

GetConnected Multi-Factor Authentication (MFA)

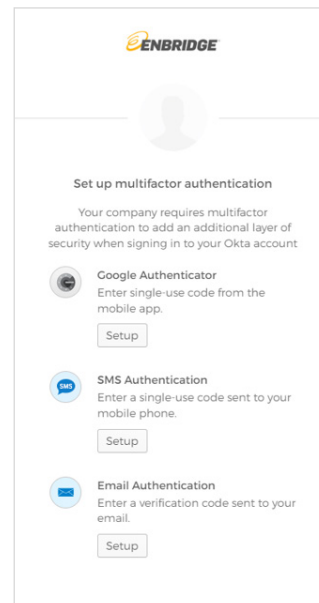

Setting up email authentication

1. Enter your credentials on the GetConnected login screen.

The screenshot shows the ENBRIDGE login interface. At the top is the ENBRIDGE logo. Below it is a circular profile icon with a question mark and the text "Sign In". The form includes fields for "Username" and "Password", a "Remember me" checkbox, and a blue "Sign In" button. At the bottom, there are links for "Need help signing in?" and "Don't have an account? Sign up".

2. Click the **Setup** button for the email authentication option.

The screenshot shows the ENBRIDGE MFA setup screen. At the top is the ENBRIDGE logo. Below it is a circular profile icon. The main heading is "Set up multifactor authentication". A message states: "Your company requires multifactor authentication to add an additional layer of security when signing in to your Okta account". There are three options, each with a "Setup" button: "Google Authenticator" (with a mobile app icon), "SMS Authentication" (with a mobile phone icon), and "Email Authentication" (with an email icon). The "Email Authentication" option is highlighted with a blue border.

3. Click **Send me the code**.

Note: You must have access to the email address on your account in order to set up email authentication. The verification code email may take up to 5 minutes to arrive. You can select **Send again**, however, if the original email was delayed, the first code will not be valid when you enter it. In this case, use the code in the second email that arrives.

4. When you receive the email, locate the code and enter it into the verification code field.

Click **Verify**.

You have now set up a security option to authenticate your identity when logging in to GetConnected.
