perceive the company to be very or somewhat innovative and sustainable *(new metrics added in 2022)*.

- When evaluating **Enbridge Gas** against a revised list of 8 brand attributes, it is most strongly associated with "Reliable" and "Essential", both selected by 51% of respondents. Associations with both of these attributes are nearly twice as high among customers vs. non-customers.
  - One-quarter of EGI non-customers do not associate **Enbridge Gas** with any of the attributes.
- When evaluating **Enbridge Gas** against 10 business attributes, it is most strongly associated with being "a natural gas storage and distribution company" (58%) and "a leader in the provision and distribution of energy" (31%).

- Key metrics for both **Enbridge** and **Enbridge Gas** continue to be significantly higher among EGI customers (who skew older).

RESEARCH STRATEGY GROUP

summary of findings: natural gas & energy transition

- Natural gas continues to be seen as having many roles as a fuel source. Most commonly, natural gas is seen as a practical alternative to oil and electricity, as well as easily accessible and the best energy option for the home.
- Natural gas will continue to have a role as an energy source in the future. It is anticipated to be a back up to wind and solar and an alternative to other fossil fuels.
- 71% of respondents expect their use of natural gas to remain the same over the next 5 years, while 15% expect an increase due to plans to purchase new appliances, more people joining their household, or moving to a larger residence.

- Three-quarters of respondents are concerned about how the energy they use is generated, and three-quarters are concerned with where the energy they use comes from. Even more (84%) indicate concerns about climate change, and a similar 83% indicate an urgent need for action on climate change.
  - Energy generation/sources and climate change concerns/urgency of action continue to be driven by women.

- Roughly one-quarter of respondents are aware of **Enbridge Gas** offering energy conservation programs for homes/businesses – awareness of other initiatives that **Enbridge Gas** is doing to help ensure a sustainable energy future is low.
- Encouragingly, two-thirds of respondents are interested in and would like to learn more about at least one program that **Enbridge Gas** is doing to help ensure a sustainable energy future.
  - Highest interest is in energy conservation programs for homes and businesses to help them use less energy and reduce carbon emissions (36%), Enbridge Gas' commitment to achieving net zero emissions in its own operations by 2050 (29%), and Enbridge Sustain, a new line of business providing homeowners, businesses and builders with turnkey solutions with no upfront costs for low carbon technologies like geothermal, solar, and hybrid heating – *new in 2022* (28%).

RESEARCH STRATEGY GROUP

2022

main reasons for favourable opinions of Enbridge Gas (a selection of verbatim responses)

PROVIDES GOOD/RELIABLE SERVICE

- "Canadian company, reliable, trustworthy."
- "I'm happy with the service they provide. When I've called them for anything they have been helpful."
- "They are a reliable company that delivers natural gas to my home."
- "Lived right close to one of their pipelines. They have been communicative, professional and provide assistance promptly."
- "Good customer service, no problems experienced with delivery of gas to my home."
- "Provide a good, reliable service. Care about people and the environment."

HAVE NEVER EXPERIENCED DIFFICULTY WITH THE COMPANY

- "I have never experienced an issue with Enbridge Gas before."
- "Used them for years and didn't have an issue with them except their prices got much higher."
- "Have never had a problem. Gas is always available."

RENOWNED IN THE ENERGY INDUSTRY

- "They have a good reputation for supply of gas and have had their services for over 30 years."
- "They are Canadian based, provide lots of good paying jobs, and are held to high environmental standards (compared to other oil and gas companies)."
- "Well established multinational company providing reliable quality service."

B10. You mentioned earlier that you have a favourable opinion towards Enbridge Gas. What is your main reason for this?

trend

the key reason for an unfavourable opinion of Enbridge Gas is *high costs*, with an increase in mentions of *rate increases* this year

reasons for unfavourable opinions of Enbridge Gas (%)

among those with an unfavourable opinion

Pipeline protests	4	-	11

**Small base, interpret with caution* ↑↓ = significantly higher/lower versus the previous year at 95% confidence level

B11. You mentioned earlier that you have an unfavourable opinion towards Enbridge Gas. What is your main reason for this?

2022

main reasons for unfavourable opinions of Enbridge Gas (a selection of verbatim responses)

HIGH COST/OVERCHARGING/RATE INCREASES

- "They have the monopoly on the natural gas and charge an extravagant rate."
- "Delivery charges are more than the cost of gas. Too expensive!"
- "They dramatically increased their prices with barely any notice (my friends and family were impacted)."
- "My gas bill just went up $80 a MONTH, we are a two person household already conservative in energy usage."

LACK OF CONCERN FOR THE ENVIRONMENT

- "Enbridge Gas is a gas company. As a company that supplies fossil fuels, Enbridge is literally fueling the climate crisis. Enbridge also builds pipelines that damage the environment and Indigenous communities."
- "They are not doing enough to move us away from natural gas consumption."
- "Not a big fan of energy companies that have their main goal as exploiting natural resources in a non-renewable fashion. They're one of the leading causes of climate change. And they're profiting off it."

CUSTOMER SERVICE ISSUES

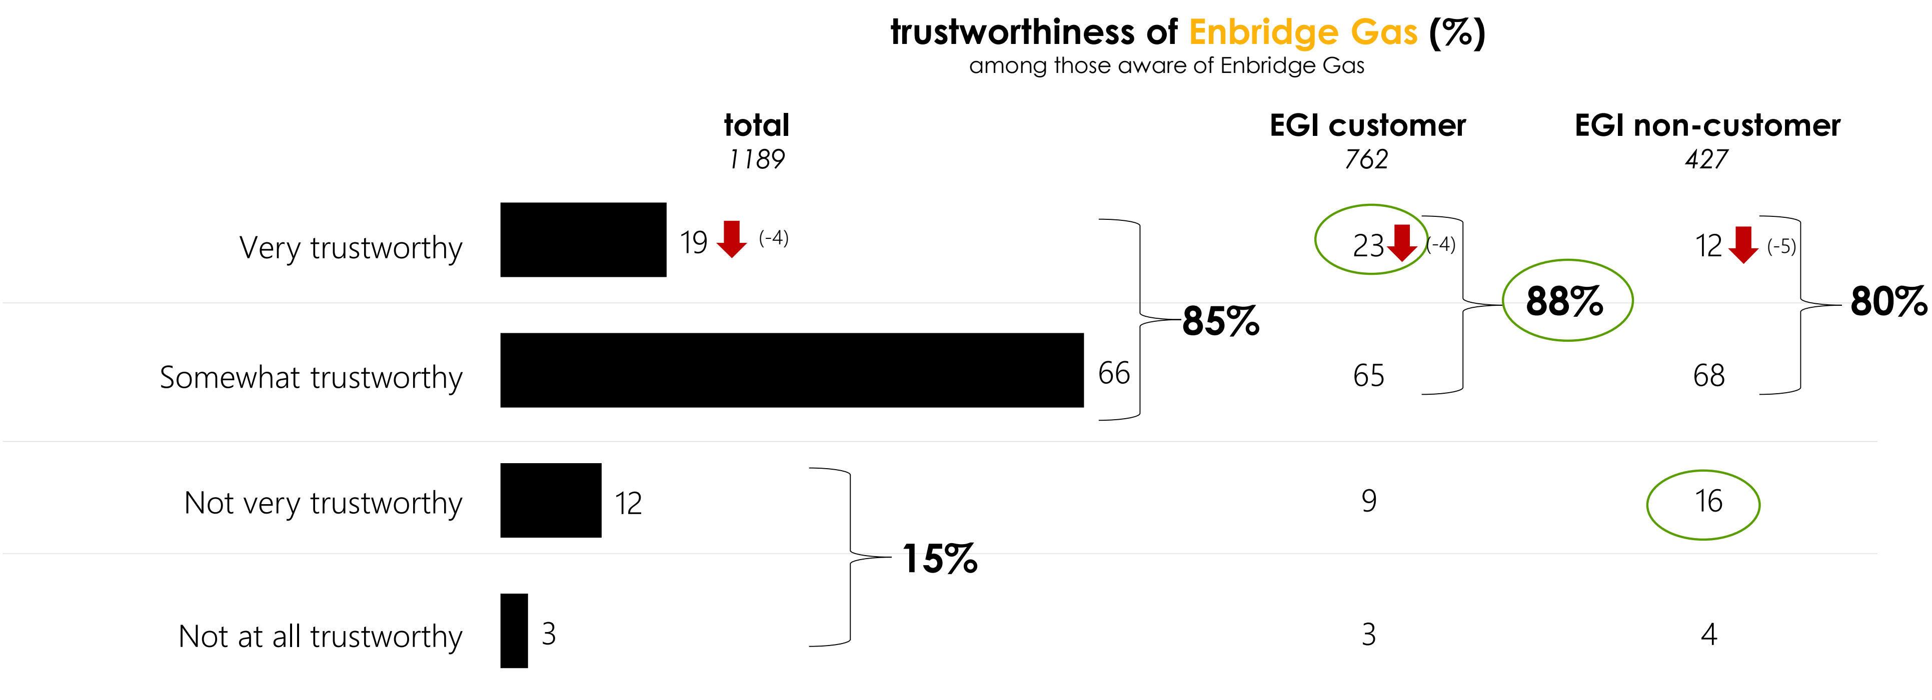
- "Their bills are not accurate. Their online bill payment and billing cycles are not customer friendly."
- "Rates keep fluctuating or increasing. Poor customer service and support."
- "Their prices have increased considerably, and their customer service leaves a lot to be desired. They have no low income support program like Hydro One and their equal monthly payments are not equal."

B11. You mentioned earlier that you have an unfavourable opinion towards Enbridge Gas. What is your main reason for this?

2022

trustworthiness of Enbridge Gas

- 85% of respondents find Enbridge Gas very/somewhat trustworthy – significantly higher among EGI customers (88% vs. 80%).
  - A decline in perceptions of Enbridge Gas being 'very trustworthy' is noted this year, among EGI customers and non-customers.



= significantly higher/lower versus the previous year at 95% confidence level

B13. Now we would like you to think about Enbridge Gas, the company that delivers natural gas to homes in Ontario. Please look at the list of words below and indicate which of these you associate with Enbridge Gas? Note: Significant revisions made to the list of attributes in 2022.

RESEARCH STRATEGY GROUP

2022

Enbridge Gas is most strongly associated with being a natural gas storage/distribution company

- Additionally, EGI customers are more likely to think of Enbridge Gas as a leader in the provision and distribution of energy, a top employer in Ontario and with excellent customer service.

Enbridge Gas perceptions (%)

	total *1613*	**EGI customer** *893*	**EGI non-customer** *720*
A natural gas storage and distribution company	58	70	43
A leader in the provision and distribution of energy	31	41	20
A top employer in Ontario	18	20	15
Excellent customer service	15	20	10
Has higher energy costs compared to other energy companies	15 ↑ (+4)	16 ↑ (+3)	13 ↑ (+3)
A leader in energy conservation *(2021: A leader in environmental conservation and protection)*	11 ↑ (+4)	12 ↑ (+4)	10
An essential partner in the transition to net zero emissions *(2021: A leader in the transition to net zero emissions)*	11 ↑ (+5)	13 ↑ (+7)	8
Has more environmental impacts compared to other energy companies	9	10	8
A company with new inventions, ideas, and technology	8	9	7
A leader in the creation and provision of green tech	5	5	5
None of these	20	11	30

↑↓ = significantly higher/lower versus the previous year at 95% confidence level

B14. Still thinking about Enbridge Gas, which of the following, if any, do you associate with Enbridge Gas.

RESEARCH STRATEGY GROUP

perceptions of natural gas

2022

Natural gas continues to be seen as having many roles as a fuel source

- Most commonly, natural gas is seen as a practical alternative to oil and electricity, as well as easily accessible and the best option for my home, with perceptions generally stable since last year.

natural gas is…(%)

	total *1613*	EGI customer *893*	EGI non-customer *720*
A practical alternative to oil	42	49	32
A practical alternative to electricity	34	39	27
Easily accessible	31	41	20
The best energy option for my home	28	41	11 ↓ (-4)
The most reliable energy source	23	31	13
The only energy source I need to heat my home	21	31	9
Not prone to shortages in supply	18	24	11 ↓ (-4)
The most affordable energy option[1]	19	24	12
An energy source for the future	19	21	16
An environmentally friendly energy option	19	21 ↑ (+4)	16
An essential energy option for moving to net zero emissions by 2050	14	16	11
The safest energy option	12	14	8 ↓ (-4)
Other	2	2	3
None of these	17	10	26

[1] Prior to 2022: The most economical energy option

↑↓ = significantly higher/lower versus the previous year at 95% confidence level

N1. Now we would like you to think about natural gas in general. What do you see as the role of natural gas as a fuel source today? Natural gas is....

2022

natural gas will continue to have a role in the future as a necessary back up to solar and wind and an alternative to other fossil fuels

natural gas will be...(%)

	total *1613*	EGI customer *893*	EGI non-customer *720*
A necessary backup to solar or wind power	39 ↑ (+4)	46 ↑ (+7)	31
An alternative to other fossil fuels	38	42	34
The best energy option to heat my home	26 ↓ (-3)	35	14 ↓ (-7)
Replaced by other sources of energy	23 ↑ (+4)	24 ↑ (+4)	21
The most reliable energy option	20 ↓ (-6)	26 ↓ (-7)	14 ↓ (-6)
An increasingly clean energy source	19 ↑ (+5)	22 ↑ (+8)	16
A more expensive energy option	17 ↑ (+7)	19 ↑ (+9)	15 ↑ (+5)

GRIT 2021 TOP 50 INNOVATIVE COMPANY

Enbridge Gas Brand Pulse Survey
Wave 1

A survey of legacy Union Gas residential customers to gauge their awareness of the amalgamation

September 23, 2019

ENBRIDGE®

Zulfiqar Ali
Advisor Market Research,
Market Research and Analysis

Survey Objective

- The objective of this pulse survey was to estimate awareness of the utility amalgamation among Legacy Union Gas residential customers, as well as awareness that Union Gas will be known as Enbridge going forward.

- The information is expected to be used to help determining appropriate timing for removing the Union Gas logo from remaining residential customer communications such as the bill and website.

- A second wave of the survey (to provide an updated "pulse") will be executed as needed.

Survey Contents

ENBRIDGE

1 Un-aided Awareness of Gas Provider Name

2 Aided familiarity with the amalgamation

3 If familiar:

- sources of familiarity

4 If not familiar:

- Preferred channels to receive information about Enbridge Gas

5 Opportunity to pass along any comments or suggestions

6 Demographics: respondent age

Survey Methodology

The main survey was completed by telephone. In parallel, an online survey was used to investigate the group of customers that receive email communications from Enbridge. Details of the methodology for the two surveys are summarized below.

Telephone Survey	Online Survey (Qualtrics)
• Customers were randomly selected for the survey from the entire population of Legacy Union Gas residential customers. • A randomly selected group of 400 customers was interviewed. • Telephone interviews were conducted during August 13-29, 2019. • Due to the randomness of the sample, the survey results are representative of the total legacy Union Gas residential customer population. The associated margin of error is +/- 4.9%.	• Customers were randomly selected for the survey from a list of all Legacy Union Gas residential customers with an email address on file (the majority are paperless billing customers or have a myaccount profile). • 15,000 email survey invitations were sent during August 16 -25, 2019. • 566 customers completed the survey. • Results are not generalizable to the total Legacy Union Gas customer population since only customers with email addresses on file were eligible.

Summary of Findings

- About one-third of legacy Union Gas (LUG) residential customers are aware that the company that delivers natural gas to their home is now Enbridge Gas. LUG bill and LUG bill inserts are the stated key sources of information about the merger.

- For customers who were not familiar with the merger, emails and natural gas bill inserts are by far the most preferred stated sources of important information like the merger.

- Level of customer awareness is significantly influenced by billing service type (paperless billing, APP, EBP). Those who are on paperless billing, APP, or EBP are found relatively less aware of the merger.

- When invited to pass along any comments or suggestions the respondents felt important to share with Enbridge Gas, customers expressed high level of satisfaction with the service they had received from LUG in the past and expected similar service moving forward.

1. Un-aided Awareness

What is the name of the company that delivers natural gas to your home?

Telephone Survey

Base = 400

Enbridge	Union Gas	Other *	Don't Know
32%	48%	10%	10%

Online Survey (Qualtrics)

Base = 566

Enbridge	Union Gas	Other *	Don't Know

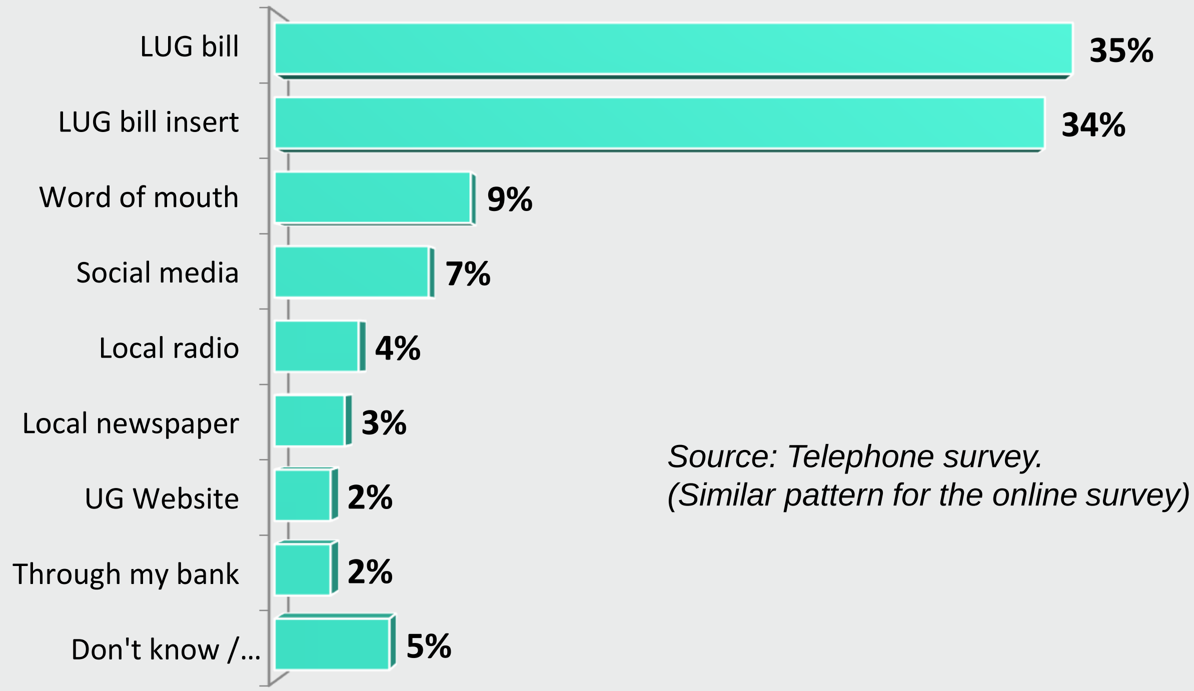
- Somewhat familiar
- Not very familiar
- Not at all familiar
- Don’t know

Base: Those familiar

How did you first hear about the Union Gas and Enbridge Gas merger?



Source: Telephone survey.
(Similar pattern for the online survey)

The Legacy Union Gas bill and bill inserts are the key stated sources of information about the amalgamation.

4. Stated Communication Preferences

Before today, how familiar were you with the Union Gas and Enbridge Gas merger? (*Base = 400)*

Very familiar

Somewhat familiar

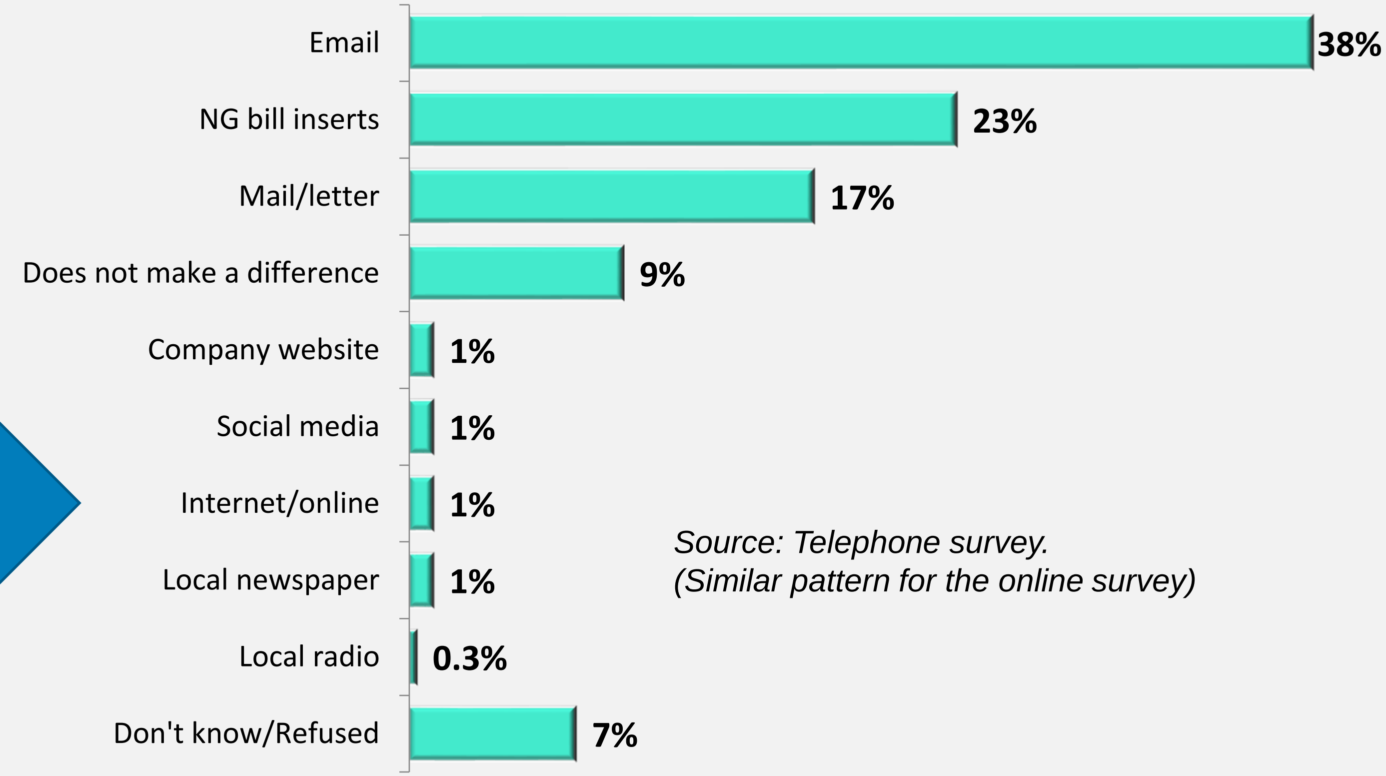
Not very familiar

Not at all familiar

Don't know

Those who were not familiar

How would you prefer your natural gas delivery company to provide you important information like Union Gas and Enbridge Gas merger?



Source: Telephone survey.
(Similar pattern for the online survey)

Emails are by far the most preferred sources of information by customers

5. Customer Comments or Suggestions

Finally, you have an opportunity to pass along any comments or suggestions that you feel are important to share with Enbridge Gas. Do you have any final comments?

"Thanks for the great service over the years!"

"Hydro One could learn a lot from you …"

"I have nothing but excellent service from Union Gas. They are eager to assist when called and that is greatly appreciated"

"Enbridge has big shoes to fill …."

"Fix your website, I can't login to my account since the merger has taken place"

"Is Enbridge a Canadian company "

"Now with the merger, and shared resources, the costs would surely decrease. It would be great if you could pass some of that savings to customers"

"We appreciate always trying to improve your company so you can pass it along to your customers"

"Continue strong PR program that natural gas is more environmentally friendly and more transparency regarding gas leaks etc. And what detection and safeguards are in place to keep consumers safe"

"I hope I get the same service I got with Union from Enbridge. We converted to gas from electric and service from *Union gas was very good"

"I just wanted to thank you guys for your service and everything you have done for me and my family. Maybe its not safe for the environment, but its more economical"

"I think Enbridge could do a better job maintaining and should honor contracts like when they make deals with the first nations and Matie"

"I'm very comfortable with them I signed a new contract with them this year they are pretty good"

"not satisfied with the merger---hope that because of this merger my gas will not go up"

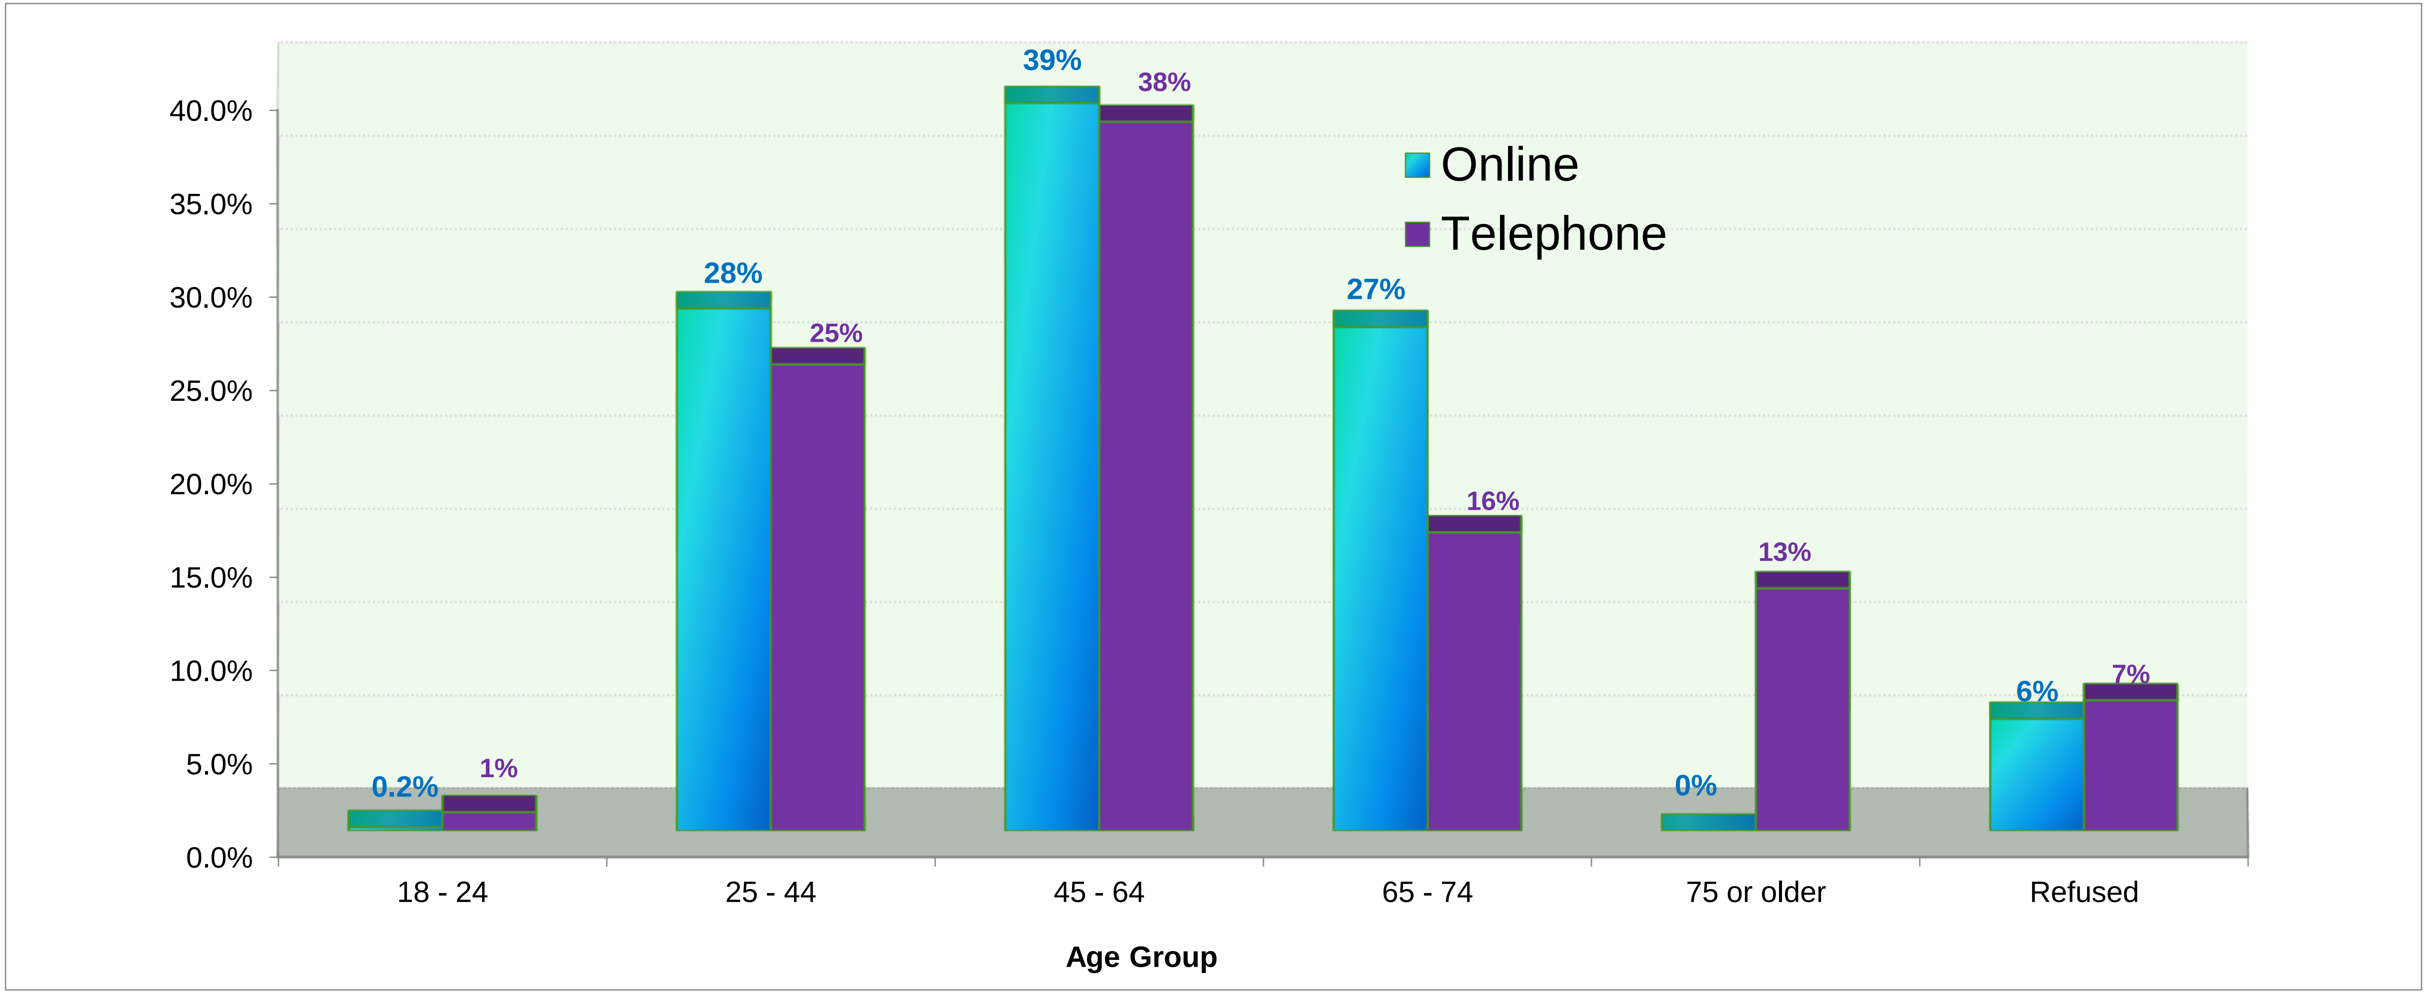
"Now they are a merger they are a monopoly , they should keep our prices down their overhead down if they have the money to merger why are they always at the board asking for price increases"

"Will there be any price increase as a result of the merger?"

"with this merger i hope the gas bill doesn't goes up"

Customers expressed satisfaction with the service they received in the past and expect similar service moving forward

6. Age Distribution of Survey Respondents



Appendix

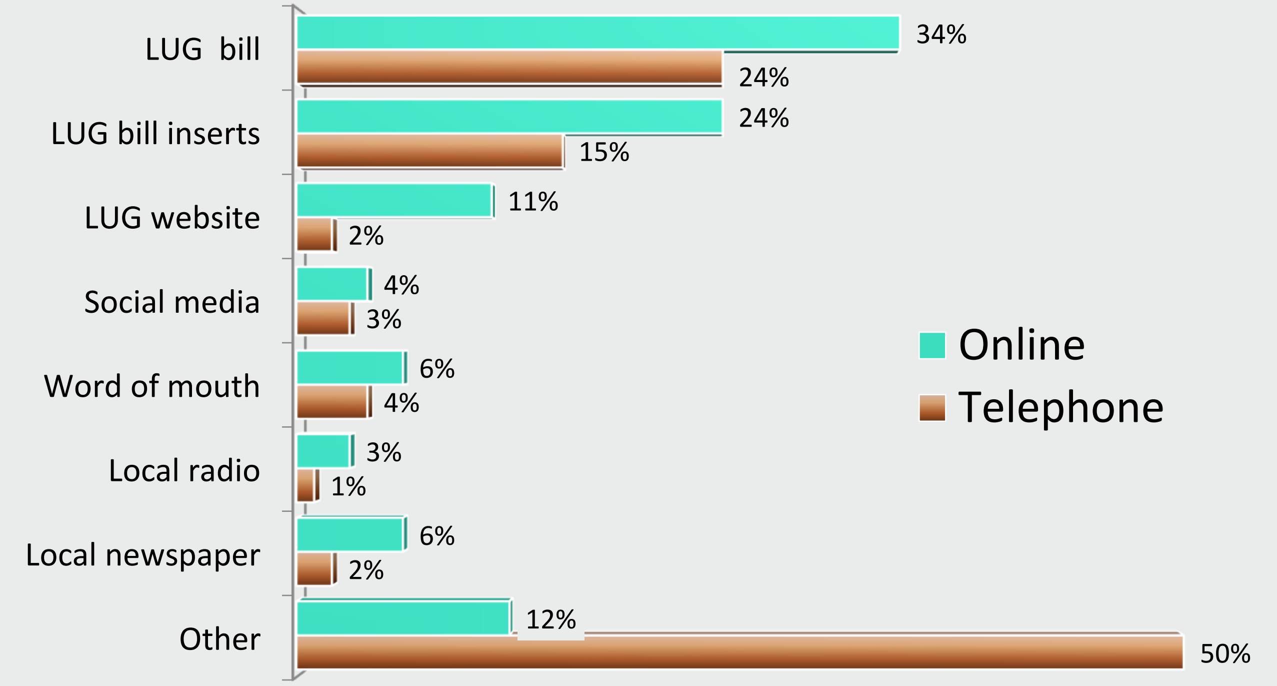
Stated Sources of Familiarity

Before today, how familiar were you with the Union Gas and Enbridge Gas merger?

- Very familiar
- Somewhat familiar
- Not very familiar
- Not at all familiar
- Don't know

Base: Those familiar

How did you first hear about the Union Gas and Enbridge Gas merger?



Legacy Union Gas bill, Bill inserts, and the Website are the top-3 stated sources of information about the merger

Stated Communication Preferences

ENBRIDGE

Before today, how familiar were you with the Union Gas and Enbridge Gas merger?
(Base = 400)

Very familiar

Somewhat familiar

Not very familiar

Not at all familiar

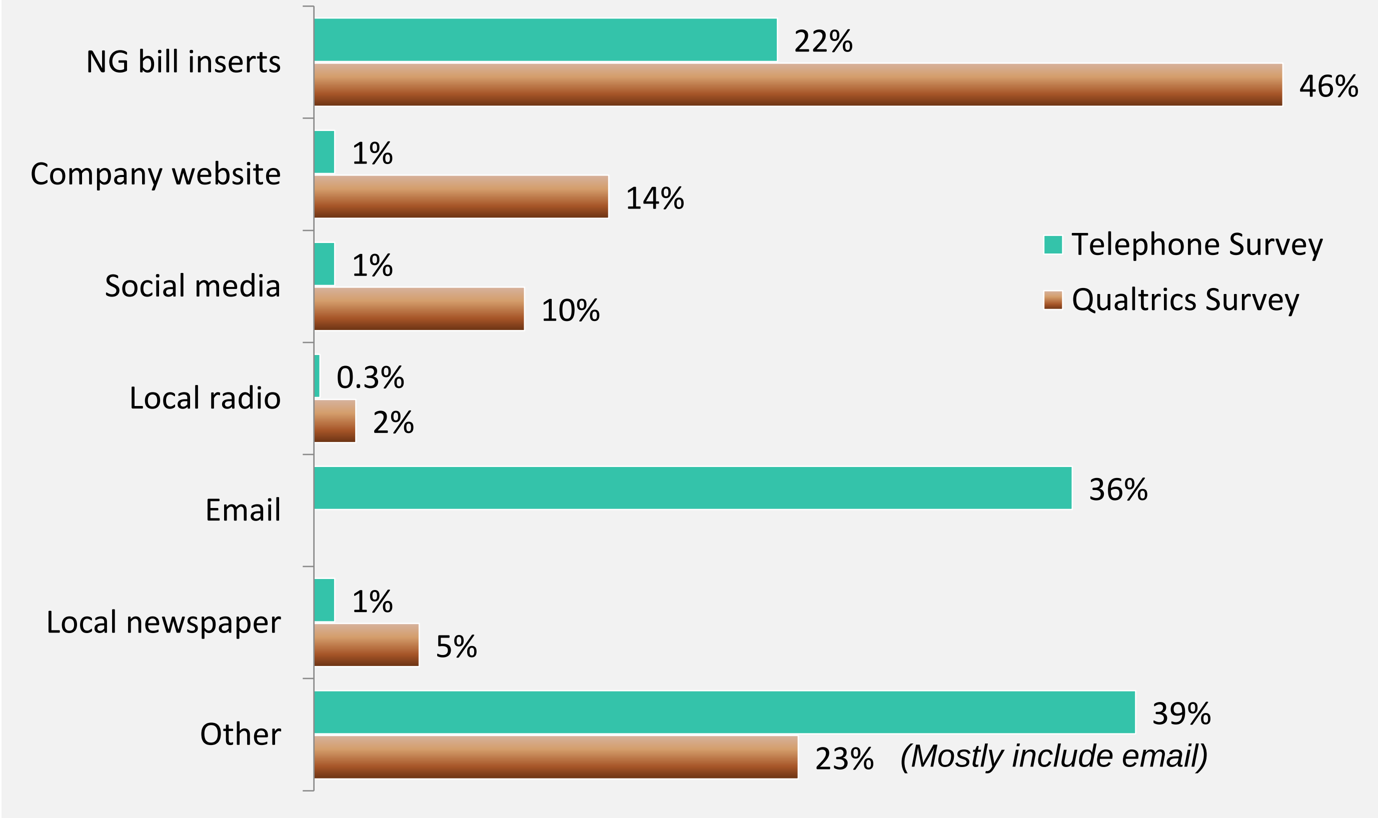
Those who were not familiar

How would you prefer your natural gas delivery company to provide you important information like Union Gas and Enbridge merger?



Natural gas bill inserts are by far the most popular source of important information like Union Gas and Enbridge merger

2022 SAFETY AWARENESS & COMPLIANCE SURVEY

December 2022

Contents

METHODOLOGY & OBJECTIVES

Methodology & Objectives

The purpose of this research initiative is to track awareness, understanding and behaviours related to natural gas safety over time.

More specifically, the research tracks attitudes and behaviours as it relates to:

1. Heating equipment & maintenance;
2. Natural gas safety;
3. Cross-bore awareness;
4. Carbon monoxide alarms & safety; and,
5. Safety communications.

Overall, n=1,200 natural gas users completed the online survey between November 15 and 28, 2022. Within this core sample, n=600 natural gas users who live within the boundaries of legacy Union Gas territory and n=600 natural gas users who live within the boundaries of legacy Enbridge Gas Distribution territory were surveyed. Consistent with the previous year, non-Enbridge Gas Inc. natural gas users have been included in the sample as it was determined that it is important to survey and inform all natural gas users who live in the Enbridge service territory about natural gas safety topics, regardless of who their natural gas service provider is.

Throughout the report, there is tracking against data from the 2019, 2020 and 2021 surveys. Green arrows ⬆ identify statistically significant increases and red arrows ⬇ denote statistically significant decreases, relative to 2021. Green circles ○ identify statistically significant increases and red circles ○ denote statistically significant decreases, relative to 2020.

Survey results have been weighted by age, gender, region, bill type (eBill vs. paper bill), and respondent type (legacy Enbridge vs. legacy Union Gas) to ensure that the sample is representative of the target population. Where totals do not add to 100%, it is due either to rounding or the respondent was permitted to provide more than one response. For more details on weighting, please see the appendix section.

KEY FINDINGS & EXECUTIVE SUMMARY

Key Findings

1. There is an overwhelming belief that it is safe to use natural gas.

2. Many natural gas users in the Enbridge service territory might be less knowledgeable about natural gas safety than they think they are, though some behaviours are improving.

3. There is a somewhat common misperception that carbon monoxide alarms are also capable of detecting natural gas leaks.

4. There is growing awareness of the need to get a line locate, before digging.

5. Safety information recall across most metrics remains consistent with 2021, though continues to track mostly below what was observed in earlier years.

Executive Summary

The vast majority (89%) of natural gas users believe it is safe to use natural gas in homes and most feel as though they are at least moderately knowledgeable about all natural gas safety topics, save for blocked sewer lines. And yet as the objective measures of this survey indicate, natural gas users in the Enbridge service territory might be a little less knowledgeable about natural gas safety than they think they are.

The results of this survey postulate that there might be some knowledge gaps, when it comes to natural gas safety, among natural gas users who live in the Enbridge service territory. As evidenced by the natural gas safety knowledge test, many appear to be unclear on matters such as laws relating to carbon monoxide alarms, the frequency with which natural gas appliances need to be inspected, or even whether they (or their contractor) need to call before digging.

Additionally, there are some concerning misperceptions that continue to persist regarding natural gas safety and carbon monoxide alarms. Similar to what has been observed in previous years, a sizeable proportion of natural gas users believe carbon monoxide alarms are also capable of detecting natural gas leaks. In fact, the proportion that erroneously believe their carbon monoxide alarm is also capable of detecting natural gas leaks has increased, year-over-year (30%; +5 pts vs. 2021). When asked how they would know if they had a natural gas leak as many as three in ten (31%) aren't worried about this because they say they have a carbon monoxide alarm, a figure which underscores how uninformed many natural gas users are when it comes to their carbon monoxide alarms and natural gas safety, more generally.

Executive Summary (cont.)

While natural gas users might be a little less knowledgeable about natural gas safety than they think they are, there has been improvement over time on some metrics, in the safety behaviours of natural gas users in the Enbridge service territory. This suggests that the natural gas safety initiatives taken by Enbridge Gas Inc. might have had a positive effect on certain natural gas safety behaviours of users in their service territory.

Most notably, a majority (54%; +12 pts vs. 2021) and statistically higher proportion relative to previous waves say they would get a line locate before digging. This marks the first iteration of the Safety & Compliance survey in which a majority has acknowledged the importance of getting a line locate before digging. What's more, majorities think their furnace is supposed to be inspected at least once a year (56%) and correctly liken the scent of natural gas to a distinctive rotten egg/Sulphur/mercaptan smell (53%). Half (49%) have had a furnace inspection within the past year, with most (68%) having done this within the past two years. And seven in ten (70%) report having carbon monoxide alarms next to all sleeping areas in their home.

Safety information recall across most metrics more or less remains on par with 2021, which saw a general decline relative to 2020. Among those who do recall receiving safety information from Enbridge Gas Inc., the Enbridge Gas bill (43%) remains the top source of awareness, followed at a distance by television (31%), emails from Enbridge (21%), the Enbridge Gas website (20%), and the Enbridge Gas safety email.

HEATING EQUIPMENT & MAINTENANCE

Natural Gas Equipment

- The proportion of natural gas users who report having most types of natural gas equipment or appliances is more or less on par with previous years, though fewer report having an oven/stove/cooktop (21%; -4 pts vs. 2021), relative to the previous year.
- Natural gas users living in the Windsor/Chatham region are more likely (at 49%), compared to those living in all other regions (20%) to report having a natural gas barbecue (with a natural gas line). Younger natural gas users (18-34) are more likely to have a natural gas range/over/stove/cooktop (41% vs. 20% aged 35+) but are less likely to have natural gas furnace (56% vs. 85%). Older natural gas users (75+) are among the most likely to have a natural gas fireplace (44% vs. 30% aged 74 or younger). Paper bill users are more likely to have a gas furnace (87% vs. 81% of eBill users). Those living in the legacy Union Gas territory are more likely to report having a natura gas dryer (15% vs. 11% of legacy EGD) and water heater (73% vs. 65%).

	Furnace	Water Heater	Fireplace	Oven / Stove / Cooktop	Barbecue	Dryer	Swimming Pool Heater	Generator	None
2021	85%	72%	33%	25%	21%	13%	5%	2%	3%
2020	85%	71%	35%	23%	21%	13%	5%	2%	2%
2019	85%	70%	33%	24%	20%	13%	4%	1%	4%

Q1. Which of the following appliances do you use inside or outside your home / unit? Select all that apply.
Base: All respondents; 2022 (n=1200); 2021 (n=1200); 2020 (n=1200); 2019 (n=1200)

Maintenance Responsibility

- Consistent with previous years, the highest proportion of natural gas users indicate that they are personally responsible for the maintenance across all types of natural gas equipment. Despite this, however, fewer indicate that they are responsible for the maintenance of their natural gas range/oven/stove/cooktop (66%; -12 pts vs. 2020) and fewer say they are responsible for the maintenance of a natural gas dryer (56%; -13 pts vs. 2020), relative to previous years.
- Natural gas users living in the legacy Enbridge Gas territory are more likely to report being personally responsible for maintenance of their furnace (63% vs. 56% of legacy Union Gas Distribution) and natural gas water heater (58% vs. 48%). eBill users are more likely to say they are responsible for the maintenance of their range/oven/stove/cooktop (71% vs. 54% of paper bill users) and natural gas furnace (63% vs. 56%).

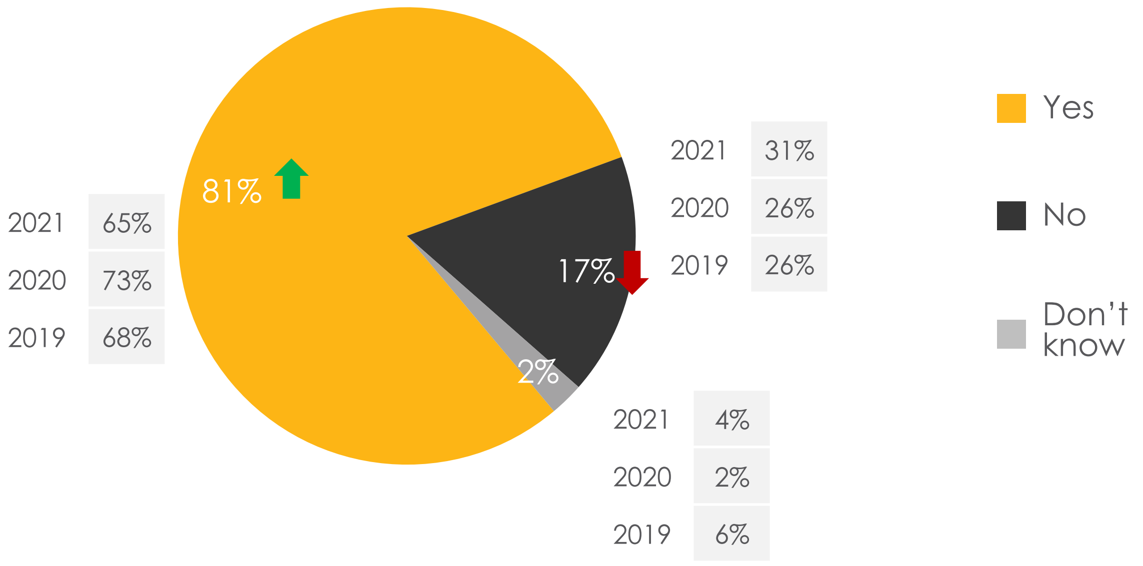
Q2aa. Who is responsible for the maintenance of the following?
Base: Natural gas furnace or fireplace users

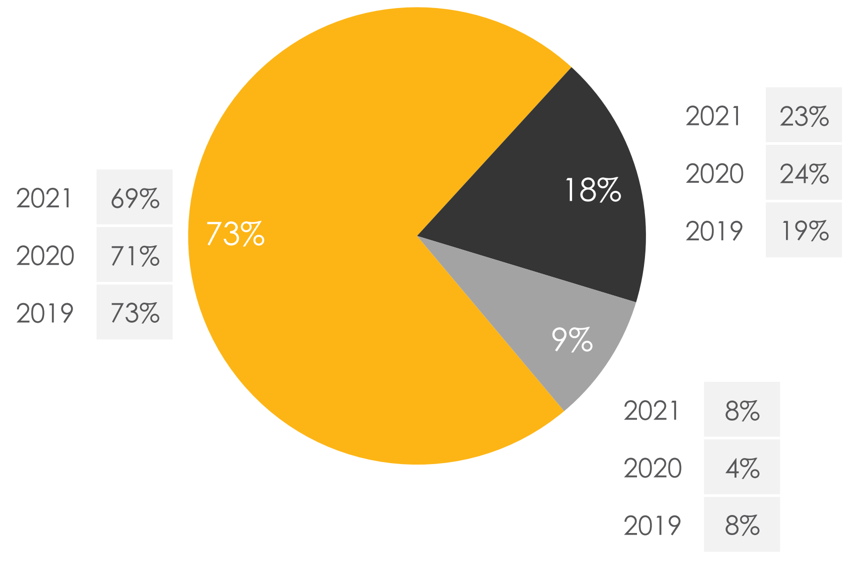
Multi-Unit Heating System Types

- Significantly higher proportion of natural gas users who reside in multi-unit dwellings indicate having centrally located heating (81%; +16 pts vs. 2021) in their building, relative to the previous year. On par with previous years, most natural gas users who reside in multi-unit dwellings have hot water heating systems (73%).

CENTRALLY LOCATED HEATING SYSTEM



CENTRALLY LOCATED HOT WATER HEATING SYSTEM



Q1a_1. Do you have any of the following in your building?
Base: Those who reside in an apartment/condo; Total 2022 (n=98); 2021 (n=95); 2020 (n=83); 2019 (n=114)

Natural Gas Furnace Maintenance

- Similar to what has been observed in previous years, nine in ten (91%) natural gas users clean or replace their furnace filter at least once a year, though fewer say they do this every month (6%; -3 pts vs. 2020) or at least four times a year (24%; -4 pts vs. 2021; -9 pts vs. 2020) and a significantly higher proportion (26%; +7 pts vs. 2021; +9 pts vs. 2020) admit doing this once a year.
- Younger natural gas users (18-34) are more likely to report cleaning or replacing their furnace filter less than once a year (11% vs. 3% aged 35+).

	2022	2021	2020	2019
Every month	6%	7%	9%	7%
At least four times a year	24%	28%	33%	34%
Two or three times per year	35%	36%	33%	33%
Once a year	26%	19%	17%	18%
Less than once a year	4%	5%	3%	2%
Never	2%	2%	3%	2%
Don't know	4%	3%	2%	3%

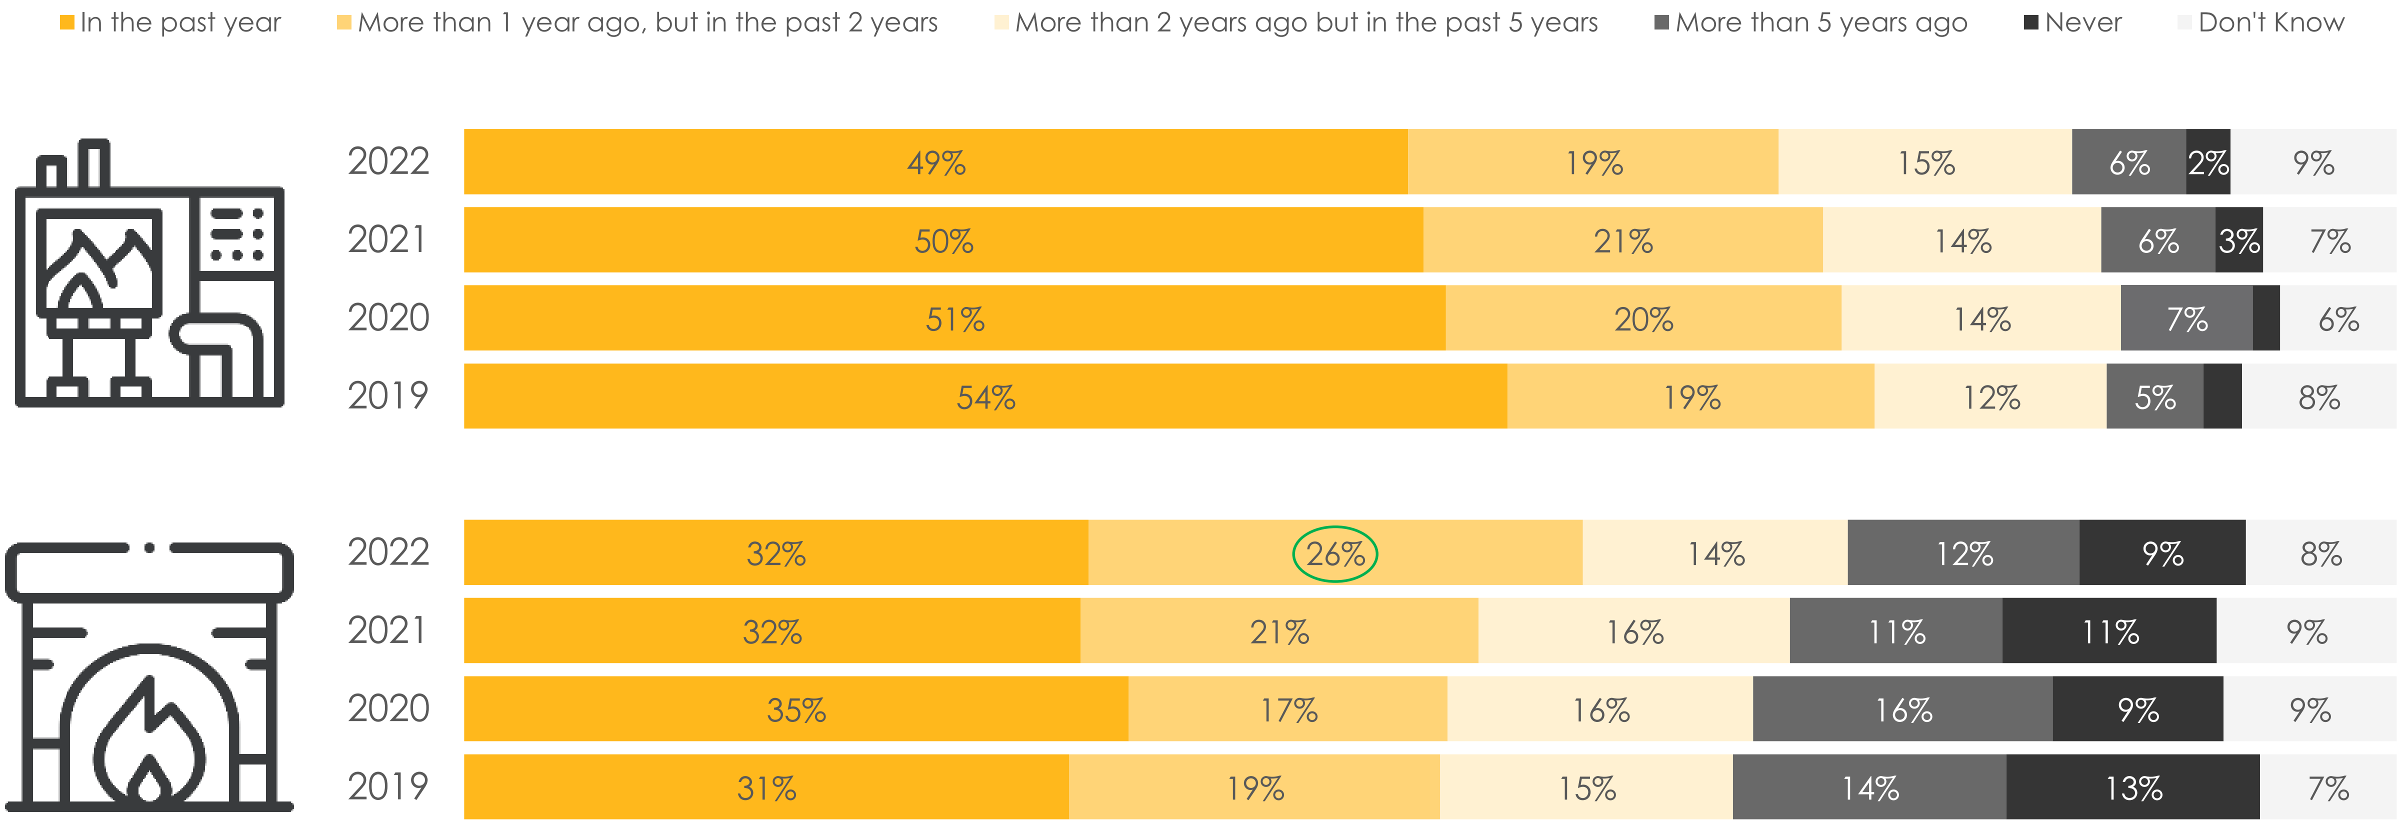
% At Least Once Per Year

2022	91%
2021	91%
2020	91%
2019	93%

Q2a. How frequently is your furnace filter cleaned or replaced?
Base: Respondents used a natural gas furnace in home or unit; Total 2022 (n=980); 2021 (n=992); 2020 (n=1015); 2019 (n=1015)

Furnace & Fireplace Inspection

- Half (49%) of natural gas users with a natural gas furnace had an inspection within the past year, though just one in three (32%) did this for their natural gas fireplace, figures which are consistent with previous years on both counts.
- The 65+ cohort of natural gas users is much more likely to report having their natural gas furnace inspected within the past year (57% vs. 43% under 65). Natural gas users living in Union Gas East region are more likely (at 69%), compared to those living in all other regions (49%) to have had their furnace inspected within the past year. Natural gas users living in the legacy Union Gas territory are more likely to have had their furnace inspected more than 2 years ago but within the past 5 years (20% vs. 12% legacy Enbridge Gas Distribution).

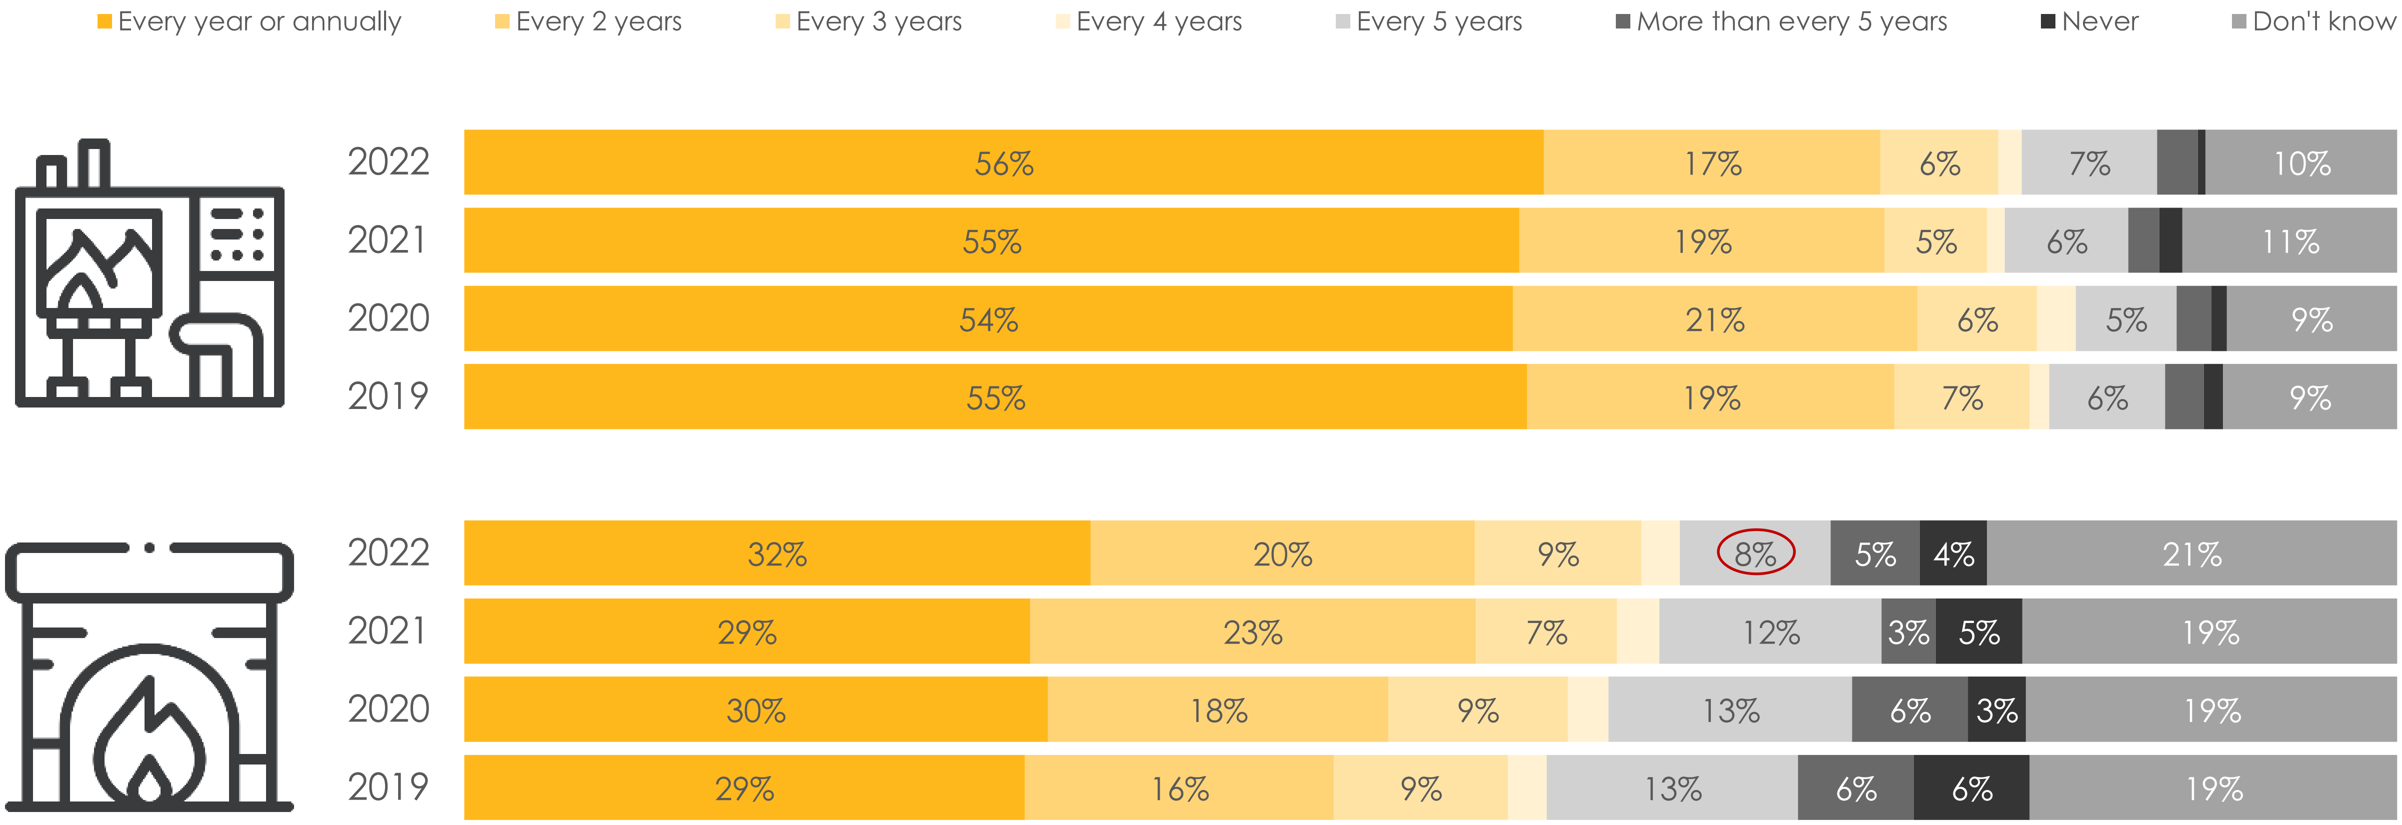


Note: Values less than 3% not labelled.

Q2b. When was the last time your natural gas fireplace/furnace was inspected by a certified technician? Was it…
Base: Have a natural gas furnace; Total 2022 (n=980); 2021 (n=992); 2020 (n=1015); 2019 (n=1015)
Have a natural gas fireplace; Total 2022 (n=379); 2021 (n=390); 2020 (n=410); 2019 (n=390)

When Inspection is Required

- A majority (56%) of natural gas users who have a natural gas furnace believe it should be inspected annually compared to just over three in ten (32%) of those who have a natural gas fireplace, figures which are on par with previous years, on both counts.
- Natural gas users living in the legacy Enbridge Gas Distribution are more likely to think furnaces need to be inspected on an annual basis (60% vs. 50% legacy Union Gas territory). Three-fifths (60%) of natural gas users aged 55+ think furnaces need to be inspected on an annual basis whereas less than half (47%) under the age of 55 believe the same.

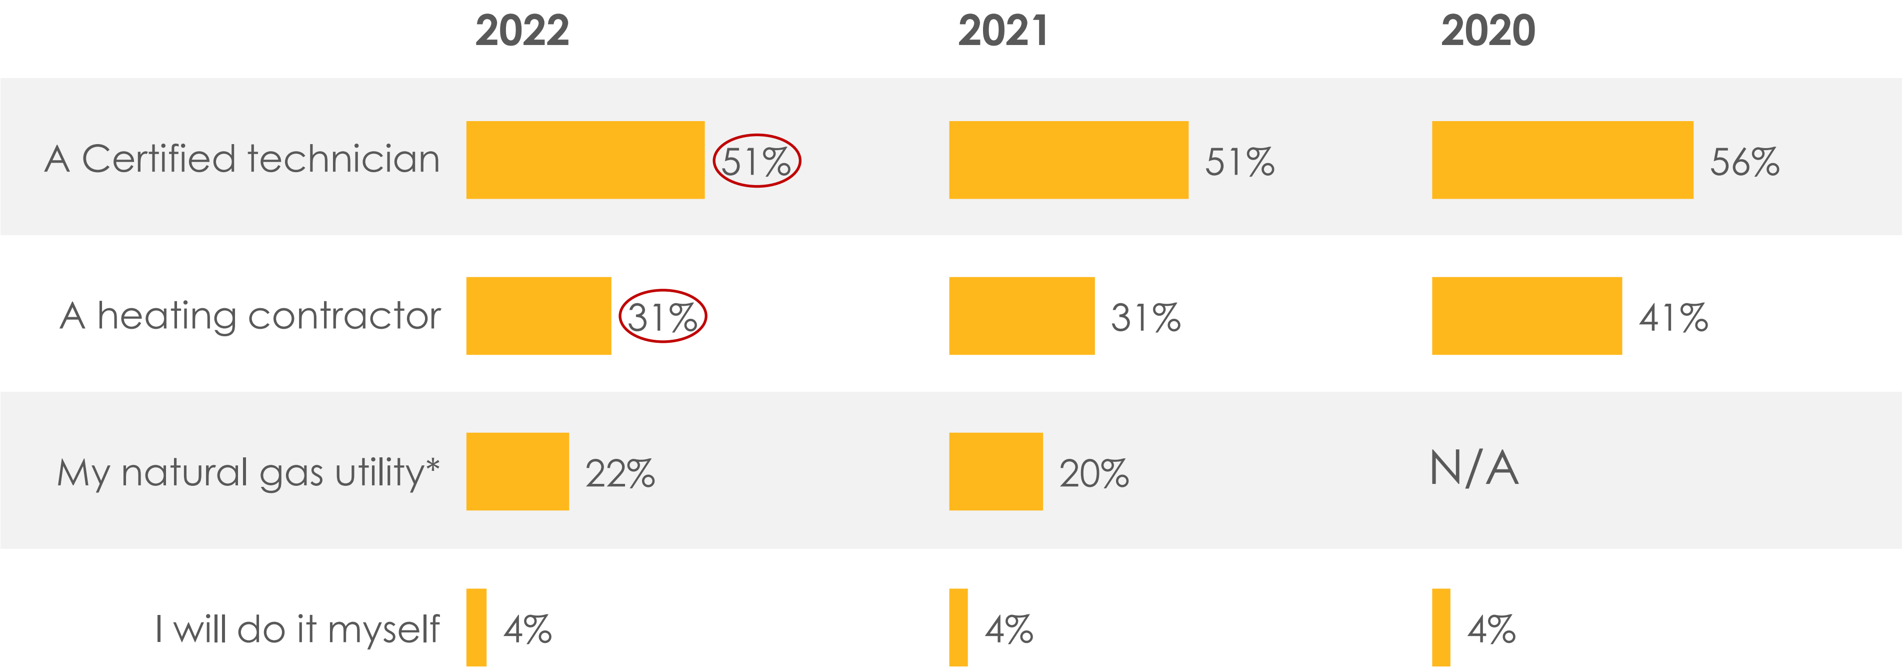


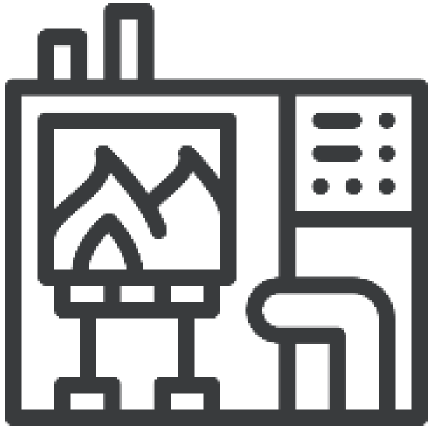
Note: Values less than 3% not labelled.

Q2aab. How often do you think that you need to have your natural gas furnace / fireplace inspected?
Base: Have a natural gas furnace; Total 2022 (n=980); 2021 (n=1014); 2020 (n=1015); 2019 (n=1015)
Have a natural gas fireplace; Total 2022 (n=379); 2021 (n=390); 2020 (n=410); 2019 (n=390)

Natural Gas Furnace Inspection

- Similar to 2021, natural gas users most frequently cite a certified technician (51%) as the person they would contact to service or inspect their natural gas furnace, followed by a heating contractor (31%). Statistical significance is not noteworthy, given that a new response category was added in the 2021 survey.
- Natural gas users living in the legacy Enbridge Gas Distribution territory are more likely to say they would contact their natural gas utility (25% vs. 17% legacy Union Gas). Older natural gas users (75+) are more likely to indicate that they would contact a heating contractor (41% vs. 29% under 74) but are less likely to contact a certified technician (39% vs. 53%).



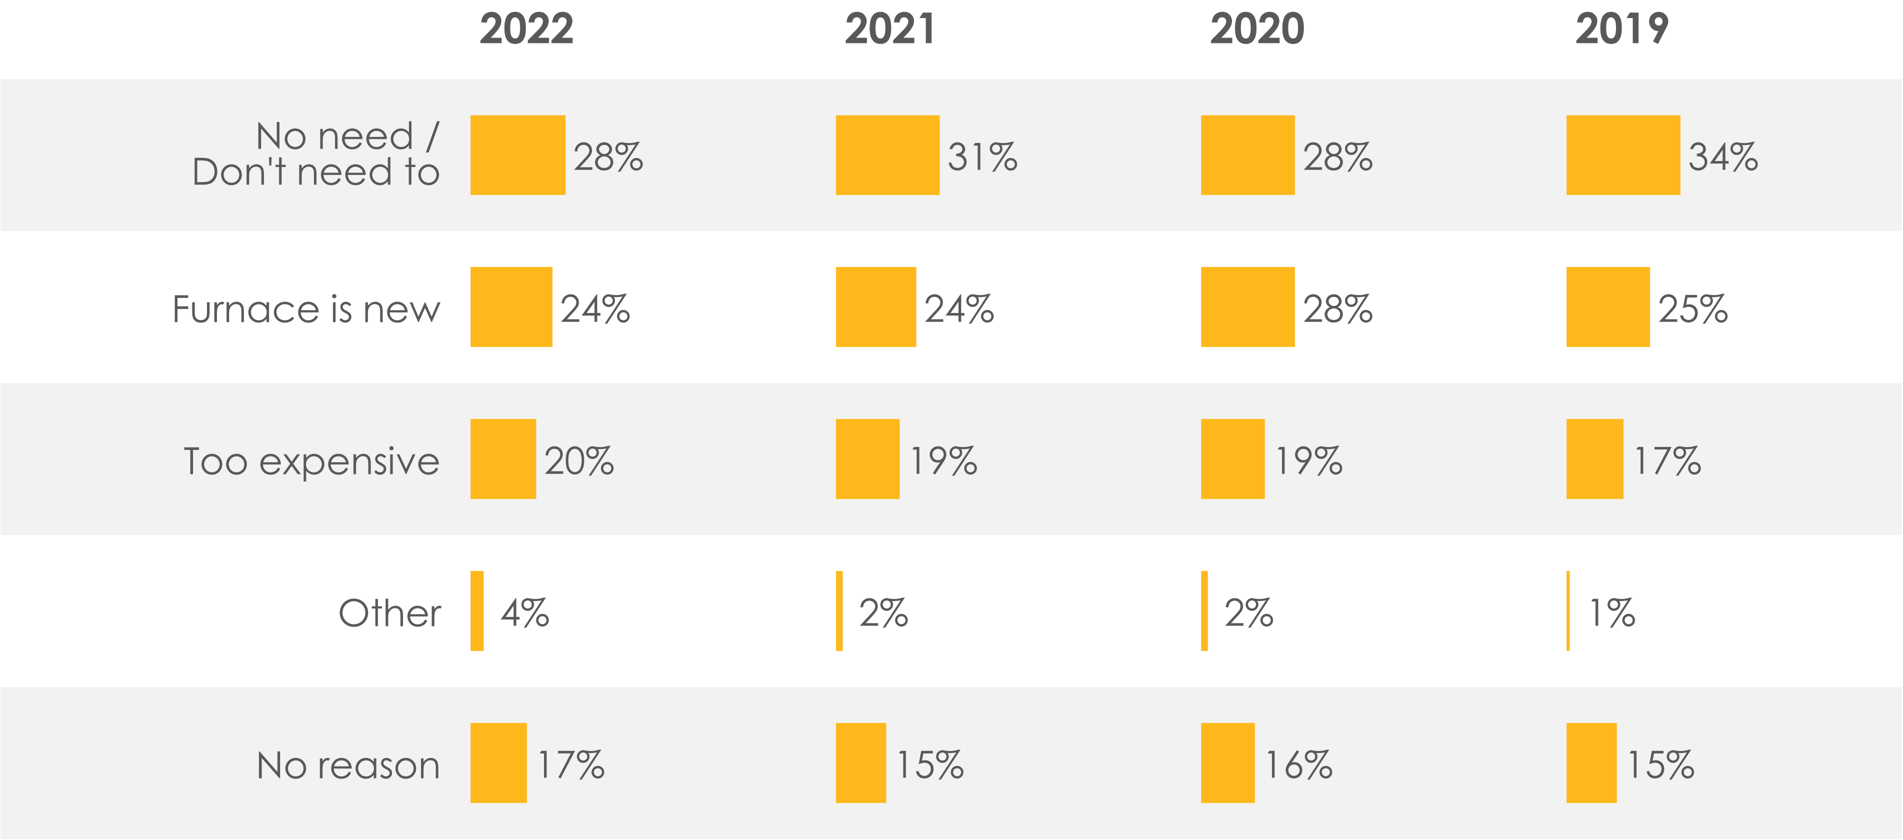


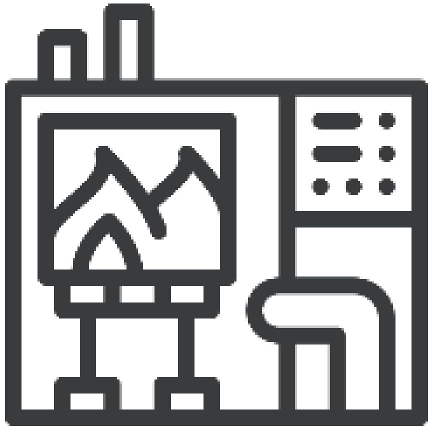
Note: Values less than 4% not shown

Mentions >3% not shown
*response option was added in 2021.
NEW Q2aab-2. Who would you contact to service or inspect your natural gas furnace?
Base: Have a natural gas furnace; Total 2022 (n=980); 2021 (n=992); 2020 (n=1015)

Reasons For No Furnace Maintenance

- A lack of necessity (28%), cost (20%) or having a new furnace (24%) are most commonly cited by those who have not had their furnace inspected in the past year as reasons for not doing this, figures which are on par with previous years.



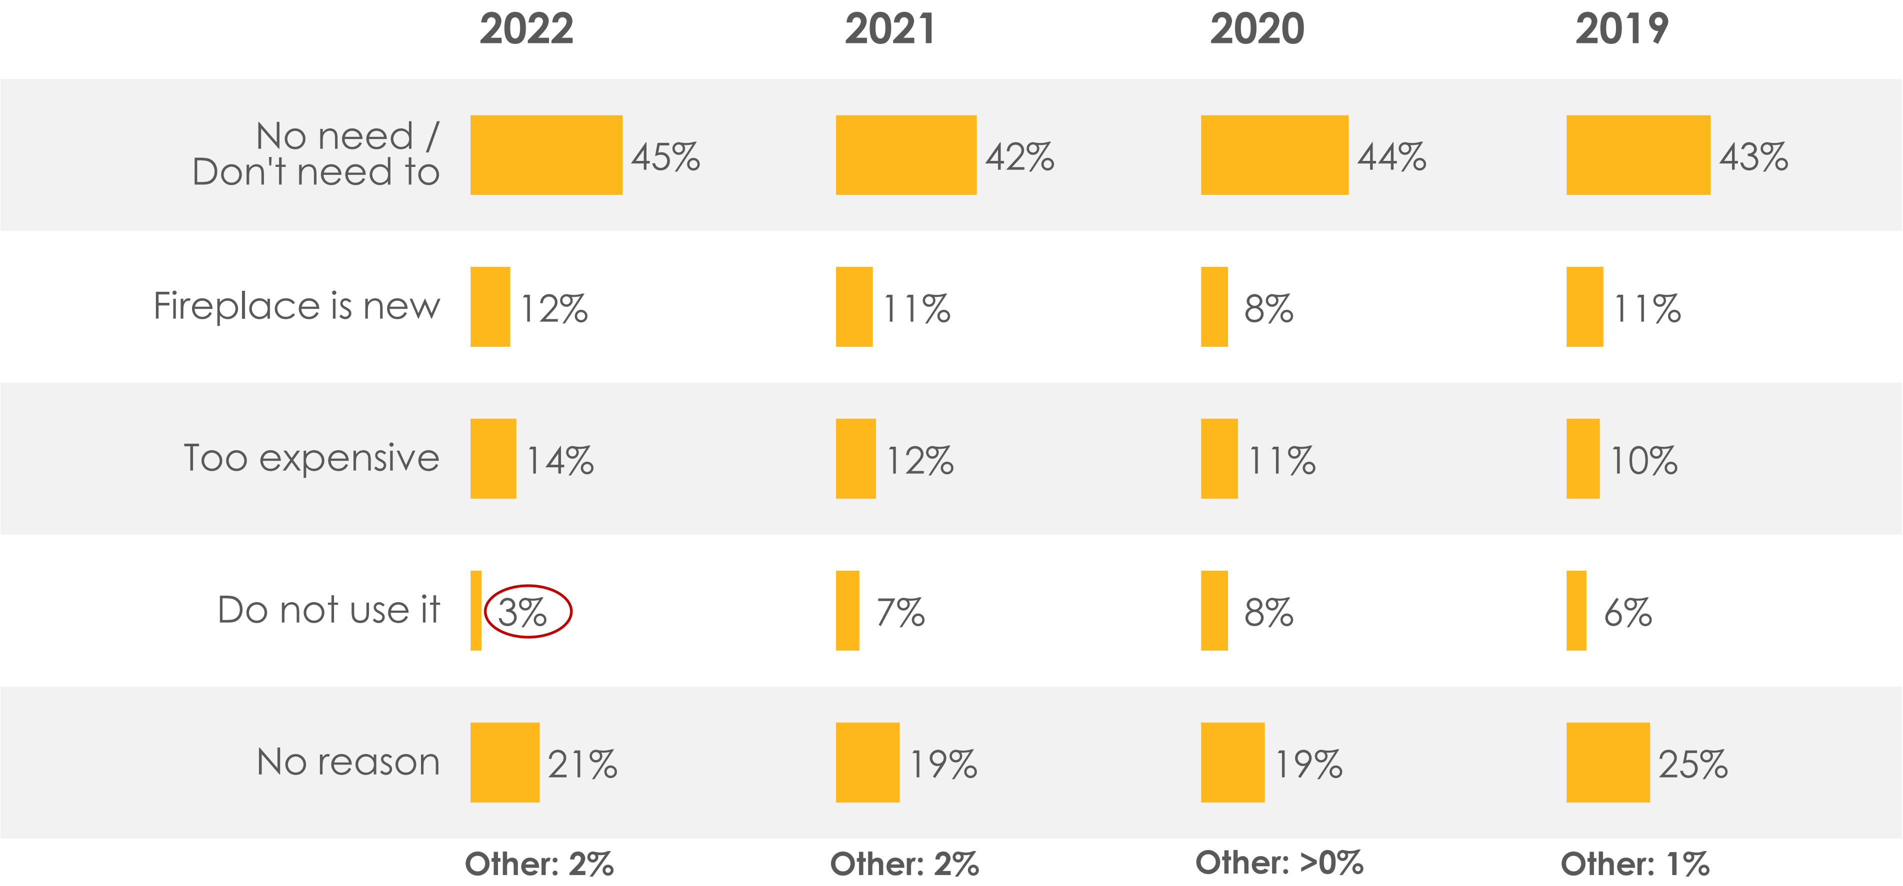


Note: Values less than 4% not shown

Q2c. Why have you not had your natural gas furnace or fireplace inspected on an annual basis]?
Base: Had their fireplace or furnace last inspected over a year ago; Total 2022 (n=430); 2021 (n=454); 2020 (n=452); 2019 (n=406)

Reasons For No Fireplace Maintenance

- Similar to furnaces, a lack of necessity (45%), cost (14%) or having a new furnace (12%) are most commonly cited by those who have not had their fireplace inspected in the past year as reasons for not doing this, figures which are on par with previous years.



Note: Values less than 4% not shown

Q2c. Why have you not had your natural gas furnace or fireplace inspected on an annual basis]?
Base: Had their fireplace or furnace last inspected over a year ago; Total 2022 (n=229); 2021 (n=232); 2020 (n=240); 2019 (n=244)

NATURAL GAS SAFETY

Detecting A Natural Gas Leak

- Virtually all (95%) natural gas users are confident they would know how to detect a natural gas leak, a figure which is on par with previous years, with most indicating that the scent (70%) would give it away. Relative to 2021, fewer natural gas users indicate that they would detect a natural gas leak using scent (70%; -4 pts) while the proportion of natural gas users that say they would detect it using their carbon monoxide alarm (31%) more or less remain consistent.
- Natural gas users under the age of 34 are more likely to admit they aren't sure how to detect a natural gas leak (10% vs. 5% across all other age groups). Older natural gas users (65+) are among the most likely to say they would use scent, to detect a natural gas leak (77% vs. 66% across all other age groups). eBill users are more likely (at 34%) than paper bill users (27%) to say they would use their carbon monoxide alarm.

	I WOULD SMELL IT	I HAVE A CARBON MONOXIDE DETECTOR/ALARM	OTHER	DON'T KNOW / NOT SURE
2021	74%	28%	3%	5%
2020	72%	29%	3%	6%
2019	69%	33%	2%	6%

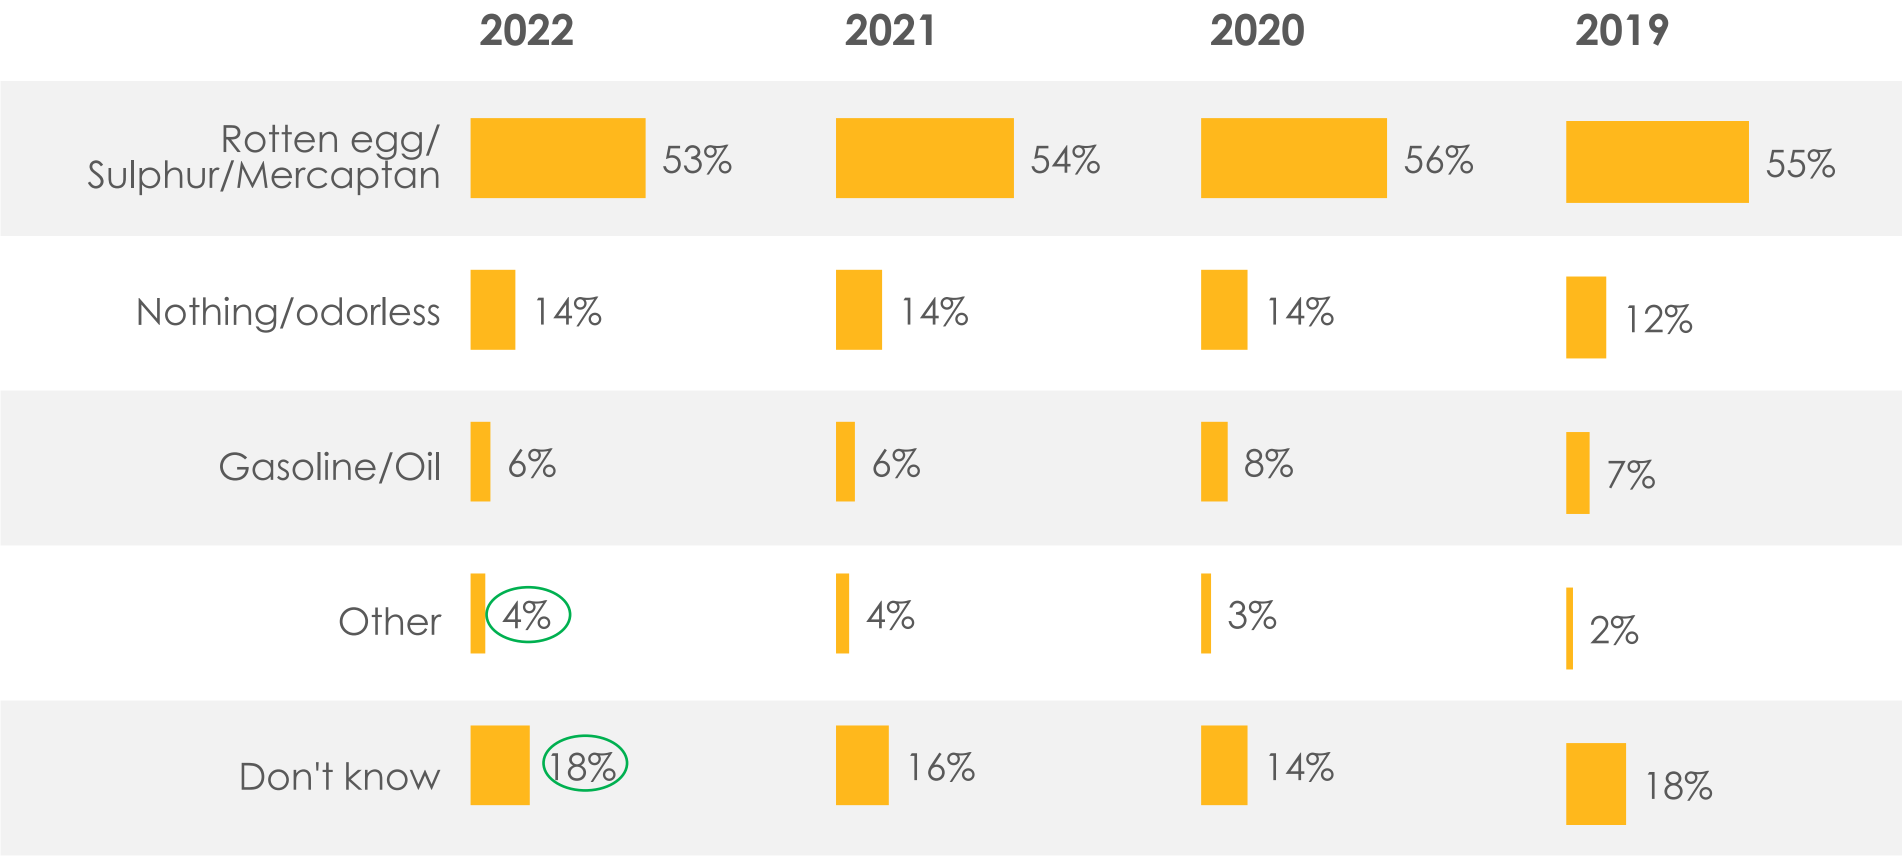
NONE:
2022: 0%
2021: 1%
2020: 1%
2019: 1%

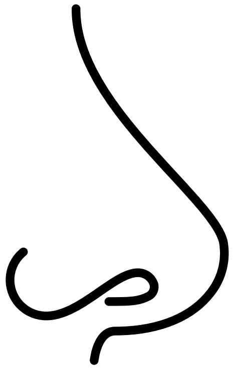
Q4a. How would you know you had a natural gas leak in your home / unit?
Base: All respondents; Total 2022 (n=1200); 2021 (n=1200); 2020 (n=1200); 2019 (n=1200)

Note: Values less than 4% not shown

Natural Gas Smell

- A majority (53%) of natural gas users think natural gas has a distinctive rotten egg/Sulphur/mercaptan smell, while fourteen percent (14%) say it is odorless, figures which are on par with previous years.
- Natural gas users aged 34 or younger are more likely to indicate that natural gas smells like gasoline/oil (15% vs. 5% 35 and older). This group is more likely to feel as though they aren't sure what natural gas smells like (29% vs. 17%).





Data less than 3% not shown
Q4a1. What does the natural gas you receive at your residence smell like?
Base: All respondents; Total 2022 (n=1200); 2021 (n=1200); 2020 (n=1200); 2019 (n=1200)

Note: Values less than 4% not shown

When A Gas Leak is Suspected

- When asked what they would do if they suspected a natural gas leak in their home, calling the gas company continues to top the list, though statistically lower proportions cite this action relative to the previous year (23%; -6 pts vs. 2021). More natural gas users say they would get out of the house and then call the fire department (15%; +6 pts vs. 2021). Fewer would call 911 (13%; -8 pts vs. 2021) or get out of the house (13%; -11 pts vs. 2021; -4 pts vs. 2020).
- Younger natural gas users (18-34) are among the most likely to indicate that they would call 911, if they were to suspect a natural gas leak (28% vs. 12% across all other age groups). eBill users are more likely (at 8%) than paper bill users (5%) to indicate that they would open windows/doors and/or call Union/Enbridge Gas or 911, if they were to suspect a natural gas leak. Natural gas users living in the legacy Union Gas Distribution territory are more likely to say they would call an inspector/technician (9% vs. 4% legacy Enbridge Gas).

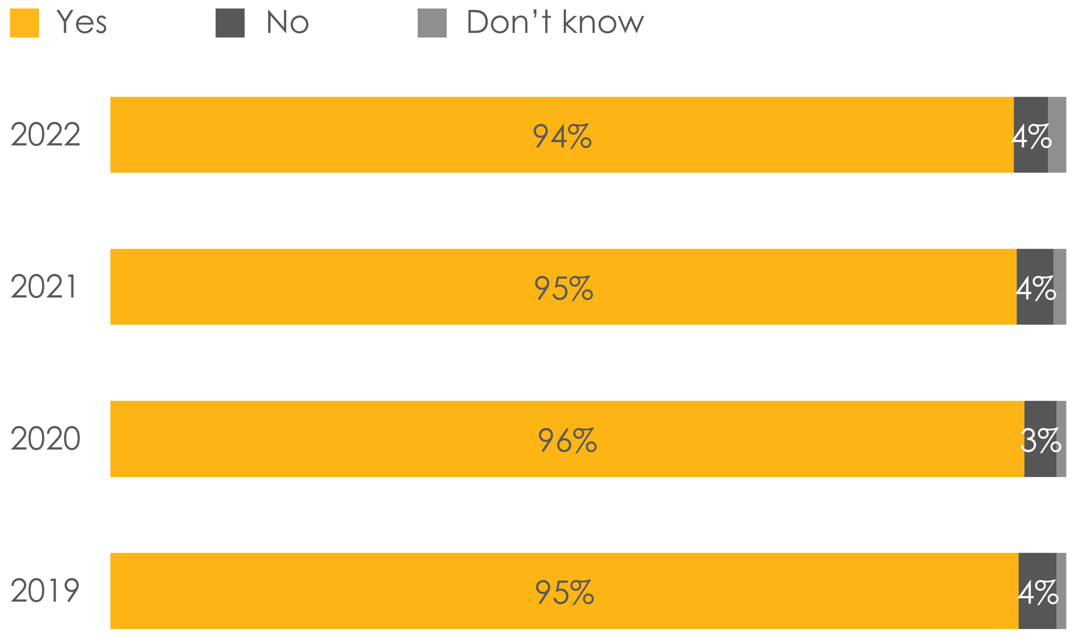
CARBON MONOXIDE ALARMS AND SAFETY AWARENESS

Carbon Monoxide Alarm Usage

- Virtually all (94%) natural gas users have a working carbon monoxide alarm(s), of which seven in ten (70%) say they have alarms near all sleeping areas. Concerningly, more than one in ten (12%; +3 pts vs. 2020) of this group report having no carbon monoxide alarms located next to sleeping areas.
- Natural gas users living in the legacy Enbridge Gas Distribution territory are more likely to say they have carbon monoxide alarms next to all sleeping areas (73% vs. 67% legacy Union Gas). Younger natural gas users (18-34) are among the most likely to admit to not having a working carbon monoxide alarms installed (9% vs. 3% aged 35+).

CARBON MONOXIDE ALARM IN HOME



Note: Values less than 3% not labelled

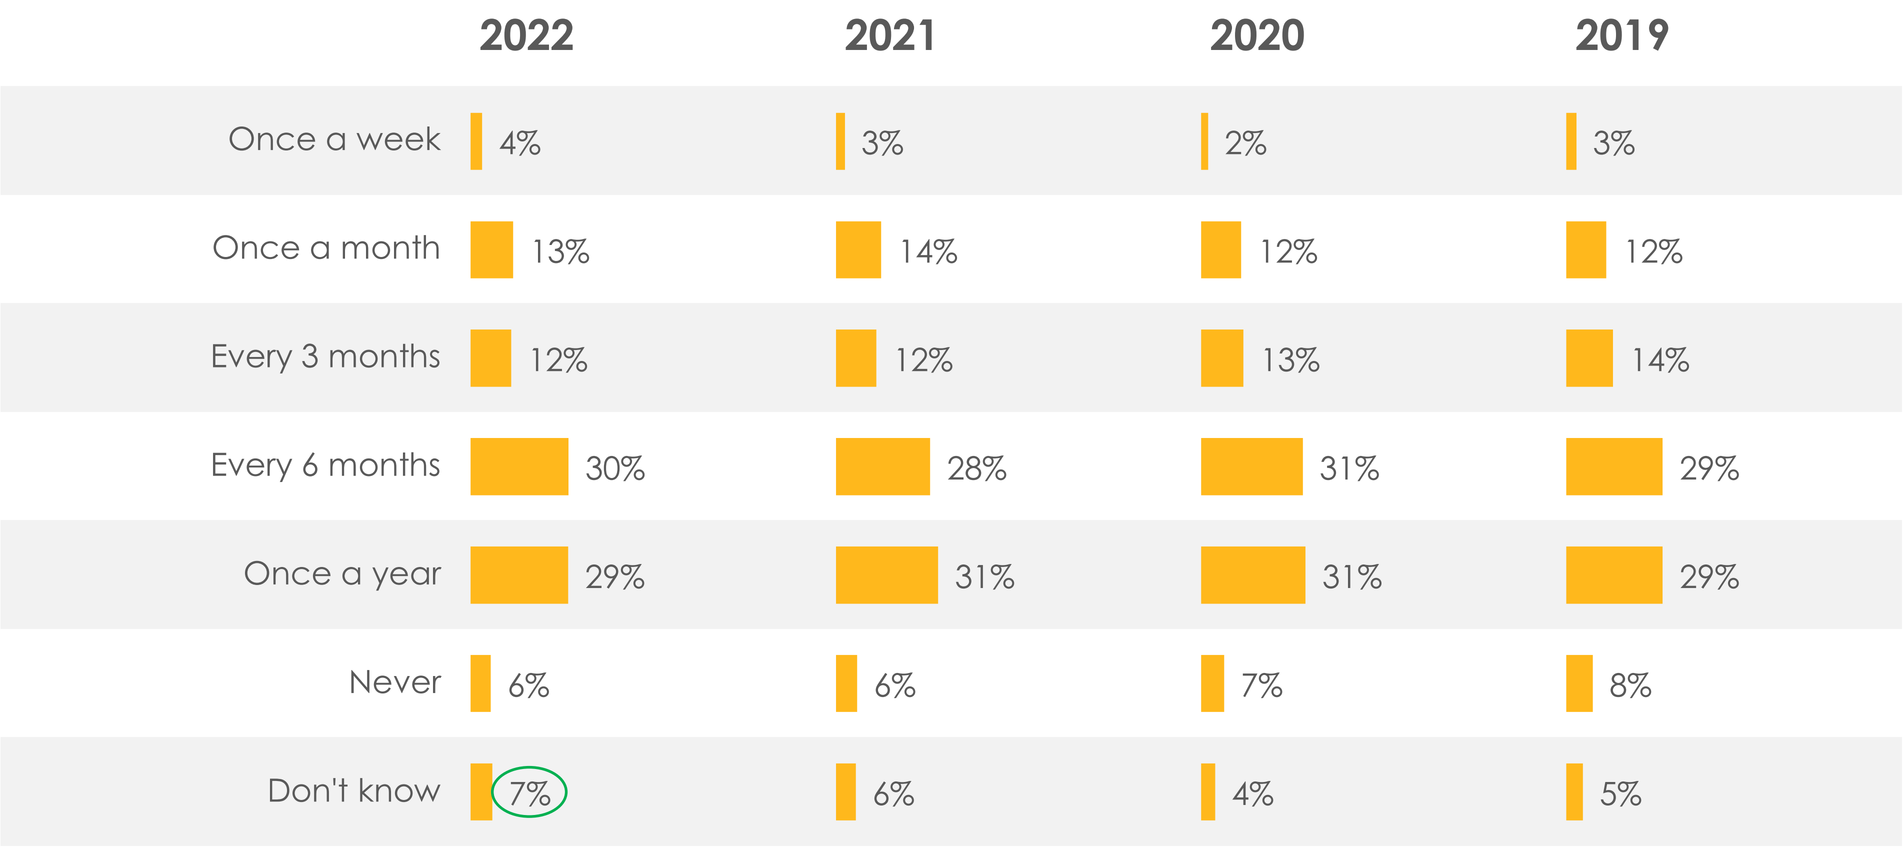
ALARMS NEAR SLEEPING AREAS

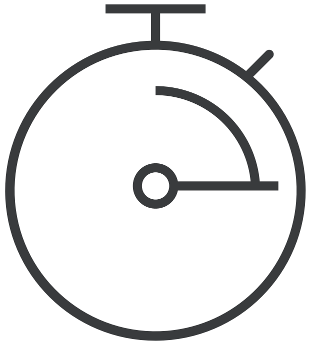
	2021	2020	2019
Yes – next to all sleeping areas	67%	70%	68%
Yes – next to some sleepingareas, but not others	20%	20%	20%
No – carbon monoxide alarm not located next to sleeping areas	13%	9%	12%

CO1: Do you have any working Carbon Monoxide Alarms, or CO Detectors, installed in your home / unit?
Base: All respondents; Total 2022 (n=1200); 2021 (n=1200); 2020 (n=1200); 2019 (n=1200)
CO1B. Do you have a working carbon monoxide alarm installed next to each sleeping area in your home / unit?
Base: Have carbon monoxide alarms; Total 2022 (n=1130); 2021 (n=1136); 2020 (n=1143); 2019 (n=1136)

Frequency Check Carbon Monoxide Alarm

- Most natural gas users check their CO alarm once a year (29%) or every six months (30%). However, more than one in ten (13%) natural gas users with a CO alarm do not (6%) or are unsure (7%; +3 pts vs. 2020) how often they check it. Just four percent (4%) say they do this at least weekly.
- The cohort aged 35-44 are also among the most likely to admit they aren't sure how often they check their CO alarm (13% vs. 5% aged 45+).

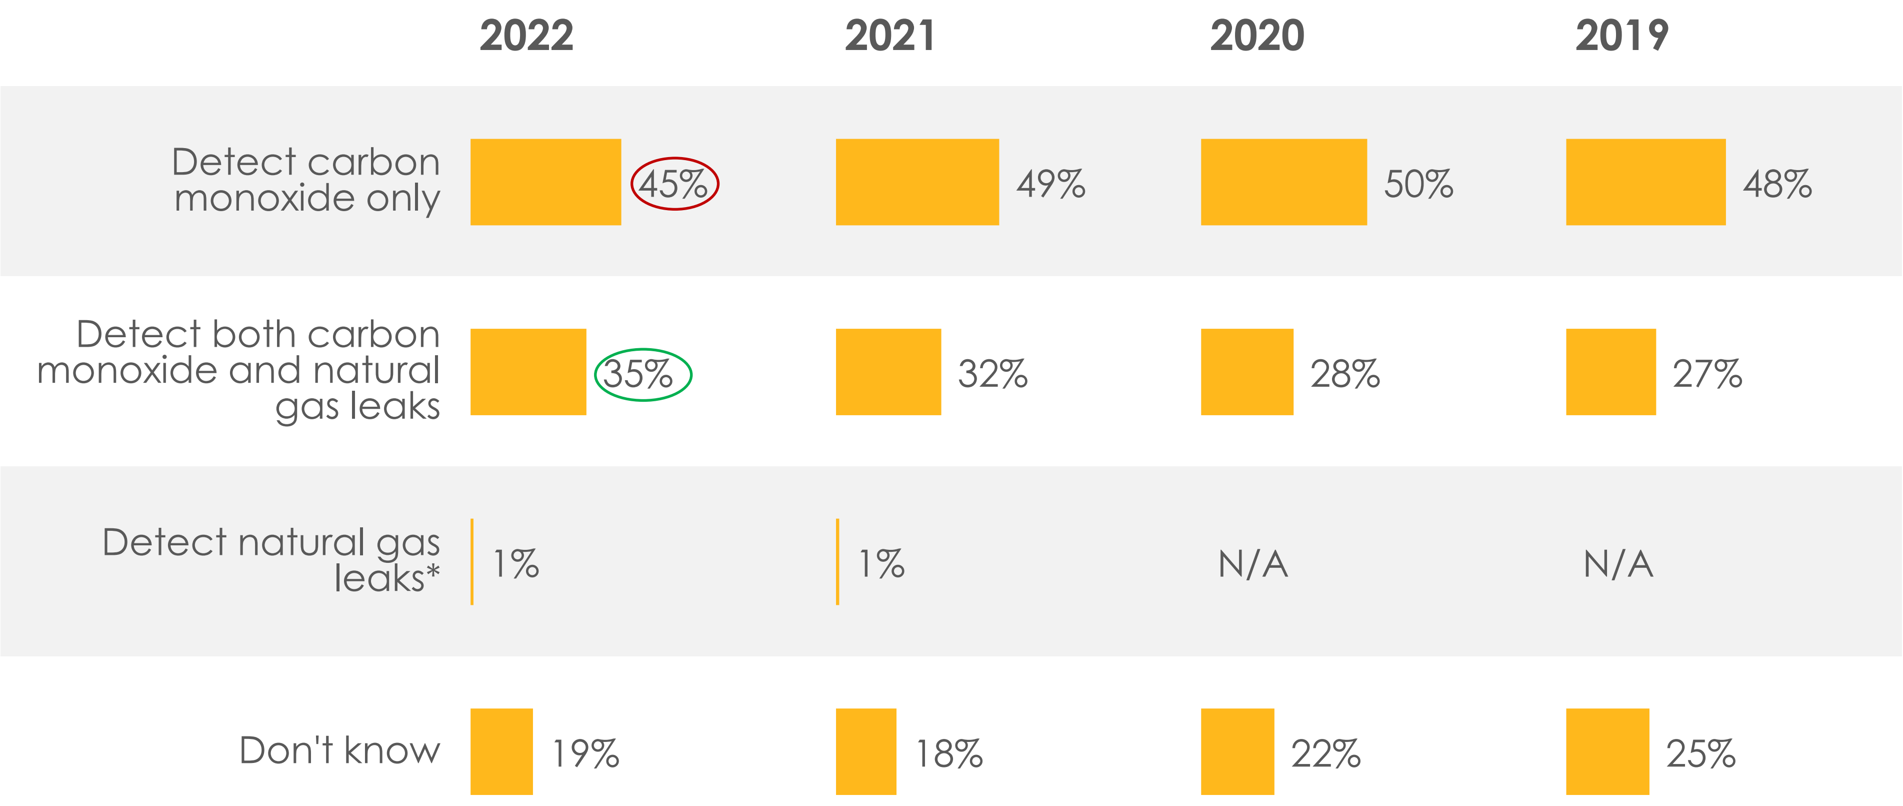


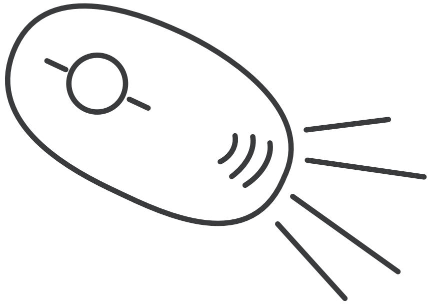


CO4: How often do you check your carbon monoxide alarm(s), to ensure it is operating?
Base: Have a carbon monoxide alarm; Total 2022 (n=1130); 2021 (n=1136); 2020 (n=1143); 2019 (n=1136)

Carbon Monoxide Alarm Knowledge

- More than two-thirds (45%; -5 pts vs. 2020) of natural gas users think their carbon monoxide alarm can detect carbon monoxide only, though fewer compared to 2020. Over one in three (35%; +7 pts vs. 2020) believe their carbon monoxide alarms are also capable of detecting natural gas leaks, a statistically higher proportion relative to 2020. Natural gas users that feel as though they don't know enough to offer an opinion on the matter (19%) remain more or less consistent. Just one percent (1%) think their carbon monoxide alarm can detect natural gas leaks.
- The cohort aged 65-74 are among the most likely to say they think their CO alarm can detect carbon monoxide only (56% vs. 42% across all other age groups).



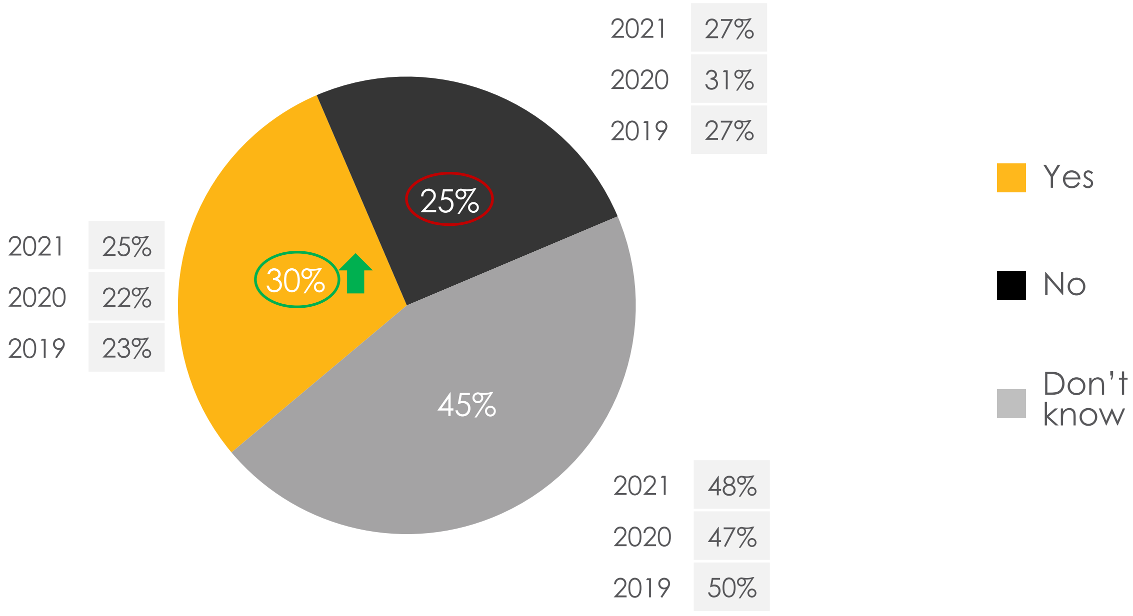


CO1B_bis: To the best of your knowledge, does your Carbon Monoxide alarm …?
Base: Have a carbon monoxide alarm; Total 2022 (n=1130); 2021 (n=1136); 2020 (n=1143); 2019 (n=1136)
*New response category in 2021.

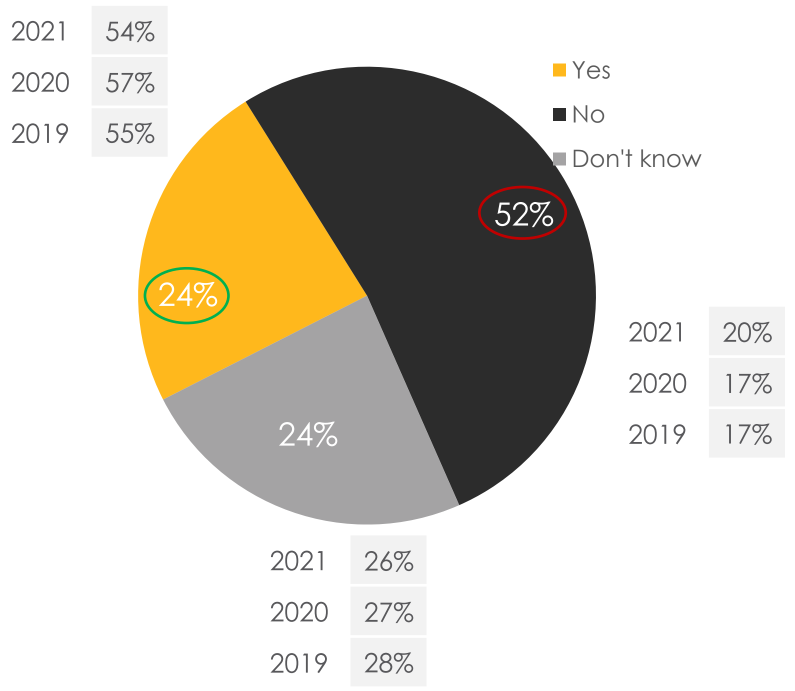
Natural Gas & Carbon Monoxide Alarm

- Year-over-year, a statistically higher proportion (30%; +5 pts) erroneously believe that a carbon monoxide alarm can also detect the presence of natural gas. Majorities (52%) admit that they do not have any natural gas detecting alarm devices.
- The 65-74 cohort is among the least likely to think carbon monoxide alarms can detect natural gas (21% vs. 34% under 64). eBill users are more likely to be of the opinion that carbon monoxide alarms can detect natural gas (32% vs. 26% of paper bill users). Natural gas users aged 45+ are more likely to admit they do not have any natural gas detecting alarms (55% vs. 40% under 45).

CARBON MONOXIDE ALARM CAN DETECT NATURAL GAS



HAVE NATURAL GAS DETECTING ALARM DEVICES



CO5: To the best of your knowledge, does a carbon monoxide alarm, also detect the presence of natural gas in your home / unit?
CO6. Do you have any natural gas detecting alarm devices in your ...?

Q5. On a different topic, suppose you needed to dig on your property - this could be tree planting, fence building, hammering in a stake, deck building, waterproofing a basement, etc. What would you do before digging on your property to prevent damaging a natural gas line? Note: adjustments were made to question wording in 2021.
Base: Live in a single family home; Total 2022 (n=1102); 2021 (n=1105); 2020 (n=1117); 2019 (n=1086)

Cross Bore Actions Taken

- Relative to previous years, more natural gas users say they would contact their utility (36%; +6 pts vs. 2020) whereas fewer would ask their contractor to take care of it (7%; -3 pts vs. 2021; -13 pts vs. 2020), if they needed to clear a blockage of a sewer beyond the walls of their house. Year-over-year, more would call before digging (13%; +8 pts vs. 2020) but fewer would do research to find the gas lines (2%; -4 pts vs. 2021; -7 pts vs. 2020).
- Natural gas users under the age of 55 are more likely to admit they are not sure what they would do, if they needed to clear a sewer blockage (29% vs. 18% aged 55+) and are less likely to call their gas company (23% vs. 43%).

	Contact Utility	Contractor Will Take Care of It	Find the Gas Lines / Research	Call Before You Dig	Call Ontario One Call	Call Someone	Contact the City / Call 311	Don't Know
2021	35%	10%	6%	11%	3%	4%	10%	20%
2020	30%	20%	9%	5%	4%	2%	8%	20%
2019	25%	20%	3%	11%	3%	3%	15%	13%

OTHER:
2022: 4%
2021: 1%
2020: 5%

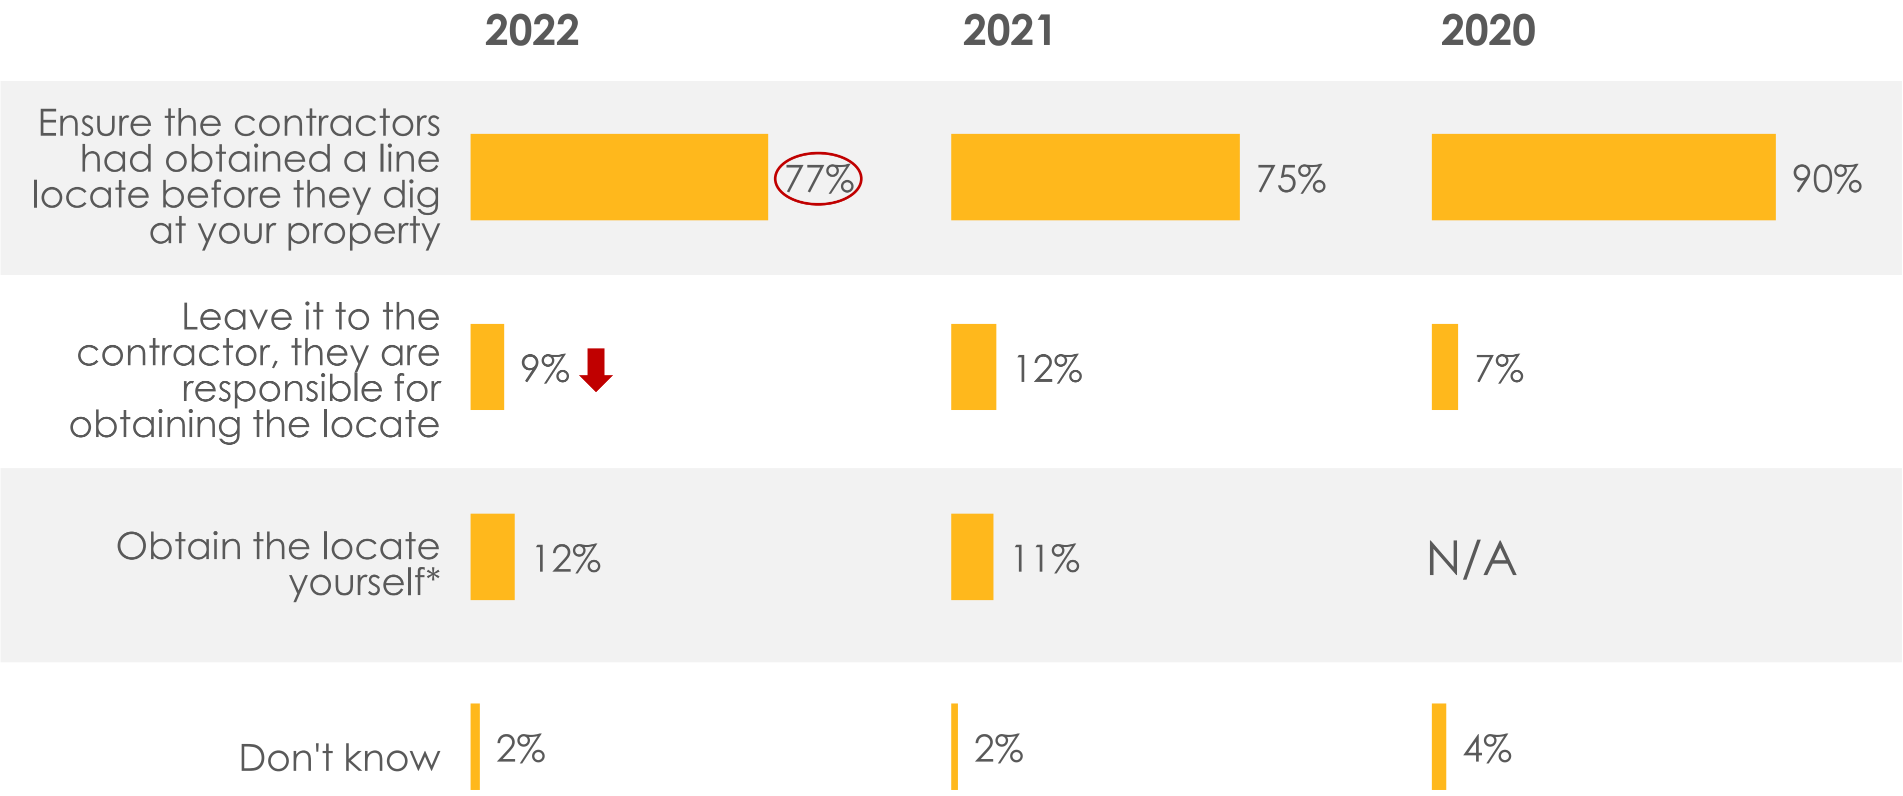
NONE:
2022: 3%
2021: 4%
2020: 1%
2019: 4%

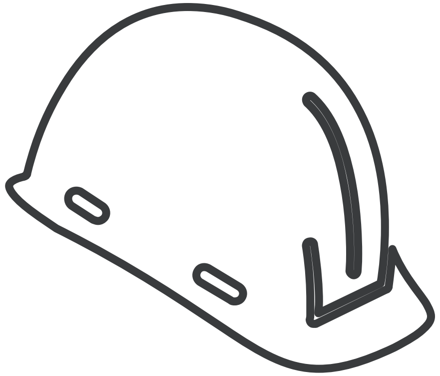
CBORE1: While rare, it's possible that a natural gas line is unintentionally installed through a sewer line. Suppose you need to clear a blockage of a sewer beyond the walls of your house/building by using a mechanical or high-pressure water jetting equipment, what would you do before you attempt to clear the blocked sewer or septic pipe outside the walls of your house or have it cleared by a contractor or a plumber to prevent damaging a natural gas line? [NEW 2020] *small update to question wording.
Base: Live in a single family home; Total 2022 (n=1102); 2021 (n=1105); 2020 (n=1117); 2019 (n=1086)

Note: Values less than 4% not shown

Digging on Property

- Not unlike 2021, most (77%) natural gas users who live in a single-family home say they would ensure the contractors had obtained a line locate before digging, if they needed to dig. The statistical significance is not noteworthy as a new response category was added in 2021.
- Among natural gas users who live in a single-family home, those aged 65+ are more likely to say they would ensure the contractors had obtained a line locate (85% vs. 72% under 65) before digging and are less likely to say they would leave this up to the contractors (5% vs. 12%).



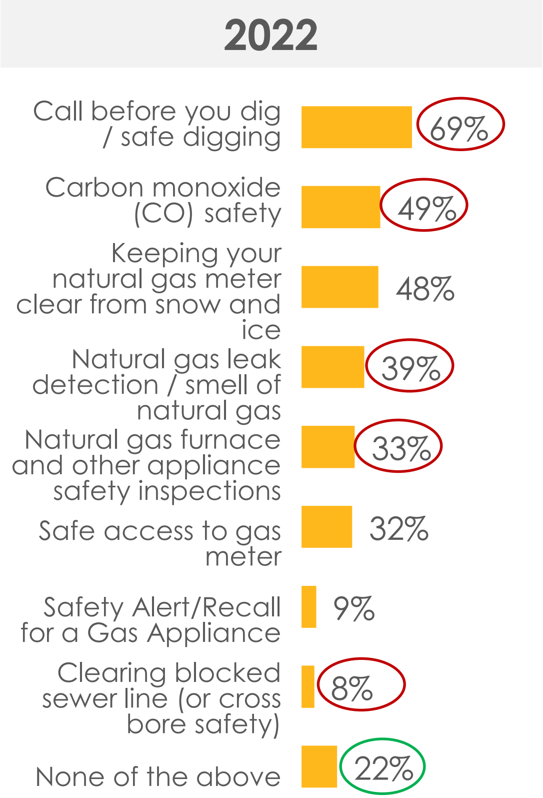


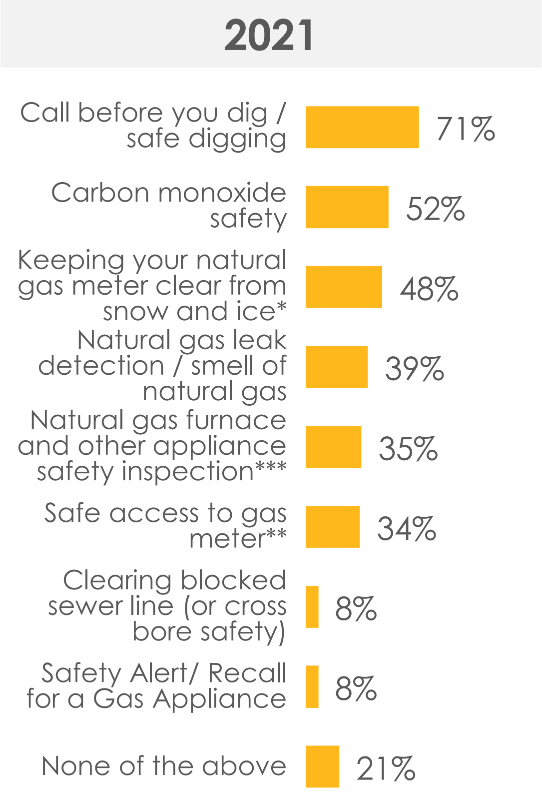
NEW Q5b. Once again, thinking of a contractor working on your property needed to dig for a variety of reasons including tree planting, fence building hammer in a stake, deck building, etc., would you…?
Base: Live in a single family home; Total 2022 (n=1102); 2021 (n=1105); 2020 (n=1200)
*New response category added in 2021.

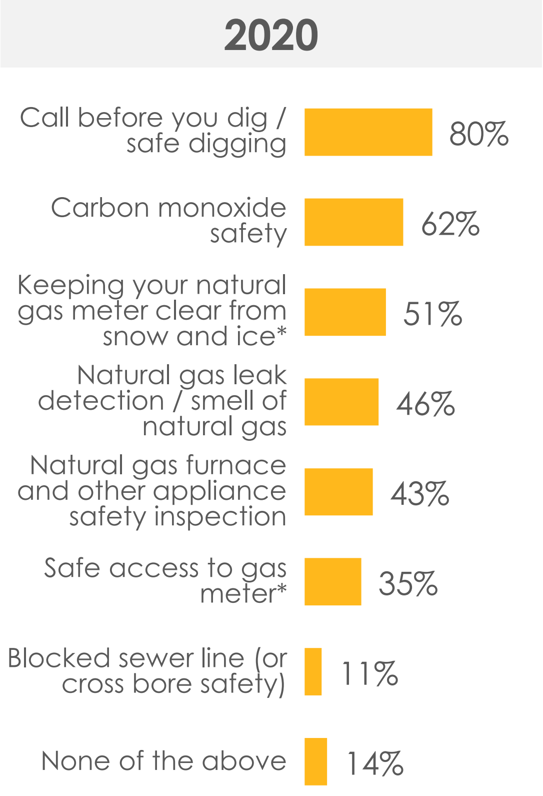
SAFETY COMMUNICATIONS

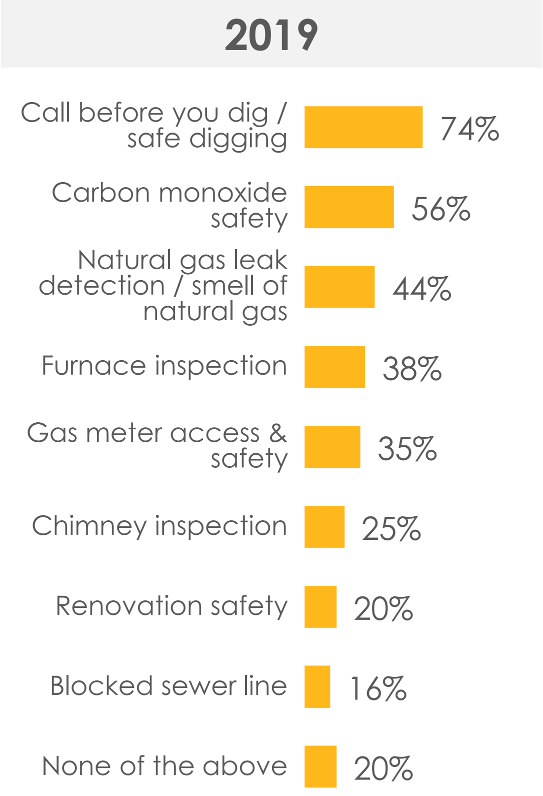
Safety Information Recall

- Safety information recall is down across most metrics, relative to previous years.
- Natural gas users living in legacy Union Gas territory and older natural gas users tend to be more likely to indicate recall of most safety topics. The 75+ cohort specifically is more likely to recall consuming information about safe access to gas meter (46% vs. 29% under 75) and natural gas furnace and other appliance safety inspections (50% vs. 30%).





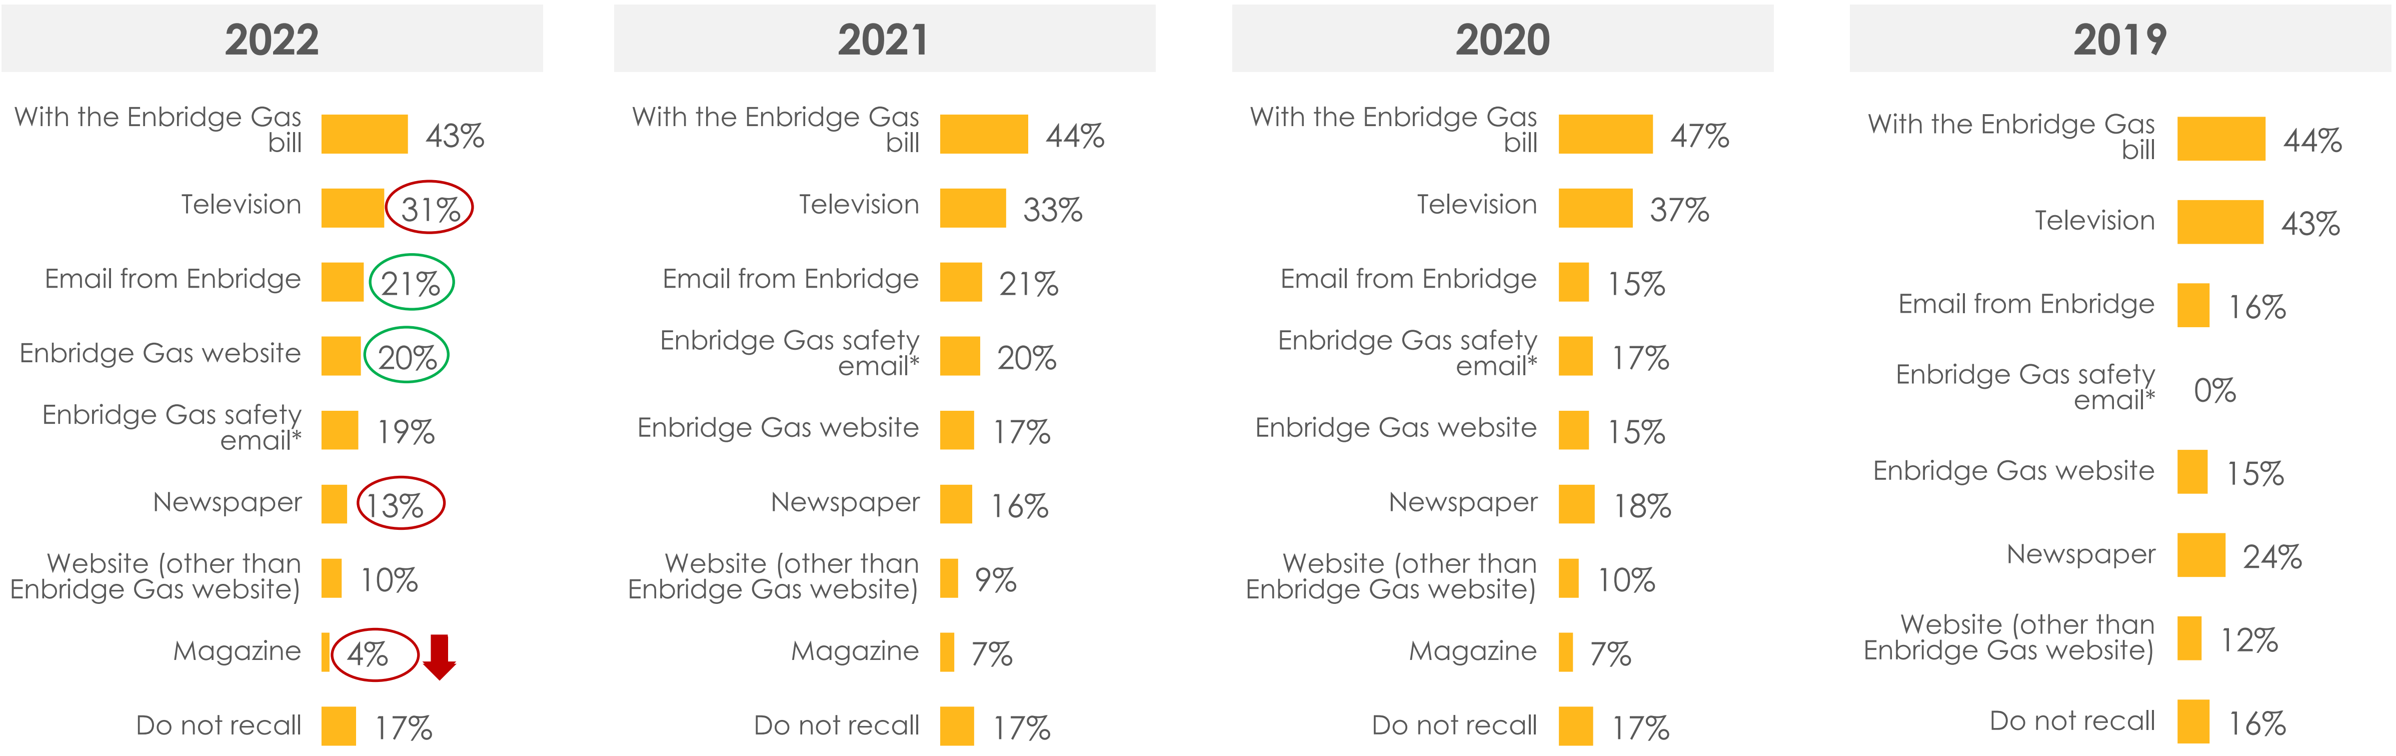




Q15a. Have you seen, heard or read any information before today about the following topics?
*New selection option in 2020; **Legacy wording: Gas meter access & safety *** Legacy wording: furnace inspection
Base: All respondents; Total 2022 (n=1200); 2021 (n=1200); 2020 (n=1200); 2019 (n=1200)

Source of Recall

- Television (31%; -6 pts vs. 2020), newspaper (13%; -5 pts vs. 2020) and magazine (4%; -3 pts vs. 2021; -3 pts vs. 2020) are cited by fewer as their sources of awareness, compared to the previous years.
- eBill users are more likely to cite the Enbridge Gas website (24% vs. 13% of paper bill natural gas users) or other website (12% vs.7%) as sources of recall. Older natural gas users (aged 75+) are more likely to mention newspaper (22% vs. 11% under 75), as their source of recall. Younger natural gas users (18-34) are among the most likely to cite Enbridge Gas Instagram page (13% vs. 2% 35+) as their source of awareness. Around half in the London & Sarnia (46%), Northeast (45%) and Northwest (49%) regions mention television, as their source of awareness compared to only three in ten (29%) natural gas users across all other regions. Natural gas users living in the legacy Enbridge Gas Distribution territory are more likely to list an email from Enbridge Gas, as their source of recall (24% vs. 18% legacy Union Gas) but less likely to mention television (27% vs. 38%).

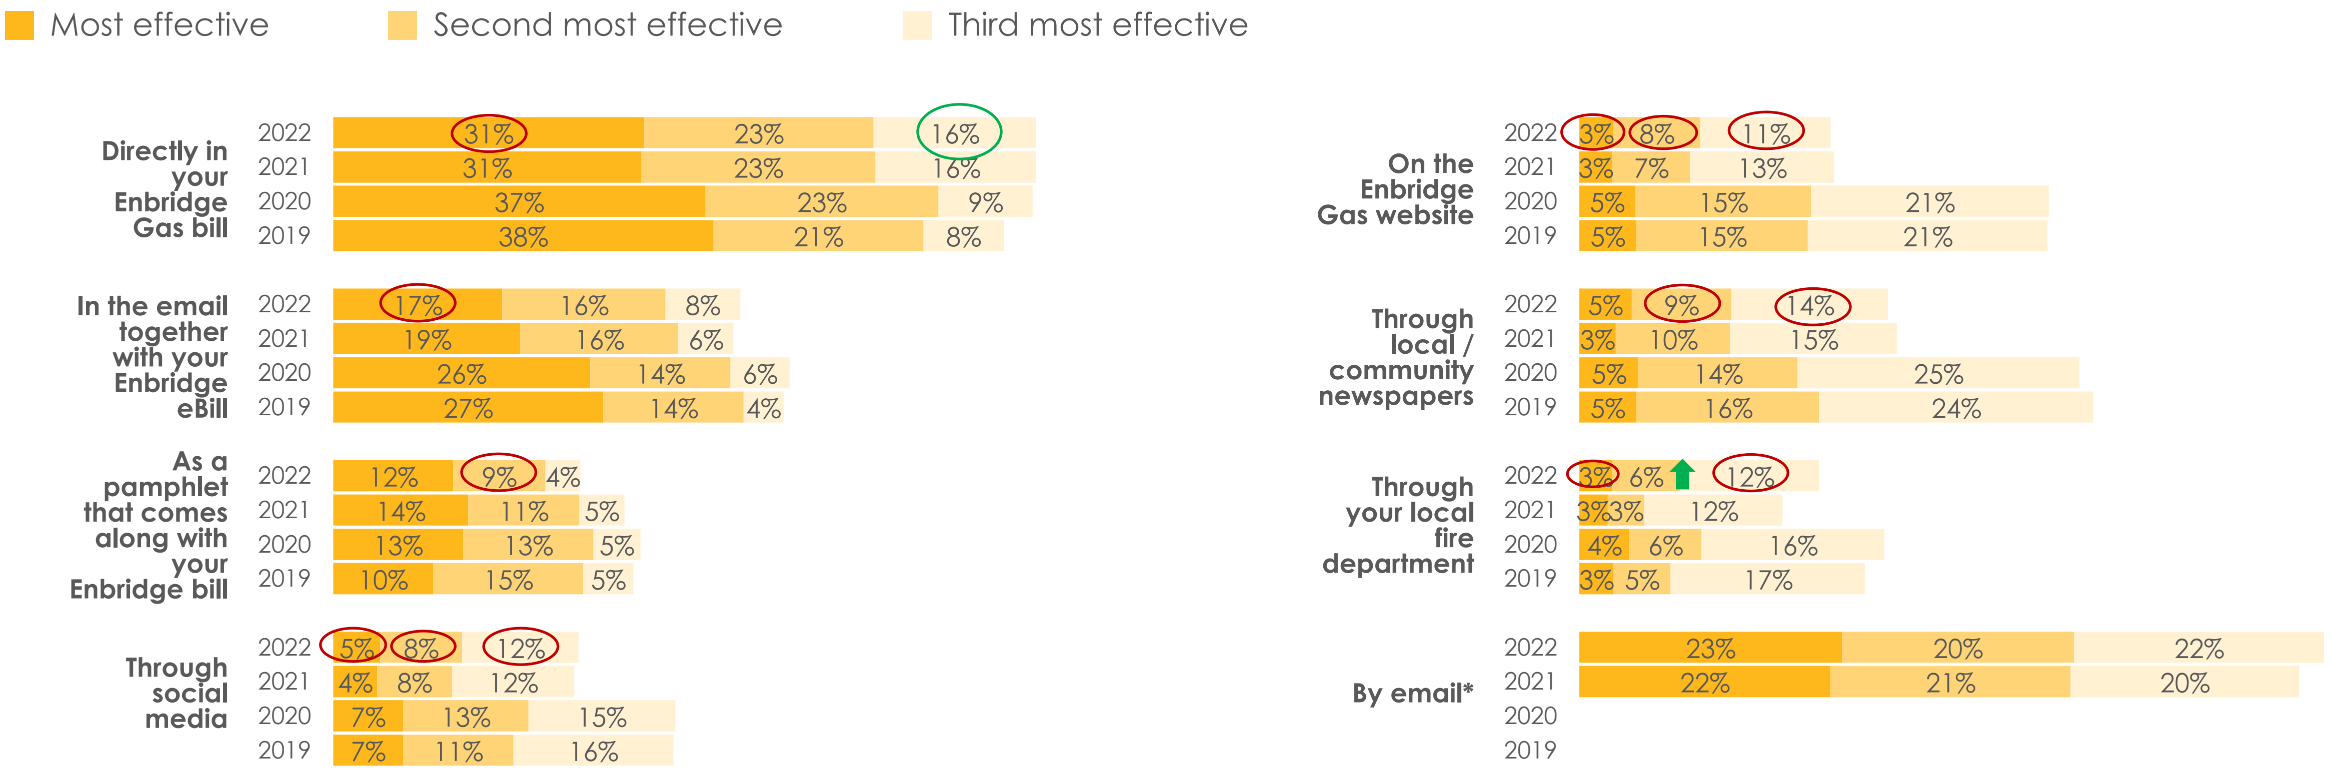


Q15b. Where do you remember seeing this information? Select all that apply.
*New selection option in 2020. Data less than 5% not shown
Base: Recall safety information; Total 2022 (n=935); 2021 (n=935); 2020 (n=1027); 2019 (n=953)

Note: Values less than 7% not shown

Safety News

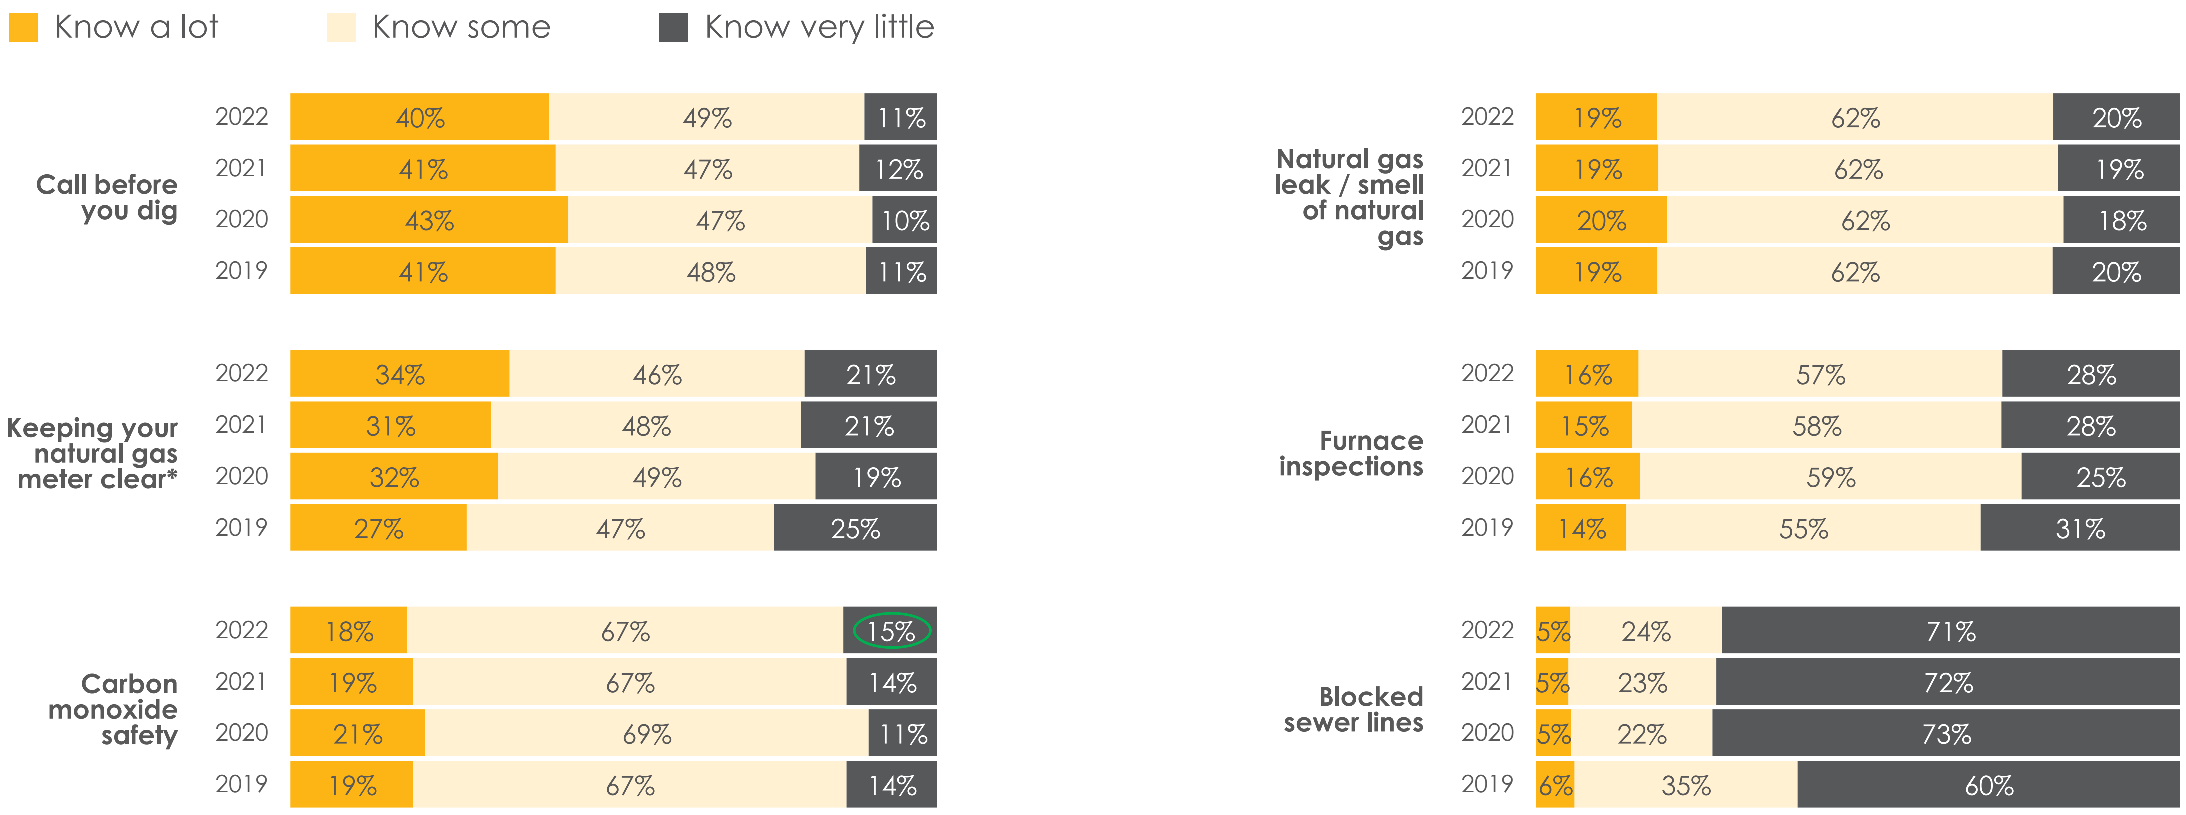
- Effectiveness scores are more or less on par with 2021, though remain down across most metrics, relative to the pre-2021 years.
- Natural gas users under the age of 55 are more likely to view social media (9% vs. 2% 55+) as being the most effective method of receiving safety news. Paper bill users are more likely to think having safety news directly in their Enbridge Gas bill would be most effective (38% vs. 28% of eBill users).



15bb. We would like to understand how Enbridge Gas can share safety news with you. Please select your top three choices.
Base: All respondents; Total 2022 (n=1200); 2021 (n=1200); 2020 (n=1200)
*New response category that was added in 2021.

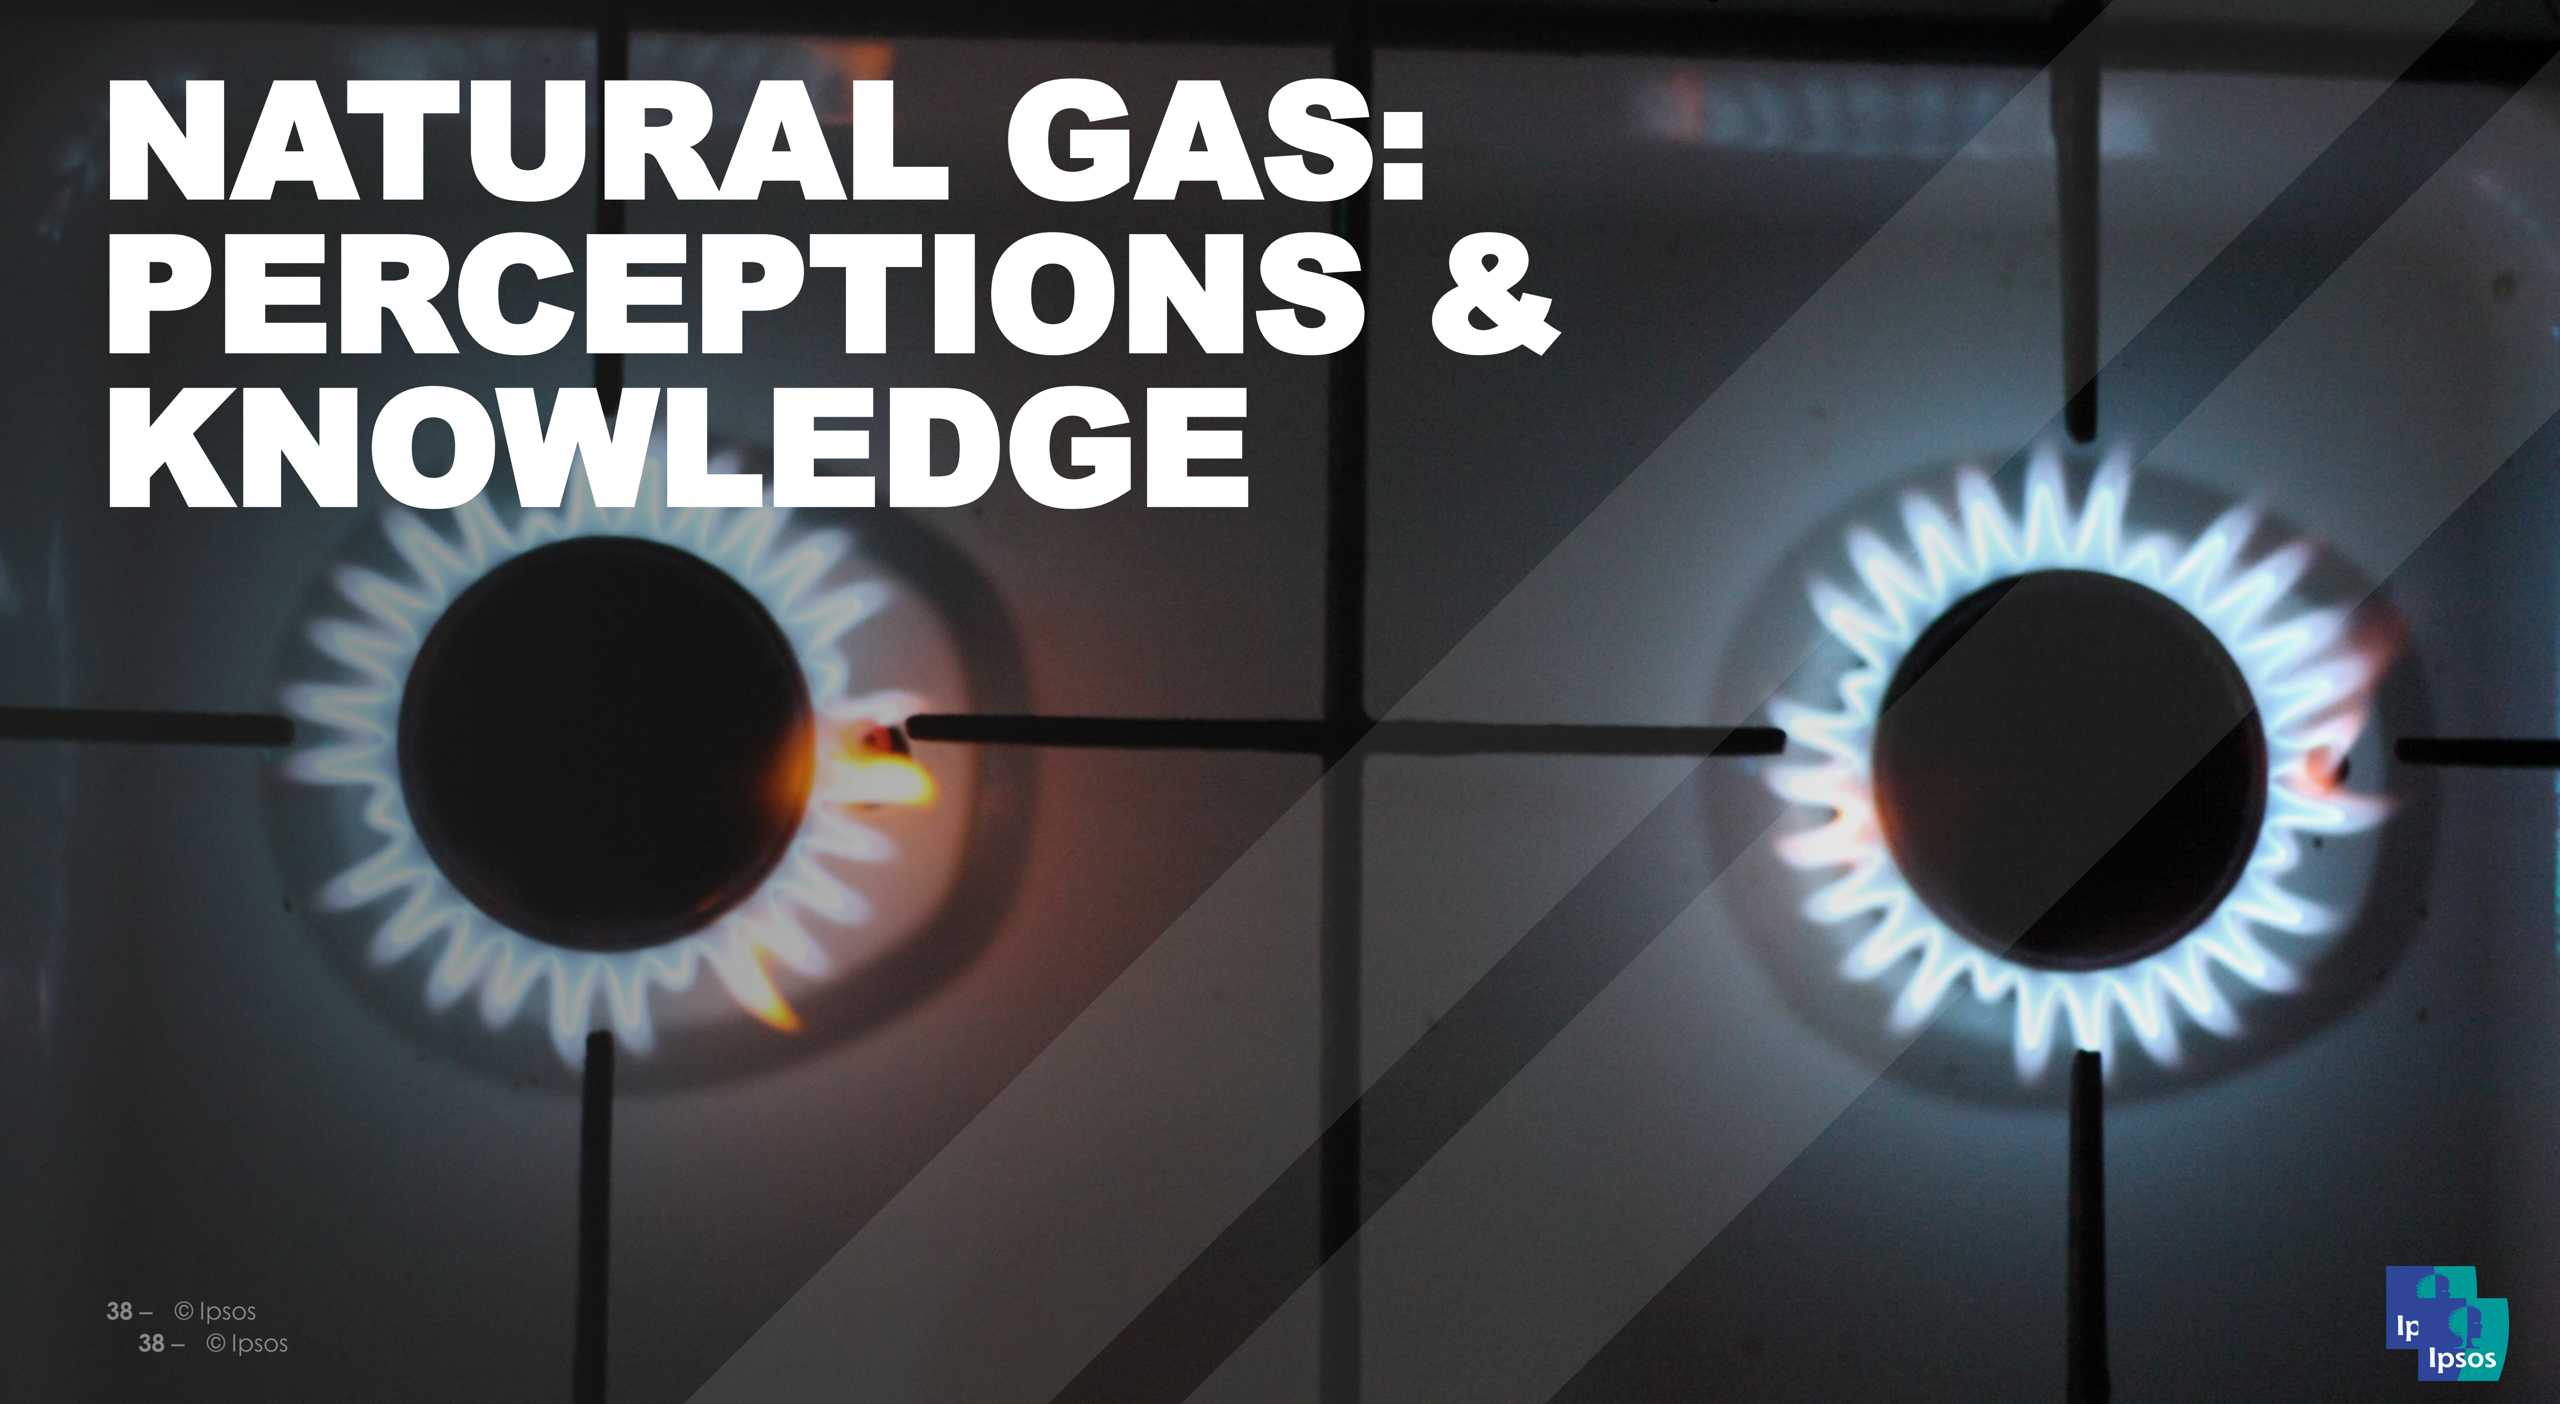
Safety Topics Knowledge

- Most natural gas users feel as though they are at least moderately knowledgeable about all safety topics, save for blocked sewer lines, at least according to their own self-assessed safety knowledge ratings.
- Safety topics knowledge tends to increase with age. Natural gas users living in the legacy Union Gas territory are more likely to indicate knowledge of keeping their natural gas meter clear (85% vs. 76% legacy Enbridge Gas Distribution). Nearly two thirds (65%) of Northwest region natural gas users claim to know a lot about keeping their natural gas meter clear making this only region in which a majority of natural gas users feels this is the case (33% across all other regions).



Q15c. How much would you say that you know about the following safety topics.
*Legacy wording: Gas meter access & safety.
Base: All respondents; Total 2022 (n=1200); 2021 (n=1200); 2020 (n=1200)

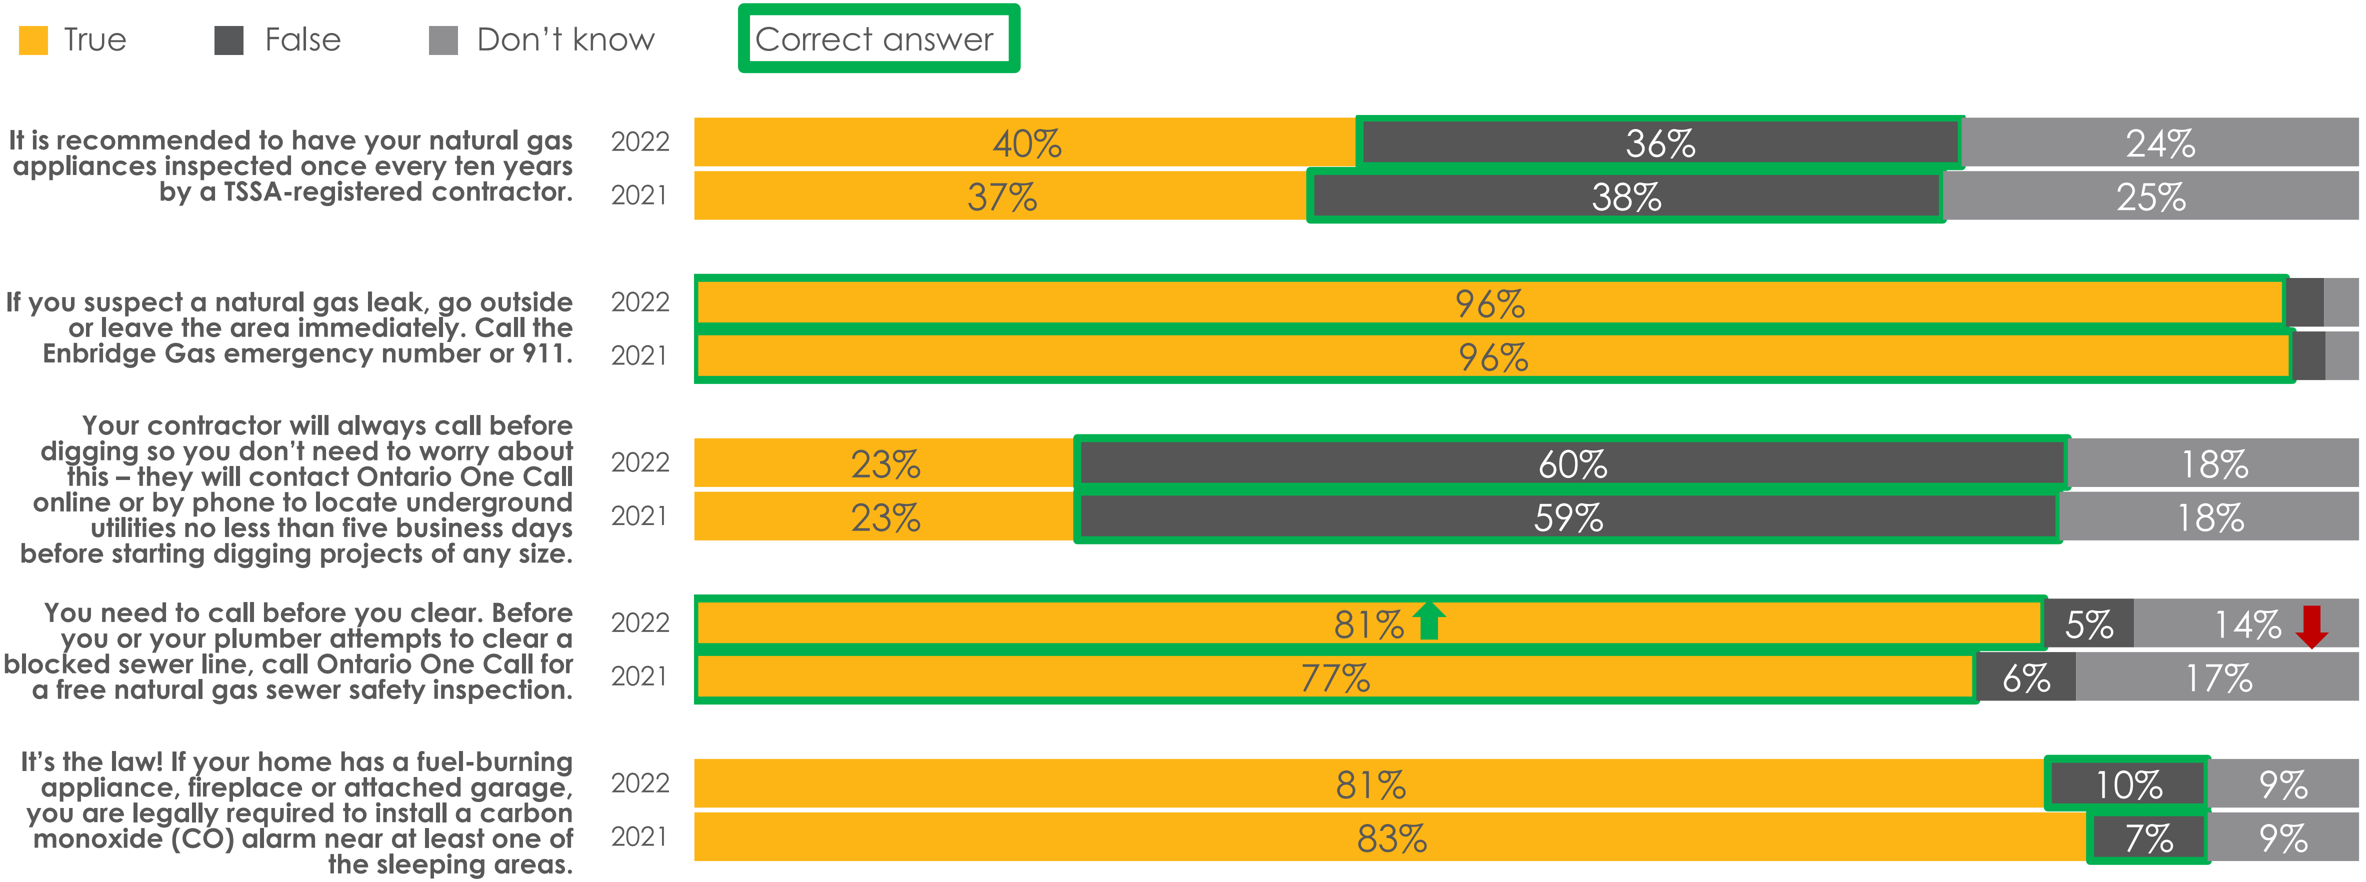
NATURAL GAS: PERCEPTIONS & KNOWLEDGE



38 – © Ipsos

Testing Natural Gas Safety Knowledge

- Natural gas safety knowledge is moderate to low. On the one hand, clear majorities know what to do when a natural gas leak is suspected (96%) or when clearing a blocked sewer line (81%; +4 pts vs. 2021). On the other hand, however, most do not know how often their natural gas appliances need to be inspected (36% correctly indicate the statement is false) or what the laws are, as they relate to carbon monoxide alarms (just 10% correctly indicate that the statement is false).
- The 75+ cohort is among the most likely to correctly indicate that it is not recommended to wait 10 years to inspect your furnace (45% vs. 35% under 75).

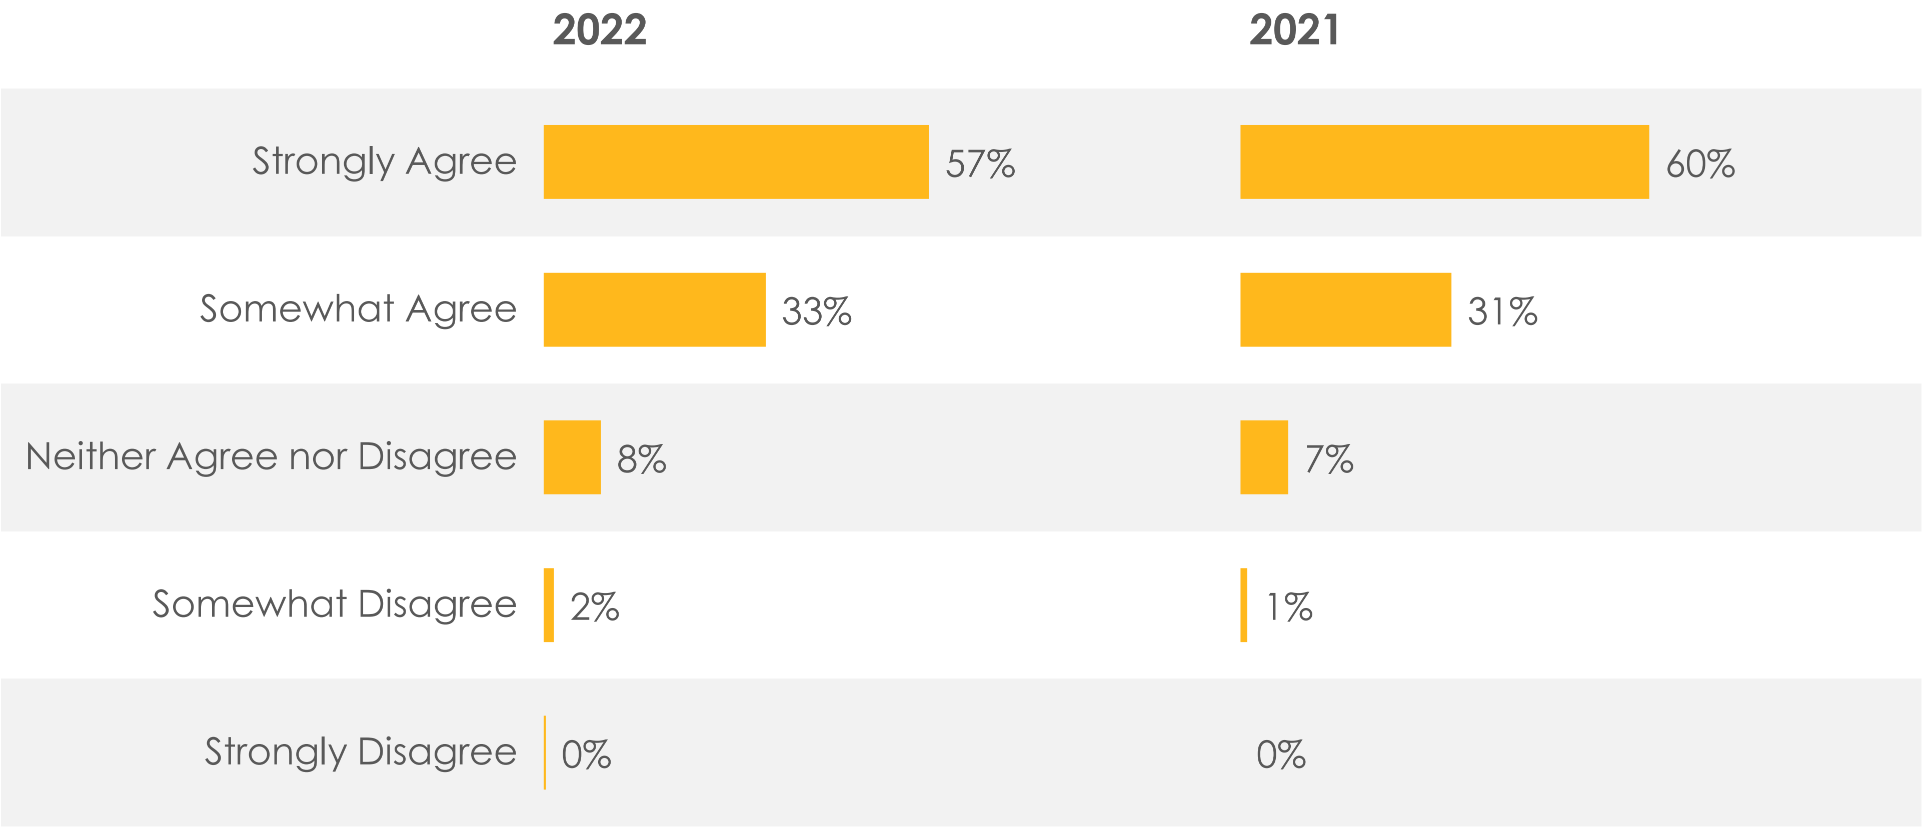


X1-X5. For each of the following questions, please answer true or false.
Base: All respondents 2022 (n=1200); 2021 (n=1200)

Note: Values less than 3% not labelled.

Perceptions of Natural Gas Usage

- The vast majority (89%) of natural gas users feel as though natural gas is safe to use in homes.
- Natural gas users living in the legacy Union Gas territory (60% vs. 54% legacy Enbridge Gas Distribution), the 55+ cohort (62% vs. 47% under 55), and those living in the Windsor/Chatham (70%) and Northwest region (70% vs. 56% across all other regions) are among the most likely to strongly agree that natural gas is safe to use in homes.



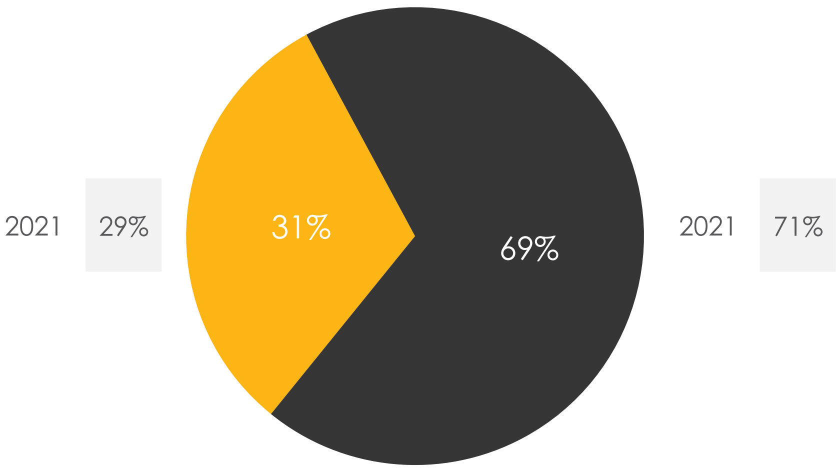
Note: Values less than 4% not shown

QA1. To what extent would you agree or disagree with the idea that natural gas is safe to use in homes?
Base: All respondents 2022 (n=1200); 2021 (n=1200)

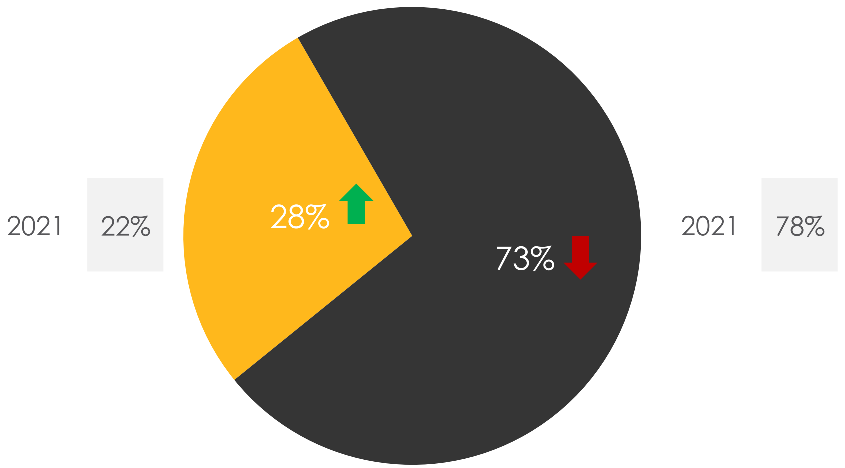
Recall Receiving Natural Gas Safety Information

- Most natural gas users do not recall receiving natural gas safety information via bill insert (69%) or by safety email (73%). However, greater proportion recall receiving natural gas safety information via safety email (28%; +6 pts vs. 2021), relative to the previous year.
- Younger natural gas users (18-34) are more likely to recall receiving natural gas safety information via bill insert (44% vs. 30% 35+). eBill users are more likely to recall receiving this information by safety email (30% vs. 24% of paper bill natural gas users).

BILL INSERT



SAFETY EMAIL



Q16. Do you recall receiving this information with your Enbridge Gas bill?
Base: All respondents 2022 (n=1200); 2021 (n=1200)
Q17. Do you recall receiving this information by email from Enbridge?
Base: All respondents 2022 (n=1200); 2021 (n=1200)

Note: Values less than 4% not shown

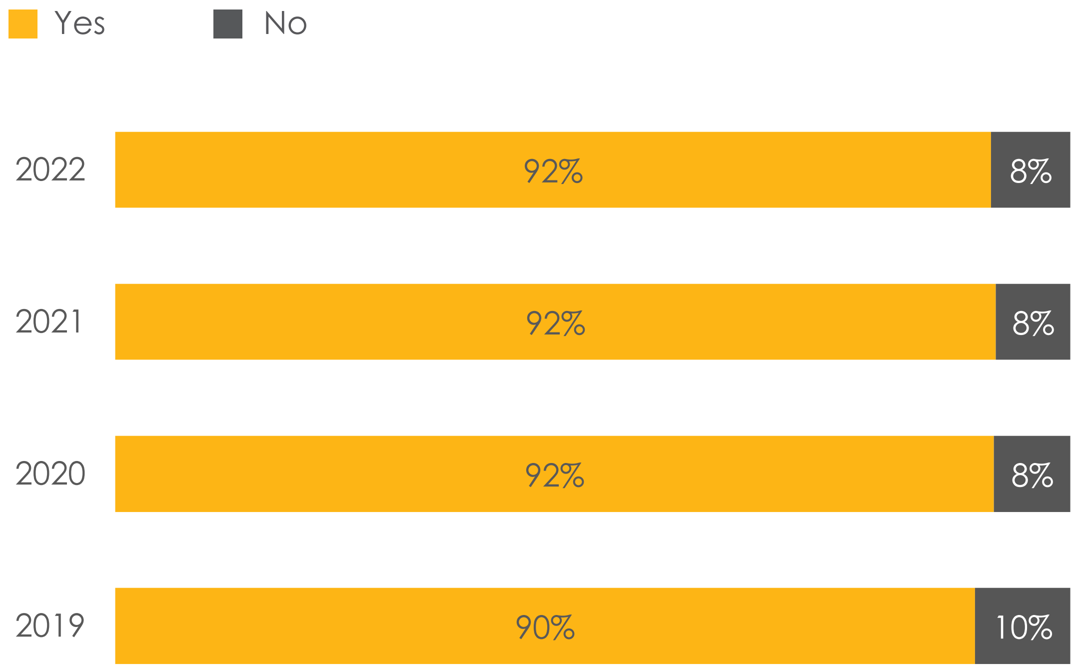
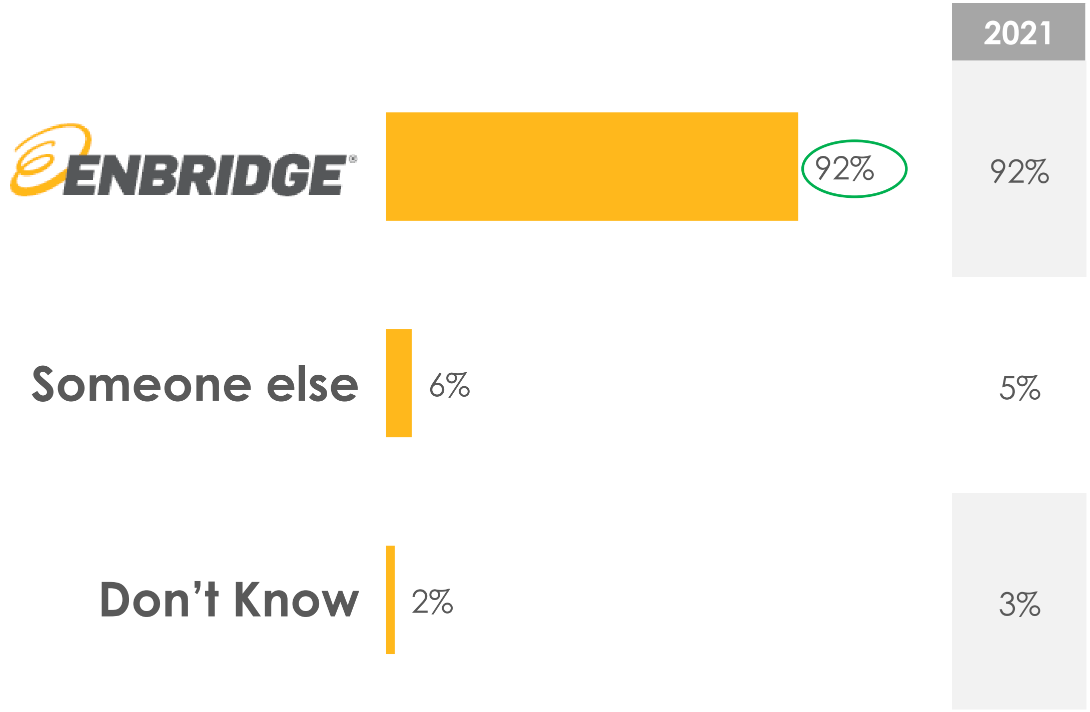
Natural Gas Bill

- On par with previous years, around nine in ten (92%) natural gas users indicate that they receive a natural gas bill, of which a vast majority (92%) indicate that Enbridge is their natural gas provider.

RECEIVE A NATURAL GAS BILL



NATURAL GAS PROVIDER



S4. Do you receive a natural gas bill? Base: All respondents; 2022 (n=1200); 2021 (n=1200); 2020 (n=1200); 2019 (n=1200)
S5. From whom do you receive your natural gas bill …? Base: Receive a natural gas bill; 2022 (n=1102); 2021 (n=1104); 2020 (n=1107); 2019 (n=1074)
Note: Union Gas response option was removed at S5 in 2021. Respondents who selected some other natural gas provider were allowed to proceed with the survey in 2021, unlike in previous years.

Natural Gas Bill Reception for MU natural gas users

- A majority (52%) of those who do not receive a bill indicate that it goes to their landlord, while about three in ten (29%) list their property manager as the bill recipient.

	LANDLORD	PROPERTY MANAGER	OTHER	DON'T KNOW
2021	57%	25%	4%	5%
2020	43%	32%	6%	6%
2019	53%	30%	2%	7%

S6. Who receives the natural gas bill?
Base: Do not receive a natural gas bill; Total 2022 (n=98); 2021 (n=96); 2020 (n=93); 2019 (n=126)

Note: Values less than 4% not shown

About Ipsos

Ipsos is the third largest market research company in the world, present in 90 markets and employing more than 18,000 people.

Our research professionals, analysts and scientists have built unique multi-specialist capabilities that provide powerful insights into the actions, opinions and motivations of citizens, consumers, patients, natural gas users or employees. Our 75 business solutions are based on primary data coming from our surveys, social media monitoring, and qualitative or observational techniques.

"Game Changers" – our tagline – summarises our ambition to help our 5,000 clients to navigate more easily our deeply changing world.

Founded in France in 1975, Ipsos is listed on the Euronext Paris since July 1st, 1999. The company is part of the SBF 120 and the Mid-60 index and is eligible for the Deferred Settlement Service (SRD).

Game Changers

In our world of rapid change, the need for reliable information
to make confident decisions has never been greater.

At Ipsos we believe our clients need more than a data supplier, they need a partner who can produce accurate and relevant information and turn it into actionable truth.

This is why our passionately curious experts not only provide the most precise measurement, but shape it to provide True Understanding of Society, Markets and People.

To do this we use the best of science, technology and know-how and apply the principles of security, simplicity, speed and substance to everything we do.

So that our clients can act faster, smarter and bolder. Ultimately, success comes down to a simple truth:
You act better when you are sure.

New Housing

Residential Natural Gas End Use Study
2022 Results

ENBRIDGE

Customer & Market Insights
February 2023

2022 Residential New Housing Natural Gas End Use Study

Background

ENBRIDGE

Objectives

- Measure the penetration of natural gas appliances within the franchise “new build” customer base,
- Understand customer perceptions of the energy efficiency levels of their home and their familiarity with energy efficiency rating systems,
- Determine key factors in the home purchase decision,
- Gauge awareness of renewable natural gas, and
- Gauge awareness of solar panels, heat pumps and geothermal.

Methodology

- Respondents are customers who reside in single family dwellings built within the prior 18 months (built after May 2021) and are (mainly) responsible for making energy-related decisions for the home.
- Sponsor identified telephone interviews were fielded by Leger, a Canadian market research vendor, over the period December 16, 2022 - January 12, 2023.
- 801 interviews were completed across the total Enbridge Gas area. Total results are weighted by the total proportion of customers in each franchise area.
- Overall results yield a margin of error of +/-3.4% at the 95% confidence interval.
- Results prior to 2019 are for the LUG (Legacy Union Gas) franchise area only.

2022 Residential New Housing Natural Gas End Use Study

Region Definitions

- Unless otherwise noted, results in this report are based on the total Enbridge Gas area.
- The regions reported in this report are defined as follows:

Region Name	Includes
Northern	Northeast (DMA 46), Northwest (DMA 33)
Eastern	Eastern (DMA 22), DMA 65
GTA West	DMA 17, DMA 21, DMA 53
GTA Toronto	DMA 01
GTA East	DMA 35, DMA 45, DMA 47
Southeast	Waterloo/Brantford (DMA 7), Hamilton/Halton (DMA 16), DMA 76
Southwest	Windsor/Chatham (DMA 2), Sarnia/London (DMA 4)

Executive Summary (1 of 2)

- Natural gas continues to be used for home and water heating for the majority of newly built homes across the franchise area, though it is noted that home heating and water heating have been lower since 2020.
- Custom built homes are more likely to use natural gas for home and water heating compared to tract/production homes or homes that were already completed.
- The use of natural gas to fuel secondary appliances varies:
  - Prevalence of natural gas cooktop/stoves is up slightly in 2022 and is highest in the Southwest region (51%).
  - Compared to previous years, though the same proportion of fireplaces are being installed in new homes, fewer use natural gas.
- Smart Thermostats installed in new homes continue to trend upward and are likely to surpass programmable thermostats in the near future. Most thermostats were included with the home by the builder (80%).
- The proportion of tankless water heaters continues to grow – accounting for over half of all water heaters (56%). Ownership levels have increased over the past few years – and are comparable to 2019 results. The proportion who said builders offered a choice for the fuel type is stable.

Executive Summary (2 of 2)

- About 2-in-5 respondents believe that their home is built to a higher level of energy efficiency (EE) compared to the standard new home built to Ontario Building Code standards, and a similar proportion discussed the home's EE with the builder prior to making the purchasing decision. Most respondents who discussed the home's EE with the builder expressed satisfaction with the usefulness and amount of information provided.
- Among factors that influence the purchasing decision, this year EE is no longer in the top 5 mentions overall, but this varies by region.
- Familiarity with home EE rating systems has moved very little over the past several years, with the majority of respondents being unfamiliar or never having heard of most rating/certification systems. Familiarity with ENERGY STAR sees a declining trend over the past 4 years, and about 1-in-5 respondents indicate seeing some energy efficiency advertising during the process (though this mostly relates to products/appliances).
  - Solar Ready Homes continues to garner greater familiarity than Net Zero (and Net Zero Ready) and Passive Houses however, familiarity with Net Zero and Net Zero Ready homes continues to trend upward, while familiarity with Solar Ready Homes remains stable.

Overview of Natural Gas Appliances

- Natural gas continues to lead as the fuel of choice for home and water heating.
- The prevalence of natural gas appliances in new homes is quite similar across Regions for most appliances. Data for clothes dryers and barbecues was not collected in 2022.

	2014	2015	2016	2017	2018	2019	2020	2021	2022
			LUG			EGI	EGI	EGI	EGI

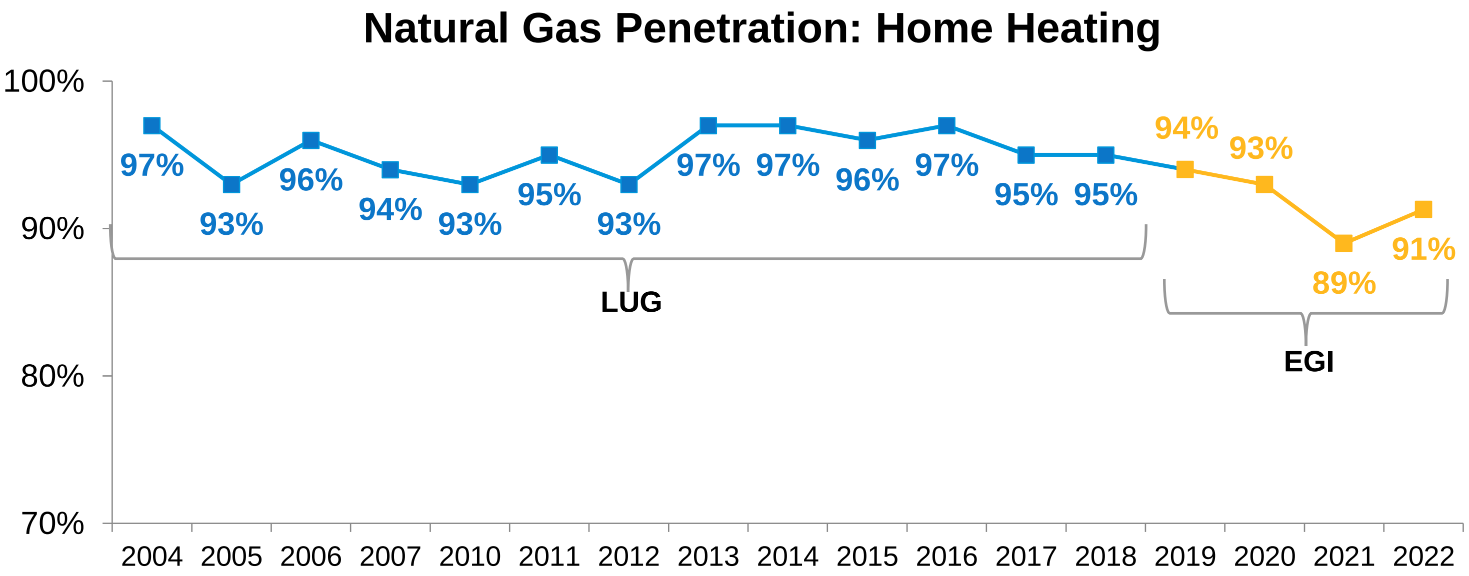
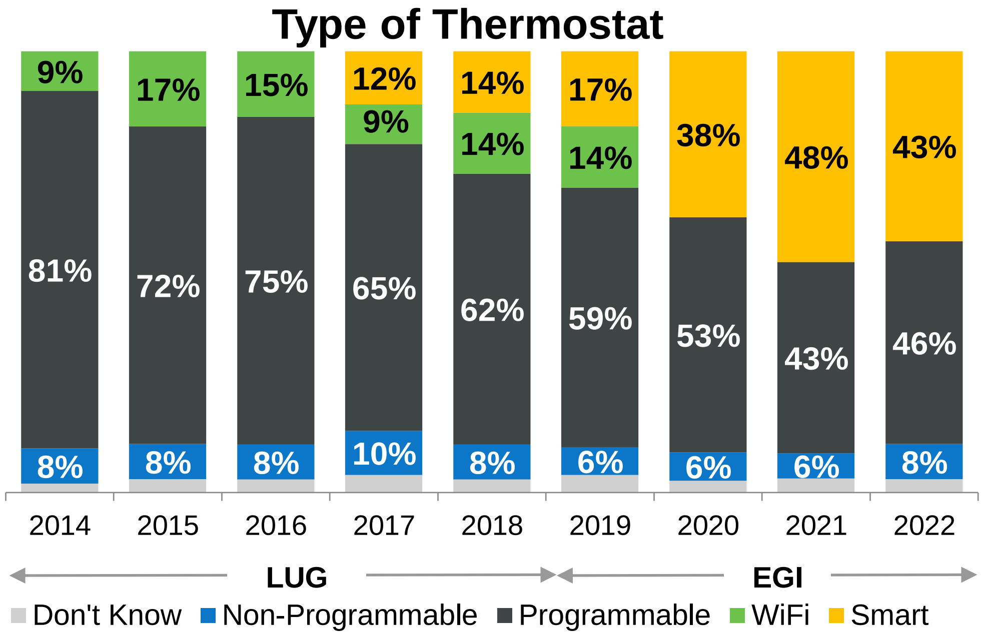
2011-2014 results for Outdoor BBQs restated on full population base size for consistent comparison.

2022 Residential New Housing Natural Gas End Use Study

Home Heating: Gas Adoption & Equipment

- Natural gas continues to be the dominant choice for home heating – the remainder tend to heat with electricity (8% for EGI).
- Heating equipment continues to be predominately forced air (66%) though it is noted that a sizable group of respondents are not aware of the specific type of heating equipment in their home (21% Don't Know).
  - A sizeable proportion of respondents in the Northern region reported a hydronic (Hot Water Radiators) (11%) or a combination system that provides both space heating and hot water (11%).
- Smart thermostats have been trending upward since Enbridge Gas started collecting information. Most thermostats were included with the home (80%), while the remainder were purchased and installed by the customer.





Q:What is the MAIN energy source for heating your home? Q: What type of natural gas furnace or heating system do you have? Is it a forced-air system, a hydronic system using a hot water radiator, a space heater, or a combination system where the water heater, rather than a furnace, heats your home? Q: Which of the following thermostats do you have? Q: Was this thermostat included with the home or did you purchase and install a new one when you moved?

Fireplace: Gas Adoption & Equipment

- The percentage of respondents with a fireplace remain unchanged. Just over half of respondents have a fireplace (57%) – among them, the majority have just one. Fireplaces are especially popular in GTA East (69%), Eastern (62%), and GTA West (60%).
- The majority have fireplaces are fueled natural gas (74%), followed by electricity. Electric fireplaces significantly increased in popularity over the past 4 years.
- Almost 1-in-6 respondents are likely (fairly/very/extremely) to install an indoor fireplace in the next 2 years – among them most would install electric (51%) followed by natural gas (44%).

Do you have an indoor fireplace?	EGI
Yes	57%
… One	51%
… Two or more	5%
No	43%

Any fueled by …	EGI

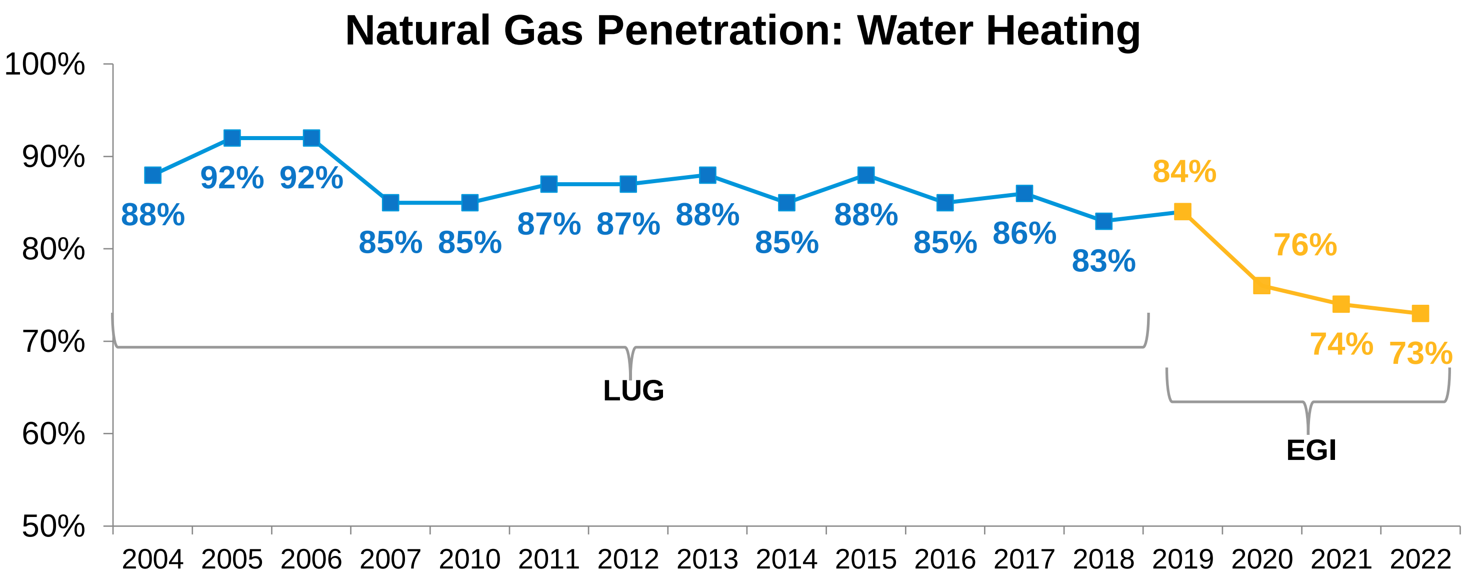
Don't Know	2%

Q: Are there any indoor working fireplaces in your home? Q: How many indoor working fireplaces do you have in your home? Q: And which energy source does (FIREPLACE #) use? Q: How likely are you to install an indoor fireplace in your home in the next 2 years? Are you ... Q: And what type of fireplace are you most likely to install?

2022 Residential New Housing Natural Gas End Use Study

Water Heating: Gas Adoption & Equipment

- Natural gas continues to be the most popular option for water heating (73%), though penetration continues to soften.
- About 1-in-5 respondents say their builder offered them a choice in the type of water heater installed. Respondents in the Northern region are more likely to be offered a choice of water heater (47%) followed by Southwest (27%).
- Over half of respondents have a tankless water heater - they are much more popular in the Eastern (68%) and Southwest (66%) regions.
- Ownership rose to over 1-in-4 (27%) compared to last year (14%).



Builder offered a choice between Natural Gas and Electricity …	EGI
Yes	17%

Q: What type of water heater do you have? Is it ...? Q: Did the builder allow you to choose the fuel you would prefer your water heater to be powered by?
Q: Does your water heater have a tank or is it tankless? Q: Is your water heater owned or rented?

2022 Residential New Housing Natural Gas End Use Study

Cooking: Gas Adoption & Equipment

ENBRIDGE

- About 3-in-4 respondents have a stove. Stoves are more prominent in the Eastern (84%) and Northern regions (86%). Cooktop/countertop ranges are more prevalent in the GTA Toronto region (56%).
- Natural gas cooking appliances are more popular in the Southwest region (51%), followed by the Southeast region (49%).
- Most stoves are bought new by the customer or are part of the builder's incentives. The same is true for cooktop/countertop ranges. Among those who had the stove included as part of the builder incentives, 10% paid extra for an upgrade.

Do you have a …	EGI
Stove	76%
Cooktop / Countertop range	25%
Separate built-in oven	12%

Fueled by Natural Gas (%)	EGI
Stove	40%
Cooktop / Countertop range	46%
Separate built-in oven	11%

Already in the home/Purchased with the home	1%

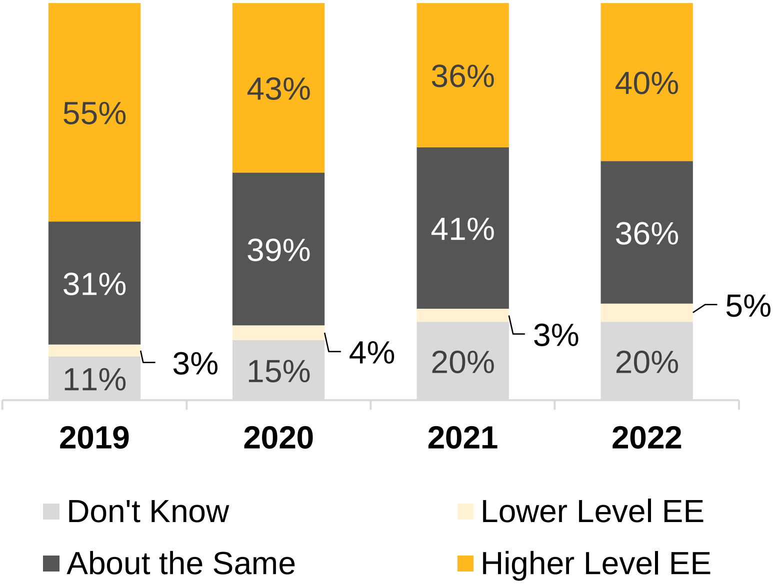
Q: Do you have a stove, or do you have a cook top with a separate oven? Q: Is your stove / cooktop / counter range / separate built-in oven fueled by natural gas or electricity? Q: Did you bring your stove / cooktop / counter range / separate built-in oven from a previous home or did you purchase a new one when you moved? Q: Was the stove / cooktop / counter range / separate built-in oven included as part of the builder incentives or did you have to pay extra for an upgrade? Q: Assuming your stove / cooktop / counter range / separate built-in oven does not break down, how likely are you to replace it in the next 2 years? Are you...? Q: What type of stove / cooktop / counter range / separate built-in oven are you most likely to replace your current appliance with?

2022 Residential New Housing Natural Gas End Use Study

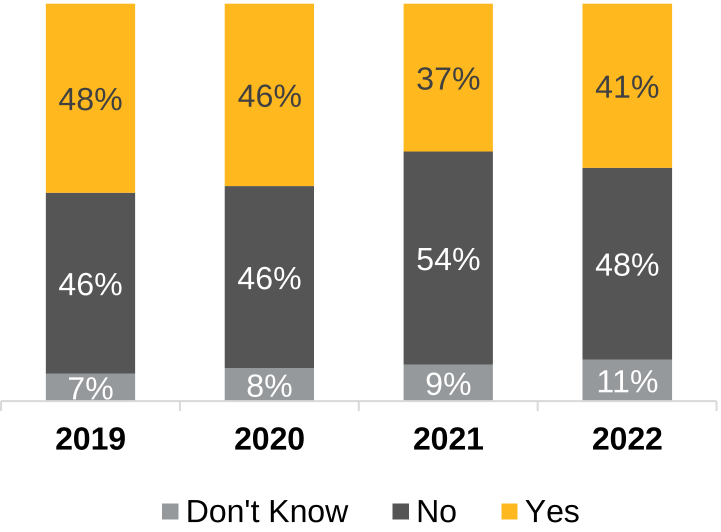
Energy Efficiency (EE) of the New Home

- Most respondents believe their new home is built at least to the same level of EE, if not higher, compared to a standard new home (built to Ontario Building Code standards). It is worth noting that perceptions of homes being built to a higher level of EE are showing signs of softening.
- The belief that the home is built to higher EE levels is significantly more prevalent among those who have a custom-built home (65% say their house is built to a higher level of EE compared to 40% overall).
- About 2-in-5 customers say their builder discussed the home's EE prior to making the purchase decision – this continues to vary by region

Level of Home EE (compared to standard new house built to OBC)



Builder discussed EE prior to making purchase decision



Region	Yes (%)
Northern	64%
Eastern	42%
GTA West	37%
GTA Toronto	22%
GTA East	37%
Southeast	36%
Southwest	51%

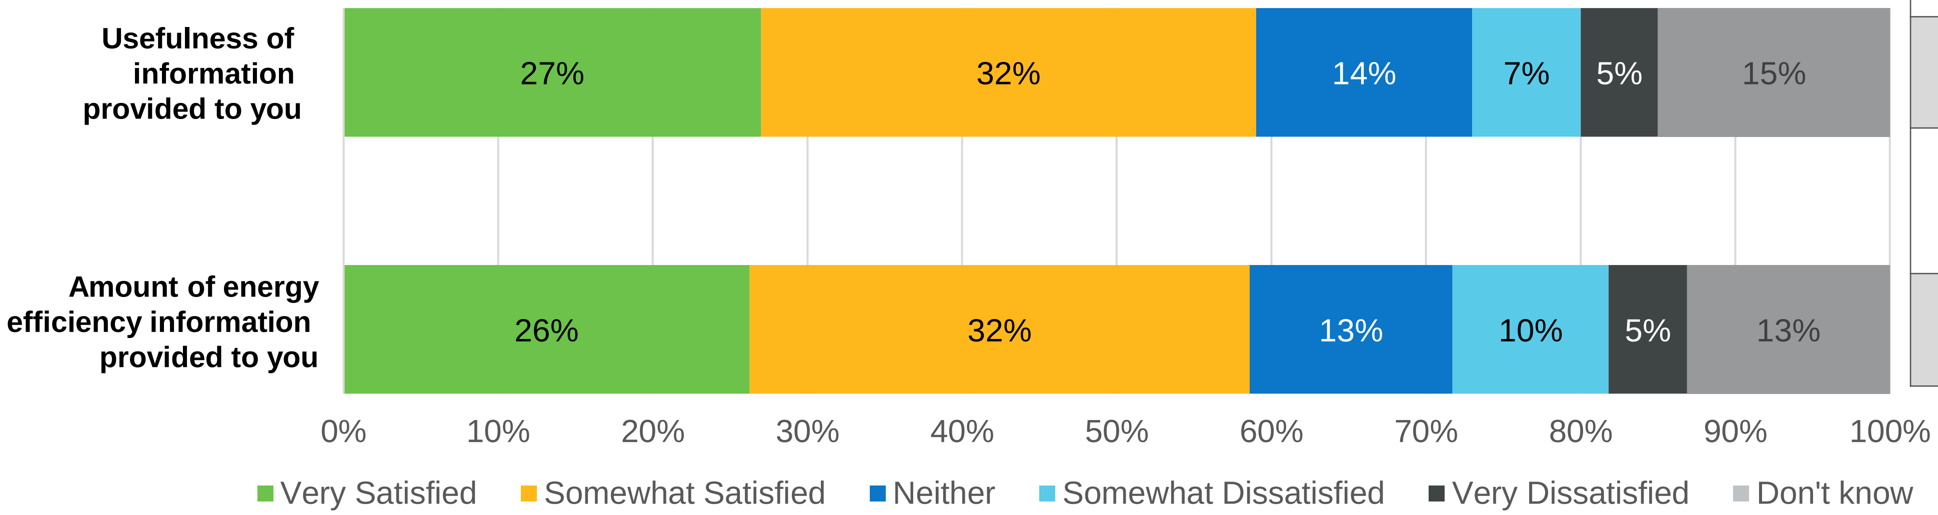
Q: To the best of your knowledge, and compared to the standard new home built to the Ontario Building Code standards, is your new home built to a… ? Q: Prior to making your purchase decision, did the builder discuss the home´s energy efficiency with you?

2022 Residential New Housing Natural Gas End Use Study

Home Energy Efficiency: Satisfaction with EE information provided

- Most respondents indicate satisfaction with the usefulness and amount of energy efficiency provided during the decision-making process (though more than 1-in-10 indicate some dissatisfaction).
- Satisfaction on these measures is stronger among Northern and Southwest regions. Similarly, satisfaction is also stronger among those who discussed energy efficiency with the builder.

Satisfaction with Energy Efficiency Information Provided During Decision-Making Process



Total Satisfied (Top 2 Box %)	
Total	The builder discussed EE with you (Yes)
59%	86%
59%	87%

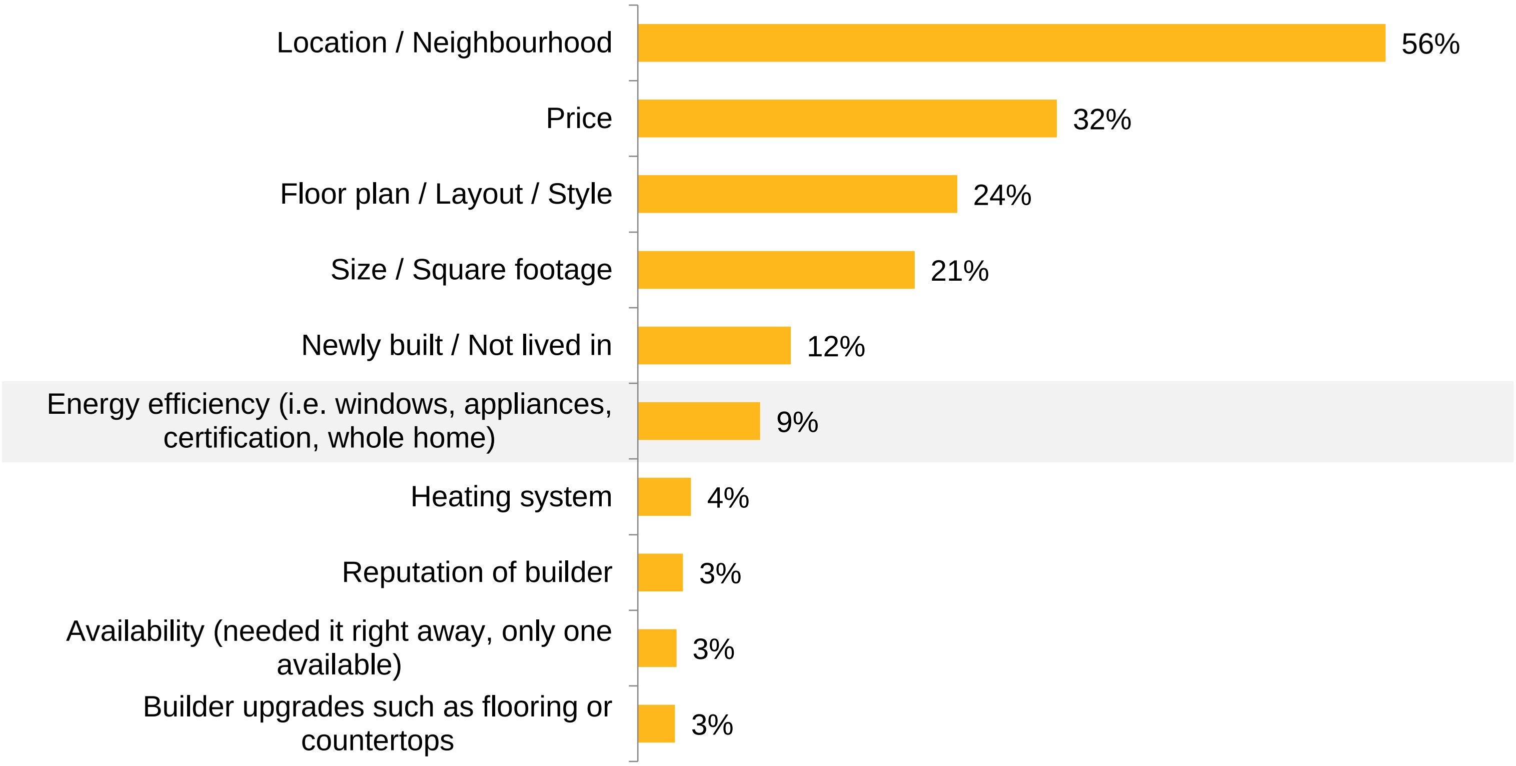
Q: Thinking about the energy efficiency information provided to you during the decision-making process, how satisfied were you with the following:

2022 Residential New Housing Natural Gas End Use Study

Factors in Home Purchase Decision

- Location, floor plan (as well as size) and price continue to be top factors that influence the home purchase decision.
- About 1-in-6 respondents identified energy efficiency as a top factor in the purchase decision. Energy efficiency is a more prominent factor for the Northern region.

Factors Important in Choosing a New Home *(Unaided)*



Region	Energy Efficiency (%)
Northern	19%
Eastern	13%
GTA West	7%
GTA Toronto	6%
GTA East	3%
Southeast	5%
Southwest	10%

Q: Please tell me what factors were important when you chose your new home?

2022 Residential New Housing Natural Gas End Use Study

Familiarity with Energy Rating Systems

ENBRIDGE

- Familiarity with energy rating systems is fairly stable compared to 2021 results.
- Respondents are most likely to be familiar with “ENERGY STAR” for new homes (55%) followed by “Solar Ready” homes (41%).
- Among certifications, respondents are most likely to believe their home is certified or labelled as “ENERGY STAR” (39%).

Familiarity with rating systems

(base: all new housing customers)

	Top 2 Box (Very + Somewhat)		Is your home certified? (base: all homes)	
	2022	2021	2022	2021
ENERGY STAR	55%	63%	39%	38%

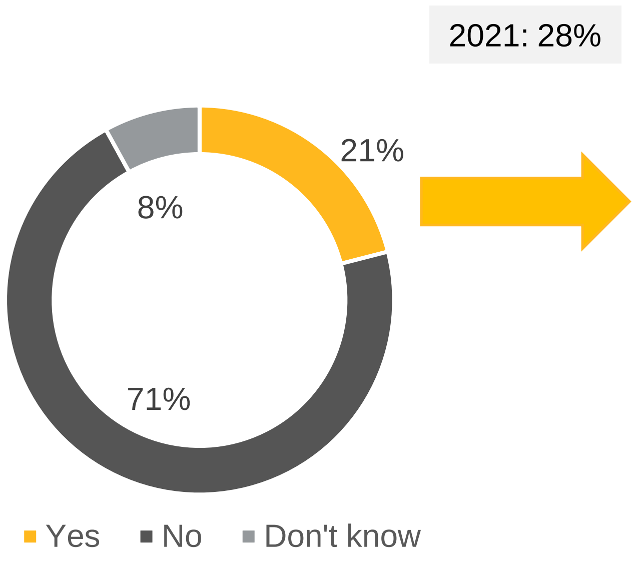
Q: How familiar would you say you are with the following … Q: Is your home certified or labelled by one the following …?

2022 Residential New Housing Natural Gas End Use Study

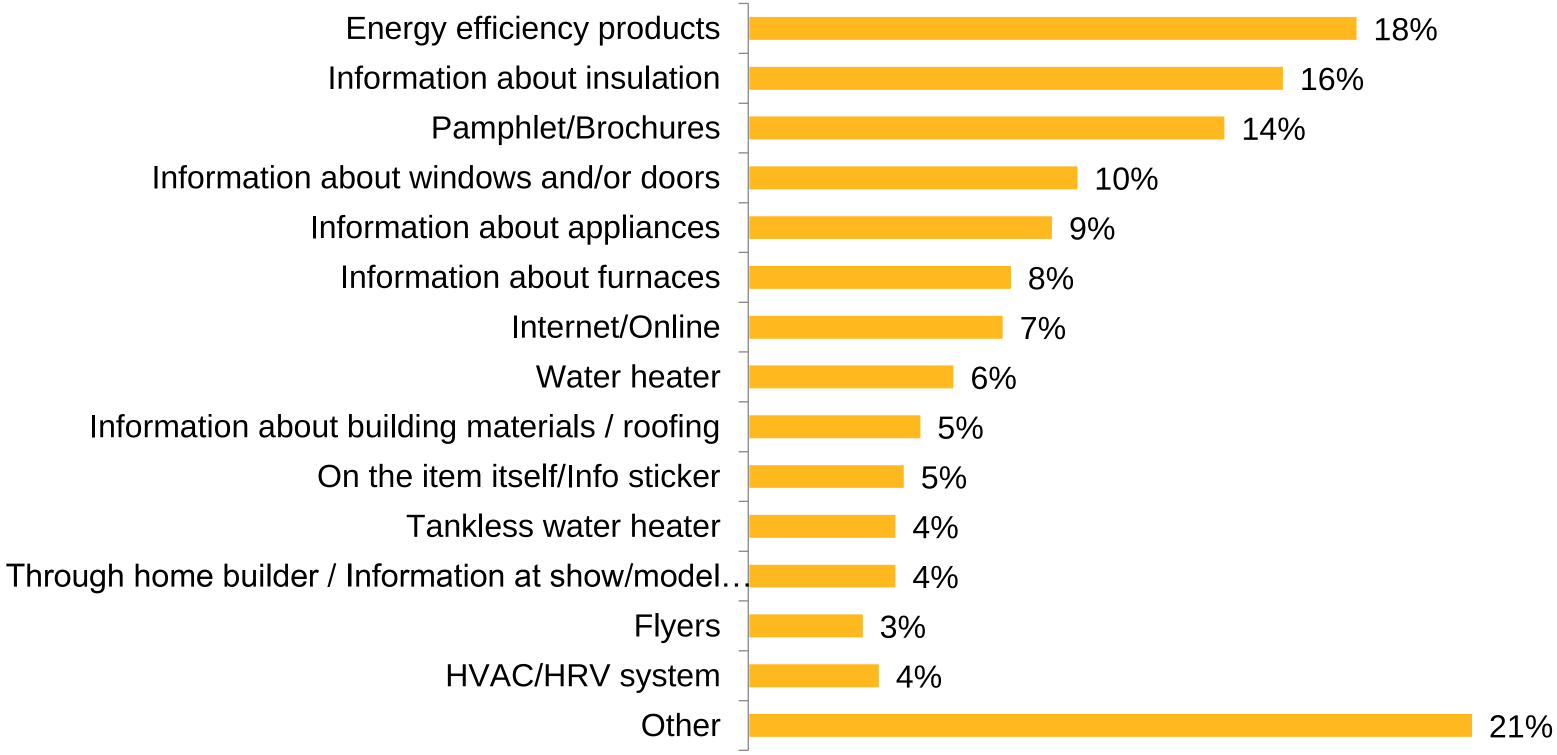
Energy Efficiency Advertising

- About 1-in-5 respondents saw some type of energy efficiency advertising during the home purchasing process. Recall level was strongest in the Northern (31%) and Southwest regions (25%).
- Respondents remember seeing information about energy efficiency products, information about insulation or through pamphlets and stickers, for example.

Saw any energy efficiency advertising for new homes
(base: all customers)



Recall of type of material
(base: all customers who saw advertising)



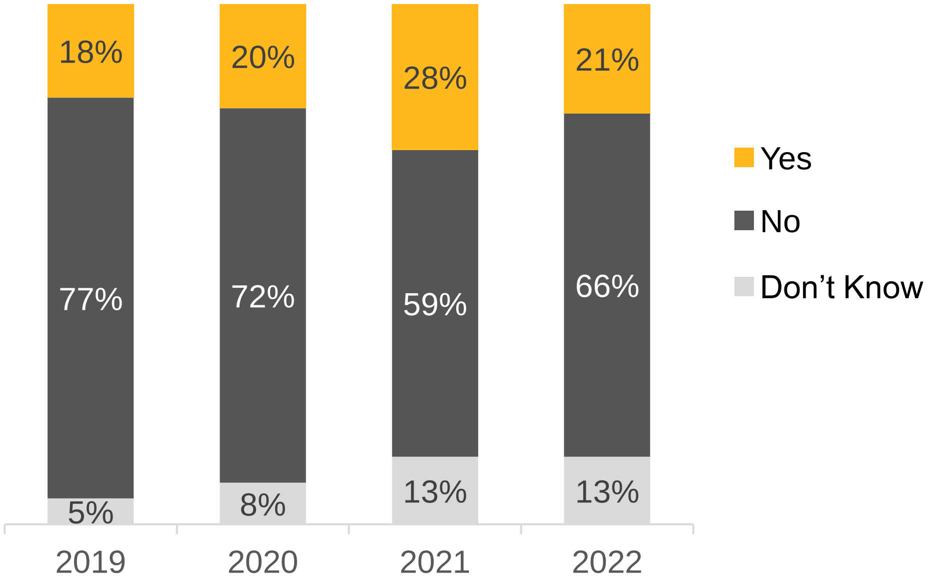
Q: Did you see any advertising material related to energy efficiency during the time you were making your purchase decision? Q: Can you recall what type of material you saw?

2022 Residential New Housing Natural Gas End Use Study

Home Energy Efficiency: Future Intentions

- A portion of respondents (21%) intend to make their new home more energy efficient in the next 2 years.
- The proportion is slightly higher among respondents in tract/production homes (26%) and larger homes that are more than 2,000 sq ft in size (49%).
- Age is also a factor – younger customers are more likely to plan to make their homes more energy efficient than older customers.
- A higher proportion of respondents in the GTA West region indicated plans to make their new homes more energy efficient (32%).

Plan to make home more energy efficient in the next 2 years



Age Group	Yes (%)
18 – 34	28%
35 – 54	24%
55 – 64	8%
65+	2%

Region	Yes (%)
Northern	8%
Eastern	21%
GTA West	32%
GTA Toronto	11%
GTA East	21%
Southeast	22%
Southwest	16%

Q: Do you have any plans to make your home more energy efficient within the next two years?

2022 Residential New Housing Natural Gas End Use Study

Awareness of Renewable Natural Gas (Biogas)

ENBRIDGE

- About 1-in-5 respondents are aware of renewable natural gas.
- Awareness level varies by age and region. Those in the Southwest region are more aware of biogas and respondents between the ages of 35-64 have a higher level of awareness of biogas as well.

Awareness of Renewable Natural Gas (Biogas)
(base: all new housing customers)

	Age Group	Aware of Biogas (Top 2 Box %)
	18 – 34	15%
	35 – 54	21%
	55 – 64	24%
	65+	19%

Region	Aware of Biogas (Top 2 Box %)
Northern	14%
Eastern	20%
GTA West	20%
GTA Toronto	17%
GTA East	14%
Southeast	18%
Southwest	25%

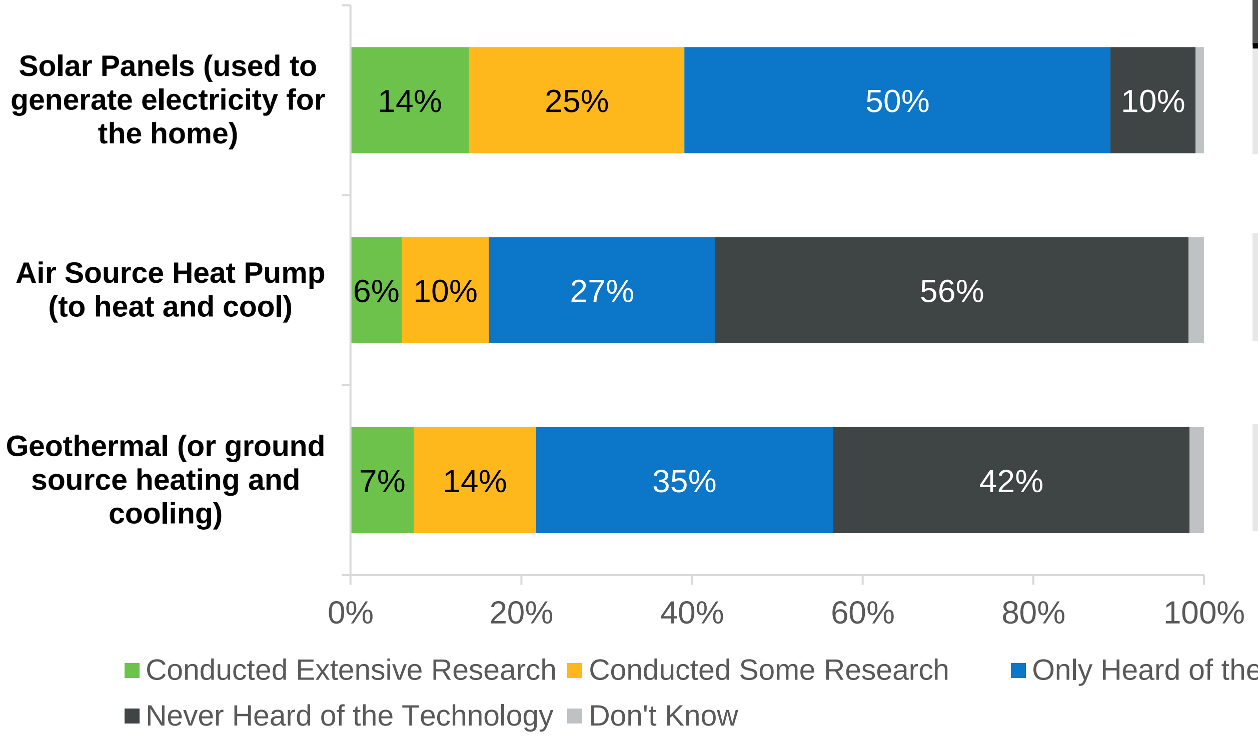
Q: How aware would you say that you are about renewable natural gas, this is sometimes also referred to as bio methane gas, or biogas?

2022 Residential New Housing Natural Gas End Use Study

Knowledge of Technology

- New for 2022 – respondents were asked to rate their level of knowledge with three technologies.
- Respondents in the Northern region were most likely to have conducted at least some research on heat pumps.

Knowledge of Technology for the Home
(base: all new housing customers)



Top 2 Box (Conducted Extensive/Some Research)
39%
16%
22%

Region	Never Heard of the Technology (%)		
	Solar Panel	Air Source Heat Pump	Geo-Thermal
Northern	6%	36%	17%
Eastern	7%	48%	38%
GTA West	12%	72%	51%
GTA Toronto	33%	61%	67%
GTA East	10%	60%	39%
Southeast	11%	63%	48%
Southwest	10%	50%	40%

Q: Please tell me which of the following statements best describe your knowledge with the following technologies?

Toronto, ON | M5E 1A7

Survey Design

Method: Online and Telephone
Language: English
Sample Size: See table below
Sample Frame: Residential Customers who are responsible for paying the bill and Commercial Customers who are responsible for decisions regarding their natural gas account

Sample Design

Customer Segments	Methodology	Sample Size
Residential	Phone and Online	2400 online, 600 phone
Commercial (Small, Billed)	Phone and Online	200 total
Commercial (Medium/Large, Billed)	Phone and Online	200 total

Sample Variables

1. **Type of customer (CUSTOMER) (Residential (CUSTOMER=1) vs Commercial (CUSTOMER=2))**
2. **Type of Commercial customer (Small vs Medium/Large)**
3. **For Residential customers – E-billing (Y/N)**
4. **Consumption**
5. **Legacy Utility**
6. **Region**

Notes:

- This document contains the survey questions asked of both residential and commercial customers. There are some minor differences in wording and in the actual questions, as noted herein.
- This document contains both the online (longer) and telephone (core questions only) versions of the survey. Minor wording changes were made in the programming of the surveys to make the language appropriate for each mode of data collection. For example, "I am going to read you a list…" in the telephone version was changed to "Below is a list …" in the online version.

Email Invitation Sent by Enbridge Gas – Residential

Subject: Enbridge Gas is planning! Your Opinion Matters!

Dear [FULL NAME FROM SAMPLE],

Enbridge Gas Inc. is undertaking a Customer Engagement process that is designed to understand customers' needs and preferences as it develops its investment plans for 2024 and beyond. The goal of this process is to understand the specific outcomes that are valued by customers like you and to consider these when making key business decisions. Your rates may be impacted by this plan so please take this opportunity to have a say.

For this survey, we would like to hear from someone in your household who is responsible or jointly responsible for decisions regarding natural gas such as viewing and paying your natural gas bill. If that is not you, please forward this email to the appropriate person.

As an Enbridge Gas customer, you are invited to complete an online survey. This survey will take approximately 15 minutes to complete, and if you're unable to complete it in one session, you can pick up where you left off by clicking the survey link again – your progress will be saved. We kindly ask that you complete the survey prior to August 22, 2021 by clicking the link below.

Start Survey

To ensure all responses are kept anonymous and confidential, all survey responses will be collected by INNOVATIVE Research Group, an independent market research company. If you would like to verify the authenticity of this survey or would like more information about the survey you can contact marketresearch@enbridge.com.

If you have any problems with the above link please copy and paste the following address into your web browser.

Introduction – Telephone Only

[IF RESIDENTIAL CUSTOMER (CUSTOMER=1)]

Hello, my name is ____. I'm calling from Innovative Research Group, a national public opinion research firm. Today, we are conducting a customer survey for Enbridge Gas about your natural gas service as Enbridge Gas develops its investment plans for 2024 and beyond.

I assure you we are not selling anything; we are only interested in your opinions and all of your answers will be kept strictly confidential. This call will take approximately 20 minutes and may be monitored or recorded for quality assurance purposes.

Can I speak with the person in your household who is responsible or jointly responsible for decisions regarding natural gas such as viewing and paying your natural gas bill?

01	Yes – Continue	
02	No – Ask to speak with person	
03	Unavailable – Schedule call back	
97	Do not receive a natural gas bill	**[THANK & TERMINATE]**
98	DK or REFUSE	**[THANK & TERMINATE]**

Thank you. I have some questions to see if you qualify for this study.

[IF COMMERCIAL CUSTOMER (CUSTOMER=2)]

Hello, my name is ____. I'm calling from Innovative Research Group, a national public opinion research firm. Today, we are conducting a customer survey for Enbridge Gas about your natural gas service as Enbridge Gas develops its investment plans for 2024 and beyond.

I assure you we are not selling anything; we are only interested in your opinions and all of your answers will be kept strictly confidential. This call will take approximately 20 minutes and may be monitored or recorded for quality assurance purposes. In appreciation of your time, upon completion of the survey, you will be entered into a draw for one of two $500 cash prizes.

Can I speak with the person in your organization who is responsible or jointly responsible for decisions regarding your natural gas account?

01	Yes – Continue	
02	No – Ask to speak with person	
03	Unavailable – Schedule call back	
97	Do not receive a natural gas bill	**[THANK & TERMINATE]**
98	DK or REFUSE	**[THANK & TERMINATE]**

Thank you. I have some questions to see if you qualify for this study.

A. SCREENER

Screening for qualified respondents

[ONLY ASK A1-A3 IF RESIDENTIAL CUSTOMER (CUSTOMER=1)]

A1. In what year were you born?

	[RANGE 1850-2021]	**[SKIP NEXT QUESTION]**
99	Prefer not to answer	

A2. Which of the following age categories do you fall into?

96	Under 18	**[THANK & TERMINATE]**
01	18 to 24	
02	25 to 44	
03	45 to 64	
04	65 to 74	
05	75 or older	
99	Prefer not to answer	

A3. Do you, or does anyone else in your immediate family work in any of the following areas?

01	Marketing research	**[THANK & TERMINATE]**
02	Energy providers, such as natural gas, oil, electricity, propane	
03	A gas equipment or appliance contractor or retailer	
04	Energy sector regulator or intervener	
97	None of the above	**[MUTUALLY EXCLUSIVE]**

[ONLY ASK A4-A6 IF COMMERCIAL CUSTOMER (CUSTOMER=2)]

A4. To confirm, does your organization receive a natural gas bill from Enbridge Gas?

01	Yes	
02	No	**[THANK & TERMINATE**: Thank you for your interest, but this survey is for customers who receive and pay their natural gas bill]
99	Don't know	

A5. Are you responsible or partially responsible for decisions regarding your natural gas account for your organization?

01	Yes	**[SKIP TO INTRODUCTION]**
02	No	
99	Don't know	

Note: in the online version, the survey terminates if the person selects "no" or "don't know" in A5.

Note: A6 is only asked in the telephone survey.

A6. May I speak to the person who is responsible or partially responsible for decisions regarding your natural gas account for your organization?

01	Yes	
02	No	**[THANK & TERMINATE]**
99	Don't know	**[THANK & TERMINATE]**

And … can I have their …

First Name _____________

Last Name _____________

Title/Position ___________

Phone Number __________

ASK to be transferred …

- **if transferred → go to INTRODUCTION**
- **if not transferred → Thank & Add to Callback List**

B. INTRODUCTION

Enbridge Gas is preparing its business plan to be implemented in 2024 and would like to hear your feedback on a number of things that it is considering in this plan.

Near the end of this survey, you will have the opportunity to provide any additional feedback that you would like to share with Enbridge Gas.

Throughout this survey, if you aren't sure what your response is, please say so. Thank you in advance for your feedback and participation!

C. SATISFACTION

Let's talk about your overall experience with Enbridge Gas.

C7. Taking into consideration all aspects of your utility service experience, how satisfied are you with your Enbridge Gas service?

01	Very satisfied	
02	Somewhat satisfied	
03	Neither satisfied nor dissatisfied	
04	Somewhat dissatisfied	
05	Very dissatisfied	
99	I Don't know	

[ASK C8 IF CUSTOMER=2 (COMMERCIAL) AND 03, 04 OR 05 AT C7]

C8. Is there anything in particular Enbridge Gas can do to improve their service?
[OPEN-ENDED]

D. CUSTOMER OUTCOMES

In considering its business plan to be implemented starting in 2024, Enbridge Gas must make many decisions. We would like your feedback on the outcomes you would like Enbridge Gas to focus on in its plan. Outcomes are the goals and priorities that matter to you.

There is a list of broad outcomes that Enbridge Gas will need to consider. Using a scale from 0 to 10, where 0 means "not at all important" and 10 means "extremely important", please tell us how important each one is to you. Be sure to save a rating of 10 for those items that are most important to you. (IF NECESSARY: If you don't know just say so.) How about… (read list) (Repeat scale as necessary)

[RANDOMIZE]
D9. Reliably delivering natural gas
D10. Safely delivering natural gas
D11. Making good use of the money customers pay
D12. Providing affordable pricing
D13. Providing predictable pricing
D14. Providing dependable customer service
D15. Minimizing any impacts on the environment
D16. Being socially responsible
D17. Supporting the growth of Ontario's economy

00	Not at all important	
01-09		
10	Extremely important	
99	Don't know	

D18. Sometimes we need to choose between priorities that are all considered important. Thinking about these outcomes, which one would you say is most important to you as a customer? If you don't know, just say so.

[USE THE SAME RANDOMIZATION ORDER AT D9-D17]

01	Reliably delivering natural gas	
02	Safely delivering natural gas	
03	Making good use of the money customers pay	
04	Providing affordable pricing	
05	Providing predictable pricing	
06	Providing dependable customer service	
07	Minimizing any impacts on the environment	
08	Being socially responsible	
09	Supporting the growth of Ontario's economy	
99	Don't know	**[SKIP TO NEXT SECTION]**

D19. And which one is second most important to you?
[INSERT LIST, REMOVE ITEM SELECTED AT D18]

D20. And, finally, which one is third most important to you?
[INSERT LIST, REMOVE ITEM SELECTED AT D18 and D19]

E. ASSET MANAGEMENT

Thinking about the level of safety, reliability, and customer service you receive from Enbridge Gas would you like to see the company invest in maintaining or invest in improving upon the current level? How about [INSERT ITEM]? Should Enbridge Gas [INSERT RESPONSE OPTIONS]?

01	Invest in maintaining the current level	
02	Invest in improving the current level	
99	Don't know	

[RANDOMIZE E21-E23]

E21. Safety
E22. Reliability
E23. Customer service

E24. Thinking generally about Enbridge Gas' budget for replacing pipelines and equipment that deliver gas to your **[home/organization]**, which of the following statements best represents your point of view?

[RANDOMIZE 01 AND 02]

01	Enbridge Gas should look at the long-term health of the system and spread costs out evenly over time even if that means higher rates now
02	Enbridge Gas should focus on the immediate impact on rates and only spend what it takes to keep the system in good order now to keep rates low, even if that means an increase in rates later that may end up being more expensive for customers overall
98	I don't have an opinion on this
99	Don't know

F. RATES

Note: F25 and F26, F27 and their preambles were only asked in the online survey.

Enbridge Gas is the only distributor of natural gas service in your area and there is not a competitive market in which rates are determined. For this reason, the Ontario Energy Board (OEB) reviews and approves all Enbridge Gas costs (that is, the costs to operate), and also reviews and approves how customer rates should be calculated.

Enbridge Gas incurs two types of costs in delivering natural gas to your **[home/organization]**, those that are variable and those that are fixed.

One of these is the cost of the natural gas that customers use. This cost is determined by the market and will be passed on to you based on your measured consumption of natural gas.

The fixed costs that Enbridge Gas incurs can be divided into two groups.

[RANDOMIZE PREAMBLE AND F25 WITH PREAMBLE AND F26]

One type of fixed cost is that of being connected to the network. This includes the cost of the pipeline, the pressure regulator, the natural gas meter, meter reading, billing, the contact centre and operations support. These costs are fixed for Enbridge Gas, and are similar for each customer and do not change based on the size of the customer.

F25. How do you feel **[residential/business]** customers like you should be billed for these costs of being connected to the network?

[RANDOMIZE 01 AND 02]

01	Each customer should pay a portion based on the amount of natural gas they use
02	The cost should be paid equally by customers of the same type (i.e. residential or business)
98	I don't have an opinion on this
99	Don't know

One type of fixed cost is that of the network capacity. This includes the cost of the network infrastructure, its operation, maintenance, and natural gas storage to meet the peak demand of customers on the coldest days of the year. These costs are fixed for Enbridge Gas, but may vary for each customer based on their individual level of peak demand.

F26. How do you feel **[residential/business]** customers like you should be billed for these costs of accessing network capacity?

[RANDOMIZE 01 AND 02]

01	Each customer should pay a portion based on the amount of natural gas they use on the coldest days of the year
02	The cost should be paid equally by customers of the same type (i.e. residential or business)
98	I don't have an opinion on this
99	Don't know

[IF RESIDENTIAL CUSTOMER (CUSTOMER=1)]

Enbridge Gas, today, is a combination of Legacy Union Gas and Legacy Enbridge Gas Distribution. Currently there are three rate zones which result in customers paying different rates depending on where you are located in the province and which company you were served by prior to the merger. Enbridge Gas is considering the option of offering one rate zone for its different types of customers, regardless of location within Ontario. There are many benefits of one rate zone including similar charges for similar customers, a consistent customer experience, and reduced administrative costs.

One rate zone could result in a change to the amount you pay today for your natural gas service. Approximately 60% of customers will see very little change to the amount they pay today. Approximately 30% of customers will see an increase of roughly 5% (or roughly $5 per month). Approximately 10% of customers will see a decrease of roughly 10% (or roughly $10 per month).

F27. Considering this, which of the following is closest to your view?
[RANDOMIZE 01 AND 02]

01	Enbridge Gas should implement a single rate zone and make the rates for natural gas service the same across Ontario
02	Enbridge Gas should leave the rate zones as they are where customers pay different rates for natural gas service based on where they live
98	I don’t have an opinion on this
99	Don’t know

Note: F28 was asked in the telephone and online versions of the survey.

[IF COMMERCIAL CUSTOMER (CUSTOMER=2)]

Enbridge Gas, today, is a combination of Legacy Union Gas and Legacy Enbridge Gas Distribution. Currently there are three rate zones which result in customers paying different rates depending on where you are located in the province and which company you were served by prior to the merger. Enbridge Gas is considering the option of offering one rate zone for its different types of customers, regardless of location within Ontario. There are many benefits of one rate zone including similar charges for similar customers, a consistent customer experience, and reduced administrative costs.

One rate zone could result in a change to the amount you pay today for your natural gas service. The impact is dependent on the amount of natural gas you use but could range from +5% to -10% of the amount you pay today.

F28. Considering this, which of the following is closest to your view? If you don’t have an opinion or are not sure, please say so.

01	Enbridge Gas should implement a single rate zone and make the rates for natural gas service the same across Ontario

02	Enbridge Gas should leave the rate zones as they are where customers pay different rates for natural gas service based on where they live
98	I don't have an opinion on this
99	Don't know

G. Customer Care

G29. When you consider options for paying your bill, how important is it to you that Enbridge Gas provides customers the option to pay their bills by credit card?

01	Very important	
02	Somewhat important	
03	Not very important	
04	Not at all important	
99	Don't know	

G30. Credit card companies charge Enbridge Gas a fee for any payments that customers make by credit card. Do you believe that the costs of those credit card charges should be spread out among all customers, or should customers who choose to pay by credit card pay for these charges? If you don't have an opinion on this question or are not sure just say so.

[ROTATE 01 AND 02]

01	Spread out among all customers	
02	Paid by the customer choosing to pay by credit card	
98	I don't have an opinion on this	
99	Don't know	

[ASK G31 IF CUSTOMER=2 (COMMERCIAL)]

G31. One of the tools that Enbridge Gas offers customers is a customer service team that can respond to phone calls or emails. How important is it to you that business customers like you have a dedicated team to respond to business customers specifically?

01	Very important	
02	Somewhat important	
03	Not very important	
04	Not at all important	
99	Don't know	

H. New or Harmonized Programs and Policies

Note: H32, H33 and H34 and their corresponding preambles were only asked in the online survey.

Cross Bore

While rare, it is possible that a natural gas line may intersect with a sewer line. When this happens, it is called a utility cross bore. This is unintentionally created when a natural gas line is installed through a process of trenchless drilling. Trenchless drilling is used to avoid creating open trenches that can disturb roads, driveways, and gardens, but it relies on locates of existing utilities which may not always be accurate for various reasons. While a utility cross bore may not pose an immediate risk, it may become an issue if a sewer line needs to be cleared in the case of a blockage.

Enbridge Gas intends to implement a program to proactively inspect and resolve any utility cross bores that may have been installed in the past. Also, a program has been implemented to prevent new installations from creating new cross bores even though that will increase the cost of the installation and require additional restoration work.

H32. These programs to proactively inspect and resolve existing cross bores and to prevent the creation of cross bores during the completion of new installations combined would cost customers $0.50 per year for 5 years. Which of the following is closest to your view?

[RANDOMIZE 01 AND 02]

01	Enbridge Gas should implement the proactive program and continue with the preventative program to eliminate existing cross bores and prevent any new cross bores to maintain safety, even though it costs more.
02	Enbridge Gas should leave its processes of trenchless drilling as is and only resolve those that come up as an issue arises, even though this may create additional cross bores which increases safety risk.
98	I don't have an opinion on this
99	Don't know

Infill Policy – RESIDENTIAL CUSTOMERS ONLY

[ASK IF CUSTOMER=1 (RESIDENTIAL)]

When an existing home is located near a main line, it may receive a natural gas connection through the residential infill policy. Under regulations, existing customers cannot be charged for any of these expenses.

According to the policy, connections are provided to homeowners at no cost (because forecasted revenues cover a portion of the cost to connect) up to a certain distance from the home to the main line. The cost for any extra distance must be paid by the homeowner. These costs can be structured in a number of different ways, and currently vary depending on whether someone is in the Legacy Enbridge Gas or Legacy Union Gas area.

H33. Enbridge Gas would like to create a policy that is the same across the entire territory and would like to ask you for your opinion. Thinking about general principles, which of the following approaches is closest to your view?

[RANDOMIZE 01 THROUGH 05]

01	Enbridge Gas should offer a shorter distance of the pipe at no cost, and charge a lower cost per meter for the remaining length to the homeowner
02	Enbridge Gas should offer a longer distance of the pipe at no cost, and charge a higher cost per meter for the remaining length to the homeowner
03	Enbridge Gas should determine a flat rate that would require each homeowner to pay the same amount regardless of the length of the pipeline required
04	Enbridge Gas should offer a cost per meter for the entire length of the pipe
05	Enbridge Gas should develop a full feasibility study for each new attachment, even if this requires additional resources, and charge homeowners the actual cost of the installation
98	I don't have an opinion on this
99	Don't know

Cut off at Main – RESIDENTIAL CUSTOMERS ONLY

[ASK IF CUSTOMER=1 (RESIDENTIAL)]

When a customer wants to cut off the natural gas service, for example, when a home is being demolished, when there has been a fire, or when a customer no longer wishes to receive natural gas service, the service is cut off at the main pipeline. This work is performed by a maintenance and construction crew. After that, in many cases a new home can be attached again at the same location. Not doing this work creates abandoned natural gas lines and meters, which may pose a safety risk.

Any costs not charged to the homeowner are covered by Enbridge Gas, which means all ratepayers contribute to these costs through their rates.

H34. Enbridge Gas would like to create a policy that is the same across the entire territory and would like to ask you for your opinion. Which of the following is closest to your view?

[RANDOMLY FLIP ORDER OF FIRST 3 OPTIONS]

01	Enbridge Gas should charge the homeowner the full cost of the cut off at main.
02	Enbridge Gas should charge a portion of the cost to the homeowner, ensuring that costs are not too prohibitive that natural gas lines are not left in an unsafe condition.
03	Enbridge Gas should not charge the homeowner for these costs of the cut off at main. These costs should be shared among all ratepayers.
98	I don't have an opinion on this
99	Don't know

Automated Meter Infrastructure – ASK ALL

The gas meter technology currently used by Enbridge Gas has not changed in many years. There are new, advanced, meters available that would send the usage information to Enbridge Gas through a wireless network, similar to your electricity or water usage meters.

Please tell me how important each of these features is to you.

01	Very important
02	Somewhat important
03	Not very important
04	Not at all important
99	Don't know

[RANDOMIZE]

H35. Enable Enbridge Gas to remotely and automatically shutoff gas supply if needed in the event of an emergency
H36. Enable Enbridge Gas to better detect and respond to possible gas leaks
H37. Lower GHG emissions by reducing meter reader vehicles on the road
H38. Enable access to more accurate, hourly updates to better understand and manage your natural gas use
H39. Eliminate Enbridge Gas' need to regularly access your property to conduct a meter reading
H40. Eliminate the need for estimated meter reads (where your usage and bill are estimated and adjusted in a following month)

I. ENERGY TRANSITION

Let's look ahead and think about the future.

Thinking about everything you know today, and considering any changes that you might expect in the future as it relates to all the energy choices available to you, how much natural gas do you think someone like you will be using in **(INSERT TIME)**, compared to today? How about in **(INSERT other TIME)**?

01	Significantly less
02	Somewhat less
03	About the same
04	Somewhat more
05	Significantly more
99	Don't know

[DO NOT RANDOMIZE]

I41. 10 years
I42. 30 years

When you consider options and solutions to reduce impacts on the environment, please tell me whether you agree or disagree with the following statements.

01	Completely agree
02	Somewhat agree
03	Neither agree nor disagree
04	Somewhat disagree
05	Completely disagree
99	Don't know

[RANDOMIZE]

I43. Enbridge Gas should actively be investing in low-carbon options and solutions that would help reduce impacts on the environment
I44. Given its experience, Enbridge Gas is well positioned to support the development of low-carbon options and solutions
I45. I look to Enbridge Gas to help develop offerings and new solutions that will help me reduce my natural gas usage

[END BATTERY]

Note: I46, I47, I48 and I49 and their corresponding preambles were only asked in the online survey.

Let's focus on some ways that Enbridge Gas can help minimize any impacts on the environment. Following are descriptions of three potential ways in which Enbridge Gas can minimize the impact of natural gas on the environment.

[RANDOMIZE PREAMBLE+I46, PREAMBLE+I47 AND PREAMBLE+I48]

Reduce demand / avoid new infrastructure (IRP)

When considering new or expanded pipeline projects, Enbridge Gas is required to evaluate whether alternatives are available that would eliminate the need for the project altogether. This would mean looking for ways to help customers reduce the amount of natural gas they use through conservation programs or other options. Examples could include incentives for installing new windows and doors, adding insulation, or upgrading your furnace or water heater. It could also include delivering compressed natural gas by truck or train to locations where pipelines do not exist. Other alternatives that reduce the need for natural gas might include geothermal heating and cooling, or air source heat pumps.

I46. How much, if anything, would you be willing to pay per year for Enbridge Gas to develop solutions in natural gas conservation and other non-pipeline alternatives instead of new pipeline or capacity projects?

[RANDOMIZE SCALE IN ASCENDING VS DESCENDING ORDER]

Residential response choices are in blue

Commercial response choices are in red

01	$1.00/month or $12.00 extra per year / 2% added to the delivery portion of your bill

97	I would not be willing to pay anything extra
99	Don't know

Low-carbon options / greening the gas

Other options Enbridge Gas may invest in that focus on reducing the amount of greenhouse gas emissions can include options that "green the gas." An example of this would be blending traditional natural gas with greener sources of gas, such as renewable natural gas derived from organic waste from farms, landfills, and water treatment plants, or hydrogen gas derived from using surplus electrical energy that is converted to hydrogen gas through electrolysis technology.

I47. How much, if anything, would you be willing to pay per year for Enbridge Gas to develop solutions in greening the gas to reduce the greenhouse gas emissions from the use of natural gas?

[RANDOMIZE SCALE IN ASCENDING VS DESCENDING ORDER]

01	$1.00/month or $12.00 extra per year / 2% added to the delivery portion of your bill
02	$2.00/month or $24.00 extra per year / 4% added to the delivery portion of your bill
03	$4.00/month or $48.00 extra per year / 8% added to the delivery portion of your bill
04	$10.00/month or $120.00 extra per year / 10% added to the delivery portion of your bill

97	I would not be willing to pay anything extra
99	Don't know

Certified natural gas

Enbridge Gas is looking at options to ensure that the natural gas it purchases is responsibly sourced. This means the companies who produce the natural gas adhere to higher standards than the minimum government standards. This relates to areas such as minimizing impacts to air and water quality, lowering carbon emissions during production, and stronger engagement with Indigenous communities, etc. While it may not always cost more, it is possible that this responsibly sourced natural gas comes at a small premium and would cost customers a little bit more.

I49. Considering this, would you support Enbridge Gas sourcing this type of natural gas to deliver to you, even if it comes at a small premium?

01	Definitely support
02	Somewhat support
03	Neither support nor oppose
04	Somewhat oppose
05	Definitely oppose
99	Don’t know

Customer Engagement

Phase III: Workbook

GS (Residential) Workbook

December 2021

About this Customer Engagement

Welcome to the Enbridge Gas Customer Engagement!

As Enbridge Gas plans for the future, it needs your input into choices that will impact the services you receive and the rates you pay.

- Enbridge Gas is looking for your feedback on its draft investment plan for 2024 and beyond to ensure that the plan reflects your needs and preferences.
- You don't need to be a natural gas expert to complete this workbook. It focuses on basic choices between outcomes that matter to you and provides the background information you need to answer the questions.
- The most important part of this workbook are the survey questions. While your view may not always align exactly with any of the options presented, please select the one that is closest. If you truly aren't sure, select the "don't know" option.

This workbook will take approximately 20-30 minutes to complete. Your progress will be saved as you move through the workbook, meaning you can leave and return to complete it at any time.

Those who complete the questions that follow will be invited to enter a draw to win one of four $250 cash prizes.

All individual responses will be kept confidential. Innovative Research Group (INNOVATIVE), an independent research company, has been hired to gather your feedback.

If you are reading this on a smaller mobile device, you may wish to access the survey from a tablet, desktop or laptop instead, so that it is easier to read.

Background

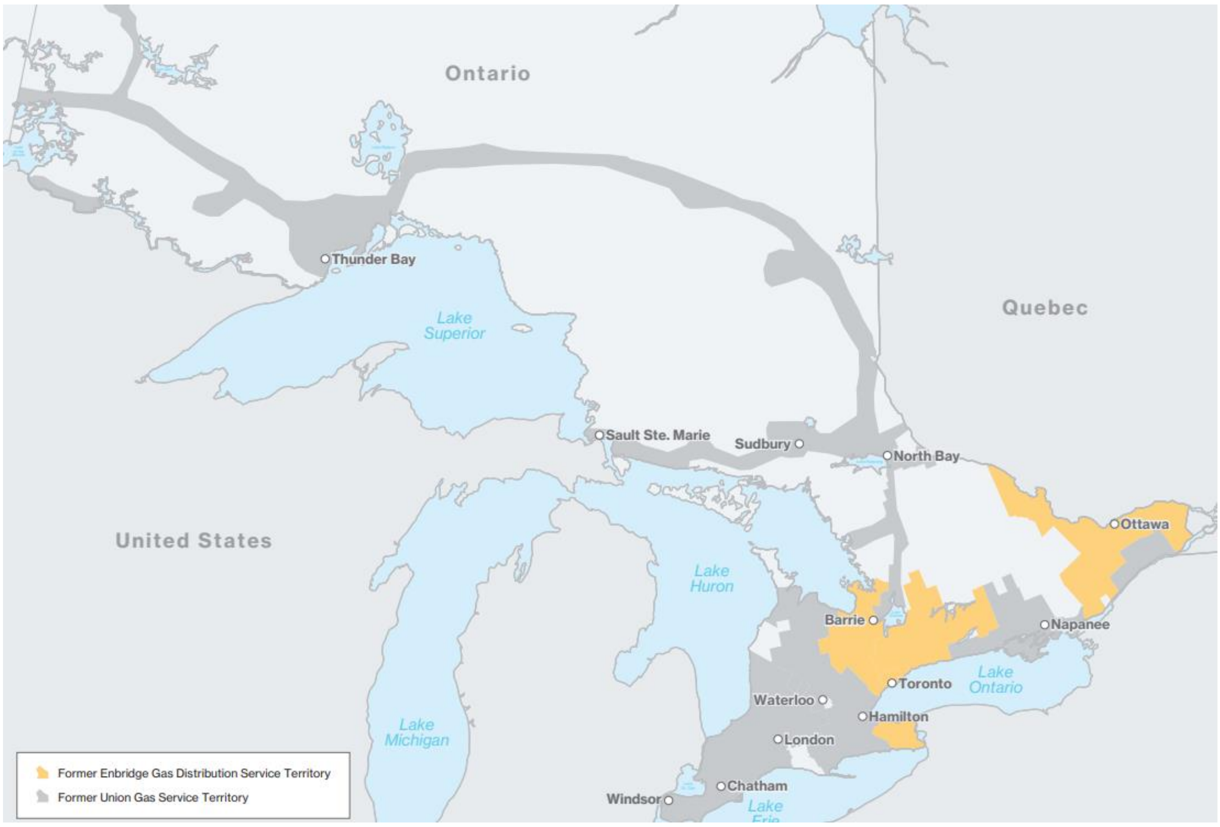
Who is Enbridge Gas?

Enbridge Gas Inc. is based in Ontario and delivers energy to customers in Ontario. Its parent company Enbridge Inc. is headquartered in Calgary, Canada, and operates across North America. Rates and business plans developed by Enbridge Gas must be approved by the Ontario Energy Board (the OEB), which regulates natural gas utilities in Ontario.

Enbridge Gas …

- ✓ Distributes natural gas to about 3.8 million residential, business and industrial customers
- ✓ Attaches more than 50,000 new customers each year
- ✓ Has agreements to provide gas distribution service within 313 municipalities and provides natural gas within 23 First Nations communities
- ✓ Has a network of over 151,500 kilometers of underground pipeline

In 2019, Enbridge Gas Distribution and Union Gas merged to form one company, Enbridge Gas Inc. Throughout this workbook we occasionally refer to Legacy Enbridge Gas Distribution and Legacy Union Gas (the previous companies), but mainly refer to the whole service area or territory that Enbridge Gas serves today.



Background

Where do your rates go?

Below is an example of a residential natural gas bill.

The charges outlined in Orange are the costs of getting the gas to you once it reaches the Enbridge Gas system. At times, this may require a Rate Adjustment which, along with other rates, is determined through a regulatory process.

CHARGES FOR NATURAL GAS

May 12, 2021 - Jun 10, 2021

Customer Charge	$21.83
Delivery to You	$6.17
Transportation to Enbridge	$2.39
Federal Carbon Charge	$4.62
Gas Supply Charge	$7.05
Cost Adjustment	$0.71 CR
Charges for Natural Gas	**$41.35**
HST*	$5.37
Total Charges for Natural Gas	**$46.72**

OTHER ENBRIDGE CHARGES

Rate Adjustment	$5.24 +HST
HST*	$0.68
Total Other Enbridge Charges	**$5.92**

The charges outlined in Blue are the 'passed through' costs that pay for the natural gas you use (Gas Supply Charge and Cost Adjustment) and the cost of transporting it from where it is produced to the Enbridge Gas system (Transportation to Enbridge). If customers buy their natural gas through an energy marketer these costs would be subject to the agreement with the energy marketer.

Enbridge Gas is also responsible for collecting HST and the Federal Carbon Charge on behalf of the government. While some of these costs may be given back to customers in rebates, how these funds are used is determined by the government and is out of Enbridge Gas' control.

The average residential customer consumes approximately 2,400m3 of natural gas per year.

The pie chart below shows where the money goes.

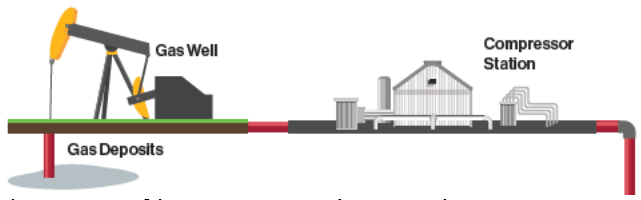
The Blue slice shows the 'passed through' costs that pay for the natural gas and transportation to the Enbridge Gas system.

The money that goes to Enbridge Gas is in the other two slices.

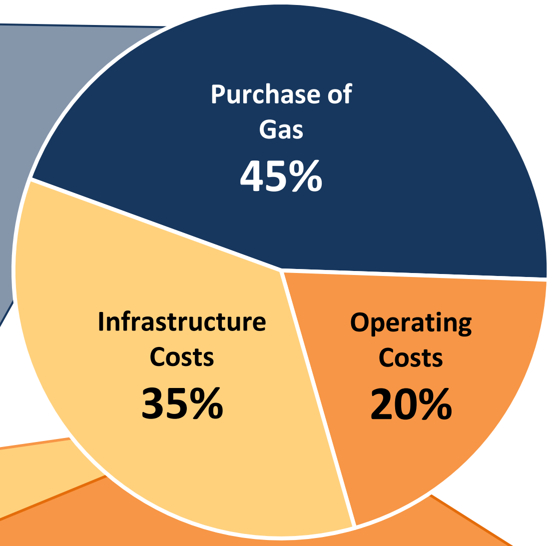
- The Light Orange slice pays the capital costs of the infrastructure (such as pipes, compressors, buildings and other equipment) used to move and store natural gas across the system.
- The Dark Orange slice pays for operations – including the people who operate and maintain the equipment and the people who answer your calls and provide customer service.

Connect to next page in the online version. All on one page there.

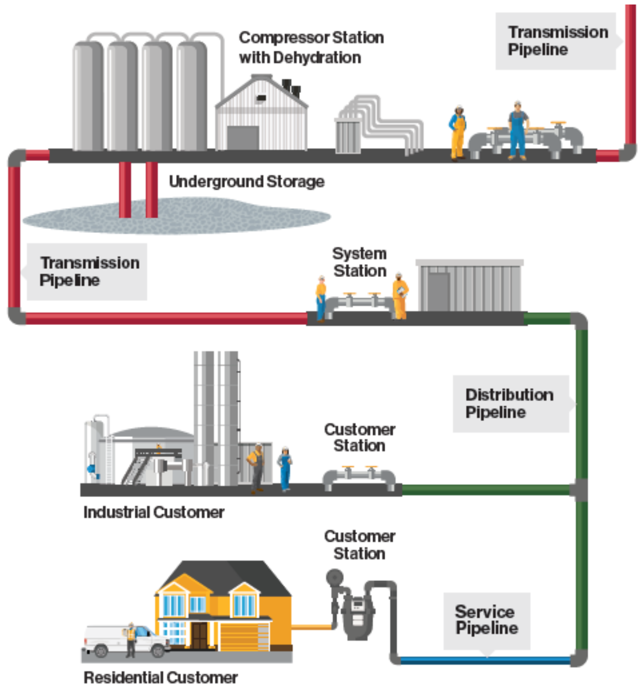
Purchase of Gas



The costs of buying natural gas and transporting it to Ontario are overseen by the Ontario Energy Board, and are passed on to customers at cost.



Infrastructure



Once gas reaches the Enbridge Gas system, it is metered and then delivered to customers through a distribution system of local gas mains, small-diameter service lines and, ultimately, customer meters.

Natural gas is often stored in large underground reservoirs to help meet spikes in demand, particularly in winter.

Operations

Delivering gas to customers is just one part of Enbridge Gas' activities. Enbridge Gas provides a variety of supporting services to customers including:

- Manage and operate its call centres, ombudsperson offices, and its online My Account system to help customers manage their account online.
- Complete meter replacements, inspections, and respond to emergency calls.
- Conduct millions of meter readings each year.
- Offer programs to help customers reduce their natural gas usage. Since 1995, Enbridge Gas has saved its customers 30 billion lifetime cubic meters of natural gas and 56.2 million tonnes of greenhouse gas emissions, the equivalent of taking 12.2 million cars off the road for a year or heating 13.1 million natural gas homes for a year. These programs get approved by the Ontario Energy Board in a separate process and the costs for these programs are included in your rates.

Before this survey, how familiar were you with Enbridge Gas when it comes to delivering natural gas to homes and businesses in Ontario?

- ☐ Very familiar and could explain the details of the Enbridge Gas system to others
- ☐ Somewhat familiar with the Enbridge Gas system but could not explain the details to others
- ☐ Had heard of some of the terms mentioned, but knew very little about the Enbridge Gas system
- ☐ I knew nothing about the Enbridge Gas system
- ☐ Don't know

Where does this consultation fit?

Here in Ontario, customer views are central to the utility planning process.

- **Rates and business plans must be approved by the Ontario Energy Board (the OEB).**
- **The OEB requires that utilities consult with customers to understand your views on key trade-offs.**
- **In addition, the utilities must show how they took customer views into account when developing the plan.**

While some planning decisions will depend on detailed knowledge of engineering and industry standards, in other cases the choices will involve trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down. That is where you come in.

The diagram below shows how customers play a role at three points as Enbridge Gas develops and submits its business plan to the OEB.

How does Customer Engagement Impact Business Planning?

Enbridge Gas has developed a phased approach to gathering and responding to customer feedback.

✓ **1. Identify Customer Priorities**
In June through August of 2021, Enbridge Gas asked residential and business customers about their priorities for natural gas service.

✓ **2. Use Customer Feedback to Guide Development of Plan**
Enbridge Gas planners were given summaries of the key findings from the initial customer engagement to consider as they began building their plans.

You are here

3. Collect Customer Feedback on the Draft Plan
Now Enbridge Gas is returning to customers to get feedback on the draft plan and ask customers how the plan fits with their needs and preferences.

4. Re-Examine Plan
Enbridge Gas has an opportunity to make appropriate changes to the plan based on customer feedback.

5. Submit the Plan to the Ontario Energy Board (OEB)
Enbridge Gas will file the plan, with this workbook, and a summary report with the OEB, where it will be examined by the OEB, consumer advocates and other independent parties in a public hearing. **Customers** can view and comment on this application through the OEB website.

How well do you feel you understand how your feedback fits within the planning process?

☐ Very well ☐ Somewhat well ☐ Not very well ☐ Not at all ☐ Don't know

Customer Experience

Satisfaction and Areas of Improvement

Taking into consideration all aspects of your utility service experience, how satisfied are you with your Enbridge Gas service?

- ☐ Very satisfied
- ☐ Somewhat satisfied
- ☐ Neither satisfied nor dissatisfied
- ☐ Somewhat dissatisfied
- ☐ Very dissatisfied
- ☐ Don’t know

Is there anything in particular Enbridge Gas can do to improve their service to you? [OPEN]

How do you know if Enbridge Gas is doing a good job for you, or not? [OPEN]

Background

2024-2028 Plan

Plan Objectives

The Enbridge Gas business plan focuses on many of the same objectives as in the past years, as well as future challenges and pressures. Some of the high-level objectives of the plan are as follows:

1. **Maintain system safety and reliability** – ensure that the system continues to operate safely and reliably.

2. **Contain costs** – the OEB requires all utilities to "demonstrate ongoing continuous improvement in their productivity and cost performance while delivering on system reliability and quality objectives".

3. **Harmonize rates and services** – ensure that the offerings are consistent across the entire service area as Enbridge Gas continues its merger activities.

4. **Prepare for the future** – ensure that the system is ready for low-carbon options, as well as offer options to help customers reduce their greenhouse gas (GHG) emissions.

Climate Change Goals

Compared to the past, Enbridge Gas' 2024-2028 plan places more emphasis on preparing for the future. Enbridge Gas is looking at ways in which it can support its organizational, as well as federal and provincial goals to reduce GHG emissions and achieve net zero targets.

- **Enbridge Inc. targets to reduce, from its operations, GHG emission intensity by 35% by 2030 over 2018 levels, and to reach Net Zero GHG emissions by 2050**
- **Federal targets to reduce GHG emissions by 40-45% by 2030 over 2005 levels and to reach Net Zero GHG emissions by 2050**
- **Provincial target to reduce GHG emissions by 30% by 2030 over 2005 levels**

How We Can Reduce GHG Emissions From Natural Gas

One of the ways in which GHG emissions are created is through the burning of fossil fuels such as coal, oil, and natural gas. Two key approaches can reduce the emissions from using natural gas:

- by blending lower carbon fuels into the gas supply, including Renewable Natural Gas (RNG) and Hydrogen gas, and
- by improving energy efficiency of homes and businesses, and implementing new, lower-emitting technologies.

Each of these could introduce new, higher, costs that would be passed on to customers but would mitigate costs that might be required to introduce other programs or options to reduce overall GHG emissions in Ontario and Canada. **Later in the workbook we will ask about your views on these potential costs.**

Do these objectives seem like the right approach or the wrong approach?
☐ Right approach ☐Wrong approach ☐ Don't know

Is there anything you would change about this approach or any other comments you would like to make?
Comments:

Calculating Rates

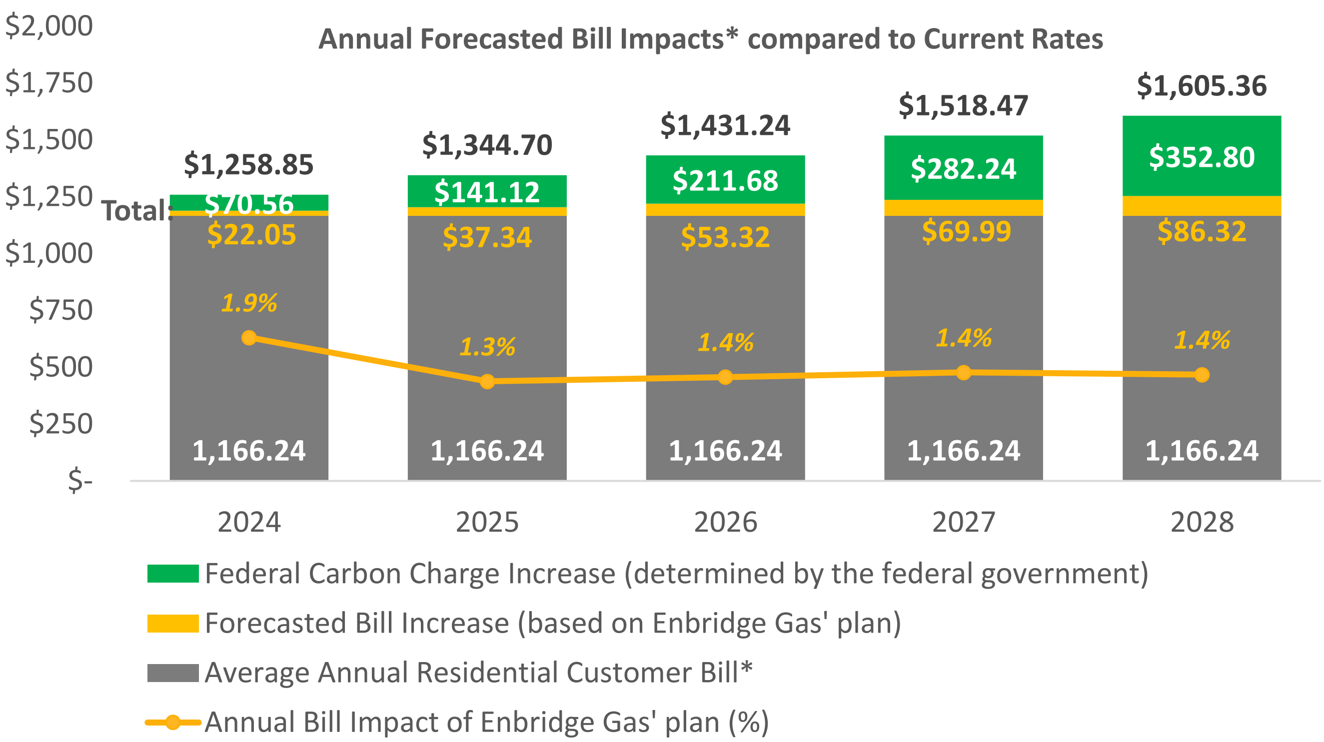
When looking at its overall objectives, and its budgets, there are many items that Enbridge Gas must consider that affect its costs, and in turn the rates that customers pay. Some of these items are determined by regulatory requirements, others by external factors in the market, and again others by decisions made by Enbridge Gas.

There are **accounting policies and factors** that affect expenditures. These include proposals through which Enbridge Gas manages business risk and how it calculates the depreciation of its assets. These types of proposals contribute significantly to the overall rate impact shown in the "Forecasted Bill Increase" below, and are partially offset by savings in other areas. While these issues are too technical for this workbook, they will be reviewed by OEB experts and intervening stakeholders in the OEB's public review process.

Operating expenses make up about 20% of Enbridge Gas' overall expenditures. Current estimates show that these expenses would increase somewhat over the 2024-2028 period, with the highest annual increase at 1.5%, which is less than inflation. Decisions on operating expenses are based on industry best practices and generally do not involve trade-offs between customer outcomes. Since these are technical issues, they will also be reviewed by OEB experts and intervening stakeholders in the OEB's public review process.

Capital expenses make up about 35% of Enbridge Gas' overall expenditures and pay for investments in its equipment that have lasting benefits over many years. Since capital spending includes major one-off projects as well as ongoing maintenance and replacement, capital spending varies from year to year. The questions in the next section focus on these choices.

The *Forecasted Bill Impacts* for the 2024 to 2028 compared to current rates are shown below. Compared to your current rates, rates in 2022 are expected to increase by $8.98 or 0.8% for the average customer, while 2023 rates are not yet established.



**These estimates are preliminary and are subject to both your feedback and ongoing work to review as Enbridge Gas planners continue to work on their plans. This does not include any potential changes in the fuel costs or the federal carbon charge.*
Based on the average customer consuming 2,400 m3 of natural gas per year. Oct 2021 average includes the federal carbon charge.

How well do you feel you understand the projected increase in your rates from 2024 to 2028?
☐ Very well ☐ Somewhat well ☐ Not very well ☐ Not at all ☐ Don't know

Making Choices

In this next section of the workbook, we will ask you about some of the key items that Enbridge Gas is considering in its plan that see trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down.

Some of these items are currently included in the draft budget, while others will need to be added to the budget depending on further analysis and feedback from customers like you.

For each question, where applicable, the financial impact is expressed as the dollar impact each year on an average residential bill. The actual impact will depend on your own individual usage.

At the end of the section, you will have an opportunity to review your responses and their impact on your bill. You will then be able to adjust your choices to provide what you feel is the best balance.

Compression Stations

Enbridge Gas has 50 Compressors, 7 Dehydrators and supporting equipment. These are required to ensure that the gas that is injected into storage or into the distribution system meets the quality specifications and to move gas along the transmission system.

As compressors age, they experience breakdowns on an increasingly frequent basis – when equipment manufacturers stop supporting these compressors, the time to complete repairs can be extensive leading to reliability and gas quality problems. There are two compressors that will need to be replaced in the coming years.

When considering a project to replace compressors like this, Enbridge Gas looks at various options:

- ✓ Replacing one larger compressor with two smaller ones,
- ✓ Using alternative fuel sources such as electricity or hydrogen gas, and
- ✓ Preparing for outages by having spare parts available.

In this case, however, there is a lack of viable alternatives at the specific locations for the two compressor stations, so Enbridge Gas is planning to replace one compressor station in 2026, with the other one being replaced after 2028 to use the existing stations for as long as possible.

Not doing this work increases the risk the station could fail. This may require Enbridge Gas to buy more gas on the market (if available), rather than drawing gas from its storage. This introduces the risk of price volatility, as gas purchased on the market during the coldest days of the year has been up to 220% more expensive in the past 5 years than the gas that could be drawn from storage.

Image: inside a building housing a compressor station

Furthermore, if the station fails, replacement will still be required which would take a couple of years of construction to complete, extending the risks for longer. The replacement of the first compressor station is planned for 2026 and would cost the average customer $2.43/year. Which of the following statements best represents your point of view?

[RANDOMIZE 01 and 02]

Connect to next page in the online version. All on one page there.

01	Enbridge Gas should replace the compressor stations as it currently plans, replacing one compressor station during the period of its 2024-2028 plan, at a cost of $2.43/year.
02	Enbridge Gas should defer the compressor station project for as long as possible, even though this carries with it increasing risk of outages and with that, greater price volatility. The cost of this is subject to market prices at the time.
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Vintage Steel Pipeline Replacement Program

Enbridge Gas has implemented a Vintage Steel Pipeline Replacement Program, which focuses on replacing older steel pipelines within the system. It is considering ramping up the program to ensure ongoing safety and reliability of the distribution system and to prepare the network for the eventual delivery of low carbon, blended hydrogen. Blended hydrogen can safely be delivered through modern steel and plastic distribution systems – however, with the rapid introduction of natural gas to Ontario during the 1950's and 60's, Enbridge Gas has a lot of older steel pipelines which are nearing end of life and require replacement in a planned and proactive manner.

This program would see an increase in work and a ramp-up of spending starting in 2024 with the goal of replacing 5,100 km of 17,000 km of vintage steel pipelines in 20 years. These vintage steel pipelines were built before 1971 and are more prone to failures compared to steel pipelines built later due to materials, construction and damage prevention practices used at the time. Using risk assessments, the program will focus on replacing pipelines that are closest to end of life first.

Enbridge Gas intends to start this increase in work in 2024 so that the work can be spread out over a longer period with a limited increase to internal resources. Pushing the work into the future, such as 10 years from now, to achieve the same objectives, will require additional internal as well as external resource overheads and costs, with reduced productivity due to a sharper ramp-up of skilled labour. The overall costs would be expected to be higher with a delayed approach.

It is estimated that this program, ramping up in 2024, included in the capital budget, is equivalent to an average annual increase of $1.22/year from $0.81 increasing to a total of $6.10 in 2028 for the average customer.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should increase its spending on the Vintage Steel Replacement Program in order to help prepare the system for the future by starting to ramp-up the work in 2024 at an average annual increase of $1.22/year from $0.81 increasing to a total of $6.10 in 2028.
02	Enbridge Gas should defer proactive replacement of its system that would prepare it for the future – even if this means that the cost will be higher in the future.
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Hydrogen Gas

Enbridge Gas is looking at options to blend more Hydrogen gas into the natural gas it delivers to green the gas supply.

Clean hydrogen gas is derived from surplus clean electrical energy that is converted to hydrogen gas through electrolysis technology. The gas is then blended with traditional natural gas, reducing GHG emissions.

Enbridge Gas is considering investing more in clean hydrogen as a tool for reducing GHG emissions in Ontario to allow for additional hydrogen gas to be blended into the natural gas distribution system. This would mean expanding the pilot project at the power-to-gas (P2G) facility in Markham where hydrogen gas is currently being produced, to deliver hydrogen-blended natural gas to a larger network of customers, expanding the blended gas area from approximately 3,600 to just under 17,000 customers.

Image: Hydrogen gas can be stored in tanks

Additionally, Enbridge Gas intends to launch a feasibility study that assesses the full system's readiness for more hydrogen gas to be included in the system. The costs for these projects for the average residential customer are estimated as follows:

	2024	2025 and 2026	2027 and 2028
Annual cost	$0.37	$0.47	$0.24

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should implement these plans for hydrogen gas, which will cost the average residential customer $0.37 in 2024, increasing to $0.47 in 2025 and 2026 and $0.24 in 2027 and 2028, including the cost of the hydrogen gas.
02	Enbridge Gas should not implement these plans related to Hydrogen gas to reduce GHG emissions and keep rates as low as possible
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Innovation and Technology Fund

Enbridge Gas can support the advancement of various new low-carbon or energy efficient technologies that may not be available to consumers today.

While some of this work is already taking place on a small scale, the budget for these types of projects is currently very limited. Additional contributions from customers would allow Enbridge Gas to expand this type of research and development work.

Similar to other jurisdictions, Enbridge Gas is considering an **Innovation and Technology Fund** in order to support the research, development, and the bringing to market of new low-carbon or energy efficient technologies. Where possible, this would be in partnership with other utilities and organizations.

Some options include funding for …

- new research on energy efficiency technologies,
- hydrogen gas,
- renewable natural gas, or
- carbon capture, utilization and sequestration (CCUS). This is the process of capturing carbon dioxide before it enters the atmosphere and either use it as a resource to create products or permanently storing it underground.

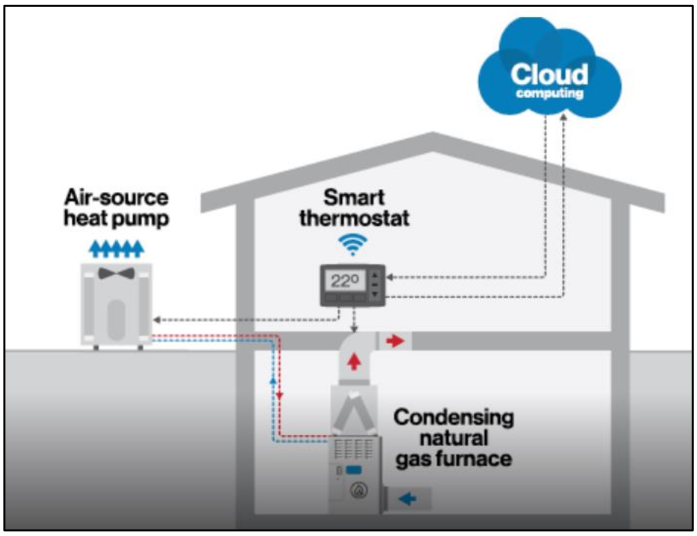


Image: Ontario pilot program tests future of advanced hybrid heating

The more money in this fund, the more projects could be completed, however Enbridge Gas is committed to finding a right balance of spending and planning for the future.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should develop this fund, spending $1M/year which would cost the average customer $0.26/year
02	Enbridge Gas should develop this fund, spending $5M/year which would cost the average customer $1.28/year
03	Enbridge Gas should develop this fund, spending $10M/year which would cost the average customer $2.56/year
04	Enbridge Gas should **not** develop a fund to invest in new low-carbon or energy efficient technologies
98	I don’t have an opinion on this
99	Don’t know

Making Choices

Cut off at Main

When a customer wants to cut off the natural gas service, for example, when a home is being demolished, or when a customer no longer wishes to receive natural gas service, the service is cut off at the main pipeline. This customer requested work is performed by a maintenance and construction crew. After that, in many cases a new home can be attached again at the same location. Not doing this work creates abandoned natural gas lines and meters, which may pose a safety risk.

Any costs not charged to the homeowner are covered by Enbridge Gas, which means all ratepayers contribute to these costs through their rates. The average number of cutoffs in a year are projected at 3,200.

Enbridge Gas would like to create a policy that is the same across the entire territory and would like to ask you for your opinion. Which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should charge the homeowner the full cost of the cut off at main. Average cost for a cut off at main is approximately $3,700.
02	Enbridge Gas should charge the homeowner $750, and the remainder would be shared among all residential customers at an annual cost of $0.25 in 2024 increasing to $1.23 in 2028 for all projected cut-offs.
03	Enbridge Gas should not charge the homeowner for these costs of the cut off at main. These costs should be shared among all residential customers at an annual cost of $0.30 in 2024 increasing to $1.52 in 2028 for all projected cut-offs.
98	I don’t have an opinion on this
99	Don’t know

Making Choices

Cross Bores

While rare, it is possible that a natural gas line may intersect with a sewer line. When this happens, it is called a utility cross bore. This is unintentionally created when a natural gas line is installed through a process of trenchless drilling.

Image: Example of a cross bore

Trenchless drilling is used to avoid creating open trenches that can disturb roads, driveways, and gardens, but it relies on locates of existing utilities which may not always be accurate for various reasons. While a utility cross bore may not pose an immediate risk, it may become an issue if a sewer line needs to be cleared in the case of a blockage. This has resulted in some instances of property damage and injury, as a result of a gas leak, fire or explosion.

To address this risk, there is currently an emergency program in place called Call Before you Clear. This program relies solely on property owner and plumber participation and through this program over 10,000 annual inspections are completed. Still, many plumbers and homeowners do not call for an inspection prior to auguring their sewer lines. To expand inspections beyond the current emergency program, Enbridge Gas intends to implement a program to **proactively inspect and resolve additional utility cross bores** that may have been installed in the past. This would double the number of annual inspections.

Another program has been implemented by Enbridge Gas to **prevent new installations from creating new cross bores** even though that increases the cost of the installation and requires additional restoration work during the installation process.

These programs to proactively inspect and resolve existing cross bores and to prevent the creation of cross bores during the completion of new installations combined would cost customers $1.95 per year in 2024 increasing to $3.59 per year in 2028.

Connect to next page in the online version. All on one page there.

Which of the following is closest to your view?

[RANDOMIZE 01 AND 02]

01	Enbridge Gas should implement the proactive program to expand the number of inspections and continue with the preventative program to eliminate existing cross bores and prevent any new cross bores to maintain safety, at a cost of $1.95 per year in 2024 increasing to $3.59 in 2028 for the average customer.
02	Enbridge Gas should leave its processes of trenchless drilling as is and only resolve the cross bores that come up as an issue arises, even though this limits the inspections to those requested through the Call Before you Clear program, and may also create additional cross bores.
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Advanced Meter Infrastructure

The gas meter technology currently used by Enbridge Gas has not changed in many years. Enbridge Gas is working on a plan to rollout new advanced meters that would send usage information to Enbridge Gas through a wireless network, like your existing water or electricity usage meters. The meters also have additional functions that could allow Enbridge Gas to:

- ✓ Better detect and respond to possible gas leaks
- ✓ Enhance safety capabilities by enabling Enbridge Gas to remotely and automatically shutoff gas supply in the event of an emergency
- ✓ Allow for a reduction in greenhouse gas (GHG) emissions by reducing meter reader vehicles on the road
- ✓ Eliminate the need for estimated meter reads
- ✓ Provide customers detailed usage data information – this may also allow customers to be notified of faulty or left on appliances

Once all meters are rolled out, the above features would become available to all customers. Rates will increase as specified below, after which rates will decrease slowly and eventually decrease to levels lower than today as benefits are fully realized. How rates are impacted depends on timing of spend and realization of benefits.

Depending on the pace of rolling out automated meters, there are implications on the time the benefits listed above can be fully realized, and the cost involved for customers like you. These are outlined in the table below.

	Time to Fully Realize Benefits	First Year Cost (2024)	Maximum Annual Cost	Year that the Rate Impact reduces to Less than Today
Option 1	4 years	$3.25	$20.64 in 2028	2038
Option 2	8 years	$2.17	$14.88 in 2031	2039
Option 3	20 years	$1.40	$1.85 in 2026	2034

Which of the following is closest to your view? Across its service area, Enbridge Gas should …

01	Implement advanced meters **as soon as is feasible**, according to Option 1 above
02	Implement advanced meters at a **moderate pace**, according to Option 2 above
03	Implement advanced meters at a **slower pace**, according to Option 3 above
04	Replace meters only as required, even though this will prevent the additional benefits noted above from being realized
98	I don’t have an opinion on this
99	Don’t know

Comments:

Impact of Choices

Do You Want to Change Your Choices?

So far in this workbook, you have been asked about **7 key choices** that could impact your rates. Below is a summary of your answers to the questions that could impact your rates.

At the bottom of this page, you will find the annual bill impact of all the answers.

Having seen the total bill impact, please review your answers and change your responses if you desire; your potential annual rate impact for 2024 and 2028 will be re-calculated each time you change one of your answers at the bottom of the page. Costs for 2025-2027 will fall between this range. You will have the opportunity to continue adjusting your answers until you feel you've reached the best balance for you.

Compressor Stations:
Replace one compressor station
- □ **Included in the draft plan:** *Within the proposed increase ($2.43 in 2024 to 2028)*
- □ **Defer as long as possible:** *Though uncertain, at best it would decrease ($2.43 in 2024 to 2028)*

Proactive Vintage Steel Pipeline Replacement Program:
Replace 5,100 km of 17,000 km of vintage steel pipeline over the next 20 years
- □ **Included in the draft plan:** *Within the proposed increase ($0.81 in 2024 to $6.10 in 2028)*
- □ **Defer the proactive replacement for as long as possible:** *Decrease by $0.81 in 2024 to $6.10 in 2028*

Hydrogen gas:
Expand the current pilot project, and complete a system assessment
- □ **Add to the draft plan:** *$0.37 added to rates in 2024 and $0.24 in 2028*
- □ **No further spending on hydrogen:** *No change in rates*

Innovation and Technology Fund
Fund research into new low-carbon or energy efficient technologies
- □ **Add $1M fund to the plan:** *$0.26 added to rates in 2024 to 2028*
- □ **Add $5M fund to the plan:** *$1.28 added to rates in 2024 to 2028*
- □ **Add $10M fund to the plan:** *$2.56 added to rates in 2024 to 2028*
- □ **No fund:** *No change in rates*

Cut off at Main policy
Create a consistent policy across Enbridge Gas when customers need their gas line to be cut off at the main pipeline
- □ **User pay:** *homeowner portion of $3,700, not included within rates*
- □ **Middle ground:** *homeowner portion of $750, $0.25 added to rates in 2024 to $1.23 in 2028*
- □ **Shared among all:** *$0.30 in rates in 2024 to $1.52 in 2028*

Cross Bores
Implement proactive program to eliminate existing cross bores and prevent new ones
- □ **Proposed approach for proactive and preventative programs:** *$1.95 added to rates in 2024 to $3.59 in 2028*
- □ **No further spending on cross bores:** *No change in rates*

Advanced Meter Infrastructure
Identify the appropriate pace for installing advanced meters with enhanced safety and customer benefits
- □ **As soon as feasible: 4-year implementation:** *$3.25 added to rates in 2024 to $20.64 in 2028*
- □ **Moderate pace: 8-year implementation:** *$2.17 added to rates in 2024 to $10.27 in 2028*

The total impact of your choices would result in a range from:

+/- $X.XX in 2024 to +/- $X.XX in 2028

Note: these areas will be uniquely populated for each individual customer. The bill impacts of their individual responses will be summed and displayed below.

This would be a change from the estimated average increase of $22.05 in 2024 up to $86.32 in 2028 compared to October 2021 to your bill for distribution over the 5-year planning period that starts in 2024.

Enbridge Gas will be reviewing its plan based on the feedback you and other customers are sharing now. However, in doing that review, it is important for Enbridge Gas to get a sense of whether the current draft plan is generally acceptable or not. There were some choice options that Enbridge Gas had already included in the draft plan, and others that were not.

As mentioned earlier in the workbook, the Enbridge Gas plan for 2024 to 2028 focused on the following key objectives:

1. Maintaining system safety and reliability
2. Containing costs
3. Harmonizing rates and services
4. Preparing for the future

Currently the plan is estimated to result in an average annual increase of 1.9% over 2024 to 2028 for a total of 7.4% in 2028 compared to October 2021 rates. Along with your feedback on choices included within the plan, Enbridge Gas will consider your feedback on the choices that have not yet been included and update the plan accordingly.

Considering what you know about Enbridge Gas' plans, and the choices you have been making, which of the following best represents your point of view?

- ☐ Enbridge Gas should increase its investments, seeking to accelerate the programs shared in this workbook where possible, even if that means a higher draft increase over the 5-year period.
- ☐ Enbridge Gas should maintain the draft increase to deliver the programs shared in this workbook, focusing on its outlined objectives over the 5-year period.
- ☐ Enbridge Gas should reduce the draft increase, even if that could mean reductions in performance or increase safety or environmental risks over the 5-year period.
- ☐ Other **(please specify)**
- ☐ Don't know

Comments:

Service and Rate Harmonization

In its application to the OEB, Enbridge Gas is also considering several other items that may affect customers. In this section we will ask you about a few different things, including programs that it could offer, as well as some options on how rates are calculated and applied.

Infill Policy

When an existing home is located near a main line, it may receive a natural gas connection through the residential infill policy. Under regulations, existing customers cannot be charged for any of these expenses.

According to the policy, connections are provided to homeowners at no cost (because forecasted revenues from the new customer cover a portion of the cost to connect) up to a certain distance from the home to the main line. The cost for any extra distance must be paid by the homeowner.

These costs can be structured in different ways, and currently vary depending on whether someone is in the Legacy Enbridge Gas Distribution or Legacy Union Gas area. The more service length Enbridge Gas provides at no charge, the more needs to be charged for each extra metre of length to account for costs not covered by forecasted revenue.

Enbridge Gas would like to create a policy that is the same across the entire territory that reflects the cost of attaching a new customer and would like to ask you for your opinion.

Based on data from the last 3 years of installations, which is influenced by the current policies, the following proportion of installations would be free, while the remainder would pay an amount based on the length of their line. The historical average is shown in the table below.

	Length for free	Cost for remainder	Proportion of installations that would be free	Average cost for customers who would pay
Option 1	15m	$75/m	57%	43% pay an average of $635 for the remainder
Option 2	20m	$100/m	75%	25% pay an average of $1700 for the remainder
Option 3	25m	$140/m	84%	16% pay an average of $2885 for the remainder

Which of the following approaches is closest to your view?

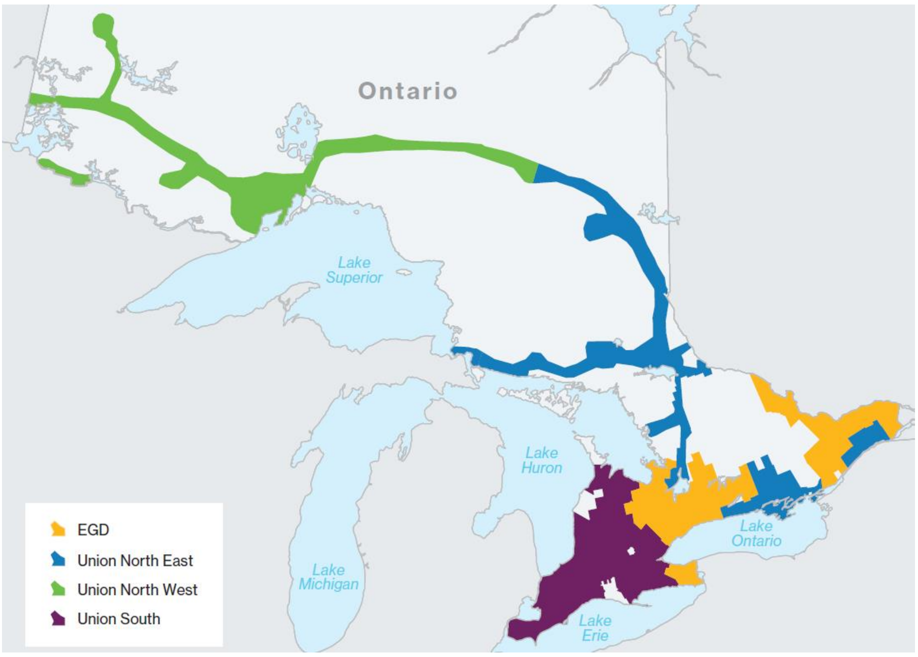
[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should offer 15 metres at no cost to the homeowner and charge $75/m for the remainder
02	Enbridge Gas should offer 20 metres at no cost to the homeowner and charge $100/m for the remainder
03	Enbridge Gas should offer 25 metres at no cost to the homeowner and charge $140/m for the remainder
98	I don’t have an opinion on this
99	Don’t know

Comments:

Rate Zones

Currently, the rate you pay for natural gas delivery depends on where you live in Ontario. As previously indicated, Enbridge Gas, today, is a combination of Legacy Enbridge Gas Distribution and Legacy Union Gas. Currently there are four rate zones, each with its own rates depending on where you are located, and which company previously served you. The four rate zones look as follows:



Enbridge Gas is considering the option of offering one rate zone for its different types of customers, regardless of location within Ontario and the cost to serve them. There are many benefits of one rate zone including similar charges for similar customers, a consistent customer experience, and reduced administrative costs.

One rate zone could result in a change to the amount customers pay for their natural gas service, and varies on the rate zone a customer is currently located in. The adjustment as a result of this change is impacted by the number of customers in a rate zone and is shown in the table below.

Current rate zone	Current average annual bill based on 2,400m3	Average cost adjustment at current rates
EGD	$1,149	Decrease of approximately 1% ($1 per month)
Union North East	$1,302	Decrease of approximately 10% ($10 per month)
Union North West	$1,230	Decrease of approximately 10% ($10 per month)
Union South	$1,018	Increase of approximately 5% ($5 per month)

REPRESENTATIVE SAMPLE ONLY: You are located in **(PIPE IN RATE ZONE BASED ON SAMPLE)**. Considering this, which of the following is closest to your view?
[RANDOMIZE 01 and 02]

01	Enbridge Gas should implement a single rate zone and make the rates for natural gas service the same across Ontario
02	Enbridge Gas should leave the rate zones as they are where customers pay different rates for natural gas service based on where they live
98	I don't have an opinion on this
99	Don't know

Comments:

Rate Design

Similar to your electric utility, your gas bill is split into the cost of the natural gas you use and the cost of delivering that gas to you. This question focuses on the delivery charge. Enbridge Gas incurs two types of costs in delivering natural gas to customers like you.

- **Variable costs** depend on how much natural gas you use.
- **Fixed costs** are the same regardless of how much natural gas you use.

The fixed costs that Enbridge Gas incurs can be divided into two groups: the cost of having access to the system, and the cost of the demand that you place on the system which drives the system capacity. We'll look at these two separately.

Cost of being connected to the system

One type of fixed cost is that of being connected to the system. This includes the cost of the pipeline, the pressure regulator, the natural gas meter, meter reading, billing, the contact centre and operations support. These costs are **fixed for Enbridge Gas** and are **similar for each customer** and do not change based on the size of the customer.

How do you feel **residential** customers like you should be billed for these costs of being connected to the system?

[RANDOMIZE 01 AND 02]

01	Each customer should pay a portion based on the amount of natural gas they use
02	The cost should be paid equally by customers of the same type (i.e. residential or business) regardless of how much natural gas they use
98	I don't have an opinion on this
99	Don't know

Cost of accessing a portion of the system

The other type of fixed cost is that of the system capacity. This includes the cost of the infrastructure, its operation, maintenance, and natural gas storage to meet the peak demand of customers on the coldest days of the year. These costs are **fixed for Enbridge Gas** but **may vary for each customer** based on their individual level of peak demand, which is often on the coldest days of the year.

How do you feel **residential** customers like you should be billed for these costs of accessing system capacity?

[RANDOMIZE 01 AND 02]

01	Each customer should pay a portion based on the amount of natural gas they use
02	The cost should be paid equally by customers of the same type (i.e. residential or business) regardless of how much natural gas they use
98	I don't have an opinion on this
99	Don't know

Comments:

Cost of the fuel

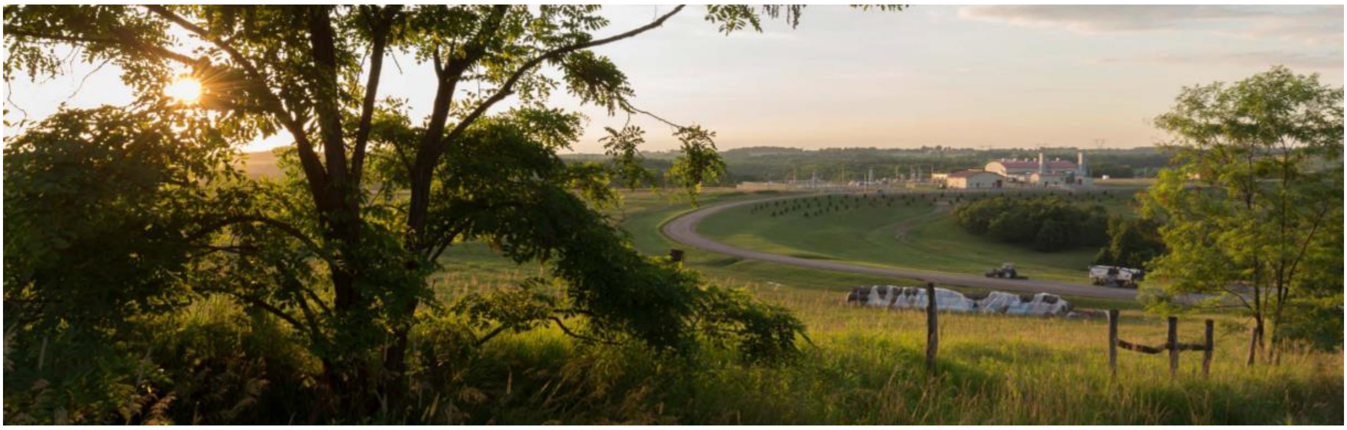
Fuel Choices

As previously discussed, the costs of buying natural gas and transporting it to Ontario are overseen by the Ontario Energy Board and are passed on to customers at cost. However, Enbridge Gas can make some choices about the natural gas it purchases, beyond focusing on the lowest price in the market. We would like to ask you a couple of questions about gas supply options.

Responsibly Sourced Gas

Enbridge Gas is looking at options to ensure that the natural gas it purchases is responsibly sourced. This means that the companies who produce the natural gas adhere to higher standards than the minimum government standards. This relates to areas such as:

- minimizing impacts to air and water quality
- lowering GHG emissions during production
- stronger engagement with Indigenous communities, etc.



Enbridge Gas can offer some options to include Responsibly Sourced Gas in its portfolio, which can be purchased at a small premium. Responsibly Sourced Gas is a new and emerging trend in the North American natural gas industry. For this reason, current supply options are limited.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should commit to 10% of responsibly sourced gas in its gas supply which will cost the average customer $0.96/year
02	Enbridge Gas should commit to 25% of responsibly sourced gas in its gas supply which will cost the average customer $2.40/year
03	Enbridge Gas should commit to 50% of responsibly sourced gas in its gas supply which will cost the average customer $4.81/year
04	Enbridge Gas should **not** add any responsibly sourced gas to its gas supply if it increases rates by any amount
98	I don’t have an opinion on this
99	Don’t know

Comments:

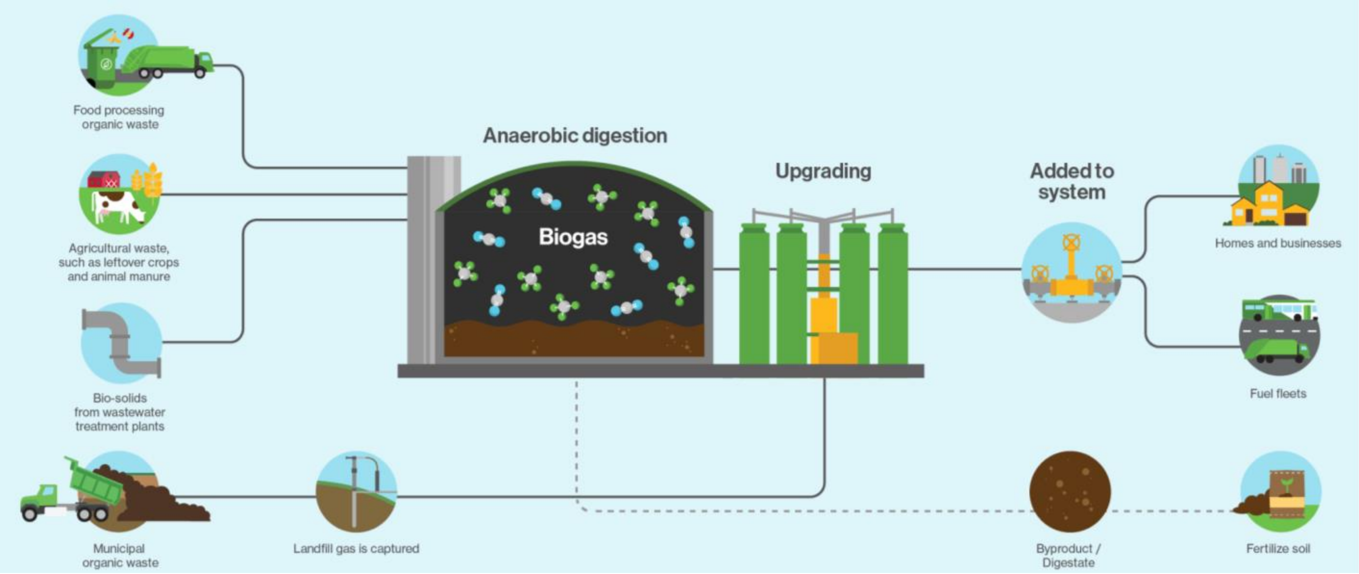
Cost of the fuel

Fuel Choices

Renewable Natural Gas

Enbridge Gas is looking at options to blend more Renewable Natural Gas (RNG) into the natural gas it delivers to green the gas supply. The gas is derived from organic waste from farms, landfills, and water treatment plants. The gas is then blended with traditional natural gas and supplied to customers using existing natural gas infrastructure.

RNG is considered to be carbon neutral and would reduce GHG emissions to help meet climate change targets. Every one percent of RNG in the gas supply reduces GHG emissions by one percent, in a 1:1 ratio. That means every additional 1% of RNG reduces your natural gas GHG emissions by 1%, and across the Enbridge Gas system, this is equivalent to taking 55,000 cars off the road.



Enbridge Gas is developing a plan to increase the blend of RNG in the gas system from 0.5% in 2025 to a higher amount over the course of the 2024 to 2028 plan and beyond. This amount is limited by the amount of RNG available in the market. Since the cost to produce RNG is currently higher than that of traditional natural gas it could have an impact on your rates.

The federal carbon charge would not be applied to the volume of RNG on customer bills, which is accounted for in the costs shown below.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should commit to increasing the amount of RNG in its gas supply to **8%** by 2030, which will cost the average customer $10.25/year in 2025 increasing to $135.73/year in 2030
02	Enbridge Gas should commit to increasing the amount of RNG in its gas supply to **5%** by 2030 which will cost the average customer $10.25/year in 2025 increasing to $84.83/year in 2030
03	Enbridge Gas should commit to increasing the amount of RNG in its gas supply to **2%** by 2030, which will cost the average customer $10.25/year in 2025 increasing to $33.93/year in 2030
04	Enbridge Gas should **not** add any RNG to its gas supply if it increases rates by any amount
98	I don't have an opinion on this
99	Don't know

Final Thoughts

Feedback and More About You

Thank you for providing your input into the Enbridge Gas planning process. Your feedback will help ensure we submit a plan that will address our customers' needs and opinions. Before you finish, we would appreciate your answers to two brief topics. First, to help ensure we continue to improve our customer engagements, we would appreciate your feedback on this workbook. Second, sometimes particular groups of people have specific needs. We have some questions that will allow us to group your answers with other people like you. It should just take one or two more minutes to finish up.

Feedback on Enbridge Gas Customer Engagement

Enbridge Gas values your feedback. This is the first time the utility has conducted a review about its upcoming plans in this type of format.

Overall, did you have a favourable or unfavourable impression of the workbook you just completed?

- ❑ Very favourable
- ❑ Somewhat favourable
- ❑ Somewhat unfavourable
- ❑ Very unfavourable
- ❑ Don't know

In this workbook, do you feel that Enbridge Gas provided too much information, not enough, or just the right amount?

- ❑ Too little information
- ❑ Just the right amount of information
- ❑ Too much information

Was there any content missing that you would have liked to have seen included in this workbook?

- ❑ None

Is there anything that you would still like answered?

- ❑ None

Would you like to be notified by email about how Enbridge Gas used your feedback?

- ❑ Yes
- ❑ No

[IF "Yes"] Please enter you preferred email address: ______________________________________

$___________

❑ Don't know/not sure

Next Steps

Thank you for your input into our planning process. Enbridge Gas will use the findings from this consultation to ensure that its 2024-2028 plan meets customers' needs, which will be filed to the Ontario Energy Board as part of the Enbridge Gas 2024 Rate Rebasing application in Q4 2022.

Customer Engagement
Phase III: Workbook

GS (Business) Workbook

December 2021

About this Customer Engagement

Welcome to the Enbridge Gas Customer Engagement!

As Enbridge Gas plans for the future, it needs your input into choices that will impact the services you receive and the rates you pay.

- Enbridge Gas is looking for your feedback on its draft investment plan for 2024 and beyond to ensure that the plan reflects your needs and preferences.
- You don't need to be a natural gas expert to complete this workbook. It focuses on basic choices between outcomes that matter to you and provides the background information you need to answer the questions.
- The most important part of this workbook are the survey questions. While your view may not always align exactly with any of the options presented, please select the one that is closest. If you truly aren't sure, select the "don't know" option.

This workbook will take approximately 20-30 minutes to complete. Your progress will be saved as you move through the workbook, meaning you can leave and return to complete it at any time.

Those who complete the questions that follow will be invited to enter a draw to win one of two $500 cash prizes.

All individual responses will be kept confidential. Innovative Research Group (INNOVATIVE), an independent research company, has been hired to gather your feedback.

If you are reading this on a smaller mobile device, you may wish to access the survey from a tablet, desktop or laptop instead, so that it is easier to read.

Background

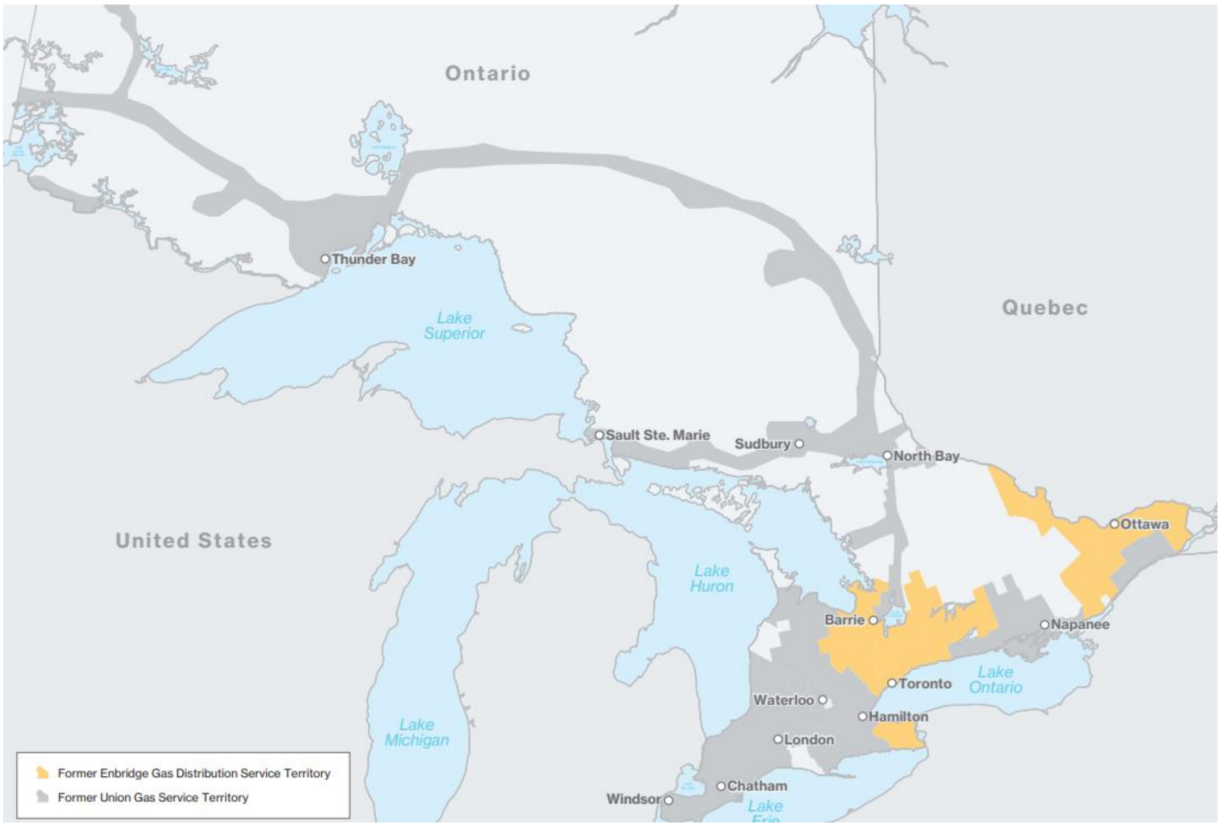
Who is Enbridge Gas?

Enbridge Gas Inc. is based in Ontario and delivers energy to customers in Ontario. Its parent company Enbridge Inc. is headquartered in Calgary, Canada, and operates across North America. Rates and business plans developed by Enbridge Gas must be approved by the Ontario Energy Board (the OEB), which regulates natural gas utilities in Ontario.

Enbridge Gas …

- ✓ Distributes natural gas to about 3.8 million residential, business and industrial customers
- ✓ Attaches more than 50,000 new customers each year
- ✓ Has agreements to provide gas distribution service within 313 municipalities and provides natural gas within 23 First Nations communities
- ✓ Has a network of over 151,500 kilometers of underground pipeline

In 2019, Enbridge Gas Distribution and Union Gas merged to form one company, Enbridge Gas Inc. Throughout this workbook we occasionally refer to Legacy Enbridge Gas Distribution and Legacy Union Gas (the previous companies), but mainly refer to the whole service area or territory that Enbridge Gas serves today.

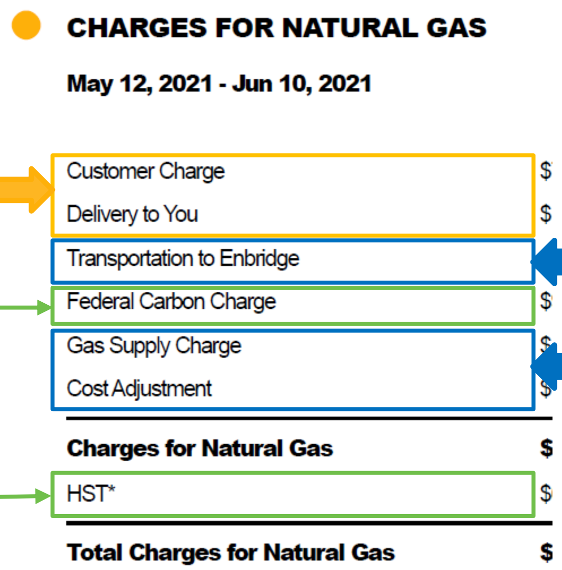


Background

Where do your rates go?

Below is an example of a natural gas bill.

The charges outlined in Orange are the costs of getting the gas to you once it reaches the Enbridge Gas system. At times, this may require a Rate Adjustment which, along with other rates, is determined through a regulatory process.



CHARGES FOR NATURAL GAS

May 12, 2021 - Jun 10, 2021

Customer Charge	$
Delivery to You	$
Transportation to Enbridge	
Federal Carbon Charge	$
Gas Supply Charge	$
Cost Adjustment	$
Charges for Natural Gas	**$**
HST*	$
Total Charges for Natural Gas	**$**

The charges outlined in Blue are the 'passed through' costs that pay for the natural gas you use (Gas Supply Charge and Cost Adjustment) and the cost of transporting it from where it is produced to the Enbridge Gas system (Transportation to Enbridge). If customers buy their natural gas through an energy marketer these costs would be subject to the agreement with the energy marketer.

Enbridge Gas is also responsible for collecting HST and the Federal Carbon Charge on behalf of the government. While some of these costs may be given back to customers in rebates, how these funds are used is determined by the government and is out of Enbridge Gas' control.

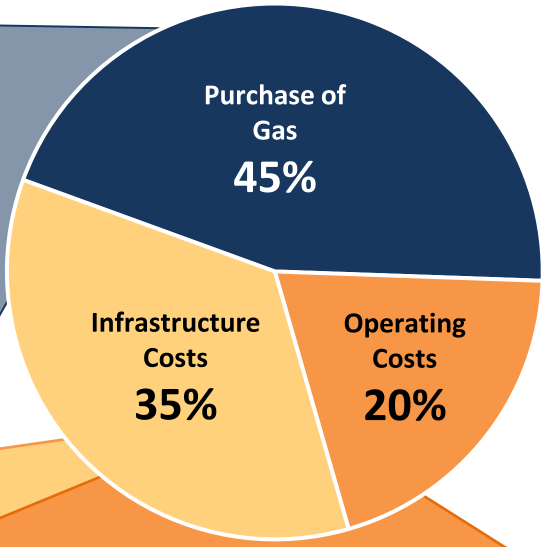
The pie chart below shows where the money goes.

The Blue slice shows the 'passed through' costs that pay for the natural gas and transportation to the Enbridge Gas system.

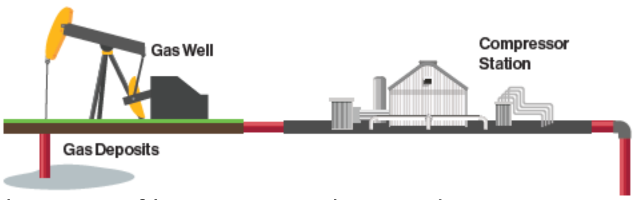
The money that goes to Enbridge Gas is in the other two slices.

- The Light Orange slice pays the capital costs of the infrastructure (such as pipes, compressors, buildings and other equipment) used to move and store natural gas across the system.
- The Dark Orange slice pays for operations – including the people who operate and maintain the equipment and the people who answer your calls and provide customer service.

Connect to next page in the online version. All on one page there.

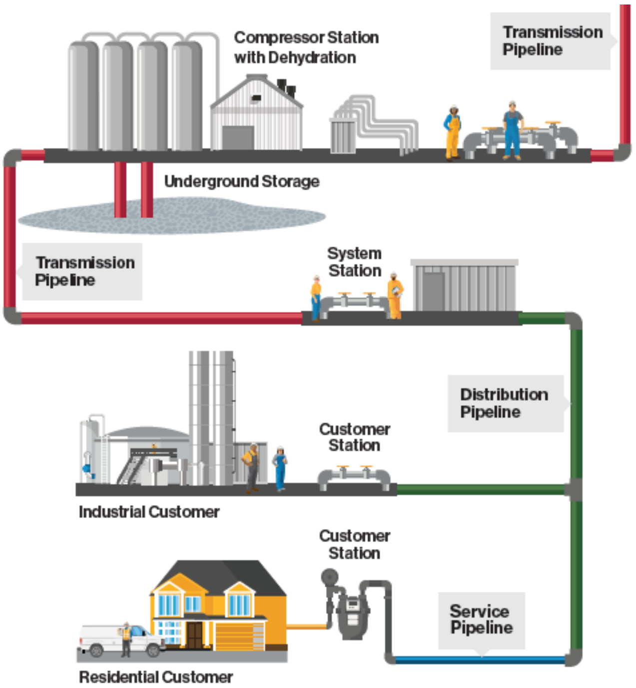


Purchase of Gas



The costs of buying natural gas and transporting it to Ontario are overseen by the Ontario Energy Board, and are passed on to customers at cost.

Infrastructure



Once gas reaches the Enbridge Gas system, it is metered and then delivered to customers through a distribution system of local gas mains, small-diameter service lines and, ultimately, customer meters.

Natural gas is often stored in large underground reservoirs to help meet spikes in demand, particularly in winter.

Operations

Delivering gas to customers is just one part of Enbridge Gas' activities. Enbridge Gas provides a variety of supporting services to customers including:

- Manage and operate its call centres, ombudsperson offices, and its online My Account system to help customers manage their account online.
- Complete meter replacements, inspections, and respond to emergency calls.
- Conduct millions of meter readings each year.
- Offer programs to help customers reduce their natural gas usage. Since 1995, Enbridge Gas has saved its customers 30 billion lifetime cubic meters of natural gas and 56.2 million tonnes of greenhouse gas emissions, the equivalent of taking 12.2 million cars off the road for a year or heating 13.1 million natural gas homes for a year. These programs get approved by the Ontario Energy Board in a separate process and the costs for these programs are included in your rates.

Before this survey, how familiar were you with Enbridge Gas when it comes to delivering natural gas to homes and businesses in Ontario?

- ☐ Very familiar and could explain the details of the Enbridge Gas system to others
- ☐ Somewhat familiar with the Enbridge Gas system but could not explain the details to others
- ☐ Had heard of some of the terms mentioned, but knew very little about the Enbridge Gas system
- ☐ I knew nothing about the Enbridge Gas system
- ☐ Don't know

Where does this consultation fit?

Here in Ontario, customer views are central to the utility planning process.

- **Rates and business plans must be approved by the Ontario Energy Board (the OEB).**
- **The OEB requires that utilities consult with customers to understand your views on key trade-offs.**
- **In addition, the utilities must show how they took customer views into account when developing the plan.**

While some planning decisions will depend on detailed knowledge of engineering and industry standards, in other cases the choices will involve trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down. That is where you come in.

The diagram below shows how customers play a role at three points as Enbridge Gas develops and submits its business plan to the OEB.

How does Customer Engagement Impact Business Planning?

Enbridge Gas has developed a phased approach to gathering and responding to customer feedback.

✓ **1. Identify Customer Priorities**
In June through August of 2021, Enbridge Gas asked residential and business customers about their priorities for natural gas service.

✓ **2. Use Customer Feedback to Guide Development of Plan**
Enbridge Gas planners were given summaries of the key findings from the initial customer engagement to consider as they began building their plans.

You are here

3. Collect Customer Feedback on the Draft Plan
Now Enbridge Gas is returning to customers to get feedback on the draft plan and ask customers how the plan fits with their needs and preferences.

4. Re-Examine Plan
Enbridge Gas has an opportunity to make appropriate changes to the plan based on customer feedback.

5. Submit the Plan to the Ontario Energy Board (OEB)
Enbridge Gas will file the plan, with this workbook, and a summary report with the OEB, where it will be examined by the OEB, consumer advocates and other independent parties in a public hearing. **Customers** can view and comment on this application through the OEB website.

How well do you feel you understand how your feedback fits within the planning process?

□ Very well □ Somewhat well □ Not very well □ Not at all □ Don't know

Customer Experience

Satisfaction and Areas of Improvement

Taking into consideration all aspects of your utility service experience, how satisfied are you with your Enbridge Gas service?

- ☐ Very satisfied
- ☐ Somewhat satisfied
- ☐ Neither satisfied nor dissatisfied
- ☐ Somewhat dissatisfied
- ☐ Very dissatisfied
- ☐ Don't know

Is there anything in particular Enbridge Gas can do to improve their service to your organization? [OPEN]

How do you know if Enbridge Gas is doing a good job for your organization, or not? [OPEN]

Background

2024-2028 Plan

Plan Objectives

The Enbridge Gas business plan focuses on many of the same objectives as in the past years, as well as future challenges and pressures. Some of the high-level objectives of the plan are as follows:

1. **Maintain system safety and reliability** – ensure that the system continues to operate safely and reliably.
2. **Contain costs** – the OEB requires all utilities to "demonstrate ongoing continuous improvement in their productivity and cost performance while delivering on system reliability and quality objectives".
3. **Harmonize rates and services** – ensure that the offerings are consistent across the entire service area as Enbridge Gas continues its merger activities.
4. **Prepare for the future** – ensure that the system is ready for low-carbon options, as well as offer options to help customers reduce their greenhouse gas (GHG) emissions.

Climate Change Goals

Compared to the past, Enbridge Gas' 2024-2028 plan places more emphasis on preparing for the future. Enbridge Gas is looking at ways in which it can support its organizational, as well as federal and provincial goals to reduce GHG emissions and achieve net zero targets.

- **Enbridge Inc. targets to reduce, from its operations, GHG emission intensity by 35% by 2030 over 2018 levels, and to reach Net Zero GHG emissions by 2050**
- **Federal targets to reduce GHG emissions by 40-45% by 2030 over 2005 levels and to reach Net Zero GHG emissions by 2050**
- **Provincial target to reduce GHG emissions by 30% by 2030 over 2005 levels**

How We Can Reduce GHG Emissions From Natural Gas

One of the ways in which GHG emissions are created is through the burning of fossil fuels such as coal, oil, and natural gas. Two key approaches can reduce the emissions from using natural gas:

- by blending lower carbon fuels into the gas supply, including Renewable Natural Gas (RNG) and Hydrogen gas, and
- by improving energy efficiency of homes and businesses, and implementing new, lower-emitting technologies.

Each of these could introduce new, higher, costs that would be passed on to customers but would mitigate costs that might be required to introduce other programs or options to reduce overall GHG emissions in Ontario and Canada. **Later in the workbook we will ask about your views on these potential costs.**

Do these objectives seem like the right approach or the wrong approach?
☐ Right approach ☐Wrong approach ☐ Don't know

Is there anything you would change about this approach or any other comments you would like to make?
Comments:

Calculating Rates

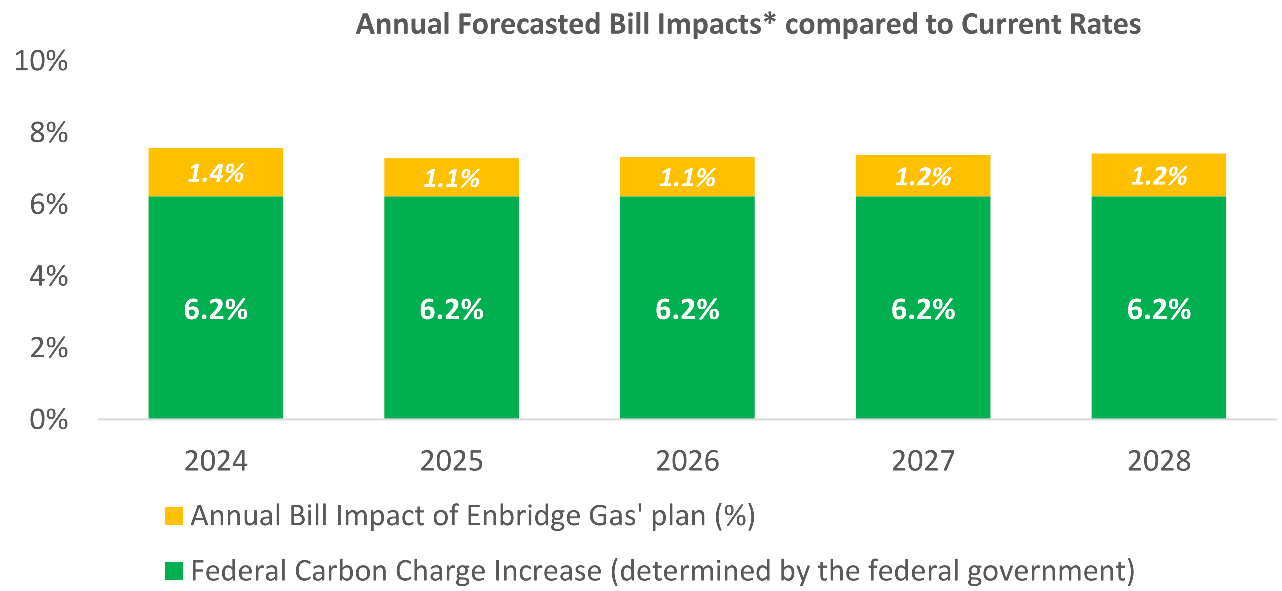
When looking at its overall objectives, and its budgets, there are many items that Enbridge Gas must consider that affect its costs, and in turn the rates that customers pay. Some of these items are determined by regulatory requirements, others by external factors in the market, and again others by decisions made by Enbridge Gas.

There are **accounting policies and factors** that affect expenditures. These include proposals through which Enbridge Gas manages business risk and how it calculates the depreciation of its assets. These types of proposals contribute significantly to the overall rate impact shown in the "Forecasted Bill Increase" below and are partially offset by savings in other areas. While these issues are too technical for this workbook, they will be reviewed by OEB experts and intervening stakeholders in the OEB's public review process.

Operating expenses make up about 20% of Enbridge Gas' overall expenditures. Current estimates show that these expenses would increase somewhat over the 2024-2028 period, with the highest annual increase at 1.5%, which is less than inflation. Decisions on operating expenses are based on industry best practices and generally do not involve trade-offs between customer outcomes. Since these are technical issues, they will also be reviewed by OEB experts and intervening stakeholders in the OEB's public review process.

Capital expenses make up about 35% of Enbridge Gas' overall expenditures and pay for investments in its equipment that have lasting benefits over many years. Since capital spending includes major one-off projects as well as ongoing maintenance and replacement, capital spending varies from year to year. The questions in the next section focus on these choices.

The *Forecasted Bill Impacts* for 2024 to 2028 compared to current rates are shown below. Compared to your current rates, rates in 2022 are expected to increase by 2.1% for the average commercial customer, while 2023 rates are not yet established.



These charges for business customers may vary somewhat by rate class, and in all cases where we're showing a rate impact, it is the highest potential impact across rate classes.

**These estimates are preliminary and are subject to both your feedback and ongoing work to review as Enbridge Gas planners continue to work on their plans. This does not include any potential changes in the fuel costs or the federal carbon charge.*

How well do you feel you understand the projected increase in your rates from 2024 to 2028?
☐ Very well ☐ Somewhat well ☐ Not very well ☐ Not at all ☐ Don't know

Making Choices

In this next section of the workbook, we will ask you about some of the key items that Enbridge Gas is considering in its plan that see trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down.

Some of these items are currently included in the draft budget, while others will need to be added to the budget depending on further analysis and feedback from customers like you.

For each question, where applicable, the financial impact is expressed as the percentage impact each year on an average business customer bill. The actual impact will depend on your own individual usage.

At the end of the section, you will have an opportunity to review your responses and their impact on your bill. You will then be able to adjust your choices to provide what you feel is the best balance.

Compression Stations

Enbridge Gas has 50 Compressors, 7 Dehydrators and supporting equipment. These are required to ensure that the gas that is injected into storage or into the distribution system meets the quality specifications and to move gas along the transmission system.

As compressors age, they experience breakdowns on an increasingly frequent basis – when equipment manufacturers stop supporting these compressors, the time to complete repairs can be extensive leading to reliability and gas quality problems. There are two compressors that will need to be replaced in the coming years.

When considering a project to replace compressors like this, Enbridge Gas looks at various options:

- ✓ Replacing one larger compressor with two smaller ones,
- ✓ Using alternative fuel sources such as electricity or hydrogen gas, and
- ✓ Preparing for outages by having spare parts available.

In this case, however, there is a lack of viable alternatives at the specific locations for the two compressor stations, so Enbridge Gas is planning to replace one compressor station in 2026, with the other one being replaced after 2028 to use the existing stations for as long as possible.

Not doing this work increases the risk the station could fail. This may require Enbridge Gas to buy more gas on the market (if available), rather than drawing gas from its storage. This introduces the risk of price volatility, as gas purchased on the market during the coldest days of the year has been up to 220% more expensive in the past 5 years than the gas that could be drawn from storage.

Image: inside a building housing a compressor station

Connect to next page in the online version. All on one page there.

Furthermore, if the station fails, replacement will still be required which would take a couple of years of construction to complete, extending the risks for longer. The replacement of the first compressor station is planned for 2026 and would cost the average customer 0.028%/year. Which of the following statements best represents your point of view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should replace the compressor stations as it currently plans, replacing one compressor station during the period of its 2024-2028 plan, at an increase of 0.028%
02	Enbridge Gas should defer the compressor station project for as long as possible, even though this carries with it increasing risk of outages and with that, greater price volatility. The cost of this is subject to market prices at the time.
98	I don’t have an opinion on this
99	Don’t know

Comments:

Making Choices

Vintage Steel Pipeline Replacement Program

Enbridge Gas has implemented a Vintage Steel Pipeline Replacement Program, which focuses on replacing older steel pipelines within the system. It is considering ramping up the program to ensure ongoing safety and reliability of the distribution system and to prepare the network for the eventual delivery of low carbon, blended hydrogen. Blended hydrogen can safely be delivered through modern steel and plastic distribution systems – however, with the rapid introduction of natural gas to Ontario during the 1950's and 60's, Enbridge Gas has a lot of older steel pipelines which are nearing end of life and require replacement in a planned and proactive manner.

This program would see an increase in work and a ramp-up of spending starting in 2024 with the goal of replacing 5,100 km of 17,000 km of vintage steel pipelines in 20 years. These vintage steel pipelines were built before 1971 and are more prone to failures compared to steel pipelines built later due to materials, construction and damage prevention practices used at the time. Using risk assessments, the program will focus on replacing pipelines that are closest to end of life first.

Enbridge Gas intends to start this increase in work in 2024 so that the work can be spread out over a longer period with a limited increase to internal resources. Pushing the work into the future, such as 10 years from now, to achieve the same objectives, will require additional internal as well as external resource overheads and costs, with reduced productivity due to a sharper ramp-up of skilled labour. The overall costs would be expected to be higher with a delayed approach.

It is estimated that this program, ramping up in 2024, included in the capital budget, is equivalent to an average annual increase of 0.2%/year from 0.05% increasing to a total of 0.38% in 2028 for the average business customer.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should increase its spending on the Vintage Steel Replacement Program in order to help prepare the system for the future by starting to ramp-up the work in 2024 at an average annual increase of 0.2%/year from 0.05% increasing to a total of 0.38% in 2028.
02	Enbridge Gas should defer proactive replacement of its system that would prepare it for the future – even if this means that the cost will be higher in the future.
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Hydrogen Gas

Enbridge Gas is looking at options to blend more Hydrogen gas into the natural gas it delivers to green the gas supply.

Clean hydrogen gas is derived from surplus clean electrical energy that is converted to hydrogen gas through electrolysis technology. The gas is then blended with traditional natural gas, reducing GHG emissions.

Enbridge Gas is considering investing more in clean hydrogen as a tool for reducing GHG emissions in Ontario to allow for additional hydrogen gas to be blended into the natural gas distribution system. This would mean expanding the pilot project at the power-to-gas (P2G) facility in Markham where hydrogen gas is currently being produced, to deliver hydrogen-blended natural gas to a larger network of customers, expanding the blended gas area from approximately 3,600 to just under 17,000 customers.

Image: Hydrogen gas can be stored in tanks

Additionally, Enbridge Gas intends to launch a feasibility study that assesses the full system's readiness for more hydrogen gas to be included in the system. The costs for these projects for the average customer are estimated as follows:

	2024	2025 and 2026	2027 and 2028
Annual cost	0.004%	0.005%	0.018%

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should implement these plans for hydrogen gas, which will increase the average business customer's bill by 0.004% in 2024, increasing to 0.005% in 2025 and 2026 and 0.018% in 2027 and 2028, including the cost of the hydrogen gas.
02	Enbridge Gas should not implement these plans related to Hydrogen gas to reduce GHG emissions and keep rates as low as possible
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Innovation and Technology Fund

Enbridge Gas can support the advancement of various new low-carbon or energy efficient technologies that may not be available to consumers today.

While some of this work is already taking place on a small scale, the budget for these types of projects is currently very limited. Additional contributions from customers would allow Enbridge Gas to expand this type of research and development work.

Similar to other jurisdictions, Enbridge Gas is considering an **Innovation and Technology Fund** in order to support the research, development, and the bringing to market of new low-carbon or energy efficient technologies. Where possible, this would be in partnership with other utilities and organizations.

Some options include funding for …

- new research on energy efficiency technologies,
- hydrogen gas,
- renewable natural gas, or
- carbon capture, utilization and sequestration (CCUS). This is the process of capturing carbon dioxide before it enters the atmosphere and either use it as a resource to create products or permanently storing it underground.

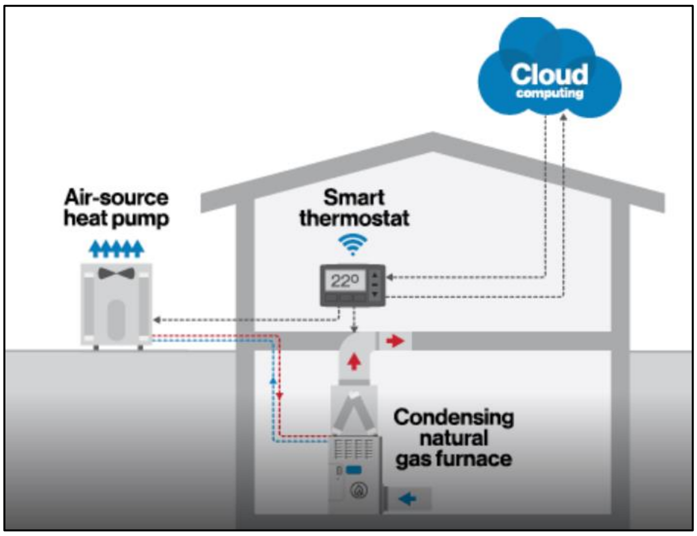


Image: Ontario pilot program tests future of advanced hybrid heating

The more money in this fund, the more projects could be completed, however Enbridge Gas is committed to finding a right balance of spending and planning for the future.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should develop this fund, spending $1M/year which would increase the average business customer’s bill by 0.003%/year
02	Enbridge Gas should develop this fund, spending $5M/year which would increase the average business customer’s bill by 0.014%/year
03	Enbridge Gas should develop this fund, spending $10M/year which would increase the average business customer’s bill by 0.029%/year
04	Enbridge Gas should **not** develop a fund to invest in new low-carbon or energy efficient technologies
98	I don’t have an opinion on this
99	Don’t know

Comments:

Making Choices

Cross Bores

While rare, it is possible that a natural gas line may intersect with a sewer line. When this happens, it is called a utility cross bore. This is unintentionally created when a natural gas line is installed through a process of trenchless drilling.

Image: Example of a cross bore

Trenchless drilling is used to avoid creating open trenches that can disturb roads, driveways, and gardens, but it relies on locates of existing utilities which may not always be accurate for various reasons. While a utility cross bore may not pose an immediate risk, it may become an issue if a sewer line needs to be cleared in the case of a blockage. This has resulted in some instances of property damage and injury, as a result of a gas leak, fire or explosion.

To address this risk, there is currently an emergency program in place called Call Before you Clear. This program relies solely on property owner and plumber participation and through this program over 10,000 annual inspections are completed. Still, many plumbers and homeowners do not call for an inspection prior to auguring their sewer lines. To expand inspections beyond the current emergency program, Enbridge Gas intends to implement a program to **proactively inspect and resolve additional utility cross bores** that may have been installed in the past. This would double the number of annual inspections.

Another program has been implemented by Enbridge Gas to **prevent new installations from creating new cross bores** even though that increases the cost of the installation and requires additional restoration work during the installation process.

These programs to proactively inspect and resolve existing cross bores and to prevent the creation of cross bores during the completion of new installations combined would increase the average business customer's bill by 0.02% per year in 2024 increasing to $0.04% per year in 2028.

Which of the following is closest to your view?

[RANDOMIZE 01 AND 02]

Connect to next page in the online version. All on one page there.

01	Enbridge Gas should implement the proactive program to expand the number of inspections and continue with the preventative program to eliminate existing cross bores and prevent any new cross bores to maintain safety, at an increase of 0.02% per year in 2024 increasing to 0.04% in 2028 for the average customer.
02	Enbridge Gas should leave its processes of trenchless drilling as is and only resolve the cross bores that come up as an issue arises, even though this limits the inspections to those requested through the Call Before you Clear program, and may also create additional cross bores.
98	I don’t have an opinion on this
99	Don’t know

Comments:

Making Choices

Advanced Meter Infrastructure

The gas meter technology currently used by Enbridge Gas has not changed in many years. Enbridge Gas is working on a plan to rollout new advanced meters that would send usage information to Enbridge Gas through a wireless network, like your existing water or electricity usage meters. The meters also have additional functions that could allow Enbridge Gas to:

- ✓ Better detect and respond to possible gas leaks
- ✓ Enhance safety capabilities by enabling Enbridge Gas to remotely and automatically shutoff gas supply in the event of an emergency
- ✓ Allow for a reduction in greenhouse gas (GHG) emissions by reducing meter reader vehicles on the road
- ✓ Eliminate the need for estimated meter reads
- ✓ Provide customers detailed usage data information – this may also allow customers to be notified of faulty or left on appliances or equipment

Once all meters are rolled out, the above features would become available to all customers. Rates will increase as specified below, after which rates will decrease slowly and eventually decrease to levels lower than today as benefits are fully realized. How rates are impacted depends on timing of spend and realization of benefits.

Depending on the pace of rolling out automated meters, there are implications on the time the benefits listed above can be fully realized, and the cost involved for customers like you. These are outlined in the table below.

	Time to Fully Realize Benefits	First Year Increase (2024)	Maximum Annual Increase	Year that the Rates Impact Reduces to Less than Today
Option 1	4 years	0.04%	0.23% in 2028	2038
Option 2	8 years	0.02%	0.17% in 2031	2039
Option 3	20 years	0.02%	0.02% in 2026	2034

Which of the following is closest to your view? Across its service area, Enbridge Gas should …

01	Implement advanced meters **as soon as is feasible**, according to Option 1 above
02	Implement advanced meters at a **moderate pace**, according to Option 2 above
03	Implement advanced meters at a **slower pace**, according to Option 3 above
04	Replace meters only as required, even though this will prevent the additional benefits noted above from being realized
98	I don't have an opinion on this
99	Don't know

Comments:

Impact of Choices

Do You Want to Change Your Choices?

So far in this workbook, you have been asked about **6 key choices** that could impact your rates. Below is a summary of your answers to the questions that could impact your rates.

At the bottom of this page, you will find the annual bill impact of all the answers.

Having seen the total bill impact, please review your answers and change your responses if you desire; your potential annual rate impact for 2024 and 2028 will be re-calculated each time you change one of your answers at the bottom of the page. Costs for 2025-2027 will fall between this range. You will have the opportunity to continue adjusting your answers until you feel you've reached the best balance for you.

Compressor Stations:
Replace one compressor station
- ☐ **Included in the draft plan:** *Within the proposed increase (0.028% in 2024 to 2028)*
- ☐ **Defer as long as possible:** *Though uncertain, at best it would decrease (0.028% in 2024 to 2028)*

Proactive Vintage Steel Pipeline Replacement Program:
Replace 5,100 km of 17,000 km of vintage steel pipeline over the next 20 years
- ☐ **Included in the draft plan:** *Within the proposed increase (0.05% in 2024 to 0.38% in 2028)*
- ☐ **Defer the proactive replacement for as long as possible:** *Decrease by 0.05% in 2024 to 0.38% in 2028*

Hydrogen Gas:
Expand the current pilot project, and complete a system assessment
- ☐ **Add to the draft *plan:*** *0.004% in 2024, 0.018% in 2028*
- ☐ **No further spending on hydrogen:** *No change in rates*

Innovation and Technology Fund:
Fund research into new low-carbon or energy efficient technologies
- ☐ **Add $1M fund to the plan:** *Increase by 0.003%/year*
- ☐ **Add $5M fund to the plan:** *Increase by 0.014%/year*
- ☐ **Add $10M fund to the plan:** *Increase by 0.029%/year*
- ☐ **No fund:** *No change in rates*

Cross Bores:
Implement proactive program to eliminate existing cross bores and prevent new ones
- ☐ **Proposed approach for proactive and preventative programs:** *0.02% added to rates in 2024 to 0.04% in 2028*
- ☐ **No further spending on cross bores:** *No change in rates*

Advanced Meter Infrastructure:
Identify the appropriate pace for installing advanced meters with enhanced safety and customer benefits
- ☐ **As soon as feasible: 4-year implementation:** *0.04% added to rates in 2024 to 0.23% in 2028*
- ☐ **Moderate pace: 8-year implementation:** *0.02% added to rates in 2024 to 0.12% in 2028*
- ☐ **Slower pace: 20-year implementation:** *0.02% added to rates in 2024 to 0.02% in 2028*
- ☐ **Replace as required:** *No change in rates*

The total impact of your choices would result in a range from:

+/- xx% in 2024 to +/- xx% in 2028

Note: these areas will be uniquely populated for each individual customer. The bill impacts of their individual responses will be summe and displayed below.

This would be a change from the estimated average increase of 1.4% in 2024 up to 5.9% in 2028 compared to October 2021 to your bill for distribution over the 5-year planning period that starts in 2024.

Enbridge Gas will be reviewing its plan based on the feedback you and other customers are sharing now. However, in doing that review, it is important for Enbridge Gas to get a sense of whether the current draft plan is generally acceptable or not. There were some choice options that Enbridge Gas had already included in the draft plan, and others that were not.

As mentioned earlier in the workbook, the Enbridge Gas plan for 2024 to 2028 focused on the following key objectives:

1. Maintaining system safety and reliability
2. Containing costs
3. Harmonizing rates and services
4. Preparing for the future

Currently the plan is estimated to result in an average annual increase of 1.4% over 2024 to 2028 for a total of 5.9% in 2028 compared to October 2021 rates. Along with your feedback on choices included within the plan, Enbridge Gas will consider your feedback on the choices that have not yet been included and update the plan accordingly.

Considering what you know about Enbridge Gas’ plans, and the choices you have been making, which of the following best represents your point of view?

- □ Enbridge Gas should increase its investments, seeking to accelerate the programs shared in this workbook where possible, even if that means a higher draft increase over the 5-year period.
- □ Enbridge Gas should maintain the draft increase to deliver the programs shared in this workbook, focusing on its outlined objectives over the 5-year period.
- □ Enbridge Gas should reduce the draft increase, even if that could mean reductions in performance or increase safety or environmental risks over the 5-year period.
- □ Other **(please specify)**
- □ Don’t know

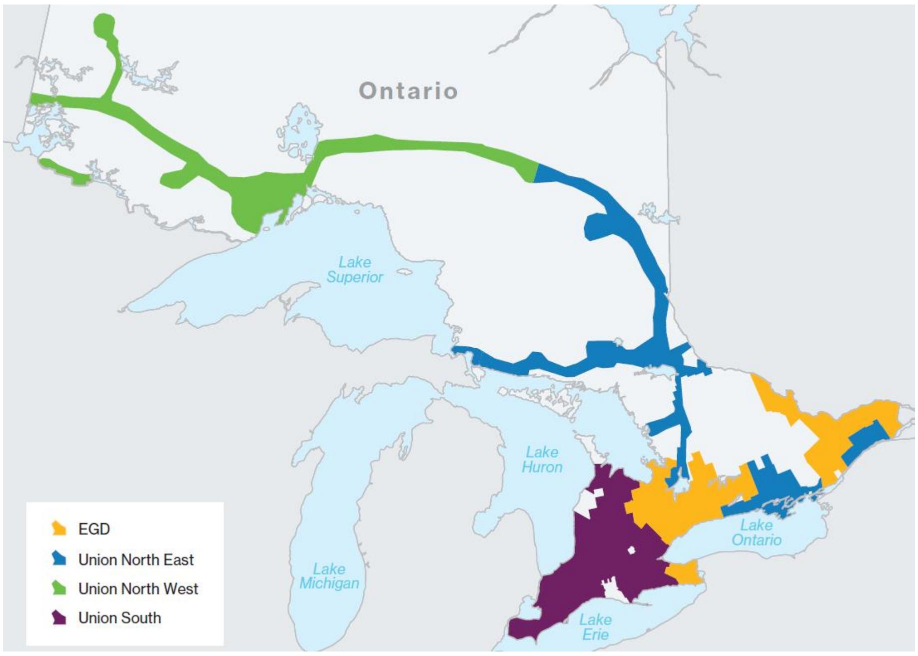
Comments:

Service and Rate Harmonization

In its application to the OEB, Enbridge Gas is also considering several other items that may affect customers. In this section we will ask you about a few different things, including programs that it could offer, as well as some options on how rates are calculated and applied.

Rate Zones

Currently, the rate you pay for natural gas delivery depends on where you are in Ontario. As previously indicated, Enbridge Gas, today, is a combination of Legacy Enbridge Gas Distribution and Legacy Union Gas. Currently there are four rate zones, each with its own rates depending on where you are located, and which company previously served you. The four rate zones look as follows:



Enbridge Gas is considering the option of offering one rate zone for its different types of customers, regardless of location within Ontario and the cost to serve them. There are many benefits of one rate zone including similar charges for similar customers, a consistent customer experience, and reduced administrative costs.

One rate zone could result in a change to the amount customers pay for their natural gas service, and varies on the rate zone a customer is currently located in. The adjustment as a result of this change is impacted by the number of customers in a rate zone and is shown in the table below.

Current rate zone	Average cost adjustment at current rates
EGD	Decrease of approximately 1%
Union North East	Decrease of approximately 10%
Union North West	Decrease of approximately 10%
Union South	Increase of approximately 5%

You are located in **(PIPE IN RATE ZONE BASED ON SAMPLE)**.
Considering this, which of the following is closest to your view?
[RANDOMIZE 01 and 02]

01	Enbridge Gas should implement a single rate zone and make the rates for natural gas service the same across Ontario
02	Enbridge Gas should leave the rate zones as they are where customers pay different rates for natural gas service based on where they live
98	I don't have an opinion on this
99	Don't know

Rate Design

Similar to your electric utility, your gas bill is split into the cost of the natural gas you use and the cost of delivering that gas to you. This question focuses on the delivery charge. Enbridge Gas incurs two types of costs in delivering natural gas to customers like you.

- **Variable costs** depend on how much natural gas you use.
- **Fixed costs** are the same regardless of how much natural gas you use.

The fixed costs that Enbridge Gas incurs can be divided into two groups: the cost of having access to the system, and the cost of the demand that you place on the system which drives the system capacity. We'll look at these two separately.

Cost of being connected to the system

One type of fixed cost is that of being connected to the system. This includes the cost of the pipeline, the pressure regulator, the natural gas meter, meter reading, billing, the contact centre and operations support. These costs are **fixed for Enbridge Gas** and are **similar for each customer** and do not change based on the size of the customer.

How do you feel **business** customers like you should be billed for these costs of being connected to the system?

[RANDOMIZE 01 AND 02]

01	Each customer should pay a portion based on the amount of natural gas they use
02	The cost should be paid equally by customers of the same type (i.e. residential or business) regardless of how much natural gas they use
98	I don't have an opinion on this
99	Don't know

Cost of accessing a portion of the system

The other type of fixed cost is that of the system capacity. This includes the cost of the infrastructure, its operation, maintenance, and natural gas storage to meet the peak demand of customers on the coldest days of the year. These costs are **fixed for Enbridge Gas** but **may vary for each customer** based on their individual level of peak demand, which is often on the coldest days of the year.

How do you feel business customers like you should be billed for these costs of accessing system capacity?

[RANDOMIZE 01 AND 02]

01	Each customer should pay a portion based on the amount of natural gas they use
02	The cost should be paid equally by customers of the same type (i.e. residential or business) regardless of how much natural gas they use
98	I don't have an opinion on this
99	Don't know

Comments:

Cost of the fuel

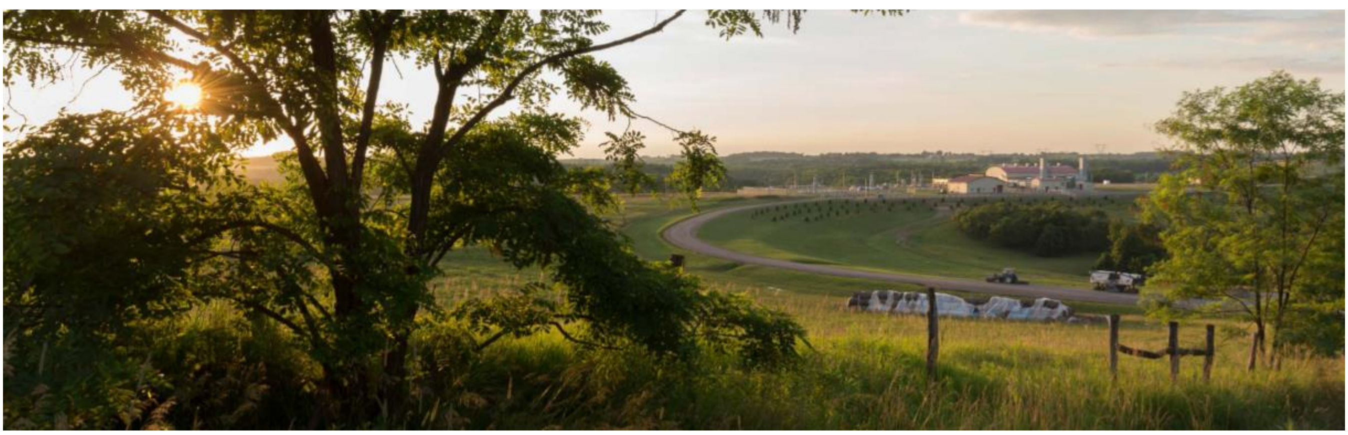
Fuel Choices

As previously discussed, the costs of buying natural gas and transporting it to Ontario are overseen by the Ontario Energy Board and are passed on to customers at cost. However, Enbridge Gas can make some choices about the natural gas it purchases, beyond focusing on the lowest price in the market. We would like to ask you a couple of questions about gas supply options.

Responsibly Sourced Gas

Enbridge Gas is looking at options to ensure that the natural gas it purchases is responsibly sourced. This means that the companies who produce the natural gas adhere to higher standards than the minimum government standards. This relates to areas such as:

- minimizing impacts to air and water quality
- lowering GHG emissions during production
- stronger engagement with Indigenous communities, etc.



Enbridge Gas can offer some options to include Responsibly Sourced Gas in its portfolio, which can be purchased at a small premium. Responsibly Sourced Gas is a new and emerging trend in the North American natural gas industry. For this reason, current supply options are limited.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should commit to 10% of responsibly sourced gas in its gas supply which will cost the average business customer an additional 0.13%/year
02	Enbridge Gas should commit to 25% of responsibly sourced gas in its gas supply which will cost the average business customer an additional 0.32%/year
03	Enbridge Gas should commit to 50% of responsibly sourced gas in its gas supply which will cost the average business customer an additional 0.63%/year
04	Enbridge Gas should **not** add any responsibly sourced gas to its gas supply if it increases rates by any amount
98	I don’t have an opinion on this
99	Don’t know

Comments:

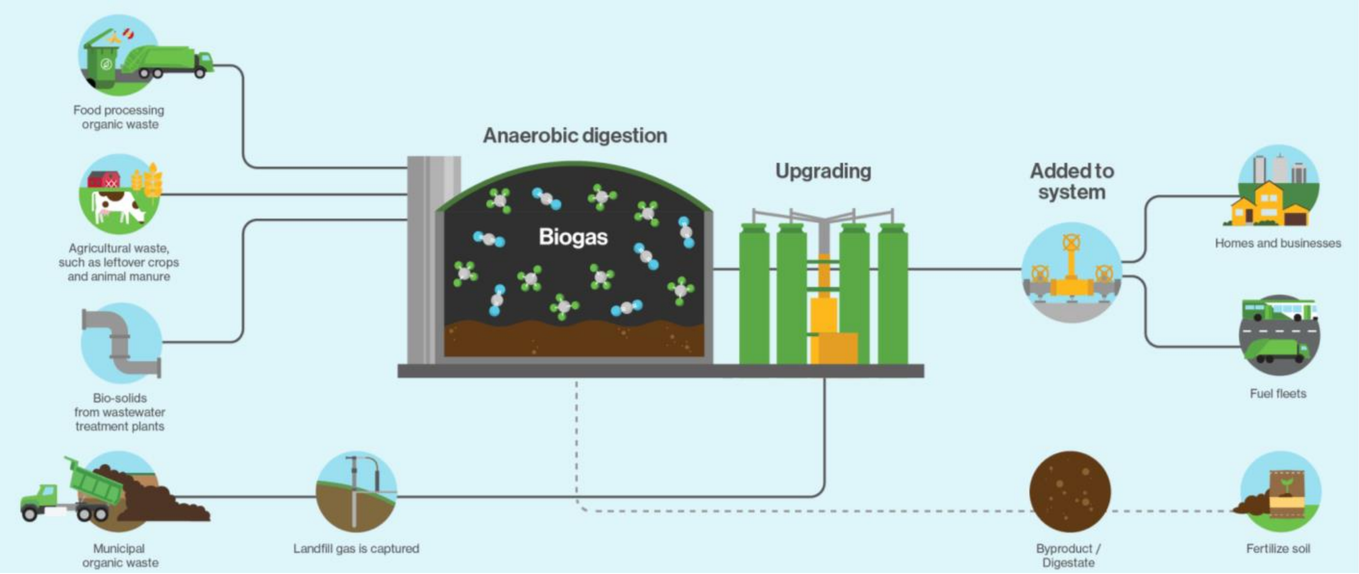
Cost of the fuel

Fuel Choices

Renewable Natural Gas

Enbridge Gas is looking at options to blend more Renewable Natural Gas (RNG) into the natural gas it delivers to green the gas supply. The gas is derived from organic waste from farms, landfills, and water treatment plants. The gas is then blended with traditional natural gas and supplied to customers using existing natural gas infrastructure.

RNG is considered to be carbon neutral and would reduce GHG emissions to help meet climate change targets. Every one percent of RNG in the gas supply reduces GHG emissions by one percent, in a 1:1 ratio. That means every additional 1% of RNG reduces your natural gas GHG emissions by 1%.



Enbridge Gas is developing a plan to increase the blend of RNG in the gas system from 0.5% in 2025 to a higher amount over the course of the 2024 to 2028 plan and beyond. This amount is limited by the amount of RNG available in the market. Since the cost to produce RNG is currently higher than that of traditional natural gas it could have an impact on your rates.

The federal carbon charge would not be applied to the volume of RNG on customer bills, which is accounted for in the costs shown below.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should commit to increasing the amount of RNG in its gas supply to **8%** by 2030, which will cost the average business customer 1.3%/year in 2025 increasing to 17.8% in 2030
02	Enbridge Gas should commit to increasing the amount of RNG in its gas supply to **5%** by 2030 which will cost the average business customer 1.3%/year in 2025 increasing to 11.2% in 2030
03	Enbridge Gas should commit to increasing the amount of RNG in its gas supply to **2%** by 2030, which will cost the average business customer 1.3%/year in 2025 increasing to 4.5% in 2030
04	Enbridge Gas should **not** add any RNG to its gas supply if it increases rates by any amount
98	I don't have an opinion on this
99	Don't know

Final Thoughts

Feedback and More About Your Business

Thank you for providing your input into the Enbridge Gas planning process. Your feedback will help ensure we submit a plan that will address our customers' needs and opinions. Before you finish, we would appreciate your answers to two brief topics. First, to help ensure we continue to improve our customer engagements, we would appreciate your feedback on this workbook. Second, sometimes particular groups of customers have specific needs. We have some questions that will allow us to group your answers with other customers like you. It should just take one or two more minutes to finish up.

Feedback on Enbridge Gas Customer Engagement

Enbridge Gas values your feedback. This is the first time the utility has conducted a review about its upcoming plans in this type of format.

Overall, did you have a favourable or unfavourable impression of the workbook you just completed?

- ❑ Very favourable
- ❑ Somewhat favourable
- ❑ Somewhat unfavourable
- ❑ Very unfavourable
- ❑ Don't know

In this workbook, do you feel that Enbridge Gas provided too much information, not enough, or just the right amount?

- ❑ Too little information
- ❑ Just the right amount of information
- ❑ Too much information

Was there any content missing that you would have liked to have seen included in this workbook?

- ❑ None

Is there anything that you would still like answered?

- ❑ None

Would you like to be notified by email about how Enbridge Gas used your feedback?

- ❑ Yes
- ❑ No

[IF "Yes"] Please enter you preferred email address: ____

About you

More About Your Business

The following questions are for statistical purposes only. This information is used to segment and group similar customers together when the survey results are analysed.

To what extent do you agree or disagree with the following statements?

The cost of my Enbridge Gas bill has a major impact on my business' finances and requires the business do without some other important priorities.

- ❑ Strongly agree
- ❑ Somewhat agree
- ❑ Somewhat disagree
- ❑ Strongly disagree
- ❑ Don't know/No opinion

Customers are well served by the energy system in Ontario.

- ❑ Strongly agree
- ❑ Somewhat agree
- ❑ Somewhat disagree
- ❑ Strongly disagree
- ❑ Don't know/No opinion

How do you use natural gas at your organization? Please check as many as apply.

- ❑ Natural gas is used in production process
- ❑ Natural gas is used as feedstock
- ❑ Natural gas is used for heating or space conditioning
- ❑ Natural gas is used for water heating
- ❑ Other
- ❑ Don't know

Including yourself, how many people work at your organization?

- ❑ 1 person
- ❑ 2 to 5 people
- ❑ 6 to 10 people
- ❑ 11 to 25 people
- ❑ 26 to 50 people
- ❑ More than 50 people
- ❑ Don't know

Approximately, how much was your most recent total Enbridge Gas bill?

$___________

❑ Don't know/not sure

Next Steps

Thank you for your input into our planning process. Enbridge Gas will use the findings from this consultation to ensure that its 2024-2028 plan meets customers' needs, which will be filed to the Ontario Energy Board as part of the Enbridge Gas 2024 Rate Rebasing application in Q4 2022.

Customer Engagement
Phase III: Workbook

Contract Customer Workbook

January 2022

STRICTLY PRIVILEGED AND CONFIDENTIAL

About this Customer Engagement

Welcome to the Enbridge Gas Customer Engagement!

As Enbridge Gas plans for the future, it needs your input into choices that will impact the services you receive and the rates you pay.

- Enbridge Gas is looking for your feedback on its draft investment plan for 2024 and beyond to ensure that the plan reflects your needs and preferences.
- Enbridge Gas' contract customers are important to its business and their views are important.

This is Enbridge Gas' first rate application and investment plan since the merger of Union Gas and Enbridge Gas Distribution, and it will address a large number of issues that could affect your rates and services. In addition to the workbook itself, there are also links to videos that explain the proposals for contract rate distribution services, and direct purchase services in more detail.

We want to hear from you on all those changes, so we are asking for an hour or so of your time.

You don't have to do this all at once. Your progress will be saved as you move through the workbook, so you can leave and return to complete it at any time.

While this engagement is dealing with all the issues that may affect you in one comprehensive conversation, future engagements could conduct several smaller conversations. We will ask you for your feedback on this choice near the end

Those who complete the questions that follow will be invited to enter a draw to win one of two $500 cash prizes.

All individual responses will be kept confidential. Innovative Research Group (INNOVATIVE), an independent research company, has been hired to gather your feedback.

If you are reading this on a smaller mobile device, you may wish to access the survey from a tablet, desktop or laptop instead, so that it is easier to read.

While many customer are familiar with natural gas contract terminology, you can click **here** to open a list of acronyms in a separate window.

Background

Who is Enbridge Gas?

Company Overview

Enbridge Gas Inc. is based in Ontario and delivers energy to customers in Ontario. Its parent company Enbridge Inc. is headquartered in Calgary, Canada, and operates across North America. Rates and business plans developed by Enbridge Gas must be approved by the Ontario Energy Board (the OEB), which regulates natural gas utilities in Ontario.

Enbridge Gas …

- ✓ Distributes natural gas to about 3.8 million residential, business and industrial customers
- ✓ Attaches more than 50,000 new customers each year
- ✓ Has agreements to provide gas distribution service within 313 municipalities and provides natural gas within 23 First Nation communities
- ✓ Has a network of over 151,500 kilometers of underground pipeline

In 2019, Enbridge Gas Distribution and Union Gas merged to form one company, Enbridge Gas Inc. Throughout this workbook we occasionally refer to Legacy Enbridge Gas Distribution and Legacy Union Gas (the previous companies), but mainly refer to the whole service area or territory that Enbridge Gas serves today.

The Storage and Transmission Market

In addition to providing distribution services to customers in our franchise area, Enbridge Gas serves the surrounding storage and transmission marketplace. The Dawn Hub is the largest integrated underground storage facility in Canada and one of the largest in North America. It offers customers an important link in the movement of natural gas from Western Canadian and U.S. supply basins to markets in central Canada, the Great Lakes region and the northeast U.S.

The Dawn-Parkway transmission system is a series of four transmission pipelines (229 km/143 mi), and compressor stations that move natural gas through Ontario from the Dawn Hub near Sarnia, east to the Parkway compressor facility near Mississauga. At Parkway, the system connects with other pipelines that serve residents in the Toronto area, Quebec, eastern Canada and the U.S. northeast.

Enbridge Gas Customer Engagement

Background

Where do your rates go?

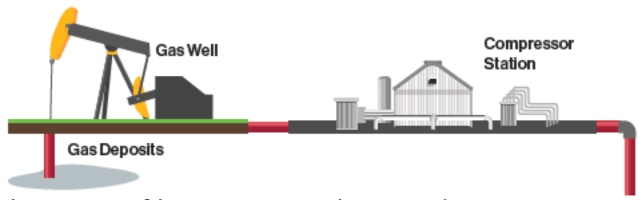
The pie chart below shows where the money goes.

The Blue slice shows the 'pass through' costs that pay for the natural gas and transportation to the Enbridge Gas system.

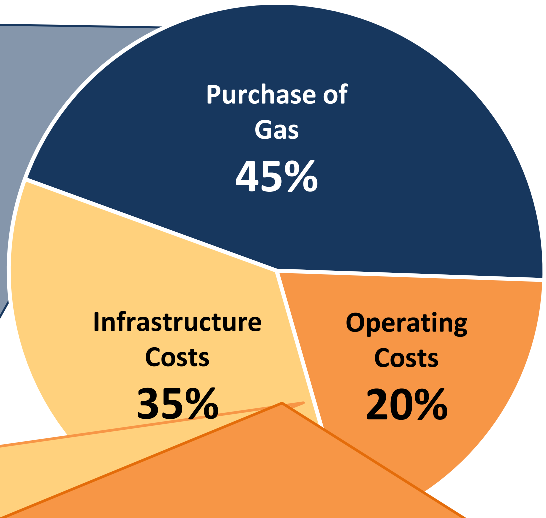
The money that goes to Enbridge Gas is in the other two slices.

- The Light Orange slice pays the capital costs of the infrastructure (such as pipes, compressors, buildings and other equipment) used to move and store natural gas across the system.
- The Dark Orange slice pays for operations – including the people who operate and maintain the equipment and the people who answer your calls and provide customer service.

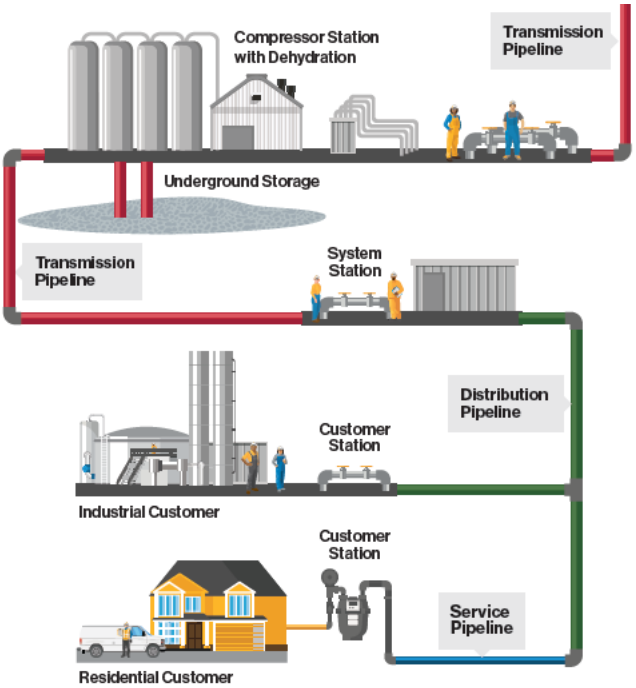
Purchase of Gas



The costs of buying natural gas and transporting it to Ontario are overseen by the Ontario Energy Board, and are passed on to customers at cost.



Infrastructure



Once gas reaches the Enbridge Gas system, it is metered and then delivered to customers through a distribution network of local gas mains, small-diameter service lines and, ultimately, customer meters.

Natural gas is often stored in large underground reservoirs to help meet spikes in demand, particularly in winter.

Operations

Delivering gas to customers is just one part of Enbridge Gas' activities. Enbridge Gas employees provide a variety of supporting services to customers including:

- ✓ Manage and operate its call centres, ombudsperson offices, and its online My Account system to help customers manage their account online.
- ✓ Complete meter replacements, inspections, and respond to emergency calls.
- ✓ Conduct millions of meter readings each year.
- ✓ Offer programs to help customers reduce their natural gas usage. Since 1995, Enbridge Gas has saved its customers 30 billion lifetime cubic meters of natural gas and 56.2 million tonnes of greenhouse gas emissions, the equivalent of taking 12.2 million cars off the road for a year or heating 13.1 million natural gas homes for a year. These programs get approved by the Ontario Energy Board in a separate process and the costs for these programs are included in your rates.

Before this survey, how familiar were you with Enbridge Gas when it comes to delivering natural gas to homes and businesses in Ontario?

- ☐ Very familiar and could explain the details of the Enbridge Gas system to others
- ☐ Somewhat familiar with the Enbridge Gas system but could not explain the details to others
- ☐ Had heard of some of the terms mentioned, but knew very little about the Enbridge Gas system
- ☐ I knew nothing about the Enbridge Gas system
- ☐ Don't know

Where does this consultation fit?

Here in Ontario, customer views are central to the utility planning process.

- **Rates and business plans must be approved by the Ontario Energy Board (the OEB).**
- **The OEB requires that utilities consult with customers to understand your views on key trade-offs.**
- **In addition, the utilities must show how they took customer views into account when developing the plan.**

While some planning decisions will depend on detailed knowledge of engineering and industry standards, in other cases the choices will involve trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down. That is where you come in.

The diagram below shows how customers play a role as Enbridge Gas develops and submits its business plan to the OEB.

How does Customer Engagement Impact Business Planning?

Enbridge Gas has developed a phased approach to gathering and responding to customer feedback.

✓ **1. Information Gathering and Issue Identification**
Enbridge Gas planners gathered information and identified key issues to address in its plans. This process included review of previous research engagements, as well as informal conversations with customers and industry associations to identify customer needs and priorities.

✓ **2. Develop the Draft Plan**
Enbridge Gas planners use the key findings from the information gathering and issue identification phase as they began building their plans.

You are here

3. Collect Customer Feedback on the Draft Plan
Enbridge Gas is asking customers for feedback on the draft plan and how the plan fits with their needs and preferences.

4. Re-Examine Plan
Enbridge Gas has an opportunity to make appropriate changes to the plan based on customer feedback.

5. Submit the Plan to the Ontario Energy Board (OEB)
Enbridge Gas will file the plan, with this workbook, and a summary report with the OEB, where it will be examined by the OEB, consumer advocates and other independent parties in a public hearing. **Customers** can view and comment on this application through the OEB website.

How well do you feel you understand how your feedback fits within the planning process?

☐ Very well ☐ Somewhat well ☐ Not very well ☐ Not at all ☐ Don't know

Customer Experience

Satisfaction and Areas of Improvement

The Ontario Energy Board (OEB) expects Enbridge Gas to develop a plan that will focus on cost effective delivery of outcomes that matter to customers.

Overall experience

Taking into consideration all aspects of your utility service experience, how satisfied are you with your Enbridge Gas service?

- ☐ Very satisfied
- ☐ Somewhat satisfied
- ☐ Neither satisfied nor dissatisfied
- ☐ Somewhat dissatisfied
- ☐ Very dissatisfied
- ☐ Don't know

Comments:

Is there anything in particular Enbridge Gas can do to improve their service to you? [OPEN]

Customer Experience

Satisfaction and Areas of Improvement

Contract customers have a unique set of needs compared to other rate classes. The following questions will help us understand how well we are currently meeting your needs and where there is room for improvement.

Overall customer service

Taking into consideration all aspects of Enbridge Gas' customer service, how satisfied are you with Enbridge Gas' customer service?

- ☐ Very satisfied
- ☐ Somewhat satisfied
- ☐ Neither satisfied nor dissatisfied
- ☐ Somewhat dissatisfied
- ☐ Very dissatisfied
- ☐ Don't know

Comments:

Firm distribution service

Firm distribution service offers firm deliveries of natural gas to the end use customer every day of the year. This is the most common service.

How satisfied are you with the reliability of Enbridge Gas' firm distribution services?

- ☐ Very satisfied
- ☐ Somewhat satisfied
- ☐ Neither satisfied nor dissatisfied
- ☐ Somewhat dissatisfied
- ☐ Very dissatisfied
- ☐ Don't know

Comments:

Seasonal distribution service

Seasonal distribution service is a form of firm service that provides access to firm deliveries of natural gas in months where Enbridge Gas does not expect to see peak demand on the system. This service is tailored for customers who do not have their peak demands in the winter.

Do you contract for seasonal distribution service today?

- ☐ Yes
- ☐ No

If yes:

How satisfied are you with Enbridge Gas' current seasonal distribution services?

- ☐ Very satisfied
- ☐ Somewhat satisfied
- ☐ Neither satisfied nor dissatisfied
- ☐ Somewhat dissatisfied
- ☐ Very dissatisfied
- ☐ Don't know

Comments:

Customer Experience

Satisfaction and Areas of Improvement

Interruptible distribution service

Interruptible distribution service can be added to firm distribution service or can be contracted separately. This service allows Enbridge Gas to issue a notice of interruption that requires an end user to reduce their consumption completely, or to reduce it to the level of firm service they have contracted.

Do you contract for interruptible distribution service today?

- ◻ Yes
- ◻ No

If yes:

How satisfied are you with Enbridge Gas' current interruptible distribution services?

- ◻ Very satisfied
- ◻ Somewhat satisfied
- ◻ Neither satisfied nor dissatisfied
- ◻ Somewhat dissatisfied
- ◻ Very dissatisfied
- ◻ Don't know

Comments:

Why do you use interruptible distribution service?

- ◻ Less expensive
- ◻ Natural gas is not a primary energy source
- ◻ Firm distribution service is not available (I would prefer firm service if available)
- ◻ Avoids distribution overrun charges
- ◻ Other: _______
- ◻ Don't know

Are there any other reasons that you use interruptible distribution service? Please indicate them below:

Customer Experience

Customer Outcomes

In considering its business plan to be implemented starting in 2024, Enbridge Gas must make many decisions. We would like your feedback on the outcomes you would like Enbridge Gas to focus on in its plan. Outcomes are the goals and priorities that matter to you.

There is a list of broad outcomes that Enbridge Gas will need to consider. Using a scale from 0 to 10, where 0 means "not at all important" and 10 means "extremely important", please tell us how important each one is to you. Be sure to save a rating of 10 for those items that are most important to you.

Outcomes (randomize)	**Importance Rating (0-10, don't know)**
Reliably delivering natural gas	
Safely delivering natural gas	
Making good use of the money customers pay	
Providing affordable pricing	
Providing predictable pricing	
Providing dependable customer service	
Minimizing any impacts on the environment	
Being socially responsible	
Supporting the growth of Ontario's economy	

Are there any other outcomes that are not listed above that are important to you? Please indicate them below:

Sometimes we need to choose between priorities that are all considered important. Thinking about these outcomes, which ones would you rank as first, second and third, in terms of importance to you.

Outcomes	**Ranking, 1st, 2nd, 3rd**
Reliably delivering natural gas	
Safely delivering natural gas	
Making good use of the money customers pay	
Providing affordable pricing	
Providing predictable pricing	
Providing dependable customer service	
Minimizing any impacts on the environment	
Being socially responsible	
Supporting the growth of Ontario's economy	
Other:	

Background

2024-2028 Plan

Plan Objectives

The Enbridge Gas business plan focuses on many of the same objectives as in the past years, as well as future challenges and pressures. Some of the high-level objectives of the plan are as follows:

1. **Maintain system safety and reliability** – ensure that the system continues to operate safely and reliably.
2. **Contain costs** – the OEB requires all utilities to "demonstrate ongoing continuous improvement in their productivity and cost performance while delivering on system reliability and quality objectives".
3. **Harmonize rates and services** – ensure that the offerings are consistent across the entire service area as Enbridge Gas continues its merger activities.
4. **Prepare for the future** – ensure that the system is ready for low-carbon options, as well as offer options to help customers reduce their greenhouse gas (GHG) emissions.

Climate Change Goals

Compared to the past, Enbridge Gas' 2024-2028 plan places more emphasis on preparing for the future. Enbridge Gas is looking at ways in which it can support its organizational, as well as federal and provincial goals to reduce GHG emissions and achieve net zero targets.

- **Enbridge Inc. targets to reduce, from its operations, GHG emission intensity by 35% by 2030 over 2018 levels, and to reach Net Zero GHG emissions by 2050**
- **Federal targets to reduce GHG emissions by 40-45% by 2030 over 2005 levels and to reach Net Zero GHG emissions by 2050**
- **Provincial target to reduce GHG emissions by 30% by 2030 over 2005 levels**

How We Can Reduce GHG Emissions From Natural Gas

One of the ways in which GHG emissions are created is through the burning of fossil fuels such as coal, oil, and natural gas. Two key approaches can reduce the emissions from using natural gas:

- by blending lower carbon fuels into the gas supply, including Renewable Natural Gas (RNG) and Hydrogen gas, and
- by improving energy efficiency of homes and businesses, and implementing new, lower-emitting technologies.

Each of these could introduce new, higher, costs that would be passed on to customers but would mitigate costs that might be required to introduce other programs or options to reduce overall GHG emissions in Ontario and Canada. **Later in the workbook we will ask about your views on these potential costs.**

Do these objectives seem like the right approach or the wrong approach?
□ Right approach □ Wrong approach □ Don't know

Is there anything you would change about this approach or any other comments you would like to make?
Comments:

Calculating Rates

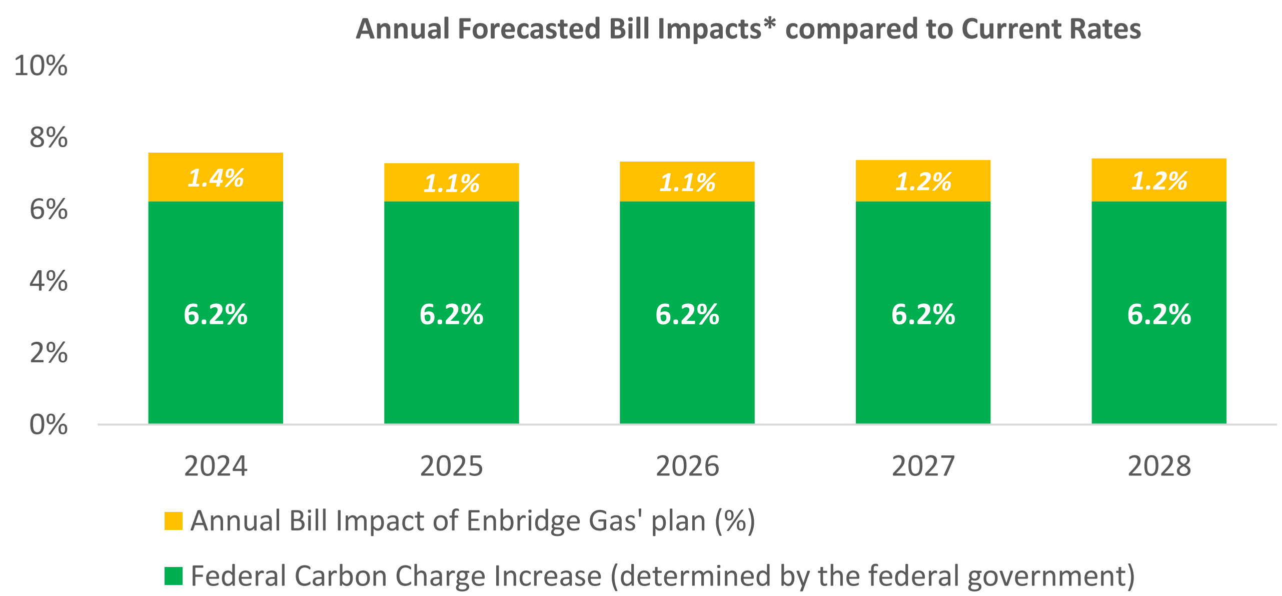
When looking at its overall objectives, and its budgets, there are many items that Enbridge Gas must consider that affect its costs, and in turn the rates that customers pay. Some of these items are determined by regulatory requirements, others by external factors in the market, and again others by decisions made by Enbridge Gas.

There are **accounting policies and factors** that affect expenditures. These include proposals through which Enbridge Gas manages business risk and how it calculates the depreciation of its assets. These types of proposals contribute significantly to the overall rate impact shown in the "Forecasted Bill Impacts" below and are partially offset by savings in other areas. While these issues are too technical for this workbook, they will be reviewed by OEB experts and intervening stakeholders in the OEB's public review process.

Operating expenses make up about 20% of Enbridge Gas' overall expenditures. Current estimates show that these expenses would increase somewhat over the 2024-2028 period, with the highest annual increase at 1.5%, which is less than inflation. Decisions on operating expenses are based on industry best practices and generally do not involve trade-offs between customer outcomes. Since these are technical issues, they will also be reviewed by OEB experts and intervening stakeholders in the OEB's public review process.

Capital expenses make up about 35% of Enbridge Gas' overall expenditures and pay for investments in its equipment that have lasting benefits over many years. Since capital spending includes major one-off projects as well as ongoing maintenance and replacement, capital spending varies from year to year. The questions in the next section focus on these choices.

The *Forecasted Bill Impacts* for 2024 to 2028 compared to current rates are shown below. Compared to your current rates, rates in 2022 are expected to increase by 2.1% for the average commercial customer, while 2023 rates are not yet established.



These charges for business customers may vary somewhat by rate class, and in all cases where we're showing a rate impact, it is the highest potential impact across rate classes.

**These estimates are preliminary and are subject to both your feedback and ongoing work to review as Enbridge Gas planners continue to work on their plans. This does not include any potential changes in the fuel costs or the federal carbon charge.*

How well do you feel you understand the projected increase in your rates from 2024 to 2028?
□ Very well □ Somewhat well □ Not very well □ Not at all □ Don't know

Making Choices

In this next section of the workbook, we will ask you about some of the key items that Enbridge Gas is considering in its plan that see trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down.

Some of these items are currently included in the draft budget, while others will need to be added to the budget depending on further analysis and feedback from customers like you.

For each question, where applicable, the financial impact is expressed as the percentage impact each year on an average business customer bill. The actual impact will depend on your own individual usage.

At the end of the section, you will have an opportunity to review your responses and their impact on your bill. You will then be able to adjust your choices to provide what you feel is the best balance.

Compression Stations

Enbridge Gas has 50 Compressors, 7 Dehydrators and supporting equipment. These are required to ensure that the gas that is injected into storage or into the distribution system meets the quality specifications and to move gas along the transmission system.

As compressors age, they experience breakdowns on an increasingly frequent basis – when equipment manufacturers stop supporting these compressors, the time to complete repairs can be extensive leading to reliability and gas quality problems. There are two compressors that will need to be replaced in the coming years.

When considering a project to replace compressors like this, Enbridge Gas looks at various options:

- ✓ Replacing one larger compressor with two smaller ones,
- ✓ Using alternative fuel sources such as electricity or hydrogen gas, and
- ✓ Preparing for outages by having spare parts available.

In this case, however, there is a lack of viable alternatives at the specific locations for the two compressor stations, so Enbridge Gas is planning to replace one compressor station in 2026, with the other one being replaced after 2028 to use the existing stations for as long as possible.

Not doing this work increases the risk the station could fail. This may require Enbridge Gas to buy more gas on the market (if available), rather than drawing gas from its storage. This introduces the risk of price volatility, as gas purchased on the market during the coldest days of the year has been up to 220% more expensive in the past 5 years than the gas that could be drawn from storage.

Image: inside a building housing a compressor station

Furthermore, if the station fails, replacement will still be required which would take a couple of years of construction to complete, extending the risks for longer. The replacement of the first compressor station is planned for 2026 and would cost the average customer 0.028%/year. Which of the following statements best represents your point of view?

[RANDOMIZE 01 and 02]

	Enbridge Gas should replace the compressor stations as it currently plans, replacing one

Making Choices

Vintage Steel Pipeline Replacement Program

Enbridge Gas has implemented a Vintage Steel Pipeline Replacement Program, which focuses on replacing older steel pipelines within the system. It is considering ramping up the program to ensure ongoing safety and reliability of the distribution system and to prepare the network for the eventual delivery of low carbon, blended hydrogen. Blended hydrogen can safely be delivered through modern steel and plastic distribution systems – however, with the rapid introduction of natural gas to Ontario during the 1950's and 60's, Enbridge Gas has a lot of older steel pipelines which are nearing end of life and require replacement in a planned and proactive manner.

This program would see an increase in work and a ramp-up of spending starting in 2024 with the goal of replacing 5,100 km of 17,000 km of vintage steel pipelines in 20 years. These vintage steel pipelines were built before 1971 and are more prone to failures compared to steel pipelines built later due to materials, construction and damage prevention practices used at the time. Using risk assessments, the program will focus on replacing pipelines that are closest to end of life first.

Enbridge Gas intends to start this increase in work in 2024 so that the work can be spread out over a longer period with a limited increase to internal resources. Pushing the work into the future, such as 10 years from now, to achieve the same objectives, will require additional internal as well as external resource overheads and costs, with reduced productivity due to a sharper ramp-up of skilled labour. The overall costs would be expected to be higher with a delayed approach.

It is estimated that this program, ramping up in 2024, included in the capital budget, is equivalent to an average annual increase of 0.2%/year from 0.05% increasing to a total of 0.38% in 2028 for the average customer.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should increase its spending on the Vintage Steel Replacement Program in order to help prepare the system for the future by starting to ramp-up the work in 2024 at an average annual increase of 0.2%/year from 0.05% increasing to a total of 0.38% in 2028.
02	Enbridge Gas should defer proactive replacement of its system that would prepare it for the future – even if this means that the cost will be higher in the future.
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Hydrogen Gas

Enbridge Gas is looking at options to blend more Hydrogen gas into the natural gas it delivers to green the gas supply.

Clean hydrogen gas is derived from surplus clean electrical energy that is converted to hydrogen gas through electrolysis technology. The gas is then blended with traditional natural gas, reducing GHG emissions.

Enbridge Gas is considering investing more in clean hydrogen as a tool for reducing GHG emissions in Ontario to allow for additional hydrogen gas to be blended into the natural gas distribution system. This would mean expanding the pilot project at the power-to-gas (P2G) facility in Markham where hydrogen gas is currently being produced, to deliver hydrogen-blended natural gas to a larger network of customers, expanding the blended gas area from approximately 3,600 to just under 17,000 customers.

Image: Hydrogen gas can be stored in tanks

Additionally, Enbridge Gas intends to launch a feasibility study that assesses the full system's readiness for more hydrogen gas to be included in the system. The costs for these projects for the average customer are estimated as follows:

	2024	2025 and 2026
Annual cost	0.004%	0.005%

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 and 02]

01	Enbridge Gas should implement these plans for hydrogen gas, which will cost the average customer 0.004% in 2024, increasing to 0.005% in 2025 and 2026.
02	Enbridge Gas should not implement these plans related to Hydrogen gas to reduce GHG emissions and keep rates as low as possible
98	I don't have an opinion on this
99	Don't know

Comments:

Making Choices

Innovation and Technology Fund

Enbridge Gas can support the advancement of various new low-carbon or energy efficient technologies that may not be available to consumers today.

While some of this work is already taking place on a small scale, the budget for these types of projects is currently very limited. Additional contributions from customers would allow Enbridge Gas to expand this type of research and development work.

Similar to other jurisdictions, Enbridge Gas is considering an **Innovation and Technology Fund** in order to support the research, development, and the bringing to market of new low-carbon or energy efficient technologies. Where possible, this would be in partnership with other utilities and organizations.

Some options include funding for …

- new research on energy efficiency technologies,
- hydrogen gas,
- renewable natural gas, or
- carbon capture, utilization and sequestration (CCUS). This is the process of capturing carbon dioxide before it enters the atmosphere and either use it as a resource to create products or permanently storing it underground.

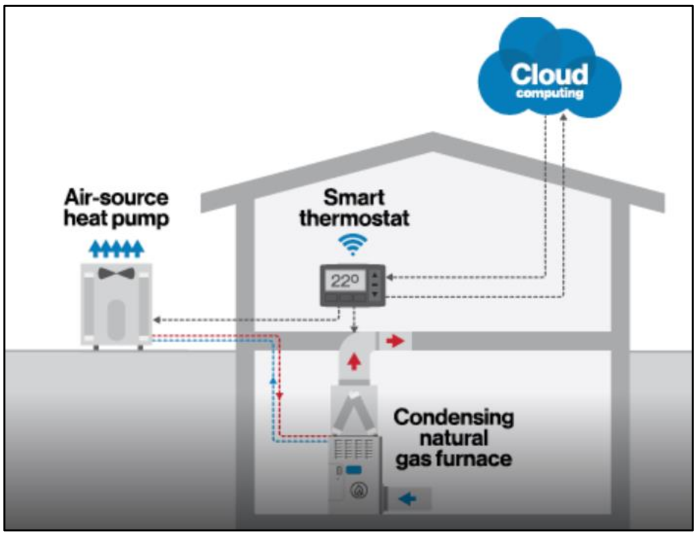


Image: Ontario pilot program tests future of advanced hybrid heating

The more money in this fund, the more projects could be completed, however Enbridge Gas is committed to finding a right balance of spending and planning for the future.

Considering this, which of the following is closest to your view?

[RANDOMIZE 01 THROUGH 03 AND 03 THROUGH 01]

01	Enbridge Gas should develop this fund, spending $1M/year which would cost the average customer 0.003%/year
02	Enbridge Gas should develop this fund, spending $5M/year which would cost the average customer 0.014%/year
03	Enbridge Gas should develop this fund, spending $10M/year which would cost the average customer 0.029%/year
04	Enbridge Gas should **not** develop a fund to invest in new low-carbon or energy efficient technologies
98	I don’t have an opinion on this
99	Don’t know

Comments:

Impact of Choices

Do You Want to Change Your Choices?

So far in this workbook, you have been asked about **4 key choices** that could impact your rates. Below is a summary of your answers to the questions that could impact your rates.

At the bottom of this page, you will find the annual bill impact of all the answers.

Having seen the total bill impact, please review your answers and change your responses if you desire; your potential annual rate impact for 2024 and 2028 will be re-calculated each time you change one of your answers at the bottom of the page. Costs for 2025-2027 will fall between this range. You will have the opportunity to continue adjusting your answers until you feel you've reached the best balance for you.

Compressor Stations:

Replace one compressor station

- ☐ **Included in the draft plan:** *Within the proposed increase (0.028% in 2024 to 2028)*
- ☐ **Defer as long as possible:** *Though uncertain, at best it would decrease (0.028% in 2024 to 2028)*

Proactive Vintage Steel Pipeline Replacement Program:

Replace 5,100 km of 17,000 km of vintage steel pipeline over the next 20 years

- ☐ **Included in the draft plan:** *Within the proposed increase (0.05% in 2024 to 0.38% in 2028)*
- ☐ **Defer the proactive replacement for as long as possible:** *Decrease by 0.05% in 2024 to 0.38% in 2028*

Hydrogen Gas:

Expand the current pilot project, and complete a system assessment

- ☐ **Add to the draft *plan:*** *0.004% in 2024, no impact in 2028*
- ☐ **No further spending on hydrogen:** *No change in rates*

Innovation and Technology Fund:

Fund research into new low-carbon or energy efficient technologies

- ☐ **Add $1M fund to the plan:** *Increase by 0.003%/year*
- ☐ **Add $5M fund to the plan:** *Increase by 0.014%/year*
- ☐ **Add $10M fund to the plan:** *Increase by 0.029%/year*
- ☐ **No fund:** *No change in rates*

The total impact of your choices would result in a range from:

+/- xx% in 2024 to +/- xx% in 2028

This would be a change from the estimated average increase of 1.4% in 2024 up to 5.9% in 2028 compared to October 2021 to your bill for distribution over the 5-year planning period that starts in 2024.

Note: these areas will be uniquely populated for each individual customer. The bill impacts of their individual responses will be summe and displayed below.

Enbridge Gas will be reviewing its plan based on the feedback you and other customers are sharing now. However, in doing that review, it is important for Enbridge Gas to get a sense of whether the current draft plan is generally acceptable or not. There were some choice options that Enbridge Gas had already included in the draft plan, and others that were not.

As mentioned earlier in the workbook, the Enbridge Gas plan for 2024 to 2028 focused on the following key objectives:

1. Maintaining system safety and reliability
2. Containing costs
3. Harmonizing rates and services
4. Preparing for the future

Currently the plan is estimated to result in an average annual increase of an average of 1.4% over 2024 to 2028 for a total of 5.9% in 2028 compared to October 2021 rates. Along with your feedback on choices included within the plan, Enbridge Gas will consider your feedback on the choices that have not yet been included and update the plan accordingly.

Considering what you know about Enbridge Gas' plans, and the choices you have been making, which of the following best represents your point of view?

- ☐ Enbridge Gas should increase its investments, seeking to accelerate the programs shared in this workbook where possible, even if that means a higher draft increase over the 5-year period.
- ☐ Enbridge Gas should maintain the draft increase to deliver the programs shared in this workbook, focusing on its outlined objectives over the 5-year period.
- ☐ Enbridge Gas should reduce the draft increase, even if that could mean reductions in performance or increase safety or environmental risks over the 5-year period.
- ☐ Other **(please specify)**
- ☐ Don't know

Comments:

Service and Rate Harmonization

In its plan objectives, Enbridge Gas is looking at harmonizing its rates and services to ensure that the offerings are consistent across the entire service area as Enbridge Gas continues its integration activities. These service offerings are intended to address the needs of customers, to provide incremental flexibility where possible, and to be as simple as possible.

In this section we will ask you about some of the service harmonization proposals that Enbridge Gas is considering. The proposals discussed in this section are not yet finalized and your input, along with further work by Enbridge Gas planners, will help shape the final proposals that Enbridge Gas will include in its application to the Ontario Energy Board. We'll cover:

- ✓ **Contract Rate Distribution Services:** firm, interruptible and seasonal distribution services
- ✓ **Direct Purchase Services:** bundled, semi-unbundled and unbundled services

Customer Experience

Service Harmonization: Contract Rate Distribution Services

The next series of questions are about Enbridge Gas' contract rate distribution services.

Enbridge Gas has prepared a video presentation that explains the service proposals it is considering for contract rate distribution services in more detail. Please watch this video before answering the following questions. You may wish to move back and forth between the video and the workbook in a separate browser to answer all the questions.

Not all the questions may be relevant to the services you are currently receiving, in which case you may choose to select "I don't have an opinion on this" in the answer choices.

There are also various comment boxes available where you can provide additional thoughts on the various topics to share with Enbridge Gas. Your feedback is very important, so please take this opportunity to share your thoughts or concerns on the listed proposals.

If you're experiencing technical difficulties with the video link, please contact marketresearch@enbridge.com for further support.

Firm distribution services

Firm distribution service offers firm deliveries of natural gas to the end use customer every day of the year. This is the most common service.

The table below summarizes the proposed changes to Enbridge Gas' firm distribution service offering.

Customer Type	Rate Zone	Changes to Distribution Services
Firm Service	Union North	✓ Addition of low-load factor firm service ✓ Broader application of high-load factor service ✓ New compliance rules for overrun - automatic increase of contract demand
	EGD	✓ Ability to request authorized overrun of firm services
	Union South	✓ Addition of low-load factor firm service ✓ Addition of high-load factor firm service ✓ New compliance rules for overrun - automatic increase of contract demand

To what extent does the proposed firm distribution service offering meet the needs of your company?

- ☐ Extremely well
- ☐ Very well
- ☐ Somewhat well
- ☐ Not so well
- ☐ Not well at all
- ☐ Don't know

Are there any parts of this proposal that work particularly well for your company? [OPEN]

Customer Experience

Service Harmonization: Contract Rate Distribution Services

Interruptible distribution services

Interruptible distribution service can be added to firm distribution service or can be contracted separately. This service allows Enbridge Gas to issue a notice of interruption that requires an end user to reduce their consumption completely, or to reduce it to the level of firm service they have contracted.

The table below summarizes the proposed changes to Enbridge Gas' interruptible distribution service offering.

Customer Type	Rate Zone	Changes to Distribution Services
Interruptible Service	**Union North**	✓ Retirement of Rate 25 Sales service
	EGD	✓ Change in non-compliance methodology from curtailment credits/overrun charge to a simplified $/GJ charge
	Union South	✓ Removal of 40-day restriction on interruption

To what extent does the <u>proposed interruptible distribution service offering</u> meet the needs of your company?

- ☐ Extremely well
- ☐ Very well
- ☐ Somewhat well
- ☐ Not so well
- ☐ Not well at all
- ☐ Don't know

Are there any parts of this proposal that work particularly well for your company? [OPEN]

Any parts that do not work well for your company? [OPEN]

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Contract Rate Distribution Services

Seasonal distribution services

Seasonal distribution service is a form of firm service that provides access to firm deliveries of natural gas in months where Enbridge Gas does not expect to see peak demand on the system. This service is tailored for customers who do not have their peak demands in the winter.

The table below summarizes the proposed changes to Enbridge Gas' seasonal distribution service offering.

Customer Type	Rate Zone	Changes to Distribution Services
Seasonal Service	**Union North**	✓ Addition of seasonal service
	EGD	✓ Reduction in seasonal service parameters in the winter instead of 5% annual consumption allowance ✓ Ability to add seasonal service to a base level of firm service
	Union South	✓ Broader application of the seasonal option

To what extent does the proposed seasonal distribution service offering meet the needs of your company?

- ◻ Extremely well
- ◻ Very well
- ◻ Somewhat well
- ◻ Not so well
- ◻ Not well at all
- ◻ Don't know

Any parts that do not work well for your company? [OPEN]

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Contract Rate Distribution Services

Reduced rates for interruptible distribution service

Customers with interruptible distribution service are required to stop consuming natural gas upon receipt of a **notice of interruption**. Interruption notifications are sent because of constraints on the Enbridge Gas system, generally due to cold weather or maintenance.

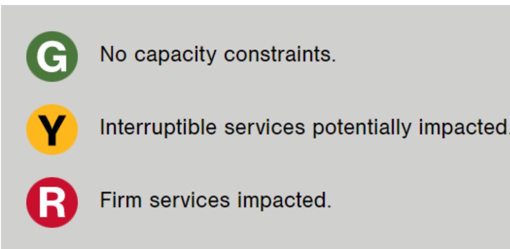

Image: Operational Status information is posted on the Enbridge Gas website

Customers generally comply with interruptions by switching to an alternate fuel source or, in some cases, by stopping their operations during the interruption period. Non-compliance with a notice of interruption results in financial charges to ensure compliance.

Enbridge Gas is studying whether <u>a reduced interruptible rate</u> compared to firm service would result in existing firm, or new, customers converting to interruptible service.

This conversion may result in Enbridge Gas having a reduced or deferred requirement for capital investment to expand the distribution and transmission system. However, the reduced rates for interruptible customers would result in an increase in firm distribution service rates to offset the reduced rates charged to interruptible customers.

Generally, do you support or oppose Enbridge Gas reducing interruptible rates to potentially reduce or defer the requirement for capital investments?

- ☐ Definitely support
- ☐ Somewhat support
- ☐ Somewhat oppose
- ☐ Definitely oppose
- ☐ I don’t have an opinion on this
- ☐ Don’t know

Comments:

Is your company in a position to consider interruptible service if the lower rate provides sufficient benefit?

- ☐ Yes – we already contract interruptible service
- ☐ Yes – we would consider contracting interruptible service
- ☐ No
- ☐ Don’t know

Comments:

Customer Experience

Service Harmonization: Contract Rate Distribution Services

Reduced rates for interruptible distribution service

PN: Do not ask if customer answered NO to question whether they could consider interruptible service (on slide 23)

Based on what you know now, which of the following best reflects your company's situation when it comes to possibly stopping its operations in case of a notice of interruption?

- ☐ Given the nature of our operation, it is not possible to stop operations so we would need to have an alternative fuel system
- ☐ It is possible to stop our operation, but it would make more sense to continue operations with an alternative fuel system
- ☐ It is possible to stop our operations and it likely makes more sense to do so than to invest in an alternative fuel system
- ☐ Don't know

Which of the following statements best reflects your company's situation when it comes to an alternative fuel system?

- ☐ We currently have an alternative fuel system in place that would meet our needs if our natural gas supply is interrupted
- ☐ We currently have an alternative fuel system in place, but it would need to be enhanced to meet our needs if our natural gas supply is interrupted
- ☐ We do not currently have an alternative fuel system in place that would meet our needs if our natural gas supply is interrupted
- ☐ Don't know

If your company currently has an alternative fuel system in place, or if you were to consider one, what type of alternative fuel do you use or are you most likely to use?

Select all that apply.

- ☐ Oil
- ☐ Propane
- ☐ Diesel
- ☐ Biomass
- ☐ Electricity
- ☐ Other ______
- ☐ There are no alternative fuel options available to us
- ☐ Don't know

Service Harmonization: Direct Purchase (DP) Services

This next series of questions are about Enbridge Gas' direct purchase services.

Enbridge Gas has prepared a video presentation that explains the service proposals it is considering for direct purchase services in more detail. Please watch this video before answering the following questions. You may wish to move back and forth between the video and the workbook in a separate browser to answer all the questions.

Not all the questions may be relevant to the services you are currently receiving, in which case you may choose to select "I don't have an opinion on this" in the answer choices.

There are also various comment boxes available where you can provide additional thoughts on the various topics to share with Enbridge Gas. Your feedback is very important, so please take this opportunity to share your thoughts or concerns on the listed proposals.

Link: https://www.enbridgegas.com/business-industrial/commercial-industrial/workbook#draftproposal

Were you able to watch the Direct Purchase Services video?

- ◻ Yes
- ◻ No

Comments:
If you're experiencing technical difficulties with the video link, please contact marketresearch@enbridge.com for further support.

Utility sale of system gas supply to bundled direct purchase customers

In the Union North rate zones, unlike the other rate zones, Enbridge Gas provides system gas supply to meet the interruptible consumption of bundled DP customers.

Enbridge Gas is considering eliminating the sale of system supply to bundled DP customers in the Union North rate zone. Instead, bundled DP customers would provide their own supply through their DCQ to meet their planned interruptible consumption needs just as they already do to meet their planned firm consumption.

Which of the following comes closest to your view?

- ◻ Enbridge Gas should eliminate the sale of system gas supply for interruptible consumption and direct purchase customers should provide their own gas for all consumption
- ◻ Enbridge Gas should continue to provide system supply should continue to be sold for interruptible consumption in the Union North rate zones
- ◻ I have no opinion on this
- ◻ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Bundled direct purchase gas delivery receipt points

Bundled direct purchase customers currently deliver their gas at the following points:

Rate Zone	Receipt Point
Enbridge Gas Distribution (EGD)	• Empress; or • Dawn; or • Ontario (Enbridge Central Delivery Area (ECDA) or Enbridge Eastern Delivery Area (EEDA)
Union North East	• Dawn (required)
Union North West	• Empress (required)
Union South	• Dawn; and/or • Parkway

When given the choice, customers have been showing a strong preference for delivering their supply at Dawn. Currently:

- 4% of bundled direct purchase gas is delivered at Empress; and
- less than 1% is delivered in the Enbridge EDA

The Enbridge CDA receipt point and Parkway receipt points are in close proximity and Enbridge Gas is considering handling these receipt points similarly.

Enbridge Gas is considering simplifying the administration of the service by moving the small remaining bundled Direct Purchase customers' receipt point obligations from the Empress and Enbridge EDA receipt points to Dawn.

Which of the following comes closest to your view?

- ☐ Enbridge Gas should implement this proposal and move customers' receipt point obligations from Empress and the Enbridge EDA to Dawn
- ☐ Enbridge Gas should not make any changes to the receipt point obligations
- ☐ I have no opinion on this
- ☐ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Bundled direct purchase gas delivery receipt points (cont'd)

Customers obtain their supply and deliver it to meet their contracted DCQ obligation to the receipt point(s) defined in their contract. It is up to the customer where and how they get their supply to that receipt point (delivered service to the receipt point or acquired at some other point and transported to the contracted receipt point(s)).

Enbridge Gas would like to understand if there is significant interest by customers in delivering their gas supply to other points to Enbridge Gas's transmission system. If there is significant interest, Enbridge Gas will evaluate further.

What are your current receipt point(s)? *Please select all that apply.*

- ◻ Dawn
- ◻ Empress
- ◻ Enbridge CDA
- ◻ Enbridge EDA
- ◻ Parkway
- ◻ Don't know

Are there other receipt points to Enbridge Gas' transmission system where you are interested in delivering your gas supply? If so, which ones? *Please select all that apply.*

- ◻ Kirkwall
- ◻ Ojibway
- ◻ Other (please specify) _____
- ◻ Not interested in delivering to any other receipt points
- ◻ Don't know

(PN: If any selected, please ask the following)

How much of your gas supply would you want to shift to these receipt points? If possible, please indicate this in GJ/day.

____

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Bundled direct purchase balancing

Enbridge Gas provides a base level of load balancing to manage differences between *planned* consumption and customer's *contracted DCQ deliveries* for all bundled DP customers. However, across the rate zones, customers have differing responsibilities and control over costs to manage differences from that plan.

Rate Zone	Responsibilities and Options
Enbridge Gas Distribution (EGD)	✓ Balance within a tolerance by the end of contract term ✓ Have access to balancing transactions (some subject to seasonal availability) ✓ Enbridge Gas manages incremental balancing needs, so customers are subject to allocation of the costs of managing these needs
Union North	✓ Not required to balance but may have DCQ deliveries reduced by Enbridge Gas to manage lower than planned consumption ✓ Suite of transactions available throughout the year (some subject to daily operational capability) ✓ Enbridge Gas manages incremental balancing needs, so customers are subject to allocation of the costs of managing these needs
Union South	✓ Balance within a tolerance by the end of contract term ✓ Ensure Banked Gas Account balance is no less than planned by end of February if short (by bringing in more gas), and no greater than planned by end of September if long (by removing gas) ✓ Suite of transactions available throughout the year (some subject to daily operational capability) ✓ Customer has control over the costs of doing so

Enbridge Gas is considering moving to a modified version of the model used in the Union South rate zone today where bundled DP customers manage and control the costs of variances from the planned BGA by balancing, where necessary, on a seasonal basis (and where the modification is to remove the requirement to balance at renewal).

With the adoption of the above, Enbridge Gas is considering offering a common set of cost-based balancing transactions like the Union South rate zone today which will provide a broader suite of transactions with broader availability to allow customers to better manage their gas supply costs.

Which of the following comes closest to your view?

- ☐ Enbridge Gas should implement the modified version of the Union South rate zone model of balancing on a seasonal basis with broader availability of transactions to provide customers more control of their supply and balancing costs
- ☐ Enbridge Gas should implement the EGD rate zone model of balancing only at renewal even though it means that customers will have less control over their supply and balancing costs
- ☐ Enbridge Gas should not make any changes to the current varying load balancing requirements
- ☐ Enbridge Gas should make different changes to the varying load balancing requirements - *please describe:* ________________
- ☐ I have no opinion on this
- ☐ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share?

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Enbridge Gas purchase of bundled direct purchase customer supply during an interruption of distribution service

In the EGD rate zone, unlike the other rate zones, if Enbridge Gas curtails bundled direct purchase customers' interruptible consumption, Enbridge Gas will purchase the proportion of the customers' Mean Daily Volume (MDV) or Daily Contract Quantity (DCQ) that is intended to meet the customer's annual interruptible consumption each day during the distribution interruption period at the average market price for the month of the distribution interruption.

Instead of purchasing the direct purchase customer's gas, **Enbridge Gas is considering adopting the approach used in the Union South rate zone today which is to rely on the customer's contractual obligation to deliver its obligated deliveries and not purchase the customer's gas.** This allows the customer to maintain control over the cost of all its supply costs.

Which of the following comes closest to your view?

- ☐ Enbridge Gas should be able to rely on the delivery obligation and not purchase the direct purchase customer's gas
- ☐ Enbridge Gas should purchase the direct purchase customer's gas at the average market price
- ☐ Enbridge Gas should purchase the direct purchase customer's gas at a different price *(please explain:________)*
- ☐ I have no opinion on this
- ☐ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Semi-unbundled direct purchase gas delivery receipt points

Customers obtain their supply and deliver it to meet their contracted DCQ obligation to the receipt point(s) defined in their contract. It is up to the customer where and how they get their supply to that receipt point (delivered service to the receipt point or acquired at some other point and transported to the contracted receipt point(s)).

Enbridge Gas would like to understand if there is significant interest by customers in delivering their gas supply to other points to Enbridge Gas's transmission system. If there is significant interest, Enbridge Gas will evaluate further.

What are your current receipt point(s)? *Please select all that apply.*

- ☐ Dawn
- ☐ Parkway
- ☐ Don't know

Are there other receipt points to Enbridge Gas' transmission system where you are interested in delivering your gas supply? If so, which ones? *Please select all that apply.*

- ☐ Kirkwall
- ☐ Ojibway
- ☐ Other (please specify) ______
- ☐ Not interested in delivering to any other receipt points
- ☐ Don't know

(PN: If any receipt points selected above, including other, please ask the following)

How much of your gas supply would you want to shift to these receipt points? If possible, please indicate this in GJ/day.

____

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Expansion of the semi-unbundled direct purchase service to bundled DP customers in the Enbridge CDA

In the Union South rate zone, customers have a semi-unbundled DP service available under the current Rate T1 and T2 services. Under this service, customers have obligated deliveries for their gas supply like the bundled DP service and storage has been unbundled from distribution service. Customers can tailor their storage space and storage injection/withdrawal parameters, under OEB approved allocation methods, to meet their reasonable operational needs.

Enbridge Gas is considering expansion of this service beyond the Union South rate zone to bundled customers in areas where the company has the company owned transportation and distribution facilities connected to Enbridge Gas's storage facilities at Dawn [i.e., without the use of transportation facilities owned by third party pipeline companies]. Currently, only bundled customers in the Toronto area of the EGD rate zone meet this requirement.

Which of the following comes closest to your view?

- ◻ Enbridge Gas should expand this service to the Enbridge CDA as described
- ◻ Enbridge Gas should expand this service to other areas and customers even if it means Enbridge Gas needs to contract for additional storage and/or transportation capacity and enhanced services with third parties to be recovered from customers
- ◻ Enbridge Gas should not expand the service
- ◻ I have no opinion on this
- ◻ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Capping semi-unbundled direct purchase storage withdrawal rights

In the Union South rate zone, customers that contract for semi-unbundled service with obligated deliveries can choose an allocation of storage deliverability up to the higher of their DCQ or firm CD – obligated DCQ.

On a peak day in the winter, Enbridge Gas meets contracted peak day needs of its customers with withdrawals from storage generally equivalent to firm CD less obligated DCQ (unless customers have contracted for less). Overall utility peak day deliverability out of storage is approximately 2% of storage space. Through the approved allocation methods, some customers currently receive a significantly higher amount of withdrawal deliverability as a percentage of their contracted storage space. The costs of meeting deliverability is shared by all customers.

Enbridge Gas is considering capping the withdrawal rights resulting from the approved allocation methods to 5% of storage space.

- ✓ This allows from some variability between customer profiles but would reduce the need for Enbridge Gas to purchase deliverability at higher market-based prices and better manage the overall average cost of storage shared by all customers.
- ✓ Most customer allocations are within the 5%.
- ✓ Customers who have their deliverability reduced to 5% would be required to meet their need in excess of the capped amount through additional deliveries of supply in the winter or contracting for market-based deliverability or contracting for an unbundled service or contracting for bundled service.

Which of the following comes closest to your view?

- ◻ Enbridge Gas should implement the withdrawal cap at 5% of storage space
- ◻ Enbridge Gas should implement a withdrawal cap at a different level *(please explain)* ________
- ◻ A withdrawal right cap should not be implemented even though it means additional costs for all customers
- ◻ I have no opinion on this
- ◻ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Utility sale of system gas supply to unbundled (or T-service) direct purchase customers

In the Union North rate zone, unlike the other rate zones, Enbridge Gas provides system gas supply as a source of supply/balancing to meet some of the interruptible consumption of DP customers.

Enbridge Gas is considering the elimination of system supply to meet the needs of unbundled (aka T-service) customers in the Union North rate zone.

- Most of these customers deliver their own gas to the delivery area to meet their interruptible consumption needs and use a Customer Balancing Service (CBS) account (equivalent to 100% of the customer's firm contract demand) to manage daily imbalances between nominated and actual quantities.
- For these customers, the system supply service supplements the CBS and is equivalent to 15% of the customer's firm contract demand.

Since Enbridge Gas does not have firm contracted capacity to support system supply and CBS services, both are subject to the same operational availability.

With an elimination of system gas supply for these customers, Enbridge Gas would:

✓ Provide Union North T-service customers greater thresholds in the CBS on a daily basis equivalent to what had been available under the utility supply service for a total of 115% of firm contract demand

✓ Allow the cumulative balance in the CBS to increase to 150% of firm CD to allow customers time to replace the gas consumed. This provides unbundled DP customers the ability to manage all their gas supply costs.

Which of the following comes closest to your view?

□ Direct purchase customers should provide their own gas for all consumption and the new balancing account tolerances are appropriate

□ Direct purchase customers should provide their own gas for all consumption and the new balancing account tolerances are not appropriate *(please explain)* ________________

□ System supply should continue to be sold for interruptible consumption/balancing in the Union North rate zones

□ I have no opinion on this

□ Don't know

Do you have any further thoughts or comments about this proposal that you would like to share? [OPEN]

Customer Experience

Service Harmonization: Direct Purchase (DP) Services

Harmonization of CBS, LLB, and DVA used by unbundled (or T-Service) direct purchase customers

Enbridge Gas is considering harmonizing the limits and operation of the CBS used by unbundled (also known as T-service) customers in the Union North rate zone, the Limited Load Balancing (LLB) service used by unbundled customers in the EGD rate zone, and the Daily Variance Account (DVA) used by certain customers in the Union South rate zone. The customer is required to manage the balance in these accounts within certain tolerances which differ by rate zone/service.

These customers have non-obligated gas deliveries to Enbridge Gas and instead nominate their supply each day to meet their planned consumption on the following day. The purpose of these services/accounts is the same - to capture the small differences that occur between the customer's nominated supply and their actual consumption.

Enbridge Gas is considering harmonizing the service with daily limits set at 115% of firm CD and cumulative limits set at 150%. In addition, the service would be subject to interruption based on Enbridge Gas' daily capability.

Which of the following comes closest to your view?

- ☐ Enbridge Gas should harmonize the balancing accounts as described
- ☐ Enbridge Gas should harmonize the balancing accounts but with different limits *(please explain)* ______
- ☐ Each rate zone should continue with its separate balancing service
- ☐ I have no opinion on this
- ☐ Don't know

Feedback and More About Your Business

Thank you for providing your input into the Enbridge Gas planning process. Your feedback will help ensure we submit a plan that will address our customers' needs and opinions. Before you finish, we would appreciate your answers to two brief topics.

First, to help ensure we continue to improve our customer engagements, we would appreciate your feedback on this workbook. Second, sometimes particular groups of customers have specific needs. We have some questions that will allow us to group your answers with other companies like yours. It should just take one or two more minutes to finish up.

Feedback on Enbridge Gas Customer Engagement

Enbridge Gas values your feedback. This is the first time the utility has conducted a review about its upcoming plans in this type of format.

Thinking about the videos for contract rate distribution services and direct purchase services, please indicate whether you have a favourable or unfavourable impression of those videos.

- ❑ Very favourable
- ❑ Somewhat favourable
- ❑ Somewhat unfavourable
- ❑ Very unfavourable
- ❑ Don't know

Do you have any suggestions for how the videos could be improved in future consultations? [OPEN]

Now thinking about the online workbook, overall, did you have a favourable or unfavourable impression of the workbook you just completed?

- ❑ Very favourable
- ❑ Somewhat favourable
- ❑ Somewhat unfavourable
- ❑ Very unfavourable
- ❑ Don't know

Enbridge Gas indicated that they had a choice of reaching out to customers like you more than once with multiple surveys, or once with a more comprehensive survey that takes longer to complete. Do you feel that Enbridge Gas made the right choice?

- ❑ Yes, one longer survey covering all topics is preferred
- ❑ No, I would have preferred to give feedback through various surveys
- ❑ Don't know

In this workbook, do you feel that Enbridge Gas provided too much information, not enough, or just the right amount?

- ❑ Too little information
- ❑ Just the right amount of information
- ❑ Too much information

More About Your Business

The following questions are for statistical purposes only. This information is used to segment and group similar customers together when the survey results are analysed.

To what extent do you agree or disagree with the following statements?

The cost of my Enbridge Gas bill has a major impact on my business' finances and requires the business do without some other important priorities.

About this Customer Engagement

Welcome to the Enbridge Gas Customer Engagement!

- Enbridge Gas is looking for your feedback to support its investment plan for 2024 and beyond to ensure that plan reflects your needs and preferences.
- You don't need to be a natural gas expert to complete this workbook. It focuses on choices between outcomes that matter to you and provides the background information you need to answer the questions.

If you are completing this workbook online, please note that it will take approximately 20-30 minutes to complete. Your progress will be saved as you move through the workbook, meaning you can leave and return to complete it at any time.

The most important part of this workbook are the survey questions. Utilities are expected to develop a genuine understanding of their customers' interests and preferences and integrate them into their plans. As such, the goal of this workbook is to understand the general priorities and criteria you would like Enbridge Gas to use when making key business decisions. While your view may not always align exactly with any of the options presented, please select the one that is closest. If you truly aren't sure, select the "don't know" option.

If you are reading this on a smaller mobile device, you may wish to access the survey from a tablet, desktop or laptop instead, so that it is easier to read.

Background

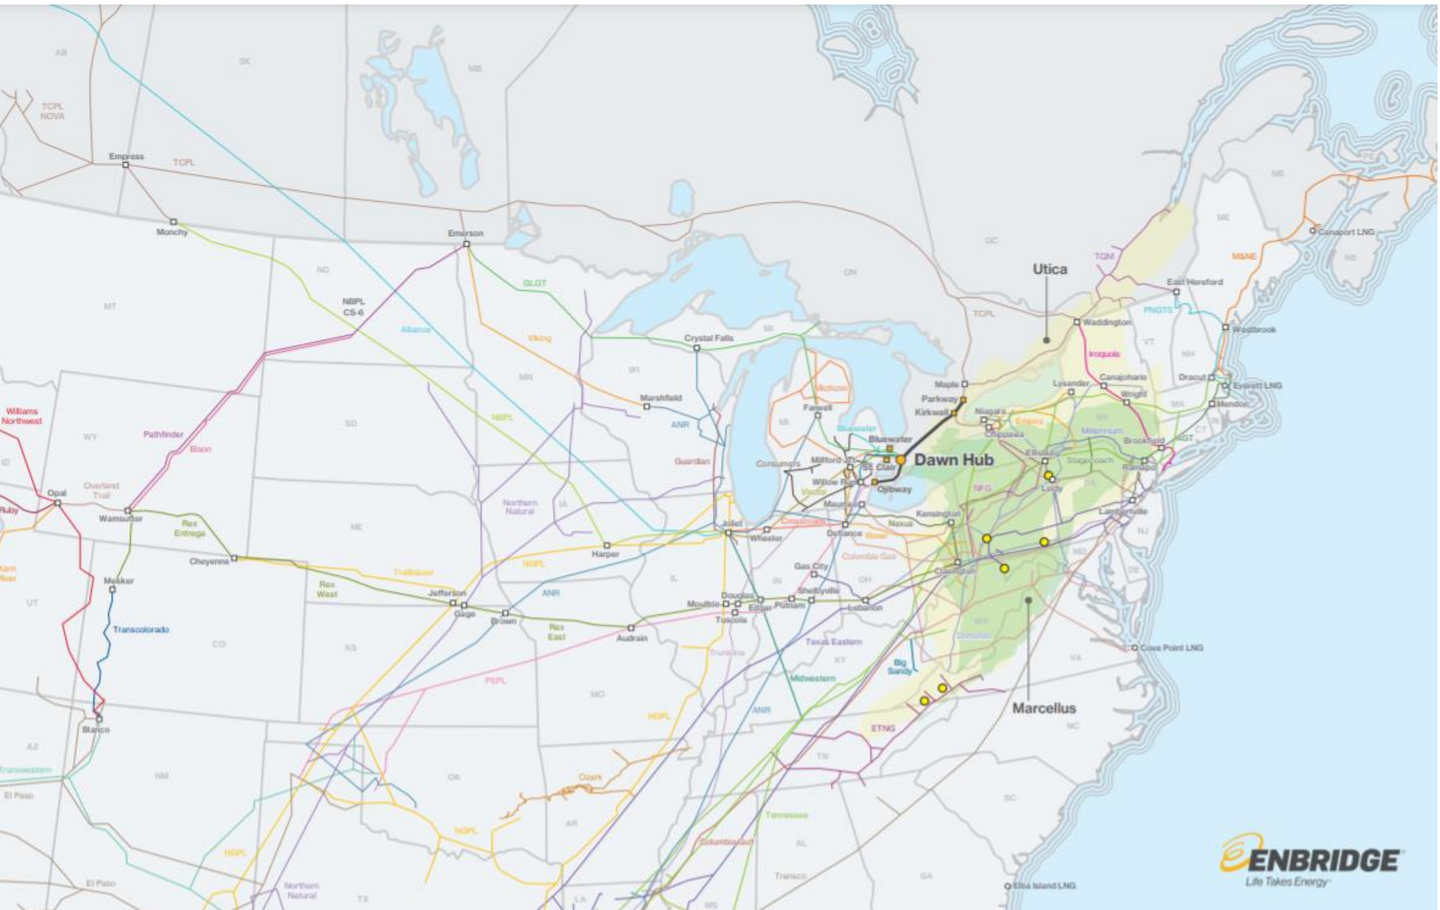
Who is Enbridge Gas?

Enbridge Gas Inc. is based in Ontario and delivers energy to customers in Ontario. Its parent company Enbridge Inc. is headquartered in Calgary, Canada, and operates across North America. All rates and business plans developed by Enbridge Gas must be approved by the Ontario Energy Board (the OEB), which regulates natural gas and electric utilities in Ontario.

Enbridge Gas distributes natural gas to about 3.8 million residential, business and industrial customers, attaching more than 50,000 new customers each year. Enbridge Gas has agreements to provide gas distribution service within 313 municipalities and provides natural gas within 23 First Nation communities across Ontario through a network of over 151,500 kilometers of underground pipeline.

In addition to providing distribution services to customers in our franchise area, Enbridge Gas serves the surrounding storage and transmission marketplace. The Dawn Hub is the largest integrated underground storage facility in Canada and one of the largest in North America. It offers customers an important link in the movement of natural gas from Western Canadian and U.S. supply basins to markets in central Canada, the Great Lakes region and the northeast U.S.

The Dawn-Parkway transmission system is a series of four transmission pipelines (229 km/143 mi), and compressor stations that move natural gas through Ontario from the Dawn Hub near Sarnia, east to the Parkway compressor facility near Mississauga. At Parkway, the system connects with other pipelines that serve residents in the Toronto area, Quebec, eastern Canada and the U.S. northeast.



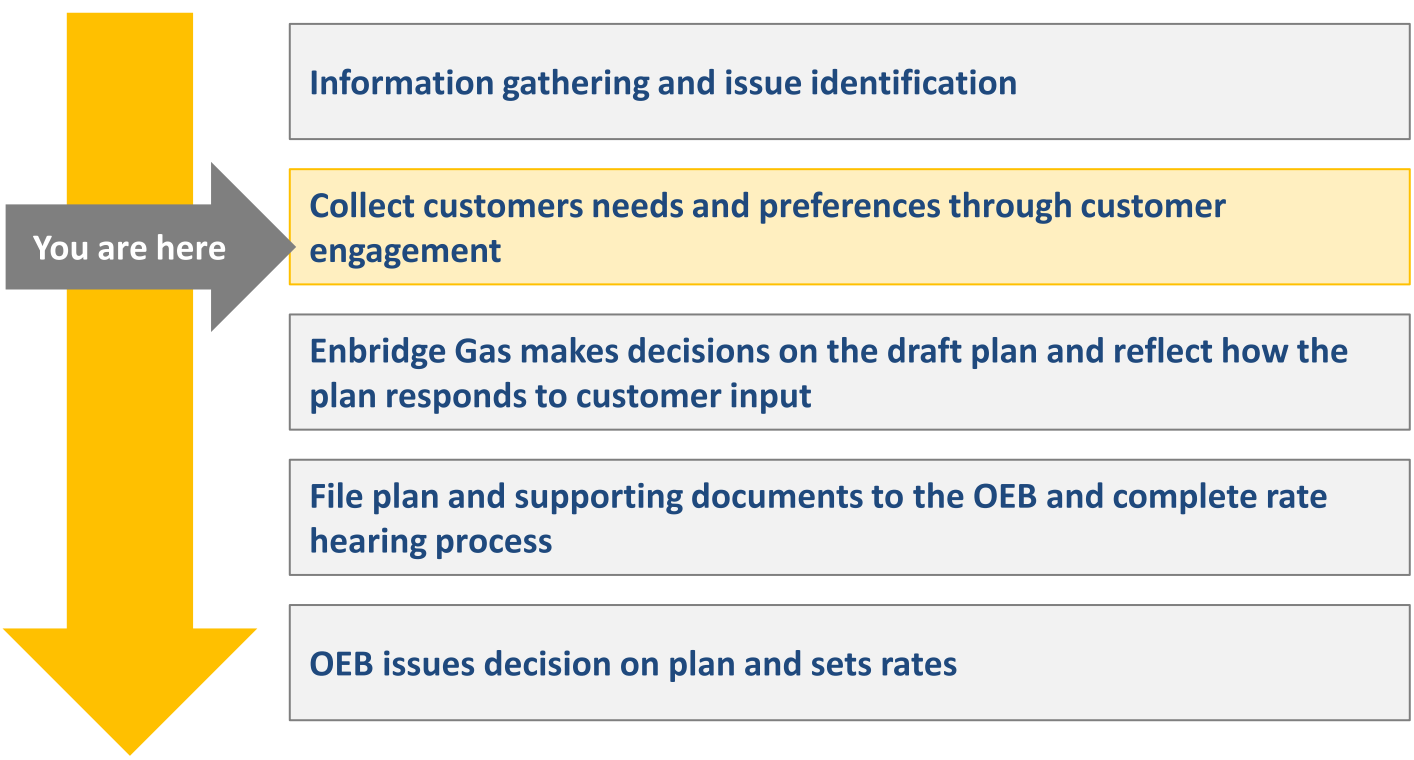
Where does this consultation fit?

Here in Ontario, customer views are central to the utility planning process.

- **All rates and business plans must be approved by the Ontario Energy Board (the OEB).**
- **The OEB requires that utilities consult with customers to understand your views on key trade-offs.**
- **In addition, the utilities must show how they took customer views into account when developing the plan.**

While some planning decisions will depend on detailed knowledge of engineering and industry standards, in other cases the choices will involve trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down. That is where you come in.

The diagram below shows how customers play a role as Enbridge Gas develops and submits its business plan to the Ontario Energy Board.



How well do you feel you understand how your feedback fits within the planning process?

□ Very well □ Somewhat well □ Not very well □ Not at all □ Don’t know

Customer Experience

Customer Outcomes

In considering its investment plan to be implemented starting in 2024, Enbridge Gas must make many decisions. We would like your feedback on the outcomes you would like Enbridge Gas to focus on in its plan. Outcomes are the goals and priorities that matter to you.

There is a list of broad outcomes that Enbridge Gas will need to consider. Using a scale from 0 to 10, where 0 means “not at all important” and 10 means “extremely important”, please tell us how important each one is to you. Be sure to save a rating of 10 for those items that are most important to you.

Outcomes	**Importance Rating (0-10, don’t know)**
Reliably delivering natural gas	
Safely delivering natural gas	
Making good use of the money customers pay	
Providing affordable pricing	
Providing predictable pricing	
Providing dependable customer service	
Minimizing any impacts on the environment	
Being socially responsible	
Supporting the growth of Ontario’s economy	

Are there any other outcomes that are not listed above that are important to you? Please indicate them below:

Sometimes we need to choose between priorities that are all considered important. Thinking about these outcomes, which ones would you rank as first, second and third, in terms of importance to you.

Outcomes	**Ranking, 1^{st}, 2^{nd}, 3^{rd}**
Reliably delivering natural gas	
Safely delivering natural gas	
Making good use of the money customers pay	
Providing affordable pricing	
Providing predictable pricing	
Providing dependable customer service	
Minimizing any impacts on the environment	
Being socially responsible	
Supporting the growth of Ontario’s economy

Transportation Rates

What are the costs?

Enbridge Gas transportation rates are largely driven by Dawn Parkway transmission system and Dawn Station costs. Dawn Parkway transmission costs include transmission pipelines, the compressors and metering equipment along the pipeline including facilities at the Parkway Station. Dawn Station demand costs include the facilities and compressors at the Dawn Station used for transmission purposes.

How are costs included in rates?

The transportation costs are allocated between in-franchise and ex-franchise rate classes based on distance weighted design day demands. The Dawn Station costs are allocated between rate classes based on the use of the Dawn station. The cost allocated to ex-franchise rate classes are recovered through rates based on the use of the transportation services available to customers on the Dawn to Parkway system.

How are rates updated?

Enbridge Gas transportation rates are adjusted using a five-year framework which was approved by the Ontario Energy Board. An annual update includes a formula that adjusts rates each year based on inflation less a productivity factor and approved investments in infrastructure. At the end of the five-year period, Enbridge Gas reviews all of its costs and applies to the Ontario Energy Board for new rates and a new framework to adjust rates going forward. This customer engagement will support plans for the 2024-2028 period.

How well do you understand the basics of how natural gas transportation rates are set?
□ Completely understand □ Somewhat understand □ Do not understand □ Don’t know

Customer Experience

Transportation Rates

Cost Allocation Considerations

Enbridge Gas allocates its costs for providing services to the different rate classes for the purpose of designing rates.

Enbridge Gas' cost allocation practice allocates costs to rate classes based on cost causality principles using specific knowledge of how its system is operated. Although judgment is required in allocating costs, cost allocation results in rate classes that reflect 'user pay' – that is, customers pay in their rate for the cost of the service they use.

How familiar are you with the cost allocation objectives?
□ Very familiar □ Somewhat familiar □ Not very familiar □ Not at all familiar □ Don't know

As a result of significant system growth over the last five years, Enbridge Gas is considering a change to the cost allocation methodology of the Parkway Station costs. As you may be aware, Enbridge Gas has invested substantially in expanding this part of our system and the Parkway Station now represents approximately 20% of the Dawn Parkway transmission costs. The cost allocation change being considered involves allocating the Parkway Station costs to rates that use the Parkway Station rather than including it in the overall costs of the Dawn Parkway system.

The Parkway Station facilities are designed to meet Enbridge Gas' design day requirement to export gas from the Enbridge Gas system into the TransCanada and Enbridge Gas systems through Parkway. They are not necessary to transport or deliver natural gas to other locations along Dawn to Parkway. Allocating Parkway Station demand costs using this user pay methodology will result in an increase of M12 rate class costs by approximately 4%.

Thinking about Enbridge Gas' consideration of the cost allocation change for the Parkway Station, which of the following statements best describes your view?

01	Enbridge Gas should not change the recovery of the Parkway Station and all M12/C1 paths should pay for it based on the use of the Dawn to Parkway system.
02	Enbridge Gas should change the recovery of the Parkway Station costs and recover the costs from only those M12/C1 paths that use the Parkway Station.
98	I don't have an opinion on this
99	Don't know

Are there other ways that Enbridge Gas should consider allocating Parkway Station costs?

Comments:

Customer Experience

Transportation Rates

Rate Design Considerations

Within the M12/C1 rate classes, these questions will examine how costs are allocated by specific paths. In addition to the consideration of possible changes in the cost allocation of the Parkway Station, Enbridge Gas is also considering assigning the costs of the Parkway Station to those M12/C1 paths that use the Parkway Station.

Enbridge Gas' current rate design recovers the costs of the Dawn Parkway transmission costs (including Parkway Station) from each M12/C1 path based on a distance weighted use of the Dawn to Parkway system. Currently, Dawn Station costs are recovered from M12/C1 paths that use Dawn Station only.

This change would mean that the Parkway Station costs would be recovered in a similar manner as the Dawn Station and assigned to the Dawn to Parkway and Kirkwall to Parkway rates but not to the Kirkwall to Dawn rate.

Assigning Parkway Station costs to the M12/C1 paths that use the Parkway Station will result in an increase to the Kirkwall to Parkway rate, a decrease to the Kirkwall to Dawn rate and have very little impact on the Dawn to Parkway rate.

Thinking about Enbridge Gas' consideration of the rate design change for the Parkway Station, which of the following statements best describes your view?

01	Enbridge Gas **should not** change the recovery of the Parkway Station and all M12 paths should pay for it based on the use of the Dawn to Parkway system.
02	Enbridge Gas **should** change the recovery of the Parkway Station costs from those M12 paths that use the Parkway Station.
98	I don't have an opinion on this
99	Don't know

Are there other rate design methodologies that Enbridge Gas should consider?
Comments:

If the Ontario Energy Board approved a rate increase for 2024 and beyond, which of the following statements best describes your view on the implementation of the rate change?

01	Adjust rates to reflect costs as they occur, which may result in more annual volatility
02	Apply a steady annual increase in rates over a 5-year period to minimize annual volatility
03	Apply a larger one time increase in the first rebasing year and then leave rates flat for the remaining period
98	I don't have an opinion on this
99	Don't know

Comments:

Energy Transition

Enbridge Gas is also looking at ways in which it can support its organizational, as well as federal and provincial goals to reduce greenhouse gas (GHG) emissions and achieve net zero targets.

- **Enbridge Inc. targets to reduce, from its operations, GHG emission intensity by 35% by 2030 over 2018 levels, and to reach Net Zero GHG emissions by 2050**
- **Federal targets to reduce GHG emissions by 40-45% by 2030 over 2005 levels and to reach Net Zero GHG emissions by 2050**
- **Provincial target to reduce GHG emissions by 30% by 2030 over 2005 levels**

There are several options that Enbridge Gas is considering in its efforts to minimize impact on the environment, which include reducing the demand for natural gas, greening the gas through the blending of Renewable Natural Gas (RNG) or Hydrogen Gas with traditional natural gas, and supporting the development of new technologies and options that may not exist today.

Thinking about your organization's goals, as well as broader climate targets, what are some ways in which Enbridge Gas can support these goals and targets?

About this Customer Engagement

Welcome to the Enbridge Gas Customer Engagement!

- Enbridge Gas is looking for your feedback to support its investment plan for 2024 and beyond to ensure that plan reflects your needs and preferences.
- You don't need to be a natural gas expert to complete this workbook. It focuses on choices between outcomes that matter to you and provides the background information you need to answer the questions.

If you are completing this workbook online, please note that it will take approximately 20-30 minutes to complete. Your progress will be saved as you move through the workbook, meaning you can leave and return to complete it at any time.

The most important part of this workbook are the survey questions. Utilities are expected to develop a genuine understanding of their customers' interests and preferences and integrate them into their plans. As such, the goal of this workbook is to understand the general priorities and criteria you would like Enbridge Gas to use when making key business decisions. While your view may not always align exactly with any of the options presented, please select the one that is closest. If you truly aren't sure, select the "don't know" option.

If you are reading this on a smaller mobile device, you may wish to access the survey from a tablet, desktop or laptop instead, so that it is easier to read.

Background

Who is Enbridge Gas?

Enbridge Gas Inc. is based in Ontario and delivers energy to customers in Ontario. Its parent company Enbridge Inc. is headquartered in Calgary, Canada, and operates across North America. Rates and business plans developed by Enbridge Gas must be approved by the Ontario Energy Board (the OEB), which regulates natural gas utilities in Ontario.

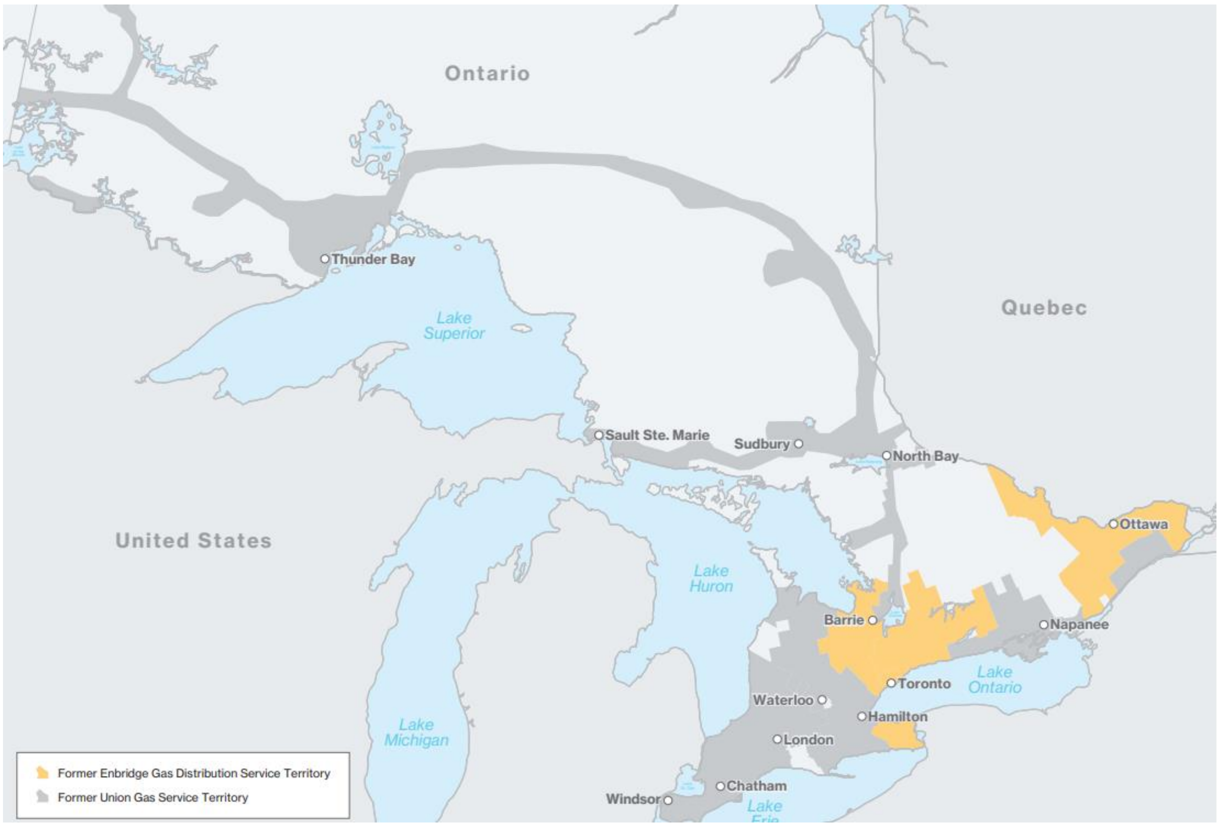
Enbridge Gas …

- ✓ Distributes natural gas to about 3.8 million residential, business and industrial customers
- ✓ Attaches more than 50,000 new customers each year
- ✓ Has agreements to provide gas distribution service within 313 municipalities and provides natural gas within 23 First Nation communities
- ✓ Has a network of over 151,500 kilometers of underground pipeline

In 2019, Enbridge Gas Distribution and Union Gas merged to form one company, Enbridge Gas Inc. Throughout this workbook we occasionally refer to Legacy Enbridge Gas Distribution and Legacy Union Gas (the previous companies), but mainly refer to the whole service area or territory that Enbridge Gas serves today.

In addition to providing distribution services to customers in our franchise area, Enbridge Gas serves the surrounding storage and transmission marketplace. The Dawn Hub is the largest integrated underground storage facility in Canada and one of the largest in North America. It offers customers an important link in the movement of natural gas from Western Canadian and U.S. supply basins to markets in central Canada, the Great Lakes region and the northeast U.S.

The Dawn-Parkway transmission system is a series of four transmission pipelines (229 km/143 mi), and compressor stations that move natural gas through Ontario from the Dawn Hub near Sarnia, east to the Parkway compressor facility near Mississauga. At Parkway, the system connects with other pipelines that serve residents in the Toronto area, Quebec, eastern Canada and the U.S. northeast.



Where does this consultation fit?

Here in Ontario, customer views are central to the utility planning process.

- **All rates and business plans must be approved by the Ontario Energy Board (the OEB).**
- **The OEB requires that utilities consult with customers to understand your views on key trade-offs.**
- **In addition, the utilities must show how they took customer views into account when developing the plan.**

While some planning decisions will depend on detailed knowledge of engineering and industry standards, in other cases the choices will involve trade-offs between competing outcomes, such as doing more to meet customer needs or reduce greenhouse gas (GHG) emissions, versus keeping bills down. That is where you come in.

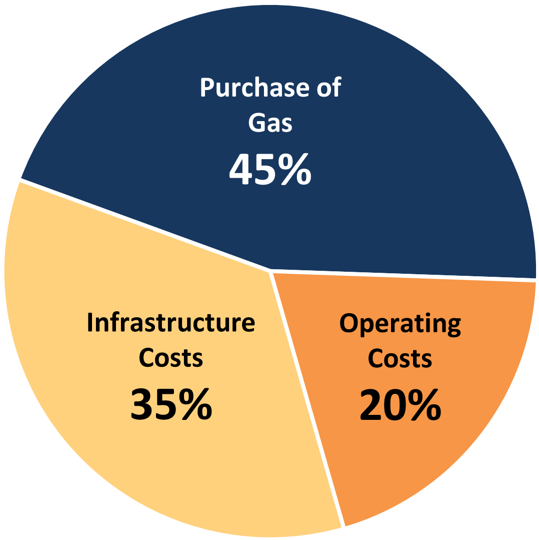
Rates



What are the costs?
The proportions of Enbridge Gas' expenditures are shown in the pie chart.

- ✓ The **Purchase of Gas** shows the 'passed through' costs that pay for the natural gas and transportation to the Enbridge Gas system.
- ✓ The **Infrastructure Costs** pay the capital costs of the infrastructure (such as pipes, compressors, buildings and other equipment) used to move and store natural gas across the system.
- ✓ The **Operating Costs** pay for operations – including the people who operate and maintain the equipment and the people who provide customer service.

These costs will be reviewed in detail through the application to the OEB.

Cost Allocation Considerations

Enbridge Gas allocates its costs for providing services to the different rate classes for the purpose of designing rates.

Enbridge Gas' cost allocation practice allocates costs to rate classes based on cost causality principles using specific knowledge of how its system is operated. Although judgment is required in allocating costs, cost allocation results in rate classes that reflect 'user pay' – that is, customers pay in their rate for the cost of the service they use.

How familiar are you with the cost allocation objectives?
□ Very familiar □ Somewhat familiar □ Not very familiar □ Not at all familiar □ Don't know

How are rates updated?

Enbridge Gas rates are adjusted using a five-year framework which was approved by the Ontario Energy Board. An annual update includes a formula that adjusts rates each year based on inflation less a productivity factor and approved investments in infrastructure. At the end of the five-year period, Enbridge Gas reviews all of its costs and applies to the Ontario Energy Board for new rates and a new framework to adjust rates going forward. This customer engagement will support plans for the 2024-2028 period.

How well do you understand the basics of how natural gas rates are set?

Rates

Cost of New Facilities

When a producer asks for a new attachment to the Enbridge Gas system, estimates for both the capital costs required for attachment along with the future revenue stream that will be received by Enbridge Gas from signing a contract with the producer are performed.

If the estimated revenues are insufficient to cover the capital costs, Enbridge Gas requires the producer to pay for the difference. Depending on the rate zone that the producer is in, the recovery of this capital cost occurs as follows:

For the Enbridge Gas Distribution Rate Zone: If the producer passes the Enbridge Gas capital requirements, they have the option to pay the capital shortfall over the term of the agreement signed by the producer. If the producer doesn't pass the credit requirements or chooses not to pay the shortfall over the term of the agreement, they have the option to pay the shortfall in an upfront lump-sum amount.

For the Union Rate Zone: The producer is required to pay half of the shortfall prior to procurement of construction materials with the balance to be paid in full prior to construction starting.

For both rate zones, a true-up based on actual costs incurred is performed after construction has been completed.

Enbridge Gas is considering alternatives to the payment of shortfall amounts that would be consistent regardless of which rate zone the producer is in.

Thinking about Enbridge Gas' consideration of the treatment of Contribution in Aid of Construction (CIAC) payments, which of the following statements best describes your view?

	Enbridge Gas should require the full shortfall payment from producers prior to the facilities being constructed
	Enbridge Gas should offer producers the option to pay for the shortfall over the term of the agreement, subject to the producer meeting Enbridge Gas credit requirements
	The producer should have the option to choose from either option, subject to meeting Enbridge Gas credit requirements
	I don't have an opinion on this
	Don't know

Options For The Sale of Production

Enbridge Gas is considering three (3) different elections that a producer can make to sell their production.

1) **Transport the production to the Enbridge Gas Dawn Hub and sell to market participants** (marketers or direct purchase customers of Enbridge Gas). This option would require the producer to nominate the transportation from the meter location to Dawn daily.
2) If the producer is also an Enbridge Gas direct purchase customer, the **production can be used to meet the customer's direct purchase obligations**. The molecule would be transferred by the producer to their direct purchase obligated delivery point and transferred to the direct purchase account. Normal direct purchase rules would still apply once the molecule is delivered.
3) The producer would **sell to Enbridge Gas' Gas Supply** group. The sale would be deemed to occur at Dawn and would be a firm service. The producer would not be required to nominate the service and the payment would be based on actual production during the month.

Enbridge Gas is currently proposing that the producer makes an election for one of the three choices at the time of contract execution.

Thinking about Enbridge Gas' options proposed for the sale of production, do you support or oppose these options?

□ Strongly support

□ Somewhat support

□ Somewhat oppose

□ Strongly oppose

□ Don't know

Comments:

Thinking about Enbridge Gas' proposal that the producer make a choice of how they want to sell their production at the time they sign their agreement, which of the following statements best describes your view?

	The producer should have the ability to change their election annually
	A producer should have the ability to choose more than one option at a time
	I don't have an opinion on this
	Don't know

Are there any other options that Enbridge Gas should consider for producers to sell their production?

Comments:

Energy Transition

Enbridge Gas is also looking at ways in which it can support its organizational, as well as federal and provincial goals to reduce greenhouse gas (GHG) emissions and achieve net zero targets.

- **Enbridge Inc. targets to reduce, from its operations, GHG emission intensity by 35% by 2030 over 2018 levels, and to reach Net Zero GHG emissions by 2050**
- **Federal targets to reduce GHG emissions by 40-45% by 2030 over 2005 levels and to reach Net Zero GHG emissions by 2050**
- **Provincial target to reduce GHG emissions by 30% by 2030 over 2005 levels**

There are several options that Enbridge Gas is considering in its efforts to minimize impact on the environment, which include reducing the demand for natural gas, greening the gas through the blending of Renewable Natural Gas (RNG) or Hydrogen Gas with traditional natural gas, and supporting the development of new technologies and options that may not exist today.

Thinking about your organization's goals, as well as broader climate targets, what are some ways in which Enbridge Gas can support these goals and targets?

Next Steps

Thank you for your input into our planning process.

After this, Enbridge Gas will use the findings from this consultation to ensure that its 2024-2028 plan meets customers' needs, which will be filed to the Ontario Energy Board as part of the Enbridge Gas 2024 Rate Rebasing application in Q4 2022.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Three Fires Group Inc. (Three Fires)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1

Preamble:

Enbridge Gas Inc. ("**Enbridge**") describes the customer engagement process that it conducted in 2021 and 2022, which involved over 12,000 customers. The process consisted of three phases and included various forms of engagement, such as focus groups, in-depth interviews, telephone surveys, and online workbooks.

Question(s):

a) Please produce Enbridge's 2022 *Indigenous Reconciliation Action Plan* ("**IRAP**") and *Indigenous Peoples Policy* ("**IPP**").

b) Please describe how Enbridge has applied the principles, policies and commitments set out in its IRAP and IPP in the context of the current Application.

c) Please provide specific comment on how the following items from the IPP apply in the context of the current Application:

- Enbridge's stated principle to "engage early and sincerely through processes that aim to achieve the support and agreement of Indigenous nations and governments for our projects and operations that may occur on their traditional lands" (IPP at page 2);

- Enbridge's stated principle that it seeks "the input and knowledge of Indigenous groups to identify and develop appropriate measures to avoid and/or mitigate the impacts of our projects and operations that may occur on their traditional lands." (IPP at page 2);

- Enbridge's statement that it will "provide ongoing leadership and resources to ensure the effective implementation of the above principles, including the development of implementation strategies and specific action plans…" (IPP at page 3).

d) Please provide specific comment on how the following items from the IRAP apply in the context of the current Application:

- Pillar 2 concerning community engagement and relationships;
- Pillar 3 concerning economic inclusion and partnerships;
- Pillar 5 and in particular its objectives relating to sustainability;
- Pillar 6 concerning governance and leadership.

e) Please produce any additional internal or public documents that set out any Enbridge policies applicable to Enbridge's interactions with Indigenous customers or groups for the purposes of the matters at issue in this Application.

f) Please describe how Enbridge worked to ensure representation for all types of customers in all rate zones, as stated at paragraph 7 of Karen Sweet's evidence, including specific comment with respect to Indigenous customers.

g) Please describe any efforts taken on the part of Enbridge to ensure Indigenous engagement generally, or participation in consultations specifically, in a form relevant to this Application.

h) Please describe any efforts taken on the part of Innovative Research Group to ensure Indigenous participation in their consultations.

i) What are the costs incurred to date and what are the anticipated costs to the ratepayers for operationalizing the IRAP in Enbridge's Ontario franchise areas? In your answer, please provide the following:

1. A general answer for both past and future anticipated costs
2. A breakdown for both costs already incurred by franchise area
3. Detailed annual projections of anticipated costs by franchise area for the next 5 years

j) What are the costs incurred to date and what are the anticipated costs to the ratepayers for operationalizing the IPP in Enbridge's Ontario franchise areas? In your answer, please provide the following:

1. A general answer for both past and future anticipated costs
2. A breakdown for both costs already incurred by franchise area
3. Detailed annual projections of anticipated costs by franchise area for the next 5 years

k) Please describe Enbridge's plans to apply the IRAP to enable Indigenous ownership and operation of Enbridge's infrastructure. In particular, what are its plans to work with Indigenous communities, not only in stewarding the environment, but also in owning and operating critical energy infrastructure?

l) Please describe how the IRAP applies to current and future regulated and unregulated RNG assets and provide specific comment with respect to Indigenous ownership and operation of these assets.

Response:

a) Please see Attachment 1 for the IRAP, and Attachment 2 for the IPP.

b) Enbridge Inc.'s Indigenous Peoples Policy (IPP) directs the methods by which Enbridge develops mutually beneficial relations with Indigenous communities close to, or potentially affected by, our operations. This Application does not have a physical impact on traditional lands or on Aboriginal and treaty rights and therefore, Enbridge Gas has not undertaken a consultation program commensurate with what would be undertaken in relation to an application for facilities that may have a potential impact on Aboriginal and treaty rights. Nevertheless, the overarching principles in the IPP, including the recognition of the importance of reconciliation between Indigenous peoples and broader society, will continue to guide Enbridge Gas's interactions with Indigenous communities and peoples.

   Akin to ESG goals, the IRAP is not a document that is intended to be directly applied to regulatory applications. The IRAP serves as a corporate roadmap for Enbridge Inc.'s continued journey towards truth and reconciliation. It is the mechanism by which Enbridge Inc., as a company, will remain accountable for executing on our commitments and to our partners, including Indigenous peoples. Enbridge Inc. will be publicly reporting on its progress against the commitments set out in the IRAP starting with its 2023 Sustainability Report.

c) Please see response at part b).

d) Please see response at part b).

e) Please see response at part a) and b). There are no additional documents to provide.

f) To ensure the results are representative of all customers, customer engagement sample lists were randomly pulled from the Enbridge Gas systems. Responses were reviewed and weighted according to sample proportions as explained in detail in the Sample Design sections of the report (Exhibit 1, Schedule 6, Tab 1, Attachment 1, pages 108 to 113, 162 to 163, 225 to 226 and 307). Enbridge Gas made just a few minor exclusions, such as customers who previously requested not to be included in market research and customers who didn't meet basic screening criteria such as being age 18 or older (as indicated in the survey instruments). As described in the response at Exhibit I.1.6-GFN-4, Attachment 1, customers with US phone numbers were also removed from lists. Due to this approach, Indigenous customers were included in the samples and results, as confirmed in the Phase Three results, described by Innovative in the response to h).

g) Please see response at part f).

h) The following response was provided by Innovative Research Group:

   This engagement was focused broadly on representing Enbridge Gas ratepayers. The Phase Three workbook did ask about Indigenous identity. Page 228 (of Exhibit 1, Tab 6, Schedule 1, Attachment 1) includes a chart reporting that 2% of the residential workbook sample identified themselves as an Indigenous person.

i) As a corporate roadmap, all existing corporate and Enbridge Gas resources are guided by the IRAP and to the extent their duties can support meeting the goals and targets set by the IRAP, they are involved in its operationalization. As a result, Enbridge Gas does not have the specific breakdown requested.

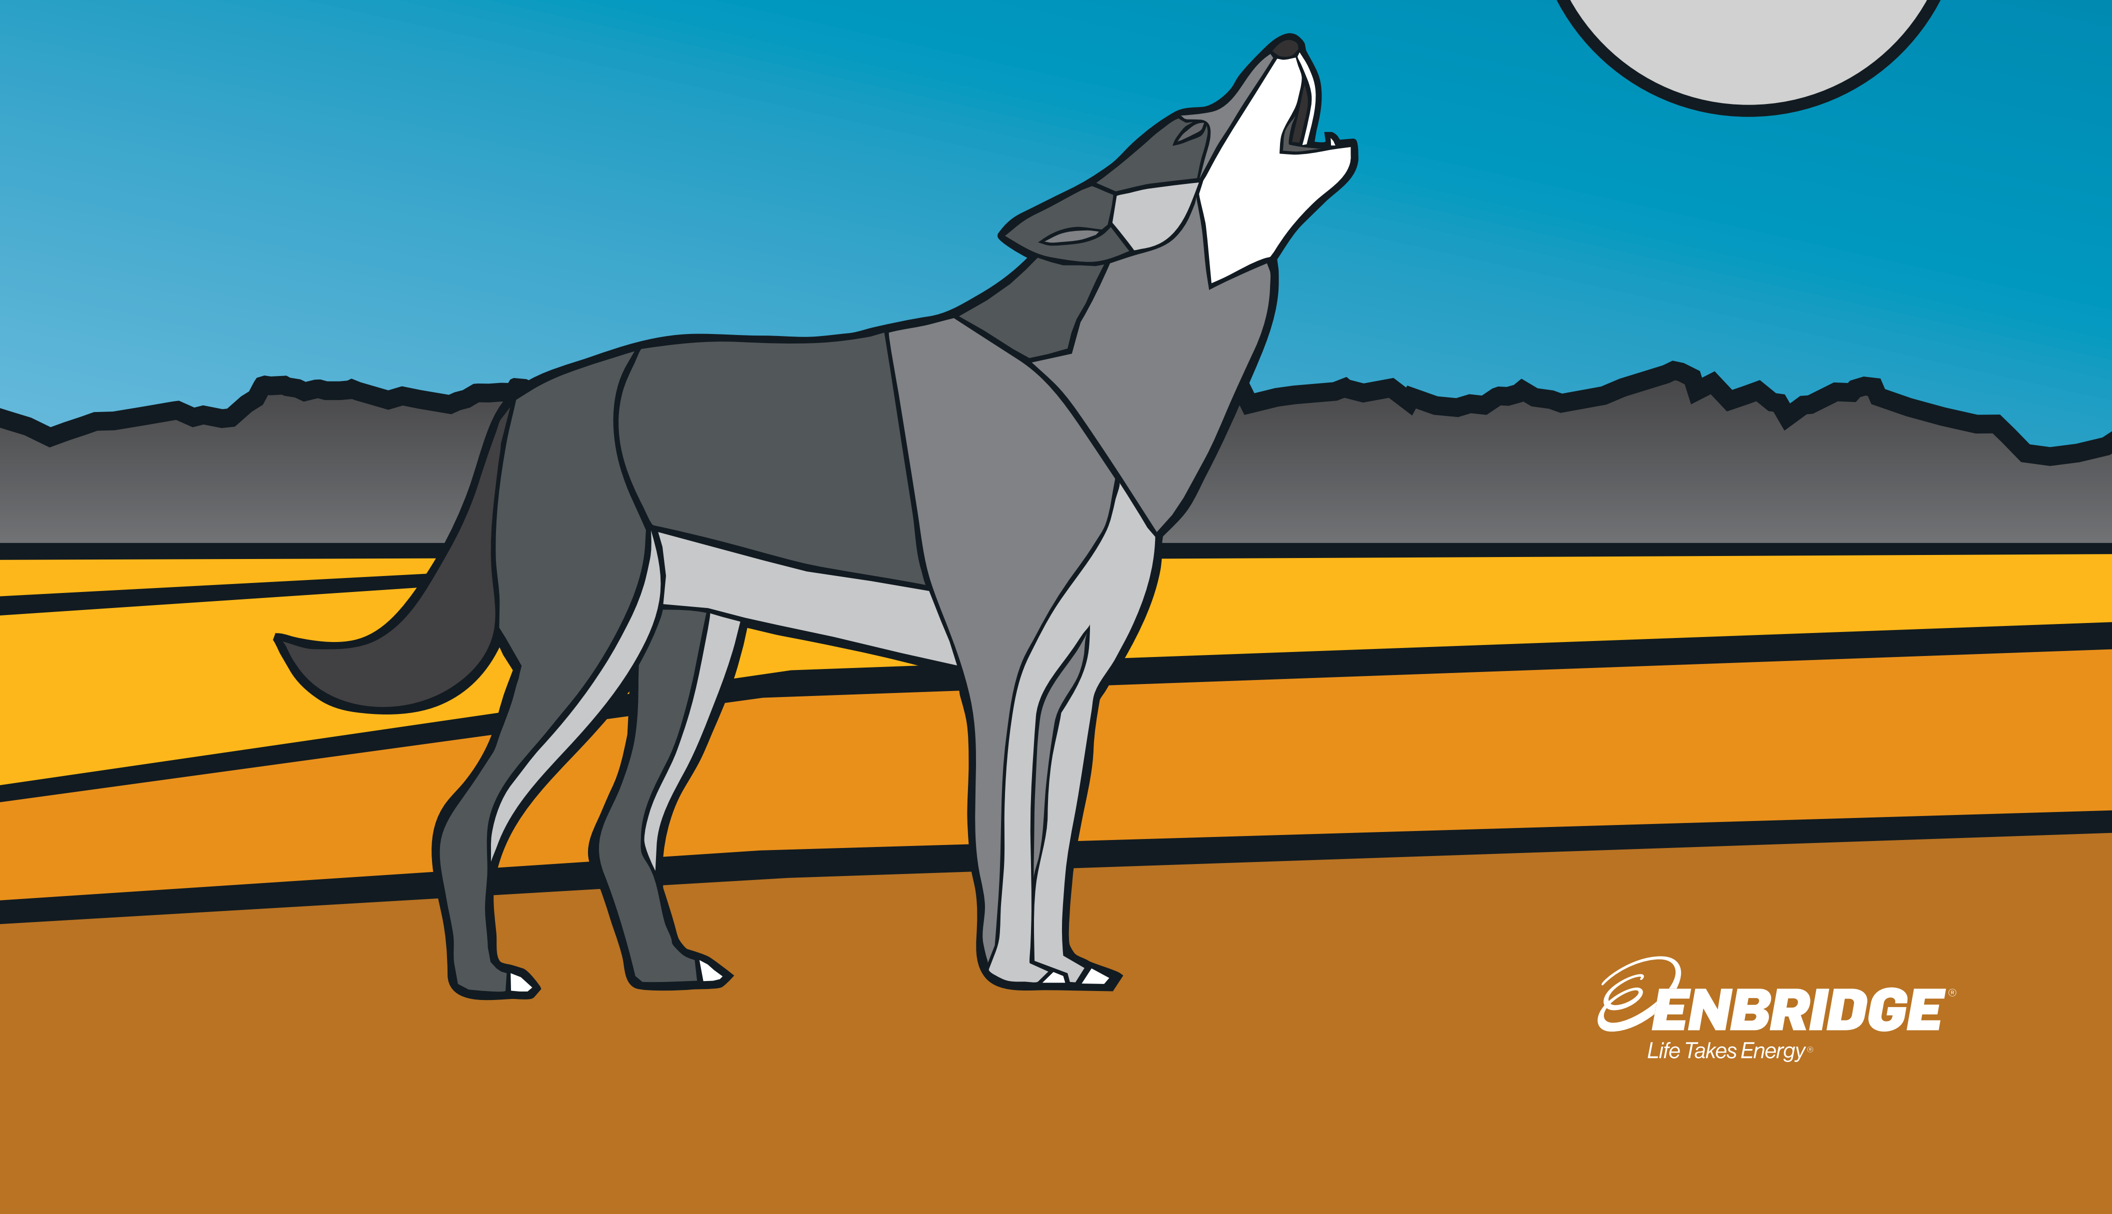
j) Please see response at part i), which statements also apply to the IPP.

k) Please see response at part b). In addition, Enbridge Gas can confirm that it meets with and discusses the interests and priorities of Indigenous groups, including representatives of TFG, to explore, among other things, opportunities to advance innovative partnerships and economic inclusion. While some Indigenous equity partnerships have recently been developed by Enbridge Gas's affiliated companies, those transactions are very complex and specific to the circumstances surrounding those projects and are outside the scope of this Application. For its evidence in support of this Application, and specifically for its proposed 2024 revenue requirement, Enbridge Gas has not included expenses for Indigenous ownership and operation of regulated assets.

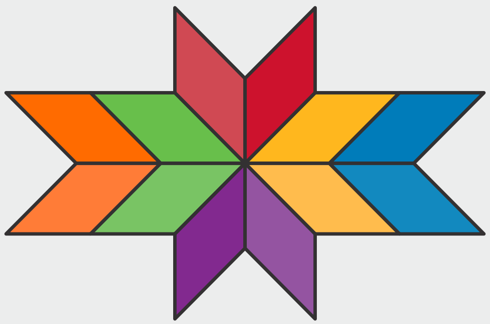
l) Please see response at part b). In addition, Enbridge Gas follows the same general approach to Indigenous engagement for RNG-related projects as it does for facilities projects where the duty to consult is triggered. In those cases, Enbridge Gas engages with potentially affected Indigenous groups to avoid or mitigate any impacts the project may have on their rights and interests. Enbridge Gas has not contemplated Indigenous ownership or operation of regulated RNG assets for the purposes of the proposed 2024 revenue requirement. Any unregulated RNG projects are outside the scope of this Application.

The journey ahead

2022 Indigenous Reconciliation Action Plan



ENBRIDGE®
Life Takes Energy®



Over the years, Enbridge has been honored with blankets gifted from Indigenous groups. The blankets served as a source of inspiration for the design of the 2022 Indigenous Update Report and this star graphic. We honor these gifts and their importance to the fabric of our culture, and our dedication to continued learning and inclusion of Indigenous culture, heritage and teachings in our everyday lives.

Table of contents

Why an Indigenous Reconciliation Action Plan?

Enbridge is proud to share this Indigenous Reconciliation Action Plan (IRAP). As a North American company, it is important to foster meaningful reconciliation within communities where we live and work. This IRAP continues our long-held commitment to advancing reconciliation with Indigenous peoples. Further, it is developed in recognition of the Truth and Reconciliation Commission's Call to Action #92, the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), and with respect for and acknowledgement of Indigenous rights and title, treaties, and sovereignty across Turtle Island[1]. Our IRAP will serve as the roadmap by which we will continue our journey to advance truth and reconciliation. It is the mechanism by which we will remain accountable for executing on our commitments and to our partners, including Indigenous peoples.

* All dollar amounts are in CAD except when specified in USD.

[1] The continent of North America is often referred to as Turtle Island by some Indigenous peoples. Both terms appear within this IRAP, where appropriate.

ENBRIDGE
Life Takes Energy

Land acknowledgment

Our projects and operations span Treaty and Tribal lands, the National Métis Homeland, unceded lands and the traditional territories of Indigenous Nations, Tribes, Governments and Groups (Indigenous groups)[2] across North America.

[2] In this IRAP we are using the term "Indigenous groups" when referring to Indigenous nations, governments or groups in Canada and/or Native American Tribes and Tribal associations in the United States. We have the utmost respect for the unique rights and individual names of Indigenous groups across Turtle Island. This collective term is used solely for the purpose of the readability of the IRAP.

About the artist

Jason Carter is an Indigenous sculptor, painter, illustrator and public artist from the Little Red River Cree Nation at John D'Or Prairie, Alberta, and a Distinguished Alumni of MacEwan University. Jason has major permanent installations in both the Calgary and Edmonton International Airports, and his sculpture and canvas artwork are displayed in many public places (NAC, AFA, YWCA Calgary and Edmonton, Travel Alberta, Wood Buffalo Region, Stantec, Banff Caribou Properties, Microsoft and Canada Goose) and private collections globally.

In 2019, Jason was commissioned by the Museum of Aboriginal Peoples' Art and Artifacts of Canada to create three paintings (two 79" x 29" and one 58" x 29") to be permanently installed in the museum's entrance. Jason is the lead sculpture artist for 'In Search of Christmas Spirit'; an immersive sculpture exhibit in Banff, Alberta where he created 12′ to 18′ tall sculptures of bears, wolves, and bison lit from within like a lantern. He worked alongside Banff & Lake Louise Tourism and Parks Canada to complete this initiative. In 2021, Jason created wâpos; another large-scale sculpture installation celebrating the rabbit in Churchill Square, and Winter Solstice, which brought to light the importance of solstice and the passing of the sun and moon in Winter to Indigenous peoples. Most recently, Jason was commissioned by Hockey Canada to hand paint 150 hockey sticks gifted to the player of the game at the World Junior Championships in August 2022.

About Enbridge

Enbridge is a leading North American energy infrastructure company, headquartered on Treaty 7 territory and a portion of the Métis Homeland in Calgary, Canada. We operate locally, living and working in the communities near our projects and operations. Enbridge has additional major offices across Turtle Island in Houston, Edmonton, Toronto, Duluth and Chatham.

We safely and reliably connect millions of people to the energy they rely on every day, fueling quality of life through our North American natural gas, oil, or renewable power networks and our growing European offshore wind portfolio. We continue to invest in modern energy delivery infrastructure and are committed to reducing the carbon footprint of the energy we deliver. Our goal is to achieve net-zero greenhouse gas emissions by 2050.

To learn more, visit us at Enbridge.com.

“We believe that our business can play a critical role in advancing reconciliation, and that means acknowledging the truth and learning from the complicated and challenging history of Indigenous peoples. We need to understand the past in order to move forward.

We are a values-driven organization, and therefore we recognize the deep and meaningful connections that Indigenous nations have to water, land and the environment. We've learned not to walk into Indigenous communities with all the answers, but rather to listen carefully to concerns and ask questions that further our understanding. We instill trust by listening carefully and working together – and delivering on the promises we make.

To that end, our first Indigenous Reconciliation Action Plan (IRAP), and its commitments, serve as a beacon of our company-wide focus to advance reconciliation.

That said, reconciliation at Enbridge is more than what could be embodied in this plan. It requires a thoughtful approach, hard work, and respecting and acknowledging our history. Most of all it requires our full commitment to building a better future together. In my experience, this hard work is not only necessary but is always worth the effort.”

– **Al Monaco**, President and CEO

Where we are now in our journey

As a company, we strive for a future where society is united in and committed to creating an inclusive future. We have a role to play in challenging long-held beliefs about the history of Indigenous peoples and embarking on and supporting a path towards reconciliation. As we learn more, and reflect on and acknowledge our journey to date, we create a path that we can walk, together, towards reconciliation. Enbridge is responsible for forging this path – by continuing to listen to and learn about the history, culture and perspectives of Indigenous peoples and identify ways to enable, encourage and support this journey.

While we have been building relationships with Indigenous groups for many years, Enbridge made a commitment in 2017 to enhance transparency by expanding reporting on the implementation of our Indigenous Peoples Policy and the steps we are taking to integrate Indigenous rights and knowledge into our business across Turtle Island. In June 2018, we began to fulfill that commitment with the release of a discussion paper, *Indigenous Rights and Relationships in North American Energy Infrastructure*, and have since provided an annual overview of our plans, commitments and outcomes with respect to Indigenous inclusion within our 2018–2021 sustainability reports.

We most recently reported on our corporate journey towards reconciliation in February 2022 with the release of, *Continuing Our Path to Reconciliation: Indigenous Engagement and Inclusion—An Update*. Our work to date has been values-driven, focused on collaboration and has taken shape in our lifecycle approach to engagement and supply chain opportunities, and employment, education, and Indigenous cultural awareness initiatives.

> While much work has been done, there is much more to do. We have a responsibility to continue moving forward.

This, our first Indigenous Reconciliation Action Plan (IRAP), is an opportunity to continue our unwavering commitment to reconciliation. These tangible, measurable and publicly reportable commitments help to further underpin our Indigenous Lifecycle Engagement Framework by forming the next stage of our journey towards reconciliation, and support the transition towards a cleaner energy future in partnership and collaboration with Indigenous peoples.

Our commitments will require continued collaboration, patience, and a resolute commitment to advancing reconciliation. These commitments permeate across each of our four core businesses within Enbridge, transcend geographic borders and require us to focus on our role as an energy company whose projects and operations span Treaty and Tribal lands, the National Métis Homeland, unceded lands and the traditional territories of Indigenous Nations, Tribes, Governments and Groups (Indigenous groups)[2] across Turtle Island. Enbridge has consulted and engaged with more than 340 Indigenous groups in Canada and the United States.

We also acknowledge and express our gratitude to the 50 individuals from Indigenous groups across Canada and the United States who provided valued input early on in our IRAP development process, and whose insights have helped shape our commitments and the priorities for this continued journey towards reconciliation. Thank you – for your honesty, your willingness to engage, and your thoughtful contributions – all of which help direct the trajectory of this journey to reconciliation and a sustainable energy future.

Through this IRAP, and the actions we will undertake to support and advance our 22 commitments, we must create opportunities – for dialogue, for listening, for knowledge transfer, and for collaboration and partnership with Indigenous groups. Put simply, reconciliation is supported by creating connections, and furthered by building bridges that connect recognition of the past to a shared vision for the future.

IRAP vision and values

At Enbridge, our core values – Safety, Integrity, Respect and Inclusion – reflect what is truly important to us as a company. These values represent the "north star" for our organization, a constant beacon by which we make our decisions, as a company and as individual employees, every day. In 2020, we invested time and energy listening to our employees speak about their experiences, including the barriers faced by Indigenous peoples. This engagement resulted in the addition of inclusion as a core value. We are committed to upholding these values as we collectively walk a path to reconciliation.

Our name, Enbridge, has long conveyed our commitment to being a bridge and leading the way to a safer, cleaner and more sustainable energy future. We recognize we have an important role to play in building bridges toward reconciliation and in collaborating with Indigenous peoples on the energy transition as we seek to be the leading energy infrastructure company in North America.

Our vision for this IRAP is that it will:

- Guide us on our continued journey to reconciliation
- Unite and focus us in our efforts to continue to build and nurture respectful and mutually beneficial relationships with Indigenous peoples
- Enable us to collaboratively create a safer, and more accountable, respectful, sustainable and inclusive future for seven generations[3] and beyond

We believe we can achieve more together – collaboratively, respectfully, purposefully and transparently.

[3] "Seven generations" is an Indigenous sustainability principle that says that we should consider how every decision will impact and affect those seven generations into the future.

About this IRAP

This IRAP is organized into six pillars and outlines a total of 22 commitments. Full details and targets are provided in the pages that follow.

These pillars represent our priorities, a cornerstone of our commitment to reconciliation, each collaboratively developed with the input of Indigenous individuals and groups. Our pillars will endure, and while the commitments may evolve over time, we expect each pillar will remain stable and consistent. Enbridge will develop tools and mechanisms to support and execute on these commitments on our path towards reconciliation.

We will publicly report on our progress against these commitments annually, starting with an update on our progress in our 2023 Sustainability Report.

SIX PILLARS

1
People, employment and education

2
Community engagement and relationships

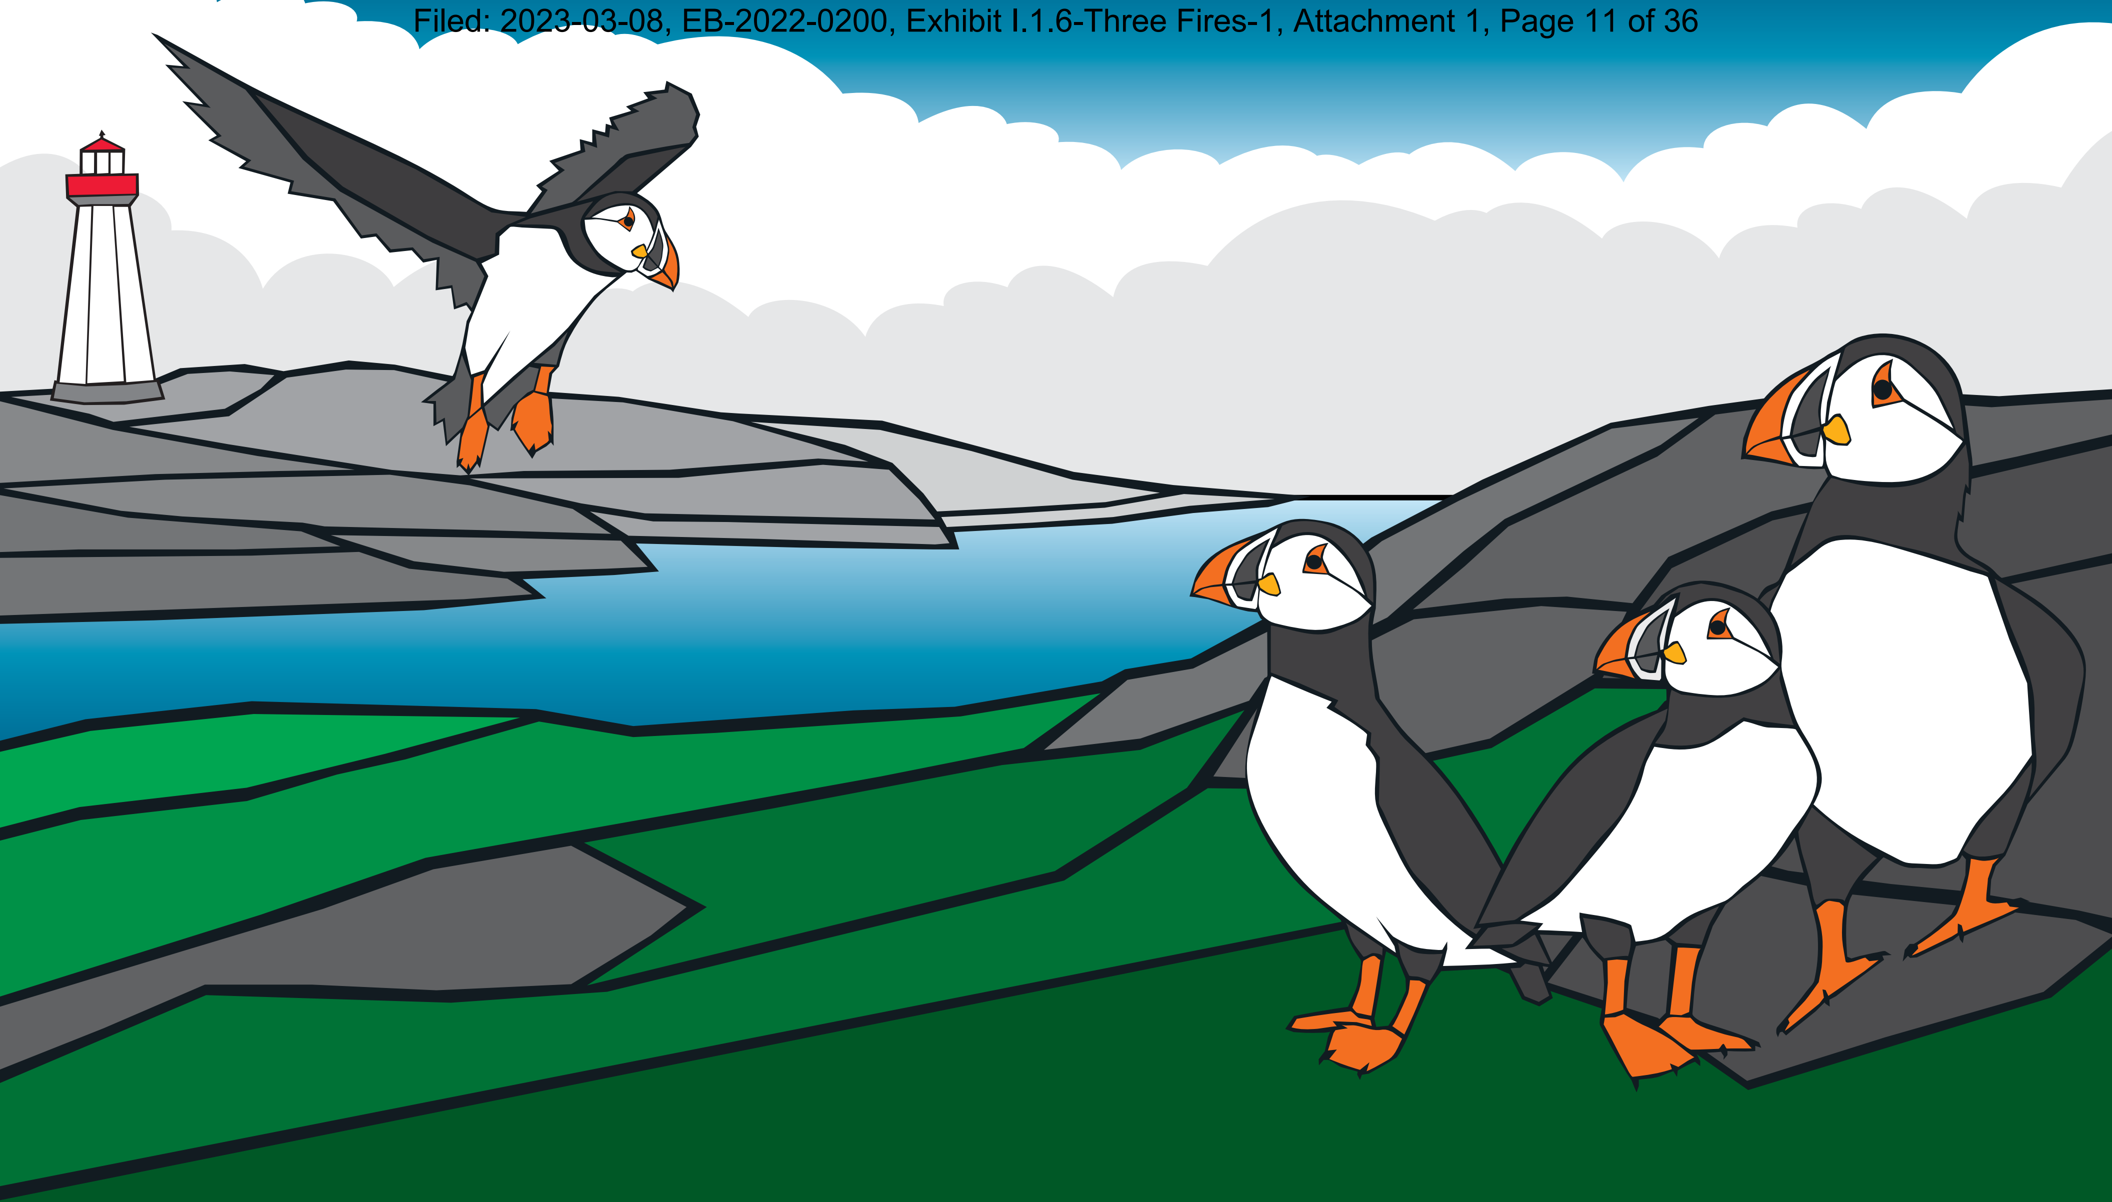
3
Economic inclusion and partnerships

4
Environmental stewardship and safety

5
Sustainability, reporting and energy transition

6
Governance and leadership

Reconciliation Action Pillars



PILLAR 1

People, employment and education

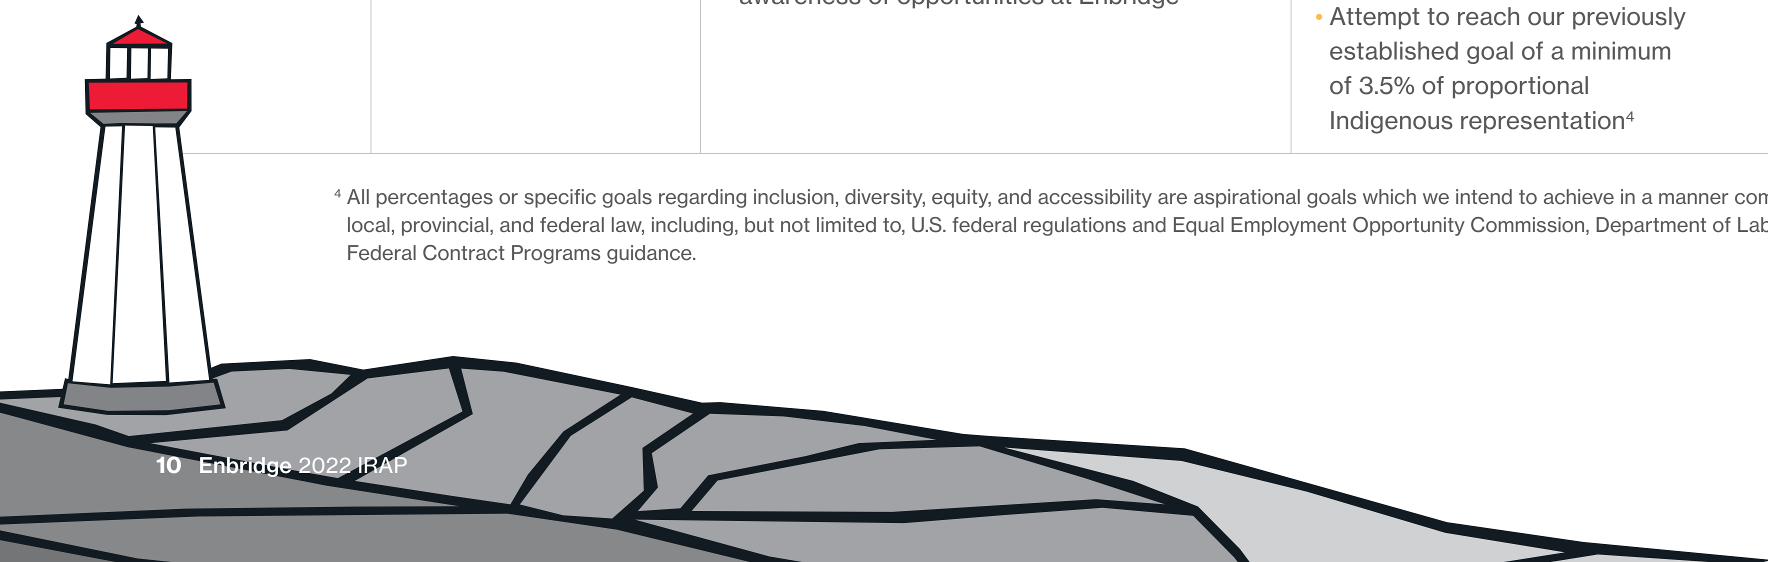
Enbridge is committed to creating and nurturing organizational structures that support opportunities to attract, retain and develop the skills of Indigenous people at all levels and in positions that make Enbridge the place to build their careers in a culturally supportive work environment.

PILLAR 1

People, employment and education

Focus	Commitment	Details	Target/Goal	Timeline
Talent attraction and recruiting	Establish flexible work placements and opportunities for Indigenous peoples that account for regional and cultural considerations across Canada and the United States	• In addition to current organizational workplace flexibility options, identify and develop opportunities for roles in other locations where there might be increased availability of Indigenous applicants • Identify and resolve employment barriers for current and future Indigenous employees • Explore updating leaves policies to reflect cultural inclusivity	• Update Indigenous engagement employment program to account for Indigenous culture, regional/remote considerations and legal considerations, as appropriate • Explore establishing a cultural leave program	2022 – Ongoing
	Continue to seek and strive to increase Indigenous representation in Enbridge's permanent workforce	• Continue to review and develop Indigenous employment data and report annually • Work with Indigenous groups and training partners to identify current opportunities and key growth areas for employment and skills development • Explore new partnerships to grow talent pool and implement Indigenous recruitment strategies with the goal of increasing awareness of opportunities at Enbridge	• Continue to report metrics and provide annual disclosure • Identify key growth areas for employment and skills development • Establish partnership with Indigenous employment agency • Attend at least eight (8) Indigenous-focused career fairs throughout Canada and the United States • Attempt to reach our previously established goal of a minimum of 3.5% of proportional Indigenous representation[4]	2025

[4] All percentages or specific goals regarding inclusion, diversity, equity, and accessibility are aspirational goals which we intend to achieve in a manner compliant with state, local, provincial, and federal law, including, but not limited to, U.S. federal regulations and Equal Employment Opportunity Commission, Department of Labor and Office of Federal Contract Programs guidance.



Focus	Commitment	Details	Target/Goal	Timeline
Talent attraction and recruiting	Continue to review internal hiring processes and develop human resource capability to ensure all perspectives are reflected through attraction/ retention lifecycle	• Review existing talent policies and procedures to identify gaps and implement changes to ensure cultural perspectives and priorities are reflected throughout process(es) • Continue to conduct regular training with Talent Acquisition team on ways to conduct culturally sensitive interviews (e.g., understanding Indigenous cultural differences, uncovering hiring biases, interviewee evaluation criteria) • Where allowed by law, formalize Indigenous attraction/retention programming for diversity, cultural, regional and remote considerations	• Review and, where appropriate, update internal hiring processes • Conduct ongoing and regular training with Talent Acquisition team related to hiring practices • Explore development of policies/ procedures to support Indigenous attraction/retention programs	2022 – Ongoing
Talent experience and development	Increase representation of Indigenous employees within Enbridge's Leadership Development Program to support the retention and advancement of Indigenous employees	• Continue to support Indigenous employees through consultation, mentorship, onboarding, coaching and connection • Develop and diversify pools of candidates for apprenticeship and internship programs • Continue to identify and develop succession plans free from unconscious bias across the company	• Explore expansion of programs and opportunities for the growth of Indigenous employees/employee base	2023 – Ongoing

* Please note that bargaining unit employees are subject to the terms and conditions of their collective bargaining agreement.

PILLAR 1

People, employment and education

Focus	Commitment	Details	Target/Goal	Timeline
Cultural support programs	Continue to develop and maintain cultural support programs to make Enbridge an attractive and welcoming employer for all people, including Indigenous peoples	• Continue to include and develop Indigenous Employee Resource Groups across the company • Expand programs related to Sharing Circles and Indigenous employee support across the company • Continue to create culturally inclusive and safe spaces across the company that are supportive and celebrate Indigenous arts and culture. • Develop a regional-based implementation model inclusive of diverse perspectives across the company • Establish an Elder connections program to give employees direct access to Indigenous Elders for advice and cultural support	• Continue to implement and expand cultural support programs • Integrate Indigenous arts and culture in Enbridge offices and facilities across Turtle Island	2023 – Ongoing
Learning and awareness	Ensure 100% of Enbridge's employees complete Indigenous awareness training	• Ensure opportunities exist for employees to develop a deeper understanding of the history, rights, culture and knowledge of Indigenous peoples by completing online or in-person cultural awareness training • Explore tailored training for groups across Enbridge, as needed • Track and monitor completion statistics of required Indigenous Awareness Training	• 100% employee participation in cultural awareness training • Ensure every new Enbridge employee receives cultural awareness training as a requirement	2022

PILLAR 1

Spotlight: Gas Distribution and Storage Mentorship Program

As an example of forging new pathways and living our values — the Gas Distribution and Storage (GDS) Mentorship Program aims at reducing barriers and increasing opportunities for Indigenous recruitment and employment.

> Wendy Landry (left) and previous mentorship participant, now full-time Enbridge employee, Lauryn Graham (right) pose next to the Enbridge sign in Eastern Region.

Enbridge's Gas Distribution and Storage (GDS) Northern Mentorship Program, now in its 4th year, was founded when our Northern Region team in GDS recognized their approach to recruit local Indigenous talent for various positions over several years was largely unsuccessful. "We have a duty to reflect the communities we serve, yet we struggled to attract local Indigenous talent after years of effort and commitment," said Luke Skaarup, former Director Northern Region Operations GDS and now Director Operations Services for Enbridge's Liquids Pipelines Operations. "We needed to work collaboratively both internally and externally to course correct."

The team sought approval for and actioned the re-purposing of Enbridge's co-operative and summer student roles for Indigenous mentorship and engaged with local Indigenous groups and unions to reduce the very real barriers to entry into Enbridge – and more generally, corporate Canada – by enhancing the accessibility of our job postings, inviting initial discussions and conducting interviews within communities. They provided recognition for relevant lived experience in addition to professional experience.

"The success in identifying and connecting candidates with positions came from the commitment and foresight of early champions of this program and a willingness to depart from the normalized hiring processes that create barriers to entry for some Indigenous candidates."

– **Wendy Landry,** Enbridge Senior Indigenous Initiatives and Engagement Advisor

PILLAR 1

Gas Distribution and Storage Mentorship Program continued

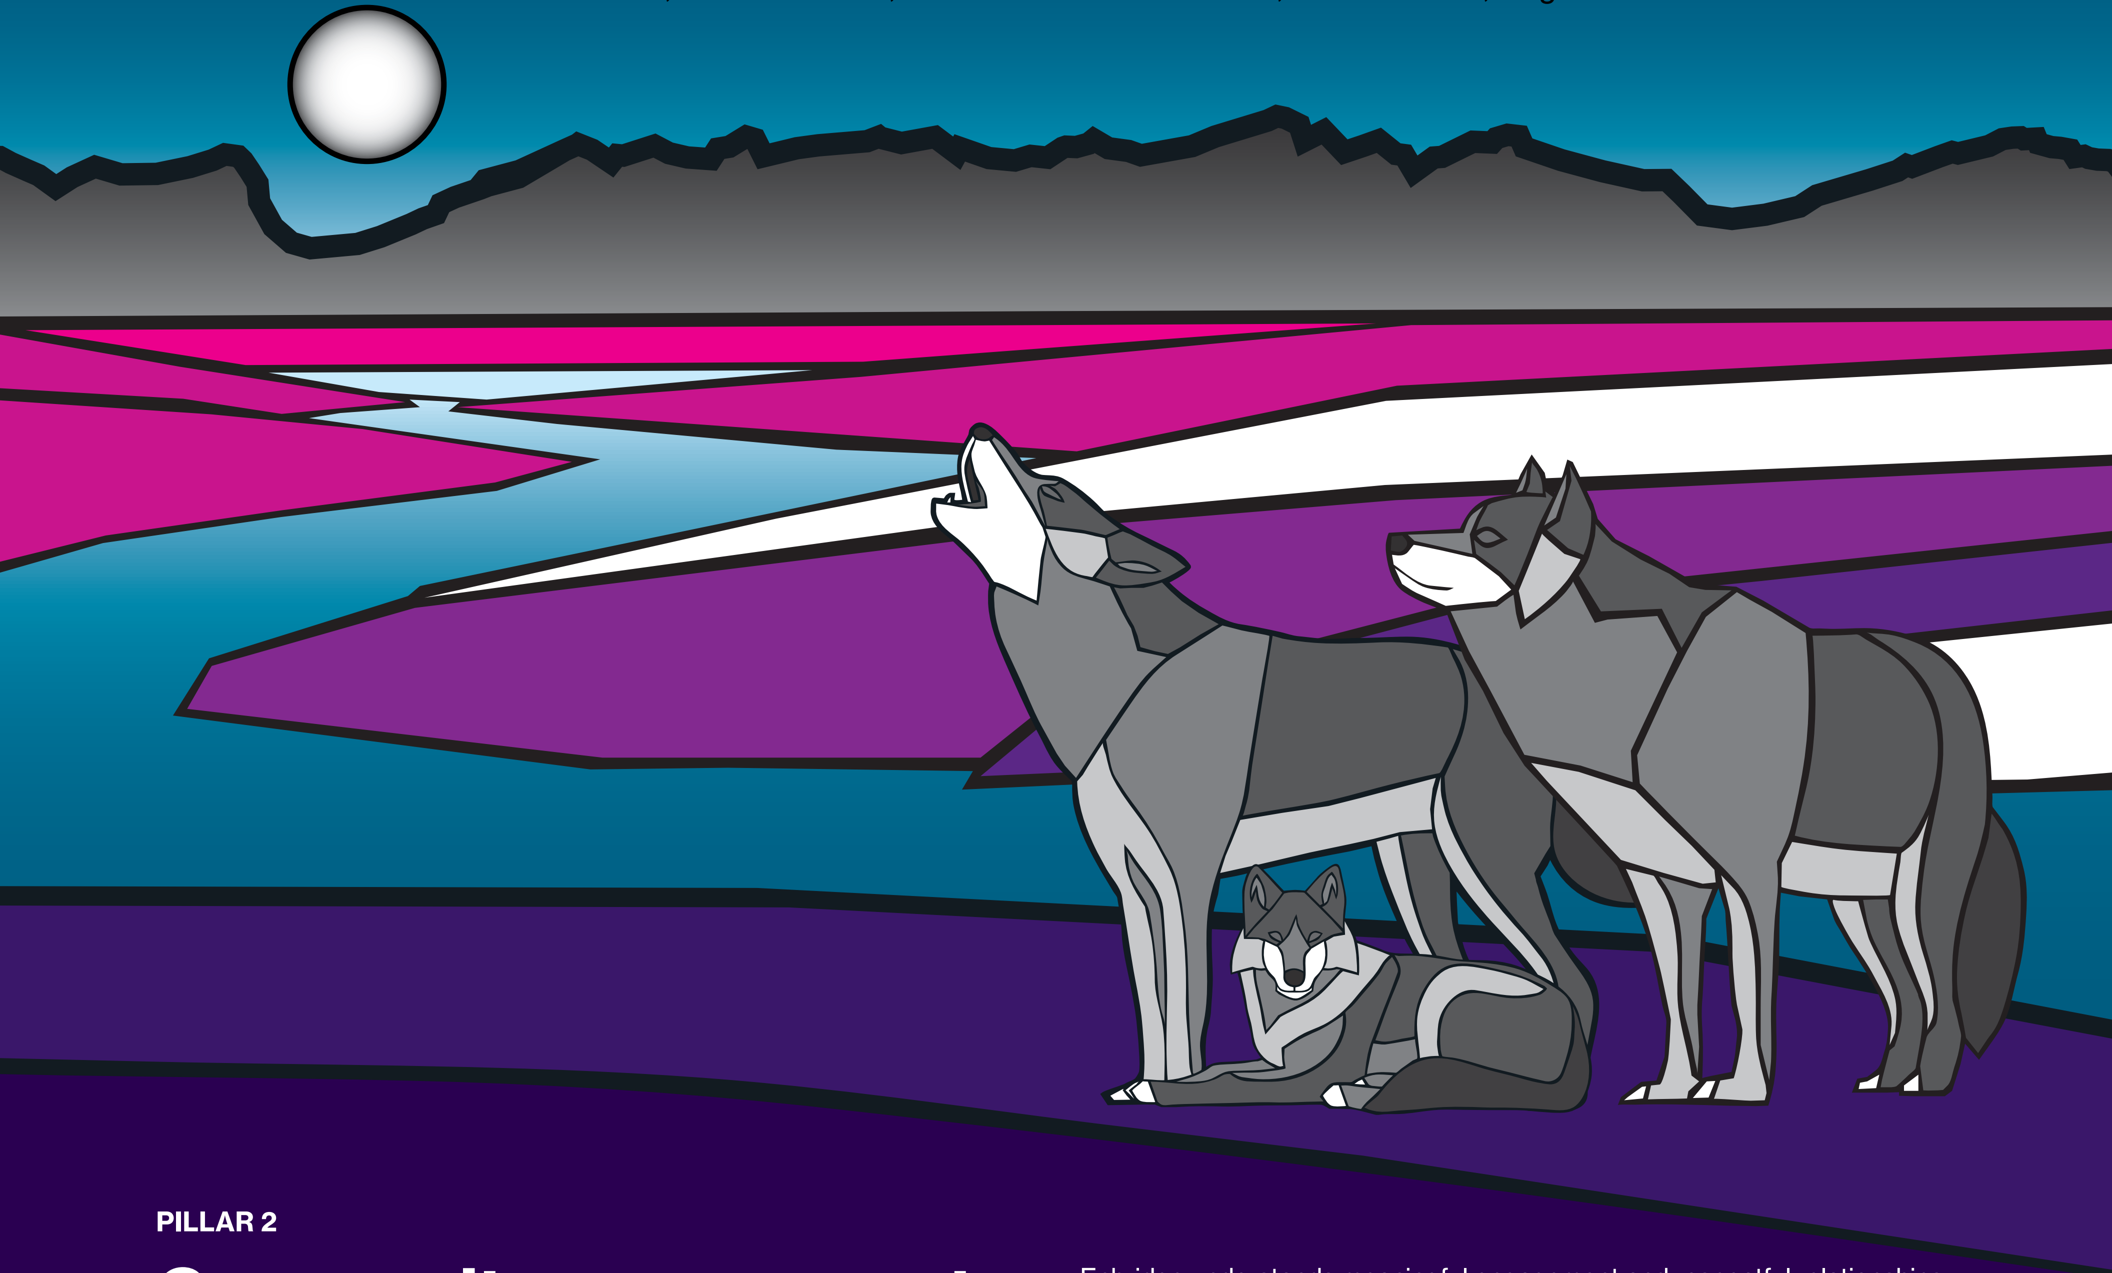
"The success in identifying and connecting candidates with positions came from the commitment and foresight of early champions of this program, and a willingness to depart from the normalized hiring processes that create barriers to entry for some Indigenous candidates," said Wendy Landry, Red Rock Indian Band member, Mayor of Shuniah and Senior Indigenous Initiatives and Engagement Advisor to Enbridge. While there is more work to do, this program has helped develop capacity by identifying where there were gaps in the recruitment and hiring process and how best to address those gaps to create pathways to employment – with Enbridge or elsewhere in the energy industry.

> The team focused internally on identifying pathways to fulltime employment, on implementing a mentorship program, and approached recruitment and hiring in a more culturally sensitive and respectful manner.

In 2021, the Northern Region team in GDS hired four mentees with an additional Indigenous employee successfully competing for a fulltime construction laborer position. We also partnered with the Métis Nation of Ontario as part of a Métis Youth Internship Program to on-board one additional hire to our construction team, and Distribution Operations initiated an Indigenous Community Outreach program as part of its diversity and inclusion strategy.

Enbridge is focused on expanding the mentorship program across GDS in Ontario in 2022, along with the implementation of an internal awareness campaign to increase understanding and support for Indigenous partnerships and collaboration.

Opportunities for dialogue and engagement with current and potential employees, including through the Indigenous Employment Resource Group and the Indigenous Sharing Circle, mean our journey of learning and adapting continues to inform the evolution of our Indigenous recruitment commitment. The entire team continues to identify mechanisms to enhance our accessibility, recruitment, retention and education practices.



PILLAR 2

Community engagement and relationships

Enbridge understands meaningful engagement and respectful relationships are foundational to advancing reconciliation. We are committed to developing strategies, mechanisms and opportunities that support and nurture dialogue and engagement between Enbridge and Indigenous groups throughout the lifecycle of our projects and operations.

PILLAR 2

Community engagement and relationships

Focus	Commitment	Details	Target/Goal	Timeline
Feedback mechanism	Develop an incremental formal mechanism for Indigenous groups to provide feedback to Enbridge	• In addition to ongoing engagement activities, and in consultation with Indigenous peoples, develop an incremental transparent feedback mechanism to facilitate input from potentially impacted Indigenous groups such as questions, concerns, and opportunities for collaborations related to Enbridge's projects and operations	• Establish and launch feedback mechanism	2023 – Ongoing
Community engagement and relationships	Provide $80 million in cumulative funding support for engagement priorities, community capacity building and fostering wellbeing over the next five years	• In addition to Enbridge's Indigenous contracting and procurement spend, these funds are intended to support community capacity and wellbeing. This may include dollars from relationship agreements, taxes paid and/or corporate/regional community investment	• $80 million in cumulative funding over five years	2022 – 2027

PILLAR 2

Spotlight: Patrick Hunter mural

How an art installation ignites and inspires conversation and connection to each other, the land and Indigenous culture and history.

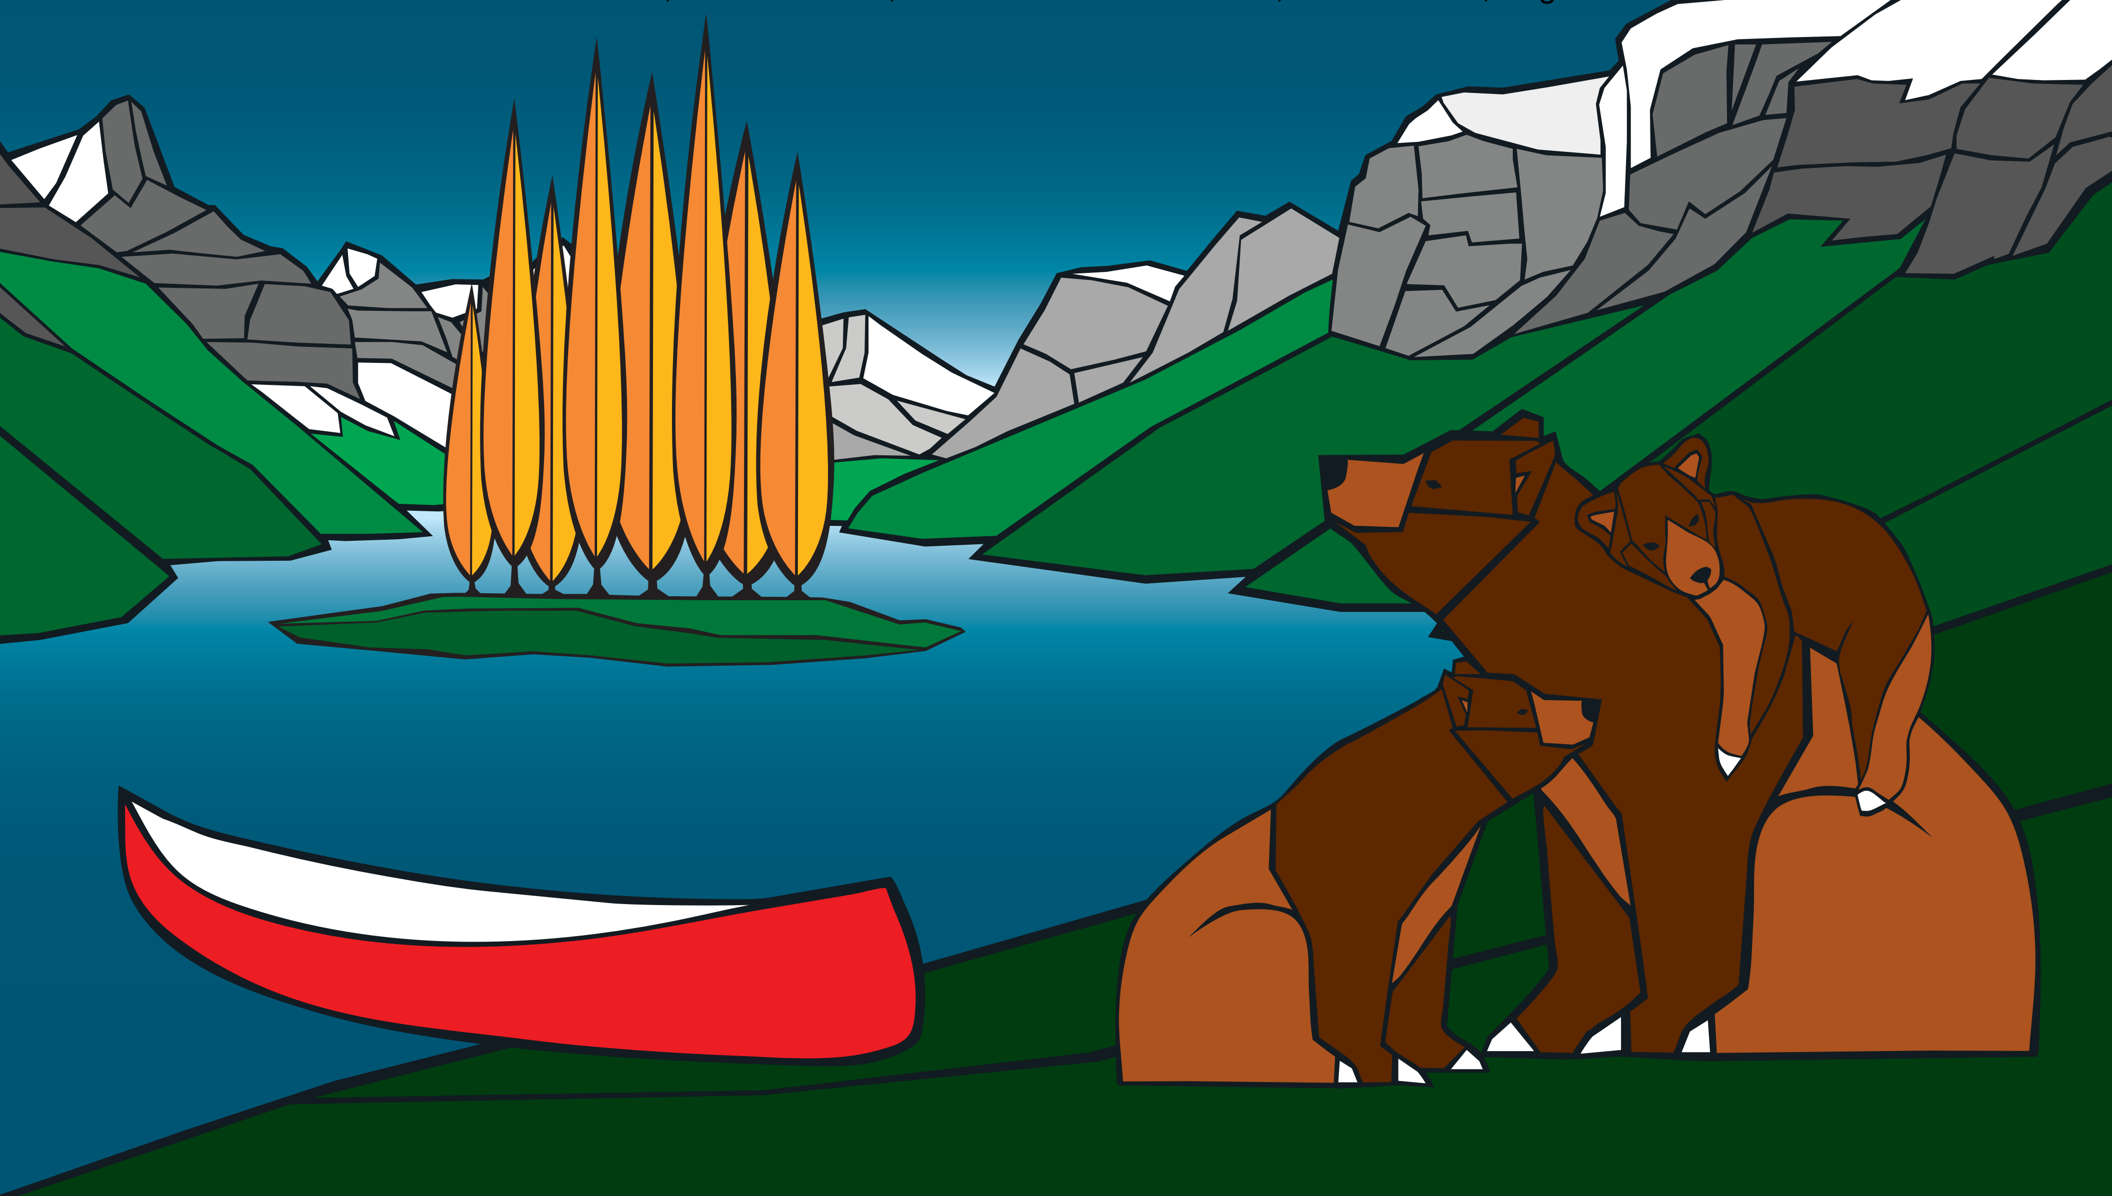
“I think it’s important for companies today to realize the land they are on was once another culture’s territory. Public acknowledgments of that fact are such a great first step towards being on the right side of history.”

– **Patrick Hunter,** Ojibway artist

Patrick Hunter is a two Spirit Ojibway artist, graphic designer and entrepreneur from Red Lake, Ontario. Patrick is one of Canada’s well-known Woodland artists, gaining inspiration from his homeland, painting what he sees through a spiritual lens, with the intent to create a broader awareness of Indigenous culture and iconography. Among his many projects are artwork he created for the Canadian Olympic Curling Team, the Chicago Blackhawks and Hockey Night in Canada.

In 2021, Enbridge commissioned Patrick to create two original pieces of art that could be digitized and used as murals in GDS facilities across Ontario. The pieces are installed in two locations: the 3rd floor of the 50 Keil Drive office in Chatham, and the 1st floor of the Victoria Park Centre in Toronto. Both pieces represent the start of a longer-term project to prominently display a collection of original Indigenous artwork.

The murals, designed specifically for Enbridge, embody Patrick’s personal reflections on and spiritual connection to the land and Indigenous territories in and around Ontario on which our GDS offices reside. They create awareness of Indigenous culture and history of the lands on which we work and live and connect us back to the natural world, something increasingly difficult to do in our urban environment. Not least, and perhaps most profoundly, they invite and ignite conversation, furthering our connections to each other and creating opportunities for dialogue, learning and reflection on our individual and collective journeys towards reconciliation.



PILLAR 3

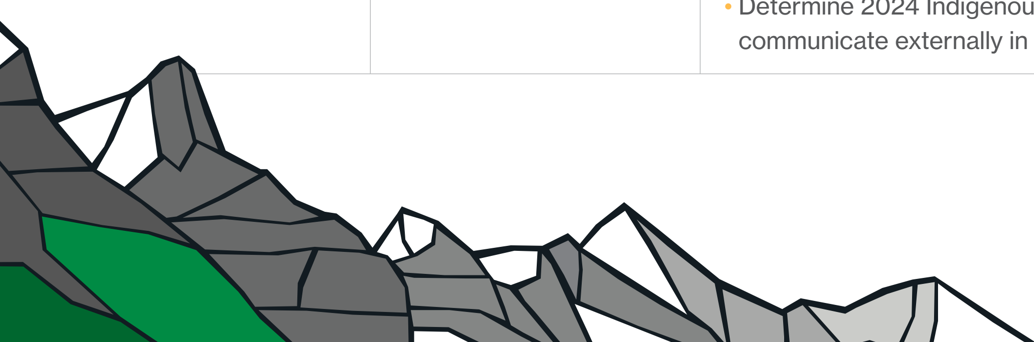
Economic inclusion and partnerships

Enbridge strives to create, engage in, and stimulate positive and mutually beneficial financial impacts, opportunities and potential partnerships with Indigenous groups and businesses.

PILLAR 3

Economic inclusion and partnerships

Focus	Commitment	Details	Target/Goal	Timeline
Indigenous financial partnerships	Revise and formalize Indigenous financial partnership processes that encourage strategies to provide opportunities for Indigenous economic participation	Establish a formal Indigenous Economic Development Taskforce to formalize processes that will: • Leverage business units' and project teams' insights to establish standards and criteria for financial partnerships within the company's investment review processes • Identify and review previous successes to develop financial opportunities that account for various regulatory, legal and socio-economic considerations • Undertake a review of the Indigenous financial capacity landscape and access to capital to ensure Enbridge facilitates opportunities that can be implemented • Engage with Indigenous groups to seek feedback and assess alignment between Enbridge's processes, market opportunities and new opportunities for Indigenous economic participation	• Develop Indigenous Economic Development Taskforce • Formalize processes and strategies for Indigenous economic participation • Implement new partnership processes and strategies that foster early engagement with Indigenous groups • Ensure Indigenous perspectives are included within review and development process(es)	2022 – Ongoing
Supplier capacity development	Advance opportunities for Indigenous businesses to participate in Enbridge's supply chain	• Develop and conduct information sessions over two years to provide guidance and education to Indigenous businesses seeking participation in Enbridge's supply chain • Continue to provide support for Indigenous businesses navigating Enbridge's procurement system	• Develop and conduct at least eight information sessions over two years	Ongoing
Indigenous procurement	Establish Indigenous spend targets	• Continue to establish benchmarks for Indigenous spend targets • Determine 2024 Indigenous spend targets and communicate externally in 2023	• Determine and disclose Indigenous spend targets	2023



PILLAR 3

Spotlight: Indigenous economic inclusion in gas transmission expansion projects in British Columbia

An expansion of B.C.'s gas transmission system created mutual opportunities and benefits for Indigenous businesses and Enbridge and shone a spotlight on the far-reaching impact and importance of Indigenous economic inclusion.

Enbridge is the owner and operator of British Columbia's (B.C.) major gas transmission system, connecting the province's natural gas exploration and production industry with millions of consumers and heating homes, businesses, hospitals and schools in B.C., Alberta, and the U.S. Pacific Northwest. Gas also fuels electric power generation and is a staple in many industrial and manufacturing processes.

In the fourth quarter of 2021, we completed two capital expansion projects – the T-South Reliability Expansion Project (TSRE) and the Spruce Ridge Expansion Program (Spruce Ridge). Enbridge conducted upgrades and reliability enhancements and expanded the capacity of the gas transmission system in B.C.

TSRE work included the installation of five new compressor units and associated equipment at five existing compressor stations, two

> These projects were completed with significant Indigenous engagement, participation and collaboration. In fact, the spend with Indigenous contractors in B.C. nearly doubled between 2018 and 2021.

compressor station cooler additions and three pipeline crossover projects. Twenty-four Indigenous groups participated and benefited economically, with Indigenous businesses securing and executing an aggregate of $54.7 million in contracts and subcontracts.

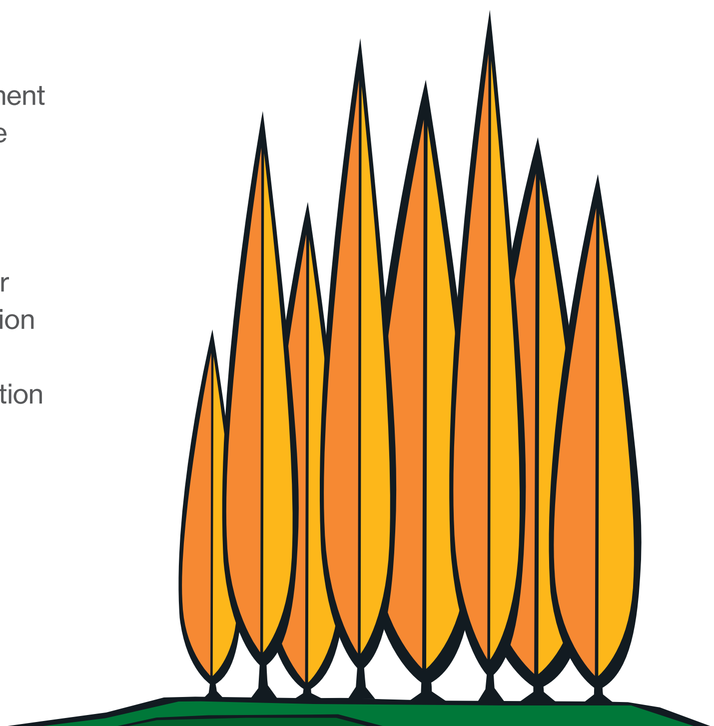
Spruce Ridge work involved the building of two new natural gas pipeline loops (the 13-km Aitken Creek Loop and the 25-km Chetwynd Loop), the addition of a new compressor unit at two compressor stations and some additional minor modifications at above-ground facilities. Nine Indigenous groups benefitted economically through subcontracting opportunities for an aggregate $66.6 million worth of contracts and subcontracts, including the award for construction of the Aitken Creek Loop to an Indigenous partner business.

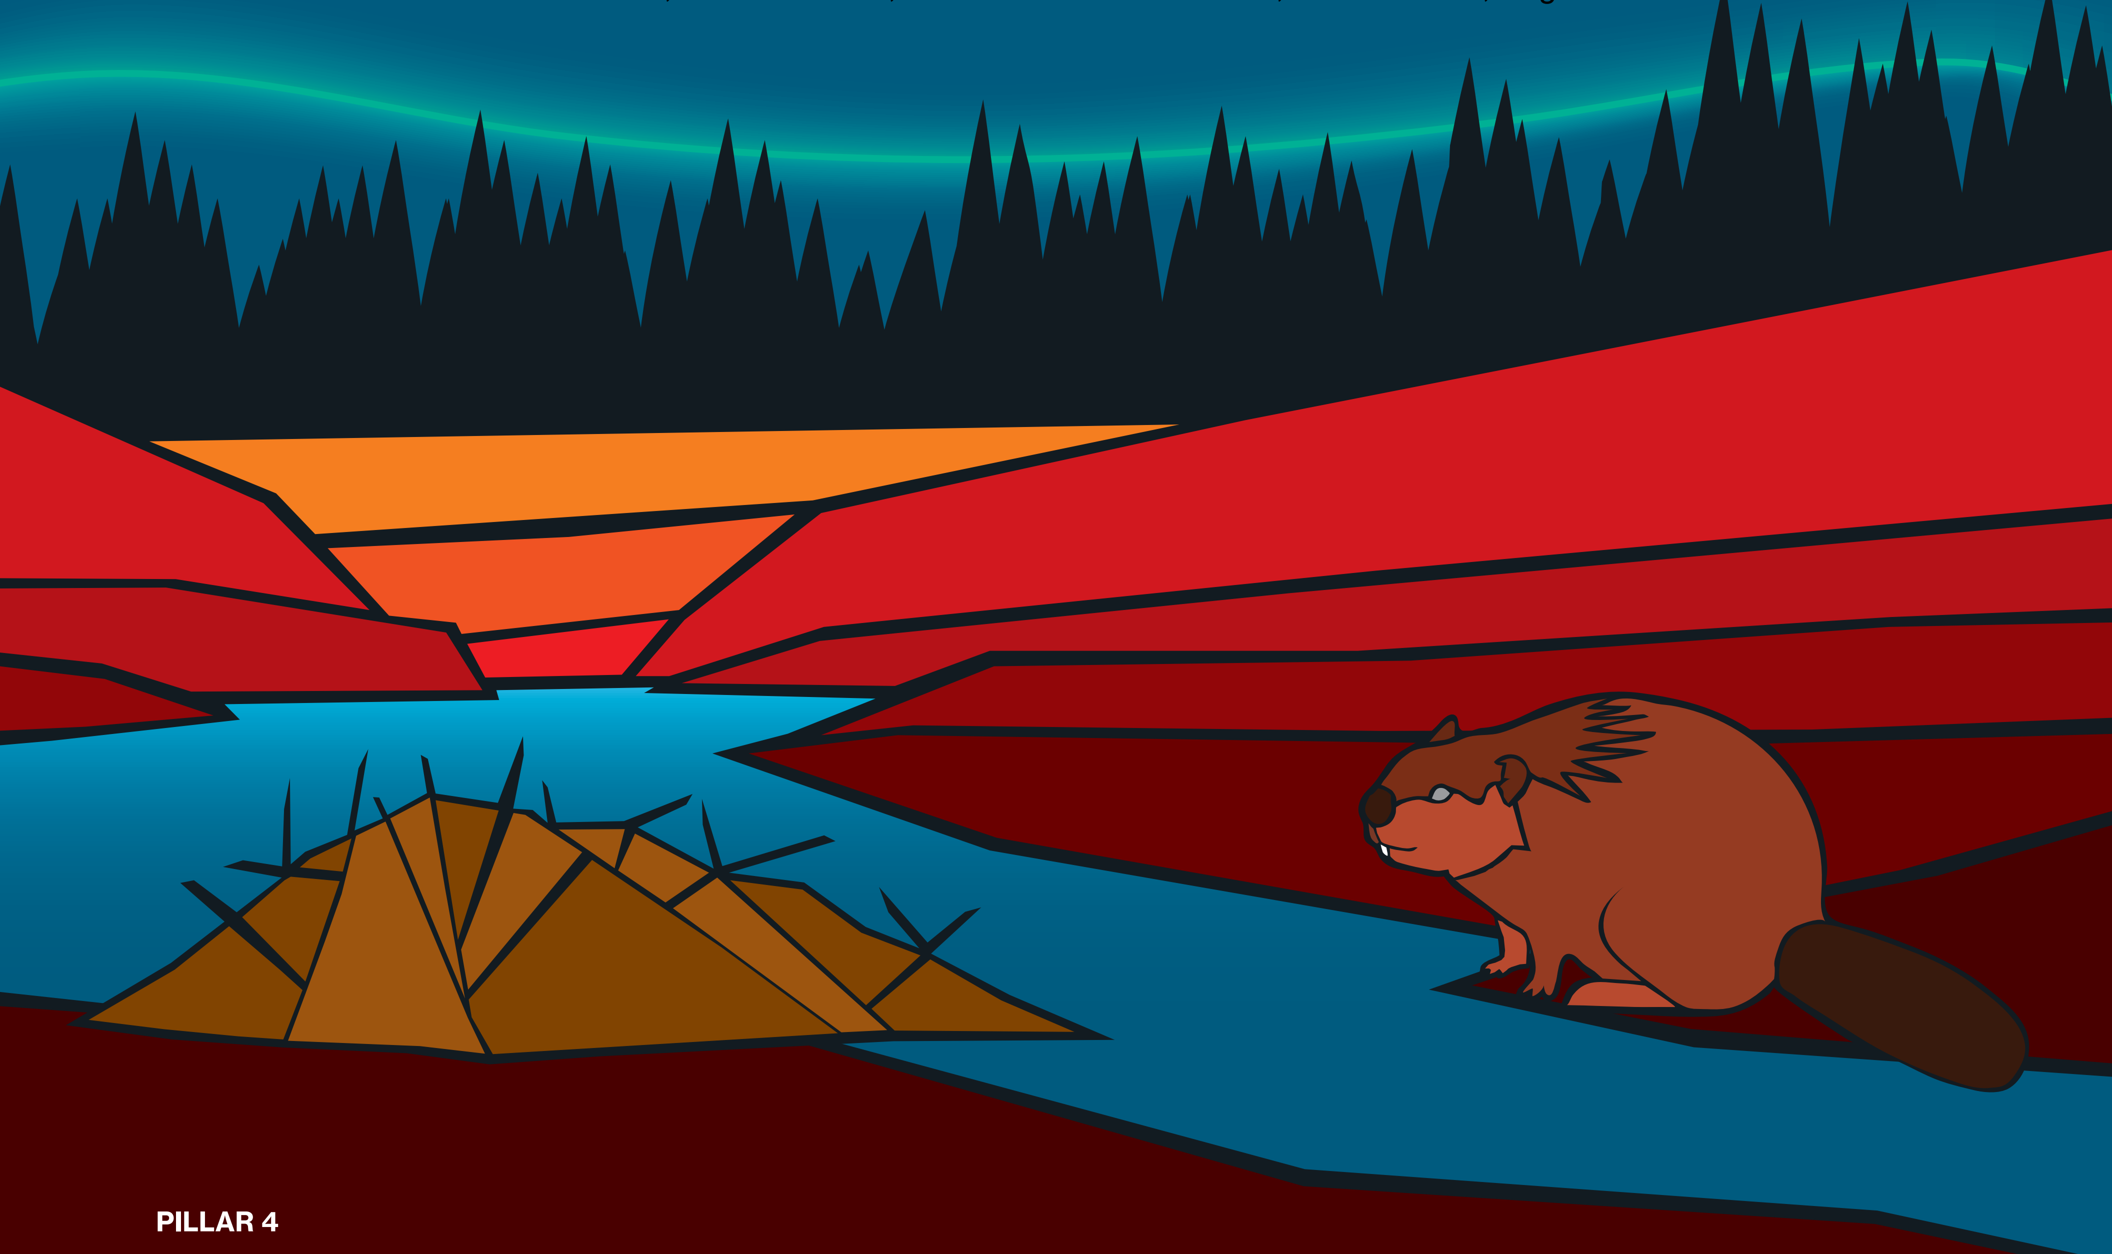
As we have walked this path towards reconciliation through the years, there have been pivotal moments along the way that have increased the momentum of our journey and created fundamental shifts in the way we do business. The focus on and implementation of measures to increase Indigenous economic inclusion and engagement is one such example of Enbridge's commitment on this journey.

The roll-out of Enbridge's Socio-Economic Requirements of Contractors (SERC) process in 2017 coincided with early engagement activities with Indigenous groups on TSRE and Spruce Ridge. The SERC guides our contractors on how we expect them to include Indigenous businesses in the execution of their work, as well as efforts to increase the use of Indigenous businesses as general contractors working directly for Enbridge. Each component of our focus on increased Indigenous economic engagement and inclusion was complemented by other mechanisms driving an increase in Indigenous economic inclusion and included targeted pre-qualification of Indigenous businesses; strategic direct award opportunities for Indigenous businesses to increase capacity and experience; and a focus on increasing capacity with Indigenous archaeology companies.

"Embracing relationships with Indigenous groups – giving them the opportunity to have a seat at the table, provide input on projects and to capitalize on opportunities is a big part of what reconciliation is [and to a further extent the implementation of UNDRIP in our daily lives]," said Chief Willie Sellars of Williams Lake First Nation.

"In addition, it's important to keep in mind the cultural, ceremonial, and traditional components of our way of life and incorporating that understanding and respect into projects. The TSRE ground-breaking at Compressor Station 6A 150 Mile House included a ground blessing, prayers and songs and provided an opportunity to introduce those present to our way of life and our traditions. This is so important as reconciliation requires education for people to be able to understand, to heal and to move forward. We are pleased to be able to work with Enbridge on this important journey towards reconciliation."





PILLAR 4

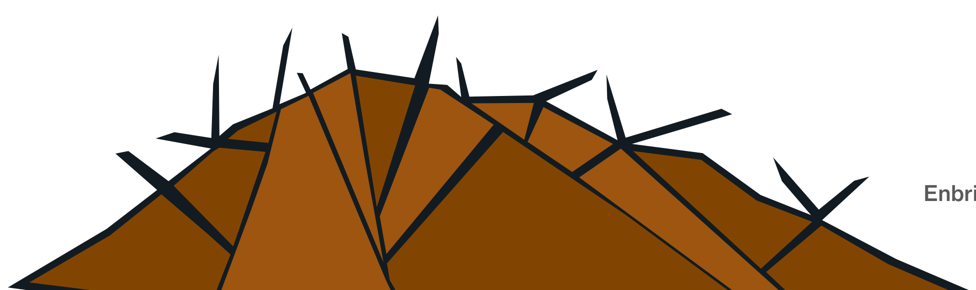
Environmental stewardship and safety

Enbridge recognizes the strong Indigenous connection to culture and the traditional importance of the land, air, animals and water. We are committed to environmental protection, collaborative stewardship, and continued improvement of engagement on, and inclusion of traditional and cultural knowledge in our plans, projects and operations.

PILLAR 4

Environmental stewardship and safety

Focus	Commitment	Details	Target/Goal	Timeline
Indigenous inclusion and traditional knowledge	Review and revise Enbridge's approach to Indigenous inclusion in the environmental review processes	• Assess current approach and identify opportunities for increased Indigenous inclusion and strengthening Enbridge's current mitigation strategies	• Confirm and utilize a phased approach to revise Enbridge's environmental review processes, as needed	2022 – Ongoing
	Regionally advance opportunities for Indigenous inclusion in environmental field work	• Regionally identify and advance opportunities for Indigenous participation in environmental field work	• Increase Indigenous involvement in fieldwork	2022 – Ongoing
Emergency preparedness and pipeline safety	Continue to share emergency management materials and encourage increased Indigenous awareness in emergency response	• Continue to share emergency management materials with Indigenous groups • Continue to generate awareness and provide opportunities for participation in emergency response exercises	• Continue to share relevant emergency management materials to generate awareness	2022 – Ongoing
	Continue to communicate with Indigenous groups regarding emergency and safety mechanisms and approaches	• Continue to provide notifications to Indigenous groups to ensure they are aware and engaged in the event of releases from pipeline systems • Develop a consistent process or protocol to share environmental and safety notices to Indigenous groups	• Proactively communicate with Indigenous groups through release notifications	2022 – Ongoing



PILLAR 4

Spotlight: Pontiac Township High School pollinator plot and Kickapoo Nation

An opportunity to advance sustainability commitments and facilitate connections that may endure for seven generations and beyond.

The Operation Endangered Species (OES) program was started in 2011 near Pontiac, Illinois, a brainchild of a group of Pontiac Township High School (PTHS) students with a biodiversity conservation initiative idea. The students approached their high school environmental science teacher with an idea to reintroduce endangered species on community pollination plots that would benefit surrounding agricultural land. The OES program at PTHS has raised US$150,000 over nine years to support the reintroduction of a species of reptile back to its native historic home range in Illinois.

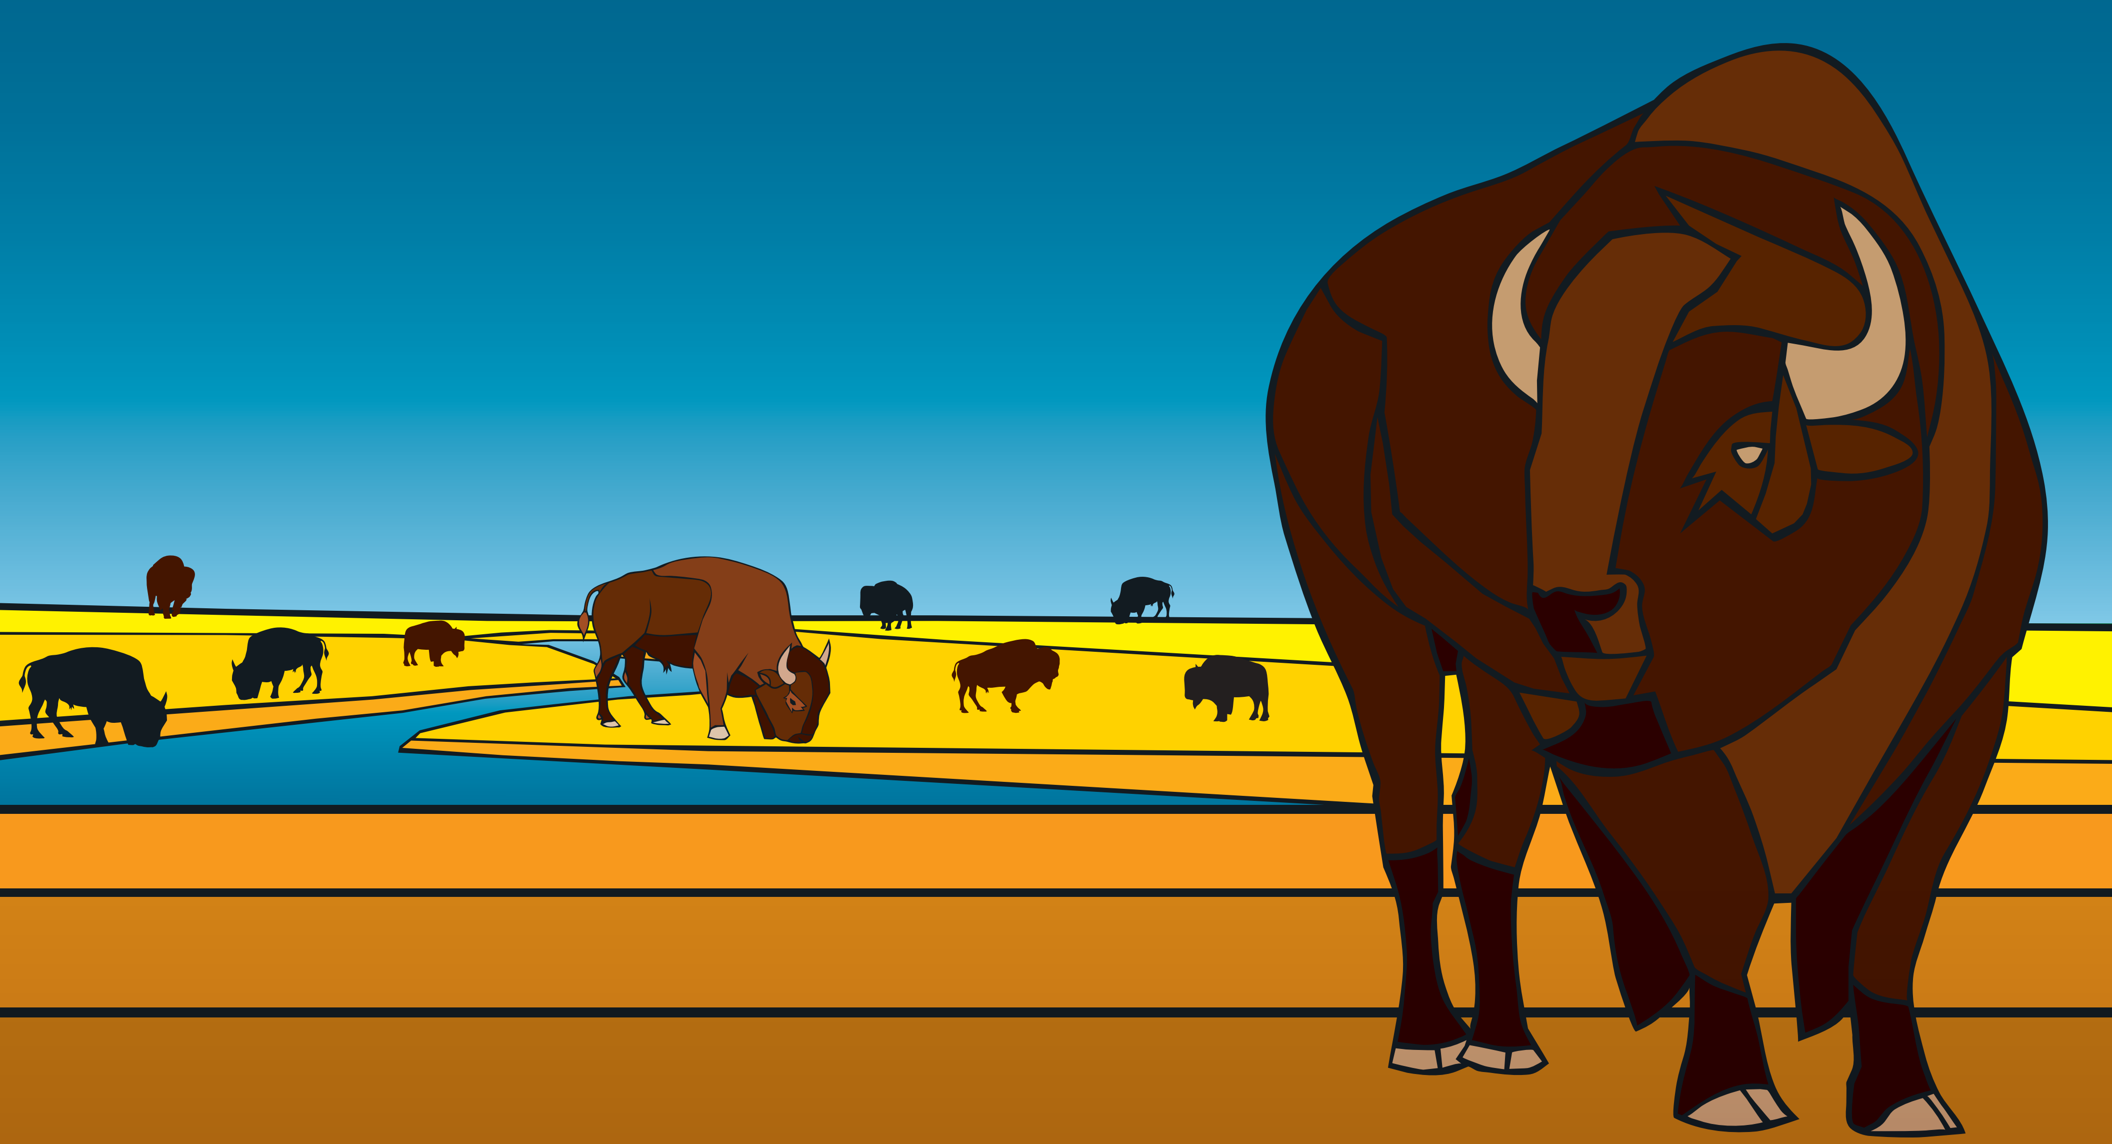
Following a US$10,000 grant from Enbridge to establish a pavilion on a nearby company-owned 20-acre pollinator plot, students from the PTHS Environmental Earth class set out to develop the land into a pollinator plot, planting native prairie grasses and other vegetation to encourage development of the natural ecosystem. In 2021, Enbridge donated the pollinator plot to PTHS and the OES program to facilitate the continuation of this meaningful and impactful conservation and community work and as part of our commitment to sustainability.

Upon completion of the land transfer, the U.S. History students of Pontiac began researching the origins of the land. They wanted to integrate respect for Indigenous groups into their ultimate use of the plot. Through this research, the students learned the land being developed as a pollinator plot in Illinois is within the ancestral lands of the Kickapoo tribe, which was one of 25 tribes forcibly relocated to Kansas between 1825 and 1850.

Through Enbridge's relationships with all parties, we were able to facilitate an introduction between PTHS, the Kickapoo tribe and the Odawa tribe, which has blossomed into a mutually respectful and engaged relationship where teachings about care and respect for the earth and ecology now occur on a weekly basis. Furthermore, Kickapoo spiritual leaders and PTHS students continue to find ways to weave cultural teachings and education opportunities together and a deep and mutual respect has been formed.

In upholding our vision for our IRAP and our role in reconciliation, we are proud to be able to facilitate connections that promote and support further learning and pathways to reconciliation that may have positive and permeating impacts for generations to come.

> “I've always believed that giving students opportunities and enabling them is the most impactful way to support them on their learning journey. The cultural learning and growth that occurred here was driven by the students, but Enbridge was a major part in helping facilitate that for them.”
>
> – **Paul,** teacher at Pontiac Township High School



PILLAR 5

Sustainability, reporting and energy transition

Enbridge is committed to forming strategies and collaborative partnerships with Indigenous groups focused on advancing the energy transition to a low-carbon economy and transparently reporting on our progress against our commitments.

PILLAR 5

Sustainability, reporting and energy transition

Focus	Commitment	Details	Target/Goal	Timeline
Reporting	Report and disclose progress on IRAP commitments in ESG and Sustainability Report	• Increase transparency by addressing progress of IRAP commitments in annual Sustainability Report	• Disclose progress via annual Sustainability Report	2023 – Ongoing
	Refresh IRAP commitments and goals every two years	• Refresh IRAP commitments and goals every two years in conjunction with input from Indigenous groups, IRAP working group, employees and Executive Leadership Team	• Publish updated IRAP commitments/ goals every two years	2024 – Ongoing
Sustainability	Facilitate a thought leader roundtable related to Indigenous inclusion and perspectives in sustainability strategy and policies	• Identify key organizations/industry partners for inclusion in thought leader roundtable discussion • Work with roundtable participants to identify relevant topics related to sustainability, climate change, Indigenous perspectives and reconciliation that further support action, identify pathways towards implementation and build capacity within Indigenous groups to support implementation • Conduct roundtable(s) with participation from Indigenous groups and industry peers	• Establish partnership(s) with Indigenous-led organizations and relevant industry peers • Convene at least one thought leader roundtable • Consider the findings and Indigenous perspectives shared at the round table(s) when Enbridge sustainability strategies and policies are updated	2023

PILLAR 5

Spotlight: The Wabamun Carbon Hub—advancing carbon capture and storage and Indigenous partnership

A "Hub" of innovation and collaboration—the Open Access Wabamun Carbon Hub creates opportunities to advance partnerships and ownership in new energy projects with Indigenous groups.

> From left to right, Chief George Arcand Jr. (Alexander First Nation), Chief Arthur Rain (Paul First Nation), Chief Tony Alexis (Alexis Nakoda Sioux Nation), and former Chief Billy Morin (Enoch Cree Nation) of the First Nations Capital Investment Partnership, partners with Enbridge to pursue ownership in future carbon transportation and storage projects.

In the fight against climate change, the International Energy Agency calls Carbon Capture and Storage (CCS) one of the world's most critical carbon reduction technologies.

As countries like Canada aim to achieve net-zero emissions by 2050, the capture and permanent deep underground storage of carbon dioxide (CO2) is being touted as a vital component of global efforts to contain those emissions from heavy industrial processes, including power generation, cement production and conventional energy production and refining.

One CCS project under development is our Open Access Wabamun Carbon Hub (the Hub) to be located west of Edmonton, Alberta, Canada.

The Hub would support recently announced carbon capture projects by Capital Power Corporation and Lehigh Cement, which represents an opportunity to avoid nearly four million tonnes of atmospheric CO2 emissions – the equivalent of taking more than 1.2 million cars off the road annually.

The Hub will remain open access for other nearby capture projects and once built, will be one of the world's largest integrated carbon transportation and storage projects, effectively doubling the amount of CO2 captured and stored today in Canada.

Engagement and dialogue about the Hub started early with Indigenous groups – even before the project was a project. The initial conversations took a "blank sheet of paper" approach and focused on

PILLAR 5

The Wabamun Carbon Hub—advancing carbon capture and storage and Indigenous partnership continued

opportunity and what could be. Through listening, learning, and acting in parallel, a partnership on the journey along this energy transition and in advancing carbon reduction, was formed.

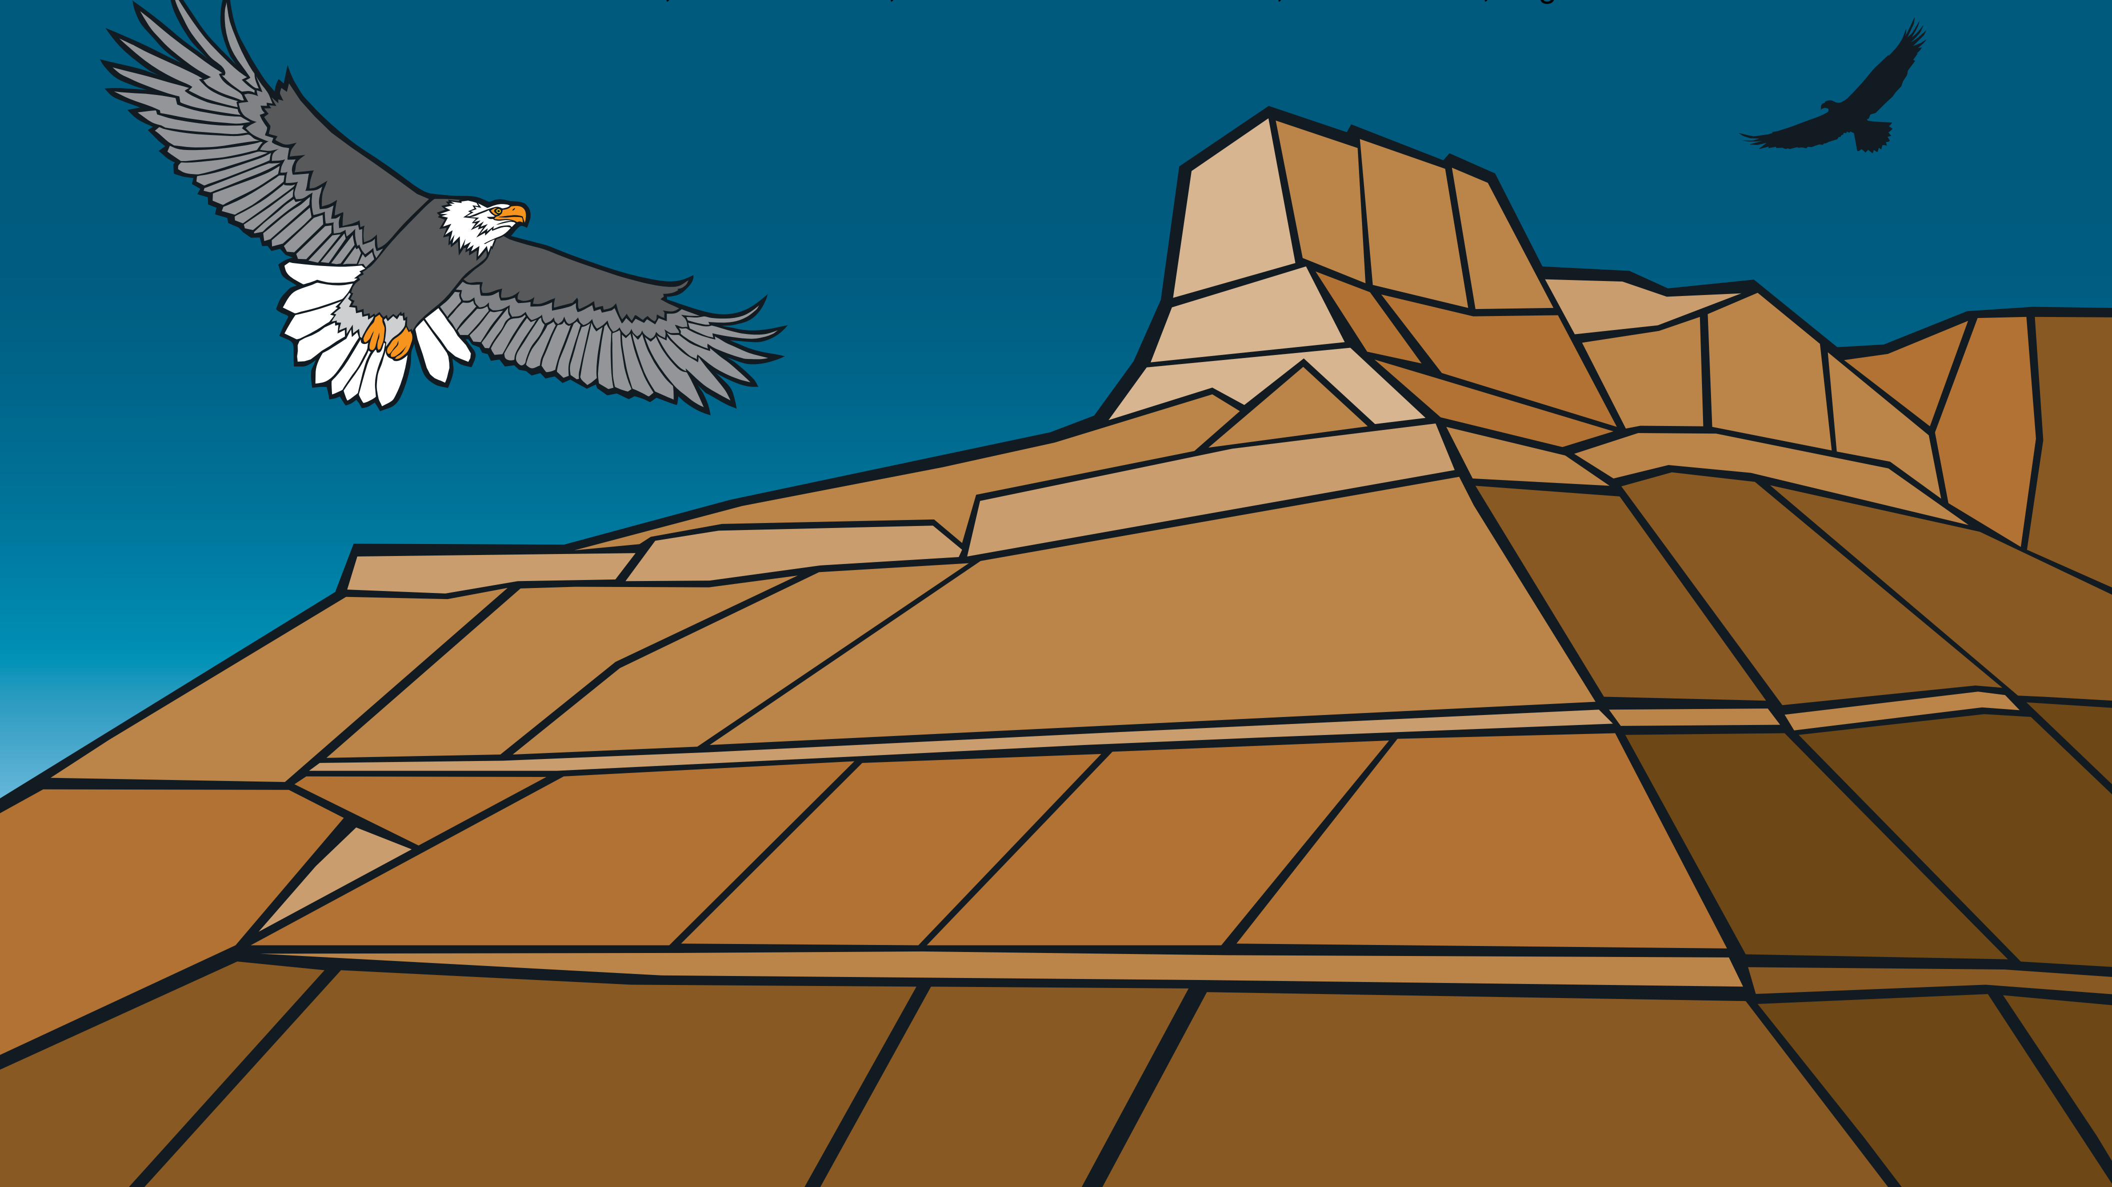
In February 2022, Enbridge and the First Nation Capital Investment Partnership (FNCIP) announced a partnership agreement to advance the Hub. The FNCIP was formed by four Treaty 6 Nations – Alexander First Nation, Alexis Nakota Sioux Nation, Enoch Cree Nation, and Paul First Nation – to pursue ownership in major infrastructure projects with commercial partners who share Indigenous values. The Hub is the FNCIP's first partnership. The Lac Ste. Anne Métis community will also have an opportunity to pursue ownership in future carbon transportation and storage projects with the Hub.

> Critically, the Hub's Indigenous partners will have an opportunity to own up to 50% of the carbon transportation and storage projects developed in connection with the Hub. This openness to co-own and co-develop the assets is ground-breaking. These projects will create long-term, stable revenues for local Indigenous groups.

“This path creates an opportunity to generate wealth, but more importantly it allows sustainable economic sovereignty for our communities. We are creating a healthy future for the next seven generations to thrive.

We're looking forward to working with industry leaders who share our values of environmental stewardship and to collaborate with Enbridge on world-scale carbon transportation and storage infrastructure investments.”

– **Chief George Arcand Jr.,** Alexander First Nation



PILLAR 6

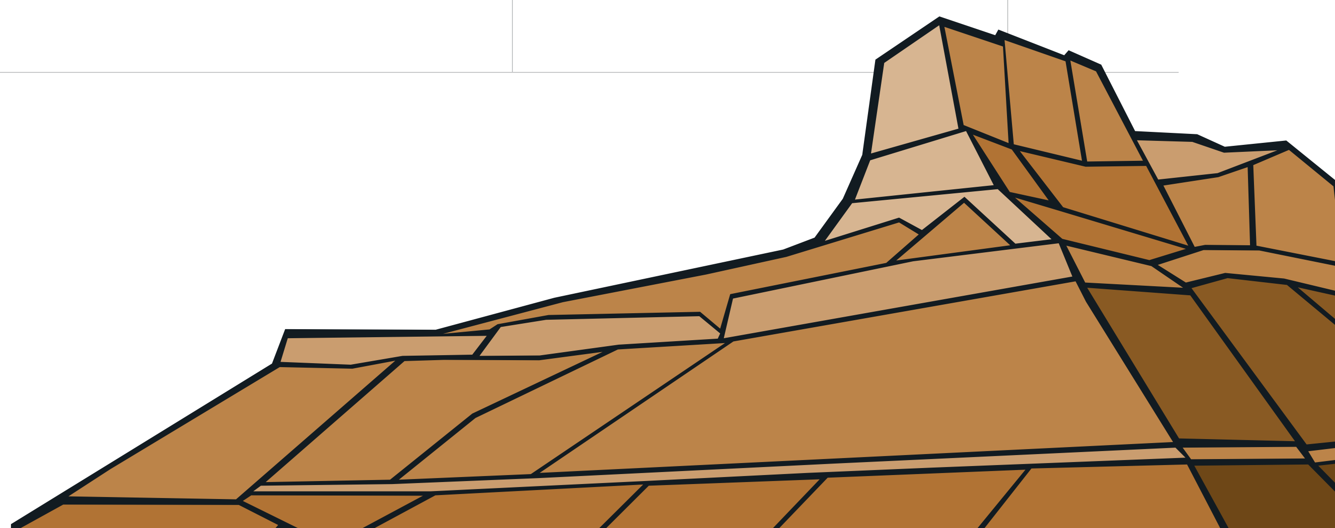
Governance and leadership

Enbridge is committed to the creation and support of governance and leadership structures that focus on embedding and promoting accountability for Indigenous engagement and inclusion across the organization. We will lead by example and hold each other accountable for the commitments we make on our reconciliation pathway forward.

PILLAR 6

Governance and leadership

Focus	Commitment	Details	Target/Goal	Timeline
Governance	Establish an Indigenous Advisory Group (IAG)	• Establish an IAG to provide advice and Indigenous and/or Tribal insight to executive management at Enbridge • Recruitment of IAG will include broad geographic representation and recruitment from diverse Indigenous groups	• Establish IAG and Terms of Reference	2023
Leadership and oversight	Ensure executive sponsorship and commitment to achieving IRAP goals	• Review executive support, sponsorship and accountability for IRAP specific commitments • Additional IRAP commitments to be linked to executive sponsorship	• Ensure IRAP performance is included in executive objectives	2023
	Ensure IRAP implementation and support mechanisms are established and aligned across the company	• Establish and maintain governance oversight for IRAP implementation and accountability	• Establish mechanisms for implementation and accountability of the IRAP	2023
Cultural awareness	Continue to conduct Indigenous Sharing Circles with participation from Executive Leadership Team	• Maintain and expand participation in Sharing Circles	• Conduct quarterly Indigenous Sharing Circles	2023 – Ongoing



PILLAR 6

Spotlight: Calgary smudge

A first-of-its-kind gathering within Enbridge provided an opportunity for personal reflection and Indigenous cultural awareness.

> A member of the Tsuu T'ina Nation west of Calgary conducts a smudge ceremony with members of our Calgary Indigenous Employee Resource Group.

In March 2022, employees were invited to gather with their colleagues, local Indigenous Elders and invited guests at our Calgary office in to participate in the first-ever indoor smudge held within our Enbridge infrastructure. The smudge experience, despite the large team gathered and being a first for most attendees, was deeply personal, reflective and spiritual.

The session was opened with a blessing and teachings by a local community Elder and led by Enbridge's Calgary chair of the Indigenous Employee Resource Group (IERG), an 18-year veteran of Enbridge and a Saulteaux member of the Cote First Nation. The smudge and teachings were a powerfully moving experience. "This event embodied the true spirit of reconciliation," said Edie Severight. "Providing an opportunity for respectful education, and exposure to important Indigenous cultural traditions in a safe and inclusive way creates crucial space for learning and connection."

This event was supported by the senior executive team and attended by management, there were extensive approvals required to facilitate permits and manage the logistics of the smudge. The ceremony created an opportunity for awareness, learning and dialogue around the rich cultural practices of Indigenous peoples.

“Smudging is an opportunity to reflect, cleanse the air and connect to the Creator. I look forward to sharing this ritual with my colleagues through many season changes to come.”

– **Edie Severight,** Law Analyst and Chair of Indigenous Employee Resource Group (IERG), Calgary chapter

The journey ahead

Our commitment to this journey is steadfast. Our goal is to create and nurture sustainable, respectful and mutually beneficial relationships with Indigenous groups in the areas in which we operate.

Our approach to Indigenous engagement and inclusion is continuously evolving. Our journey of reconciliation is a journey of continual listening, learning, reflection and action.

This IRAP is an evolutionary milestone – we are committed to this work, to continue to challenge ourselves, our leaders, and our suppliers to walk a shared path to reconciliation and to taking an innovative and progressive approach to collaboration and inclusion.

2022 Indigenous Reconciliation Action Plan

About the animals

Puffin: is an incredible social creature that is often used as a symbol of transformation (due to their ability to be a sea bird and a land-based bird). Not only celebrated for their plucky and joyful disposition, they are often thought to carry much wisdom and can offer much guidance.

Wolf: represents loyalty, strong family ties, good communication, understanding, education and seeker of higher intelligence. Of all land animals, the wolf is found all around the world and is considered to be a connector of all.

Bear: represents authority, good medicine, courage and strength. The bear is believed to be a healer and protector (like a mother bear protects her young). This animal is a symbol for standing up for what is right and fighting for what is good and true.

Beaver: is a symbol of stewardship and safety because he uses his natural gifts wisely for his survival. The beaver is also celebrated as an animal that alters their environment in an environmentally-friendly and sustainable way for the benefit of all their family.

Bison: sustained a way of life for Indigenous peoples for centuries. The bison was used as a food source throughout the years, its hides used in teepees and clothing, and its bones fashioned into tools. This animal symbolizes protection, prosperity, courage, strength, abundance, gratitude and most importantly, stability.

Eagle: is a symbol of strength, authority and power. It rules the skies with grace and great intellect. As a source of inspiration and sometimes used as a guiding force, the eagle teaches individuals about the value of the high road and the unparalleled joys of true freedom.

Enbridge Inc. Indigenous Peoples Policy

ENBRIDGE
Life Takes Energy

August 2022

Enbridge Indigenous Peoples Policy

Purpose: Enbridge recognizes the diversity of Indigenous peoples[1] who live where we work and operate. We understand that certain laws and policies – in both Canada and the United States – have had destructive impacts on Indigenous cultures, languages, and the social and economic well-being of Indigenous peoples. Enbridge recognizes the importance of reconciliation between Indigenous peoples and broader society. We are committed to building positive and sustainable relationships with Indigenous peoples, based on trust and respect, and focused on finding common goals through open dialogue.

Enbridge believes: Companies can play a role in advancing reconciliation through meaningful engagement with and inclusion of Indigenous peoples and perspectives in their business activities.

Policy: As an energy infrastructure company whose operations span Treaty and Tribal lands, the National Métis Homeland, unceded lands and the traditional territories of Indigenous groups[2] across North America, Enbridge is deeply committed to advancing reconciliation with Indigenous peoples. Our mutual success depends on the ability to build long-term, respectful and constructive relationships with Indigenous groups near Enbridge's projects and operations throughout the lifecycle of our activities. To achieve this, Enbridge will govern itself by the following principles:

Respect for Indigenous rights and knowledge

- We recognize the importance of the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) in the context of existing Canadian law, and the legal and constitutional obligations that governments in both Canada and the United States have to protect those rights.
- We recognize the legal and constitutional rights possessed by Indigenous peoples in Canada and in the Unites States, and the importance of the relationship between Indigenous peoples and their traditional lands and resources. We commit to working with Indigenous communities in a manner that recognizes and respects those legal and constitutional rights and the traditional lands and resources to which they apply, and we commit to ensuring that our projects and operations are carried out in an environmentally responsible manner.
- Consistent with Enbridge's respect for the rights of Indigenous peoples, we engage early and sincerely through processes that aim to achieve the support and agreement of Indigenous nations and governments for our projects and operations that may occur on their traditional lands.
- We seek the input and knowledge of Indigenous groups to identify and develop appropriate measures to avoid and/or mitigate the impacts of our projects and operations that may occur on their traditional lands.

[1] In Canada, Indigenous peoples has the meaning assigned by the definition *aboriginal peoples of Canada* in subsection 35(2) of the *Constitution Act*, 1982, which includes First Nations, Métis and Inuit Peoples. In the United States, Enbridge refers to Indigenous peoples as all descendants of people inhabiting land within the current exterior boundaries of the United States prior to the continent being inhabited by European settlers, including all U.S. federally recognized tribes.

[2] The collective term "Indigenous groups" is used in this Policy when referring to Enbridge's engagement with Indigenous nations, governments or groups in Canada, and/or Native American Tribes and Tribal associations in the United States about Enbridge's projects and operations. Enbridge has the utmost respect for the unique rights and individual names of Indigenous groups across North America. This collective term is used solely for the purpose of readability of the policy.

ENBRIDGE®
Life Takes Energy®

Promoting equity and inclusion

- Recognizing the need to eliminate the significant socioeconomic barriers that continue to prevent Indigenous peoples from fully participating in the North American economy, Enbridge works with Indigenous peoples to ensure they have opportunities to be included in socioeconomic benefits resulting from our projects and operations. These may include partnerships and opportunities in training and education, employment, procurement, equity participation, business development and community development.
- We are committed to increasing Indigenous representation in Enbridge's workforce and supplier community.

Fostering awareness through education

- We are building – and will continue to ensure – a foundational understanding of the rights, history and cultures of Indigenous peoples through Indigenous awareness training for all Enbridge employees, with the aim of advancing reconciliation with Indigenous peoples

Enbridge will provide ongoing leadership and resources to ensure the effective implementation of the above principles, including the development of implementation strategies and specific action plans, and report its Indigenous reconciliation efforts – including engagement and inclusion outcomes – through its annual Sustainability Report.

This Policy is a shared responsibility involving Enbridge and its affiliates, employees and contractors, and we will conduct business in a manner that reflects the above principles. We will work with our contractors, joint venture partners and others to support consistency with this policy. Enbridge commits to periodically reviewing this policy to ensure it remains relevant and meets changing expectations.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Three Fires Group Inc. (Three Fires)

Interrogatory

Reference:

Exhibit 1, Tab 6, Schedule 1
Exhibit 1, Table 6, Schedule 1, Attachment 1
Exhibit 1, Tab 10, Schedule 2

Preamble:

Enbridge's customer engagement found that customers prefer some investment in renewable natural gas (**RNG**), but there is no strong consensus on the amount. Enbridge has proposed recovering the incremental costs associated with this energy through the proposed cost recovery mechanism.

Enbridge's recognizes that under the federal Clean Fuel Regulation (**CFR**) it can voluntarily participate in the CFR by generating, trading, and selling credits from covered activities, including from RNG.

Enbridge's proposed approach under its Energy Transition Plan will allow Enbridge to contract for RNG as part of regular business activities.

Question(s):

a) Please provide the exact figure quantifying Enbridge's RNG regulated and unregulated assets in Ontario, and please provide an estimate of the future growth in these assets either as a result of customer demand or government policy.

Response:

a) Enbridge Gas declines to provide specific information about the value of unregulated assets but notes that it does and will comply with the requirements of the OEB's Affiliate Relationships Code.

   - As of December 31, 2022, Enbridge Gas has gross regulated RNG assets of $5.2 million.

- Enbridge Gas estimates the CapEx growth in regulated assets over the next 5 years is approximately $95 million.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 7, Schedule 1, pp. 12 & 20

Question(s):

Enbridge Gas stated that the attrition rate for meter reading personnel in 2022 is 20% and the level of absenteeism is 17%, the highest that Enbridge Gas has experienced, which has contributed to the challenge of achieving staffing levels required to meet the MRPM.

Part of Enbridge Gas's mitigation plan to meet the MRPM includes working with meter reading vendors to hire additional readers and engaging and providing assistance to customers to submit meter reads.

a) Please expand on Enbridge Gas's plans to increase staffing levels required to meet the MRPM.

b) How does Enbridge Gas plan to accommodate the additional time and resources required to onboard new staff? Has Enbridge Gas implemented initiatives to reduce the attrition rate of meter reading personnel?

c) What is the percentage of customer meter submissions rejected by Enbridge Gas?

d) Please expand on Enbridge Gas's plans to engage and provide assistance to customers to provide their own meter reads. Does Enbridge Gas have plans to increase customer training on meter reads (through videos on its website) in order to reduce the number of rejected meter submissions?

e) Please confirm if a customer has to be on e-billing in order to submit a meter read (by phone or online).

Response:

a) Enbridge Gas is continuously working with vendors to enhance their hiring process and ensure they continue to hire additional resources. In 2022, vendors added 21 additional staff in various areas of the province to ensure consistency in meter reading. Additionally, they offered incentives to work evenings and weekends. Enbridge Gas also works with vendors to ensure they maintain competitive pay for their staff. As the employment market improves, meter reading vendors are starting to see an increase in applicants. Both attrition and absenteeism continue to be reviewed regularly and hiring is ongoing to ensure we continue to see improvements.

b) Meter Reading vendors have streamlined their hiring processes to ensure the effectiveness of new meter readers. New staff are now on-boarded and trained in approximately two weeks. The screening process has also improved so new employees better meet the requirements necessary to perform the meter reading function and reduce attrition. These processes are vital to ensure new meter readers and able to effectively complete their routes.

c) For 2022, the percentage of customer meter read submissions being rejected by Enbridge Gas is 1.96%

d) Enbridge Gas continues to send emails and letters to customers with consecutive estimates requesting their assistance by submitting a meter reading. Enbridge Gas provides multiple options for a customer to submit a meter reading, including: the Enbridge Gas website, through MyAccount, in the call centre IVR and through a live agent call. Both the website and MyAccount provide customers with a video[1] on how to submit reads. The IVR option provides step by step directions as customers navigate through the flow and agents provide instructions to customers on the call. Most customers have an understanding, which makes the number of customer meter read submissions being rejected very low.

e) Not Confirmed. Customers do not have to be on eBill to submit a meter read by phone or online.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 7, Schedule 1, p. 14

Question(s):

Enbridge Gas is requesting partial exemption under Section 1.5.1 of the Gas Distribution Access Rule (GDAR) related to certain service quality requirements (SQR) performance measures beginning in 2024 for the rebasing period or until the OEB orders otherwise, specifically: Call Answering Service Level (CASL), Time to Reschedule a Missed Appointment (TRMA) and Meter Reading Performance Measurement (MRPM). Enbridge Gas requested the following modified measures:

- CASL – achieve 65% of calls reaching the general inquiry number answered within 30 seconds;
- TRMA – attempt to contact customers requiring a rescheduled appointment within one business day of the original appointment window 98% of the time; and
- MRPM – achieve no more than 2% of meters with consecutive estimates for four months or more.

a) Please confirm if Enbridge Gas is also requesting an exemption of these SQR performance metrics for 2022 and 2023. If so, please confirm if Enbridge Gas's requested modified performance measures for 2022 and 2023 are the same as those requested for 2024.

b) Please describe the customer impact of Enbridge Gas's proposed modifications to the CASL, TRMA and MRPM measures.

Response:

a) Regarding 2023, Enbridge Gas applied to the OEB on October 27, 2022 for a one-year exemption for 2023, for the same modified performance measures to CASL, MRPM, and TRMA as stated in the 2024 Rebasing Application (2023 Application) and the 2023 Application is provided at Attachment 1. On December 23, 2022, Enbridge Gas was notified by the OEB,[1] that the 2023 Application will not be processed at this time, as this proposal to revise Enbridge Gas's SQRs is also a matter in this 2024 Rebasing proceeding. However, Enbridge Gas notes that issue 40 on the approved issues list in this proceeding (set out below) does not currently reflect the 2023 Application and Enbridge Gas is requesting in the March 8, 2023 cover letter to these interrogatory responses that the OEB to clarify its intent in this regard.

> *40) Should the OEB grant Enbridge Gas's request for a partial exemption for 2024 from the Call Answering Service Level, Time to Reschedule a Missed Appointment and Meter Reading Performance Measurement targets set out in GDAR?*

Regarding 2022, Enbridge Gas had not intended to request an exemption from SQR performance metrics for 2022 because it was assumed that the Assurance of Voluntary Compliance (AVC) was determinative of 2022 GDAR performance metrics. However, since filing its application in this proceeding, Enbridge Gas has provided further reporting to OEB staff regarding its 2022 performance. The OEB's letter to Enbridge Gas is provided at Attachment 2 and Enbridge Gas's response is provided at Attachment 3.

Consistent with Attachment 3, Enbridge Gas maintains that it is in compliance with its commitments in the AVC and that the AVC is determinative of its 2022 performance in this regard. In the event that the OEB disagrees with this interpretation, Enbridge Gas requests that the OEB determine any outstanding matters with respect to Enbridge Gas's 2022 GDAR performance in this proceeding as part of issue 40.

b) Enbridge Gas considered customer impacts in its proposal to modify performance measurements. Enbridge Gas believes the proposal recognizes changes in customer behaviour and expectations while at the same time aligns with the performance standards for electric utilities. The proposed exemption would balance achieving the metrics, providing a positive customer experience and the cost to customers. The potential impact to customers of the modified metrics is:

- The proposed CASL metric of 65% will achieve a high-performance standard to meet customer expectations while at the same time aligning with the electric utilities to provide a consistent level of service across the utilities. An increasing trend in call complexity means that Enbridge Gas cannot answer as many calls in the 30 second CASL requirement. The revised metric would allow Enbridge Gas's

[1] EB-2022-0276, OEB Letter, December 23, 2022. OEB_Response Final EGI GDAR Exemption Request_20221223 (1).PDF

agents additional time to handle the longer, more complicated calls to provide a better customer experience.

- The proposed TRMA metric aligns with the electric utilities requiring an appointment to be rescheduled within one business day. The change in performance standard from 100% to 98% will have minimal impact on customers as Enbridge Gas consistently exceeds the Appointments Met metric, with a small percentage of four-hour window appointments requiring a reschedule. In 2021, there were 51,821 four-hour window appointments and 54 of those appointments were not rescheduled within two hours of the original appointment window.

- The proposed MRPM of 2% aligns with the changes in extreme weather events and customer behaviour observed post pandemic. Since the pandemic, access to meters has become more difficult and reading meters safely is becoming more challenging with the increase in dog ownership.

ONTARIO ENERGY BOARD

IN THE MATTER OF the Ontario Energy Board's *Gas Distribution Access Rule*;

AND IN THE MATTER OF an application by Enbridge Gas Inc. under section 1.5.1 of the *Gas Distribution Access Rule* for a partial exemption to certain performance standards in section 7.

APPLICATION

1. Introduction

1. Enbridge Gas Inc. (Enbridge Gas or the Company), the applicant, was formed by the amalgamation of Enbridge Gas Distribution Inc. and Union Gas Limited on January 1, 2019, pursuant to the *Ontario Business Corporations Act*, R.S.O. 1990, c. B. 16. Enbridge Gas is the largest natural gas distribution, transmission and storage company in Ontario, currently serving approximately 3.8 million gas distribution customers across Ontario.

2. Enbridge Gas hereby applies to the Ontario Energy Board (OEB) for a partial exemption from the performance measures or service quality requirements (SQRs) set out in the following subsections of the *Gas Distribution Access Rule* (GDAR): 7.3.1.1 Call Answering Service Level (CASL), 7.3.3 Meter Reading Performance Measurement (MRPM) and 7.3.4.2 Time to Reschedule a Missed Appointment (TRMA), for a one-year period, from January 1, 2023 to December 31, 2023. For ease of reference, these GDAR subsections are set out in Attachment 1 to this application (Application).

3. Enbridge Gas also recommends that the OEB's Chief Executive Officer review and amend these GDAR performance measures as soon as practicable with a view to modernizing the GDAR to achieve better alignment with customer behaviour and

expectations and similar performance measures in the OEB's *Distribution System Code* (DSC).[1]

2. Background

4. Enbridge Gas has reported annual SQR results to the OEB since these measures were added to GDAR and came into affect on January 1, 2007.[2] Additionally, following the MAAD Decision[3] in August 2018, Enbridge Gas developed its performance scorecard to include the SQRs, and the scorecard results are filed annually in the Company's Utility Earnings Sharing and Deferral and Variance Account Clearances proceedings.[4] Enbridge Gas will also provide its scorecard results with five years of history in as part of its 2024 Rebasing Application.[5]

5. As described below, Enbridge Gas was unable to meet all SQRs for 2021, and through the OEB's processes for compliance, provided an Assurance of Voluntary Compliance (AVC) in September 2022 and paid an administrative penalty of $250,000. The AVC addresses the Company's efforts to achieve the SQRs for 2022. Within the AVC, Enbridge Gas has committed to mitigation plans for 2022 that aim to meet the CASL target of answering 75% of calls within 30 seconds with a minimum of 40% monthly; the Abandon Rate (AR) of not more than 10% on a yearly basis; and a 4% MRPM (3% when accounting for meters that Enbridge Gas cannot access). Additionally, Enbridge Gas agreed to monthly reporting to OEB staff on its progress and to advise OEB staff of the occurrence and impact of any extraordinary events as soon as reasonably practicable once they are known to the Company. For clarity, Enbridge Gas interprets the AVC as addressing the Company's SQR performance for 2022 and therefore has not included an exemption request for 2022 as part of this or any other application. Enbridge Gas

[3] EB-2017-0306/EB-2017-0307, OEB Decision and Order Enbridge Gas Distribution Inc. and Union Gas Limited Application for Amalgamation and Rate-Setting Mechanism, August 30, 2018, pp.52-53.
[4] Utility's Earning Sharing and Deferral and Variance Account Clearances Proceedings: 2019 – EB-2020-0134; 2020 – EB-2021-0149; and 2021 – EB-2022-0110.
[5] EB-2022-0200, EGI 2024 Rebasing Application, anticipated to be filed October 31, 2022.

requests that the OEB advise as soon as possible if this interpretation is erroneous so that Enbridge Gas may revise this application to also seek exemption relief for 2022, consistent with the AVC.[6]

6. During the Company's annual Utility Earnings Sharing and Deferral and Variance Account Clearances proceedings, the OEB found that the 2024 rebasing proceeding is "the appropriate time to review historical performance trends and consider customer implications before making any adjustments to the performance scorecard."[7] Therefore, as noted above, Enbridge Gas is addressing its SQR performance challenges for 2024 and beyond in its 2024 Rebasing Application.

2.1. 2021 SQR Results

7. Enbridge Gas was unable to meet the performance standard for four SQRs in 2021 due to factors including the COVID-19 pandemic, staffing issues, and extreme weather events. Those measures are:
   - CASL;
   - AR;
   - MRPM; and
   - TRMA

   In addition, the performance standard for MRPM was not attained in 2020 and 2019. The 100% performance standard for TRMA has historically not been met.

8. In mid-2021, the OEB initiated a review of the Company's compliance with CASL and MRPM. The compliance review was initiated as a result of an increased number of customer complaints to the OEB about Enbridge Gas meter reading, estimated bills and call centre wait times. Following the compliance review, Enbridge Gas shared its mitigation plans with the OEB, proposed SQR targets for 2022 and Enbridge Gas

---

[6] EGI-Assurance-of-Voluntary-Compliance-20220912.pdf (oeb.ca), p.8.
[7] EB-2021-0149, OEB Decision and Order Enbridge Gas – 2020 DVA & Earnings Sharing Proceeding, January 27, 2022, p.12.

provided the AVC as a commitment to take all reasonable steps necessary to meet call answer performance measures[8] and to establish and meet improved meter reading performance metrics for 2022.

9. Enbridge Gas has taken all reasonable steps in striving to achieve the SQRs on a consistent basis. Factors contributing to not reaching the SQRs in recent reporting periods include the COVID-19 pandemic, staffing issues, system integration and extreme weather events. Throughout 2020 and 2021, Enbridge Gas took proactive steps to manage through changes and challenges and meet the performance standards for all SQRs. Those steps included:
    - Customer Communications – Communications were developed and delivered months prior to Customer Information System (CIS) integration, notifying customers of expected impacts including updated log in and payment information. Communications used multiple channels including email, the website and the Interactive Voice Response (IVR). Prior to the integration of the CIS system, communication plans were shared with OEB staff providing an opportunity for questions and comment on the integration taking place. To address meter reading performance, similar communication channels were used to assist customers in submitting meter reads to decrease the number of consecutive estimates used to produce customer bills.
    - Digital Channels – Enbridge Gas introduced additional online self-serve options for customers in 2019, including a “chatbot” to answer less complex questions such as account balance inquiries. Following system integration all digital channels were aligned and available to all customers.
    - Staffing – Where possible, temporary staff were hired to assist with the increase in call volumes and absenteeism. In addition, staff were redirected to focus on addressing customer concerns that were resulting in increased calls such as resolving billing issues.

---

[8] Call answer performance measures in the EGI Assurance of Voluntary Compliance pertains to both CASL and AR.

- Labour Shortage – Enbridge Gas assisted key vendors in hiring staff to address the labour shortage. In addition, Enbridge Gas worked with vendors to support retention of staff.
- Training – Prior to the CIS system integration implementation call centre staff underwent extensive training on the new system and new scripts to ensure agents were able to answer questions and resolve issues effectively.
- Systems Integration – Enbridge Gas continues to integrate systems and align processes in an effort to provide an efficient and consistent customer experience. Integration of systems such as CIS and the work management systems are necessary and beneficial, however, they can require an initial change for customers, can take time to transition and can create an initial learning curve for employees. Systems integration supports consistent and aligned processes for the benefit of customers.

10. Safety continues to be the top priority and a core value of Enbridge Gas. During the COVID-19 pandemic, there were periods of time when meter readers were unable to complete routes due to public health stay at home orders. The stay-at-home orders also led to more people being at home during the day, increasing interactions between meter readers and homeowners. There was also an increase the number of dogs in backyards with more people being home. This led to increased safety concerns and dog bites. COVID-19 safety and quarantine periods were also impactful, as the well-being of staff that were ill and staff that could come in contact with ill co-workers was a concern. In addition, provincial guidelines and the requirement to adhere to quarantine/isolation periods that ranged between 5 to 14 days created resourcing challenges that impacted meter reading performance. To provide further context, approximately 4,000 meters can be read by one meter reader in a five day work week, therefore if a meter reader is unable to conduct reads for a 14 day quarantine/isolation period (10 business days) 8,000 meters could go unread.

11. Finally, extreme weather such as freezing rain, flooding and heavy snow impacted the ability to obtain meter reads as roads were too dangerous to travel on or in some cases were closed. Responding to emergencies was and continues to be a priority for Enbridge Gas, and from time-to-time field staff and dispatch staff are re-directed from customer appointments to attend emergencies impacting the ability to reschedule appointments according to the prescribed timelines.

2.2. Call Answering Service Level

12. CASL tracks the percentage of calls reaching the general inquiry number, including IVR calls that are answered within 30 seconds. The yearly performance standard for CASL is 75% with a minimum monthly standard of 40%. The 2021 annual result was 64.3%; however, Enbridge Gas did achieve the minimum monthly standard of 40% in all months. Prior to 2021, Enbridge Gas met the performance standard for CASL on a consistent basis.

13. Enbridge Gas consolidated its CIS systems in July 2021, migrating 1.6 million Union rate zone customers from the CIS in use that was approaching end of life to a single CIS on the platform in use for EGD rate zone customers. The transition of customers to the SAP CIS also introduced these customers to a new customer-facing website, online billing and IVR systems. The change resulted in a significant increase in call volumes and call complexity in 2021. The move to one CIS benefitted customers through efficiencies created by integrated and consistent processes related to call handling, billing and customer experience.

14. As part of this integration project, customers were required to update passwords and banking information and some customers experienced issues with billing data converted during system integration, all of which increased calls to the call centre. Anticipating an increase in call volumes, additional temporary employees were hired to support the transition. Also, prior to the integration, each call centre employee underwent extensive training on the SAP CIS. All the training was virtual due to the pandemic restrictions for

in class training, resulting in reduced "hands-on" training and experience. Over the same period Enbridge Gas experienced a shortage of resources in the call centre due to increased illness and absences related to the COVID-19 pandemic. While Enbridge Gas added temporary staffing, adding enough temporary staff to cover all absences due to COVID-19 outbreaks was not practical. It takes up to four weeks for call centre staff to be initially trained to answer calls related to customer moves and an additional two weeks of training to answer more complex calls such as billing calls or questions on changes to rates.

15. The annual call volumes prior to the pandemic in 2019 were 3,588,323 and the average call handling time was 7 minutes and 7 seconds. In 2021 the annual call volumes were 3,609,331 and the average call handling time was 8 minutes and 14 seconds. The call volumes between 2019 and 2021 did increase and may have been even higher for 2021 following CIS integration, if not for Enbridge Gas implementing enhanced web self-serve options, including an online chatbot in August 2019. From the time of integration in July 2021 to the end of that year, there were approximately 900,000 transactions completed across the digital channels (My Account, IVR and chatbot) which represents approximately half of total customer interactions which otherwise could have been calls to the call centre. The web self-service implementation is part of Enbridge Gas's digital strategy to better meet customer expectations. Enbridge Gas's customers can self-serve for less complex inquiries such as viewing account balances, submitting meter readings and moves. This leaves the more complex inquiries for the call centre, and these calls tend to be lengthier.

16. Complex call types are most often in the billing category and are driven by a heightened interest in understanding and lowering gas use and changes to rates, amplified by broader customer affordability concerns. These calls often include multiple intents within the same interaction. For example, a billing call may start with an inquiry about the balance but will commonly transition to options available to make payments easier if the balance is higher than expected. As well, during the initial pandemic period of 2020 through 2021, Enbridge Gas administered the Ontario Government's COVID-19 Energy

Assistance Program to support customers through pandemic lockdowns. Agents are trained to address customers' questions in an empathetic manner and offer support to customers experiencing hardship. The current metrics require agents to seek to minimize average call handle time so they can answer a higher volume of calls. A metric that incents shorter individual call times may result in a less positive customer experience for customers seeking assistance with paying bills and other complex issues.

2.3. Abandon Rate

17. AR tracks the percentage of callers who hang up while waiting for a live operator. The annual standard is not to exceed 10%. As a result of the increased call volume and call complexity, customers had a longer wait time to speak to a live operator and this impacted the AR. The 2021 result was 16.0%. As with the CASL measure, the 2021 result is not consistent with historical performance. The result in 2019 was 2.5% and 5.4% in 2020, exceeding the performance standard.

18. The AR was also impacted by the CIS integration in 2021 and the COVID-19 pandemic. The increase in call volumes, call handling time, and staffing issues due to illness resulted in an increase in wait times driving the increased AR.

2.4. Meter Reading Performance

19. MRPM represents the number of meters with no read for four consecutive months or more divided by the total number of active meters to be read. The target for the metric is 0.5% or less and Enbridge Gas attained 5.0% in 2021. The result for 2020 was 4.4% and 0.7% in 2019.

20. In 2019, the main reasons for Enbridge Gas not meeting the MRPM include:
    - Extreme weather events such as freezing rain, polar vortex, heavy snowfall and flooding which limited the ability to travel to properties and access meters safely; and

- A key vendor decision to no longer provide meter reading services and end its contract with Enbridge Gas, resulting in the unplanned need to hire a new vendor in an already limited market.

21. For 2020 and 2021, the pandemic presented many additional and unprecedented challenges to Enbridge Gas meeting the MRPM, such as:
    - Enbridge Gas, like all Ontario residents and businesses, was required to follow public health guidelines during the pandemic. During the early onset of the COVID-19 pandemic and periods of lockdown, Enbridge Gas faced several challenges with meter reading and considered pausing meter reading activity due to public concerns about the safety of meter reading activity. Enbridge Gas directed its meter reading partners to ensure that all staff were working as safely as possible and to avoid close contact with the public and customers based on sensitivities. The pandemic resulted in many events beyond the control of Enbridge Gas such as closed businesses, increased customer sensitivities and access issues such as the inability to read inside meters;
    - Extreme weather events such as freezing rain, polar vortex, heavy snowfall and flooding which limited the ability to travel to properties and access meters safety; and
    - A new meter reading vendor was still transitioning and learning the requirements of Enbridge Gas, while also facing challenges with staffing due to the COVID-19 pandemic. Resourcing issues impacted all meter reading vendors during the pandemic and included challenges hiring staff and absences due to illness and the quarantine/isolation periods required by public health to ensure public safety.

22. The attrition rate for meter reading personnel in 2022 is 20% and the level of absenteeism is 17%, the highest that Enbridge Gas has experienced. Meter reading vendors are also experiencing hiring challenges with low applicant interest due to the physically demanding nature of the role, which also contributes to the high attrition rate adding to the challenge of achieving the staffing levels required to meet the MRPM.

Weather is also an area where there is a shift to more natural weather events. In 2020 and 2021 there were over 27 different events ranging from flooding to tornadoes and severe cold and snow. Winter forecasts for 2023 call for snow, rain and record breaking cold temperatures which will contribute to missed reads due to unsafe weather conditions, particularly in the northern area. These changes in customer behaviour, labour market challenges and weather impacts that are outside of the control of Enbridge Gas are expected to continue for the foreseeable future. These factors make it unrealistic and impractical for Enbridge Gas to be able to commit to meeting the performance standard of 0.5% in future years.

23. In addition to the challenges listed above, the MRPM is cumulative, where the total number of unread meters fluctuates as some meters are read and are deducted from the totals, while other meters remain as unread from the previous month, and new meters reach their four-month timeline and are added to the current consecutive estimate results. This means that even though a percentage of meters have successfully been read, Enbridge Gas will continue to have meters that have consecutive estimates. With over 3.8 million customers, if 19,000 meters have consecutive estimates on average each month, the metric is not achieved. As noted above, having only one meter reader ill for ten business days leaves approximately 8,000 meters unread. The number of unread meters quickly increases with any number of unplanned absences.

24. Once a meter has consecutive estimates for four months or more, it will count toward the metric in a minimum of two meter reading cycles. Unread meters being carried into the next year compounds the results when added to the external challenges such as extreme weather events, COVID-19, and staffing issues. In addition, due to increased customer sensitivity, meter access issues are contributing in the range of 1-3% of the total monthly percentage of consecutive estimates. At the current metric level, based on access issues alone, Enbridge Gas is not able to meet the metric in 2022. The cumulative impact of all of these factors makes meeting the MRPM impossible for the year and that Enbridge Gas will enter 2023 in a deficit for meter reading.

25. Enbridge Gas is working with customers whose meters are not accessible. Examples include sending regular emails and letters asking the customers to submit a read (an option that is always available to customers), working with field staff to obtain reads on all service visits and sending out personnel to knock on customers' doors to arrange access to the meter. Enbridge Gas is also working with customers impacted by the consecutive estimates to ensure that their billing is reconciled as soon as an actual read is obtained. In addition, Enbridge Gas is sending out notices where an email is available to advise customers of the adjustments which include the adjusted amount, time frame and difference in charges. Enbridge Gas issues customer bills (paper and eBill) 21 days before payment is required, providing customers with the opportunity to contact Enbridge Gas regarding any concerns about their amount owing. Where the billing adjustment results in an amount owing, flexible pay arrangements are offered in the event that they need extra time to pay. Where the billing adjustment results in a credit, customers have the option for Enbridge Gas to return the amount owing to them automatically through their bank, an interac etransfer or a cheque.

26. Enbridge Gas is continuing work to maintain and, where necessary, improve the results of all scorecard performance measures through ongoing reporting of results, identifying the root cause for variances and implementing initiatives targeting areas where improvement can be made. Such initiatives include the implementation of automated process tools which allow Enbridge Gas to process reads into its system faster making them available for billing to customers. Enbridge Gas is committed to continuous year over year performance improvement and has developed mitigation plans to aid in achieving progress.

2.5. Time to Reschedule a Missed Appointment

27. The TRMA tracks the percentage of customers contacted to reschedule work within two hours of the end of the original appointment time. Enbridge Gas has historically experienced challenges meeting the annual performance standard of 100% for the TRMA measure. The result in 2021 was 97.0%, consistent with previous years.

28. Efforts toward improving the TRMA target of 100% are ongoing. Enbridge Gas began to align work management systems and processes upon amalgamation, in 2019 and by 2021, was able to move to one platform for the planning and scheduling of customer work. Enbridge Gas is investigating process and technology solutions that will further enhance its ability to reschedule customer appointments when required. For example, technology to ensure technicians can continue to use their cellular phones in the event of a service provider outage has been implemented and the ability to text customers to communicate that they will not be able to attend the appointment on time are being reviewed.

29. While Enbridge Gas acknowledges that prompt rescheduling of missed appointments is an important part of achieving the SQRs and customer service, attainment of a performance standard of 100% is unreasonable and impractical. The 100% target does not consider factors like emergency response, human error and technical error. In the event of an emergency, technicians and dispatch team members are redirected from non-emergent customer appointments to respond to emergencies such as blowing gas or an odour call. Redirecting from customer appointments to respond to an emergency can impact the ability of Enbridge Gas to meet a booked customer appointment and the reschedule timeline. It should be noted that the number of missed appointments that are not rescheduled within the required time represents a small percentage of total customer four-hour window appointments. For example, in 2021 there were 54 four-hour window appointments that were missed and the customer was not contacted to rescheduled within two hours of the original appointment window end time. 54 appointments represents 0.1% of the 51,821 four-hour window appointments completed in 2021. Of the 54 appointments where Enbridge Gas did not contact the customer to reschedule within two hours of the original appointment window, there were 20 appointments that were still completed that day. In addition, Enbridge Gas consistently exceeds the Appointments Met target, demonstrating commitment to and success with overall customer service. By meeting more appointments, the Company reduces the absolute number of calls that require rescheduling, which promotes greater customer satisfaction.

3. Exemption Request and GDAR Review Recommendation

30. Enbridge Gas anticipates continued challenges meeting the existing performance standards in 2023 for the CASL, MRPM and TRMA and therefore is seeking a partial exemption from these SQR measures from January 1, 2023 to December 31, 2023. Mitigation plans have been developed and initiatives are being implemented to improve performance, however, given continuing pandemic-related impacts, changes in customer behaviour and expectations and comparisons with the equivalent performance standards for electric utilities, the existing targets are no longer reasonable. Enbridge Gas requests a partial exemption from CASL, MRPM and TRMA to be replaced by modified measures set out in Attachment 2 to this Application and summarized as follows:
    - CASL – achieve 65% of calls reaching the general inquiry number answered within 30 seconds. This aligns with the DSC;
    - MRPM – achieve no more than 2% of meters with consecutive estimates for four months or more; and
    - TRMA – attempt to contact customers requiring a rescheduled appointment within one business day of the original appointment window 98% of the time. This is also similar to the DSC.

    Enbridge Gas aims to meet the AR measure of no more than 10% of callers hanging up while waiting for a live operator and is not asking for any form of exemption from the AR.

31. In the longer term and for the purpose of generic application to rate-regulated gas utilities, Enbridge Gas recommends that the OEB's Chief Executive Officer conduct a review of the GDAR pursuant to Section 44 of the *Ontario Energy Board Act* and consider appropriate amendments to CASL, MRPM and TRMA.

32. Enbridge Gas submits that a generic review of the GDAR performance standards is required because:
    - the performance standards were established more than 15 years ago and are not reflective of the current customer behaviours and expectations. For instance,

customer calls are more complex in nature as customers can use web self-service options and chatbot feature for less complex inquires;

- there is lack of alignment with the DSC performance standards and no allowance for force majeure relief in the GDAR;
- there are continuing impacts of external factors such as the pandemic, labour market and economic environment; and
- planned activities to align systems and meet industry standards (such as for cyber-security) may impact SQR performance.

3.1. Customer Behaviour and Expectations

33. The SQRs were added to the GDAR on January 1, 2007. The SQR performance measures are more than 15 years old and in that time, there have been notable changes to customer behaviour and expectations. From the customer behaviour perspective, there is increased customer sensitivity to contact with meter readers and/or meter readers going onto homeowners' property which creates access issues. In addition, since the pandemic began, more customers are working from home and are now seeing readers access the meter which is causing increased customer concerns such as trespassing and accusations of meter readers stealing packages from front porches. From the customer expectation perspective, customers expect digital channels in addition to being able to reach agents by phone by calling the call centre. Companies now need to develop, support, and maintain service levels for multiple points of contact for customers. Digital channels such as websites, chatbots and IVRs allow customers to complete self-serve activities such as change of address and checking account information.

3.2. Distribution System Code Alignment

34. The DSC performance requirements and the SQRs within the GDAR do not align on similar measures. Referenced DSC provisions are set out in Attachment 3.

- Rescheduling a Missed Appointment measure in the DSC is an attempt to contact the customer prior to the appointment and an attempt to reschedule within one business day compared to the GDAR requirement to reschedule within two hours of the end of the original appointment time;

- The Telephone Accessibility performance measure in the DSC is to answer 65% of calls in 30 seconds compared to CASL in the GDAR that requires 75% of calls to be answered in 30 seconds; and
- The DSC contains a force majeure provision that allows a utility to be relieved of obligations for events that are beyond its reasonable control and the GDAR is silent on force majeure.

3.3. External Factors and Planned Activities

35. External factors such as the pandemic, labour market conditions and economic factors continue to impact the ability of Enbridge Gas to meet the performance standards outlined in the GDAR. Mitigation plans have been developed and initiatives are being implemented that will assist the Company in managing outside factors; however the Company expects continued challenges with meeting existing targets. Outside factors include:
    - The COVID-19 pandemic continues to impact the ability to meet performance standards with increased illness and absence of call centre agents and meter readers;
    - Challenges hiring staff experienced across Ontario has impacted the ability to hire temporary and full-time employees for the call centre and for the meter reading vendor to hire full-time staff;
    - Extreme weather events such as heavy snowfall, extreme cold, and flooding have been impactful, and this trend is likely to continue; and
    - An increase in the natural gas market price, due to inflation, global energy shortages and federal carbon charges have resulted in an increase in customer bills resulting in an increase in calls to the call centre.

36. As explained above, the increased complexity of calls has led to longer call times which impacts the number of calls that can be answered by agents. Agents typically manage

multiple questions with each customer transaction with the majority of questions being about billing including how to lower usage, questions about changes to rates and affordability concerns. The focus on decreasing call handling time to meet the metric target can result in a less positive customer experience as agents work to quickly answer inquiries and move to the next call rather than taking extra time when needed to understand the entire customer experience, address concerns and respond in an empathetic manner.

4. Mitigation Plans

37. Enbridge Gas is committed to providing excellent customer service to all customers and has developed mitigation plans for the performance measures for which we are seeking relief in 2023. The mitigation plans outlining the approach to improve CASL, MRPM and TRMA performance in 2023 and throughout the rebasing period are provided at Attachments 4 through 6 to this Application.

4.1. CASL and AR Mitigation

38. To improve performance on the CASL and the AR, Enbridge Gas has identified and implemented several initiatives outlined in the mitigation plan provided at Attachment 4. The main elements include:

- Planning – implementing an augmented planning process to better assess and mitigate impacts from events with customer-facing impacts.
- Resourcing – recruiting temporary and full-time employees to assist with high call volumes at all call centre and billing locations;
- Digital Channel Enhancements – review and continuous improvement of systems to enhance customer experience; and
- Customer Service Processes – continuous improvement in response to customer surveys and internal reviews.

39. The mitigation plans aim to achieve as close to the existing CASL performance standard as possible, however given the uncertainty of continuing pandemic-related impacts and

other factors noted above, Enbridge Gas is uncertain about whether it can achieve CASL for 2023. Also, alignment with the DSC is appropriate for CASL.

4.2. MRPM Mitigation

40. Enbridge Gas recognizes the importance of obtaining regular meter reads and is committed to implementing a plan to reduce the consecutive estimate count. Key initiatives are outlined in the mitigation plan provided at Attachment 5. The main elements include:
    - Consecutive estimate campaign – working with meter reading vendors to hire additional readers and conduct spring reading and communication campaigns;
    - Inbound calls – educating customers on the importance of providing access to meters and providing assistance to read own meters;
    - Customer outreach – targeted customer communications to engage customers to arrange for meter access and submit own meter reads;
    - Operations engagement – field operations to support meter access efforts; and
    - Meter reading processes – review and continuous improvement to increase attainment and efficiency.

41. The mitigation plan aims to achieve a 2% MRPM commencing in 2023.

42. In addition to the above-mentioned initiatives to reduce the consecutive estimate count, Enbridge Gas is investigating an Advanced Metering Infrastructure (AMI) solution to automate its meter reading process for customers. Details on this initiative will be included in the 2024 Rebasing Application. The current meter reading process is highly manual and can be inconvenient to customers. Further, the utility industry is overwhelmingly moving towards some form of meter automation, leading to changes in both market conditions and customer expectations. Automation is more accurate and convenient for customers while allowing operational efficiencies to be achieved for the utility and additional insight for customers as they can see further details on their gas consumption patterns.

4.3. TRMA Mitigation Plan

43. To improve performance on TRMA, Enbridge Gas has identified several initiatives outlined in the mitigation plan provided at Attachment 6. The main elements include:

- Process – align existing processes for identifying attempts to contact the customer to reschedule appointments;
- Technology – leverage technology to aim to improve performance measure results through additional customer contact options for appointment rescheduling;
- Reporting - enhanced reporting of results and corrective action process; and
- Communication – ongoing communication of process to reschedule appointments.

44. The mitigation plans aim to achieve a performance standard of 98% of customer appointments rescheduled within one business day for TRMA commencing in 2023.

4.3. Mitigation Plan Monitoring and Conditions of Approval

45. Enbridge Gas will monitor the success of the mitigation initiatives and the impact on metric performance to determine if adjustments need to be made to the initiatives or if new initiatives need to be added. Internally, weekly reporting and comprehensive monthly reviews will occur with the cross-functional teams responsible for metric performance. Monthly reviews will include variance explanations and management action plans focusing on continuous improvement. In addition, monthly reporting of mitigation plan progress and metric performance will be presented to Enbridge Gas senior leadership.

46. Enbridge Gas anticipates the continuation of annual SQR reporting under the *Natural Gas Reporting and Record Keeping Requirements (RRR) Rule for Gas Utilities* during the relief period. Enbridge Gas will also provide quarterly updates to OEB staff on its progress with implementing mitigation plans and metric performance for CASL, MRPM and TRMA.

5. Summary

47. Enbridge Gas hereby applies to the OEB, pursuant to section 1.5.1 of the GDAR, for a partial exemption for a period of one year, from January 1, 2023 to December 31, 2023, from the following SQRs in GDAR:
    a. subsection 7.3.1.1 CASL performance standard of 75%, to be revised to 65%;
    b. subsection 7.3.3.1 MRPM performance standard of not exceeding 0.5%, to be revised to not exceeding 2%; and
    c. subsection 7.3.4.2 TRMA performance standard of 100%, to be revised to meeting a target of 98%.

48. Enbridge Gas further applies to the OEB for all necessary orders and directions concerning pre-hearing and hearing procedures for the determination of this application.

49. Enbridge Gas requests that the OEB's review of this application proceed by way of written hearing in English.

50. Enbridge Gas requests that all documents relating to this application and its supporting evidence, including the responsive comments of any interested party, be served on Enbridge Gas as follows:

Tanya Mushynski
Vice President, Customer Care
Enbridge Gas Inc.
500 Consumers Road
North York ON

Dear Ms. Mushynski:

Re: Enbridge Gas Inc. Service Quality Requirements Performance 2022

On September 15, 2022, the Ontario Energy Board (OEB) accepted an Assurance of Voluntary Compliance (AVC) from Enbridge Gas Inc. (Enbridge) regarding Enbridge's compliance with certain of its service quality requirements (SQRs) as set out in the Gas Distribution Access Rule (GDAR). In the AVC, Enbridge acknowledged it had not met certain SQRs and committed to mitigation plans that aimed to:

- Achieve call answer performance measures (CAPM) of 75% of calls answered within 30 seconds, with a minimum monthly standard of 40% and, a call abandon rate not to exceed 10%.

- Achieve an improved meter reading performance metric of 4% for 2022 (SQR target is 0.5%)

In accordance with the provisions of the AVC, Enbridge is providing monthly updates on its SQR performance to OEB staff. On January 16, 2023, Enbridge submitted a final report on the 2022 year-end status for each metric as follows:

- Abandon rate: 7.1%
- Call answering service level: 75.94%
- Meter reading performance: 4.1%

While Enbridge exceeded the call answer and abandon rate targets, it is noted that, while close, the target for improved meter reading performance was not met.

On December 23, 2022, I wrote to Enbridge indicating that OEB staff did not intend to commence a compliance action against Enbridge related to the above noted SQR provisions of the GDAR pending a final decision on Enbridge's exemption request in the EB 2022-0200 proceeding. In turn, OEB staff expressed its expectation that Enbridge continue to meet the commitments it made in relation to SQRs in the AVC and, in relation to time to reschedule missed appointments, to meet the requirement set in GDAR.

It is acknowledged that Enbridge has made progress in improving its call answer service level and abandon rate. However, OEB staff expect to see additional improvement in meter reading performance to ensure Enbridge is meeting its commitments in the AVC. Enbridge is also expected to continue to provide monthly scorecard performance updates.

Should you have any questions relating to this letter, please contact Donna Kinapen by e-mail at donna.kinapen@oeb.ca or on her mobile at 416-817-5930.

Sincerely,

Brian Hewson
Vice President, Consumer Protection & Industry Performance

Dear Brian Hewson:

Re: Enbridge Gas Inc. Service Quality Requirements Performance 2022

On January 27, 2023, we received your letter regarding the Ontario Energy Board (OEB) staff review of the Service Quality Requirement (SQR) performance of Enbridge Gas Inc. (Enbridge Gas) for 2022. The letter acknowledges the progress that Enbridge Gas has made in its call answer service level and abandon rate and noted that OEB staff expects to see additional improvement in meter reading performance to ensure Enbridge Gas is meeting its commitments in the Assurance of Voluntary Compliance (AVC).

Enbridge Gas reaffirms our commitment to continuing to improve our performance on the Meter Reading Performance Metric (MRPM). In the AVC, Enbridge Gas committed to MRPM mitigation plans that aim for 4% for 2022 (3% when accounting for meters that Enbridge Gas cannot access). For 2022, Enbridge Gas was able to significantly decrease the number of meters with consecutive estimates and reached an annual MRPM of 4.1% or 2.5% when accounting for meters that Enbridge Gas could not access. These results exceeded the AVC commitment when accounting for meters where access is limited by the customer.

At the end of 2022, Enbridge Gas had 1.2% (approx. 46k) of customers with consecutive estimates, down from 9% (approx. 347k) in March, following weather and resource challenges in Q1. To continue to improve our MRPM performance, Enbridge Gas is carrying on with the actions outlined in our mitigation plan and we are maintaining an increased focus on meters with access issues. We believe that these actions will result in an MRPM for 2023 that trends downwards from the 4%/3% AVC commitment for 2022.

OEB Staff has also noted the expectation that Enbridge Gas meet the SQR for Time to Reschedule Missed Appointments (TRMA) of 100%. As we've explained in our evidence for the SQR exemptions, Enbridge Gas continues mitigation work to improve results, however the TRMA metric remains challenging as it does not consider factors like emergency response, human error and technical error. While Enbridge Gas acknowledges that prompt rescheduling of missed appointments is an important part of achieving the SQRs and customer service, it should be noted that the number of missed appointments not rescheduled within the required time represents a small percentage of total customer four-hour appointments (.1% in 2021, impacting 54 customers). Additionally, Enbridge Gas consistently exceeds the Appointments Met target, demonstrating commitment to and success with overall customer service.

Enbridge Gas will continue to provide monthly updates to OEB Staff as committed to in the AVC. Should you have any questions, please do not hesitate to contact me by e-mail at Tanya.Mushynski@enbridge.com or by phone at 416-495-5007.

Sincerely,

Tanya Mushynski
Vice President, Customer Care

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 7, Schedule 1, p. 14; EB-2022-0188 Enbridge Gas Assurance of Voluntary Compliance, dated September 12, 2022

Question(s):

The CASL performance standard as set out in GDAR is 75% of calls reaching the general inquiry number answered within 30 seconds. Aside from 2021 where Enbridge Gas achieved 64.3% in this performance measure, Enbridge Gas has historically achieved the target. Enbridge Gas requested to modify its CASL performance measure from 75% to 65%.

In September 2022, Enbridge Gas provided the OEB with an Assurance of Voluntary Compliance in which it committed to mitigation plans that aim to achieve 75% for the CASL performance measure for 2022.

Please explain the basis for modifying the CASL measure from 75% to 65% given that aside from 2021, Enbridge Gas has historically achieved the metric and has committed to mitigation plans to achieve the 75% CASL measure for 2022.

Response:

Enbridge Gas has taken all reasonable steps in striving to achieve the CASL targets on a consistent basis and will aim to achieve the metrics in 2023. Enbridge Gas is requesting an exemption of the CASL measure as part of its proposal to modernize certain SQRs to meet the current business environment, customer needs, behaviours and expectations. The request aims to achieve a balance between providing a high level of customer service and the cost to customers.

Enbridge Gas has requested an exemption for CASL whereby the target would provide a high level of performance and customer service while at the same time align with the electric utilities' metric of 65% as discussed in evidence at Exhibit 1, Tab 7, Schedule 1, page 16.

Through the implementation of several forecasting, process and system changes as well as hiring of additional staff, Enbridge Gas was able to meet the CASL metric for 2022. Even though Enbridge Gas achieved this metric an increasing trend in call complexity means that Enbridge Gas cannot answer as many calls in the 30 second CASL requirement. The focus on decreasing call handling time can result in a less positive customer experience as the agent works quickly to answer inquires and move to the next call rather than taking additional time to understand the entire customer experience. This proposal would allow the Enbridge Gas agents additional time resulting in better customer service as provided at Exhibit 1, Tab 7, Schedule 1, page 18.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 7, Schedule 1, Attachments 2-4

Question(s):

Enbridge Gas's mitigation plans for 2022 were provided to the OEB as part of the Assurance of Voluntary Compliance dated September 2022; the mitigation plans for the 2023 reporting year were provided in Enbridge Gas's 2023 GDAR Exemption Request Application (EB-2022-0276); and the mitigation plans for 2024 and beyond were filed as part of the current application.

Please provide an update on the implementation of Enbridge Gas's mitigation plans to date. Describe what mitigation plan(s) have been implemented, its outcome(s), and how it has impacted Enbridge Gas's performance metric(s) for 2022.

Response:

Enbridge Gas is committed to providing excellent customer service to all customers and has developed mitigation plans for the performance measures not met in 2021. The Company aims to achieve the expected performance standards however, recognizes there is a balance between achieving the metrics, providing a positive customer experience, and the cost to customers.

Call Answering Service Level (CASL), Abandon Rate (AR) and Meter Reading Performance Metric (MRPM)

Enbridge Gas has implemented all aspects of the mitigation plans set out in the 2022 Assurance of Voluntary compliance (AVC). Mitigation plans for 2023 and 2024 are an extension of the 2022 plans. In relation to the AVC, Enbridge Gas has submitted monthly reports to OEB Staff which commenced in October 2022. Please see Attachments 1 to 4 for the monthly reports.

Enbridge Gas met both the CASL and the AR metrics in 2022. As set out in the AVC[1], Enbridge Gas agreed to aim for a target of 4% (or 3% excluding meters where access is not granted by customers) for the MRPM. The MRPM result for 2022 was 4.1% (and 2.5% for meters where access was not granted by customers).

Time to Reschedule a Missed Appointment (TRMA)

An updated process outlining the steps to contact the customer when a rescheduled appointment is required has been developed. The process includes a method for identification of an attempt made to contact the customer. In addition, a process to report missed reschedules, the reason for the miss, and escalated management action plans have been developed. Updated processes will be communicated in Q1 2023 and will continue to be reinforced. These efforts, along with potential future technology enhancements towards meeting the TRMA target are ongoing, however, Enbridge Gas does not anticipate meeting the 100% performance standard. Attainment of a perfect 100% does not consider factors like emergency response, human error or technical error.

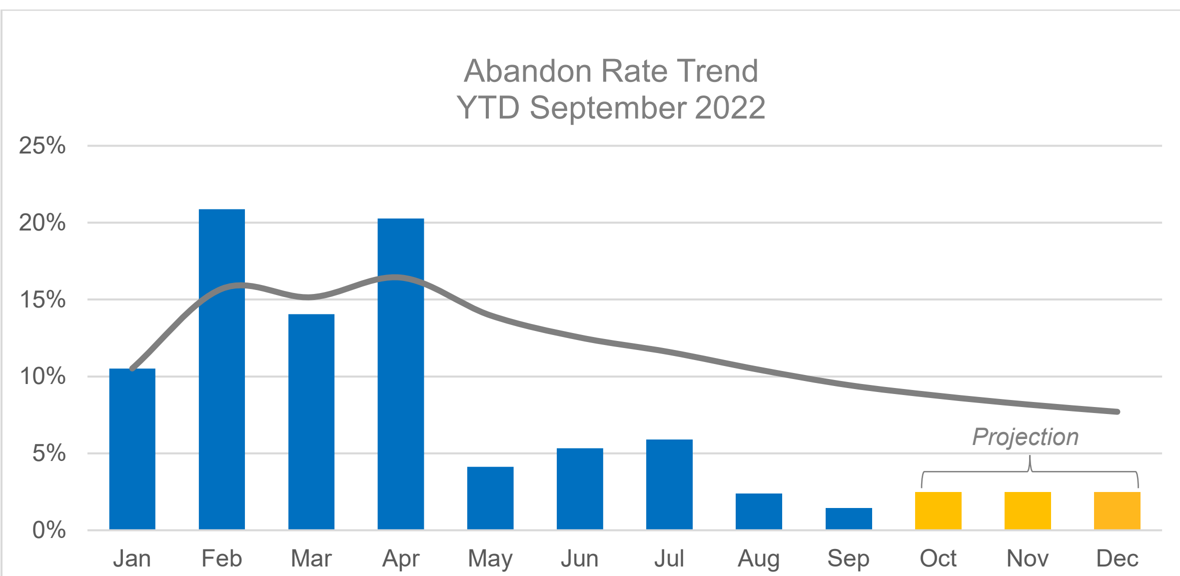
Re: **Service Quality Requirements (SQR): Abandon Rate, Call Answering Service Level, Meter Reading Performance Measurement**

As part of the Assurance of Voluntary Compliance (AVC) filed on September 14, 2022, Enbridge Gas committed to providing monthly reporting to OEB staff on the progress of the SQR metrics. Below is a summary of the status of each metric as of September 30, 2022.

Abandon Rate

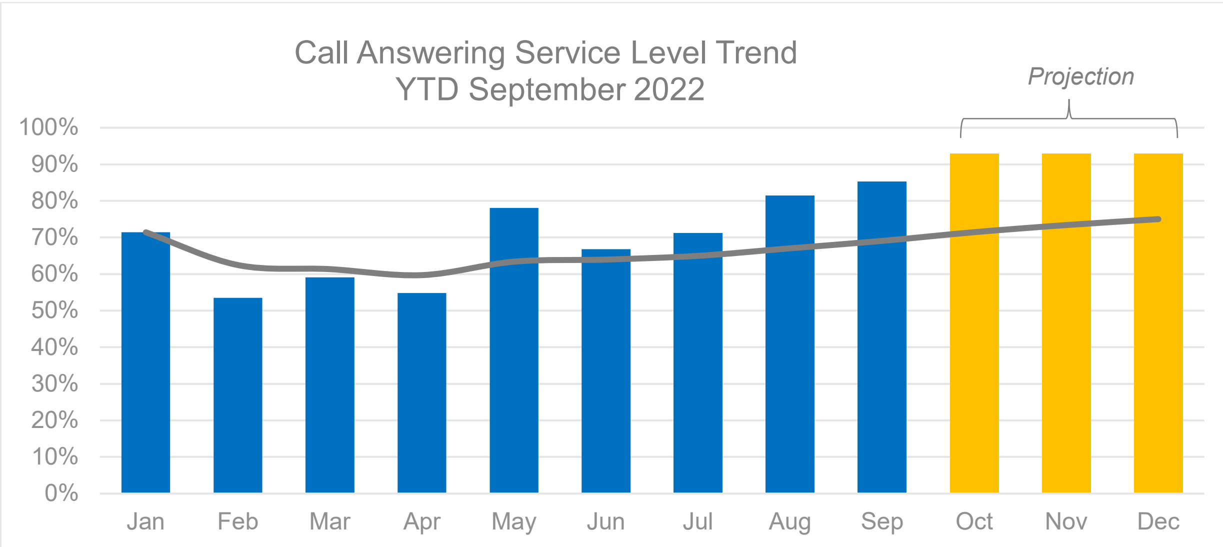
Abandon Rate (AR) tracks the percentage of callers who hang up while waiting for a live operator. The annual standard is not to exceed 10%. The September 2022 year to date result is 9%. Enbridge Gas anticipates that AR will be achieved in 2022.



ENBRIDGE

Call Answering Service Level

Call Answering Service Level (CASL) tracks the percentage of calls reaching the general inquiry number, including IVR calls that are answered within 30 seconds. The yearly performance standard for CASL is 75% with a minimum monthly standard of 40%. The September 2022 year to date result is 69%. Enbridge Gas is continuing to work diligently through implementation of its mitigation plan as outlined in the AVC to aim to achieve CASL for 2022.



Mitigation Activities

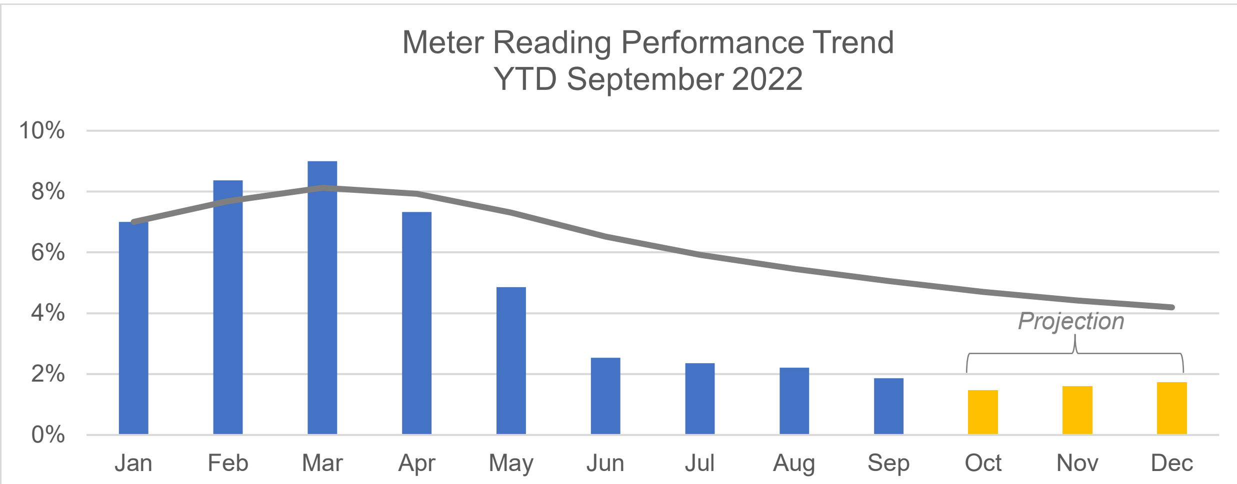
- Additional staff hired and calls are being answered faster, the average speed to answer a customer's call in early 2022 was over 10 minutes, this has improved and in Q3 2022 customers are waiting less than 90 seconds on average. In addition, in Q3, 79% of calls have been answered within 30 seconds.
- Proactive customer comunications to promote use of self-serve digital channels for less complex transactions.
- Continue to hire full-time and temporary staff to assist with high call volumes at all call centre locations (additional 65 call centre agents to start in October/November).
- Improve processes to assist with customer experience, for example, a call back option is currently being piloted in which customers are provided with an option to have a call back rather than waiting for a live agent.
- Focus on employee engagement activities to promote mental wellness and retention.

Challenges

- Call volumes continue to be higher as a result of trending call types including rate increases, managing equal monthly payment plans, collections, and an increase in customer moves.
- Illness and absenteeism continue to be a challenge. Historical average illness and absenteeism rate from 2019 to 2021 has been up to 10%. In 2022, due to an increasing trend of mental health related incidents in conjunction with COVID, illness absence rates have more than doubled. The Enbridge contact centre recently experienced a covid-related event in which 27% of the workforce was ill for a period of two weeks.
- Higher attrition rates and hiring challenges continue due to the tight labour market.

Meter Reading Performance Measurement

Meter Reading Performance Measurement (MRPM) represents the number of meters with no read for four consecutive months or more divided by the total number of active meters to be read. The target for the MRPM is 0.5% or less. As stated in the AVC Enbridge Gas anticipates MRPM to be in the range of 4% (or 3% if we exclude meters where access is not granted by customers). The September 2022 year to date result is 5% (3% when meters with access issues are removed). Enbridge Gas is continuing to work diligently through implementation of its mitigation plan as outlined in the AVC and aims to achieve this revised MRPM for 2022.



Mitigation Activities

- Working with internal staff and third party vendors to assist with attaining reads to offset attrition and absenteeism impacts.
- Continue to hire resources to mitigate increased absences.
- In addition to monthly emails, letters were mailed to customers encouraging them to submit a read (80K notices sent out between the two channels).
- Marketing campaign on social media promoting the Win Free Gas campaign.[1]
- Meter readers are working overtime, including evenings and weekends to attain reads.
- Additional back office staff being hired to process reads coming in, 10 agents started in August with 20 additional agents starting in October.

Challenges

- Attrition and illness/absense continue to be a challenge. Year to date attrition rates are 20% and absenteeism rates are 17%.
- Hiring challenges continue due to the tight labour market.
- Ongoing access issues: 50% of our current consecutive estimates are due to access limited by customers.

[1] "Submit your meter reading to win Free* natural gas for a year!" contest. The contest ran between June 15 – September 30, 2022. *Customers submit a meter reading for a chance to with $2000 each. Three prizes of $2000 each was awarded. Contest provided details on how to read a meter, submit a meter reading, a reminder not to block the meter from view, safety tips, question & answer section, and the contest rules and regulations.

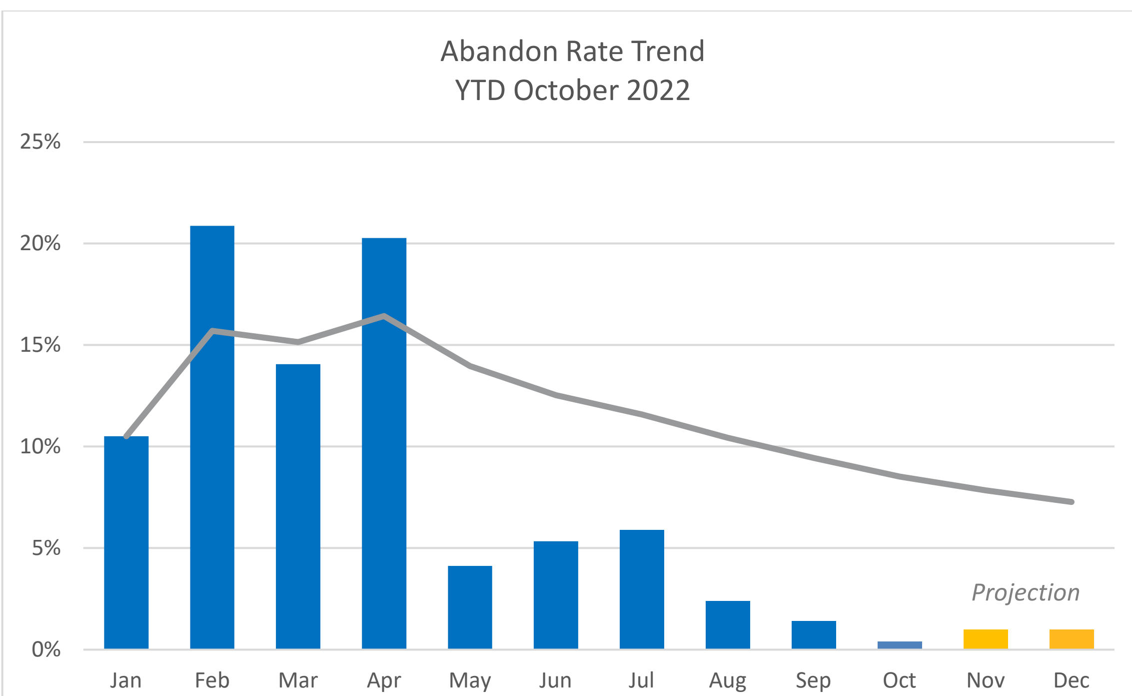
Re: Service Quality Requirements (SQR): Abandon Rate, Call Answering Service Level, Meter Reading Performance Measurement

As part of the Assurance of Voluntary Compliance (AVC) filed on September 14, 2022, Enbridge Gas committed to providing monthly reporting to OEB staff on the progress of the SQR metrics. Below is a summary of the status of each metric as of October 31, 2022.

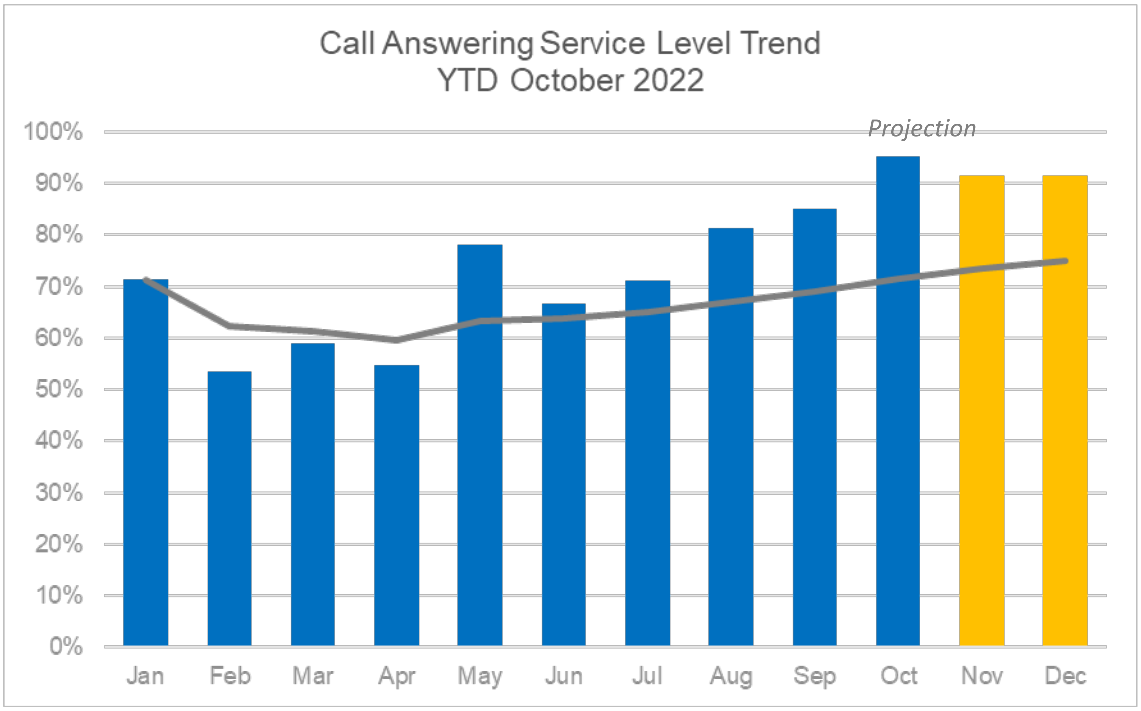
Abandon Rate

Abandon Rate (AR) tracks the percentage of callers who hang up while waiting for a live operator. The annual standard is not to exceed 10%. The October 2022 year to date result is 8%. Enbridge Gas anticipates that AR will be achieved in 2022.



Call Answering Service Level

Call Answering Service Level (CASL) tracks the percentage of calls reaching the general inquiry number, including IVR calls that are answered within 30 seconds. The yearly performance standard for CASL is 75% with a minimum monthly standard of 40%. The October 2022 year to date result is 72%. Enbridge Gas is continuing to work diligently through implementation of its mitigation plan as outlined in the AVC to aim to achieve CASL for 2022.



Mitigation Activities

- Hiring and training of new staff to assist with high call volumes at all call centre locations.
- Proactive planning for customer communications including emails for the "Notice of Hearing for Enbridge Gas's application for 2024 Cost of Service Rates" to assist with a potential increase in call volumes.
- Improve processes to assist with customer experience including a call back option which has been implemented in which customers are provided with an option to have a call back rather than waiting for a live agent.
- Focus on employee engagement activities to promote mental wellness and retention.

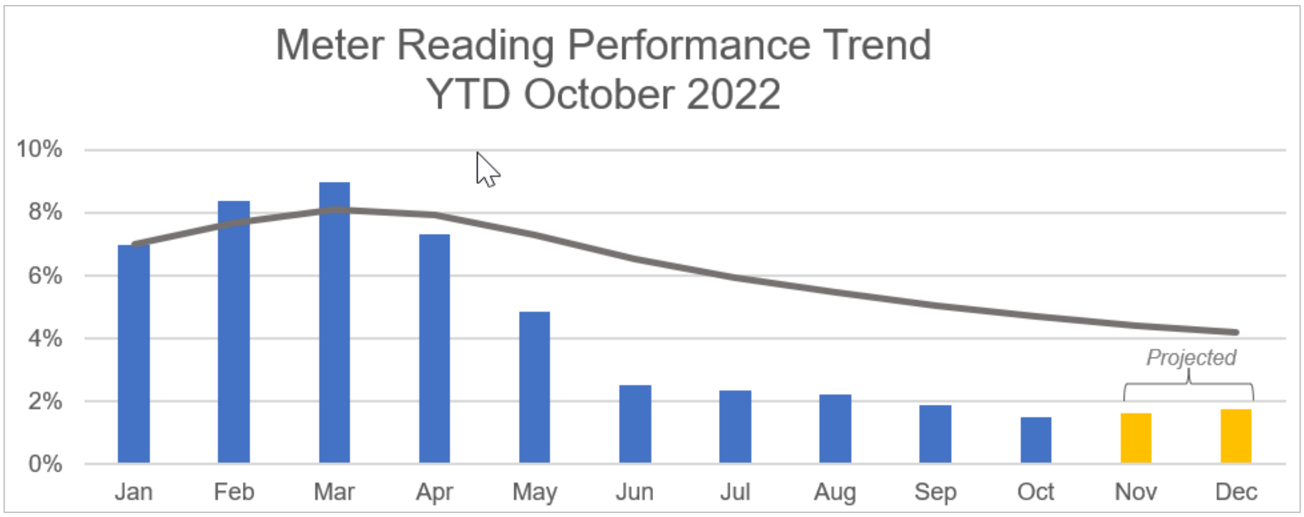
Challenges

- Call volumes continue to be higher as a result of trending call types including rate increases, managing equal monthly payment plans, collections, and an increase in customer moves.
- Illness and absenteeism continue to be a challenge and is being closely monitored.
- Higher attrition rates and hiring challenges continue due to the tight labour market.

ENBRIDGE

Meter Reading Performance Measurement

Meter Reading Performance Measurement (MRPM) represents the number of meters with no read for four consecutive months or more divided by the total number of active meters to be read. The target for the MRPM is 0.5% or less. As stated in the AVC Enbridge Gas anticipates MRPM to be in the range of 4% (or 3% if we exclude meters where access is not granted by customers). The October 2022 year to date result is 4.7% (2.8% when meters with access issues are removed). Enbridge Gas is continuing to work diligently through implementation of its mitigation plan as outlined in the AVC and aims to achieve this revised MRPM for 2022.



Mitigation Activities

- Continue working with internal staff and third-party vendors to assist with attaining reads to offset attrition and absenteeism impacts.
- Continue to hire resources to mitigate increased absences. Since March, 21 additional resources hired.
- Daily emails continue to be sent out encouraging customers to submit a reading.
- Meter readers continue to work overtime, including evenings and weekends to attain reads.
- Additional back office staff being hired to process reads coming in, 10 agents started in August and 20 additional agents started in October.

Challenges

- Attrition and illness/absence continue to be a challenge. Year to date attrition rates are 20% and absenteeism rates are 17%.
- Hiring challenges continue due to the tight labour market.
- Ongoing access issues: 50% of our current consecutive estimates are due to access limited by customers.

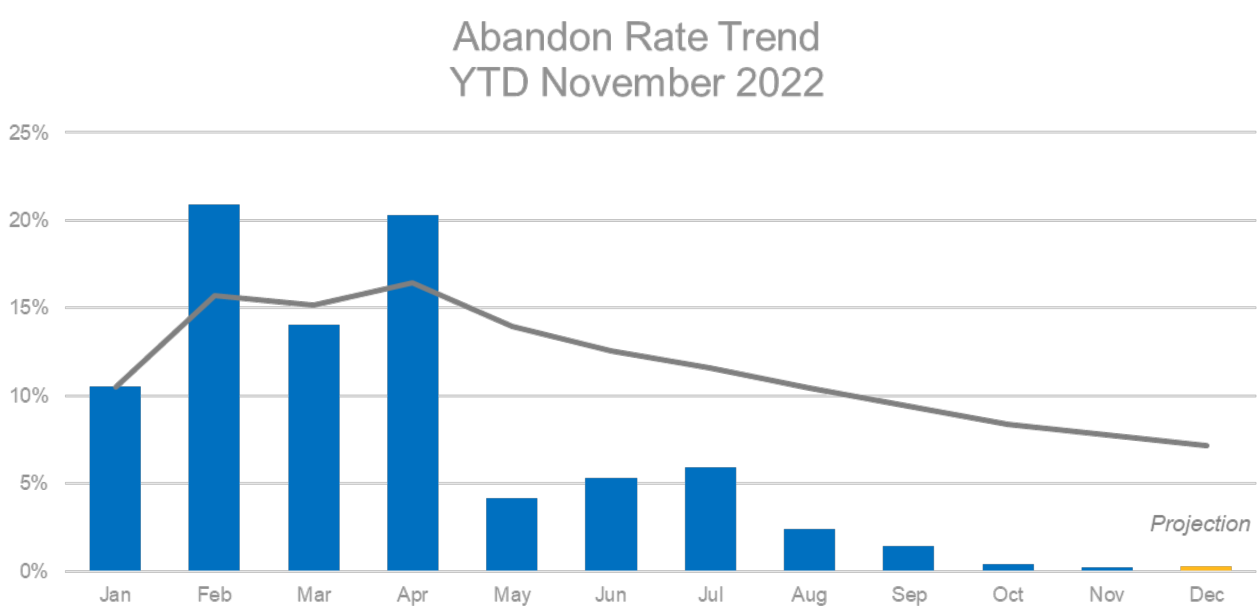
Re: **Service Quality Requirements (SQR): Abandon Rate, Call Answering Service Level, Meter Reading Performance Measurement**

As part of the Assurance of Voluntary Compliance (AVC) filed on September 14, 2022, Enbridge Gas committed to providing monthly reporting to OEB staff on the progress of the SQR metrics. Below is a summary of the status of each metric as of November 30, 2022.

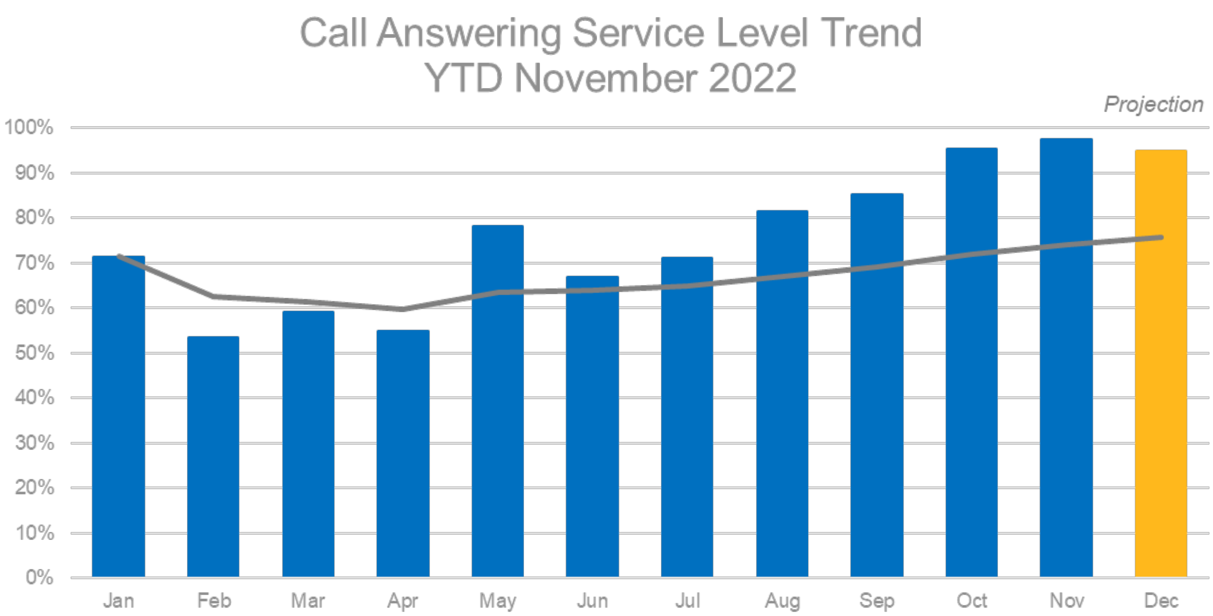
Abandon Rate

Abandon Rate (AR) tracks the percentage of callers who hang up while waiting for a live operator. The annual standard is not to exceed 10%. The November 2022 year to date result is 8%. Enbridge Gas anticipates that AR will be achieved in 2022.



Call Answering Service Level

Call Answering Service Level (CASL) tracks the percentage of calls reaching the general inquiry number, including IVR calls that are answered within 30 seconds. The yearly performance standard for CASL is 75% with a minimum monthly standard of 40%. The November 2022 year to date result is 74%. Enbridge Gas is continuing to work diligently through implementation of its mitigation plan as outlined in the AVC to aim to achieve CASL for 2022.



Mitigation Activities

- Ongoing hiring and training of new staff to assist with high call volumes at all call centre locations.
- Proactive planning for customer communications on key information to assist with call volumes.
- Focus on employee engagement activities to promote mental wellness and retention.

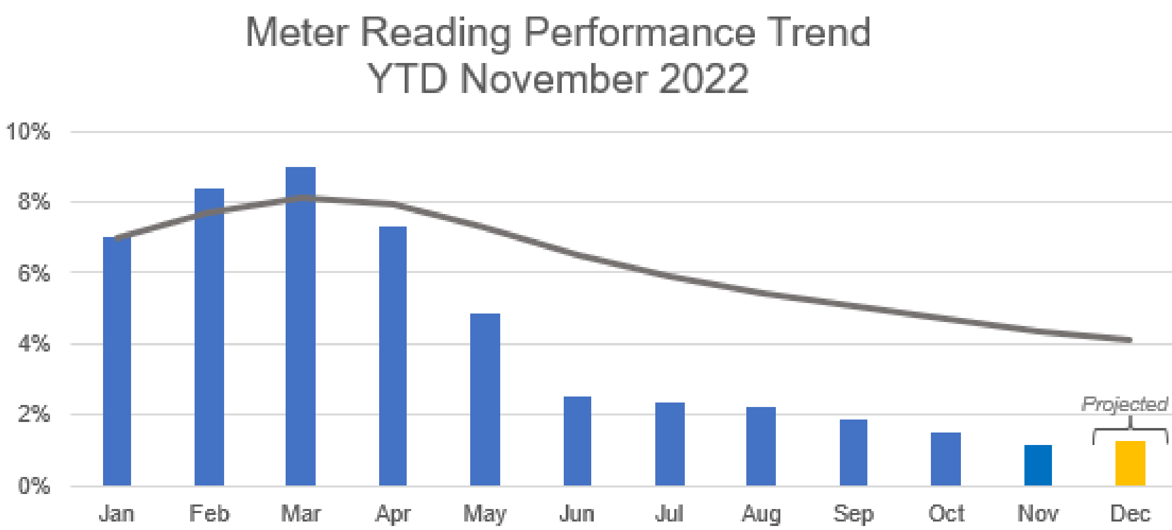
Challenges

- Call volumes continue to be higher as a result of trending call types including rate increases, payment plans, and early heating season inquiries.
- Illness and absenteeism continue to be a challenge and is being closely monitored.

Meter Reading Performance Measurement

Meter Reading Performance Measurement (MRPM) represents the number of meters with no read for four consecutive months or more divided by the total number of active meters to be read. The target for the MRPM is 0.5% or less. As stated in the AVC Enbridge Gas anticipates MRPM to be in the range of 4% (or 3% if we exclude meters where access is not granted by customers). The November 2022 year to date result is 4.38% (2.66% when meters with access issues are removed). Enbridge Gas is continuing to work diligently through implementation of its mitigation plan as outlined in the AVC and aims to achieve this revised MRPM for 2022.

ENBRIDGE



Mitigation Activities

- Continue working with internal staff and third-party vendors to assist with attaining reads to offset attrition and absenteeism impacts.
- Continue to hire resources to mitigate increased absences.
- Daily emails continue to be sent out encouraging customers to submit a reading.
- Meter readers continue to work overtime, including evenings and weekends to attain reads.
- Additional back office staff has been hired and are processing the additional reads coming in.

Challenges

- Attrition and illness/absence continue to be a challenge. Year to date attrition rates are 20% and absenteeism rates are 17%.
- Hiring challenges continue due to the tight labour market.
- Ongoing access issues: 50% of our current consecutive estimates are due to access limited by customers.

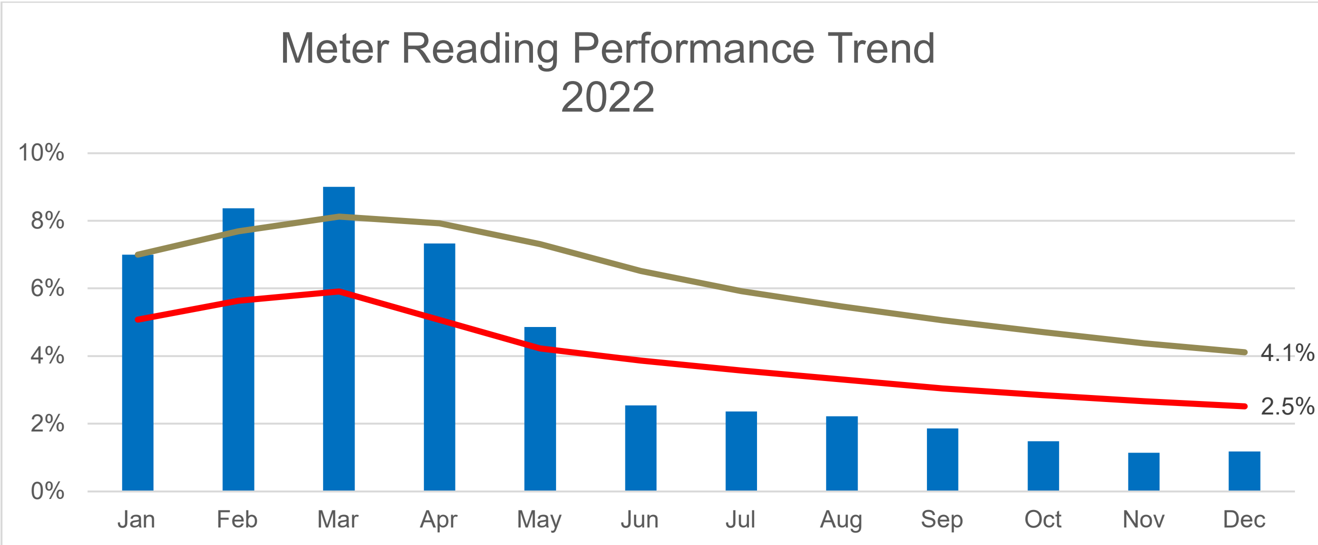
Meter Reading Performance Measurement

Meter Reading Performance Measurement (MRPM) represents the number of meters with no read for four consecutive months or more divided by the total number of active meters to be read. The target for the MRPM is 0.5% or less. As stated in the AVC Enbridge Gas anticipates MRPM to be in the range of 4% (or 3% if we exclude meters where access is not granted by customers). The December 2022 year end result is 4.1% (2.51% after excluding meters where access is not granted). Enbridge Gas has continued to work diligently through implementation of its mitigation plan as outlined in the AVC to achieve this revised MRPM for 2022.

ENBRIDGE



Mitigation Activities

- Continue working with internal staff and third-party vendors to assist with attaining reads to offset attrition and absenteeism impacts.
- Continue to hire resources to mitigate increased absences.
- Emails continue to be sent out encouraging customers to submit a reading.
- Meter readers continue to work overtime, including evenings and weekends to attain reads.
- Additional back office staff has been hired and are processing the additional reads coming in.

Challenges

- Attrition and illness/absence continue to be a challenge. Attrition rates are 20% and absenteeism rates are 17%.
- Hiring challenges continue due to the tight labour market.
- Ongoing access issues: 40% of our current consecutive estimates are due to access limited by customers.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Energy Probe Research Foundation (EP)

Interrogatory

Reference:

Exhibit 1, Tab 7, Schedule 1, Attachment 1, EGI OEB Scorecard

Preamble:

Call Answering Service is below standard.

Question(s):

Given the explanation in evidence, what specific steps has EGI taken/will take to:

i. correct the problems.
ii. achieve above standard performance in 2023/2024?

Response:

Please see response at Exhibit I.1.7-STAFF-13.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 1, Tab 7. Schedule 1, pg. 10-14

Preamble:

Notwithstanding EGI's Assurance Voluntary Compliance dated 20220912, we are concerned about how the meter reading and billing issue has been managed since FRPO first tried to raise this issue with EGI through interrogatories in EB-2021-0148 in late 2021.

Question(s):

For each of the four years of 2019, 2020, 2021 and 2022, separately for each rate zone, please provide the cost of:

a) Meter-reading

b) Bill production

c) Customer accounting/receivables.

Response:

a) Table 1 shows meter reading costs separated by Union and EGD rate zones.

Table 1
Meter Reading Costs

Line No.	Particulars ($ millions)	2019 Actual	2020 Actual	2021 Actual	2022 Actual
		(a)	(b)	(c)	(d)
1	Union	6.9	7.2	7.6	8.4
2	EGD	10.4	10.0	10.9	11.8
3	Total	17.3	17.2	18.5	20.1

b) Table 2 shows bill production costs. As part of the integration, Enbridge Gas discontinued bill production services beginning in May 2020 with the Union third-party vendor and expanded services with the EGD third-party vendor to include Union customers as well. As a result, bill production costs could only be provided by rate zone for 2019 and 2020 from January 2020 to April 2020 as costs were consolidated under a single third-party vendor. For the purposes of integration related to third-party service bill production, Enbridge Gas no longer requires the vendor to differentiate services by Union and EGD, therefore the breakdown by rate zone is unavailable.

Table 2
Bill Production Costs

Line No.	Particulars ($ millions)	2019 Actual	2020 Actual	2021 Actual	2022 Actual
		(a)	(b)	(c)	(d)
1	Union	1.5	0.7	0.0	0.0
2	EGD	3.0	1.0	0.0	0.0
3	EGI	0.0	2.2	4.0	4.1
4	Total	4.5	3.9	4.0	4.1

c) Table 3 shows customer accounting/receivables costs for cheque payment processing. All other forms of payment are electronic, and the costs are not reflected in the table because they are not part of Customer Care O&M costs.

As part of the integration, Enbridge Gas discontinued cheque payment processing services beginning in July 2021 with the Union third-party vendor and expanded services with the EGD third-party vendor to include Union customers as well. As a result, cheque payment processing costs could only be provided by rate zone for 2019 and 2021 from January to June as costs were consolidated under a single third-party vendor. For the purposes of integration related to third-party services for cheque payment processing, EGD no longer requires the vendor to differentiate services by Union and EGD, therefore the breakdown by rate zone is unavailable.

Table 3
Customer Accounting/Receivables Costs

Line No.	Particulars ($ millions)	2019 Actual	2020 Actual	2021 Actual	2022 Actual
		(a)	(b)	(c)	(d)
1	Union	0.3	0.3	0.1	0.0
2	EGD	0.4	0.4	0.2	0.0
3	EGI	0.0	0.0	0.2	0.4
4	Total	0.6	0.7	0.5	0.4

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 1, Tab 7. Schedule 1, pg. 10-14

Preamble:

Notwithstanding EGI's Assurance Voluntary Compliance dated 20220912, we are concerned about how the meter reading and billing issue has been managed since FRPO first tried to raise this issue with EGI through interrogatories in EB-2021-0148 in late 2021.

Question(s):

For each of the four years of 2019, 2020, 2021 and 2022, please provide the number of bills produced by:

a) Electronic meter read (instrument on meter through phone line)

b) Manual meter read with handle held equipment

c) Estimated meter read

d) No read.

Response:

a) Total number of bills produced by electronic meter read (instrument on meter through phone line) for the years of 2019 to 2022.

Table 1

Year	Bills produced by electronic meter read Instrument
2019	37,404
2020	37,258
2021	38,047
2022	38,140

b) Total number of bills produced by manual meter read for the years of 2019 to 2022.

Table 2

Year	Bills produced by manual meter read
2019	20,438,404
2020	20,764,748
2021	18,620,824
2022	18,585,750

c) Total number of bills produced by estimated meter read for the years of 2019 to 2022.

Table 3

Year	Bills produced by estimated meter read
2019	23,905,229
2020	24,159,757
2021	25,024,976
2022	26,250,930

d) Zero consumption on a gas bill would be based on a customer's consumption behaviour, such as seasonal gas use, or in the case where the meter is temporarily locked. Total number of bills produced with no consumption for the years of 2019 to 2022.

Table 4

Year	Bills with no consumption
2019	947,167
2020	979,094
2021	1,204,570
2022	1,051,011

Interrogatory

Reference:

Ex. 1, Tab 7. Schedule 1, pg. 10-14

Preamble:

Notwithstanding EGI's Assurance Voluntary Compliance dated 20220912, we are concerned about how the meter reading and billing issue has been managed since FRPO first tried to raise this issue with EGI through interrogatories in EB-2021-0148 in late 2021.

Question(s):

Please confirm that some Direct Purchase contracts have been required to balance their deliveries and consumption even though the balance was in question due to missing or estimated reads.

a) How has EGI handled those situations?

b) Will that approach be maintained going forward until ongoing billing issues have resolved?

c) If not, why not?

Response:

Contractual balancing requirements continue to exist for all direct purchase contracts. However, in situations where consumption has been identified to be significantly impacted due to missing meter readings and/or estimated or re-billed readings that do not appear to be reasonable, Enbridge Gas has taken steps to mitigate the impact to direct purchase customers.

a-c) Enbridge Gas has, and will continue to, accommodate requests to mitigate billing impacts to direct purchase customers by providing balancing flexibility when operationally available and by waiving and/or adjusting associated fees.

What is the current status of the EGI exemption request for 2023 for the SQR measures noted in the paragraph?

Response:

On December 23, 2022, Enbridge Gas was notified by the OEB,[1] that it has decided Enbridge Gas's Application for a Partial and Temporary Exemption from Sections 7.3.1.1, 7.3.3.1 and 7.3.4.2 of the Gas Distribution Access Rule for 2023 will not be processed at this time, as this proposal to revise Enbridge Gas's SQRs is also a matter in Enbridge Gas's 2024 Rebasing proceeding.

ENBRIDGE GAS INC.

Answer to Interrogatory from
London Property Management Association (LPMA)

Interrogatory

Reference:

Exhibit 1, Tab 7, Sch. 1, para. 29

Question(s):

Did EGI do any customer engagement with respect to the modified measures that are being proposed? If yes, please provide or indicate where in the customer engagement evidence these modified measures were discussed with customers. If no, please explain why not.

Response:

Enbridge Gas did not request new customer engagement with respect to the proposed modified measures set out in the exemption request. Given that this is a partial exemption, Enbridge Gas identified the factors preventing the achievement of each individual metric as provided at Exhibit 1, Tab 7, Schedule 1, pages 6 to 14 and recommended that the OEB's Chief Executive Officer conduct a review of the GDAR pursuant to Section 44 of the *Ontario Energy Board Act* and consider appropriate amendments to CASL, MRPM and TRMA.

ENBRIDGE GAS INC.

Answer to Interrogatory from
London Property Management Association (LPMA)

Interrogatory

Reference:

Exhibit 1, Tab 7, Sch. 1, para. 46

Question(s):

What are the consequences to EGI of failing to meet each of the SQR's, and in particular, what are the consequences to EGI of failing to meet the current standards for the CASL, TRMA and MRPM?

Response:

Service Quality Requirements (SQRs) were added to the Gas Distribution Access Rule (GDAR) coming into effect January 1, 2007[1] to establish performance standards and measurement of customer experience for the natural gas industry in Ontario. Enbridge Gas believes that a review of the performance standards is needed to modernize the SQRs with the current business environment and customer needs, behaviors and expectations. The Company remains committed to providing a positive customer experience.

The consequences to Enbridge Gas for failing to meet the current standards are monetary and reputational. Monetary penalties for not meeting the current standards are managed through the OEB's processes for compliance. The Company provided an Assurance of Voluntary Compliance (AVC)[2] in September 2022 for Call Answering Service Level (CASL), Abandon Rate (AR) and Meter Reading Performance Measurement (MRPM). In addition, there are reputational consequences for not meeting standards for customer responsiveness. Enbridge Gas has developed mitigation plans for CASL, MRPM and Time to Reschedule a Missed Appointment (TRMA). Please see response at Exhibit I.1.7-STAFF-13.

[1] EB-2005-0453, OEB Amendments to the Gas Distribution Access Rule, March 27, 2006, pp. 1-2.
[2] EB-2022-0188, Assurance of Voluntary Compliance, Enbridge Gas Inc., September 12, 2022. EGI-Assurance-of-Voluntary-Compliance-20220912.pdf (oeb.ca)

Enbridge Gas is committed to excellent customer service, however, the safety of employees, customers, and the communities in which we operate continues to be a top priority and core value. As provided at Exhibit 1, Tab 7, Schedule 1, pages 5 to 6, at the height of the COVID-19 pandemic there were periods of time when meter readers were unable to complete routes due to public health stay-at-home orders. COVID-19 also impacted staffing, with increased illness and quarantine/isolation periods. Extreme weather events impact the ability to safely obtain meter reads. Finally, responding to emergencies is a top priority and from time-to-time field and dispatch staff are redirected from customer appointments to attend emergencies, resulting in appointments not always being rescheduled according to the prescribed timelines.

Answer to Interrogatory from
London Property Management Association (LPMA)

Interrogatory

Reference:

Exhibit 1, Tab 7, Sch. 1, Attachment 1

Question(s):

Please update Attachment 1 to included actual figures for 2022.

Response:

Please see response at Exhibit I.1.7-VECC-9, Attachment 1.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Vulnerable Energy Consumers Coalition (VECC)

Interrogatory

Reference:

Exhibit 1, Tab 7, Schedule 1

Question(s):

a) Please provide the OEB Scorecard in the format of Attachment 1 but for the years 2013-2016 (EGD and Union).

b) Please update the Scorecard at Attachment 1 to include 2022 results

c) A review of the measures EGI is seeking relief from meeting and the historical data prior to amalgamation suggest that the two prior Utilities were able to meet all the performance measures with the exception of Time to Reschedule Missed Appointments – where both utilities were within .03% of meeting the target. Since amalgamation there has been a notable decline in a number of performance metrics – for example emergency call response has fallen from around 97-99% to 95.2% after amalgamation. Please outline the changes were made to the call centre operations subsequent to amalgamation.

d) Please provide (separately) the number of telephone calls, email and other contacts (social media etc.) for each year 2013 through 2022.

e) Does EGI outsource call center activity? If so please provide the performance measurements required by that contract.

Response:

a-b) Enbridge Gas's OEB scorecard has been updated to include EGD and Union results for 2013 through 2016, and 2022 preliminary results for Enbridge Gas. Please see Attachment 1. Financial metrics are not yet available for 2022, as these metrics are part of the annual filing for the Natural Gas Reporting and Record Keeping (RRR) Rule for Gas Utilities, due to the OEB on April 30, and require dedicated time in the first quarter of the year to be prepared and validated. The Cost per Customer and Cost per Total Kilometer of Distribution Pipe metrics are not available for 2013 through 2016. These metrics were established as part of the MAADs decision and were not historically tracked by EGD or Union.

c) Enbridge Gas began a significant effort to align systems and processes following amalgamation which affected metric performance. At the same time factors including the COVID-19 pandemic, staffing issues and extreme weather events further impacted results. Details of the impacts are provided in evidence at Exhibit 1, Tab 7, Schedule 1, pages 4 to 12, and 15 to 17.

The integration of systems and processes resulted in a positive change to customer call centre operations for Enbridge Gas. With aligned systems and processes and cross-trained staff across multiple call centre locations, customer call centres can provide seamless backup for increased call volumes, staffing shortages and system outage management. Existing internal call centre operations for Emergency Call Handling and the Customer Contact Centre did not experience changes to location or staffing as a result of amalgamation. Prior to amalgamation Enbridge Gas Distribution emergency calls were handled by an external contractor. In early 2020 Emergency Call Handling operations were harmonized, with all emergency calls now being handled internally with the addition of emergency call handling to the Toronto dispatch centre.

There were significant changes for the organization with system integration and subsequent process alignment, temporarily impacting productivity. In addition, some metrics were impacted by similar alignment activities and reporting practice adjustments. For example, emergency call handling process alignment resulted in an increased number of calls being classified as an emergency, which marginally impacted response volumes in the field and ultimately the Emergency Response SQR results.

d) The number of calls Enbridge Gas (EGD and Union prior to amalgamation) received from 2012 to 2022 is provided in Table 1.

Table 1

Year	Number of Calls	
	EGD	Union
2013	2,615,084	1,157,206
2014	2,747,715	1,285,561
2015	2,862,347	1,193,792
2016	2,654,978	1,110,893
2017	2,378,139	1,151,592
2018	2,478,162	1,082,381
	EGI	
2019	3,588,323	
2020	3,001,431	
2021	3,609,331	
2022	3,615,137*	

*preliminary result

In addition, in 2022 customers completed nearly 1.9 million transactions through the Enbridge Gas website and chat. Enbridge Gas does not track email and social media volumes as they are not primary channels for customer contact.

e) Enbridge Gas outsources a portion of its Customer Contact Centre. The vendor is required to meet service levels for call management. The results are included within the scorecard for the Abandonment Rate (AR) and the Call Answering Service Level (CASL). The vendor is required to meet an AR of less than 10% per calendar year. The vendor is also required to achieve 50% of calls answered within 30 seconds each month and 55% per calendar year. This service level is not inclusive of the Interactive Voice Response (IVR) calls which is another component of the CASL metric results.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 1, Tab 8, Schedule 1, Attachment 1
Exhibit 1, Tab 8, Schedule 1, Attachment 2
Exhibit 1, Tab 8, Schedule 1, Attachment 9
Exhibit 1, Tab 8, Schedule 1, Attachment 11
Exhibit 1, Tab 8, Schedule 1, Attachment 12

Question(s):

Enbridge Gas has provided the following:

- Consolidated financial statements for 2020 and 2021.
- Pro-forma statement of utility income for 2023 bridge year.
- Rating reports from DBRS Morningstar (September 27, 2022) and S&P Global Ratings (February 1, 2022).

a) As Concentric has compared Enbridge Gas's risk profile in 2022 to Enbridge Gas Distribution (EGD) and Union Gas Limited's (Union Gas) risk profile in 2012, please provide the following information starting from 2012 (all information to be provided for Enbridge Gas):

   i. Audited financial statements for 2019, including income statement, balance sheet and cash flow statement in MS Excel format.
   ii. Audited financial statements, if available, or draft financial statements for 2022, including income statement, balance sheet and cash flow statement in MS Excel format.
   iii. Pro-forma financial statements, prepared in the same manner as Enbridge Gas's audited financial statements, for 2023, 2024, 2025, 2026, 2027 and 2028 (including income statement, balance sheet and cash flow statement in MS Excel format).
   iv. All relevant credit rating reports from DBRS Morningstar and S&P Global Ratings from 2019 to 2022.

b) As Concentric has compared Enbridge Gas's risk profile in 2022 to EGD and Union Gas's risk profile in 2012, please provide the following information starting from 2012 (all information to be provided separately for EGD and Union Gas):

i. Audited financial statements for 2012, 2013, 2014, 2015, 2016, 2017 and 2018 (including income statement, balance sheet and cash flow statement in MS Excel format).
ii. All relevant credit rating reports from DBRS Morningstar and S&P Global Ratings from 2012 to 2018.

Response:

a)

i. Please see Attachment 1 for the PDF versions of the 2018 and 2019 Audited Financial Statements and Attachment 2 for the Excel versions. Please note that Enbridge Gas filed a combined set of Audited Financial Statements for 2018 and no standalone Financial Statements were filed in 2018 for EGD or Union.

ii. Please see Attachment 3 for the PDF version of the 2022 Audited Financial Statements and Attachment 4 for the Excel versions.

iii. As Enbridge Gas is setting cost of service rates for 2024 based on 2024 forecast information, Enbridge Gas declines to provide the requested forecast information beyond 2024. Any forecast of post-2024 will depend on the determinations in this proceeding. Please see Exhibit 1, Tab 8, Schedule 1, Attachment 9 for Enbridge Gas's pro-forma financial information. Enbridge Gas does not produce pro-forma financial statements in the same manner as the audited financial statements.

iv. Please see Attachment 5 and Attachment 6 for credit rating agency reports from DBRS Morningstar and S&P Global Ratings from 2019 to 2022.

b)

i. Please see Attachments 7 and 8 for the PDF versions of the 2012 through 2017 Audited Financial Statements for EGD and Union and Attachments 9 and 10 for the Excel versions.

ii. Please see Attachments 11 through 14 for credit rating agency reports from DBRS Morningstar and S&P Global Ratings from 2012 to 2018. Note that S&P Global did not publish reports for EGD or Union Gas in 2018.

ENBRIDGE GAS INC.
(a subsidiary of Enbridge Inc.)

COMBINED FINANCIAL STATEMENTS

December 31, 2018

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Inc.

Financial Reporting
Management of Enbridge Gas Inc. (the Company) is responsible for the accompanying Combined Financial Statements. The Combined Financial Statements have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors is responsible for all aspects related to governance of the Company. The Company does not have an Audit Committee, having received an exemption from such requirement.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare Combined Financial Statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, have conducted an audit of the Combined Financial Statements of the Company in accordance with Canadian generally accepted auditing standards and have issued an unqualified audit report, which is accompanying the Combined Financial Statements.

(Signed)

Cynthia L. Hansen
President

(Signed)

Wendy Zelond
Vice President, Finance

February 15, 2019

Independent auditor's report

To the Shareholders of Enbridge Gas Inc.

Our opinion

In our opinion, the accompanying combined financial statements present fairly, in all material respects, the financial position of Enbridge Gas Inc. (the Company) as at December 31, 2018 and 2017, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America (US GAAP).

What we have audited
The Company's combined financial statements comprise:

- the combined statements of earnings for the years ended December 31, 2018 and 2017;
- the combined statements of comprehensive income for the years ended December 31, 2018 and 2017;
- the combined statements of shareholders' equity for the years ended December 31, 2018 and 2017;
- the combined statements of cash flows for the years ended December 31, 2018 and 2017;
- the combined statements of financial position as at December 31, 2018 and 2017; and
- the notes to the combined financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the combined financial statements* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence
We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of the combined financial statements in Canada. We have fulfilled our other ethical responsibilities in accordance with these requirements.

PricewaterhouseCoopers LLP
PwC Tower, 18 York Street, Suite 2600, Toronto, Ontario, Canada M5J 0B2
T: +1 416 863 1133, F: +1 416 365 8215

Emphasis of matter - Combined financial statements

We draw attention to the fact that, as described in note 1 to the combined financial statements, the businesses included in the combined financial statements have not operated as a single entity. These combined financial statements are, therefore, not necessarily indicative of results that would have occurred if the businesses had operated as a single business during the years presented or of future results of the combined businesses. Our opinion is not modified in respect of this matter.

Other information

Management is responsible for the other information. The other information comprises the Management's Discussion and Analysis.

Our opinion on the combined financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the combined financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the combined financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of management and those charged with governance for the combined financial statements

Management is responsible for the preparation and fair presentation of the combined financial statements in accordance with US GAAP, and for such internal control as management determines is necessary to enable the preparation of combined financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the combined financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Company's financial reporting process.

Auditor's responsibilities for the audit of the combined financial statements

Our objectives are to obtain reasonable assurance about whether the combined financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these combined financial statements.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the combined financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the combined financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the combined financial statements, including the disclosures, and whether the combined financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Company to express an opinion on the combined financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

NOTES TO THE COMBINED FINANCIAL STATEMENTS

1. BUSINESS OVERVIEW

Enbridge Gas Inc. (Enbridge Gas) is a rate-regulated natural gas distribution, storage and transmission utility, serving residential, commercial and industrial customers in Ontario. Enbridge Gas also serves areas in northern New York State through its wholly-owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence Gas), an asset held for sale *(Note 5)*.

AMALGAMATION AND COMBINED FINANCIAL STATEMENTS

On August 30, 2018, Enbridge Gas Distribution Inc. (EGD) and Union Gas Limited (Union Gas) received approval by the Ontario Energy Board (OEB) for their application to amalgamate on January 1, 2019, as described in *Note 6 Regulatory Matters.* The amalgamated company has continued from this date as Enbridge Gas. Enbridge Gas continues to have all of the assets, rights, contracts, liabilities and obligations of each of EGD and Union Gas, including licenses and permits.

Prior to the amalgamation, EGD and Union Gas were both indirect wholly-owned subsidiaries of Enbridge Inc. (Enbridge) and operated as companies under common control since February 27, 2017, when Enbridge completed a stock-for-stock merger transaction to acquire all outstanding common stock of Spectra Energy Corp (Spectra Energy). As a result of the February 27, 2017 merger, Enbridge and its subsidiaries obtained ownership of Union Gas through its ownership in Spectra Energy.

These Combined Financial Statements have been prepared to include the results and accounts of EGD from January 1, 2017 and Union Gas from February 27, 2017, the date upon which Enbridge acquired common control of both entities. As a result, the comparability of the individual line items in the Combined Statements of Earnings, Combined Statements of Comprehensive Income and Combined Statements of Cash Flows are impacted.

In accordance with generally accepted accounting principles in the United States of America (U.S. GAAP), the Combined Financial Statements reflect EGD as the receiving entity with Union Gas' accounts transferred at Enbridge's historical cost as at February 27, 2017. The carrying values of certain assets and liabilities of Union Gas were adjusted to reflect EGD's accounting policies retrospectively to the transfer date. All intercompany transactions and balances have been eliminated.

The following table summarizes the carrying value of the assets and liabilities of Union Gas that were transferred to EGD:

February 27,	2017
(millions of Canadian dollars)	
Current assets	882
Property, plant and equipment, net	6,365
Deferred amounts and other assets	1,277
Intangible assets, net	84
Current liabilities	(1,214)
Long-term debt	(3,763)
Other long-term liabilities	(947)
Deferred income taxes	(596)
	2,088
Goodwill	4,784
	6,872

All references to "the Company" relate to the continuing, amalgamated company Enbridge Gas and the combined financial position, results of operations and cash flows for EGD and Union Gas. References to “EGD” or “Union Gas” relate to the separate legal entities as they existed prior to January 1, 2019.

2. SIGNIFICANT ACCOUNTING POLICIES

These Combined Financial Statements are prepared in accordance with U.S. GAAP. Amounts are stated in Canadian dollars unless otherwise noted.

In May 2018, Canadian securities regulators approved the extension of EGD and Union Gas' exemptive relief to continue reporting under U.S. GAAP instead of International Financial Reporting Standards (IFRS) until the earliest of January 1, 2024, the first day of the Company's financial year that commences if and after the Company ceases to have activities subject to rate regulation, or the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within IFRS specific to entities with activities subject to rate regulation. The Company will continue to rely upon the exemptive relief following the amalgamation of EGD and Union Gas.

BASIS OF PRESENTATION AND USE OF ESTIMATES
These Combined Financial Statements include the accounts of EGD, St. Lawrence Gas and Union Gas. All intercompany accounts and transactions are eliminated on combination.

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the Combined Financial Statements. Significant estimates and assumptions used in the preparation of the Combined Financial Statements include, but are not limited to: carrying values of regulatory assets and liabilities; unbilled revenues; estimates of revenue; depreciation rates and carrying value of property, plant and equipment; amortization rates and carrying value of intangible assets; measurement of goodwill; fair value of asset retirement obligations (ARO); fair value of financial instruments; provisions for income taxes; assumptions used to measure retirement and OPEB; and commitments and contingencies. Actual results could differ from these estimates.

REGULATION
The utility operations of the Company within Ontario are regulated by the OEB, while the utility operations of St. Lawrence Gas are regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 6)*.

As a result of rate regulation accounting, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates and amounts collected from customers in advance of costs being incurred. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation accounting, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations, or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

REVENUE RECOGNITION

Revenues from contracts with customers are generally recognized upon the fulfillment of the performance obligations for the distribution, storage, transportation and sale of natural gas. For distribution and transportation service arrangements where the services are simultaneously received and consumed by the customer, revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's distribution franchise areas. Revenue from storage services are recognized as the storage services are provided.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue under such circumstances is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulator, which follow the accounting guidance found in *ASC 980 - Regulated Operations*.

PUSH-DOWN ACCOUNTING

EGD also elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge, when it first adopted U.S. GAAP. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by EGD. Upon adopting push-down accounting, the historical cost of EGD's property, plant and equipment and related accounts was adjusted by the remaining unamortized fair value adjustment.

The Company has applied push-down accounting with respect to the accounts of Union Gas from February 27, 2017, the date upon which Enbridge acquired common control of EGD and Union Gas. The carrying values of certain assets and liabilities of Union Gas transferred to EGD have been adjusted to reflect Enbridge's historical cost as at February 27, 2017.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage its exposure to changes in interest rates and foreign exchange rates. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges.

Cash Flow Hedges

The Company uses cash flow hedges to manage its exposure to changes in currency exchange rates related to unregulated storage revenue and changes in interest rates *(Note 15)*. The effective portion of the change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/ loss (OCI) and is reclassified to earnings when the hedged item impacts earnings. Any hedge ineffectiveness is recorded in current period earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Combined Statements of Financial Position as current and non-current assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments in qualifying hedging relationships are classified as Operating activities on the Combined Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments may be offset in the Combined Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and accounts for these costs as a deduction from Long-term debt on the Combined Statements of Financial Position. These costs are amortized using the effective interest rate method over the term of the related debt instrument and are recorded in Interest expense.

INCOME TAXES

Income taxes are accounted for using the liability method. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. For the Company's regulated operations, a deferred income tax liability or asset is recognized with a corresponding regulatory asset or liability, respectively, to the extent taxes can be recovered through rates *(Note 6)*. Any interest and/or penalty incurred related to tax is reflected in Income taxes.

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION

Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Combined Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Combined Statements of Earnings in the period that they arise.

The functional currency of the Company's only foreign operation, St. Lawrence Gas, is the United States dollar (USD). The effects of translating the financial statements of St. Lawrence Gas to Canadian dollars are included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts are translated at the exchange rates in effect on the date of the Combined Statement of Financial Position, while revenues and expenses are translated at monthly average rates.

CASH AND CASH EQUIVALENTS

Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased. The Company combines Cash and cash equivalents and Bank indebtedness where the corresponding bank accounts are subject to cash pooling arrangements.

RESTRICTED CASH

Cash and cash equivalents that are restricted as to withdrawal or usage, in accordance with specific agreements, are presented as Restricted cash on the Combined Statements of Financial Position. Restricted cash represents funds received from the Green Investment Fund (GIF) program. The Company's use of the funds is limited to eligible expenditures for the purpose of executing the program. The Company manages the GIF program separately from its core regulated activities. There is no earnings impact related to the GIF program.

GAS INVENTORY

Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction as authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The pool method of accounting for property, plant and equipment is followed whereby similar assets with comparable useful lives are grouped and depreciated as a pool, as approved by the Regulators. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are booked as an adjustment to accumulated depreciation until the last asset in the pool is disposed of. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS

Deferred amounts and other assets primarily include: costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates; deferred income taxes; and derivative financial instruments.

INTANGIBLE ASSETS

Intangible assets consist primarily of certain software costs and emission allowances. The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are generally amortized on a straight line basis over their expected lives, commencing when an asset is available for use.

From January 1, 2017 through July 3, 2018, emission allowances were purchased in order to meet greenhouse gas (GHG) compliance obligations and were recorded at their original cost. Refer to *Note 9 Intangible Assets* for more information.

GOODWILL

Goodwill represents the excess of the purchase price over the fair value of net identifiable assets on acquisition of a business. The carrying value of goodwill, which is not amortized, is assessed for impairment annually, or more frequently if events or changes in circumstances arise that suggest the carrying value of goodwill may be impaired. For the purposes of impairment testing, the Company has the option to first assess qualitative factors to determine whether it is necessary to perform the quantitative goodwill impairment test. If the quantitative goodwill impairment test is performed, the Company determines the fair value of goodwill and compares those values to the carrying value. If the carrying value exceeds its fair value, goodwill impairment is measured at the amount by which the carrying value exceeds its fair value.

ASSET RETIREMENT OBLIGATIONS (AROs)

AROs associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. AROs are added to the carrying value of the associated asset and depreciated over the asset’s useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For the majority of the Company's assets, it is not possible to make a reasonable estimate of AROs due to the indeterminate timing and scope of the asset retirements.

RETIREMENT AND POSTRETIREMENT BENEFITS

The Company maintains pension plans which provide defined benefit and defined contribution pension benefits.

Defined benefit pension plan costs are determined using actuarial methods and are funded through contributions determined using the projected benefit method, which incorporates management’s best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality.

The Company uses mortality tables issued by the Canadian Institute of Actuaries to measure its benefit obligations of its pension plan. The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans. Pension cost is charged to earnings and includes:

- Cost of pension plan benefits provided in exchange for employee services rendered during the year;
- Interest cost of pension plan obligations;
- Expected return on pension plan assets;
- Amortization of the prior service costs and amendments on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period or from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount or salary inflation experience.

Pension plan assets are measured at fair value. The expected return on pension plan assets is determined using market related values and assumptions on the specific invested asset mix within the pension plans. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contribution occurs.

The Company also provides OPEB other than pensions, including group health care and life insurance benefits for eligible retirees, their spouses and qualified dependents. The cost of such benefits is accrued during the years in which employees render service.

The overfunded or underfunded status of defined benefit pension and OPEB plans is recognized as Deferred amounts and other assets or Other long-term liabilities on the Combined Statements of Financial Position. A plan's funded status is measured as the difference between the fair value of plan assets and the plan's projected benefit obligation. Any unrecognized actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax.

The Company records regulatory adjustments to reflect the difference between certain pension and OPEB costs for accounting purposes and the pension and OPEB costs for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension expense or OPEB costs are expected to be collected from or refunded to customers, respectively, in future rates. In the absence of rate regulation, regulatory balances would not be recorded and pension and OPEB costs would be charged to earnings and OCI on an accrual basis.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or a liability has been incurred, and the amount of the impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES

ADOPTION OF NEW ACCOUNTING STANDARDS

Improving the Presentation of Net Periodic Benefit Cost related to Defined Benefit Plans

Effective January 1, 2018, the Company adopted ASU 2017-07 which was issued primarily to improve the income statement presentation of the components of net periodic pension cost and net periodic postretirement benefit cost for an entity's sponsored defined benefit pension and other postretirement plans. The Company's Combined Statements of Earnings is adjusted to present the current service cost within Operating and administrative expenses and the other components of net benefit cost within Other income/(expense). For the year ended December 31, 2017, $30 million relating to the other components of net benefit cost were reclassified from Operating and administrative expenses to Other income/(expense).

Clarifying Guidance on the Application of Modification Accounting on Stock Compensation

Effective January 1, 2018, the Company adopted ASU 2017-09 and applied the standard on a prospective basis. The new standard was issued to clarify the scope of modification accounting. Under the new guidance, modification accounting is required for all changes to share based payment awards, unless all of the following are met: 1) there is no change to the fair value of the award, 2) the vesting conditions have not changed, and 3) the classification of the award as an equity instrument or a debt instrument has not changed. The adoption of this accounting update did not have a material impact on the Company's Combined Financial Statements.

Clarifying the Presentation of Restricted Cash in the Statement of Cash Flows

Effective January 1, 2018, the Company adopted ASU 2016-18 on a retrospective basis. The new standard clarifies guidance on the classification and presentation of changes in restricted cash and restricted cash equivalents within the statement of cash flows. The amendments require that changes in restricted cash and restricted cash equivalents be included within cash and cash equivalents when reconciling the opening and closing period amounts shown on the statement of cash flows. For current and comparative periods, the Company amended the presentation in the Combined Statements of Cash Flows to include restricted cash with cash and cash equivalents. Net cash provided by operating activities on the Combined Statements of Cash Flows for the year ended December 31, 2017 have decreased by $36 million to reflect the change in presentation.

Simplifying Cash Flow Classification
Effective January 1, 2018, the Company adopted ASU 2016-15 on a retrospective basis. The new standard reduces diversity in practice of how certain cash receipts and cash payments are classified in the statement of cash flows. The new guidance addresses eight specific presentation issues. The Company assessed each of the eight specific presentation issues and the adoption of this ASU did not have a material impact on the Company's Combined Financial Statements.

Recognition and Measurement of Financial Assets and Liabilities
Effective January 1, 2018, the Company adopted ASU 2016-01 on a prospective basis. The new standard addresses certain aspects of recognition, measurement, presentation and disclosure of financial assets and liabilities. Investments in equity securities, excluding equity method and consolidated investments, are no longer classified as trading or available-for-sale securities. All investments in equity securities with readily determinable fair values are classified as investments at fair value through net income. Investments in equity securities without readily determinable fair values are measured using the fair value measurement alternative and are recorded at cost minus impairment, if any, plus or minus changes resulting from observable price changes in orderly transactions for an identical or similar investment of the same issuer. Investments in equity securities measured using the fair value measurement alternative are reviewed for indicators of impairment each reporting period. Fair value of financial instruments for disclosure purposes is measured using exit price. The adoption of this accounting update did not have a material impact on the Company's Combined Financial Statements.

Revenue from Contracts with Customers
Effective January 1, 2018, the Company adopted Accounting Standard Update (ASU) 2014-09 on a modified retrospective basis. The new standard was issued with the intent of significantly enhancing consistency and comparability of revenue recognition practices across entities and industries. The new standard establishes a single, principles-based five-step model to be applied to all contracts with customers and introduces new and enhanced disclosure requirements. It also requires the use of more estimates and judgments than the previous standards along with additional disclosures. For additional details on the adoption of the new standard, see Note 4.

The following ASU's have been issued, but not yet adopted:

Clarifying Interaction between Collaborative Arrangements and Revenue from Contracts with Customers
In November 2018, ASU 2018-18 was issued to provide clarity on when transactions between entities in a collaborative arrangement should be accounted for under the new revenue standard, ASC 606. In determining whether transactions in collaborative arrangements should be accounted under the revenue standard, the update specifies that entities shall apply unit of account guidance to identify distinct goods or services and whether such goods and services are separately identifiable from other promises in the contract. ASU 2018-18 also precludes entities from presenting transactions with a collaborative partner which are not in scope of the new revenue standard together with revenue from contracts with customers. The accounting update is effective January 1, 2020 and early adoption is permitted. The Company is currently assessing the impact of the new standard on the Combined Financial Statements.

Amended Guidance on Cloud Computing Arrangements

In August 2018, ASU 2018-15 was issued to provide guidance on the accounting for implementation costs incurred in a cloud computing arrangement (CCA) that is a service contract. The amendment aligns the accounting for costs incurred to implement a CCA that is a service arrangement with the guidance on capitalizing costs associated with developing or obtaining internal-use software. Additionally ASU 2018-15 specifies that an entity would apply ASC 350-40 to determine which implementation costs related to a hosting arrangement that is a service contract should be capitalized and which should be expensed. Furthermore, the amendments in the update require capitalized costs be amortized on a straight-line basis generally over the term of the arrangement and presented in the same income statement line as fees paid for the hosting service. The new standard also requires that the balance sheet presentation of capitalized implementation costs to be the same as that of the prepayment of fees related to the hosting arrangement, as well as similar consistency in classifications from a cash flow statement perspective. ASU 2018-15 is effective January 1, 2020 and the Company has elected to early adopt the standard as of January 1, 2019, as permitted. The Company does not expect the adoption of this accounting update to have a material impact on the Combined Financial Statements.

Disclosure Effectiveness

In August 2018, the Financial Accounting Standards Board issued two amendments as a part of its disclosure framework project aimed to improve the effectiveness of disclosures in the notes to financial statements.

ASU 2018-14 was issued in August 2018 to improve disclosure requirements for employers that sponsor defined benefit pension or other postretirement plans. The amendment modifies ASC 715, Compensation - Retirement Benefits, by adding and removing several disclosure requirements while also clarifying the guidance on current disclosure requirements. ASU 2018-14 is effective January 1, 2021 and entities are permitted to adopt the standard early. The Company is currently assessing the impact of the new standard on the Combined Financial Statements.

ASU 2018-13 was issued to modify the disclosure requirements in ASC 820, Fair Value Measurement. The amendments in ASU 2018-13 eliminate and modify some disclosures, while also adding new disclosures for fair value measurements. This update is effective January 1, 2020, however entities are permitted to early adopt the eliminated or modified disclosures. The Company is currently assessing the impact of the new standard on the Combined Financial Statements.

Accounting for Credit Losses

ASU 2016-13 was issued in June 2016 with the intent of providing financial statement users with more useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. Current treatment uses the incurred loss methodology for recognizing credit losses that delays the recognition until it is probable a loss has been incurred. The accounting update adds a new impairment model, known as the current expected credit loss model, which is based on expected losses rather than incurred losses. Under the new guidance, an entity will recognize as an allowance its estimate of expected credit losses, which the Financial Accounting Standards Board believes will result in more timely recognition of such losses.

Further, ASU 2018-19 was issued in November 2018 to clarify that operating lease receivables should be accounted for under the new leases standard, ASC 842, and are not within the scope of ASC 326, Financial Instruments - Credit Losses. Both accounting updates are effective January 1, 2020. The Company is currently assessing the impact of the new standard on the Combined Financial Statements.

Recognition of Leases

ASU 2016-02 was issued in February 2016 with the intent to increase transparency and comparability among organizations. It requires lessees of operating lease arrangements to recognize lease assets and lease liabilities on the statement of financial position and disclose additional key information about lease agreements. The accounting update also replaces the current definition of a lease and requires that an arrangement be recognized as a lease when a customer has the right to obtain substantially all of the economic benefits from the use of an asset, as well as the right to direct the use of the asset. The new standard became effective January 1, 2019, in adopting ASC 842, the Company has applied the package of practical expedients offered in connection with this update. Application of the package of practical expedients permits entities not to reassess a) whether any expired or existing contracts contain leases in accordance with the new guidance, b) lease classifications, and c) whether initial direct costs capitalized under current guidance continue to meet the definition of initial direct costs under the new guidance. Under the new lease guidance, the Company has also decided to elect, by class of underlying asset, to not separate non-lease components from the associated lease components of our lessee contract and account for both components as a single lease component.

ASU 2018-01 was issued in January 2018 to address stakeholder concerns about the costs and complexity of complying with the transition provisions of the new lease requirements as they relate to land easements. The amendments provide an optional transition practical expedient to not evaluate existing or expired land easements that were not previously accounted for as leases under existing guidance. The Company has elected to use this practical expedient in connection with the adoption of the new lease requirements.

In July 2018, ASU 2018-11 was issued to address additional stakeholder concerns regarding the unanticipated costs and complexities associated with the modified retrospective transition method as well as the requirement for lessors to separate components of a contract. Under the new guidance, entities are provided with an additional transition method which allows entities to apply the new standard at the date of adoption and to elect not to recast comparative periods presented. This amendment also permits lessors to combine associated lease and non-lease components within a contract for operating leases when certain conditions are met. The Company elected both of these practical expedients in the adoption of the new lease standard.

The Company has identified all lease contracts existing as at November 30, 2018 and performed detailed evaluations of those lease contracts under the requirements of the transitional guidance. The Company estimates that it will recognize right-of-use lease assets and related lease liabilities for existing operating leases where it is the lessee in the range of $50 million to $75 million, with no impact to the Combined Statements of Earnings or Combined Statements of Cash Flows. This estimate represents the net present value of future lease payments payable under operating lease contracts the Company has entered into as at November 30, 2018, and that have commenced or are scheduled to commence by January 1, 2019. The Company does not expect any adjustments will be made to its accounting for existing lessor contracts as a result of implementing this new standard.

4. REVENUE

REVENUE FROM CONTRACTS WITH CUSTOMERS

Major Services

December 31,	**2018**
(millions of Canadian dollars)	
Gas commodity and distribution revenue - residential	**2,894**
Gas commodity and distribution revenue - commercial and industrial	**1,385**
Storage revenue	**147**
Transportation revenue	**843**
Other revenue	**46**
Total revenue from contracts with customers	**5,315**
Other	**(18)**
Total operating revenues	**5,297**

The Company disaggregates revenue into categories which represent its principal performance obligations because these revenue categories represent the most significant revenue streams, and consequently are considered to be the most relevant revenue information for management to consider in evaluating performance.

Contract Balances

	Receivables	Contract Liabilities
(millions of Canadian dollars)		
Balance as at January 1, 2018	801	75
Balance as at December 31, 2018	589	63

Receivables represent an unconditional right to consideration where only the passage of time is required before payment of consideration is due and consist of trade accounts receivable, unbilled revenue and other accrued receivable balances.

Contract liabilities represent payments received for performance obligations which have not been fulfilled, under the Company's equal billing and budget billing programs. Revenue recognized during the year ended December 31, 2018 included in contract liabilities at the beginning of the period is $75 million. Increases in contract liabilities from cash received, net of amounts recognized as revenue during the year ended December 31, 2018 were $63 million.

Performance Obligations

	Nature of Performance Obligation
Gas commodity and distribution revenue	• Supply and delivery of natural gas to customers.
Storage and transportation revenue	• Storage and transportation of natural gas on behalf of customers.
Other revenue	• Other billing and service fees.

The amount of revenue recognized in the current period from performance obligations satisfied in previous periods was a reduction of $12 million, primarily resulting from differences in actual and estimated consumption, as discussed below in *Significant Judgments Made in Recognizing Revenue*. The associated reduction in gas commodity and distribution costs were also recognized in the current period.

Payment Terms

Payments from distribution revenue customers are received on a continuous basis based on established billing cycles. The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. Payments from transportation revenue customers are received on a continuous basis based on established billing cycles, or monthly under long-term transportation capacity contracts. Payments from storage customers are received monthly under long-term storage capacity contracts.

Revenue to be Recognized from Unfulfilled Performance Obligations

Total revenue from performance obligations expected to be fulfilled in future periods is $755 million, of which $442 million is expected to be recognized during the year ending December 31, 2019.

The amounts above reflect revenues expected to be recognized in future periods from unfulfilled performance obligations pursuant to contracts with customers for the purchase of natural gas distribution, transportation and storage services. The Company uses the optional exemption available under ASC 606 whereby certain revenues such as flow through costs charged to customers are recognized at the amount for which the Company has the right to invoice its customers. Those revenues are not included in the amounts above. The Company also uses the optional exemption available under ASC 606 whereby revenues from contracts with customers which have an original expected duration of one year or less are excluded from the amounts above. Variable consideration is excluded from the amounts above due to the uncertainty of the associated consideration, which is generally resolved when actual volumes and prices are determined. For example, the Company considers interruptible transportation service revenues to be variable revenues since volumes cannot be estimated. A significant portion of the Company's operations are subject to regulation and accordingly the amounts above only include, where applicable, revenue for which the underlying rate has been approved by regulation. The revenues excluded from the amounts above, as explained, represent a significant portion of the Company's overall revenues and revenues from contracts with customers.

SIGNIFICANT JUDGEMENTS MADE IN RECOGNIZING REVENUE

Revenue Recognition

Revenues from contracts with customers are generally recognized upon the fulfillment of the performance obligations as described above. Distribution and transportation service revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company’s distribution franchise areas.

A significant portion of the Company’s operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue under such circumstances is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the regulator. This may give rise to regulatory deferral accounts pending disposition by decisions of the regulator, which follow the accounting guidance found in *ASC 980 - Regulated Operations*.

Recognition and Measurement of Revenue

Timing of Revenue Recognition

December 31,	**2018**
(millions of Canadian dollars)	
Revenue from products and services transferred over time[1]	**5,246**
Revenue from products transferred at a point in time[2]	**69**
Total revenue from contracts with customers	**5,315**

1 Revenue from distribution, transportation and storage services.
2 Primarily from other revenue.

Performance Obligations Satisfied Over Time

For distribution and transportation services arrangements where the services are simultaneously received and consumed by the customer, the Company recognizes revenue over time using an output method based on volumes of commodities delivered.

Revenue from storage services are recognized as the storage services are provided.

Determination of Transaction Prices

Prices for distribution and transportation services and regulated storage services are prescribed by regulation. Fees for unregulated storage services are determined through negotiations with customers based on market rates. Prices for the natural gas commodity are driven by market prices and the Company has a quarterly rate adjustment mechanism in place that allows for rates to reflect changes in natural gas prices, subject to regulatory approval.

METHOD AND EFFECTS OF ADOPTION

The Company has adopted ASC 606 using the modified retrospective method, whereby prior periods are not restated for the effect of ASC 606. Results for 2018 have been presented as if ASC 606 had been in effect as at January 1, 2018.

The following table presents the effect of the adoption of ASC 606 on the Company's Combined Statement of Earnings for the year ended December 31, 2018 on each affected financial statement line item along with explanations of those effects:

December 31,	**2018**
(millions of Canadian dollars)	
Gas commodity and distribution revenue	**(27)**
Earnings sharing	**(27)**

The Company is required by the terms of its regulated tariff to refund a portion of its earnings in excess of an amount specified by the regulator to its customers, referred to as the Earnings Sharing Mechanism (ESM). Previously, this amount was shown in the Combined Statements of Earnings as an operating expense. Under ASC 606, payments to customers are accounted for as reductions to revenue unless the payment is in exchange for a distinct good or service. Accordingly, payments under the ESM are shown as reductions of revenue in the Combined Statements of Earnings from January 1, 2018 forward. For the year ended December 31, 2018, this change in presentation resulted in a reduction of $27 million in the Gas commodity and distribution revenue and Earnings sharing financial statement line items.

5. ASSETS HELD FOR SALE

In August 2017, EGD entered into an agreement to sell the issued and outstanding shares of its wholly-owned subsidiary, St. Lawrence Gas, for cash of approximately $96 million (US $70 million), minus third-party debt at closing and subject to customary working capital adjustments. The transaction is subject to regulatory approval and certain pre-closing conditions, and is expected to close in 2019. As at December 31, 2018, St. Lawrence Gas was classified as held for sale on the Combined Statements of Financial Position and was measured at the lower of its carrying value and fair value less costs to sell. Included within Assets held for sale, long-term as at December 31, 2018 is $102 million (December 31, 2017 - $94 million) related to Property, plant and equipment, net. No impairment loss was recognized on the classification of St. Lawrence Gas as held for sale. Any gain or loss on the sale will be measured and recorded at the date that the transaction closes.

6. REGULATORY MATTERS

GENERAL INFORMATION ON RATE REGULATION AND ITS ECONOMIC EFFECTS

The Company is regulated by the OEB pursuant to the provisions of the *Ontario Energy Board Act*, (1998), which is part of a package of legislation known as the *Energy Competition Act*, (1998). This legislation provides for different forms of regulation and competition in the energy (electricity and natural gas) industry in Ontario.

The Company records assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities.

RATE APPROVALS

Enbridge Gas Distribution Inc.

EGD’s distribution rates, beginning in 2014 through 2018, were set under a five-year customized incentive regulation (IR) plan. The plan required EGD to update select items in each of 2015 through 2018, in order to establish final allowed revenues and rates. Under the customized IR plan, EGD shared equally with customers, earnings above the annually approved allowed return on equity.

Union Gas Limited
Union Gas' distribution rates, beginning in 2014 through 2018, were set under a five-year IR plan which established new rates at the beginning of each year through the use of a pricing formula, rather than through the examination of revenue and cost forecasts. The IR plan included an earnings sharing mechanism with customers, that permitted Union Gas to fully retain the return on equity from utility operations up to 9.93%, to retain 50% of any earnings between 9.93% and 10.93%, and to retain 10% of any earnings above 10.93%.

St. Lawrence Gas Company, Inc.
St. Lawrence Gas is currently in a rate year ending May 31, 2019, according to the a NYSPSC order establishing a three year rate plan beginning June 1, 2016. In each rate year, St. Lawrence Gas' rates were set using a Cost of Service (COS) methodology. Under COS, revenues are set to recover costs and to earn a rate of return on the deemed common equity component of rate base. Costs include natural gas commodity and transportation, operating and administrative, depreciation and amortization, interest and income taxes. Rate base is the average level of investment in all recoverable assets used in natural gas distribution, storage and transmission and an allowance for working capital. Gas costs are not recovered through revenue rates, but are set separately in gas cost rates.

The three year rate plan includes an earnings sharing mechanism that permits St. Lawrence Gas to fully retain the return on equity from operations up to 9.5%, share 50% of any earnings between 9.5% and 10.0% with customers, share 80% of any earnings between10.0% to 10.5% with customers and share 90% of any earnings over 10.5% with customers.

Under COS, it is the responsibility of St. Lawrence Gas to demonstrate to the NYSPSC the prudence of the costs incurred or to be incurred or the activities undertaken or to be undertaken.

APPROVED RETURNS ON EQUITY
Enbridge Gas Distribution Inc.
EGD's rates for 2018 included an after-tax rate of return on common equity of 9.00% (2017 - 8.78%) based on a 36% (2017 - 36%) deemed common equity component of rate base.

Union Gas Limited
Union Gas' approved after-tax return on common equity is fixed at 8.93% for the five-year IR term based on a 36% deemed common equity component of rate base.

St. Lawrence Gas Company, Inc.
St. Lawrence Gas' approved after-tax rate of return on common equity embedded in rates was 9.0% for the rate year ended May 31, 2019 (fiscal 2017 - 9.0%) based on a 48% (fiscal 2017 - 48%) deemed common equity component of rate base.

APPLICATION TO AMALGAMATE
In November 2017, EGD and Union Gas (together, the Applicants) filed two applications with the OEB consisting of an application to amalgamate in accordance with the OEB's guidance for Mergers, Acquisitions, Amalgamations and Divestitures (MAADs), and an application seeking approval of the rate setting mechanism to be utilized over the deferred rebasing period, both with an effective date of January 1, 2019. Under the OEB's MAADs policy, the Applicants are able to seek to defer rate rebasing, to allow them the opportunity to identify and leverage best practices and implement integrated solutions.

On August 30, 2018, the Applicants received a decision from the OEB (the MAADs Decision) which approved the application to amalgamate. The MAADs Decision also approved the rate setting mechanism to be employed during a five-year deferred rebasing period from 2019 through 2023, after which time rates will be rebased. In accordance with the approved rate setting mechanism, rates in each year of the five-year deferred rebasing period will be set under a price cap mechanism, which includes annual base rate escalation at inflation less a 0.3% stretch factor, annual updates for certain costs to be passed through to customers, and where applicable the inclusion of incremental capital module amounts which allow for the recovery of material discrete incremental capital investments beyond which can be funded through base rates. The MAADs Decision also approved the continuation and establishment of certain deferral and variance accounts, as well as an earnings sharing mechanism that requires the amalgamated entity to share equally with customers, any earnings in excess of 150 basis points over the OEB approved rate of return on equity. In the fourth quarter of 2018, in accordance with the approved rate setting mechanism, the Applicants filed a rate application seeking approval for the establishment of rates effective January 1, 2019.

On October 15, 2018, Enbridge announced that it would move forward with the amalgamation of EGD and Union Gas. On January 1, 2019, EGD and Union Gas amalgamated and the Company has continued as Enbridge Gas.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2018**	2017	Combined Statements of Financial Position	Recovery/Refund Period Ends
(millions of Canadian dollars)				
Current regulatory assets				
Purchase gas variance[1]	**169**	55	AR	2019
Short-term debt[8]	**—**	12	AR	2018
Other current regulatory assets	**124**	152	AR	2019
Total current regulatory assets	**293**	219		
Long-term regulatory assets				
Deferred income taxes - long-term[2]	**1,131**	998	DA	Various
Pension plan receivable[3]	**60**	42	DA	Various
OPEB[4]	**58**	62	DA	Various
Long-term debt[8]	**387**	413	DA	Various
Other long-term regulatory assets	**—**	23	DA	Various
Total long-term regulatory assets	**1,636**	1,538		
Total regulatory assets[5]	**1,929**	1,757		
Current regulatory liabilities				
Site restoration clearance adjustment[6]	**—**	31	AP	2018
Other current regulatory liabilities	**135**	72	AP	2019
Total current regulatory liabilities	**135**	103		
Long-term regulatory liabilities				
Future removal and site restoration reserves[7]	**1,356**	1,296	OLTL	Various
Other long-term regulatory liabilities	**24**	7	OLTL	Various
Total long-term regulatory liabilities	**1,380**	1,303		
Total regulatory liabilities[5]	**1,515**	1,406		

AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities

1 *Purchase gas variance is the difference between the actual cost and the approved cost of natural gas reflected in rates. The Company has been granted OEB approval to refund this balance to, or collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process.*

2 The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.

3 The pension plan balance represents EGD's regulatory offset to the pension liability to the extent the amounts are to be collected in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation accounting, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.

4 The OPEB balance represents EGD's right to recover OPEB costs resulting from the adoption of the accrual basis of accounting for OPEB costs upon transition to US GAAP in 2012. Pursuant to the OEB rate order, the amount as at December 31, 2012 is to be collected in rates over a 20-year period that commenced in 2013. In the absence of rate regulation accounting, this regulatory balance and related earnings impact would not be recorded.

5 All regulatory assets and liabilities are excluded from rate base unless otherwise noted.

6 The site restoration clearance adjustment represents the amount that was determined by the OEB for EGD of previously collected costs for future removal and site restoration that was considered to be in excess of future requirements and was refunded to customers over the customized IR term.

7 Future removal and site restoration reserves result from amounts collected from customers by the Company, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment that is recorded in rates. The balance represents the amount that the Company has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation accounting, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.

8 The debt balance represents the Company's regulatory offset to the fair value adjustment to debt pushed down to Union Gas. The offset is viewed as a proxy for the regulatory asset that would be recorded in the event such debt was extinguished at an amount higher than the carrying value.

OTHER ITEMS AFFECTED BY RATE REGULATION

Operating Cost Capitalization

In the absence of rate regulation accounting, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred.

With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation accounting, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs, primarily consulting fees, were being capitalized to gas mains in accordance with regulatory approval. At December 31, 2018, the net book value of these costs included in gas mains in Property, plant and equipment, net was $110 million (2017 - $118 million). In the absence of rate regulation accounting, some of these costs would be charged to earnings in the year incurred.

WAMS is EGD's integrated work and asset management solution. At December 31, 2018, the net book value of the asset included in intangible assets was $68 million (2017 - $77 million). In the absence of rate regulation accounting, a portion of the original cost of the asset would have been expensed in the period incurred.

Gas Inventories

Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2018 is $59 million (2017 - $55 million) related to EGD storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation accounting, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation
In the absence of rate regulation accounting, depreciation rates would not have included a charge for future removal and site restoration costs.

7. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2018**	2017
(millions of Canadian dollars)		
Trade receivables	**548**	574
Unbilled revenues	**270**	411
Gas imbalances[1]	**84**	251
Regulatory assets *(Note 6)*	**293**	219
Rebillables receivable	**110**	76
Other	**45**	147
Allowance for doubtful accounts *(Note 15)*	**(38)**	(35)
	1,312	1,643

[1]The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Combined Statements of Financial Position dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

8. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	**2018**	2017
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas mains	**2.33%**	**8,921**	8,502
Gas services	**2.46%**	**4,983**	4,824
Regulating and metering equipment	**4.14%**	**2,333**	2,243
Storage	**2.46%**	**985**	981
Other operating equipment	**2.94%**	**2,093**	2,053
Land and right-of-way	**0.84%**	**342**	338
Under construction	**—**	**193**	138
		19,850	19,079

		566	553
Accumulated depreciation		**(171)**	(165)
		395	388
Property, plant and equipment, net		**14,818**	14,344

Depreciation expense, including amounts collected for future removal and site restoration costs, was $540 million for the year ended December 31, 2018 (2017 - $476 million).

Included within depreciation expense is $22 million for the year ended December 31, 2018 (2017 - $22 million) in incremental depreciation resulting from push-down accounting *(Note 2)*.

9. INTANGIBLE ASSETS

December 31,	**2018**	2017
(millions of Canadian dollars)		
Intangible assets		
Software and Customer Information System (CIS)	**586**	536
Emission allowances	**—**	638
	586	1,174
Less: Accumulated amortization	**(377)**	(319)
Intangible assets, net	**209**	855

Intangible assets consist primarily of software and emission allowances. From January 1, 2017 through July 3, 2018, emission allowances were purchased by the Company for itself and most of its customers in order to meet greenhouse gas compliance obligations in the province of Ontario. Purchased emission allowances were recorded at their original cost and were not amortized, as they were intended to satisfy compliance obligations as they became due. On October 31, 2018, Bill 4 received Royal Assent from the government of Ontario, providing for the wind down of the Cap and Trade program. This resulted in an elimination of $990 million in emission allowances in the fourth quarter of 2018.

For the year ended December 31, 2018, the weighted average amortization rate for software and CIS was 12.6% (2017 - 15.9%).

Intangible assets include $33 million of work-in-progress as at December 31, 2018 (2017 - $22 million). Total amortization expense for intangible assets was $68 million for the year ended December 31, 2018 (2017 - $78 million). The Company expects aggregate amortization expense for the years ending December 31, 2019 through 2023 of $82 million, $64 million, $39 million, $34 million, and $35 million, respectively.

10. DEFERRED AMOUNTS AND OTHER ASSETS

December 31,	**2018**	2017
(millions of Canadian dollars)		
Regulatory assets *(Note 6)*	**1,636**	1,538
Pension and OPEB assets	**29**	35
Other	**266**	289
	1,931	1,862

11. ACCOUNTS PAYABLE AND OTHER

December 31,	**2018**	2017
(millions of Canadian dollars)		
Accrued liabilities	**449**	391
Trade payables	**253**	240
Gas imbalances[1]	**84**	251
Regulatory liabilities *(Note 6)*	**135**	103
Other	**394**	401
	1,315	1,386

[1]The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Combined Statements of Financial Position dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

12. DEBT

December 31,	Weighted Average Interest Rate	Maturity	**2018**	2017
(millions of Canadian dollars)				
Enbridge Gas Distribution Inc.

Loans from affiliate companies *(Note 20)*			**950**	375

1 The balance pertaining to St. Lawrence Gas amounting to approximately $10 million as at December 31, 2018 (2017 - $9 million) is presented as Liabilities held for sale, long-term (Note 5) on the Combined Statements of Financial Position.
2 Consists of debt discounts and debt issuance costs.
3 The balance in 2018 pertaining to St. Lawrence Gas amounting to approximately $33 million (2017 - $30 million) is presented as Liabilities held for sale, current (Note 5) on the Combined Statements of Financial Position.

In September 2018, EGD borrowed $300 million from its parent company, Enbridge through a subordinated promissory note at an interest rate of 3.37%, payable quarterly in arrears. This note matures in September 2028.

In October 2018, Union Gas borrowed $650 million from Westcoast Energy Inc., an affiliate under common control, through a subordinated promissory note at an interest rate of 3.65%, payable semi-annually in arrears. This note matures in October 2028.

In November 2017, EGD issued $300 million of thirty-year medium-term notes (MTNs) at an interest rate of 3.51% payable semi-annually in arrears. This MTN matures in November 2047.

In November 2017, Union Gas issued $250 million of ten-year MTNs at an interest rate of 2.88% payable semi-annually in arrears. This MTN matures in November 2027.

In November 2017, Union Gas also issued $250 million of thirty-year MTNs at an interest rate of 3.59% payable semi-annually in arrears. This MTN matures in November 2047.

For the years ending December 31, 2019 through 2023, debentures and medium-term note maturities are $nil, $400 million, $375 million, $125 million and $350 million, respectively. The Company's debentures and medium-term notes bear interest at fixed rates, and interest obligations for the years ending December 31, 2019 through 2023 are $321 million, $319 million, $301 million, $286 million and $276 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Debentures, senior debenture and medium-term notes	**338**	320
Loans from affiliate company *(Note 20)*	**34**	29
Commercial paper and credit facility draws	**16**	13
Other interest and finance costs	**8**	8
Capitalized	**(5)**	(14)
	391	356

In 2018, total interest paid to third parties was $357 million (2017 - $327 million) and total interest paid to affiliates was $34 million (2017 - $29 million).

The Company's borrowings, whether senior debentures or MTNs, are unsecured.

CREDIT FACILITIES

EGD had a $1 billion commercial paper program that was backstopped by committed lines of credit of $1 billion. The issuance of commercial paper and revolving borrowings reduce the amount available under this credit facility. The maturity date of the credit facility may be extended annually for an additional year from the end of the applicable revolving term, at the lender's option. In July 2018, EGD extended the term out date of this external credit facility to July 2019, with a maturity date in July 2020.

Union Gas had a $700 million commercial paper program that was backstopped by committed lines of credit of $700 million. The issuance of commercial paper, letters of credit and revolving borrowings reduce the amount available under this credit facility. The credit facility has a maturity date of April 2021.

The Company actively manages its bank funding sources to ensure adequate liquidity and to optimize pricing and other terms. The following table provides details of the Company's credit facilities at December 31, 2018.

				December 31, 2018	December 31, 2017
	Maturity Dates	Total Facilities	Draws[1]	Available	Total Facilities
(millions of Canadian dollars)					
Enbridge Gas Distribution Inc.[3]	2020	**1,000**	**750**	**250**	1,000
St. Lawrence Gas Company, Inc.	2019	**18**	**10**	**8**	16
Union Gas Limited[2, 3]	2021	**700**	**275**	**425**	700
Total credit facilities		**1,718**	**1,035**	**683**	1,716

1 Includes facility draws and commercial paper issuances, net of discount, that are back-stopped by the external credit facility. St. Lawrence Gas draws are shown as Liabilities held for sale, current and long-term on the Combined Statements of Financial Position.

2 The credit facility contains a covenant requiring the debt-to-total capitalization ratio, as defined in the agreement, to not exceed 75% and a provision which requires Union Gas to repay all borrowings under the facility for a period of two days during the second quarter of each year.

3 On February 7, 2019, the Company extended the term out date of its external credit facility to July 2020, with a maturity date in July 2021 and increased the size of total commitments to $2 billion. The Company's credit facility, through Union Gas was terminated on February 7, 2019.

Credit facilities carried a weighted average standby fee of 0.12% on the unused portion and the draws bear interest at market rates.

DEBT COVENANTS

The Company's credit facility agreements and term debt indentures include standard events of default and covenant provisions whereby accelerated repayment and/or terminations of the agreements may result if the Company were to default on payment or violate certain covenants. As at December 31, 2018 the Company was in compliance with all debt covenants.

13. SHARE CAPITAL

At December 31, 2018, the authorized share capital of the Company consisted of an unlimited number of common shares with no par value and a limited number of preference shares.

COMMON SHARES

	2018		2017	
December 31,	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of common shares in millions)				
Enbridge Gas Distribution Inc.				
Balance at beginning of year	**213**	**2,417**	185	1,917
Common shares issued	**20**	**350**	28	500

Balance at end of year *(Note 20)*	**58**	**713**	58	657

1 In February 2018 Union Gas Gas issued 621,866 shares for $57 million. Total Union Gas shares outstanding 58,444,516.

On January 1, 2019, EGD and Union Gas amalgamated to form Enbridge Gas. Enbridge Gas authorized unlimited common shares and Enbridge Energy Distribution Inc. (EEDI), which wholly-owned EGD, was issued 281,881,334 Class A common shares in exchange for 232,749,988 EGD common shares and 621,866 Union Gas Class A common shares. Great Lakes Basin Energy L.P. (GLBE), which owned 99% of Union Gas, was issued 240,020,243 Class B common shares in exchange for 57,822,650 Union Gas common shares. Both classes of common shares are identical in every respect. Dividends cannot be paid to one class without paying dividends on the other.

PREFERENCE SHARES

December 31,		**2018**		2017	
	Authorized	Issued and Outstanding	Amount	Issued and Outstanding	Amount

			—		210

1 *Floating adjustable cumulative cash dividends on the Group 3, Series D preference shares are payable at 80% of the prime rate. EGD has the option to redeem the shares for $25.50 per share if the preference shares are publicly traded, and for $25.00 per share in all other circumstances, together with accrued and unpaid dividends in each case.*

2 *Class A, Series A and Class A, Series C preference shares are cumulative and redeemable at $50.50 per share. Union Gas is obligated to offer to purchase $170,000 of Series A and $140,000 of series C shares annually at the lowest price obtainable, but not exceeding $50 per share.*

3 *Class A, Series B preference shares are cumulative and redeemable at $55 per share at the option of Union Gas.*

4 *Class B, Series 10 preference shares are cumulative and redeemable at $25 per share at the option of Union Gas and, at the option of the holders, convertible back into Series 11 shares once every five years commencing January 1, 2014. The holders of the Class B, Series 10 preference shares did not exercise their option on January 1, 2014. Union Gas may redeem at any time at all, but not less than all, of the outstanding Series 10 Shares. The dividend rate of the Series 10 Shares is floating at an annual rate equal to 80% of the prime rate until December 31, 2018.*

On November 29, 2018, EGD redeemed all outstanding Group 3, Series D preference shares for $25.00 per share and Union Gas redeemed all outstanding preference shares for the following amounts per share: Class A, Series A - $50.50; Class A, Series B - $55.00; Class A, Series C - $50.50 and Class B, Series 10 - $25.00. On January 1, 2019, all classes of the preference shares were canceled and an unlimited number of new preference shares were authorized, however no preference shares have been issued at this time.

14. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE INCOME/(LOSS)

15. RISK MANAGEMENT AND FINANCIAL INSTRUMENTS

MARKET RISK

The Company's earnings, cash flows and OCI are subject to movements in natural gas prices, foreign exchange rates and interest rates (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which the Company is exposed and the risk management instruments used to mitigate them. The Company uses a combination of qualifying and non-qualifying derivative instruments to manage the risks noted below.

Natural Gas Price Risk

Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customers; therefore, the net exposure to the Company is zero.

Foreign Exchange Risk

Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. The Company generates certain revenues and holds a subsidiary that is denominated in USD. As a result, the Company's earnings, cash flows, and OCI are exposed to fluctuations resulting from USD exchange rate variability.

The Company implemented a policy to hedge a portion of USD denominated unregulated storage revenue exposures. Qualifying derivative instruments are used to hedge anticipated USD denominated revenues and to manage variability in cash flows.

A portion of the Company's purchases of natural gas are denominated in USD and as a result there is exposure to fluctuations in the exchange rate of the USD against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to the customer; therefore, the Company has no net exposure to movements in the foreign exchange rate on natural gas purchases.

The Company did not have any outstanding derivative instruments relating to net investment hedges as at December 31, 2018 and December 31, 2017.

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps are used to hedge against the effect of future interest rate movements. The Company has implemented a program to significantly mitigate the impact of short-term interest rate volatility on interest expense via execution of floating to fixed interest rate swaps with an average swap rate of 2.3%.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to hedge against the effect of future interest rate movements. The Company has implemented a program to significantly mitigate its exposure to long-term interest rate variability on select forecast term debt issuances via execution of floating to fixed interest rate swaps with an average swap rate of 2.7%.

The Company's portfolio mix of fixed and variable rate debt instruments is monitored by its ultimate parent company, Enbridge. The Company does not typically manage the fair value of its debt instruments.

TOTAL DERIVATIVE INSTRUMENTS
The following table summarizes the financial statement line item in the Combined Statements of Financial Position and carrying value of the Company's derivative instruments.

The Company generally has a common practice of entering into individual International Swaps and Derivatives Association, Inc. (ISDA) agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in those particular circumstances. The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Combined Statements of Financial Position.

December 31, 2018	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)

The Effect of Derivative Instruments on the Combined Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's combined earnings and comprehensive income, before the effect of income taxes.

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Amount of unrealized loss recognized in OCI cash flow hedges		
Interest rate contracts	**(5)**	—
Foreign exchange contracts	**(1)**	—
	(6)	—
Amount of loss reclassified from AOCI to earnings *(effective portion)*		
Interest rate contracts[1]	**(4)**	(4)
	(4)	(4)
Amount of loss reclassified from AOCI to earnings *(ineffective portion)*		
Interest rate contracts[1]	**—**	—
	—	—

1 Reported within Interest expense in the Combined Statements of Earnings.

The Company estimates a loss of $1 million of AOCI related to cash flow hedges will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on interest and foreign exchange rates in effect when derivative contracts that are currently outstanding mature.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under committed credit facilities and long-term debt, which includes debentures and medium term notes (MTNs) and, if necessary, additional liquidity is available through intercompany transactions with its ultimate parent, Enbridge, and other related entities. These sources are expected to be sufficient to enable the Company to fund all anticipated requirements. The Company also maintains committed credit facilities with a diversified group of banks and institutions. The Company is in compliance with all the terms and conditions of its committed credit facilities as at December 31, 2018. As a result, all credit facilities are available to the Company and the banks are obligated to fund the Company under the terms of the facilities.

CREDIT RISK

Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has obtained additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts, which totaled $38 million at December 31, 2018 (December 31, 2017 - $35 million).

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

FAIR VALUE MEASUREMENTS

The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and are supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

The Company has group credit concentrations and maximum credit exposure, with respect to derivative instruments, in the following counterparty segments:

December 31,	**2018**	2017
(millions of Canadian dollars)		
Canadian financial institutions	—	1
Other	—	—
	—	1

FAIR VALUE MEASUREMENTS
The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and are supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

FAIR VALUE OF FINANCIAL INSTRUMENTS
The Company categorizes its derivative instruments measured at fair value into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1
Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2
Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3
Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support a Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest, foreign exchange, and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2018, the Company had Level 2 derivative assets with fair value of $nil (2017 - $1 million) and Level 2 derivative liabilities with fair value of $6 million (2017 - $nil). The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers between levels as at December 31, 2018 or December 31, 2017.

FAIR VALUE OF OTHER FINANCIAL INSTRUMENTS

The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at the fair value measurement alternative. The Company's investment in IPL System Inc. (IPL), an affiliate company, was recorded at fair value. In December 2018, IPL redeemed all of its Class D preference shares held by the EGD for $825 million. As at December 31, 2018, the fair value of the investment was $nil (2017 - $825 million). The fair value of the Company's investment was classified as a Level 2 measurement and as at December 31, 2018 and 2017 the fair value approximated its cost and redemption value and therefore no amount was recognized in net income.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2018, the Company's long-term debt, including the current portion had a carrying value of $7,195 million (2017 - $7,595 million) before debt issue costs and a fair value of $7,855 million (2017 - $8,690 million).

The fair value of other financial assets and liabilities other than derivative instruments and long-term debt approximate their cost due to the short period to maturity.

16. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Earnings before income taxes	**625**	390
Federal statutory income tax rate	**15.0%**	15.0 %
Federal income taxes at statutory rate	**94**	59
Increase/(decrease) resulting from:		
Provincial and state income taxes	**(4)**	(17)
Effects of rate regulated accounting[1]	**(56)**	(63)
Non-taxable intercompany distributions[1]	**(9)**	(9)
Part VI.1 tax, net of federal Part I tax deduction[1]	**31**	6
Investment in foreign subsidiaries held for sale *(Note 5)*	**1**	4
Other[2]	**—**	3
Income tax expense/(recovery)	**57**	(17)
Effective income tax rate	**9.1%**	(4.4)%

1 The provincial tax component of these items is included in "Provincial and state income taxes" above.

2 Included in "Other" are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals and entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.

COMPONENTS OF PRETAX EARNINGS AND INCOME TAXES

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Earnings before income taxes		
Canada	**620**	386
United States	**5**	4
	625	390
Current income taxes		
Canada	**88**	27
United States	**—**	—
	88	27
Deferred income taxes		
Canada	**(32)**	(45)
United States	**1**	1
	(31)	(44)
Income tax expense/(recovery)	**57**	(17)

COMPONENTS OF DEFERRED INCOME TAXES

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2018**	2017
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**1,395**	1,292
Regulatory assets	**300**	263
Deferrals	**20**	44
Other	**10**	5
Total deferred income tax liabilities	**1,725**	1,604
Deferred income tax assets		
Future removal and site restoration reserves	**364**	345
Retirement and postretirement benefits	**12**	5
Minimum tax credits	**24**	18
Loss carryforwards	**—**	13
Financial derivatives	**3**	3
Other	**3**	4
Total deferred income tax assets	**406**	388
Net deferred income tax liabilities	**1,319**	1,216

In 2017, the investment in St. Lawrence Gas was classified as held for sale. The Company is no longer asserting permanent reinvestment for this foreign subsidiary's earnings. As such, it recorded a deferred tax liability of $6 million as at December 31, 2018 (2017 - $4 million) on the difference between the carrying value of this foreign subsidiary and its corresponding tax basis. This difference is largely a result of unremitted earnings and currency translation adjustments.

The Company and its subsidiaries are subject to taxation in Canada and the Unites States. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario). The Company is open to examination by Canadian tax authorities for the 2012 to 2018 tax years. The Company is currently under examination for income tax matters in Canada for the 2015 to 2017 tax years.

UNRECOGNIZED TAX BENEFITS

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Unrecognized tax benefits at beginning of year	**45**	38
Gross increases for tax positions of current year	**3**	3
Gross increases for tax positions of prior years	**—**	7
Gross decreases for tax positions of prior years	**(6)**	(2)
Settlements	**(1)**	—
Lapses of statute of limitations	**(2)**	(1)
Unrecognized tax benefits at end of year	**39**	45

The unrecognized tax benefits as at December 31, 2018, if recognized, would affect the Company's effective income tax rate. The Company does not anticipate further adjustments to the unrecognized tax benefits during the next 12 months that would have a material impact on its Combined Financial Statements.

The Company recognizes accrued interest and penalties related to unrecognized tax benefits as a component of income taxes. Income taxes for the years ended December 31, 2018 included $nil (2017 - $nil) recoveries, respectively, of interest and penalties. As of December 31, 2018 and 2017, interest and penalties of $1 million and $1 million, respectively, have been accrued.

17. PENSION AND OTHER POSTRETIREMENT BENEFITS

PENSION PLANS

Substantially all of the Company's employees participate in registered, contributory, and non-contributory pension plans which provide defined benefit and/or defined contribution pension benefits. Certain of the Company's employees are also members of supplemental pension plans that provide pension benefits in excess of the benefits provided in the registered plans.

Defined Benefit Plans

Benefits payable from the defined benefit component of the members' plans are based on each plan member's years of service and final average remuneration. Some benefits are partially inflation-indexed after a plan member's retirement. The Company's contributions are made in accordance with independent actuarial valuations and are invested primarily in publicly-traded equity and fixed income securities.

Defined Contributions

Contributions are based on each plan member's current eligible remuneration and may also be based on age and years of service. For the defined contribution component of the plans, benefit costs equal amounts required to be contributed by the Company.

OTHER POSTRETIREMENT BENEFITS

OPEB primarily includes supplemental health and dental, health spending accounts and life insurance coverage for qualifying retired employees, which are provided on a non-contributory basis. The OPEB plans are not funded.

BENEFIT OBLIGATIONS AND FUNDED STATUS

The following table details the changes in the benefit obligation, the fair value of plan assets and the recorded assets or liabilities for the defined benefit component of the pension and OPEB plans.

December 31,	Pension 2018	Pension 2017	OPEB 2018	OPEB 2017
(millions of Canadian dollars)				
Change in benefit obligation				
Benefit obligation at beginning of year	**2,115**	1,098	**175**	123
Service cost	**58**	49	**3**	3
Interest cost	**68**	60	**6**	6
Actuarial (gain)/loss	**(73)**	86	**(25)**	3
Employee contributions	**9**	4	**—**	—
Benefits paid	**(97)**	(92)	**(7)**	(6)
Balances transferred from Union Gas *(Note 1)*	**—**	926	**—**	62
Net transfer in/out	**(3)**	—	**—**	—
Other	**3**	(16)	**1**	(16)
Benefit obligation at end of year[1]	**2,080**	2,115	**153**	175
Change in plan assets				
Fair value of plan assets at beginning of year	**1,991**	998	**—**	17
Actual return on plan assets	**(15)**	166	**—**	2
Employer's contributions	**36**	61	**7**	6
Employee contributions	**9**	4	**—**	—
Benefits paid	**(97)**	(92)	**(7)**	(6)
Balances transferred from Union Gas *(Note 1)*	**—**	862	**—**	—
Other	**(1)**	(8)	**—**	(19)
Fair value of plan assets at end of year	**1,923**	1,991	**—**	—
Underfunded status at end of year	**(157)**	(124)	**(153)**	(175)
Presented as follows:				
Deferred amounts and other assets *(Note 10)*	**29**	35	**—**	—
Accounts payable and other *(Note 11)*	**(4)**	(2)	**(7)**	(8)
Other long-term liabilities *(Note 19)*	**(182)**	(157)	**(146)**	(167)

1 For pension plans, the benefit obligation is the projected obligation. For OPEB plans, the benefit obligations is the accumulated postretirement benefit obligation. The accumulated benefit obligation for the Company's pension plans was $1,939 million as at December 31, 2018 (2017 - $1,968 million).

At December 31, 2018, pension plans with accumulated benefit obligations in excess of the fair value of plan assets had projected benefit obligations of $595 million (2017 - $596 million), accumulated benefit obligations of $537 million (2017 - $536 million) and plan assets with a fair value of $465 million (2017 - $486 million).

AMOUNTS RECOGNIZED IN OTHER COMPREHENSIVE INCOME

The net actuarial loss and prior service cost included in AOCI, before tax, was $74 million relating to the pension plans and the net actuarial gain included in AOCI, before tax, was $11 million relating to the OPEB plans as at December 31, 2018 (2017 - loss of $30 million and loss of $13 million, respectively).

NET BENEFIT COST RECOGNIZED

The components of net benefit cost and other amounts recognized in pre-tax OCI related to the pension and OPEB plans are as follows:

	Pension		OPEB	
Year ended December 31,	**2018**	2017	**2018**	2017
(millions of Canadian dollars)				
Service cost	**58**	49	**3**	3
Interest cost	**68**	60	**6**	6
Expected return on plan assets	**(130)**	(108)	**(1)**	(1)
Amortization of actuarial loss and prior service cost	**14**	17	**—**	—
Net defined benefit and OPEB costs	**10**	18	**8**	8
Defined contribution benefit costs	**6**	7	**—**	—
Net benefit cost recognized in Earnings	**16**	25	**8**	8
Amount recognized in OCI:				
Net actuarial loss arising during the year	**—**	—	**—**	2
Total amount recognized in OCI	**—**	—	**—**	2
Total amount recognized in Comprehensive income	**16**	25	**8**	10

The Company estimates that approximately $17 million related to pension plans and OPEB plans as at December 31, 2018 will be reclassified from AOCI into earnings in the next 12 months.

Pension and OPEB costs related to the period on an accrual basis are presented above and were initially expensed. However, there was a partially offsetting adjustment for pension and OPEB costs due to the regulatory mechanism in place.

Regulatory adjustments were recorded in the Combined Statements of Earnings, the Combined Statements of Comprehensive Income and the Combined Statements of Financial Position to reflect the difference between pension expense for accounting purposes and pension expense for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent pension or OPEB costs or gains are expected to be collected from or refunded to customers, respectively, in future rates. For the years ended December 31, 2018 and December 31, 2017, there were nominal differences between pension expense for accounting purposes and pension expense for ratemaking purposes.

ACTUARIAL ASSUMPTIONS

The weighted average assumptions made in the measurement of the benefit obligations and net benefit cost of the pension and OPEB plans are as follows:

	Pension		OPEB	
Year ended December 31,	**2018**	2017	**2018**	2017
Benefit obligations				
Discount rate	**3.8%**	3.6%	**3.8%**	3.6%
Rate of salary increase	**3.1%**	3.1%	**3.3%**	3.2%
Net benefit cost				
Discount rate - service cost	**3.7%**	4.1%	**3.7%**	4.1%
Discount rate - interest cost	**3.6%**	3.8%	**3.6%**	3.9%
Rate of return on plan assets	**6.5%**	6.4%	**0.0%**	0.0%
Rate of salary increase	**3.1%**	3.2%	**3.2%**	3.5%

The overall expected rate of return is based on the asset allocation targets with estimates for returns on equity and debt securities based on long-term expectations.

ASSUMED HEALTH CARE COST TRENDS

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	2018	2017
Health care cost trend rate assumed for next year	**4.0%**	5.4%
Rate to which the cost trend is assumed to decline (the ultimate trend rate)	**4.0%**	4.4%
Year that the rate reaches the ultimate trend rate	**2034**	2034

A 1% point change in the assumed health care cost trend rate would have the following effects for the year ended and as at December 31, 2018:

	1% Point Increase	1% Point Decrease
(in millions of dollars)		
Effect on total service and interest costs	1	(1)
Effect on accumulated postretirement benefit obligation	(11)	(9)

PLAN ASSETS

The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the Company's operating environment and financial situation and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets.

The asset allocation targets and major categories of plan assets are as follows:

		December 31,	
Asset Category	Target Allocation	**2018**	2017
Equity securities	40%	**45.7%**	52.9%
Fixed income securities	36%	**37.2%**	36.9%
Other	24%	**17.1%**	10.2%

The following table summarizes the fair value of the plan assets for the Company's pension and OPEB plans recorded at each fair value hierarchy level.

	2018				2017			
December 31,	Level 1[1]	Level 2[2]	Level 3[3]	Total	Level 1[1]	Level 2[2]	Level 3[3]	Total
(millions of Canadian dollars)								
Pension Benefits								
Cash and cash equivalents	**66**	**—**	**—**	**66**	19	—	—	19
Equity securities								—
United States	**—**	**—**	**—**	**—**	208	—	—	208
Canada	**324**	**—**	**—**	**324**	477	—	—	477
Global	**554**	**—**	**—**	**554**	85	283	—	368
Fixed income securities								—
Government	**402**	**—**	**—**	**402**	389	—	—	389
Corporate	**281**	**—**	**32**	**313**	345	—	—	345
Infrastructure and real estate[4]	**—**	**—**	**266**	**266**	—	—	178	178
Forward currency contracts	**—**	**(10)**	**—**	**(10)**	—	(5)	—	(5)
	1,627	**(10)**	**298**	**1,915**	1,523	278	178	1,979
Non-financial instruments	**—**	**—**	**—**	**8**	—	—	—	12
Total pension plan assets at fair value	**—**	**—**	**—**	**1,923**	—	—	—	1,991

1 Level 1 assets include assets with quoted prices in active markets for identical assets.
2 Level 2 assets include assets with significant observable inputs.
3 Level 3 assets include assets with significant unobservable inputs.
4 The fair values of the infrastructure and real estate investments are established through the use of valuation models.

Changes in the net fair value of plan assets classified as Level 3 in the fair value hierarchy were as follows:

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Balance at beginning of year	**178**	153
Unrealized and realized gains	**39**	17
Purchases and settlements, net	**81**	8
Balance at end of year	**298**	178

BENEFITS EXPECTED TO BE PAID BY THE COMPANY

Year ended December 31,	2019	2020	2021	2022	2023	2024- 2028
(millions of Canadian dollars)						
Pension	101	104	107	110	113	607
OPEB	7	7	8	8	8	43

In 2019, the Company expects to contribute approximately $41 million and $7 million to the pension plans and OPEB plans, respectively.

18. CHANGES IN OPERATING ASSETS AND LIABILITIES

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Accounts receivable and other	**238**	(212)
Accounts receivable from affiliates	**25**	(24)
Regulatory assets *(Note 6)*	**(59)**	22
Gas inventory	**(54)**	(9)
Deferred amounts and other assets	**24**	11
Accounts payable and other	**36**	(73)
Accounts payable to affiliates	**(29)**	40
Regulatory liabilities *(Note 6)*	**53**	(24)
Other long-term liabilities	**(8)**	(78)
Cap and trade compliance liability	**387**	603
Assets held for sale	**(12)**	(3)
	601	253

19. OTHER LONG-TERM LIABILITIES

December 31,	**2018**	2017
(millions of Canadian dollars)		
Regulatory liabilities *(Note 6)*	**1,380**	1,303
Cap and trade compliance liability[1]	**—**	603
Pension and OPEB liabilities	**328**	324
Other	**65**	62
	1,773	2,292

1 Under cap and trade regulation in the Province of Ontario, the Company had been required to meet greenhouse gas obligations and had been purchasing emission allowances for itself and most of its customers to satisfy those obligations. On October 31, 2018, Bill 4 received Royal Assent from the government of Ontario, providing for the wind down of the Cap and Trade program. This resulted in an elimination of $990 million in the cap and trade compliance liability in the fourth quarter of 2018.

20. RELATED PARTY TRANSACTIONS

Related party transactions are conducted in the normal course of business and, unless otherwise noted, are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties. Other than the amalgamation of EGD and Union Gas for which all intercompany transactions and balances have been eliminated, the Company's transactions with related parties, are as follows:

Year ended December 31,	**2018**	2017
(millions of Canadian dollars)		
Enbridge Energy Distribution Inc.		
Common share dividends declared	**542**	600
Great Lakes Basin Energy L.P.

Other related entities, net	**(33)**	(31)

Financing Transactions

In December 2018, IPL, an affiliate under common control, redeemed all of its Class D, non-voting, redeemable, retractable preference shares held by EGD for $825 million. The investment resulted in a weighted average dividend yield of 7.6% as at December 31, 2018.

In December 2018, EGD repaid its two loans outstanding to IPL and all related accrued interest for a total of $376 million.

In September 2018, EGD borrowed $300 million from its parent company, Enbridge Inc. through a subordinated promissory note at an interest rate of 3.37% payable quarterly in arrears. This note matures in September 2028.

In October 2018, Union Gas borrowed $650 million from Westcoast Energy Inc., an affiliate under common control, through a subordinated promissory note at an interest rate of 3.65% payable semi-annually in arrears. This note matures in October 2028.

The note payable to Enbridge (U.S.) Inc. bears interest at the LIBOR rate plus 1.1% and is payable on demand.

In February 2018, Union Gas issued 622 thousand shares to EEDI for $57 million. Additionally, Union Gas reduced its stated capital by $1 million for the purposes of returning capital to EEDI. In December 2018, EGD issued 19 million shares to EEDI for $350 million. Additionally, EGD reduced its stated capital by $450 million in cash for the purpose of returning capital to EEDI.

Centralized Services

Enbridge performs centralized corporate functions for the Company, including legal, accounting, compliance, treasury, information technology and other areas, as well as certain engineering and other services. The Company reimburses Enbridge for the expenses to provide these services based on the cost of actual services provided or using various allocation methodologies.

Part VI.1 Tax Reimbursement
The Company entered into an agreement with Enbridge for the transfer of Part VI.1 tax and the related Part I tax deduction. The Company received a $3 million non-taxable reimbursement relating to the transfer with EGD receiving $1 million and Union Gas receiving $2 million.

Natural Gas Purchases
The Company contracted for the purchase of natural gas from various affiliates, including Tidal Energy Marketing Inc., and Tidal Energy Marketing (U.S.) LLC., at prevailing market prices under normal trade terms. Contractual obligations under the related party contracts are 2019 to 2020 - $2 million, 2021 to 2022 - $nil, and thereafter - $nil.

Optimization Services
The Company provides pipeline and storage optimization services to Tidal Energy Marketing Inc., an affiliated entity under common control.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Storage and Transportation Services
The Company contracted for natural gas transportation services from various affiliates, including Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian), NEXUS Gas Transmission (U.S.) LLC, and Sarnia Airport Storage Pool Limited Partnership. Contractual obligations under the related party contracts are 2019 to 2020 - $483 million, 2021 to 2022 - $320 million and thereafter - $1,219 million.

Other Transactions
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides administrative and other services to certain related entities under common control and records recoveries from these affiliates. The Company recovers the expenses to provide these services based on the cost of actual services provided or using various allocation methodologies. Cost recoveries are recorded as a reduction to Operating and administrative expense in the Combined Statements of Earnings.

The Company and affiliates invoice on a monthly basis and amounts are due and paid on a monthly basis.

21. GUARANTEES

In the normal course of conducting business, the Company issues financial guarantees to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Combined Statements of Financial Position. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company cannot reasonably estimate the maximum potential amounts that could become payable to third parties under these agreements; however, historically, the Company has not made any significant payments. While these agreements may specify a maximum potential exposure, or a specified duration, there are circumstances where the amount and duration are unlimited. The guarantees have not had, and are not reasonably likely to have, a material effect on the Company's financial condition, changes in financial condition, earnings, liquidity, capital expenditures or capital resources.

22. COMMITMENTS AND CONTINGENCIES

COMMITMENTS
At December 31, 2018, the Company had commitments as detailed below:

	Total	Less than 1 year	2 years	3 years	4 years	5 years	Thereafter
(millions of Canadian dollars)							
Operating leases[1]	58	7	6	6	6	6	27
Right-of-way commitments[2]	410	7	7	7	7	7	375
Purchase of services, pipe and other materials, including transportation[3,4]	6,891	1,780	1,016	696	524	347	2,528
	7,359	1,794	1,029	709	537	360	2,930

1 Included in these amounts are building, facility and storage pool leases.

2 Included in these amounts are right-of-way payments, estimated to be approximately $7 million per year, related to cancellable gas storage lease payments that are reasonably likely to occur over the remaining life of all storage reservoirs.

3 Includes capital and operating commitments.

4 Includes: firm capacity payments that provide the Company with uninterrupted firm access to natural gas transportation and storage; contractual obligations to purchase physical quantities of natural gas; contracts for software and consulting or advisory services; customer care services; and contractual obligations for engineering, procurement and construction costs for pipeline projects. Due to a timing uncertainty, all procurement obligations have been included in 2019 as the Company is unable to reasonably estimate the payments due by period.

The Company and certain affiliates, in aggregate, have access to $100 million of letters of credit that they can issue. The total outstanding letters of credit that related to the Company as at December 31, 2018 was $12 million.

ENVIRONMENTAL
The Company is subject to various federal, provincial, state and local laws relating to the protection of the environment. These laws and regulations can change from time to time, imposing new obligations on the Company.

Environmental risk is inherent to natural gas pipeline operations, and the Company is, at times, subject to environmental remediation at various contaminated sites. The Company manages this environmental risk through appropriate environmental policies and practices to minimize any impact our operations may have on the environment. To the extent that the Company is unable to recover payment for environmental liabilities from insurance or other potentially responsible parties, the Company will be responsible for payment of liabilities arising from environmental incidents associated with the operating activities of the Company.

Former Manufactured Coal Gas Plant Sites
The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. EGD was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on EGD. It remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, EGD and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with EGD. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

In its fiscal 2003 Rate Case, EGD sought OEB approval for a manufactured gas plant deferral account to record the costs of investigating, defending and dealing with a then current MGP claim and any future MGP claims that may be advanced. With respect to EGD's 2006 to 2018 fiscal years, the OEB approved the establishment of deferral accounts, but added that the issue as to whether customers should be responsible for some or all of the possible claims and related costs has yet to be determined.

Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation, isolation, and containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. The Company expects that if it is found that it must contribute to any remediation costs (either as a result of a lawsuit or government order), it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company's financial position.

Hamilton Contaminated Site
In April 2016, the Ontario Ministry of the Environment, Conservation and Parks (MECP), formerly the Ministry of the Environment and Climate Change issued a Director's Order (Order) naming Union Gas, along with other parties, as an impacted property owner in connection with a contaminated site adjacent to a property of Union Gas in Hamilton. In May 2016, Union Gas appealed the Order, and in June 2016, the Environmental Review Tribunal (Tribunal), on consent of the MECP's Director, stayed the application of parts of the Order. The Tribunal has extended the stay of the Order several times, which has allowed the owner of the property (with the cooperation of the adjacent owners) to prepare a plan of action, including discussions with the MECP and other neighbours (City of Hamilton and Infrastructure Ontario). The Company continues to monitor the matter, and to cooperate with the owner of the source property, the MECP and other adjacent owners. The risk of material environmental liability is unknown at this time.

TAX MATTERS
The Company maintains tax liabilities related to uncertain tax positions. While fully supportable in the Company's view, these tax positions, if challenged by tax authorities, may not be fully sustained on review.

OTHER LITIGATION
The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a material impact on the Company's financial position or results of operations.

ENBRIDGE GAS INC.

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2019

MANAGEMENT'S REPORT

To the Shareholders of Enbridge Gas Inc.

Financial Reporting
Management of Enbridge Gas Inc. (the Company) is responsible for the accompanying Consolidated Financial Statements. The Consolidated Financial Statements have been prepared in accordance with generally accepted accounting principles in the United States of America (U.S. GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors is responsible for all aspects related to governance of the Company. The Company does not have an Audit Committee, having received an exemption from such requirement.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare Consolidated Financial Statements for external reporting purposes in accordance with U.S. GAAP and provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, have conducted an audit of the Consolidated Financial Statements of the Company in accordance with Canadian generally accepted auditing standards and have issued an unqualified audit report, which is accompanying the Consolidated Financial Statements.

Independent auditor's report

To the Shareholders of Enbridge Gas Inc.

Our opinion

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of Enbridge Gas Inc. (the Company) as at December 31, 2019 and 2018, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America (US GAAP).

What we have audited
The Company's financial statements comprise:

- the consolidated statements of earnings for the years ended December 31, 2019 and 2018;
- the consolidated statements of comprehensive income for the years ended December 31, 2019 and 2018;
- the consolidated statements of shareholders' equity for the years ended December 31, 2019 and 2018;
- the consolidated statements of cash flows for the years ended December 31, 2019 and 2018;
- the consolidated statements of financial position as at December 31, 2019 and 2018; and
- the notes to the consolidated financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial statements* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence
We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of the financial statements in Canada. We have fulfilled our other ethical responsibilities in accordance with these requirements.

PricewaterhouseCoopers LLP
PwC Tower, 18 York Street, Suite 2600, Toronto, Ontario, Canada M5J 0B2
T: +1 416 863 1133, F: +1 416 365 8215

Other information

Management is responsible for the other information. The other information comprises the Management's Discussion and Analysis.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above when it becomes available and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of management and those charged with governance for the financial statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with US GAAP, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Company’s financial reporting process.

Auditor’s responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor’s report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Company to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. BUSINESS OVERVIEW

Enbridge Gas Inc. (the Company) is a rate-regulated natural gas distribution, storage and transmission utility, serving residential, commercial and industrial customers in Ontario. The Company also served areas in northern New York State through its wholly-owned subsidiary, St. Lawrence Gas Company, Inc. (St. Lawrence Gas), prior to disposition on November 1, 2019 *(Note 5).* The Company is a wholly-owned subsidiary of Enbridge Inc. (Enbridge).

AMALGAMATION

On August 30, 2018, Enbridge Gas Distribution Inc. (EGD) and Union Gas Limited (Union Gas) received approval from the Ontario Energy Board (OEB) for their application to amalgamate on January 1, 2019. The amalgamated entity has continued from this date as the Company. The Company continues to have all of the assets, rights, contracts, liabilities and obligations of each of EGD and Union Gas, including licenses and permits.

Prior to the amalgamation, EGD and Union Gas were both indirect wholly-owned subsidiaries of Enbridge and operated as companies under common control since February 27, 2017, when Enbridge completed a stock-for-stock merger transaction to acquire all outstanding common stock of Spectra Energy Corp (Spectra Energy). As a result of the February 27, 2017 merger, Enbridge and its subsidiaries obtained ownership of Union Gas through its ownership in Spectra Energy.

In accordance with generally accepted accounting principles in the United States of America (U.S. GAAP), the Consolidated Financial Statements reflect EGD as the receiving entity with Union Gas' accounts transferred at Enbridge's historical cost as at February 27, 2017. The carrying values of certain assets and liabilities of Union Gas were adjusted to reflect EGD's accounting policies retrospectively to the transfer date. All intercompany transactions and balances have been eliminated.

2. SIGNIFICANT ACCOUNTING POLICIES

These Consolidated Financial Statements are prepared in accordance with U.S. GAAP. Amounts are stated in Canadian dollars unless otherwise noted.

The Company is permitted to prepare its Consolidated Financial Statements in accordance with U.S. GAAP for purposes of meeting Canadian continuous disclosure requirements under an exemption granted by Canadian securities regulators until the earliest of January 1, 2024, the first day of the Company's financial year that commences if and after the Company ceases to have activities subject to rate regulation, or the effective date prescribed by the International Accounting Standards Board for the mandatory application of a standard within International Financial Reporting Standards specific to entities with activities subject to rate regulation.

Certain comparative disclosures in the notes to the financial statements have been retrospectively adjusted to conform to the current year's presentation.

BASIS OF PRESENTATION AND USE OF ESTIMATES

The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the Consolidated Financial Statements. Significant estimates and assumptions used in the preparation of the Consolidated Financial Statements include, but are not limited to: carrying values of regulatory assets and liabilities; unbilled revenues; estimates of revenue; depreciation rates and carrying value of property, plant and equipment; amortization rates and carrying value of intangible assets; measurement of goodwill; fair value of asset retirement obligations (AROs); fair value of financial instruments; provisions for income taxes; assumptions used to measure retirement benefits and OPEB; and commitments and contingencies. Actual results could differ from these estimates.

REGULATION

The utility operations of the Company within Ontario are regulated by the OEB, while the utility operations of St. Lawrence Gas were regulated by the New York State Public Service Commission (NYSPSC) (collectively the Regulators).

The Regulators exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the Regulators, the timing of recognition of certain revenues and expenses in the utility operations may differ from that otherwise expected under U.S. GAAP for non rate-regulated entities *(Note 6)*.

As a result of rate regulation accounting, the Company has recognized a number of regulatory assets and liabilities. Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates and amounts collected from customers in advance of costs being incurred. Long-term regulatory assets are recorded in Deferred amounts and other assets and current regulatory assets are recorded in Accounts receivable and other. Long-term regulatory liabilities are recorded in Other long-term liabilities and current regulatory liabilities are recorded in Accounts payable and other. Regulatory assets are assessed for impairment if the Company identifies an event indicative of possible impairment. In the absence of rate regulation accounting, the Company would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned.

The recognition of regulatory assets and liabilities is based on the actions, or an expectation of the future actions, of the Regulators. The Regulators' future actions may differ from current expectations, or future legislative changes may impact the regulatory environment in which the Company operates. To the extent that the Regulators' future actions are different from current expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded.

REVENUE RECOGNITION

Revenues from contracts with customers are generally recognized upon the fulfillment of the performance obligations for the distribution, storage, transportation and sale of natural gas. For distribution and transportation service arrangements where the services are simultaneously received and consumed by the customer, revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company's distribution franchise areas. Revenue from storage services are recognized as the storage services are provided.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue under such circumstances is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the Regulators. This may give rise to regulatory deferral accounts pending disposition by decisions of the Regulator, which follow the accounting guidance found in *ASC 980 - Regulated Operations*.

PUSH-DOWN ACCOUNTING

EGD elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge, when it first adopted U.S. GAAP. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by EGD. Upon adopting push-down accounting, the historical cost of

EGD's property, plant and equipment and related accounts were adjusted by the remaining unamortized fair value adjustment.

The Company has applied push-down accounting with respect to the accounts of Union Gas from February 27, 2017, the date upon which Enbridge acquired common control of EGD and Union Gas. The carrying values of certain assets and liabilities of Union Gas transferred to EGD have been adjusted to reflect Enbridge's historical cost as at February 27, 2017.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

The Company uses derivative financial instruments to manage its exposure to changes in interest rates and foreign exchange rates. Hedge accounting is optional and requires the Company to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. The Company presents the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges and net investment hedges.

Cash Flow Hedges

The Company uses cash flow hedges to manage its exposure to changes in currency exchange rates related to unregulated storage revenue and changes in interest rates *(Note 15)*. The change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/(loss) (OCI) and is reclassified to earnings when the hedged item impacts earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized concurrently with the related transaction. If a hedged anticipated transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

The Company recognizes the fair value of derivative instruments on the Consolidated Statements of Financial Position as current and non-current assets or liabilities depending on the timing of the settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments in qualifying hedging relationships are classified as Operating activities on the Consolidated Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when the Company has the legal right and intention to settle them on a net basis.

Transaction Costs

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. The Company incurs transaction costs primarily through the issuance of debt and accounts for these costs as a deduction from Long-term debt on the Consolidated Statements of Financial Position. These costs are amortized using the effective interest rate method over the term of the related debt instrument and are recorded in Interest expense.

INCOME TAXES

Income taxes are accounted for using the liability method. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. For the Company's regulated operations, a deferred income tax liability or asset is recognized with a corresponding regulatory asset or liability, respectively, to the extent taxes can be recovered through rates *(Note 6)*. Any interest and/or penalty incurred related to tax is reflected in Income taxes.

FOREIGN CURRENCY TRANSACTIONS AND TRANSLATION

Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which the Company or a reporting subsidiary operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated into the functional currency using the exchange rate prevailing at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the rate of exchange in effect at the date of the Consolidated Statement of Financial Position. Exchange gains and losses resulting from translation of monetary assets and liabilities are included in the Consolidated Statements of Earnings in the period that they arise.

Prior to its sale, the Company's only foreign operation was St. Lawrence Gas. The functional currency of St. Lawrence Gas was the United States dollar (USD). The effects of translating the financial statements of St. Lawrence Gas to Canadian dollars were included in the cumulative translation adjustment component of Accumulated other comprehensive income/loss (AOCI). Asset and liability accounts were translated at the exchange rates in effect on the date of the Consolidated Statements of Financial Position, while revenues and expenses were translated at monthly average rates.

CASH AND CASH EQUIVALENTS

Cash and cash equivalents include short-term investments with a term to maturity of three months or less when purchased. The Company combines Cash and cash equivalents and Bank indebtedness where the corresponding bank accounts are subject to cash pooling arrangements.

RESTRICTED CASH

Cash and cash equivalents that are restricted as to withdrawal or usage, in accordance with specific agreements, are presented as Restricted cash on the Consolidated Statements of Financial Position. Restricted cash represented funds received from the Green Investment Fund (GIF) program. The Company's use of the funds was limited to eligible expenditures for the purpose of executing the program. The Company managed the GIF program separately from its core regulated activities. There was no earnings impact related to the GIF program.

GAS INVENTORY

Gas inventories are primarily comprised of natural gas in storage and also include costs such as storage injection and demand costs. Natural gas in storage is recorded at the prices approved by the Regulators in the determination of distribution rates. The actual price of natural gas purchased may differ from the Regulators' approved price. The difference between the approved price and the actual cost of the natural gas purchased is deferred as a liability for future refund or as an asset for collection by the Company to/from customers, as approved by the Regulators.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is recorded at historical cost, including associated operating costs and an allowance for interest during construction as authorized by the Regulators. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have a future benefit.

The pool method of accounting for property, plant and equipment is followed whereby similar assets with comparable useful lives are grouped and depreciated as a pool, as approved by the Regulators. When those assets are retired or otherwise disposed of, gains and losses are not reflected in earnings, but are recorded as an adjustment to accumulated depreciation until the last asset in the pool is disposed of. Gains and losses from the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the Regulators, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the Regulators.

DEFERRED AMOUNTS AND OTHER ASSETS
Deferred amounts and other assets primarily include costs which the Regulators have permitted, or are expected to permit, to be recovered through future rates, including: deferred income taxes; derivative financial instruments; and actuarial gains and losses arising from defined benefit pension plans.

INTANGIBLE ASSETS
Intangible assets consist primarily of certain software costs and emission allowances. The Company capitalizes costs incurred during the application development stage of internal use software projects. Intangible assets are generally amortized on a straight line basis over their expected lives, commencing when an asset is available for use.

From January 1, 2017 through July 3, 2018, emission allowances were purchased in order to meet greenhouse gas (GHG) compliance obligations and were recorded at their original cost.

GOODWILL
Goodwill represents the excess of the purchase price over the fair value of net identifiable assets on acquisition of a business. The carrying value of goodwill, which is not amortized, is assessed for impairment annually, or more frequently if events or changes in circumstances arise that suggest the carrying value of goodwill may be impaired. For the purposes of impairment testing, the Company has the option to first assess qualitative factors to determine whether it is necessary to perform the quantitative goodwill impairment test. If the quantitative goodwill impairment test is performed, the Company determines the fair value of goodwill and compares those values to the carrying value. If the carrying value exceeds its fair value, goodwill impairment is measured at the amount by which the carrying value exceeds its fair value.

ASSET RETIREMENT OBLIGATIONS
AROs associated with the retirement of long-lived assets are measured at fair value and recognized as Other long-term liabilities in the period in which they can be reasonably determined. The fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. AROs are added to the carrying value of the associated asset and depreciated over the asset’s useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. The Company's estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements.

For the majority of the Company's assets, it is not possible to make a reasonable estimate of AROs due to the indeterminate timing and scope of the asset retirements.

PENSION AND OTHER POSTRETIREMENT BENEFITS
The Company provides pension benefits through defined benefit and defined contribution pension plans and OPEB, including group health care and life insurance benefits, through defined benefit OPEB plans.

Defined benefit pension obligation and net periodic benefit cost are estimated using the projected unit credit method, which incorporates management’s best estimates of future salary levels, other cost escalations, retirement ages of employees and other actuarial factors including discount rates and mortality. The OPEB benefit obligation and net periodic benefit cost are estimated using the projected unit credit method, where benefits are attributed to years of service, taking into consideration projection of benefit costs.

The Company uses mortality tables issued by the Canadian Institute of Actuaries (revised in 2014) to measure the benefit obligation of its pension plans.

The Company determines discount rates by reference to rates of high-quality long-term corporate bonds with maturities that approximate the timing of future payments the Company anticipates making under each of the respective plans.

Funded pension plan assets are measured at fair value. The expected return on funded pension plan assets is determined using market related values and assumptions on the invested asset mix consistent with the investment policies relating to the plan assets. The market related values reflect estimated return on investments consistent with long-term historical averages for similar assets.

Actuarial gains and losses arise from the difference between the actual and expected rate of return on plan assets for that period (funded pension plans) and from changes in actuarial assumptions used to determine the accrued benefit obligation, including discount rate, changes in headcount and salary inflation experience.

The excess of the fair value of a plan’s assets over the fair value of a plan’s benefit obligation is recognized as Deferred amounts and other assets in the Company’s Consolidated Statements of Financial Position. The excess of the fair value of a plan’s benefit obligation over the fair value of a plan’s assets is recognized as Accounts payable and other and Other long-term liabilities in the Company’s Consolidated Statements of Financial Position.

Net periodic benefit cost is charged to Earnings and includes:

- Cost of benefits provided in exchange for employee services rendered during the year (current service cost);
- Interest cost of plan obligations;
- Expected return on plan assets (funded pension plans);
- Amortization of prior service costs on a straight-line basis over the expected average remaining service period of the active employee group covered by the plans; and
- Amortization of cumulative unrecognized net actuarial gains and losses in excess of 10% of the greater of the accrued benefit obligation or the fair value of plan assets, over the expected average remaining service life of the active employee group covered by the plans.

Cumulative unrecognized net actuarial gains and losses and prior service costs arising from defined benefit OPEB plans are presented as a component of AOCI in the Consolidated Statements of Shareholders' Equity. Any unrecognized OPEB-related actuarial gains and losses and prior service costs and credits that arise during the period are recognized as a component of OCI, net of tax. Cumulative unrecognized net actuarial gains and losses and prior service costs arising from defined benefit pension plans, which have been permitted or are expected to be permitted by the Regulators, to be recovered through future rates, are presented as a component of Deferred amounts and other assets in the Company's Consolidated Statements of Financial Position.

The Company also records regulatory adjustments to reflect the difference between certain net periodic benefit costs for accounting purposes and net periodic benefit costs for ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent net periodic benefit costs are expected to be collected from or refunded to customers, respectively, in future rates. In the absence of rate regulation, regulatory assets or liabilities would not be recorded and net periodic benefit costs would be charged to Earnings and OCI on an accrual basis.

For defined contribution plans, contributions made by the Company are expensed in the period in which the contribution occurs.

COMMITMENTS AND CONTINGENCIES

Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, the Company determines it is either probable that an asset has been impaired, or a liability has been incurred, and the amount of the impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, the Company recognizes the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. The Company expenses legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES

ADOPTION OF NEW ACCOUNTING STANDARDS

Cloud Computing Arrangements

Effective January 1, 2019, the Company adopted Accounting Standards Update (ASU) 2018-15 on a prospective basis. The new standard was issued to provide guidance on the accounting for implementation costs incurred in a cloud computing arrangement that is a service contract. The ASU specifies that an entity would apply Accounting Standards Codification (ASC) 350-40, internal-use software, to determine which implementation costs related to a hosting arrangement that is a service contract should be capitalized and which should be expensed. The amendments in the update also require that the capitalized costs be amortized on a straight-line basis generally over the term of the arrangement and presented in the same income statement line as fees paid for the hosting service, in addition to specifying that the capitalized costs must be presented on the same balance sheet line as the prepayment of fees related to the hosting arrangement. The ASU requires similar consistency in classifications from a cash flow statement perspective. The adoption of this ASU did not have a material impact on the Consolidated Financial Statements.

Recognition of Leases

Effective January 1, 2019 the Company adopted ASU 2016-02 Leases (Topic 842) using the modified retrospective approach.

The Company recognizes an arrangement as a lease when a customer in the arrangement has the right to obtain substantially all of the economic benefits from the use of an asset, as well as the right to direct the use of the asset. The Company recognizes right-of-use (ROU) assets and the related lease liabilities on the statement of financial position for operating lease arrangements with a term of 12 months or longer. The Company does not separate non-lease components from the associated lease components of lessee contracts and accounts for both components as a single lease component. The Company combines lease and non-lease components within a contract for operating lessor leases when certain conditions are met. ROU assets are assessed for impairment using the same approach as is applied for other long-lived assets, as described in *Note 2 Significant Accounting Policies.*

Lease liabilities and ROU assets require the use of judgment and estimates, which are applied in determining the term of a lease, appropriate discount rates, whether an arrangement contains a lease, whether there are any indicators of impairment for ROU assets and whether any ROU assets should be grouped with other long-lived assets for impairment testing.

In adopting Topic 842, the Company elected the package of practical expedients permitted under the transition guidance. The election to apply the package of practical expedients allows an entity to not apply the new lease standard to the prior year comparative periods in the year of adoption. The application of the package of practical expedients also permits entities not to reassess whether any expired or existing contracts contain leases in accordance with the new guidance, lease classifications, and whether initial direct costs capitalized under current guidance continue to meet the definition of initial direct costs under the new guidance. The Company also elected the practical expedient related to land easements, allowing it to carry forward accounting treatment for land easements on existing agreements that had commenced prior to January 1, 2019.

On January 1, 2019, the Company recorded ROU assets based on corresponding lease liabilities of $52 million. When measuring lease liabilities existing at January 1, 2019, the Company discounted lease payments using the weighted average discount rate of 3.3%. There were no impacts on the Consolidated Statements of Earnings, Comprehensive Income, Shareholder's Equity and Cash Flows.

The following ASUs have been issued, but not yet adopted:

Accounting for Income Taxes
ASU 2019-12 was issued in December 2019 with the intent of simplifying the accounting for income taxes. The accounting update removes certain exceptions to the general principles in ASC 740 as well as provides simplification by clarifying and amending existing guidance. ASU 2019-12 is effective January 1, 2021 and entities are permitted to adopt the standard early. We are currently assessing the impact of the new standard on the Consolidated Financial Statements.

Clarifying Interaction between Collaborative Arrangements and Revenue from Contracts with Customers
ASU 2018-18 was issued in November 2018 to provide clarity on when transactions between entities in a collaborative arrangement should be accounted for under the new revenue standard, ASC 606. In determining whether transactions in collaborative arrangements should be accounted under the revenue standard, the update specifies that entities shall apply unit of account guidance to identify distinct goods or services and whether such goods and services are separately identifiable from other promises in the contract. ASU 2018-18 also precludes entities from presenting transactions with a collaborative partner which are not in scope of the new revenue standard together with revenue from contracts with customers. The accounting update is effective January 1, 2020 and early adoption is permitted. The adoption of ASU 2018-18 is not expected to have a material impact on the Consolidated Financial Statements.

Disclosure Effectiveness
In August 2018, the Financial Accounting Standards Board (FASB) issued two amendments as a part of its disclosure framework project aimed to improve the effectiveness of disclosures in the notes to financial statements.

ASU 2018-14 was issued in August 2018 to improve disclosure requirements for employers that sponsor defined benefit pension or other postretirement plans. The amendment modifies ASC 715, Compensation - Retirement Benefits, by adding and removing several disclosure requirements while also clarifying the guidance on current disclosure requirements. ASU 2018-14 is effective January 1, 2021 and entities are permitted to adopt the standard early. The adoption of ASU 2018-14 is not expected to have a material impact on the Consolidated Financial Statements.

ASU 2018-13 was issued to modify the disclosure requirements in ASC 820, Fair Value Measurement. The amendments in ASU 2018-13 eliminate and modify some disclosures, while also adding new disclosures for fair value measurements. This update is effective January 1, 2020, however entities are permitted to early adopt the eliminated or modified disclosures. The adoption of ASU 2018-13 is not expected to have a material impact on the Consolidated Financial Statements.

Accounting for Credit Losses
ASU 2016-13 was issued in June 2016 with the intent of providing financial statement users with more useful information about the expected credit losses on financial instruments and other commitments to extend credit held by a reporting entity at each reporting date. Current treatment uses the incurred loss methodology for recognizing credit losses that delays the recognition until it is probable a loss has been incurred. The accounting update adds a new impairment model, known as the current expected credit loss model, which is based on expected losses rather than incurred losses. Under the new guidance, an entity will recognize as an allowance its estimate of expected credit losses, which the FASB believes will result in more timely recognition of such losses.

Further, ASU 2018-19 was issued in November 2018 to clarify that operating lease receivables should be accounted for under the new leases standard, ASC 842, and are not within the scope of ASC 326, Financial Instruments - Credit Losses. Both accounting updates are effective January 1, 2020.

The Company has performed a detailed evaluation as of December 31, 2019 and does not anticipate the adoption of ASU 2016-13 to have a material impact on the Consolidated Financial Statements.

4. REVENUE

REVENUE FROM CONTRACTS WITH CUSTOMERS

Major Services

December 31,	**2019**	2018
(millions of Canadian dollars)		
Gas commodity and distribution revenue - residential	**2,847**	2,894
Gas commodity and distribution revenue - commercial and industrial	**1,316**	1,385
Storage revenue	**140**	147
Transportation revenue	**716**	843
Other revenue	**65**	46
Total revenue from contracts with customers	**5,084**	5,315
Other	**(9)**	(18)
Total operating revenues	**5,075**	5,297

The Company disaggregates revenue into categories which represent its principal performance obligations because these revenue categories represent the most significant revenue streams, and consequently are considered to be the most relevant revenue information for management to consider in evaluating performance.

Contract Balances

	Receivables	Contract Liabilities
(millions of Canadian dollars)		
Balance as at January 1, 2019	**589**	**63**
Balance as at December 31, 2019	**613**	**65**
Balance as at January 1, 2018	801	75
Balance as at December 31, 2018	589	63

Receivables represent an unconditional right to consideration where only the passage of time is required before payment of consideration is due and consist of trade accounts receivable, unbilled revenue and other accrued receivable balances.

Contract liabilities represent payments received for performance obligations which have not been fulfilled under the Company's equal billing and budget billing programs. Revenue recognized during the year ended December 31, 2019 included in contract liabilities at the beginning of the period is $63 million (2018 - $75 million). Increases in contract liabilities from cash received, net of amounts recognized as revenue during the year ended December 31, 2019 were $65 million (2018 - $63 million).

Performance Obligations

	Nature of Performance Obligation
Gas commodity and distribution revenue	• Supply and delivery of natural gas to customers.
Storage and transportation revenue	• Storage and transportation of natural gas on behalf of customers.
Other revenue	• Other billing and service fees.

The Company recognized a reduction of revenue in the current period of $7 million (2018 - $12 million) from performance obligations satisfied in previous periods, primarily resulting from differences in actual and estimated consumption, as discussed below in *Significant Judgments Made in Recognizing Revenue*. The associated reduction in gas commodity and distribution costs was also recognized in the current period.

Payment Terms
Payments from distribution revenue customers are received on a continuous basis based on established billing cycles. The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. Payments from transportation revenue customers are received on a continuous basis based on established billing cycles, or monthly under long-term transportation capacity contracts. Payments from storage customers are received monthly under long-term storage capacity contracts.

Revenue to be Recognized from Unfulfilled Performance Obligations
Total revenue from performance obligations expected to be fulfilled in future periods is $623 million, of which $298 million is expected to be recognized during the year ending December 31, 2020.

The amounts above reflect revenues expected to be recognized in future periods from unfulfilled performance obligations pursuant to contracts with customers for the purchase of natural gas distribution, transportation and storage services. The Company uses the optional exemption available under ASC 606 whereby certain revenues such as flow through costs charged to customers are recognized at the amount for which the Company has the right to invoice its customers. Those revenues are not included in the amounts above. The Company also uses the optional exemption available under ASC 606 whereby revenues from contracts with customers which have an original expected duration of one year or less are excluded from the amounts above. Variable consideration is excluded from the amounts above due to the uncertainty of the associated consideration, which is generally resolved when actual volumes and prices are determined. For example, the Company considers interruptible transportation service revenues to be variable revenues since volumes cannot be estimated. A significant portion of the Company's operations are subject to regulation and accordingly the amounts above only include, where applicable, revenue for which the underlying rate has been approved by regulation. The revenues excluded from the amounts above, as explained, represent a significant portion of the Company's overall revenues and revenues from contracts with customers.

SIGNIFICANT JUDGEMENTS MADE IN RECOGNIZING REVENUE

Revenue Recognition
Revenues from contracts with customers are generally recognized upon the fulfillment of the performance obligations as described above. Distribution and transportation service revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in the Company’s distribution franchise areas.

A significant portion of the Company's operations are subject to regulation and accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue under such circumstances is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the regulator. This may give rise to regulatory deferral accounts pending disposition by decisions of the regulator, which follow the accounting guidance found in *ASC 980 - Regulated Operations*.

Recognition and Measurement of Revenue

Timing of Revenue Recognition

December 31,	**2019**	2018
(millions of Canadian dollars)		
Revenue from products and services transferred over time[1]	**5,019**	5,246
Revenue from products transferred at a point in time[2]	**65**	69
Total revenue from contracts with customers	**5,084**	5,315

1 Revenue from distribution, transportation and storage services.
2 Primarily from other revenue.

Performance Obligations Satisfied Over Time
For distribution and transportation services arrangements where the services are simultaneously received and consumed by the customer, the Company recognizes revenue over time using an output method based on volumes of commodities delivered.

Revenue from storage services are recognized as the storage services are provided.

Determination of Transaction Prices
Prices for distribution and transportation services and regulated storage services are prescribed by regulation. Fees for unregulated storage services are determined through negotiations with customers based on market rates. Prices for the natural gas commodity are driven by market prices and the Company has a quarterly rate adjustment mechanism in place that allows for rates to reflect changes in natural gas prices, subject to regulatory approval.

5. DISPOSITION

ST. LAWRENCE GAS COMPANY, INC.
In August 2017, the Company entered into an agreement to sell the issued and outstanding shares of its wholly-owned subsidiary, St. Lawrence Gas and classified St. Lawrence Gas as held for sale on the Consolidated Statements of Financial Position. On November 1, 2019, the Company closed the previously announced sale of St. Lawrence Gas for total cash proceeds of approximately $72 million (US $55 million). A loss on disposal of approximately $10 million before tax was included in Other income in the Consolidated Statements of Earnings.

6. REGULATORY MATTERS

GENERAL INFORMATION ON RATE REGULATION AND ITS ECONOMIC EFFECTS
The Company is regulated by the OEB pursuant to the provisions of the *Ontario Energy Board Act*, (1998), which is part of a package of legislation known as the *Energy Competition Act*, (1998). This legislation provides for different forms of regulation and competition in the energy (electricity and natural gas) industry in Ontario.

The Company records assets and liabilities that result from the regulated ratemaking process that would not be recorded under U.S. GAAP for non-regulated entities.

RATE APPROVALS

The Company's distribution rates, beginning in 2019, are set under a five-year incentive regulation (IR) framework using a price cap mechanism. The price cap mechanism establishes new rates each year through an annual base rate escalation at inflation less a 0.3% stretch factor, annual updates for certain costs to be passed through to customers, and where applicable, the recovery of material discrete incremental capital investments beyond those that can be funded through base rates. The IR framework includes the continuation and establishment of certain deferral and variance accounts, as well as an earnings sharing mechanism that requires the Company to share any earnings in excess of 150 basis points over the annual OEB approved return on equity equally with customers.

FINANCIAL STATEMENT EFFECTS

As a result of rate regulation, the following regulatory assets and liabilities have been recognized:

December 31,	**2019**	2018	Consolidated Statements of Financial Position	Recovery/Refund Period Ends
(millions of Canadian dollars)				
Current regulatory assets				
Purchase gas variance[1]	**23**	196	AR	2020
Federal carbon receivables[8]	**145**	—	AR	2020
Other current regulatory assets	**122**	97	AR	2020
Total current regulatory assets	**290**	293		
Long-term regulatory assets				
Deferred income taxes - long-term[2]	**1,266**	1,131	DA	Various
Pension plan receivable[3]	**222**	60	DA	Various
OPEB[4]	**53**	58	DA	Various
Long-term debt[7]	**362**	387	DA	Various
Other long-term regulatory assets	**187**	—	DA	Various
Total long-term regulatory assets	**2,090**	1,636		
Total regulatory assets[5]	**2,380**	1,929		
Current regulatory liabilities				
Purchase gas variance[1]	**41**	—	AP	2020
Other current regulatory liabilities	**176**	135	AP	2020
Total current regulatory liabilities	**217**	135		
Long-term regulatory liabilities				
Future removal and site restoration reserves[6]	**1,424**	1,356	OLTL	Various
Other long-term regulatory liabilities	**47**	24	OLTL	Various
Total long-term regulatory liabilities	**1,471**	1,380		
Total regulatory liabilities[5]	**1,688**	1,515		

AR – Accounts receivable and other
AP – Accounts payable and other
DA – Deferred amounts and other assets
OLTL – Other long-term liabilities

1 *Purchase gas variance is the difference between the actual cost and the approved cost of natural gas reflected in rates. The Company has been granted OEB approval to refund this balance to, or collect this balance from, customers on a rolling 12 month basis via the Quarterly Rate Adjustment Mechanism process.*

2 *The deferred income taxes balance represents the regulatory offset to deferred income tax liabilities to the extent that it is expected to be included in regulator-approved future rates and recovered from future customers. The recovery period depends on the timing of the reversal of the temporary differences. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

3 *The pension plan balance represents the Company's regulatory offset to the pension liability to the extent the amounts are to be collected in future rates. The settlement period for this balance is not determinable. In the absence of rate regulation accounting, this regulatory balance would not be recorded and pension expense would have been charged to earnings and OCI based on the accrual basis of accounting.*

4 *The OPEB balance represents the Company's right to recover OPEB costs resulting from the adoption of the accrual basis of accounting for OPEB costs upon transition to US GAAP in 2012. Pursuant to the OEB rate order, the amount as at December 31, 2012 is to be collected in rates over a 20-year period that commenced in 2013. In the absence of rate regulation accounting, this regulatory balance and related earnings impact would not be recorded.*

5 *All regulatory assets and liabilities are excluded from rate base unless otherwise noted.*

6 *Future removal and site restoration reserves result from amounts collected from customers by the Company, with the approval of the OEB, to fund future costs for removal and site restoration relating to property, plant and equipment. These costs are collected as part of depreciation charged on property, plant and equipment that is recorded in rates. The balance represents the amount that the Company has collected from customers, net of actual costs expended on removal and site restoration. The settlement of this balance will occur over the long-term as future removal and site restoration costs are incurred. In the absence of rate regulation accounting, costs incurred for removal and site restoration would be charged to earnings as incurred with recognition of revenue for amounts previously collected.*

7 *The debt balance represents the Company's regulatory offset to the fair value adjustment to debt pushed down to the Company. The offset is viewed as a proxy for the regulatory asset that would be recorded in the event such debt was extinguished at an amount higher than the carrying value.*

8 *The federal carbon balance is the difference between actual carbon costs and carbon costs recovered in rates, as well as the Company's administration costs associated with the impacts of the federal carbon program requirements. The amount will be recovered from or refunded to customers in future periods in accordance with the OEB's approval. In the absence of rate regulation accounting, this regulatory balance and the related earnings impact would not be recorded.*

OTHER ITEMS AFFECTED BY RATE REGULATION

Operating Cost Capitalization

In the absence of rate regulation accounting, property, plant and equipment would not include some operating costs since these costs would have been charged to earnings in the period incurred.

With the approval of the Regulators, the Company capitalizes a percentage of certain operating costs. The Company is authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation accounting, a portion of such operating costs would be charged to earnings in the year incurred.

The Company entered into a services contract relating to asset management initiatives. The majority of the costs were capitalized to gas mains in accordance with regulatory approval. At December 31, 2019, the net book value of these costs included in gas mains in Property, plant and equipment, net was $103 million (2018 - $110 million). In the absence of rate regulation accounting, some of these costs would be charged to earnings in the year incurred.

WAMS is the Company's integrated work and asset management solution. At December 31, 2019, the net book value of the asset included in intangible assets was $60 million (2018 - $68 million). In the absence of rate regulation accounting, a portion of the original cost of the asset would have been expensed in the period incurred.

Gas Inventories

Natural gas in storage is recorded in inventory at the prices approved by the Regulators in the determination of customers' system supply rates. Included in gas inventories at December 31, 2019 is $66 million (2018 - $59 million) related to the Company storage injection and demand costs. Consistent with the regulatory recovery pattern, these costs are recorded in gas inventories during the off-peak months and charged to gas costs during the peak winter months. In the absence of rate regulation accounting, these costs would be expensed as incurred and inventory would be recorded at the lower of cost or market value.

Depreciation

In the absence of rate regulation accounting, depreciation rates would not have included a charge for future removal and site restoration costs.

7. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2019**	2018
(millions of Canadian dollars)		
Trade receivables	**581**	548
Unbilled revenues	**314**	270
Gas imbalances[1]	**44**	84
Regulatory assets *(Note 6)*	**290**	293
Rebillables receivable	**88**	110
Other	**38**	45
Allowance for doubtful accounts *(Note 15)*	**(38)**	(38)
	1,317	1,312

[1]The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Consolidated Statements of Financial Position dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

8. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	**2019**	2018[1]
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas transmission	**2.45%**	**1,505**	1,398
Gas mains, services and other	**2.68%**	**12,114**	11,501
Compressors, meters and other operating equipment	**4.52%**	**2,918**	2,716
Storage	**2.83%**	**919**	891
Land and right-of-way	**1.04%**	**334**	307
Vehicles, office furniture, equipment and other buildings and improvements	**7.35%**	**506**	475
Under construction	**—**	**223**	193
		18,519	17,481
Accumulated depreciation		**(3,490)**	(3,056)
		15,029	14,425

		389	393
Property, plant and equipment, net		**15,418**	14,818

1 2018 comparative figures were reclassified to conform to the current year's asset classification to reflect the application of push-down accounting.

Depreciation expense, including amounts collected for future removal and site restoration costs, was $558 million for the year ended December 31, 2019 (2018 - $540 million).

Included within depreciation expense is $22 million for the year ended December 31, 2019 (2018 - $22 million) in incremental depreciation resulting from push-down accounting *(Note 2)*.

9. INTANGIBLE ASSETS

December 31,	**2019**	2018[1]
(millions of Canadian dollars)		
Software and Customer Information System (CIS)	**592**	557
Less: Accumulated amortization	**(419)**	(348)
Intangible assets, net	**173**	209

1 2018 comparative figures reflect the application of push-down accounting.

For the year ended December 31, 2019, the weighted average amortization rate for software and CIS was 13.9% (2018 - 12.6%).

Intangible assets include $16 million of work-in-progress as at December 31, 2019 (2018 - $33 million). Total amortization expense for intangible assets was $80 million for the year ended December 31, 2019 (2018 - $68 million). The Company expects aggregate amortization expense for the years ending December 31, 2020 through 2024 of $58 million, $35 million, $18 million, $15 million, and $15 million, respectively.

10. DEFERRED AMOUNTS AND OTHER ASSETS

December 31,	**2019**	2018
(millions of Canadian dollars)		
Regulatory assets *(Note 6)*	**2,090**	1,636
Pension and OPEB assets	**34**	29

Taxes payable	**114**	74
Other	**282**	320
	1,369	1,315

[1]The Company, in the normal course of its operations, experiences imbalances in natural gas volumes between interconnecting pipelines and provides gas balancing services to customers. Natural gas volumes owed to or from the Company are valued at natural gas market prices as of the Consolidated Statements of Financial Position dates. As the settlement of imbalances is done with gas volumes, changes in the balances do not have an impact on the Company's cash flow from operating activities.

12. DEBT

On July 11, 2019, the Company entered into a new trust indenture and filed a $2 billion medium-term notes (MTN) shelf prospectus with Canadian securities regulators. The prospectus is effective for a 25-month period.

December 31,	Weighted Average Interest Rate	Maturity	**2019**	2018
(millions of Canadian dollars)				
Medium-term notes[1]	4.16%	2020-2050	**7,685**	6,985
Debentures	9.14%	2024-2025	**210**	210
Commercial paper and credit facility draws	2.03%	2021	**898**	1,025
Other[2]			**(42)**	(40)
Fair value adjustment from push down accounting *(Note 2)*			**362**	388
Total debt			**9,113**	8,568
Current maturities			**(400)**	—
Short-term borrowings	2.03%		**(898)**	(1,025)
Long-term debt			**7,815**	7,543
Loans from affiliate companies *(Note 22)*			**650**	950

1 The balance pertaining to St. Lawrence Gas amounting to approximately $10 million as at December 31, 2018 was presented as Liabilities held for sale, long term (Note 5) on the Consolidated Statements of Financial Position.
2 Primarily unamortized discounts and debt issuance costs.

On August 9, 2019, the Company issued $400 million of 10-year MTNs and $300 million of 30-year MTNs at an interest rate of 2.37% and 3.01%, respectively, payable semi-annually in arrears. The notes mature on August 9, 2029 and August 9, 2049, respectively.

In September 2018, EGD borrowed $300 million from its parent company, Enbridge through a subordinated promissory note at an interest rate of 3.37%, payable quarterly in arrears. The note was repaid in August 2019.

In October 2018, Union Gas borrowed $650 million from Westcoast Energy Inc., an affiliate under common control, through a subordinated promissory note at an interest rate of 3.65%, payable semi-annually in arrears. This note matures in October 2028.

For the years ending December 31, 2020 through 2024, debentures and medium-term note maturities are $400 million, $375 million, $125 million, $350 million and $300 million, respectively. The Company's debentures and medium-term notes bear interest at fixed rates, and interest obligations for the years ending December 31, 2020 through 2024 are $339 million, $320 million, $306 million, $303 million and $287 million, respectively.

INTEREST EXPENSE

Year ended December 31,	**2019**	2018
(millions of Canadian dollars)		
Debentures and term notes	**331**	338
Commercial paper and credit facility draws	**31**	16
Interest on loans from affiliates *(Note 22)*	**31**	34
Other interest and finance costs	**12**	8
Capitalized	**(5)**	(5)
	400	391

The Company's borrowings, whether senior debentures or MTNs, are unsecured.

CREDIT FACILITIES

On February 7, 2019, the Company extended the term out date of its external credit facility to July 24, 2020, with a maturity date of July 24, 2021, and increased the size of total commitments to $2 billion. The Company's credit facility and commercial paper program through Union Gas were terminated. On February 28, 2019, the Company also increased the size of its commercial paper program to $2 billion which is backstopped by committed lines of credit of $2 billion. Issues of commercial paper and revolving borrowings reduce the amount available under the credit facility.

The Company actively manages its bank funding sources to ensure adequate liquidity and to optimize pricing and other terms. The following table provides details of the Company's credit facilities at December 31, 2019.

			December 31, 2019		December 31, 2018
	Maturity Dates	Total Facilities	Draws[1]	Available	Total Facilities
(millions of Canadian dollars)					
Enbridge Gas Inc.	2021[2]	**2,000**	**898**	**1,102**	1,700
St. Lawrence Gas Company, Inc.[3]		**—**	**—**	**—**	18
Total credit facilities		**2,000**	**898**	**1,102**	1,718

1 Includes facility draws and commercial paper issuances, net of discount, that are back-stopped by the external credit facility. St. Lawrence Gas draws were presented as Liabilities held for sale, current and long-term on the Consolidated Statements of Financial Position.

2 Maturity date is inclusive of the one year term out option.

3 On November 1, 2019, the Company closed the sale of St. Lawrence Gas (Note 5).

Credit facilities carried a weighted average standby fee of 0.1% on the unused portion and the draws bear interest at market rates.

DEBT COVENANTS

The Company's credit facility agreements and term debt indentures include standard events of default and covenant provisions whereby accelerated repayment and/or terminations of the agreements may result if the Company were to default on payment or violate certain covenants. As at December 31, 2019, the Company was in compliance with all debt covenants.

13. SHARE CAPITAL

At December 31, 2019, the authorized share capital of the Company consisted of an unlimited number of common shares with no par value and an unlimited number of preference shares.

COMMON SHARES

	2019		2018	
December 31,	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of common shares in millions)				
Enbridge Gas Inc.

Return of capital	**—**	**—**	—	(1)
Balance at end of year *(Note 22)*	**—**	**—**	58	713

1 In February 2018 Union Gas Gas issued 621,866 shares for $57 million. Total Union Gas shares outstanding 58,444,516.

The Company is authorized to issue an unlimited number of Class A and Class B common shares. On January 1, 2019, the Company issued to Enbridge Energy Distribution Inc. (EEDI), which wholly-owned EGD and owned 1% of Union Gas, 281,881,334 Class A common shares in exchange for 232,749,988 EGD common shares and 621,866 Union Gas Class A common shares. Great Lakes Basin Energy L.P. (GLBE), which owned 99% of Union Gas, was issued 240,020,243 Class B common shares of the Company in exchange for 57,822,650 Union Gas common shares. Both classes of common shares of the Company are identical in every respect. Dividends cannot be paid to one class without paying dividends on the other.

On February 1, 2019, the stated capital of Class B common shares held by GLBE was reduced by approximately $1 million as part of a return of capital transaction, which had no impact on total shares outstanding.

On November 15, 2019, the stated capital of Class A common shares held by EEDI and Class B common shares held by GLBE were reduced by approximately $169 million and $143 million, respectively, as part of a return of capital transaction, which had no impact on total shares outstanding.

On November 27, 2019, the Company received capital contributions of $432 million and $368 million, respectively, from EEDI and GLBE, which had no impact on total shares outstanding.

14. COMPONENTS OF ACCUMULATED OTHER COMPREHENSIVE LOSS

Changes in AOCI for the years ended December 31, 2019 and 2018 are as follows:

	2019			
	Cash Flow Hedges	Cumulative Translation Adjustment	Pension and OPEB Adjustment	Total
(millions of Canadian dollars)				
Balance at January 1, 2019	**(9)**	**5**	**(47)**	**(51)**
Other comprehensive income/(loss) retained in AOCI	**(50)**	**(2)**	**58**	**6**
Other comprehensive (income)/loss reclassified to earnings	**5**	**(3)**	**—**	**2**
	(54)	**—**	**11**	**(43)**
Tax Impact				
Income tax on amounts retained in AOCI	**13**	**—**	**(15)**	**(2)**

Income tax on amounts reclassified to earnings	(1)	—	—	(1)
	1	—	5	6
Balance at December 31, 2018	(9)	5	(47)	(51)

OCI for the twelve months ended December 31, 2019 was increased by an adjustment of $74 million in respect of the Company applying rate regulated accounting to record a regulatory offset to certain pension liabilities of the Company. An offsetting amount of $19 million was also recorded for the related tax impact in OCI.

15. RISK MANAGEMENT AND FINANCIAL INSTRUMENTS

MARKET RISK

The Company's earnings, cash flows and OCI are subject to movements in natural gas prices, foreign exchange rates and interest rates (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which the Company is exposed and the risk management instruments used to mitigate them. The Company uses a combination of qualifying and non-qualifying derivative instruments to manage the risks noted below.

Natural Gas Price Risk

Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by the customers.

Foreign Exchange Risk
Foreign exchange risk is the risk of gains and losses due to the volatility of currency exchange rates. The Company generates certain revenues and held a subsidiary that was denominated in USD. As a result, the Company's earnings, cash flows, and OCI are exposed to fluctuations resulting from USD exchange rate variability.

The Company implemented a policy to hedge a portion of USD denominated unregulated storage revenue exposures. Qualifying derivative instruments are used to hedge anticipated USD denominated revenues and to manage variability in cash flows.

A portion of the Company's purchases of natural gas are denominated in USD and as a result there is exposure to fluctuations in the exchange rate of the USD against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to customers, therefore the Company has no net exposure to movements in the foreign exchange rate on natural gas purchases.

The Company did not have any outstanding derivative instruments relating to net investment hedges as at December 31, 2019 and December 31, 2018.

Interest Rate Risk
The Company's earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of its variable rate debt, primarily commercial paper. Pay fixed-receive floating interest rate swaps are used to hedge against the effect of future interest rate movements. The Company has implemented a program to significantly mitigate the impact of short-term interest rate volatility on interest expense via execution of floating to fixed interest rate swaps with an average swap rate of 2.3%.

The Company's earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to hedge against the effect of future interest rate movements. The Company has implemented a program to significantly mitigate its exposure to long-term interest rate variability on select forecast term debt issuances via execution of floating to fixed interest rate swaps with an average swap rate of 2.7%.

The Company's portfolio mix of fixed and variable rate debt instruments is monitored by its ultimate parent company, Enbridge.

TOTAL DERIVATIVE INSTRUMENTS

The following table summarizes the financial statement line item in the Consolidated Statements of Financial Position and carrying value of the Company's derivative instruments.

The Company generally has a common practice of entering into individual International Swaps and Derivatives Association, Inc. agreements, or other similar derivative agreements, with the majority of its derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce the Company's credit risk exposure on derivative asset positions outstanding with these counterparties in those particular circumstances. The following table also summarizes the maximum potential settlement amount in the event of those specific circumstances. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2019	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments

The Effect of Derivative Instruments on the Consolidated Statements of Earnings and Comprehensive Income

The following table presents the effect of cash flow hedges on the Company's consolidated earnings and comprehensive income, before the effect of income taxes.

Year ended December 31,	2019	2018
(millions of Canadian dollars)		
Amount of unrealized loss recognized in OCI cash flow hedges		
Interest rate contracts	**(50)**	(5)
Foreign exchange contracts	**—**	(1)
	(50)	(6)
Amount of loss reclassified from AOCI to earnings		
Interest rate contracts[1]	**6**	(4)
Foreign exchange contracts	**(1)**	—
	5	(4)

1 Reported within Interest expense in the Consolidated Statements of Earnings.

The Company estimates a loss of $2 million of AOCI related to cash flow hedges will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on interest and foreign exchange rates in effect when derivative contracts that are currently outstanding mature. For all forecasted transactions, the maximum term over which the Company is hedging exposures to the variability of cash flows is 24 months as at December 31, 2019.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will not be able to meet its financial obligations, including commitments as they become due. In order to manage this risk, the Company forecasts cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. The Company's primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under committed credit facilities and long-term debt, which includes debentures and MTNs and, if necessary, additional liquidity is available through intercompany transactions with its ultimate parent, Enbridge, and other related entities. These sources are expected to be sufficient to enable the Company to fund all anticipated requirements. The Company maintains a current MTN shelf prospectus with securities regulators, which enables ready access to the Canadian public capital markets, subject to market conditions. The Company also maintains committed credit facilities with a diversified group of banks and institutions. The Company is in compliance with all the terms and conditions of its committed credit facilities as at December 31, 2019. As a result, all credit facilities are available to the Company and the banks are obligated to fund the Company under the terms of the facilities.

CREDIT RISK

Credit risk arises from the possibility that a counterparty will default on its contractual obligations. The Company is exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by the large and diversified customer base and the ability to recover an estimate for doubtful accounts for utility operations through the rate-making process. The Company actively monitors the financial strength of large industrial customers and, in select cases, has obtained additional security to minimize the risk of default on receivables. Generally, the Company classifies receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

The Company's policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which generally require payment in full within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the allowance for doubtful accounts, which totaled $38 million at December 31, 2019 (December 31, 2018 - $38 million).

The allowance for doubtful accounts is determined based on collection history. When the Company has determined that further collection efforts are unlikely to be successful, amounts charged to the allowance for doubtful accounts are applied against the impaired accounts receivable.

Estimated costs associated with uncollectible accounts receivable are recovered through regulated distribution rates, which largely limits the Company's exposure to credit risk related to accounts receivable, to the extent such estimates are accurate.

Entering into derivative financial instruments may also result in exposure to credit risk. The Company enters into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements. As at December 31, 2019 the Company does not have any significant group credit concentrations and maximum credit exposure, with respect to derivative instruments, in any counterparty segments.

Derivative assets are adjusted for non-performance risk of the Company's counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, the Company's non-performance risk is considered in the valuation.

FAIR VALUE MEASUREMENTS

The Company's financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. The Company also discloses the fair value of other financial instruments not measured at fair value. The fair value of financial instruments reflects the Company's best estimates of fair value based on generally accepted valuation techniques or models and are supported by observable market prices and rates. When such values are not available, the Company uses discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

FAIR VALUE OF FINANCIAL INSTRUMENTS

The Company categorizes its derivative instruments measured at fair value into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1

Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. The Company does not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using

Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps for which observable inputs can be obtained.

Level 3
Level 3 includes derivative valuations based on inputs which are less observable, unavailable or where the observable data does not support a significant portion of the derivatives' fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support a Level 2 classification. The Company has developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. The Company does not have any derivative instruments classified as Level 3.

The Company uses the most observable inputs available to estimate the fair value of its derivatives. When possible, the Company estimates the fair value of its derivatives based on quoted market prices. If quoted market prices are not available, the Company uses estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, the Company uses standard valuation techniques to calculate the estimated fair value. These methods include discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, the Company uses observable market prices (interest, foreign exchange, and natural gas) and volatility as primary inputs to these valuation techniques. Finally, the Company considers its own credit default swap spread as well as the credit default swap spreads associated with its counterparties in its estimation of fair value.

At December 31, 2019, the Company had Level 2 derivative assets with fair value of $nil (2018 - $nil million) and Level 2 derivative liabilities with fair value of $22 million (2018 - $6 million). The Company's policy is to recognize transfers between levels as at the last day of the reporting period. There were no transfers between levels as at December 31, 2019 or December 31, 2018.

FAIR VALUE OF OTHER FINANCIAL INSTRUMENTS
The Company recognizes equity investments in other entities not categorized as held to maturity at fair value, with changes in fair value recorded in net income, unless actively quoted market prices are not available for fair value measurement in which case these investments are recorded at the fair value measurement alternative.

The fair value of the Company's long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. At December 31, 2019, the Company's long-term debt, including the current portion had a carrying value of $7,895 million (2018 - $7,195 million) before debt issue costs and a fair value of $9,182 million (2018 - $7,855 million).

The fair value of other financial assets and liabilities other than derivative instruments and long-term debt approximate their cost due to the short period to maturity.

16. LEASES

The Company incurs operating lease payments related to natural gas storage and real estate. The Company's operating lease agreements have remaining lease terms of 3 months to 10 years, some of which include options to terminate at our discretion.

For the year ended December 31, 2019, the Company incurred operating lease expenses of $7 million. Operating lease expenses are reported within Operating and administrative expenses in the Consolidated Statements of Earnings.

For the year ended December 31, 2019, operating lease payments to settle lease liabilities were $7 million. Operating lease payments are reported within Operating activities in the Consolidated Statements of Cash Flows.

Supplemental Consolidated Statements of Financial Position Information

Federal income taxes at statutory rate	**92**	94
Increase/(decrease) resulting from:		
Provincial and state income taxes	**29**	(4)
Effects of rate regulated accounting[1]	**(52)**	(56)
Non-taxable intercompany distributions[1]	**—**	(9)
Part VI.1 tax, net of federal Part I tax deduction[1]	**—**	31
Non-taxable portion of sale of investment to unrelated party *(Note 5)*	**(1)**	—
Investment in foreign subsidiaries	**—**	1
Other[2]	**(10)**	—
Income tax expense	**58**	57
Effective income tax rate	**9.4%**	9.1%

1 The provincial tax component of these items is included in "Provincial and state income taxes" above.

2 Included in "Other" are miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals and entertainment, and change in prior year estimates arising from the filing of tax returns in respect of the prior year.

COMPONENTS OF PRETAX EARNINGS AND INCOME TAXES

Year ended December 31,	**2019**	2018
(millions of Canadian dollars)		
Earnings before income taxes		
Canada	**638**	620
United States	**(24)**	5
	614	625
Current income taxes		
Canada	**85**	88
United States	**4**	—
	89	88
Deferred income taxes		
Canada	**(25)**	(32)
United States	**(6)**	1
	(31)	(31)
Income tax expense	**58**	57

COMPONENTS OF DEFERRED INCOME TAXES

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are:

December 31,	**2019**	2018
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**1,497**	1,395
Regulatory assets	**335**	300
Deferrals	**17**	20
Retirement and post-retirement benefits	**8**	—
Other	**1**	10
Total deferred income tax liabilities	**1,858**	1,725
Deferred income tax assets		
Future removal and site restoration reserves	**373**	364
Minimum tax credits	**30**	24
Retirement and post-retirement benefits	**—**	12
Financial derivatives	**15**	3
Other	**7**	3
Total deferred income tax assets	**425**	406
Net deferred income tax liabilities	**1,433**	1,319

The Company and its subsidiaries are subject to taxation in Canada and the United States. The material jurisdictions in which the Company is subject to potential examinations include Canada (Federal and Ontario). The Company is open to examination by Canadian tax authorities for the 2012 to 2019 tax years. The Company is currently under examination for income tax matters in Canada for the 2015 to 2017 tax years.

UNRECOGNIZED TAX BENEFITS

Year ended December 31,	**2019**	2018
(millions of Canadian dollars)		
Unrecognized tax benefits at beginning of year	**39**	45
Gross increases for tax positions of current year	**3**	3
Gross decreases for tax positions of prior years	**(1)**	(6)
Settlements	**—**	(1)
Lapses of statute of limitations	**(2)**	(2)
Unrecognized tax benefits at end of year	**39**	39

The unrecognized tax benefits as at December 31, 2019, if recognized, would affect the Company's effective income tax rate. The Company does not anticipate further adjustments to the unrecognized tax benefits during the next 12 months that would have a material impact on its Consolidated Financial Statements.

The Company recognizes accrued interest and penalties related to unrecognized tax benefits as a component of income taxes. Income taxes for the years ended December 31, 2019 and 2018 included $nil recoveries of interest and penalties. As of December 31, 2019 and 2018, interest and penalties of $1 million and $1 million, respectively, have been accrued.

18. PENSION AND OTHER POSTRETIREMENT BENEFITS

PENSION PLANS
The Company provides pension benefits, covering substantially all employees, through contributory and non-contributory registered defined benefit and defined contribution pension plans. The Company also provides non-registered pension benefits for certain employees through supplemental non-contributory, defined benefit pension plans.

Defined Benefit Pension Plan Benefits
Benefits payable from the defined benefit pension plans are based on each plan participant's years of service and final average remuneration. Some benefits are partially inflation-indexed after a plan participant's retirement. The Company's contributions are made in accordance with independent actuarial valuations. Participant contributions to contributory defined benefit pension plans are based upon each plan participant's current eligible remuneration.

Defined Contribution Pension Plan Benefits
Company contributions are based on each plan participant's current eligible remuneration. Company contributions for some defined contribution pension plans are also based on age and years of service. Defined contribution pension benefit costs to the Company are equal to the amount of contributions required to be made by the Company.

OTHER POSTRETIREMENT BENEFIT PLANS
The Company provides non-contributory supplemental health, dental, life and health spending account benefit coverage for certain qualifying retired employees, through unfunded defined benefit OPEB plans.

BENEFIT OBLIGATIONS, PLAN ASSETS AND FUNDED STATUS

The following table details the changes in the benefit obligation, the fair value of plan assets and the recorded assets or liabilities for the Company's defined benefit pension and OPEB plans:

	Pension		OPEB	
December 31,	**2019**	2018	**2019**	2018
(millions of Canadian dollars)				
Change in benefit obligation				
Benefit obligation at beginning of year	**2,080**	2,115	**153**	175
Service cost	**63**	58	**2**	3
Interest cost	**72**	68	**5**	6
Participant contributions	**14**	9	**—**	—
Actuarial (gain)/loss	**210**	(73)	**15**	(25)
Benefits paid	**(108)**	(97)	**(5)**	(7)
Other	**—**	—	**—**	1
Benefit obligation at end of year[1]	**2,331**	2,080	**170**	153
Change in plan assets				
Fair value of plan assets at beginning of year	**1,923**	1,991	**—**	—
Actual return/(loss) on plan assets	**237**	(15)	**—**	—
Employer contributions	**42**	36	**5**	7
Participant contributions	**14**	9	**—**	—
Benefits paid	**(108)**	(97)	**(5)**	(7)
Other	**—**	(1)	**—**	—
Fair value of plan assets at end of year	**2,108**	1,923	**—**	—
Underfunded status at end of year	**(223)**	(157)	**(170)**	(153)
Presented as follows:				
Deferred amounts and other assets *(Note 10)*	**34**	29	**—**	—
Accounts payable and other	**(2)**	(4)	**(7)**	(7)
Other long-term liabilities *(Note 21)*	**(255)**	(182)	**(163)**	(146)
	(223)	(157)	**(170)**	(153)

1 For pension plans, the benefit obligation is the projected benefit obligation. For OPEB plans, the benefit obligations is the accumulated postretirement benefit obligation. The accumulated benefit obligation for the Company's pension plans was $2.2 billion and $1.9 billion as at December 31, 2019 and 2018, respectively.

Certain of the Company's pension plans have an accumulated benefit obligation in excess of the fair value of plan assets. For these plans, the projected benefit obligation, accumulated benefit obligation and fair value of plan assets were as follows:

December 31,	**2019**	2018
(millions of Canadian dollars)		
Projected benefit obligation	**685**	595
Accumulated benefit obligation	**611**	537
Fair value of plan assets	**529**	465

AMOUNT RECOGNIZED IN ACCUMULATED OTHER COMPREHENSIVE INCOME

The amount of pre-tax AOCI relating to the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
December 31,	**2019**[1]	2018	**2019**	2018
(millions of Canadian dollars)				
Net actuarial (gain)/loss	**—**	74	**5**	(11)
Total amount recognized in AOCI	**—**	74	**5**	(11)

1 Pension net actuarial loss reflects a reduction of $74 million resulting from the application of rate regulated accounting and recognizing an offsetting long-term regulatory asset for net actuarial loss relating to the Company's pension plans (Note 14).

NET PERIODIC BENEFIT COST AND OTHER AMOUNTS RECOGNIZED IN COMPREHENSIVE INCOME

The components of net periodic benefit cost and other amounts recognized in pre-tax Comprehensive income related to the Company's pension and OPEB plans are as follows:

	Pension		OPEB	
Year ended December 31,	**2019**	2018	**2019**	2018
(millions of Canadian dollars)				
Service cost	**63**	58	**2**	3
Interest cost	**72**	68	**5**	6
Expected return on plan assets	**(129)**	(130)	**—**	(1)
Amortization of net actuarial loss[1]	**16**	14	**—**	—
Net periodic benefit cost	**22**	10	**7**	8
Defined contribution benefit cost	**2**	6	**—**	—
Net pension and OPEB cost recognized in Earnings	**24**	16	**7**	8
Amount recognized in OCI:				
Adjustment for rate-regulated accounting *(Note 14)*	**(74)**	—	**—**	—
Net actuarial (gain)/loss arising during the year	**—**	44	**16**	(24)
Total amount recognized in OCI	**(74)**	44	**16**	(24)
Total amount recognized in Comprehensive income	**(50)**	60	**23**	(16)

1 *Reflects amortization of net actuarial loss arising from pension plans that are recognized as long-term regulatory assets* (Note 6).

The Company estimates that approximately $nil related to the pension plans and $1 million related to the OPEB plans as at December 31, 2019 will be reclassified from AOCI into Earnings in the next 12 months.

ACTUARIAL ASSUMPTIONS

The weighted average assumptions made in the measurement of the benefit obligation and net periodic benefit cost of the Company's defined benefit pension and OPEB plans are as follows:

	Pension		OPEB	
	2019	2018	**2019**	2018
Benefit obligation				
Discount rate	**3.1%**	3.8%	**3.1%**	3.8%
Rate of salary increase	**3.2%**	3.1%	**3.3%**	3.3%
Net periodic benefit cost				
Discount rate	**3.8%**	3.7%	**3.8%**	3.7%
Expected rate of return on plan assets	**6.8%**	6.5%	**N/A**	N/A
Rate of salary increase	**3.2%**	3.1%	**3.3%**	3.2%

ASSUMED HEALTH CARE COST TREND RATES

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	2019	2018
Health care cost trend rate assumed for next year	**4.0%**	4.0%
Rate to which the cost trend is assumed to decline (ultimate trend rate)	**4.0%**	4.0%

A 1% change in the assumed health care cost trend rate would have the following effects for the year ended and as at December 31, 2019:

	1% Increase	1% Decrease
(millions of Canadian dollars)		
Total service and interest costs	**—**	**—**
Accumulated postretirement benefit obligation	**12**	**(10)**

PLAN ASSETS

The Company manages the investment risk of its pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) the Company's operating environment and financial situation and its ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets.

The overall expected rate of return on plan assets is based on the asset allocation targets with estimates for returns based on long-term expectations.

The asset allocation targets and major categories of plan assets are as follows:

Asset Category	Target Allocation	December 31, 2019	2018
Equity securities	**40.8%**	**45.7%**	45.5%
Fixed income securities	**35.8%**	**33.7%**	39.5%
Alternatives[1]	**23.4%**	**20.6%**	15.0%

1 Alternatives include investments in private debt, private equity, infrastructure and real estate funds.

The following table summarizes the fair value of the plan assets for the Company's pension plans recorded at each fair value hierarchy level.

	2019				2018			
December 31,	Level 1[1]	Level 2[2]	Level 3[3]	Total	Level 1[1]	Level 2[2]	Level 3[3]	Total
(millions of Canadian dollars)								
Cash and cash equivalents	**53**	**—**	**—**	**53**	74	—	—	74
Equity securities								
Canada	**92**	**112**	**—**	**204**	122	200	—	322
Global	**—**	**760**	**—**	**760**	—	554	—	554
Fixed income securities								
Government	**117**	**272**	**—**	**389**	124	280	—	404
Corporate	**—**	**268**	**—**	**268**	—	281	—	281
Alternatives[4]	**—**	**—**	**427**	**427**	—	—	298	298
Forward currency contracts	**—**	**7**	**—**	**7**	—	(10)	—	(10)
Total pension plan assets at fair value	**262**	**1,419**	**427**	**2,108**	320	1,305	298	1,923

1 Level 1 assets include assets with quoted prices in active markets for identical assets.
2 Level 2 assets include assets with significant observable inputs.
3 Level 3 assets include assets with significant unobservable inputs.
4 Alternatives include investments in private debt, private equity, infrastructure and real estate funds.

Changes in the net fair value of plan assets classified as Level 3 in the fair value hierarchy were as follows:

December 31,	**2019**	2018
(millions of Canadian dollars)		
Balance at beginning of year	**298**	178
Unrealized and realized gains	**9**	39
Purchases and settlements, net	**120**	81
Balance at end of year	**427**	298

EXPECTED BENEFIT PAYMENTS

Year ending December 31,	2020	2021	2022	2023	2024	2025-2029
(millions of Canadian dollars)						
Pension	104	107	110	112	115	610
OPEB	7	7	7	8	8	40

EXPECTED EMPLOYER CONTRIBUTIONS

In 2020, the Company expects to contribute approximately $38 million and $7 million to the pension and OPEB plans, respectively.

19. SEVERANCE COSTS

As at December 31, 2018, the Company had $18 million in accrued severance costs included in Accounts payable and other related to termination benefits to employees from the amalgamation of EGD and Union Gas. For the twelve months ended December 31, 2019, $39 million of additional severance costs are included in Operating and administrative expense with $36 million paid during the year. The remaining $21 million will be paid primarily during 2020.

20. CHANGES IN OPERATING ASSETS AND LIABILITIES

Year ended December 31,	**2019**	2018
(millions of Canadian dollars)		
Accounts receivable and other	**(17)**	238
Accounts receivable from affiliates	**(24)**	25
Regulatory assets *(Note 6)*	**29**	(59)
Gas inventory	**48**	(54)
Deferred amounts and other assets	**(2)**	24
Accounts payable and other	**(45)**	36
Accounts payable to affiliates	**18**	(29)
Regulatory liabilities *(Note 6)*	**105**	53
Other long-term liabilities	**(8)**	(8)
Cap and trade compliance liability	**—**	387
Assets held for sale	**12**	(12)
	116	601

21. OTHER LONG-TERM LIABILITIES

December 31,	**2019**	2018
(millions of Canadian dollars)		
Regulatory liabilities *(Note 6)*	**1,471**	1,380
Pension and OPEB liabilities	**418**	328
Other	**110**	65
	1,999	1,773

22. RELATED PARTY TRANSACTIONS

Related party transactions are conducted in the normal course of business and, unless otherwise noted, are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties. The Company's transactions with related parties are as follows:

Year ended December 31,	**2019**	2018
(millions of Canadian dollars)		
Enbridge Energy Distribution Inc.		
Common share dividends declared	**506**	542
Capital contribution	**432**	—

Enbridge *(Note 15)*	**13**	4
Other accounts receivable/(payable)		
Other related entities, net	**(67)**	(33)

Financing Transactions
In September 2018, EGD borrowed $300 million from its parent company, Enbridge through a subordinated promissory note at an interest rate of 3.37% payable quarterly in arrears. The note was repaid in August 2019.

In October 2018, Union Gas borrowed $650 million from Westcoast Energy Inc., an affiliate under common control, through a subordinated promissory note at an interest rate of 3.65% payable semi-annually in arrears. This note matures in October 2028.

On February 1, 2019, the stated capital of Class B common shares held by GLBE was reduced by approximately $1 million as part of a return of capital transaction, which had no impact on total shares outstanding.

In October 2019, St. Lawrence Gas repaid the balance and accrued interest on the note payable to Enbridge (U.S.) Inc.

On November 15, 2019, the stated capital of Class A common shares held by EEDI and Class B common shares held by GLBE were reduced by approximately $169 million and $143 million, respectively, as part of a return of capital transaction, which had no impact on total shares outstanding.

On November 27, 2019, the Company received capital contributions of $432 million and $368 million, respectively, from EEDI and GLBE, which had no impact on total shares outstanding.

Centralized Services
Enbridge performs centralized corporate functions for the Company, including legal, accounting, compliance, treasury, information technology and other areas, as well as certain engineering and other services. The Company reimburses Enbridge for the expenses to provide these services based on the cost of actual services provided or using various allocation methodologies.

Natural Gas Purchases
The Company contracted for the purchase of natural gas from various affiliates, including Tidal Energy Marketing Inc., and Tidal Energy Marketing (U.S.) LLC., at prevailing market prices under normal trade terms. Contractual obligations under the related party contracts are 2020 through 2021 - $15 million, 2022 through 2023 - $nil million, and thereafter - $nil.

Wholesale Service
These gas procurement and transportation services are pursuant to a contract negotiated between the Company and Gazifère Inc., an affiliate under common control, and approved by the OEB and Gazifère Inc.'s regulator, the Régie de l'énergie.

Gas Storage and Transportation Services
The Company contracted for natural gas transportation services from various affiliates, including Vector Pipeline Limited Partnership (U.S.), Vector Pipeline Limited Partnership (Canadian) and NEXUS Gas Transmission (U.S.) LLC. Contractual obligations under the related party contracts are 2020 through 2021 - $372 million, 2022 through 2023 - $246 million and thereafter - $1,087 million.

Other Transactions
The cash balances of the Company and its subsidiaries are subject to a concentration banking arrangement with Enbridge. Interest is received or paid at market rates.

The Company provides administrative and other services to certain related entities under common control and records recoveries from these affiliates. The Company recovers the expenses to provide these services based on the cost of actual services provided or using various allocation methodologies. Cost recoveries are recorded as a reduction to Operating and administrative expense in the Consolidated Statements of Earnings.

23. GUARANTEES

In the normal course of conducting business, the Company issues financial guarantees to facilitate a commercial transaction with a third party by enhancing the value of the transaction to the third party. To varying degrees, these agreements involve elements of performance and credit risk, which are not included on the Consolidated Statements of Financial Position. The possibility of having to perform under these guarantees is largely dependent upon future operations of other third parties or the occurrence of certain future events. The Company cannot reasonably estimate the maximum potential amounts that could become payable to third parties under these agreements; however, historically, the Company has not made any significant payments. While these agreements may specify a maximum potential exposure, or a specified duration, there are circumstances where the amount and duration are unlimited. The guarantees have not had, and are not reasonably likely to have, a material effect on the Company's financial condition, changes in financial condition, earnings, liquidity, capital expenditures or capital resources.

24. COMMITMENTS AND CONTINGENCIES

COMMITMENTS

At December 31, 2019, the Company had commitments as detailed below:

	Total	Less than 1 year	2 years	3 years	4 years	5 years	Thereafter
(millions of Canadian dollars)							
Right-of-way commitments[1]	585	10	10	10	10	10	535
Purchase of services, pipe and other materials, including transportation[2,3]	6,152	1,290	894	598	457	414	2,499
	6,737	1,300	904	608	467	424	3,034

1 Included in these amounts are right-of-way payments, estimated to be approximately $10 million per year, related to cancellable gas storage payments that are reasonably likely to occur over the remaining life of all storage reservoirs.

2 Includes capital and operating commitments.

3 Includes firm capacity payments that provide the Company with uninterrupted firm access to natural gas transportation and storage; contractual obligations to purchase physical quantities of natural gas; contracts for software and consulting or advisory services; customer care services; and contractual obligations for engineering, procurement and construction costs for pipeline projects.

The Company and certain affiliates, in aggregate, have access to $495 million of letters of credit that they can issue. The total outstanding letters of credit that related to the Company as at December 31, 2019 was $14 million.

ENVIRONMENTAL

The Company is subject to various federal, provincial and local laws relating to the protection of the environment. These laws and regulations can change from time to time, imposing new obligations on the Company.

Environmental risk is inherent to natural gas pipeline operations, and the Company is, at times, subject to environmental remediation at various contaminated sites. The Company manages this environmental risk through appropriate environmental policies and practices to minimize any impact our operations may have on the environment. To the extent that the Company is unable to recover payment for environmental liabilities from insurance or other potentially responsible parties, the Company will be responsible for payment of liabilities arising from environmental incidents associated with the operating activities of the Company.

Former Manufactured Coal Gas Plant Sites

The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. The Company was named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by the Company for the operation of its MGP.

While these Statements of Claim were issued by the City and the School Board, they were never formally served on the Company. It remains the Company's understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, the Company and the City entered into an agreement (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with the Company. To the knowledge of the Company, neither the City nor the School Board has taken any steps to advance the lawsuits.

Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time for several reasons. First, there is no certainty about the presence of and the extent of alleged coal tar contamination at or near former MGP sites. Second, there are a number of potential alternative remediation, isolation, and containment approaches, which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the United States for the recovery in rates of costs relating to the remediation of former MGP sites. From 2006 to 2018, the OEB approved the establishment of deferral accounts to record the costs of investigating, defending and dealing with ongoing MGP-related claims. The Company expects that if it is found it must contribute to any remediation costs, either as a result of a lawsuit or government order, it would be generally allowed to recover in rates those costs not recovered through insurance or by other means. Accordingly, the Company believes that the ultimate outcome of these matters will not have a significant impact on the Company’s financial position.

Hamilton Contaminated Site

In April 2016, the Ontario Ministry of the Environment, Conservation and Parks (MECP), formerly the Ministry of the Environment and Climate Change issued a Director’s Order (Order) naming the Company, along with other parties, as an impacted property owner in connection with a contaminated site adjacent to a property of the Company in Hamilton. In May 2016, the Company appealed the Order, and in June 2016, the Environmental Review Tribunal (Tribunal), on consent of the MECP’s Director, stayed the application of parts of the Order. The Tribunal has extended the stay of the Order several times, which has allowed the owner of the property, with the cooperation of the adjacent owners, to prepare a plan of action, including discussions with the MECP and other neighbours. The Company continues to monitor the matter, and to cooperate with the owner of the source property, the MECP and other adjacent owners. The risk of material environmental liability is unknown at this time.

TAX MATTERS

The Company maintains tax liabilities related to uncertain tax positions. While fully supportable in the Company's view, these tax positions, if challenged by tax authorities, may not be fully sustained on review.

OTHER LITIGATION

The Company is subject to various other legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits by special interest groups. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a material impact on the Company's financial position or results of operations.

ENBRIDGE GAS INC.

(a subsidiary of Enbridge Inc.)

CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2022

MANAGEMENT'S REPORT

TO THE SHAREHOLDERS OF ENBRIDGE GAS INC.

Financial Reporting
Management of Enbridge Gas Inc. (the Company) is responsible for the accompanying consolidated financial statements. The consolidated financial statements have been prepared in accordance with generally accepted accounting principles in the United States of America (US GAAP) and necessarily include amounts that reflect management's judgment and best estimates.

The Board of Directors is responsible for all aspects related to governance of the Company. The Company does not have an Audit Committee, having received an exemption from such requirement.

Internal Control over Financial Reporting
Management is also responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting includes policies and procedures to facilitate the preparation of relevant, reliable and timely information, to prepare consolidated financial statements for external reporting purposes in accordance with US GAAP and to provide reasonable assurance that assets are safeguarded.

PricewaterhouseCoopers LLP, independent auditors appointed by the shareholders of the Company, have conducted an audit of the consolidated financial statements of the Company in accordance with Canadian generally accepted auditing standards and have issued an unqualified audit report, which is accompanying the consolidated financial statements.

Independent auditor's report

To the Shareholders of Enbridge Gas Inc.

Our opinion

In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of Enbridge Gas Inc. and its subsidiaries (together, the Company) as at December 31, 2022 and 2021, and the results of its operations and its cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America (US GAAP).

What we have audited

The Company's consolidated financial statements comprise:

- the consolidated statements of earnings for the years ended December 31, 2022 and 2021;
- the consolidated statements of comprehensive income for the years ended December 31, 2022 and 2021;
- the consolidated statements of changes in equity for the years ended December 31, 2022 and 2021;
- the consolidated statements of cash flows for the years ended December 31, 2022 and 2021;
- the consolidated statements of financial position as at December 31, 2022 and 2021; and
- the notes to the consolidated financial statements, which include significant accounting policies and other explanatory information.

Basis for opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the consolidated financial statements* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of the consolidated financial statements in Canada. We have fulfilled our other ethical responsibilities in accordance with these requirements.

PricewaterhouseCoopers LLP
PwC Tower, 18 York Street, Suite 2600, Toronto, Ontario, Canada M5J 0B2
T: +1 416 863 1133, F: +1 416 365 8215

Other information

Management is responsible for the other information. The other information comprises the Management's Discussion and Analysis.

Our opinion on the consolidated financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the consolidated financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of management and those charged with governance for the consolidated financial statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with US GAAP, and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Company's financial reporting process.

Auditor's responsibilities for the audit of the consolidated financial statements

Our objectives are to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Company to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

1. BUSINESS OVERVIEW

The terms "we", "our", "us" and "Enbridge Gas" as used in these financial statements refer collectively to Enbridge Gas Inc. and its subsidiaries unless the context suggests otherwise. Enbridge Gas is a wholly-owned indirect subsidiary of Enbridge Inc. (Enbridge). Enbridge provides administrative and general support services to us.

Enbridge Gas is a rate-regulated natural gas distribution utility with storage and transmission services, which serves residential, commercial and industrial customers throughout Ontario.

2. SIGNIFICANT ACCOUNTING POLICIES

These consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States of America (US GAAP). Amounts are stated in Canadian dollars unless otherwise noted.

We are permitted to prepare our consolidated financial statements in accordance with US GAAP for purposes of meeting Canadian continuous disclosure requirements under an exemption granted by Canadian securities regulators until the earliest of January 1, 2027, the first day of our financial year that commences if and after we cease to have activities subject to rate regulation, or the effective date prescribed by the International Accounting Standards Board for the application of a Mandatory Rate-regulated Standard specific to entities with activities subject to rate regulation.

BASIS OF PRESENTATION AND USE OF ESTIMATES

The preparation of financial statements in conformity with US GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, as well as the disclosure of contingent assets and liabilities in the consolidated financial statements. Significant estimates and assumptions used in the preparation of the consolidated financial statements include, but are not limited to: variable consideration included in revenue *(Note 4);* carrying values of regulatory assets and liabilities *(Note 5)*; unbilled revenues; estimates of revenue; expected credit losses; depreciation rates and carrying value of property, plant and equipment *(Note 7)*; amortization rates and carrying value of intangible assets *(Note 8)*; measurement of goodwill; fair value of asset retirement obligations (ARO); fair value of financial instruments *(Note 13)*; provisions for income taxes *(Note 15)*; assumptions used to measure retirement benefits and OPEB *(Note 16)*; and commitments and contingencies *(Note 19)*. Actual results could differ from these estimates.

Certain comparative figures in our consolidated financial statements have been reclassified to conform to the current year's presentation.

REGULATION

Our utility operations within Ontario are regulated by the Ontario Energy Board (OEB). Regulatory bodies exercise statutory authority over matters such as construction, rates and ratemaking and agreements with customers. To recognize the economic effects of the actions of the regulator, the timing of recognition of certain revenues and expenses in these operations may differ from that otherwise expected under US GAAP for non-rate-regulated entities.

Regulatory assets represent amounts that are expected to be recovered from customers in future periods through rates. Regulatory liabilities represent amounts that are expected to be refunded to customers in future periods through rates and amounts collected from customers in advance of costs being incurred. Regulatory assets are assessed for impairment if we identify an event indicative of possible impairment. The recognition of regulatory assets and liabilities is based on the actions, or expected future actions, of the regulator. The regulator's future actions may differ from current expectations or future legislative changes may impact the regulatory environment in which we operate. To the extent that the regulator's actions differ from our expectations, the timing and amount of recovery or settlement of regulatory balances could differ significantly from those recorded. In the absence of rate regulation, we would generally not recognize regulatory assets or liabilities and the earnings impact would be recorded in the period the expenses are incurred or revenues are earned. A regulatory asset or liability is recognized in respect of deferred income taxes when it is expected the amounts will be recovered or settled through future regulator-approved rates. We believe that the recovery of our regulatory assets as at December 31, 2022 is probable over the periods described in *Note 5 - Regulatory Matters*.

With the approval of the regulator, certain operations capitalize a percentage of specified operating costs. These operations are authorized to charge depreciation and earn a return on the net book value of such capitalized costs in future years. In the absence of rate regulation, a portion of such operating costs would be charged to earnings in the year incurred.

REVENUE RECOGNITION

Revenue from contracts with customers is generally recognized upon the fulfillment of the performance obligations for the distribution, storage, transportation and sale of natural gas. For distribution and transportation service arrangements, where the services are simultaneously received and consumed by the customer, revenues are recorded based on regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in our distribution franchise areas. Revenues from storage services are recognized as the storage services are provided.

A significant portion of our operations are subject to regulation and, accordingly, there are circumstances where the revenues recognized do not match the amounts billed. Revenue under such circumstances is recognized in a manner that is consistent with the underlying rate-setting mechanism as approved by the regulator. This may give rise to regulatory deferral accounts pending disposition by decisions of the regulator, which are accounted for under Accounting Standards Codification (ASC) 980 *Regulated Operations*.

PUSH-DOWN ACCOUNTING

Enbridge Gas Distribution Inc. (EGD) elected to apply push-down accounting in respect of its original acquisition by its ultimate parent, Enbridge, when it first adopted US GAAP. On the original acquisition, the fair value adjustment was recorded by Enbridge rather than by EGD. Upon adopting push-down accounting, the historical cost of EGD's property, plant and equipment and related accounts were adjusted by the remaining unamortized fair value adjustment.

We have also applied push-down accounting with respect to the accounts of Union Gas Limited (Union Gas). The carrying values of certain assets and liabilities of Union Gas transferred to EGD have been adjusted to reflect Enbridge's historical cost as at February 27, 2017, the date upon which Enbridge acquired common control of EGD and Union Gas.

DERIVATIVE INSTRUMENTS AND HEDGING

Derivatives in Qualifying Hedging Relationships

We use derivative financial instruments to manage our exposure to changes in foreign exchange rates and interest rates. Hedge accounting is optional and requires us to document the hedging relationship and test the hedging item's effectiveness in offsetting changes in fair values or cash flows of the underlying hedged item on an ongoing basis. We present the earnings effects of hedging items with the hedged transaction. Derivatives in qualifying hedging relationships are categorized as cash flow hedges, fair value hedges or net investment hedges. There were no outstanding derivative instruments relating to fair value or net investment hedges as at December 31, 2022 and 2021.

Cash Flow Hedges

We use cash flow hedges to manage our exposure to changes in foreign exchange rates and interest rates related to our unregulated storage revenue. The change in the fair value of a cash flow hedging instrument is recorded in Other comprehensive income/(loss) (OCI) and is reclassified to earnings when the hedged item impacts earnings.

If a derivative instrument designated as a cash flow hedge ceases to be effective or is terminated, hedge accounting is discontinued and the gain or loss at that date is deferred in OCI and recognized in earnings concurrently with the related transaction. If an anticipated hedged transaction is no longer probable, the gain or loss is recognized immediately in earnings. Subsequent gains and losses from derivative instruments for which hedge accounting has been discontinued are recognized in earnings in the period in which they occur.

Classification of Derivatives

We recognize the fair value of derivative instruments in the Consolidated Statements of Financial Position as current and non-current assets or liabilities depending on the timing of settlements and the resulting cash flows associated with the instruments. Fair value amounts related to cash flows occurring beyond one year are classified as non-current.

Cash inflows and outflows related to derivative instruments are classified as Cash Flows from Operating Activities in the Consolidated Statements of Cash Flows.

Balance Sheet Offset

Assets and liabilities arising from derivative instruments may be offset in the Consolidated Statements of Financial Position when we have the legal right and intention to settle them on a net basis.

Transaction Costs

Transaction costs are incremental costs directly related to the acquisition of a financial asset or the issuance of a financial liability. We incur transaction costs primarily from the issuance of debt and account for these costs as a reduction to Long-term debt in the Consolidated Statements of Financial Position. These costs are amortized using the effective interest rate method over the term of the related debt instrument and are recorded in Interest expense.

INCOME TAXES

Income taxes are accounted for using the liability method. Deferred income tax assets and liabilities are recorded based on temporary differences between the tax bases of assets and liabilities and their carrying values for accounting purposes. Deferred income tax assets and liabilities are measured using the tax rate that is expected to apply when the temporary differences reverse. For our regulated operations, a deferred income tax liability or asset is recognized with a corresponding regulatory asset or liability, respectively, to the extent that taxes can be recovered through rates. Any interest and/or penalty incurred related to tax is reflected in Income tax expense.

FOREIGN CURRENCY TRANSACTIONS

Foreign currency transactions are those transactions whose terms are denominated in a currency other than the currency of the primary economic environment in which Enbridge Gas operates, referred to as the functional currency. Transactions denominated in foreign currencies are translated to the functional currency using the exchange rate prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated to the functional currency using the exchange rate in effect as at the balance sheet date. Exchange gains and losses resulting from the translation of monetary assets and liabilities are included in earnings in the period in which they arise.

CASH

We combine cash and bank indebtedness where the corresponding bank accounts are subject to cash pooling arrangements.

RECEIVABLES AND CURRENT EXPECTED CREDIT LOSSES

Accounts receivable and other are measured at cost. Interest income is recognized in earnings as it is earned with the passage of time. For accounts receivable, a loss allowance matrix is utilized to measure lifetime expected credit losses. The matrix contemplates historical credit losses by age of receivables, adjusted for any forward-looking information and management expectations.

NATURAL GAS IMBALANCES

The Consolidated Statements of Financial Position include balances as a result of differences in gas volumes received from, and delivered for, customers. As settlement of imbalances are in-kind, changes in the balances do not have an effect on our Consolidated Statements of Earnings or Consolidated Statements of Cash Flows. All natural gas volumes owed to or by us are valued at natural gas market index prices as at the balance sheet dates.

GAS INVENTORY

Gas inventories consist of natural gas held in storage. Natural gas held in storage is recorded at the quarterly prices approved by the OEB in the determination of distribution rates. The actual price of gas purchased may differ from the OEB approved price. The difference between the approved price and the actual cost of gas purchased is deferred as a liability for future refund, or as an asset for collection, as approved by the OEB.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment is recorded at historical cost, including an allowance for interest incurred during construction as authorized by the regulator. Expenditures for construction, expansion, major renewals and betterments are capitalized. Maintenance and repair costs are expensed as incurred. Expenditures for project development are capitalized if they are expected to have future benefit.

The pool method of accounting for property, plant and equipment is followed whereby similar assets with comparable useful lives are grouped and depreciated as a pool, as approved by the regulator. When group assets are retired or otherwise disposed of, gains and losses are generally not reflected in earnings but are booked as an adjustment to accumulated depreciation. Gains and losses on the disposal of assets not subject to the pool method of accounting, such as land, are reflected in earnings. Depreciation of property, plant and equipment is provided on a straight-line basis over the estimated useful lives of the assets, as approved by the regulator, commencing when the asset is placed in service. Depreciation expense includes a provision for future removal and site restoration costs at rates approved by the regulator.

LEASES

We recognize an arrangement as a lease when a customer has the right to obtain substantially all of the economic benefits from the use of an asset, as well as the right to direct the use of the asset. We recognize right-of-use (ROU) assets and the related lease liabilities in the Consolidated Statements of Financial Position for operating lease arrangements with a term of 12 months or longer. We do not separate non-lease components from the associated lease components of our lessee contracts and account for both components as a single lease component. We combine lease and non-lease components within a contract for operating lessor leases when certain conditions are met. ROU assets are assessed for impairment using the same approach applied for other long-lived assets.

Lease liabilities and ROU assets require the use of judgment and estimates which are applied in determining the term of a lease, appropriate discount rates, whether an arrangement contains a lease, whether there are any indicators of impairment for ROU assets and whether any ROU assets should be grouped with other long-lived assets for impairment testing.

DEFERRED AMOUNTS AND OTHER ASSETS

Deferred amounts and other assets primarily consist of costs our regulatory authority have permitted, or are expected to permit, to be recovered through future rates, including: deferred income taxes; the fair value adjustment to long-term debt; the difference between the actual cost and approved cost of natural gas reflected in rates; and actuarial gains and losses arising from defined benefit pension plans.

INTANGIBLE ASSETS

Intangible assets consist primarily of certain software costs. We capitalize costs incurred during the application development stage of internal use software projects. Intangible assets are generally amortized on a straight-line basis over their expected lives, commencing when the asset is available for use.

GOODWILL

Goodwill represents the excess of the purchase price over the fair value of net identifiable assets upon acquisition of a business. The carrying value of goodwill, which is not amortized, is assessed for impairment annually or more frequently if events or changes in circumstances arise that suggest the carrying value of goodwill may be impaired. We perform our annual review of the goodwill balance on April 1.

We have the option to first assess qualitative factors to determine whether it is necessary to perform the quantitative goodwill impairment assessment. When performing a qualitative assessment, we determine the drivers of fair value and evaluate whether those drivers have been positively or negatively affected by relevant events and circumstances since the last fair value assessment. Our evaluation includes, but is not limited to, the assessment of macroeconomic trends, regulatory environments, capital accessibility, operating income trends and industry conditions. Based on our assessment of qualitative factors, if we determine it is more likely than not that the fair value is less than its carrying amount, a quantitative goodwill impairment assessment is performed.

The quantitative goodwill impairment assessment involves determining the fair value of goodwill and comparing that value to its carrying value. If the carrying value, including allocated goodwill, exceeds fair value, goodwill impairment is measured at the amount by which the carrying value exceeds its fair value. This amount should not exceed the carrying amount of goodwill. Fair value is estimated using a discounted cash flow technique. The determination of fair value using the discounted cash flow technique requires the use of estimates and assumptions related to discount rates, projected operating income and rate base, rate base multiple, capital expenditures and working capital levels.

Due to changes in the macroeconomic environment which has led to a rise in interest rates, we performed a quantitative assessment as at December 1, 2022. The goodwill impairment assessment did not result in an impairment charge.

IMPAIRMENT

We review the carrying values of our long-lived assets as events or changes in circumstances warrant. If it is determined that the carrying value of an asset exceeds its expected undiscounted cash flows, we will calculate fair value based on the discounted cash flows and write the asset down to the extent that the carrying value exceeds the fair value.

ASSET RETIREMENT OBLIGATIONS

ARO associated with the retirement of long-lived assets are measured at fair value and recognized as Accounts payable and other or Other long-term liabilities in the period in which they can be reasonably determined. Fair value approximates the cost a third party would charge to perform the tasks necessary to retire such assets and is recognized at the present value of expected future cash flows. ARO are added to the carrying value of the associated asset and depreciated over the asset's useful life. The corresponding liability is accreted over time through charges to earnings and is reduced by actual costs of decommissioning and reclamation. Our estimates of retirement costs could change as a result of changes in cost estimates and regulatory requirements. Currently, for the majority of our assets, it is not possible to make a reasonable estimate of ARO due to the indeterminate timing and scope of the asset retirements.

PENSION AND OTHER POSTRETIREMENT BENEFITS

We provide benefits through defined benefit and defined contribution pension plans, as well as defined benefit OPEB plans.

Obligations and net periodic benefit costs for defined benefit pension and OPEB plans are estimated using the projected unit credit method, which is based on years of service, as well as our best estimates of actuarial assumptions such as discount rates, future salary levels, other cost escalations, employees' retirement ages, and mortality.

We determine discount rates using market yields of high-quality corporate bonds with maturities that approximate the estimated timing of future benefit payments.

Plan assets are measured at fair value. The expected return on plan assets is determined using the long-term target asset mixes in our investment policies and long-term market expectations.

Actuarial gains and losses arise from the difference between the actual and expected return on plan assets, and changes in actuarial assumptions such as discount rates. Periodic net actuarial gains and losses and prior service costs are accumulated and presented as follows in the Consolidated Statements of Financial Position:

- as a component of AOCI, for our defined benefit OPEB plans; and
- as a component of Deferred amounts and other assets and/or Other long-term liabilities, for our defined benefit pension plans, to the extent that the net actuarial gains and losses and prior service costs have been permitted or are expected to be permitted by the regulator, to be recovered through future rates.

Net periodic benefit cost is recognized in earnings and includes:

- current service cost;
- interest cost;
- expected return on plan assets;
- amortization of prior service costs over the expected average remaining service life of the plans' active employee group; and
- amortization of net actuarial gains and losses in excess of 10% of the greater of the benefit obligation or the fair value of plan assets, over the expected average remaining service life of the plans' active employee group.

We also record regulatory adjustments for the difference between net periodic benefit costs for accounting versus ratemaking purposes. Offsetting regulatory assets or liabilities are recorded to the extent net periodic benefit costs are expected to be recovered from or refunded to customers, respectively, in future rates. In the absence of rate regulation, regulatory assets or liabilities would not be recorded and net periodic benefit costs would be charged to earnings and OCI on an accrual basis.

For defined contribution plans, our contributions are expensed when the contribution occurs.

COMMITMENTS AND CONTINGENCIES
Liabilities for other commitments and contingencies are recognized when, after fully analyzing available information, we determine it is either probable that an asset has been impaired or that a liability has been incurred, and the amount of impairment or loss can be reasonably estimated. When a range of probable loss can be estimated, we recognize the most likely amount, or if no amount is more likely than another, the minimum of the range of probable loss is accrued. We expense legal costs associated with loss contingencies as such costs are incurred.

3. CHANGES IN ACCOUNTING POLICIES

CHANGES IN ACCOUNTING POLICIES
There were no changes in accounting policies during the year ended December 31, 2022.

ADOPTION OF NEW ACCOUNTING STANDARDS
Disclosures About Government Assistance
Effective January 1, 2022, we adopted Accounting Standards Update (ASU) 2021-10 on a prospective basis. The new standard was issued in November 2021 to increase the transparency of government assistance to business entities. The ASU adds new disclosure requirements for transactions with governments that are accounted for using a grant or contribution accounting model by analogy. The required disclosures include information about the nature of transactions, accounting policy applied, impacted financial statement line items and significant terms and conditions. The adoption of this ASU did not have a material impact on our consolidated financial statements.

4. REVENUES

REVENUE FROM CONTRACTS WITH CUSTOMERS
Major Services

Year ended December 31,	**2022**	2021
(millions of Canadian dollars)		
Gas commodity and distribution revenue - residential	**3,771**	2,778
Gas commodity and distribution revenue - commercial and industrial	**1,832**	1,208
Storage revenue	**176**	156
Transportation revenue	**791**	686
Other revenue	**76**	71
Total revenue from contracts with customers	**6,646**	4,899
Other[1]	**(38)**	(6)
Total revenues	**6,608**	4,893

1 Primarily relates to the effects of rate-regulated accounting.

We disaggregate revenues into categories which represent our principal performance obligations. These revenue categories also represent the most significant revenue streams, and consequently are considered to be the most relevant revenue information for management to consider in evaluating performance.

Contract Balances

	Contract Receivables	Contract Liabilities
(millions of Canadian dollars)		
Balance as at December 31, 2022	**1,359**	**—**
Balance as at December 31, 2021	824	17

Contract receivables represent an unconditional right to consideration where only the passage of time is required before payment of consideration is due, and consist of trade accounts receivable, unbilled revenue and other accrued receivable balances. Contract receivables also consist of trade accounts receivable and unbilled revenue balances for the collection of certain federal carbon levy unit rates, for which we act as an agent.

Contract liabilities represent payments received for performance obligations which have not been fulfilled under our equal monthly payment plan. Revenue recognized during the year ended December 31, 2022 related to obligations under the equal monthly payment plan that existed at December 31, 2021 was $17 million.

Performance Obligations

Revenue category	Nature of Performance Obligation
Gas commodity and distribution revenue	• Supply and delivery of natural gas to customers
Storage and transportation revenue	• Storage and transportation of natural gas on behalf of customers
Other revenue	• Other billing and service fees

There was no material revenue recognized during the year ended December 31, 2022 from performance obligations satisfied in previous periods.

Payment Terms
Payments from distribution customers are received on a continuous basis based on established billing cycles. Our policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which is generally within 20 days. Payments from storage customers are received monthly under long-term storage capacity contracts. Payments from transportation customers are received on a continuous basis based on established billing cycles or monthly under long-term transportation capacity contracts.

Revenue to be Recognized from Unfulfilled Performance Obligations
Total revenue from performance obligations expected to be fulfilled in future periods is $643 million, of which $354 million is expected to be recognized during the year ending December 31, 2023.

The performance obligations above reflect revenue expected to be recognized in future periods from unfulfilled performance obligations pursuant to contracts with customers for the purchase of natural gas distribution, storage and transportation services. Certain revenues are excluded from the amounts above under the following ASC 606 optional exemptions:

- revenues, such as flow-through costs charged to customers, which are recognized at the amount for which we have the right to invoice our customers; and
- revenue from contracts with customers that have an original expected duration of one year or less.

Variable consideration is also excluded from the amounts above due to the uncertainty of the associated consideration, which is generally resolved when actual volumes and prices are determined. For example, we consider interruptible transportation service revenues to be variable revenues since volumes cannot be reasonably estimated.

A significant portion of our operations are subject to regulation. Accordingly, the amounts above, in addition to revenues that are not regulated, only include revenue for which the underlying rate has been approved by regulation, where applicable. The revenues excluded from the amounts above could represent a significant portion of our overall revenues and revenue from contracts with customers.

SIGNIFICANT JUDGMENTS MADE IN RECOGNIZING REVENUE

Revenue Recognition

Revenue from contracts with customers is generally recognized upon the fulfillment of the performance obligations as described above. Distribution and transportation service revenues are recorded on the basis of regular meter readings and estimates of customer usage from the last meter reading to the end of the reporting period. Estimates are based on historical consumption patterns and heating degree days experienced. Heating degree days is a measure of coldness that is indicative of volumetric requirements for natural gas utilized for heating purposes in our distribution franchise areas.

Due to regulatory mechanisms, there are circumstances where revenues recognized do not match the amounts billed. Under such circumstances, revenue is recognized in a manner that is consistent with the underlying rate setting mechanism as approved by the regulator. This may give rise to regulatory deferral accounts pending disposition by decisions of the regulator.

Recognition and Measurement of Revenues

Year ended December 31,	**2022**	2021
(millions of Canadian dollars)		
Revenue from products and services transferred over time[1]	**6,571**	4,829
Revenue from products transferred at a point in time[2]	**75**	70
Total revenue from contracts with customers	**6,646**	4,899

1 Revenue from distribution, storage and transportation services.
2 Primarily from Other revenues.

Performance Obligations Satisfied Over Time

For arrangements involving the distribution and transportation of natural gas, where the services are simultaneously received and consumed by the customer, we recognize revenue over time using an output method based on volumes of commodities delivered. The measurement of the volumes delivered corresponds directly to the benefits received by the customers during that period. Revenue from storage services are recognized as the services are provided.

Determination of Transaction Prices

Prices for distribution and transportation services and regulated storage services are prescribed by regulation. Fees for unregulated storage services are determined through negotiations with customers and are based on market rates.

Prices for natural gas sold are driven by market prices and the Quarterly Rate Adjustment Mechanism (QRAM) in place that allows for rates to reflect changes in natural gas prices, subject to regulatory approval.

5. REGULATORY MATTERS

We record assets and liabilities that result from regulated ratemaking processes that would not be recorded under US GAAP for non-regulated entities. See *Note 2 - Significant Accounting Policies* for further discussion.

We are regulated by the OEB pursuant to the provisions of the *Ontario Energy Board Act*, (1998), which is part of a package of legislation known as the *Energy Competition Act*, (1998). This legislation provides for different forms of regulation and competition in the energy (electricity and natural gas) industry in Ontario.

RATE APPROVALS

Our distribution rates, commencing in 2019, are set under a five-year Incentive Regulation (IR) framework using a price cap mechanism. The price cap mechanism establishes new rates each year through an annual base rate escalation at inflation less a 0.3% stretch factor, annual updates for certain costs to be passed through to customers, and where applicable, the recovery of material discrete incremental capital investments beyond those that can be funded through base rates. The IR framework includes the continuation and establishment of certain deferral and variance accounts, as well as an earnings sharing mechanism that requires us to share equally with customers any earnings in excess of 150 basis points over the annual OEB approved return on equity.

Under the current OEB-authorized rate structure for our business, income tax costs are recovered in rates based on the current income tax payable and do not include accruals for deferred income tax. However, as income taxes become payable as a result of the reversal of temporary differences that created the deferred income taxes, it is expected that rates will be adjusted to recover these taxes. Since most of these temporary differences are related to property, plant and equipment costs, this recovery is expected to occur over the life of the related assets. In the absence of rate-regulated accounting, this regulatory Deferred income taxes balance and the related earnings impact would not be recorded.

PURCHASE GAS VARIANCE

The Purchase Gas Variance Account (PGVA) captures the difference between actual and forecasted natural gas prices reflected in rates. Account balances are typically recovered or refunded over a prospective 12-month period through QRAM applications. Due to the significant increase in natural gas prices, the approvals have also included rate mitigation plans intended to ease bill impacts to ratepayers. Specifically, the approved rate mitigation plans extended the PGVA recovery period from 12 months to 24 months in certain applications.

FINANCIAL STATEMENT EFFECTS

Accounting for rate-regulated activities has resulted in the recognition of the following regulatory assets and liabilities in the Consolidated Statements of Financial Position:

December 31,	**2022**	2021	Recovery/Refund Period Ends
(millions of Canadian dollars)			
Current regulatory assets			
Purchase gas variance	**190**	15	2023
Other current regulatory assets	**266**	67	2023
Total current regulatory assets[1] *(Note 6)*	**456**	82	
Long-term regulatory assets			
Deferred income taxes	**1,696**	1,532	Various
Long-term debt[2] *(Note 10)*	**283**	307	2046
Purchase gas variance	**244**	215	2024
Accounting policy changes[3]	**219**	157	Various
Transition impact of accounting changes[4]	**40**	49	2032
Pension plan receivable[5]	**—**	26	Various
Other long-term regulatory assets	**2**	91	Various
Total long-term regulatory assets[1]	**2,484**	2,377	
Total regulatory assets	**2,940**	2,459	
Current regulatory liabilities			
Other current regulatory liabilities	**128**	61	2023
Total current regulatory liabilities[6] *(Note 9)*	**128**	61	
Long-term regulatory liabilities			
Future removal and site restoration reserves[7]	**1,615**	1,543	Various
Pension plan payable[5]	**230**	—	Various
Other long-term regulatory liabilities	**90**	111	Various
Total long-term regulatory liabilities[6]	**1,935**	1,654	
Total regulatory liabilities	**2,063**	1,715	

1 Current regulatory assets are included in Accounts receivable and other, while long-term regulatory assets are included in Deferred amounts and other assets.

2 Represents our regulatory offset to the fair value adjustment to debt acquired in Enbridge's merger with Spectra Energy Corp. (Spectra Energy) and pushed down to Enbridge Gas. The offset is viewed as a proxy for the regulatory asset that would be recorded in the event such debt was extinguished at an amount higher than the carrying value.

3 This deferral primarily consists of unamortized accumulated actuarial gains/losses and past service costs incurred by Union Gas, relating to the period up to Enbridge's merger with Spectra Energy, which were previously recorded in AOCI. The amortization of this balance is recognized as a component of accrual-based pension expenses, which are included in Other income and recovered in rates, as previously approved by the OEB.

4 Represents our right to recover costs resulting from the adoption of the accrual basis of accounting for pension and OPEB costs upon transition to US GAAP in 2012. Pursuant to the OEB rate order, the balance as at December 31, 2012 is to be collected in rates over a 20 year period, commencing in 2013.

5 Represents the regulatory offset to our pension liability/asset to the extent that it is expected to be included in regulator-approved future rates and refunded to or recovered from customers. The settlement period for this balance is not determinable. In the absence of rate-regulated accounting, this regulatory balance and the related pension expense/income would be recorded in earnings and OCI.

6 Current regulatory liabilities are included in Accounts payable and other, while long-term regulatory liabilities are included in Other long-term liabilities.

7 Future removal and site restoration reserves consists of amounts collected from customers, with the approval of the OEB, to fund future costs of removal and site restoration relating to property, plant and equipment. These costs are collected as part of the depreciation expense charged on property, plant and equipment that is reflected in rates. The settlement of this balance will occur over the long-term as costs are incurred. In the absence of rate-regulated accounting, depreciation rates would not include a charge for removal and site restoration and costs would be charged to earnings as incurred with recognition of revenue for amounts previously collected.

OTHER ITEMS AFFECTED BY RATE REGULATION

Gas Inventories

Natural gas held in storage is recorded in inventory at the reference prices approved by the OEB in the determination of customers' system supply rates. In prior years, Gas inventory included costs related to storage injection and demand charges that, consistent with the regulatory recovery pattern, were recorded in gas inventories during our off-peak months and charged to gas costs during the peak winter months. As of December 31, 2022 we transferred $63 million related to storage injection and demand costs from Gas inventory to the Accounting policy changes deferral account where the balance will reside until we request disposal at the end of current rebasing term. Included in Gas inventory as at December 31, 2021 was $61 million related to storage injection and demand costs. In the absence of rate-regulated accounting, these costs would be expensed as incurred, and inventory would be recorded at the lower of cost or market value.

6. ACCOUNTS RECEIVABLE AND OTHER

December 31,	**2022**	2021
(millions of Canadian dollars)		
Trade receivables and unbilled revenues, net[1]	**1,550**	953
Regulatory assets *(Note 5)*	**456**	82
Gas imbalances	**177**	101
Rebillables receivable	**61**	45
Other	**102**	47
	2,346	1,228

1 Net of allowance for expected credit losses of $71 million as at December 31, 2022 (2021 - $55 million).

7. PROPERTY, PLANT AND EQUIPMENT

December 31,	Weighted Average Depreciation Rate	**2022**	2021
(millions of Canadian dollars)			
Regulated property, plant and equipment			
Gas transmission	2.4%	**1,960**	1,854
Gas mains, services and other	2.6%	**14,219**	13,354
Compressors, meters and other operating equipment	4.3%	**3,538**	3,361
Storage	2.6%	**1,145**	1,065
Land and right-of-way[1]	0.9%	**413**	375
Vehicles, office furniture, equipment and other buildings and improvements	9.5%	**511**	453
Under construction	—%	**319**	263
		22,105	20,725
Accumulated depreciation		**(4,954)**	(4,464)
		17,151	16,261
Unregulated property, plant and equipment			
Gas mains, services and other	5.3%	**13**	13
Compressors, meters and other operating equipment	1.3%	**46**	42
Storage	2.8%	**413**	374
Land and right-of-way[1]	1.5%	**40**	38
Vehicles, office furniture, equipment and other buildings and improvements	—%	**13**	—
Under construction	—%	**48**	37
		573	504
Accumulated depreciation		**(123)**	(103)
		450	401
Property, plant and equipment, net		**17,601**	16,662

1 The measurement of weighted average depreciation rate excludes non-depreciable assets.

Depreciation expense, including amounts collected for future removal and site restoration costs, was $638 million for the year ended December 31, 2022 (2021 - $606 million).

Included within depreciation expense is $22 million in incremental depreciation resulting from push-down accounting for the years ended December 31, 2022 and 2021 *(Note 2)*.

8. INTANGIBLE ASSETS

December 31,	**2022**	2021
(millions of Canadian dollars)		
Software and customer information system[1]	**466**	515
Less: Accumulated amortization	**(291)**	(338)
Intangible assets, net	**175**	177

1 The weighted average amortization rate for the years ended December 31, 2022 and 2021 was 11.3% and 12.8%, respectively.

Intangible assets include $21 million of work-in-progress as at December 31, 2022 (2021 - $26 million). Amortization expense for intangible assets for the years ended December 31, 2022 and 2021 was $52 million and $71 million, respectively. The following table presents our expected amortization expense associated with existing intangible assets for the years indicated as follows:

	2023	2024	2025	2026	2027
(millions of Canadian dollars)					
Forecast of amortization expense	54	23	22	18	12

9. ACCOUNTS PAYABLE AND OTHER

December 31,	**2022**	2021
(millions of Canadian dollars)		
Trade payables and operating accrued liabilities	**742**	638
Federal carbon program liability	**333**	242
Gas imbalances	**199**	124
Taxes payable	**169**	99
Construction payables and contractor holdbacks	**80**	88
Interest payable	**96**	87
Regulatory liabilities *(Note 5)*	**128**	61
Other	**117**	119
	1,864	1,458

10. DEBT

December 31,	Weighted Average Interest Rate[2]	Maturity	**2022**	2021
(millions of Canadian dollars)				
Medium-term notes	4.1%	2023 - 2052	**9,535**	9,010
Debentures	9.1%	2024 - 2025	**210**	210
Commercial paper and credit facility draws	4.5%	2024	**2,000**	1,515
Other[1]			**(55)**	(49)
Fair value adjustment from push down accounting *(Note 2)*			**283**	307
Total debt			**11,973**	10,993
Current maturities			**(352)**	(126)
Short-term borrowings			**(1,996)**	(1,515)
Long-term debt			**9,625**	9,352

1 Other consists of unamortized discounts, premiums and debt issuance costs.
2 Calculated based on term notes, debentures, commercial paper and credit facility draws outstanding as at December 31, 2022.

As at December 31, 2022, all outstanding debt was unsecured.

CREDIT FACILITIES

We actively manage our bank funding sources to ensure adequate liquidity and to optimize pricing and other terms. The following table provides details of our external credit facility at December 31, 2022:

	Maturity	Total Facility	Draws[2]	Available
(millions of Canadian dollars)				
364 day extendible credit facility	2024[1]	**2,000**	**2,000**	**—**

1 Maturity date is inclusive of the one-year term out provision.
2 Includes facility draws and commercial paper issuances, net of discount, that are back-stopped by the credit facility.

In July 2022, we extended our 364 day extendible credit facility to July 2024, which includes a one-year term out provision from July 2023.

The credit facility carries a standby fee of 0.1% on the unused portion and the draws bear interest at market rates.

In addition to this committed credit facility, we had access to Enbridge's demand letter of credit facilities totaling $1.0 billion as at December 31, 2022 and 2021. As at December 31, 2022, $7 million (2021 - $15 million) of letters of credit were issued by us.

LONG-TERM DEBT ISSUANCES

During the year ended December 31, 2022, we completed the following long-term debt issuances totaling $650 million:

Issue Date	Description	Principal Amount
(millions of Canadian dollars)		
August 2022	4.15% medium-term notes due August 2032	$325
August 2022	4.55% medium-term notes due August 2052	$325

LONG-TERM DEBT REPAYMENT

During the year ended December 31, 2022, we completed the following long-term debt repayment:

Repayment Date	Description	Principal Amount
(millions of Canadian dollars)		
April 2022	4.85% medium-term notes	$125

DEBT COVENANTS

Our credit facility agreements and term debt indentures include standard events of default and covenant provisions whereby accelerated repayment and/or termination of the agreements may result if we were to default on payment or violate certain covenants. We are in compliance with all terms and conditions of our committed credit facility agreement and our Trust Indenture as at December 31, 2022.

INTEREST EXPENSE

Year ended December 31,	**2022**	2021
(millions of Canadian dollars)		
Debentures and term notes	**389**	392
Commercial paper and credit facility draws	**47**	9
Interest on loan from affiliate[1]	**2**	—
Capitalized interest	**(15)**	(7)
	423	394

1 Interest on loan from affiliate is with Enbridge Inc.

11. SHARE CAPITAL

As at December 31, 2022, our authorized share capital consisted of an unlimited number of common shares with no par value and an unlimited number of preference shares. Our Class A and Class B common shares are held by Enbridge Energy Distribution Inc. and Great Lakes Basin Energy LP, respectively. Both classes of common shares are identical in every respect, and dividends cannot be paid to one class without paying dividends to the other. As at December 31, 2022 and 2021, no preference shares were issued and outstanding.

COMMON SHARES

	2022		2021	
December 31,	Number of shares	Amount	Number of shares	Amount
(millions of Canadian dollars; number of shares in millions)				
Class A				
Balance at beginning of year	**282**	**2,596**	282	2,636
Capital contribution	**—**	**432**	—	527
Return of capital	**—**	**(315)**	—	(567)
	282	**2,713**	282	2,596
Class B				
Balance at beginning of year	**240**	**846**	240	881
Capital contribution	**—**	**368**	—	448
Return of capital	**—**	**(268)**	—	(483)
	240	**946**	240	846
Balance at end of year	**522**	**3,659**	522	3,442

The capital contribution and return of capital transactions to the stated capital of Class A and Class B common shares had no impact on the total shares outstanding.

12. COMPONENTS OF AOCI

Changes in AOCI for the year ended December 31, 2022 and 2021 are as follows:

	2022		
	Cash Flow Hedges	OPEB Adjustment	Total
(millions of Canadian dollars)			
Balance at January 1, 2022	**(31)**	**8**	**(23)**
Other comprehensive income retained in AOCI	**93**	**39**	**132**

	72	**46**	**118**
Tax impact			
Income tax on amounts retained in AOCI	**(25)**	**(10)**	**(35)**
Income tax on amounts reclassified to earnings	**(3)**	**—**	**(3)**
	(28)	**(10)**	**(38)**
Balance at December 31, 2022	**44**	**36**	**80**

	2021		
	Cash Flow Hedges	OPEB Adjustment	Total
(millions of Canadian dollars)			
Balance at January 1, 2021	(64)	(14)	(78)
Other comprehensive income retained in AOCI	29	31	60
Other comprehensive loss reclassified to earnings	17	—	17
	(18)	17	(1)
Tax impact			
Income tax on amounts retained in AOCI	(8)	(9)	(17)
Income tax on amounts reclassified to earnings	(5)	—	(5)
	(13)	(9)	(22)
Balance at December 31, 2021	(31)	8	(23)

13. RISK MANAGEMENT AND FINANCIAL INSTRUMENTS

MARKET RISK
Our earnings, cash flows and other OCI are subject to movements in natural gas prices, foreign exchange rates and interest rates (collectively, market risk). Portions of these risks are borne by customers through certain regulatory mechanisms. Formal risk management policies, processes and systems have been designed to mitigate these risks.

The following summarizes the types of market risks to which we are exposed and the risk management instruments used to mitigate them. We use a combination of qualifying and non-qualifying derivative instruments to manage the risks noted below.

Natural Gas Price Risk
Natural gas price risk is the risk of gain or loss due to changes in the market price of natural gas. In compliance with the directive of the OEB, fluctuations in natural gas prices are borne by our customers.

Foreign Exchange Risk
Foreign exchange risk is the risk of gain or loss due to the volatility of currency exchange rates. We generate certain revenues, incur expenses and hold cash balances that are denominated in United States (US) dollars. As a result, our earnings, cash flows and OCI are exposed to fluctuations resulting from US dollar exchange rate variability.

We have implemented a policy to hedge a portion of our US dollar denominated unregulated storage revenue exposures. Qualifying derivative instruments are used to hedge anticipated US dollar denominated revenues and to manage variability in cash flows.

A portion of our natural gas purchases are denominated in US dollars and, as a result, there is exposure to fluctuations in the exchange rate of the US dollar against the Canadian dollar. Realized foreign exchange gains or losses relating to natural gas purchases are passed on to customers, therefore, we have no net exposure to movements in the foreign exchange rate on natural gas purchases.

Interest Rate Risk
Our earnings and cash flows are exposed to short-term interest rate variability due to the regular repricing of our variable rate debt, primarily commercial paper. We primarily use qualifying derivative instruments to manage interest rate risk. Pay fixed-receive floating interest rate swaps are used to hedge against the effect of future interest rate movements. As at December 31, 2022, we do not have any floating-to-fixed interest rate swaps outstanding.

Our earnings and cash flows are also exposed to variability in longer term interest rates ahead of anticipated fixed rate debt issuances. Forward starting interest rate swaps are used to hedge against the effect of future interest rate movements. We have implemented a program to mitigate our exposure to long-term interest rate variability on select forecast term debt issuances via execution of floating-to-fixed interest rate swaps with an average swap rate of 2.6%.

TOTAL DERIVATIVE INSTRUMENTS

We generally have a policy of entering into individual International Swaps and Derivatives Association, Inc. agreements, or other similar derivative agreements, with the majority of our derivative counterparties. These agreements provide for the net settlement of derivative instruments outstanding with specific counterparties in the event of bankruptcy or other significant credit event, and would reduce our credit risk exposure on financial derivative asset positions outstanding with these counterparties in those particular circumstances.

The following table summarizes the Consolidated Statements of Financial Position location and carrying value of our derivative instruments, as well as the maximum potential settlement amounts in the event of the specific circumstances described above. All amounts are presented gross in the Consolidated Statements of Financial Position.

December 31, 2022	Derivative Instruments Used as Cash Flow Hedges	Non-Qualifying Derivative Instruments	Total Gross Derivative Instruments as Presented	Amounts Available for Offset	Total Net Derivative Instruments
(millions of Canadian dollars)

	10	17

1 Reported within Interest expense, net in the Consolidated Statements of Earnings.

We estimate that a gain of $7 million of AOCI related to unrealized cash flow hedges will be reclassified to earnings in the next 12 months. Actual amounts reclassified to earnings depend on the interest and foreign exchange rates in effect when derivative contracts, that are currently outstanding, mature. For all forecasted transactions, the maximum term over which we are hedging exposures to the variability of cash flows is 12 months as at December 31, 2022.

LIQUIDITY RISK

Liquidity risk is the risk that we will not be able to meet our financial obligations, including commitments, as they become due. In order to manage this risk, we forecast cash requirements over a 12-month rolling time period to determine whether sufficient funds will be available. Our primary sources of liquidity and capital resources are funds generated from operations, the issuance of commercial paper, draws under the committed credit facility and long-term debt, which includes debentures and medium-term notes and, if necessary, additional liquidity is available through intercompany transactions with our ultimate parent, Enbridge, and other related entities. These sources are expected to be sufficient to enable us to fund all anticipated requirements. We maintain a current medium-term note shelf prospectus with securities regulators, which enables ready access to the Canadian public capital markets, subject to market conditions. We also maintain a committed credit facility with a diversified group of banks and institutions. We are in compliance with all of the terms and conditions of our committed credit facility as at December 31, 2022. As a result, the credit facility is available to us and the banks are obligated to fund us under the terms of the facility.

CREDIT RISK

Credit risk arises from the possibility that a counterparty will default on its contractual obligations. We are primarily exposed to credit risk from accounts receivable and derivative financial instruments. Exposure to credit risk is mitigated by our large and diversified customer base and the ability to recover an estimate for expected credit losses for utility operations through the rate-making process. We actively monitor the financial strength of large industrial customers and, in select cases, have obtained additional security to minimize the risk of default of receivables. Generally, we classify receivables older than 20 days as past due. The maximum exposure to credit risk related to non-derivative financial assets is their carrying value.

Our policy requires that customers settle their billings in accordance with the payment terms listed on their bill, which generally require payment in full within 20 days. A provision for credit and recovery risk associated with accounts receivable has been made through the expected credit loss, which totaled $71 million as at December 31, 2022 (December 31, 2021 - $55 million).

Our expected credit loss is determined based on historical credit losses by age of receivables, adjusted for any forward-looking information and management expectations, using a loss allowance matrix. This estimate is revised each reporting period to reflect current expectations. When we have determined that collection efforts are unlikely to be successful, amounts charged to the expected credit loss account are applied against the impaired accounts receivable.

Entering into derivative financial instruments may also result in exposure to credit risk. We enter into risk management transactions primarily with institutions that possess investment grade credit ratings. Credit risk relating to derivative counterparties is mitigated by credit exposure limits and contractual requirements, frequent assessment of counterparty credit ratings and netting arrangements. As at December 31, 2022, we have $79 million (December 31, 2021 - $26 million) in credit concentrations and credit exposure with Enbridge and its affiliates.

Derivative assets are adjusted for non-performance risk of our counterparties using their credit default swap spread rates and are reflected in the fair value. For derivative liabilities, our non-performance risk is considered in the valuation.

FAIR VALUE MEASUREMENTS

Our financial assets and liabilities measured at fair value on a recurring basis include derivative instruments. We also disclose the fair value of other financial instruments not measured at fair value. The fair values of financial instruments reflect our best estimates of fair value based on generally accepted valuation techniques or models and are supported by observable market prices and rates. When such values are not available, we use discounted cash flow analysis from applicable yield curves based on observable market inputs to estimate fair value.

FAIR VALUE OF FINANCIAL INSTRUMENTS

We categorize our derivative instruments measured at fair value into one of three different levels depending on the observability of the inputs employed in the measurement.

Level 1

Level 1 includes derivatives measured at fair value based on unadjusted quoted prices for identical assets and liabilities in active markets that are accessible at the measurement date. An active market for a derivative is considered to be a market where transactions occur with sufficient frequency and volume to provide pricing information on an ongoing basis. We do not have any derivative instruments classified as Level 1.

Level 2

Level 2 includes derivative valuations determined using directly or indirectly observable inputs other than quoted prices included within Level 1. Derivatives in this category are valued using models or other industry standard valuation techniques derived from observable market data. Such valuation techniques include inputs such as quoted forward prices, time value, volatility factors and broker quotes that can be observed or corroborated in the market for the entire duration of the derivative. Derivatives valued using Level 2 inputs include non-exchange traded derivatives such as over-the-counter interest rate swaps, for which observable inputs can be obtained.

As at December 31, 2022, we had Level 2 derivative assets with a fair value of $79 million (December 31, 2021 - $26 million).

Level 3
Level 3 includes derivative valuations based on inputs which are less observable, unavailable, or where the observable data does not support a significant portion of the derivative's fair value. Generally, Level 3 derivatives are longer dated transactions, occur in less active markets, occur at locations where pricing information is not available, or have no binding broker quote to support a Level 2 classification. We have developed methodologies, benchmarked against industry standards, to determine fair value for these derivatives based on extrapolation of observable future prices and rates. We do not have any derivative instruments classified as Level 3.

We use the most observable inputs available to estimate the fair value of our derivatives. When possible, we estimate the fair value of our derivatives based on quoted market prices. If quoted market prices are not available, we use estimates from third party brokers. For non-exchange traded derivatives classified in Levels 2 and 3, we use standard valuation techniques to calculate the estimated fair value, including discounted cash flows for forwards and swaps. Depending on the type of derivative and the nature of the underlying risk, we use observable market prices (interest, foreign exchange and natural gas) and volatility as primary inputs to these valuation techniques. Finally, we consider our own credit default swap spread, as well as the credit default swap spreads associated with our counterparties, in our estimation of fair value.

FAIR VALUE OF OTHER FINANCIAL INSTRUMENTS
The fair value of our long-term debt is based on quoted market prices for instruments of similar yield, credit risk and tenor, and is classified as a Level 2 measurement. As at December 31, 2022, our long-term debt, including the current portion, had a carrying value of $9.7 billion (December 31, 2021 - $9.2 billion) before debt issuance costs and a fair value adjustment from push down accounting, and a fair value of $8.9 billion (December 31, 2021 - $10.4 billion).

The fair value of financial assets and liabilities, other than derivative instruments and long-term debt, approximate their carrying value due to the short period to maturity.

14. LEASES

LESSEE
We incur operating lease payments related to natural gas transportation, storage and real estate assets. These lease agreements have remaining lease terms of 1 year to 15 years, some of which include options to terminate at our discretion.

For the years ended December 31, 2022 and 2021, we incurred operating lease expenses of $9 million and $8 million, respectively. Operating lease expenses are reported within Operating and administrative expense in the Consolidated Statements of Earnings.

For the years ended December 31, 2022 and 2021, operating lease payments made to settle lease liabilities were $9 million and $9 million, respectively. Operating lease payments are reported within Operating activities in the Consolidated Statements of Cash Flows.

Supplemental Consolidated Statements of Financial Position Information

December 31,	**2022**	2021
(millions of Canadian dollars, except lease term and discount rate)		
Operating leases		
Operating lease right-of-use assets, net[1]	**48**	49
Operating lease liabilities - current[2]	**8**	6
Operating lease liabilities - long-term[3]	**40**	43
Total operating lease liabilities	**48**	49
Weighted average remaining lease term		
Operating leases	**7 years**	8 years
Weighted average discount rate		
Operating leases	**3.1%**	3.1%

1 Right-of-use assets are reported within Deferred amounts and other assets in the Consolidated Statements of Financial Position.
2 Current lease liabilities are reported within Accounts payable and other and Accounts payable to affiliates in the Consolidated Statements of Financial Position.
3 Long-term lease liabilities are reported within Other long-term liabilities in the Consolidated Statements of Financial Position.

As at December 31, 2022, we have lease commitments as detailed below:

	Operating leases
(millions of Canadian dollars)	
2023	**9**
2024	**8**
2025	**8**
2026	**8**
2027	**7**
Thereafter	**13**
Total undiscounted lease payments	**53**
Less imputed interest	**(5)**
Total operating lease liabilities	**48**

LESSOR

We receive revenues from operating and sales-type leases primarily related to natural gas equipment and real estate assets. Our lease agreements have remaining lease terms of 4 years to 20 years as at December 31, 2022.

As at December 31, 2022, the following table sets out future lease payments to be received under operating lease and sales-type lease contracts where we are the lessor:

	Operating leases	Sales-type leases
(millions of Canadian dollars)		
2023	**2**	**2**
2024	**1**	**2**
2025	**1**	**2**
2026	**1**	**2**
2027	**1**	**2**
Thereafter	**2**	**18**
Future lease payments to be received	**8**	**28**

15. INCOME TAXES

INCOME TAX RATE RECONCILIATION

Year ended December 31,	2022	2021
(millions of Canadian dollars)		
Earnings before income taxes	**668**	614
Canadian federal statutory income tax rate	**15%**	15%
Expected federal taxes at statutory rate	**100**	92
Increase/(decrease) resulting from:		
Provincial income taxes	**(39)**	(1)
Effects of rate-regulated accounting[1]	**(62)**	(54)
Part VI.1 tax, net of federal Part I deduction[1]	**76**	30
Other[2]	**(6)**	(4)
Income tax expense	**69**	63
Effective income tax rate	**10.3%**	10.3%

1 The provincial tax component of these items is included in Provincial income taxes above.

2 Includes miscellaneous permanent differences. These include the tax effect of items such as non-deductible meals and entertainment and true-up prior year estimates to reflect the filing of tax returns in respect of the prior year.

COMPONENTS OF PRETAX EARNINGS AND INCOME TAXES

For 2022 and 2021, our earnings before income tax are exclusively from Canadian operations. We are subject to taxation in Canada only.

Year ended December 31,	2022	2021
(millions of Canadian dollars)		
Current income tax expense	**84**	78
Deferred income tax recovery	**(15)**	(15)
Income tax expense	**69**	63

COMPONENTS OF DEFERRED INCOME TAXES

Deferred tax assets and liabilities are recognized for the future tax consequences of differences between carrying amounts of assets and liabilities and their respective tax bases. Major components of deferred income tax assets and liabilities are as follows:

December 31,	2022	2021
(millions of Canadian dollars)		
Deferred income tax liabilities		
Property, plant and equipment	**(1,823)**	(1,697)
Regulatory assets	**(452)**	(409)
Deferrals	**(27)**	(8)
Pension and OPEB plans	**(42)**	(14)
Financial instruments	**(16)**	—
Other	**(4)**	(7)
Total deferred income tax liabilities	**(2,364)**	(2,135)
Deferred income tax assets		
Future removal and site restoration reserves	**433**	413
Minimum tax credits	**71**	44
Financial instruments	**—**	12
Loss carryforwards	**6**	—
Total deferred income tax assets	**510**	469
Net deferred income tax liabilities	**(1,854)**	(1,666)

The material jurisdiction in which we are subject to potential examinations within Canada is Federal only. We are open to examination by Canadian tax authorities for 2017 to 2022 tax years and are currently under examination for income tax matters in Canada for 2017 to 2019 tax years.

UNRECOGNIZED TAX BENEFITS

Year ended December 31,	**2022**	2021
(millions of Canadian dollars)		
Unrecognized tax benefits at beginning of year	**15**	34
Gross decreases for tax positions of prior year	**(6)**	(16)
Lapses of statute of limitations	**(3)**	(3)
Unrecognized tax benefits at end of year	**6**	15

The unrecognized tax benefits as at December 31, 2022, if recognized, would impact our effective income tax rate. We do not anticipate further adjustments to the unrecognized tax benefits during the next 12 months that would have a material impact on our consolidated financial statements.

We recognize accrued interest and penalties related to unrecognized tax benefits as a component of income taxes. Income taxes for the years ended December 31, 2022 and 2021 included no amounts of interest and penalties. As at December 31, 2022 and 2021, the accrued interest and penalties remained at $1 million for both periods.

16. PENSION AND OTHER POSTRETIREMENT BENEFITS

PENSION PLANS

We provide pension benefits, covering substantially all employees, through contributory and non-contributory registered defined benefit and defined contribution pension plans. We also provide non-registered pension benefits for certain employees through supplemental non-contributory defined benefit pension plans.

Defined Benefit Pension Plan Benefits

Benefits payable from the defined benefit pension plans are based on each plan participant's years of service and final average remuneration. Some benefits are partially inflation-indexed after a plan participant's retirement. Our contributions are made in accordance with independent actuarial valuations. Participant contributions to contributory defined benefit pension plans are based upon each plan participant's current eligible remuneration.

Defined Contribution Pension Plan Benefits

Our contributions are based on each plan participant's current eligible remuneration. Our contributions for some defined contribution pension plans are also based on age and years of service. Our defined contribution pension benefit costs are equal to the amount of contributions required to be made by us.

OTHER POSTRETIREMENT BENEFIT PLANS

We provide non-contributory supplemental health, dental, life and health spending account benefit coverage for certain qualifying retired employees, through unfunded defined benefit OPEB plans.

BENEFIT OBLIGATIONS, PLAN ASSETS AND FUNDED STATUS
The following table details the changes in the benefit obligation, the fair value of plan assets and the recorded assets or liabilities for our defined benefit pension and OPEB plans:

	Pension		OPEB	
December 31,	**2022**	2021	**2022**	2021
(millions of Canadian dollars)				
Change in benefit obligation				
Benefit obligation at beginning of year	**2,386**	2,532	**157**	186
Service cost	**60**	63	**2**	3
Interest cost	**64**	51	**4**	4
Participant contributions	**13**	13	**—**	—
Actuarial gain[1]	**(528)**	(161)	**(39)**	(31)
Benefits paid	**(109)**	(112)	**(5)**	(5)
Benefit obligation at end of year[2]	**1,886**	2,386	**119**	157
Change in plan assets				
Fair value of plan assets at beginning of year	**2,415**	2,219	**—**	—
Actual return/(loss) on plan assets	**(129)**	258	**—**	—
Employer contributions	**37**	37	**5**	5
Participant contributions	**13**	13	**—**	—
Benefits paid	**(109)**	(112)	**(5)**	(5)
Fair value of plan assets at end of year	**2,227**	2,415	**—**	—
Overfunded/(underfunded) status at end of year	**341**	29	**(119)**	(157)
Presented as follows:				
Deferred amounts and other assets	**387**	164	**—**	—
Accounts payable and other	**(3)**	(3)	**(7)**	(7)
Other long-term liabilities	**(43)**	(132)	**(112)**	(150)
	341	29	**(119)**	(157)

1 Actuarial gains in 2022 and 2021 primarily due to increase in the discount rates used to measure the benefit obligations.
2 For pension plans, the benefit obligation is the projected benefit obligation. For OPEB plans, the benefit obligation is the accumulated postretirement benefit obligation. The accumulated benefit obligation for our pension plans was $1.8 billion and $2.2 billion as at December 31, 2022 and 2021, respectively.

Certain of our pension plans have accumulated benefit obligations in excess of the fair value of plan assets. For these plans, the accumulated benefit obligation and fair value of plan assets were as follows:

December 31,	**2022**	2021
(millions of Canadian dollars)		
Accumulated benefit obligation	**42**	253
Fair value of plan assets	**—**	181

Certain of our pension plans have projected benefit obligations in excess of the fair value of plan assets. For these plans, the projected benefit obligation and fair value of plan assets were as follows:

December 31,	**2022**	2021
(millions of Canadian dollars)		
Projected benefit obligation	**61**	895
Fair value of plan assets	**17**	760

AMOUNT RECOGNIZED IN ACCUMULATED OTHER COMPREHENSIVE INCOME

The amount of pre-tax AOCI relating to our OPEB plans are as follows:

December 31,	**2022**	2021
(millions of Canadian dollars)		
Net actuarial gain	**(51)**	(13)
Total amount recognized in AOCI	**(51)**	(13)

NET PERIODIC BENEFIT COST AND OTHER AMOUNTS RECOGNIZED IN COMPREHENSIVE INCOME

The components of net periodic benefit cost and other amounts recognized in pre-tax Comprehensive income related to our pension and OPEB plans are as follows:

	Pension		OPEB	
Year ended December 31,	**2022**	2021	**2022**	2021
(millions of Canadian dollars)				
Service cost	**60**	63	**2**	3
Interest cost[1]	**64**	51	**4**	4
Expected return on plan assets[1]	**(151)**	(131)	**—**	—
Amortization of net actuarial (gain)/loss[1,2]	**8**	28	**(1)**	—
Net periodic benefit (credit)/cost	**(19)**	11	**5**	7
Defined contribution benefit cost	**3**	2	**—**	—
Net pension and OPEB (credit)/cost recognized in Earnings	**(16)**	13	**5**	7
Amount recognized in OCI:				
Amortization of net actuarial gain	**—**	—	**1**	—
Net actuarial gain arising during the year	**—**	—	**(39)**	(31)
Total amount recognized in OCI	**—**	—	**(38)**	(31)
Total amount recognized in Comprehensive income	**(16)**	13	**(33)**	(24)

1 Reported within Other income in the Consolidated Statements of Earnings.
2 Reflects amortization of net actuarial loss arising from pension plans that are recognized as long-term regulatory assets (Note 5).

ACTUARIAL ASSUMPTIONS

The weighted average assumptions made in the measurement of the benefit obligation and net periodic benefit cost of our defined benefit pension and OPEB plans are as follows:

	Pension		OPEB	
	2022	2021	**2022**	2021
Benefit obligations				
Discount rate	**5.3%**	3.2%	**5.3%**	3.2%
Rate of salary increase	**2.8%**	2.9%	**3.0%**	3.0%
Net benefit cost				
Discount rate	**3.2%**	2.6%	**3.2%**	2.6%
Rate of return on plan assets	**6.3%**	6.0%	**N/A**	N/A
Rate of salary increase	**2.9%**	2.3%	**3.0%**	2.4%

ASSUMED HEALTH CARE COST TREND RATES

The assumed rates for the next year used to measure the expected cost of benefits are as follows:

	2022	2021
Health care cost trend rate assumed for next year	**4.0%**	4.0%
Rate to which the cost trend is assumed to decline (ultimate trend rate)	**4.0%**	4.0%

PLAN ASSETS

We manage the investment risk of our pension funds by setting a long-term asset mix policy for each plan after consideration of: (i) the nature of pension plan liabilities; (ii) the investment horizon of the plan; (iii) the going concern and solvency funded status and cash flow requirements of the plan; (iv) our operating environment and financial situation and our ability to withstand fluctuations in pension contributions; and (v) the future economic and capital markets outlook with respect to investment returns, volatility of returns and correlation between assets.

The overall expected rate of return on plan assets is based on the asset allocation targets with estimates for returns based on long-term expectations.

The asset allocation targets and major categories of plan assets are as follows:

Asset Category	Target Allocation	December 31, 2022	December 31, 2021
Equity securities	**40.9%**	**36.9%**	44.9%
Fixed income securities	**34.1%**	**34.3%**	32.2%
Alternatives[1]	**25.0%**	**28.8%**	22.9%

1 Alternatives include investments in private debt, private equity, infrastructure and real estate funds. Fund values are based on the net asset value of the funds that invest directly in the aforementioned underlying investments. The values of the investments have been estimated using the capital accounts representing the plan's ownership interest in the funds.

The following table summarizes the fair value of plan assets for our pension plans recorded at each fair value hierarchy level:

	2022				2021			
December 31,	Level 1[1]	Level 2[2]	Level 3[3]	Total	Level 1[1]	Level 2[2]	Level 3[3]	Total
(millions of Canadian dollars)								
Cash and cash equivalents	**77**	**—**	**—**	**77**	42	—	—	42
Equity securities								
Canada	**—**	**191**	**—**	**191**	110	123	—	233
Global	**—**	**632**	**—**	**632**	—	853	—	853
Fixed income securities								
Government	**112**	**285**	**—**	**397**	141	294	—	435
Corporate	**—**	**289**	**—**	**289**	—	300	—	300
Alternatives[4]	**—**	**—**	**649**	**649**	—	—	552	552
Forward currency contracts	**—**	**(8)**	**—**	**(8)**	—	—	—	—
Total pension plan assets at fair value	**189**	**1,389**	**649**	**2,227**	293	1,570	552	2,415

1 Level 1 assets include assets with quoted prices in active markets for identical assets.
2 Level 2 assets include assets with significant observable inputs.
3 Level 3 assets include assets with significant unobservable inputs.
4 Alternatives include investments in private debt, private equity, infrastructure and real estate funds.

Changes in the net fair value of plan assets classified as Level 3 in the fair value hierarchy were as follows:

December 31,	**2022**	2021
(millions of Canadian dollars)		
Balance at beginning of year	**552**	466
Unrealized and realized gains	**103**	49
Purchases and settlements, net	**(6)**	37
Balance at end of year	**649**	552

EXPECTED BENEFIT PAYMENTS

Year ending December 31,	2023	2024	2025	2026	2027	2028-2032
(millions of Canadian dollars)						
Pension	116	118	121	123	124	646
OPEB	7	7	7	7	7	38

EXPECTED EMPLOYER CONTRIBUTIONS

In 2023, we expect to contribute approximately $5 million and $7 million to the pension plans and OPEB plans, respectively.

17. CHANGES IN OPERATING ASSETS AND LIABILITIES

Year ended December 31,	**2022**	2021
(millions of Canadian dollars)		
Accounts receivable and other	**(681)**	(14)
Accounts receivable from affiliates	**69**	(27)
Regulatory assets	**(597)**	(222)
Gas inventory	**(586)**	(242)
Deferred amounts and other assets	**(2)**	(2)
Accounts payable and other	**275**	196
Accounts payable to affiliates	**82**	(4)
Regulatory liabilities	**275**	(140)
Other long-term liabilities	**(6)**	(18)
	(1,171)	(473)

18. RELATED PARTY TRANSACTIONS

All related party transactions are provided in the normal course of business and, unless otherwise noted, are measured at the exchange amount, which is the amount of consideration established and agreed to by the related parties. Affiliates refer to Enbridge and companies that are either directly or indirectly owned by Enbridge.

Enbridge and its affiliates perform centralized corporate functions for us pursuant to applicable agreements, including legal, accounting, compliance, treasury, employee benefits, information technology and other areas, as well as certain engineering and other services. We reimburse Enbridge for the expenses incurred to provide these services as well as for other expenses incurred on our behalf. In addition, we perform services and incur expenses on behalf of our affiliates, which are subsequently reimbursed. Our expenses and recoveries for these services are recorded in Operating and administrative expense in the Consolidated Statements of Earnings, and are based on the cost of actual services provided or using various allocation methodologies.

Our transactions with entities related through common or joint control and significantly influenced investees are as follows:

Years ended December 31,	2022	2021
(millions of Canadian dollars)		
Operating revenues[1]	**57**	**85**
Gas commodity and distribution costs[2, 3]	**170**	**181**
Operating and administrative expenses[4]	**401**	**308**

1 Includes wholesale gas procurement and transportation services provided to Gazifère Inc. of $43 million (2021 - $30 million), pursuant to a contract negotiated between us and approved by the OEB and Régie de l'énergie.
2 Includes the purchase of gas transportation services of $112 million (2021 - $111 million) from NEXUS Gas Transmission, LLC.
3 Includes the purchase of natural gas, storage, and transportation services of $30 million (2021 - $47 million) from Tidal Energy Marketing Inc. and Tidal Energy Marketing (U.S.) LLC.
4 Includes centralized corporate function transaction costs of $370 million (2021 - $280 million) from Enbridge and its affiliates.

Amounts due from/(to) related parties are as follows:

December 31,	2022	2021
(millions of Canadian dollars)		
Enbridge Inc.[1,2]	**(345)**	18
Enbridge Employee Services Canada Inc.	**(49)**	(61)
Enbridge Pipelines Inc.	**33**	35
Gazifère Inc.	**13**	25
Tidal Energy Marketing Inc.[3]	**20**	19
Other affiliates, net[4]	**6**	19
	(322)	55

1 Includes net qualifying interest cash flow hedges receivable and net derivative receivable balances from affiliate.
2 Balance includes Demand loan from affiliate.
3 Includes affiliate gas imbalance receivable. As at December 31, 2022 total affiliate gas imbalance receivable was $22 million (2021 - $23 million).
4 Includes current portion of operating lease liabilities to affiliates.

SHARE CAPITAL

During the year ended December 31, 2022, common share dividends declared on our Class A and Class B common shares were $56 million (2021 - $108 million) and $48 million (2021 - $92 million), respectively. During 2022, we also completed the return of capital transactions, and received capital contributions, as described in *Note 11 - Share Capital*.

CAPITALIZED SERVICE COSTS

We purchase gas meter services from Lakeside Performance Gas Services Ltd. (Lakeside), such as ongoing meter exchanges and inspections for customers in our franchise area. During the year ended December 31, 2022, we purchased gas meter services from Lakeside totaling $66 million, of which a portion of these costs was expensed to Operating and administrative expense and the remainder capitalized in Property, plant and equipment, net. We will continue purchasing these services at prevailing market prices under normal trade terms.

LEASES

We incur operating lease payments related to natural gas transportation and storage services from various affiliates. As at December 31, 2022 and 2021, affiliate right-of-use assets and lease liabilities were $43 million and $48 million, respectively. See *Note 14 - Leases* for further discussion.

AFFILIATE LOANS

December 31,	**2022**	2021
(millions of Canadian dollars)		
Enbridge Inc.[1]	**318**	—

1 During the year ended December 31, 2022, we borrowed $318 million on the demand loan. The demand loan bears an interest rate of the Canadian Dollar Offered Rate plus a margin of 100 basis points.

See *Note 10 - Debt* for total interest on our loan from affiliate.

19. COMMITMENTS AND CONTINGENCIES

COMMITMENTS

As at December 31, 2022, we have commitments as detailed below:

	Total	Less than 1 year	2 years	3 years	4 years	5 years	Thereafter
(millions of Canadian dollars)							
Annual debt maturities[1]	9,745	350	300	745	650	350	7,350
Purchase of services, pipe and other materials, including transportation[2]	5,935	2,367	675	510	465	361	1,557
Right-of-way commitments	739	13	13	13	13	13	674
Total	16,419	2,730	988	1,268	1,128	724	9,581

1 Includes debentures and term notes, and excludes short-term borrowings, debt discounts, debt issuance costs, finance lease obligations and the fair value adjustment from push-down accounting. Changes to the planned funding requirements are dependent on the terms of any debt refinancing agreements. Therefore, the actual timing of future cash repayments could be materially different than presented above.

2 Includes capital and operating commitments. Consists primarily of firm capacity payments that provide us with uninterrupted firm access to natural gas transportation and storage; contractual obligations to purchase physical quantities of natural gas; and customer care services.

ENVIRONMENTAL

We are subject to various Canadian federal, provincial and local laws relating to the protection of the environment. These laws and regulations can change from time to time, imposing new obligations on us.

Environmental risk is inherent to natural gas pipeline operations, and we and our affiliates are, at times, subject to environmental remediation obligations at various sites where we operate. We manage this environmental risk through appropriate environmental policies, programs and practices to minimize any impact our operations may have on the environment. To the extent that we are unable to recover payment for environmental liabilities from insurance or other potentially responsible parties, we will be responsible for payment of costs arising from environmental incidents associated with our operating activities.

Former Manufactured Coal Gas Plant Sites

The remediation of discontinued manufactured gas plant (MGP) sites may result in future costs. We were named as a defendant in ten lawsuits issued in 1991 and 1993 in the Ontario Court of Justice (General Division), commenced by the Corporation of the City of Toronto (the City). Two additional actions were commenced by the Toronto Board of Education (the School Board) in 1991. In these actions, the City and the School Board claimed damages totaling approximately $79 million for alleged contamination of lands acquired by the City for the purposes of its Ataratiri housing project. The City alleges that these lands are contaminated by coal tar deposited on the properties during a time when all or a portion of such lands were utilized by us for the operation of our MGP.

While these Statements of Claim were filed by the City and the School Board, they were never formally served on us. It was and remains our understanding that these lawsuits were initiated, at least in part, because of concerns that the passage of time might give rise to limitation period defences. Rather than litigate, we entered into an agreement with the City (known as a Tolling Agreement) pursuant to which the City and the School Board agreed to forbear from serving the Statements of Claim pending further discussions with us. To our knowledge, neither the City nor the School Board has taken any steps to advance the lawsuits.

Given the novel nature of such environmental claims, the law as it relates to such claims is not settled. Should remediation of former MGP sites be required, it may result in future costs, the quantum of which cannot be determined at this time, as there are a number of potential alternative remediation, isolation and containment approaches which could vary widely in cost.

Although there are no known regulatory precedents in Canada, there are precedents in the US for the recovery in rates of costs relating to the remediation of former MGP sites. From 2006 to 2018, the OEB approved the establishment of deferral accounts to record the costs of investigating, defending and dealing with ongoing MGP-related claims. We expect that if it is found that we must contribute to any remediation costs, either as a result of a lawsuit or government order, we may be generally allowed to recover in rates those substantial costs not recovered through insurance or by other means. Accordingly, we believe that the ultimate outcome of these matters will not have a significant impact on our financial position.

Hamilton Contaminated Site

In April 2016, the Ontario Ministry of the Environment, Conservation and Parks (MECP), formerly the Ministry of the Environment and Climate Change, issued a Director's Order (the Order) naming us, along with other parties, as an impacted property owner in connection with a contaminated site adjacent to a property of ours in Hamilton. In May 2016, we appealed the Order, and in June 2016, the Environmental Review Tribunal (the Tribunal), on consent of the MECP's Director, stayed the application of parts of the Order. The Tribunal extended the stay of the Order several times, which allowed the owner of the property, with the cooperation of the adjacent owners, to prepare a plan of action, including discussions with the MECP and other neighbors. On February 4, 2021, the MECP determined that we and other parties have complied with the Order and no further obligations are outstanding. Accordingly, we withdrew our appeal, and the Tribunal has accepted the withdrawal and has closed its file.

OTHER LITIGATION

We are subject to various legal and regulatory actions and proceedings which arise in the normal course of business, including interventions in regulatory proceedings and challenges to regulatory approvals and permits. While the final outcome of such actions and proceedings cannot be predicted with certainty, management believes that the resolution of such actions and proceedings will not have a material impact on our consolidated financial position or results of operations.

TAX MATTERS

We maintain tax liabilities related to uncertain tax positions. While fully supportable in our view, these tax positions, if challenged by tax authorities, may not be fully sustained on review.

20. GUARANTEES

In the normal course of conducting business, we may enter into agreements which indemnify third parties and affiliates. We may also be a party to agreements with subsidiaries, jointly owned entities, unconsolidated entities such as equity method investees, or entities with other ownership arrangements that require us to provide financial and performance guarantees. Financial guarantees include stand-by letters of credit, debt guarantees, surety bonds and indemnifications. To varying degrees, these guarantees involve elements of performance and credit risk, which are not included in our Consolidated Statements of Financial Position. Performance guarantees require us to make payments to a third party if the guaranteed entity does not perform on its contractual obligations, such as debt agreements, purchase or sale agreements, and construction contracts and leases.

We typically enter into these arrangements to facilitate commercial transactions with third parties. Examples include indemnifying counterparties pursuant to sale agreements for assets or businesses in matters such as breaches of representations, warranties or covenants, loss or damages to property, environmental liabilities and litigation and contingent liabilities. We may indemnify third parties for certain liabilities relating to environmental matters arising from operations prior to the purchase or transfer of certain assets and interests. Similarly, we may indemnify the purchaser of assets for certain tax liabilities incurred while we owned the assets, a misrepresentation related to taxes that result in a loss to the purchaser or other certain tax liabilities related to those assets.

The likelihood of having to perform under these guarantees and indemnifications is largely dependent upon future operations of various subsidiaries, investees and other third parties, or the occurrence of certain future events. We cannot reasonably estimate the total maximum potential amounts that could become payable to third parties and affiliates under such agreements described above; however, historically, we have not made any significant payments under guarantee or indemnification provisions. While these agreements may specify a maximum potential exposure, or a specified duration to the guarantee or indemnification obligation, there are circumstances where the amount and duration are unlimited. As at December 31, 2022, guarantees and indemnifications have not had, and are not reasonably likely to have, a material effect on our financial condition, changes in financial condition, earnings, liquidity, capital expenditures or capital resources.

Ratings

Debt	Rating	Rating Action	Trend
Issuer Rating	A	Confirmed	Stable
Senior Unsecured Notes	A	Confirmed	Stable
Commercial Paper	R-1 (low)	Confirmed	Stable

Rating Update

On September 20, 2019, DBRS Limited (DBRS) confirmed all the rating of Enbridge Gas Inc. (EGI) as listed above. All trends are Stable. EGI was formed following the amalgamation of Enbridge Gas Distribution Inc. (EGD) and Union Gas Limited (Union Gas) on January 1, 2019 (the Amalgamation; see the DBRS press release on EGI dated January 2, 2019). The rating confirmations reflect (1) EGI's stable business risk profile, as the Ontario Energy Board's (OEB) decision on the Amalgamation is expected to provide a reasonable framework for EGI to achieve or exceed the allowed return on equity (ROE) and strong cash flow over the deferred rebasing period from 2019 through 2023, and (2) its improved credit metrics in 2018 and for the last 12 months (LTM) ended June 30, 2019, compared with the combined 2017 results of EGD and Union Gas (pro forma by DBRS).

Post Amalgamation, EGI has a large customer base of approximately 3.7 million across Ontario. A large customer base is one of the key factors for EGI to achieve operating efficiency under the price-cap incentive regulation (IR) through 2023. Significant synergy is expected to be achieved over the next five years and EGI is allowed to keep 100% of the earnings up to 150 basis points (bps) in excess the allowed ROE (8.98% for 2019 and will be reset annually). EGI's reliability and flexibility of the natural gas supply has improved significantly compared with EGD as a result of the addition of Union Gas's storage facilities. The ratings incorporate EGI's exposure to volume risk and potential regulatory lag with respect to the recovery of natural gas costs when the price of natural gas increases substantially.

EGI's 2017 pro forma credit metrics (DBRS combined EGD's and Union Gas's 2017 results) were modestly weak, reflecting the fact that Union Gas's metrics were under pressure as a result of a large capex program. However, they improved in 2018 and the LTM 2019 and EGI's credit metrics are expected to improve further over the medium term, reflecting operating efficiency and incremental cash flow from a growing rate base. DBRS expects EGI to fund its future capital projects and to manage its dividend policy in a way that the capital structure will be maintained in line with the regulatory capital structure of 64% debt and 36% equity. DBRS does not expect any positive rating actions during the deferred rebasing period through 2023. However, a negative rating action could be taken if (1) there is an adverse regulatory change that has a negative impact on EGI's business risk profile or (2) EGI experiences a significant deterioration of its credit metrics on a sustained basis. These scenarios are considered unlikely by DBRS.

Financial Information

	6M June 30		12M June 30	Year ended December 31		
Key Pro Forma Credit Metrics	**2019**	**2018**	**2019**	**2018**	**2017PF**	**2016PF**
Cash flow-to-debt	16.6%	15.9%	13.1%	12.3%	10.9%	12.0%
Total debt in capital structure (excl. goodwill)	64.6%	60.2%	64.6%	63.9%	62.8%	62.2%
EBIT interest coverage (times)	3.48	3.23	2.69	2.57	2.18	2.18

Note: 2016PF and 2017PF were prepared by DBRS by combining full-year EGD and Union Gas results.

Issuer Description

EGI is an amalgamation of EGD and Union Gas. It is a regulated natural gas distributor, serving approximately 3.7 million customers across Ontario. Other operations include regulated transportation services as well as regulated and unregulated storage services in Ontario.

Rating Considerations

Strengths

1. Low-risk regulated operations

Substantially all of EGI's assets are regulated and operate under the OEB-approved, five-year price-cap IR plan from 2019 through 2023. The IR plan provides the Company with the following benefits: (a) relatively predictable earnings and cash flow through a formula (see the Regulatory Update section); (b) full recovery of gas supply costs with quarterly adjustments, subject to regulatory review; (c) annual updates for certain costs to be passed through to customers and a reasonable mechanism for capex recovery; and (d) an earnings sharing mechanism with customers, which provides incentives for operational efficiency.

2. Strong franchise area with a very large customer base

EGI is currently the largest regulated natural gas distributor in Canada and is one of the largest in North America, serving approximately 3.7 million residential, commercial and industrial customers across Ontario (approximately 2.2 million from EGD and 1.5 million from Union Gas). The Company's service area is viewed as economically strong compared with other service areas in Canada. EGI's large customer base provides it with the size and scale to operate efficiently during its deferred rebasing period, when efficiency is key to achieve or exceed allowed ROE. EGI's large size also allows it to have more flexibility with its capex planning and stronger access to the debt market.

3. Sizable storage assets provide additional rate base and cash flow

Following the Amalgamation, EGI owns approximately 272 billion cubic feet of natural gas underground storage capacity facilities located at Dawn, the largest natural gas storage hub in Canada, which acts as a gateway for Western Canadian and Appalachian gas supply. EGI's storage facilities are strategically connected to major pipelines that transport natural gas to major Canadian and U.S. markets. A majority of EGI's storage assets is in the regulated rate base. In addition, non-regulated storage assets have generated strong cash flow that reflect high demand in Ontario. DBRS estimates that cash flow from non-regulated storage activities accounts for approximately between 8% and 10% of EGI's consolidated cash flow.

Challenges

1. Volume risk

For EGI's residential and small commercial customers, weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with the weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. For EGI's large industrial customers, volume consumption is sensitive to the economy. However, the volume risk is mitigated through the Company's firm contracts with larger commercial and industrial customers, with charges based on demand.

2. Managing operating costs under the price-cap IR plan

EGI is in the first year of its five-year deferred rebasing IR plan. Managing operating costs is critical for the Company to achieve or exceed the allowed ROE. A significant increase in operating costs can have a negative impact on EGI's earnings and cash flow, and consequently its credit metrics. Earnings below the allowed ROE will not be recovered from customers unless actual ROE is 300 bps below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag

EGI faces potential regulatory lag with respect to the recovery of natural gas costs. Although the Company can pass natural gas costs on to customers with quarterly adjustments, potential regulatory lag still exists. If natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, EGI could also face regulatory lag with respect to major projects if capital spending amounts are beyond those that can be funded through base rates and if these capital projects do not qualify for recovery through the Incremental Capital Module (ICM) mechanism (see the Regulatory Update section).

Earnings and Outlook

Reported Net Income	**406**	**393**	**581**	**568**	**485**	**435**

Note: 2016PF and 2017PF were prepared by DBRS by combining full-year EGD and Union Gas results.

Summary

- A noticeable increase in operating income in 2018 from 2017 reflected (1) a higher transportation revenue and higher distribution charges resulting from increases in the rate base and the customer base and (2) colder weather and higher incremental contributions from expansion projects. This increase was partially offset by higher employee-related costs.
- A meaningful increase in operating income in the first half of 2019 (H1 2019) from the same period in 2018 reflected (1) colder weather in the Company's franchise areas and (2) higher distribution rates and customer base. These positive factors were partially offset by the wind down of EGI's investment in IPL System Inc. (IPL) in December 2018, which are included in "Other Income (Expense) net" (see the Intercompany Transactions section).
- The after-tax $27 million extraordinary item in H1 2019 represented the severance costs ($37 million before tax) related to termination benefits to employees from the amalgamation of EGD and Union Gas.

Outlook

- Assuming normal weather, DBRS expects EGI's earnings to continue to increase modestly throughout the deferred rebasing period, reflecting the continued growth in the rate base and customer base.
- In addition, DBRS expects EGI to benefit from synergy and improvements in operational efficiency through a large customer base of 3.7 million (2.2 million for EGD and 1.5 million for Union Gas).
- However, because EGI's annual rate changes are based on a price-cap formula and operating efficiency is key to achieve or exceed allowed ROE, any material increase in operating costs can have a negative impact on EGI's earnings.
- In August 2017, the Company entered into an agreement to sell its 100%-owned subsidiary in New York State, St. Lawrence Gas, for approximately $76 million (the St. Lawrence Sale). The St. Lawrence Sale is expected to close in the second half of 2019. DBRS does not expect the St. Lawrence sale to have a material impact on EGI's earnings.

Note: 2016PF and 2017PF were prepared by DBRS by combining full-year EGD and Union Gas results.
1 Excludes goodwill.

Summary

- Post Amalgamation, the debt-to-capital ratio, excluding goodwill, increased modestly at the end of 2018 from the combined EGD and Union Gas in 2017. However, this ratio remains at the low end of DBRS's "A" rating range.
- The capital structure in 2017 included the investment of $825 million in IPL and the associated intercompany loan for the IPL investment. This investment and its associated loans wound down in December 2018.
- Cash flow-to-debt ratio in 2018 and LTM 2019 improved significantly from 2017, reflecting higher cash flow from operations (due to stronger earnings) and lower debt levels as a result of the elimination of intercompany loans associated with the investment in IPL. This ratio moved into DBRS's "A" rating range in LTM 2019.
- EBIT-interest coverage continues to benefit from the low-interest-rate environment and stronger operating income in 2018 and LTM 2019. In LTM 2019, this ratio improved and remained solidly at the upper end of DBRS's "A" rating range.
- EGI generated substantial cash flow deficits over the last three years as a result of a large capex program for future growth. The dividend/cash flow ratio has increased since 2018. However, EGI's financing plan is to maintain the debt-to-capital ratio in line with the regulatory capital structure of 64% debt/36% equity. As a result, EGI's debt-to-capital ratio has been maintained relatively stable around or near 64% debt in the past few years.

Outlook

- DBRS expects EGI to continue to generate large free cash flow deficits over the next two years due to large capex and a high dividend payout. Capex for 2019 and 2020 is estimated to be around $1.0 billion each year for system maintenance and to support system upgrades and new capital projects such as the community expansion projects and the Dawn-Parkway Expansion Project (see the Capital Projects section).
- DBRS does not expect EGI to change its financing strategy with respect to maintaining the debt-to-capital ratio (excluding goodwill) at or near the current level throughout the deferred rebasing period.
- DBRS expects EGI's cash flow-to-debt and EBIT-interest coverage ratios to improve modestly over the medium term, reflecting expected operating efficiency and incremental cash flow from a growing rate base.

Liquidity and Long-Term Debt Maturities

Credit Facilities

As at June 30, 2019

(CAD millions)	Total Facilities	Drawn [1]	Available	Maturity
Enbridge Gas Inc.	2,000	917	1,083	2021
St. Lawrence Gas Company, Inc.	17	9	8	2019
Total	**2,017**	**926**	**1,091**	

1 Includes commercial paper issuances, net of discount, that are backed by the $2.0 billion Revolving Term Credit Facility.
St. Lawrence Gas Company, Inc. draws are shown in Liabilities held for sale.

Summary

- Liquidity is supported by predictable cash flow form operations and the availability of credit facilities.
- The $2.0 billion Revolving Term Credit Facility is used to backstop a commercial paper (CP) program of $2.0 billion. EGI's CP program in turn is used to finance working capital changes and to fund capex before terming out with Medium-Term Notes (MTNs). In February 2019, EGI increased its CP program to $2.0 billion from $1.7 billion.
- In this respect, EGI has sufficient liquidity to fund its current working capital and capex needs. However, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, Enbridge Inc. (Enbridge; rated BBB (high) with a Stable trend by DBRS) is expected to provide liquidity support in a timely manner for EGI.

Debt Maturities

As at June 30, 2019 (CAD million)	2019	2020	2021	2022	2023	Thereafter	Total
EGD Medium-Term Notes and Debentures	0	400	175	0	100	3,105	3,780
Union Gas Medium-Term Notes and Debentures	0	0	200	125	250	2,840	3,415
Total	**0**	**400**	**375**	**125**	**350**	**5,945**	**7,195**

Summary

- EGI's refinancing risk is low in 2019, as it has no long-term debt due in the year. The refinancing risk in 2020 and 2021 is manageable because the MTNs and debentures due in each of these years are modest and within the financing capability of the Company.
- In August 2019, EGI issued $700 million of MTNs to repay its short-term indebtedness and to fund capex. DBRS believes that the debt issuance had no impact on EGI's credit metrics.
- EGI is subject to the issue test covenant in the indenture which states that its total consolidated funded obligations (namely total indebtedness including guarantee that has maturity term longer than 18 months) will not exceed 75% of total consolidated capitalization. EGI is also subject to an EBIT-to-interest covenant of 2.0 times, based on EBIT for 12 consecutive months and annual pro forma interest requirements for all debt with the maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant as at June 30, 2019.

Intercompany Transactions

- Before the Amalgamation, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL, which is 100% owned by Enbridge. The Company owed IPL $375 million in loans, which were deeply subordinated to EGD's MTNs and debentures.
- The IPL investment wound down in December 2018 and the $375 million subordinated loan from IPL was paid off.

Regulatory Update

Amalgamation

On August 30, 2018, the OEB issued a decision on the application for the amalgamation of EGI and Union Gas. The OEB's major key determinations in the decision are, among others, as follows:

- The rebasing year is deferred until 2024. The Company asked for a ten-year deferred rebasing period, but the OEB allowed for only five years. DBRS believes that the five-year rebasing period is a credit positive because shorter periods have more certainty with respect to cost recovery and forecasts.
- The annual rate change during the deferred rebasing period is based on a price-cap index (PCI), where PCI growth is driven by an inflation factor using the Gross Domestic Product Implicit Price Index Final Domestic Demand Canada index as the inflation factor, less a productivity factor of zero and a stretch factor of 0.3%. The stretch factor is used in incentive regulation to measure the efficiency of utilities (the actual costs/forecast costs), with superior performance having a lower stretch factor.
- The earnings sharing mechanism during the 2019–2023 period will be on a 50/50 basis between EGI and its ratepayers for all earnings in excess of 150 bps over the allowed ROE. This means that earnings in excess of up to 150 bps will be retained by EGI.
- All capex beyond the amount approved in the deferred rebasing years will be recovered through an ICM (see the next section).
- EGI continues to pass through costs associated with Y factors, with the exception of Cap-and-Trade costs (see the next section). Y factors are costs related to gas commodity and upstream transportation costs, demand-side management cost changes, lost revenue adjustment mechanism changes for the contract market and normalized average consumption/average use.
- EGI is allowed to recover $5.5 million through a Z-factor mechanism ($1.5 million for EGD and $4.0 million for Union Gas). Z factors are related to unforeseen events outside of management.
- During the deferred rebasing period, EGI will continue to purchase market-based storage services to meet the needs of legacy EGD in-franchise customers. This will mean that legacy Union Gas customers continue to benefit from the sale of market-based storage until issues of rate harmonization are considered.

Incremental Capital Module

- ICM is a funding mechanism for significant capital projects for which a utility requires rate recovery in advance of its next regularly scheduled cost of service application.
- The test for ICM is that a capital project is not only required to be part of a capital project that is incremental to the materiality threshold (defined below) but must be driven by capital spending requirements that are extraordinary and unanticipated.
- Materiality means that the amount of capital spending must exceed the OEB-defined threshold (which represents a utility's financial capacities underpinned by existing rates, including growth) and clearly has a significant influence on the operation of the utility. In addition, to be eligible for ICM, the amount of capital spending must be for need and prudence. Need means that the amount of capital spending must be non-discretionary and must be outside of the base upon which the rates are derived. Prudence means that the utility's decision to incur the costs must represent the most cost-effective option for the ratepayers.

Federal Carbon Levy

- Ontario is subject to the federal government's carbon pricing program, which consists of two parts: (1) an output-based pricing system (effective January 1, 2019) and (2) a carbon or fuel charge levied on natural gas (effective April 1, 2019).
- Beginning 2019, on an interim basis, EGI set up an OEB-approved deferral account to capture the costs of the federal carbon charge, which is approximately 3.91 cents/cubic metre. An estimate of an increase in the average residential customer's bill is by $86 per year to $94 per year depending on their location in Ontario. The cost will be borne by customers.

Ontario's Cap and Trade Program

- The Government of Ontario revoked the Ontario cap and trade (OCT) program in July 2018. Registered participants of the OCT program can no longer purchase, sell, trade or otherwise deal with emission allowance and credits.
- In August 2018, the OEB instructed EGD and Union Gas to remove cap and trade charges from customer bills effective October 1, 2018. And in September 2018, the OEB approved EGD's and Union Gas's requests to remove the cap and trade charges from rates and to refund approximately $20 million in the cap and trade deferral accounts to customers.
- The removal of OCT charges is not expected to have any impact on EGI's credit ratios.

Capital Projects

- The Dawn-Parkway Expansion Project: EGI will expand the Dawn-Parkway system to provide Ontario and Northeast U.S. customers with access to the diversity, reliability, security of supply and cost competitiveness of the Dawn Hub. The cost of the project is estimated to be $206 million, and the incremental capacity is 75 million cubic feet per day. The project is expected to be in service in 2021.
- Community Expansion: In March 2019, the Government of Ontario released Ontario Regulation 24/19 (Regulation) allowing for ratepayer funding of specific community expansion projects. There are several projects identified in the Regulation specific to EGI. The total funding for these projects is approximately $34.5 million. EGI has proceeded with a number of community-based system expansion projects in 2019.
- Kingsville Transmission Reinforcement Project: Before the Amalgamation, Union Gas received approval from the OEB to construct a new pipeline, extending from interconnect at the existing Panhandle Line in the Town of Lakeshore to a new station in Kingsville. The cost of the project is estimated to be $122 million. This project is expected to be in service in November 2019.

Senior Unsecured Notes	A	Confirmed	Stable
Commercial Paper	R-1 (low)	Confirmed	Stable

Rating Update

On September 17, 2020, DBRS Limited (DBRS Morningstar) confirmed all the ratings of Enbridge Gas Inc. (EGI or the Company) as listed above. All trends are Stable. The rating confirmations reflect (1) EGI's stable business risk profile as it is in the second year of the five-year price-cap incentive regulations (IR) lasting through 2023 and there are no expectations of any material changes during this five-year period; (2) its relatively solid credit metrics and DBRS Morningstar's expectation that the credit metrics will improve modestly over the medium term as a result of rate base growth and synergy realization; and (3) solid liquidity and low refinancing risk in the next few years.

The impact of the Coronavirus Disease (COVID-19) pandemic on EGI's operations and financial performance has been modest. Although the pandemic is ongoing, DBRS Morningstar does not expect it to have a material impact on EGI over the near to medium term because EGI operates critical infrastructure and continues to provide an essential service.

The Company's ratings are supported by a stable regulatory framework in Ontario and a very large and economically strong customer base of approximately 3.8 million customers across the province—the largest in Canada and one of the largest in North America. This large customer base is one of the key factors for EGI to achieve operating efficiency under the price-cap IR. Good synergy was realized from the amalgamation of Enbridge Gas Distribution Inc. (EGD) with Union Gas Limited in 2019 and the first half of 2020, and significant synergy is expected to be achieved through 2023. EGI is allowed to keep 100% of the earnings up to 150 basis points (bps) in excess of the allowed return on equity (ROE) (8.52% for 2020, and reset annually). EGI's reliability and the flexibility of its natural gas supply have improved significantly, compared with EGD, as a result of the addition of Union Gas's storage facilities. The ratings incorporate EGI's exposure to volume risk and the potential regulatory lag in the recovery of natural gas costs when the price of natural gas increases substantially.

EGI's key credit metrics have improved since the amalgamation and remained solid for 2019 and the last 12 months (LTM) ended June 30, 2020. DBRS Morningstar expects EGI's credit metrics to improve modestly over the medium term, reflecting operating efficiency (including synergy realization) and incremental cash flow from a growing rate base. Although EGI will likely generate substantial free cash flow deficits over the next few years because of its major capital projects, DBRS Morningstar expects EGI to fund its future capital expenditures (capex) and to manage its dividend policy in such a way that the capital structure will be maintained in line with the regulatory capital structure of 64% debt and 36% equity.

DBRS Morningstar does not expect any positive rating actions during the deferred rebasing period through 2023. However, a negative rating action could be taken should the following events occur: (1) an adverse regulatory change has a negative impact on EGI's business risk profile or (2) EGI experiences a significant deterioration of its credit metrics on a sustained basis. DBRS Morningstar considers these scenarios unlikely.

Financial Information

Enbridge Gas Inc.	6M June 30	6M June 30	12M June 30	Year ended December 31	
Key Pro Forma Credit Metrics	**2020**	**2019**	**2020**	**2019**	**2018**

Issuer Description

EGI was created following the amalgamation of Enbridge Gas Distribution Inc. (EGD) with Union Gas on January 1, 2019. The Company is a regulated natural gas distributor, serving approximately 3.8 million customers across Ontario. Other operations include regulated transportation services as well as regulated and unregulated storage services in Ontario. EGI is owned by Enbridge Inc. (54%; rated BBB (high) by DBRS Morningstar) and Westcoast Energy Inc. (46%; rated A (low) by DBRS Morningstar).

Rating Considerations Details

Strengths

1. Low-risk regulated operations

Substantially all of EGI's assets are regulated and operate under the Ontario Energy Board (OEB)-approved, five-year price-cap IR plan from 2019 through 2023. The IR plan provides the Company with the following benefits: (A) relatively predictable earnings and cash flow through a formula (see the Regulatory Update section); (B) full recovery of gas supply costs with quarterly adjustments, subject to regulatory review; (C) annual updates for certain costs to be passed through to customers and a reasonable mechanism for capex recovery; and (D) a mechanism for sharing earnings with customers, which provides incentives for operational efficiency.

2. Strong franchise area with a very large customer base

EGI is currently the largest regulated natural gas distributor in Canada and is one of the largest in North America, serving approximately 3.8 million residential, commercial, and industrial customers across Ontario. The Company's service area is viewed as economically strong compared with other service areas in Canada. EGI's large customer base provides it with the size and scale to operate efficiently during five-year price-cap IR plan. EGI's large size also allows it to maintain a good degree of flexibility with its capex planning.

3. Sizable storage assets provide additional rate base and cash flow

EGI currently owns approximately 272 billion cubic feet of natural gas underground storage capacity facilities located at the Dawn hub, the largest natural gas storage hub in Canada, which acts as a gateway for Western Canadian and Appalachian natural gas supply. EGI's storage facilities are strategically connected to major pipelines that transport natural gas to major Canadian and U.S. markets. A majority of EGI's storage assets is in the regulated rate base. In addition, nonregulated storage assets have generated strong cash flows that reflect high demand in Ontario. DBRS Morningstar estimates that cash flow from nonregulated storage activities accounts for approximately 8% to 10% of EGI's consolidated cash flow.

Challenges

1. Volume risk

For EGI's residential and small commercial customers, weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with the weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. For EGI's large industrial customers, volume consumption is sensitive to the economy. However, the volume risk is partially mitigated through the Company's firm contracts with larger commercial and industrial customers where charges are based on demand. Further, the weather forecast is conducted annually to reflect the latest weather patterns.

2. Managing operating costs under the price-cap IR plan

EGI is in the second year of its five -year price-cap IR plan. Managing operating costs is particularly important for the Company to achieve or exceed the allowed ROE. A significant increase in operating costs can have a negative impact on EGI's earnings and cash flow, and consequently on its credit metrics. Earnings below the allowed ROE will not be recovered from customers unless the actual ROE is 300 bps below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag

EGI faces a potential regulatory lag in the recovery of natural gas costs. Although the Company can pass natural gas costs on to customers with quarterly adjustments, the potential for a regulatory lag still exists. If natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, EGI could also face regulatory lag with respect to major projects if capital spending amounts are beyond those that can be funded through base rates and if these capital projects do not qualify for recovery through the Incremental Capital Module (ICM) mechanism (see the Regulatory Update section).

Reported Net Income	**341**	**406**	**491**	**556**	**568**

Year end 2019 Summary

- Operating income in 2019 increased modestly from 2018, reflecting (1) higher distribution charges due to increase in distribution rates, (2) the increase in the customer base, (3) colder weather and higher incremental contributions from expansion projects, and (4) synergy realized from the amalgamation. This increase was partially offset by higher employee-related costs and higher depreciation and amortization due to higher overall rate base.
- Lower other income in 2019 was a result of the wind-down of the Company's investment in IPL System Inc. (IPL) in December 2018. Extraordinary loss was due to the disposal of St. Lawrence Gas in November 2019.

H1 2020 Summary

- The noticeable decrease in operating income in H1 2020 compared with the same period in 2019 reflected the (1) warmer weather in the Company's franchise areas during the first quarter of 2020 and (2) absence of contribution from St. Lawrence Gas. These factors were partially offset by the higher distribution charges, an increase in customer base, and synergy realized from the amalgamation.
- The higher other income in H1 2020 compared with H1 2019 was largely as a result of higher interest income and foreign currency gains on cash balances denominated in U.S. dollars. The extraordinary item

in H1 2020 represented the severance costs related to termination benefits to employees from the amalgamation of EGD and Union Gas.

Outlook

- Assuming normal weather, DBRS Morningstar expects EGI's earnings to continue to increase modestly throughout the deferred rebasing period, reflecting the continued growth in the rate base and customer base as well as the potential synergy to be realized from the amalgamation.
- However, because EGI's annual rate changes are based on a price-cap formula and operating efficiency is key to achieve or exceed allowed ROE, any material unexpected increase in operating costs can have a negative impact on EGI's earnings.
- On November 1, 2019, the Company sold sell its 100%-owned subsidiary in New York State, St. Lawrence Gas, for approximately $72 million. DBRS Morningstar does not expect the St. Lawrence sale to have a material impact on EGI's earnings.

Change in equity & equivalents	(400)	0	87	487	(254)
Change in cash & marketable securities	67	16	23	(28)	47
Funding Sources	**(333)**	**(92)**	**456**	**697**	**(452)**
Total adjusted debt	9,387	9,022	9,387	9,401	9,130
Total debt in capital structure (excluding goodwill) (%)	65.3	64.6	65.3	64.1	63.9
Cash flow/total debt (%)	14.9	16.5	12.2	12.7	12.3
EBIT interest coverage (times)	3.07	3.48	2.44	2.62	2.57
Fixed-charges coverage (times)	3.07	3.48	2.44	2.62	2.51
Dividends/Cash flow (%)	32.3	83.9	47.0	78.7	68.6

Summary

- The debt-to-capital ratio, excluding goodwill, has remained relatively stable since the amalgamation and has stayed at the low end of DBRS Morningstar's "A" rating range. This capital structure is consistent with the regulatory capital structure of 36% equity/64% debt.
- The cash flow-to-debt ratio for the 12 months to June 30, 2020, was negatively affected by lower cash flow for H1 2020. This was because of the negative impact of warmer weather during the first quarter of 2020 and the absence of the cash flow contribution from St. Lawrence Gas. However, this ratio was comparable with 2018 and remained at the lower end of the DBRS Morningstar's "A" rating range.

- EBIT-interest coverage continues to benefit from the low-interest-rate environment and stronger operating income in 2019 and LTM 2020. This ratio remained solidly at the upper end of DBRS Morningstar's "A" rating range.
- EGI has generated substantial free cash flow deficits for the last couple of years as a result of a large capex program for future growth. The dividend/cash flow ratio has increased since 2018. However, EGI's financing plan is to maintain the debt-to-capital ratio in line with the regulatory capital structure of 64% debt/36% equity.

Outlook

- DBRS Morningstar expects EGI to continue to generate significant free cash flow deficits over the next couple of years due to its large capex and high dividend payout. Capex for 2020 and 2021 is estimated to be around $1.0 to $1.5 billion each year for system maintenance and to support system upgrades and new capital projects, such as the community expansion projects and the Dawn-Parkway Expansion Project (see the Capital Projects section).
- DBRS Morningstar does not expect EGI to change its financing strategy of maintaining the debt-to-capital ratio (excluding goodwill) at or near the current level throughout the deferred rebasing period.
- Assuming normal weather, DBRS Morningstar expects EGI's cash flow-to-debt and EBIT-interest coverage ratios to improve modestly over the medium term, reflecting expected operating efficiency and incremental cash flow from a growing rate base.

Liquidity and Long-Term Debt Maturities

Credit Facilities				**As at June 30, 2020**
(CAD millions)	Total Facilities	Drawn[1]	Available	Maturity
Enbridge Gas Inc.	2,000	355	1,645	2021

1 Includes facility draws and commercial paper issuances, net of discount, that are backed by the external credit facility.

Summary

- Liquidity remains solid, supported by predictable cash flow from operations and the availability of sizeable credit facilities.
- The $2.0 billion Revolving Term Credit Facility is used to backstop a commercial paper (CP) program of $2.0 billion. The CP program in turn is used to finance working capital changes and to fund capex before terming out with Medium-Term Notes (MTNs).
- On April 1, 2020, EGI completed a $1.2 billion dual-tranche offering of 10-year and 30-year notes. Partial proceeds from these offerings were used to repay a subordinated promissory note from an affiliate. The rest of the proceeds have solidified EGI's liquidity requirement to fund its current working capital and capex needs. However, any combination of cold weather and high gas prices in the future could exhaust the Company's available liquidity. Should that event occur, Enbridge Inc. (Enbridge; rated BBB (high) with a Stable trend by DBRS Morningstar) is expected to provide liquidity support in a timely manner for EGI.

Debt Maturities

As at June 30, 2020 (CAD million)	**2020**	**2021**	**2022**	**2023**	**2023**	**2024+**	**Total**
EGI MTNs and debentures	400	375	125	350	300	7,545	9,095

Summary

- The refinancing risk in 2020 and 2021 is manageable because the MTNs and debentures due in each of these years are modest and within the financing capability of the Company.
- EGI is subject to the issue test covenant in the indenture, which states that its total consolidated funded obligations (namely total indebtedness, including any guarantee that has a maturity term longer than 18 months) will not exceed 75% of total consolidated capitalization. EGI is also subject to an EBIT-to-interest covenant of 2.0 times, based on EBIT for 12 consecutive months and the annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
    - The covenant does not apply to debt issuances for debt refinancing.
    - The Company was in compliance with the covenant as at June 30, 2020.

Intercompany Transactions

- Before the amalgamation, EGD owned $825 million of Class D, non-voting, redeemable, retractable preferred shares of IPL, which were 100% owned by Enbridge. The Company owed IPL $375 million in loans, which were deeply subordinated to EGD's MTNs and debentures.
- The IPL investment wound down in December 2018 and the $375 million subordinated loan from IPL was paid off.

Regulatory Update

Amalgamation

On August 30, 2018, the OEB issued its decision on the application for the amalgamation of EGI and Union Gas. The OEB's major key determinations in the decision are, among others, as follows:

- The rebasing year is deferred until 2024. The Company asked for a 10-year deferred rebasing period, but the OEB allowed for only five years. DBRS Morningstar believes that the five-year rebasing period is credit positive because shorter periods have more certainty with respect to cost recovery and forecasts.
- The annual rate change during the deferred rebasing period is based on a price-cap index (PCI), where PCI growth is driven by an inflation factor using the Gross Domestic Product Implicit Price Index Final Domestic Demand Canada index as the inflation factor, less a productivity factor of zero and a stretch factor of 0.3%. The stretch factor is used in incentive regulation to measure the efficiency of utilities (the actual costs/forecast costs), with superior performance having a lower stretch factor.
- The earnings sharing mechanism during the 2019–23 period will be on a 50:50 basis between EGI and its ratepayers for all earnings in excess of 150 bps over the allowed ROE. This means that earnings in excess of up to 150 bps will be retained by EGI.
- All capex in excess of the OEB-defined materiality threshold will be recovered through an ICM mechanism, subject to the ICM eligibility criteria during the deferred rebasing term (see the next section).
- EGI continues to pass through costs associated with Y factors. Y factors are costs related to gas commodity and upstream transportation costs, demand-side management cost changes, lost revenue adjustment mechanism changes for the contract market and normalized average consumption/average use.
- EGI may apply to recover $5.5 million on a revenue requirement basis for costs related to unforeseen events outside of the control of management through a Z-factor mechanism.

- During the deferred rebasing period, EGI will continue to purchase market-based storage services to meet the needs of legacy EGD in-franchise customers. This will mean that legacy Union Gas customers continue to benefit from the sale of market-based storage until issues of rate harmonization are considered.

ICM mechanism

- ICM is an OEB funding mechanism for significant capital projects for which a utility requires rate recovery in advance of its next regularly scheduled cost of service (rebasing) application.
- The test for ICM eligibility is that a capital project is not only part of a capital project that is incremental to the materiality threshold (defined below) but must be driven by capital spending requirements that are extraordinary and unanticipated.
- Materiality means that the amount of capital spending must exceed the OEB-defined threshold (which represents a utility's financial capacities underpinned by existing rates, including growth). Any incremental capital amounts approved for rate recovery must fit within the total eligible incremental capital amount and must clearly have a significant influence on the operation of the utility. In addition, to be eligible for ICM, the amount of capital spending must meet the Need and Prudence criteria. Need means that the amount of capital spending must be discrete projects and must be outside of the base upon which the rates are derived. Prudence means that the utility's decision to incur the costs must represent the most cost-effective option for the ratepayers.

Federal carbon levy

- Ontario is subject to the federal government's carbon pricing program, which consists of two parts: (1) an output-based pricing system (effective January 1, 2019) and (2) a carbon or fuel charge levied on natural gas (effective April 1, 2019).
- Beginning in 2019 and on an interim basis, EGI set up an OEB-approved deferral account to capture the costs of the federal carbon charge. On April 1, 2020, the federal carbon charge for natural gas was increased from approximately 3.91 cents per cubic metre to 5.87 cents per cubic metre. The average residential customer's bill is estimated to increase by $141 per year. The cost will be borne by customers.

Capital Projects

- The Dawn-Parkway Expansion Project: EGI will expand the Dawn-Parkway system to provide Ontario and Northeast U.S. customers with access to the diversity, reliability, security of supply, and cost competitiveness of the Dawn Hub. The cost of the project is estimated to be $204 million and the incremental capacity is 83 million cubic feet per day. The project is expected to be in service in 2021.
- Community Expansion: In March 2019, the Government of Ontario released Ontario Regulation 24/19 (Regulation) allowing for ratepayer funding of specific community expansion projects. Several projects identified in the Regulation are specific to EGI. The total funding for these projects is approximately $32.9 million. EGI has proceeded with a number of community-based system expansion projects in 2019 and continued in the first half of 2020.
- Kingsville Transmission Reinforcement Project: Before the amalgamation, Union Gas received approval from the OEB to construct a new pipeline extending from the interconnect at the existing Panhandle Line

in the Town of Lakeshore, Ontario, to a new station in Kingsville, Ontario. This project was placed in service in November 2019.

Balance Sheet

About DBRS Morningstar

DBRS Morningstar is a global credit ratings business with approximately 700 employees in eight offices globally.

On July 2, 2019, Morningstar, Inc. completed its acquisition of DBRS. Combining DBRS' strong market presence in Canada, the U.S., and Europe with Morningstar Credit Ratings' U.S. footprint has expanded global asset class coverage and provided investors with an enhanced platform featuring thought leadership, analysis, and research. DBRS and Morningstar Credit Ratings are committed to empowering investor success, serving the market through leading-edge technology and raising the bar for the industry.

Together as DBRS Morningstar, we are the world's fourth-largest credit ratings agency and a market leader in Canada, the U.S., and Europe in multiple asset classes. We rate more than 2,600 issuers and 54,000 securities worldwide and are driven to bring more clarity, diversity, and responsiveness to the ratings process. Our approach and size provide the agility to respond to customers' needs, while being large enough to provide the necessary expertise and resources.

The DBRS group of companies consists of DBRS, Inc. (Delaware, U.S.)(NRSRO, DRO affiliate); DBRS Limited (Ontario, Canada)(DRO, NRSRO affiliate); DBRS Ratings GmbH (Frankfurt, Germany)(CRA, NRSRO affiliate, DRO affiliate); and DBRS Ratings Limited (England and Wales)(CRA, NRSRO affiliate, DRO affiliate). Morningstar Credit Ratings, LLC is a NRSRO affiliate of DBRS, Inc.

For more information on regulatory registrations, recognitions and approvals of the DBRS group of companies and Morningstar Credit Ratings, LLC, please see: http://www.dbrsmorningstar.com/research/highlights.pdf.

The DBRS group and Morningstar Credit Ratings, LLC are wholly-owned subsidiaries of Morningstar, Inc.

Ratings

Debt	Rating	Rating Action	Trend
Issuer Rating	A	Confirmed	Stable
Senior Unsecured Notes	A	Confirmed	Stable
Commercial Paper	R-1 (low)	Confirmed	Stable

Rating Update

On September 20, 2021, DBRS Limited (DBRS Morningstar) confirmed the Issuer Rating and Senior Unsecured Notes rating of Enbridge Gas Inc. (EGI or the Company) at "A" and the Company's Commercial Paper rating as R-1 (low). All trends are Stable. The rating confirmations reflect (1) EGI's stable business risk profile as it is in the third year of the five-year price-cap incentive regulations (IR) lasting through 2023, and there are no expectations of any material changes during this period; (2) its relatively solid credit metrics and DBRS Morningstar's expectation that the credit metrics will improve modestly over the medium term as a result of rate base growth and synergy realization; and (3) solid liquidity and low refinancing risk in the next few years.

The impact of the Coronavirus Disease (COVID-19) pandemic on EGI's operations and financial performance during 2020 and year-to-date 2021 has been modest. DBRS Morningstar does not expect the coronavirus to have a material impact on EGI's operational and financial performance because EGI operates critical infrastructure and continues to provide an essential service.

The Company's ratings are supported by a stable regulatory framework in Ontario and a very large and economically strong base of approximately 3.8 million customers across the province—the largest in Canada and one of the largest in North America. This large customer base is one of the key factors allowing EGI to achieve operating efficiency under the price-cap IR. Good synergy was realized from the amalgamation of Enbridge Gas Distribution Inc. (EGD) with Union Gas Limited in 2019 and 2020, and DBRS Morningstar expects significant synergy to be achieved through 2023. EGI is allowed to keep 100% of the earnings up to 150 basis points (bps) in excess of the allowed return on equity (ROE); beyond 150 bps, the split between customers and EGI is 50:50. EGI's reliability and the flexibility of its natural gas supply have improved significantly, compared with EGD, as a result of the addition of Union Gas' storage facilities. The ratings incorporate EGI's exposure to volume risk and the potential regulatory lag in the recovery of natural gas costs when the price of natural gas increases substantially.

A slight weakness in EGI's key credit metrics for 2020 compared with 2019 was caused by the lower volume of natural gas consumption because of warmer weather conditions. However, EGI's key credit metrics for 2020 and the last 12 months (LTM) ended June 30, 2021, remained solid and were supportive of the current ratings. DBRS Morningstar expects EGI's credit metrics to improve modestly over the medium term, reflecting operating efficiency (including synergy realization) and incremental cash flow from a growing rate base. Although EGI will likely generate substantial free cash flow deficits over the next few years because of its major capital projects, DBRS Morningstar expects EGI to fund its future capital expenditures (capex) and to manage its dividend policy in such a way that the capital structure will be maintained in line with the regulatory capital structure of 64% debt and 36% equity. As a result, DBRS Morningstar does not expect the financing of EGI's capex to have a material impact on its credit metrics in the medium term.

DBRS Morningstar does not expect any positive rating actions in the near term. However, it could take a negative rating action should the following events occur: (1) an adverse regulatory change has a negative impact on EGI's business risk profile, or (2) EGI experiences a significant deterioration of its credit metrics on a sustained basis. DBRS Morningstar considers these scenarios unlikely.

Financial Information

Enbridge Gas Inc.	6M June 30	6M June 30	12M June 30	Year ended December 31		
Key Credit Metrics	**2021**	**2020**	**2021**	**2020**	**2019**	**2018**

Issuer Description

EGI was created following the amalgamation of EGD with Union Gas on January 1, 2019. The Company is a regulated natural gas distributor, serving approximately 3.8 million customers across Ontario. Other operations include regulated transportation services as well as regulated and unregulated storage services in Ontario. Enbridge Inc. (rated BBB (high) by DBRS Morningstar) directly owns 54% and indirectly owns 100% of EGI.

Rating Considerations

Strengths

1. Low-risk regulated operations

Almost all of EGI's assets are regulated and operate under the Ontario Energy Board (OEB)-approved, five-year price-cap IR plan from 2019 through 2023. The IR plan provides the Company with the following benefits: (A) relatively predictable earnings and cash flow through a formula (see the Regulatory Update section); (B) full recovery of gas supply costs with quarterly adjustments, subject to regulatory review; (C) annual updates for certain costs to be passed through to customers and a reasonable mechanism for capex recovery; and (D) a mechanism for sharing earnings with customers, which provides incentives for operational efficiency.

2. Strong franchise area with a very large customer base

EGI is currently the largest regulated natural gas distributor in Canada and is one of the largest in North America, serving approximately 3.8 million residential, commercial, and industrial customers across Ontario. The Company's service area is viewed as economically strong compared with other service areas in Canada. EGI's large customer base provides it with the size and scale to operate efficiently during the five-year price-cap IR plan. EGI's large size also allows it to maintain a good degree of flexibility with its capex planning.

3. Sizable storage assets provide additional rate base and cash flow

EGI currently owns approximately 276 billion cubic feet of natural gas underground storage capacity facilities located at the Dawn Hub, the largest natural gas storage hub in Canada, which acts as a gateway for Western Canadian and Appalachian natural gas supply. EGI's storage facilities are strategically connected to major pipelines that transport natural gas to major Canadian and U.S. markets. The majority of EGI's storage assets is in the regulated rate base. In addition, nonregulated storage assets have generated strong cash flows that reflect high demand in Ontario. DBRS Morningstar estimates that cash flow from nonregulated storage activities accounts for approximately 8% to 10% of EGI's consolidated cash flow.

Challenges

1. Volume risk

For EGI's residential and small commercial customers, weather risk remains significant, as forecast volumes (based on normalized weather) are built into the Company's base rates, while actual usage varies with the weather. Therefore, colder-than-normal weather in any given year generally results in higher earnings, while the reverse is true for periods of warmer-than-normal weather. For EGI's large industrial customers, volume consumption is sensitive to the economy. However, the volume risk is partially mitigated through the Company's firm contracts with larger commercial and industrial customers where charges are based on demand. Further, the weather forecast is conducted annually to reflect the latest weather patterns.

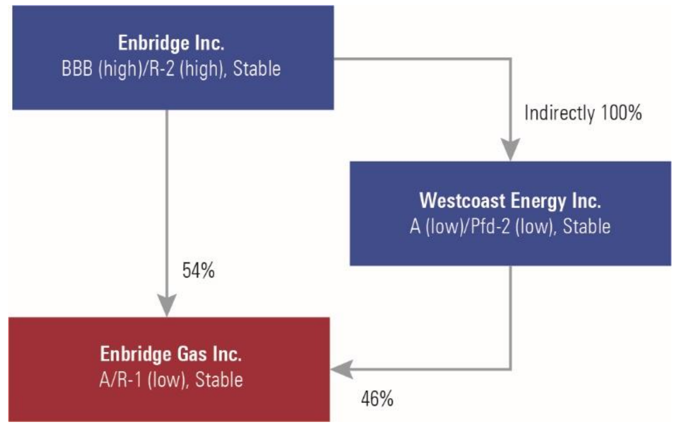
2. Managing operating costs under the price-cap IR plan

EGI is in the third year of its five-year price-cap IR plan. Managing operating costs is particularly important for the Company to achieve or exceed the allowed ROE. A significant increase in operating costs can have a negative impact on EGI's earnings and cash flow, and consequently on its credit metrics. Earnings below the allowed ROE will not be recovered from customers unless the actual ROE is 300 bps below the allowed ROE, at which point the Company can request a regulatory review.

3. Potential regulatory lag

EGI faces a potential regulatory lag in the recovery of natural gas costs. Although the Company can pass natural gas costs on to customers with quarterly adjustments, the potential for a regulatory lag still exists. If natural gas costs increase substantially within a short period of time, the Company may have to recover such costs over a longer time frame than it normally does. In addition, EGI could also face regulatory lag with respect to major projects if capital spending amounts are beyond those that can be funded through base rates and if these capital projects do not qualify for recovery through the Incremental Capital Module (ICM) mechanism (see the Regulatory Update section).

Simplified Organizational Structure



Note: Enbridge Gas Inc. represents approximately 14% of the consolidated EBITDA of Enbridge Inc.

Enbridge Inc: It is a diversified energy company with the following segments: Liquids Pipelines (approximately 54% of DBRS Morningstar-adjusted segment EBITDA in the LTM ended March 31, 2021), Gas Transmission and Midstream (29%), Gas Distribution and Storage (14%), Renewable Power Generation (4%), and Energy Services (-1%).

Westcoast Energy Inc.: In addition of owning a 46% interest in EGI, Westcoast Energy Inc. also owns (1) the federally regulated B.C. Pipeline natural gas transmission system and (2) a 78% interest in the federally regulated Maritime & Northeast Pipeline Limited Partnership Canada, a natural gas transmission system in Eastern Canada.

Reported net income	**401**	**341**	**557**	**497**	**556**	**568**

YE2020 Summary

- Operating income in 2020 dropped slightly from 2019, largely reflecting (1) warmer weather in 2020 than 2019 and (2) higher employee-related costs and higher depreciation and amortization from a higher overall rate base. The decrease was partially offset by (1) the increase in the customer base and (2) synergy realized from the amalgamation.

H1 2021 Summary

- The increase in operating income in H1 2021 compared with the same period in 2020 reflected (1) the increase in rates and customer base and (2) synergies realized from the amalgamation. However, the increase in the operating income was partially offset by warmer weather in the Company's franchise areas during the Q1 2021.

Outlook

- Assuming normal weather, DBRS Morningstar expects EGI's operating income to continue to increase modestly throughout the deferred rebasing period, reflecting the continued growth in the rate base and customer base as well as the potential synergy to be realized from the amalgamation.
- However, because EGI's annual rate changes are based on a price-cap formula and operating efficiency, any materially unexpected increase in operating costs can have a negative impact on EGI's operating income.

Financial Profile

Enbridge Gas Inc.	6M June 30	6M June 30	12M June 30	Year ended December 31

Change in equity & equivalents	0	0	800	800	800	(44)
Change in cash & marketable securities	0	67	1	68	(28)	47
Funding sources	**89**	**67**	**1,255**	**1,233**	**1,010**	**(242)**
Total debt in capital structure (%)	50.0	49.0	50.0	49.2	48.3	47.9
Cash flow/total debt (%)	14.8	14.9	12.2	11.9	12.7	12.3
EBIT interest coverage (times)	3.28	3.07	2.58	2.50	2.62	2.57
Fixed-charges coverage (times)	3.28	3.07	2.58	2.50	2.62	2.51
Dividends/cash flow (%)	85.5	89.7	104.4	107.5	105.0	68.6

Summary

- All credit metrics remained solid in the LTM to June 30, 2021, reflecting relatively stable cash flow and reasonable debt leverage.
- The debt-to-capital ratio, excluding goodwill, has remained relatively stable since the amalgamation and has stayed at the low end of DBRS Morningstar's "A" rating range. This capital structure level is consistent with the regulatory capital structure of 36% equity/64% debt.
- The cash flow-to-debt ratio for the LTM to June 30, 2021, improved modestly from 2020 because of higher cash flow for H1 2021 compared with H1 2020. Cash flow in H1 2020 was negatively affected by warmer weather.
- EBIT-interest coverage for the LTM to June 30, 2021, continued to benefit from the low-interest rate environment and solid operating income for the period.
- EGI has generated substantial free cash flow deficits for the last couple of years as a result of a large capex program in 2019 and 2020 (averaging $1.15 billion each year). Most of growth capex was spent on growth capital projects that were approved by the regulator (see below).
- DBRS Morningstar notes that the dividend/cash flow ratio has increased since 2018. This increase combined with large growth projects caused EGI to require substantial external funds to finance its cash flow deficits.
- However, EGI's financing plan has been to maintain the debt-to-capital ratio in line with the regulatory capital structure of 64% debt/36% equity.

Outlook

- DBRS Morningstar expects EGI to continue to generate free cash flow deficits over the next couple of years because of its large capex and high dividend payout. Capex for 2021 and 2022 is estimated to be between $1.4 billion and $1.6 billion each year. A substantial amount of capex each year will be for system upgrades and new capital projects, such as the Community Expansion projects and the Lake Shore KOL Replacement Project (see the Capital Projects section).
- DBRS Morningstar does not expect EGI to change its financing strategy of maintaining the debt-to-capital ratio (excluding goodwill) at or near the current level throughout the deferred rebasing period.
- Assuming normal weather, DBRS Morningstar expects EGI's cash flow-to-debt and EBIT-interest coverage ratios to improve modestly over the medium term, reflecting expected operating efficiency and incremental cash flow from a growing rate base.

Liquidity and Long-Term Debt Maturities

Credit Facilities				As at June 30, 2021
(CAD millions)	**Total Facilities**	**Drawn**[1]	**Available**	**Maturity**
Enbridge Gas Inc.	2,000	1,410	590	2022

1 Includes facility draws and commercial paper issuances, net of discount, that are backed by the external credit facility.

Summary

- Liquidity remains solid, supported by predictable cash flow from operations and the availability of sizeable credit facilities.
- The $2.0 billion Revolving Term Credit Facility is used to backstop a commercial paper program of $2.0 billion.
- On September 15, 2021, EGI completed a $900 million dual-tranche offering of 10-year and 30-year notes. The debt issuance is not expected to have any material impact on EGI's credit metrics because most net proceeds repaid the company's indebtedness, which had financed its capex program.
- DBRS Morningstar notes that in the event where there is extremely cold weather and gas prices are rising sharply, the Company would have to seek temporarily support from its parent, Enbridge. Currently, EGI has access to Enbridge's letter of credit facilities totalling $2.0 billion.

Debt Maturities

As at June 30, 2021 (CAD million)	**2021**	**2022**	**2023**	**2024**	**2025**	**2026+**	**Total**
EGI medium-term notes and debentures	175	125	350	300	745	6,800	8,495

Summary

- The refinancing risk in the next four years is manageable because the medium-term notes and debentures due in each of these years are modest and within the financing capability of the Company.
- EGI is subject to the issue test covenant in the indenture, which states that its total consolidated funded obligations (namely total indebtedness, including any guarantee that has a maturity term longer than 18 months) will not exceed 75% of total consolidated capitalization. EGI is also subject to an EBIT-to-interest covenant of 2.0 times, based on EBIT for 12 consecutive months and the annual pro forma interest requirements for all debt with a maturity term longer than 18 months.
  - The covenant does not apply to debt issuances for debt refinancing.
  - The Company was in compliance with the covenant as at June 30, 2021.

Regulatory Update

2021 Rate Application

- On June 30, 2020, EGI filed for phase 1 of the application for setting rates for 2021. OEB approved this application on November 6, 2020.
- On October 15, 2021, EGI filed phase 2 application for 2021 ICM funding requirements. On May 6, 2021, OEB approved $124 million of the capital funding.

2022 Rate Application

- On June 30, 2021, EGI filed for phase 1 of the application for setting rates for 2022. The approval on this application is expected in H2 2021.

Amalgamation

On August 30, 2018, the OEB issued its decision on the application for the amalgamation of EGI and Union Gas. The OEB's major key determinations in the decision are, among others, as follows:

- The rebasing year is deferred until 2024. The Company asked for a 10-year deferred rebasing period, but the OEB allowed for only five years. DBRS Morningstar believes that the five-year rebasing period is credit positive because shorter periods have more certainty with respect to cost recovery and forecasts.
- The annual rate change during the deferred rebasing period is based on a price-cap index (PCI), where PCI growth is driven by an inflation factor using the Gross Domestic Product Implicit Price Index Final Domestic Demand Canada index as the inflation factor, less a productivity factor of zero and a stretch factor of 0.3%. The stretch factor is used in incentive regulation to measure the efficiency of utilities (the actual costs/forecast costs), with superior performance having a lower stretch factor.
- The earnings sharing mechanism during the 2019–23 period will be on a 50:50 basis between EGI and its ratepayers for all earnings in excess of 150 bps over the allowed ROE. This means that earnings in excess of up to 150 bps will be retained by EGI.
- All capex in excess of the OEB-defined materiality threshold will be recovered through an ICM mechanism, subject to the ICM eligibility criteria during the deferred rebasing term (see the next section).
- EGI continues to pass through costs associated with Y factors. Y factors are costs related to gas commodity and upstream transportation costs, demand-side management cost changes, lost revenue adjustment mechanism changes for the contract market, and normalized average consumption/average use.
- EGI may apply to recover $5.5 million on a revenue requirement basis for costs related to unforeseen events outside of the control of management through a Z-factor mechanism.
- During the deferred rebasing period, EGI will continue to purchase market-based storage services to meet the needs of legacy EGD in-franchise customers. This will mean that legacy Union Gas customers continue to benefit from the sale of market-based storage until issues of rate harmonization are considered.

ICM Mechanism

- ICM is an OEB funding mechanism for significant capital projects for which a utility requires rate recovery in advance of its next regularly scheduled cost of service (rebasing) application.
- The test for ICM eligibility is that a capital project is not only part of a capital project that is incremental to the materiality threshold (defined below) but must be driven by capital spending requirements that are extraordinary and unanticipated.
- Materiality means that the amount of capital spending must exceed the OEB-defined threshold (which represents a utility's financial capacities underpinned by existing rates, including growth). Any incremental capital amounts approved for rate recovery must fit within the total eligible incremental capital amount and must clearly have a significant influence on the operation of the utility. In addition, to be eligible for ICM, the amount of capital spending must meet the Need and Prudence criteria. Need means that the amount of capital spending must be discrete projects and must be outside of the base upon which the rates are derived. Prudence means that the utility's decision to incur the costs must represent the most cost-effective option for ratepayers.

Federal Carbon Levy

- Ontario is subject to the federal government's carbon pricing program, which consists of two parts: (1) an output-based pricing system (effective January 1, 2019) and (2) a carbon or fuel charge levied on natural gas (effective April 1, 2019).
- Beginning in 2019 and on an interim basis, EGI set up an OEB-approved deferral account to capture the costs of the federal carbon charge. On April 1, 2020, the federal carbon charge for natural gas was increased to 7.83 cents per cubic metre from approximately 5.87 cents per cubic metre. The average residential customer's bill is estimated to increase by $43 to $47 per year. The cost will be borne by customers.

Capital Projects

- The Dawn-Parkway Expansion Project: The purpose of the expansion was to provide Ontario and Northeast U.S. customers with access to the diversity, reliability, security of supply, and cost competitiveness of the Dawn Hub. However, because of changes in demand and uncertainties resulting from the coronavirus pandemic, on October 22, 2020, EGI withdrew the application for the Dawn-Parkway system expansion.
- Community Expansion: In March 2019, the government of Ontario released Ontario Regulation 24/19 (Regulation) allowing for ratepayer funding of specific community expansion projects. Several projects identified in the Regulation are specific to EGI. The total funding for these projects is approximately $32.9 million. On June 8, 2021, the Ontario government approved funding for phase 2 of the program. Under phase 2, EGI will be provided with up to $214 million for funding assistance to deliver 25 community expansion and two economic development projects. These projects are expected to be in service from 2022 through 2027.
- Lake Shore KOL Replacement Project: The replacement project of approximately 4.5 kilometres of natural gas pipeline and ancillary facilities of the Cherry to Bathurst segment of the Kipling Oshawa Loop along Lake Shore Boulevard in the City of Toronto. The project is expected to be placed into service in H2 2022.

Balance Sheet

Ratings

Debt	Rating	Rating Action	Trend
Issuer Rating	A	Confirmed	Stable
Senior Unsecured Notes	A	Confirmed	Stable
Commercial Paper	R-1 (low)	Confirmed	Stable

Rating Update

On September 21, 2022, DBRS Limited (DBRS Morningstar) confirmed the Issuer Rating and Senior Unsecured Notes rating of Enbridge Gas Inc. (EGI or the Company) at “A” and the Company’s Commercial Paper rating at R-1 (low). All trends are Stable. The rating confirmations reflect the following considerations:

1. EGI maintained a stable business risk profile as it is in the fourth year of the five-year price-cap incentive regulations (IR) ending at the end of 2023. The IR framework for EGI has been stable and DBRS Morningstar does not expect any material changes during this IR period.

2. EGI's financial performance remained solid, with improved credit metrics for the 12 months ended June 30, 2022. Furthermore, DBRS Morningstar expects the credit metrics to improve modestly over the medium term as a result of rate base growth and synergy realization (see below).
