

Moriah Energy Center

Enhancing reliability through storage

Operational safeguards

Enbridge Gas North Carolina is committed to building, operating and maintaining **Moriah Energy Center, a liquefied natural gas (LNG) facility**, in accordance with all applicable regulations. The utility is also committed to being a good neighbor in Person County by minimizing operational impacts in the community.

Emergency management

Enbridge Gas will have the necessary equipment onsite to manage a response in the unlikely event of an emergency without outside assistance, including automatic and remote shut-down capabilities. First responders will also be equipped and trained to assist.

Delivery

LNG will be converted back to a gas and dispatched through Enbridge Gas' existing pipeline infrastructure. Trucking of LNG will not be a routine part of operations.

End users

Moriah Energy Center will support the natural gas needs of over 400,000 Enbridge Gas customers who use natural gas for home heating, cooking and manufacturing across the region.

Experience

Enbridge Gas owns several LNG facilities across its footprint, including an LNG facility near downtown Cary that the company has operated safely and reliably for nearly 50 years in a residential and commercial area.

Noise

Noise will not exceed 85 decibels three feet from equipment. Considering Moriah Energy Center's operating footprint and the tree buffer, operating noise is not expected to impact surrounding property owners.

Light

A significant tree buffer will remain on the property, so lighting impacts are not anticipated.

Water usage

The vast majority of the well water that will be used once the facility is operational will be for employee facilities and not for plant processes or natural gas liquefaction.

Compliance

Enbridge Gas will comply with all local, state and federal regulations to operate Moriah Energy Center.
